The ALJ considered Claimant's argument (which was based on her testimony) that she lost confidence in Dr. McCranie and determined this was not sufficient to require a change of physician at this time. This contention was raised in several cases. *Loza v. Ken's Welding*, W.C. 4-712-246 (January 7, 2009); *Zolman v. Horizon Home Care, LLC, Inc.*, W.C. 4-636-044 (November 3, 2010). In *Loza*, the Panel affirmed the denial of a change of physician where the ALJ found Claimant had not introduced persuasive evidence that he developed mistrust of the ATP or had been unable to communicate with the physician.

In *Zolman*, the ICAO considered a similar argument where Claimant asserted there was a breakdown in the physician-patient relationship with his treating physicians, Dr. Danahey and Dr. Primack. Claimant also argued that he had developed a relationship with Dr. Yamamoto, but the ALJ concluded no such relationship was present. The Panel concluded that Claimant's testimony standing alone was not sufficient to allow the change of physician. The Panel also found there was no basis to disturb the ruling denying the change of physician to Dr. Yamamoto. Explaining its rationale, the Panel considered the application of *Merrill v. Mulberry Inn, Inc., supra,* stating at page 6 of the opinion:

"In *Merrill*, the Panel interpreted § 8-43-404 (5)(a)(VI), C.R.S. as affording the ALJ discretionary authority to grant the Claimant's request for a change of physician. *Vigil v. City Cab Co.* W.C. No. 3-985-493 (May 23, 1995); Carson v. Wal Mart, W.C. No. 3-964-079 (April 12, 1993). However, the Panel also noted that an ALJ is not compelled to grant a change of physician based upon the Claimant's personal dissatisfaction with a physician, citing *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Based upon the totality of the evidence, the ALJ determined Claimant's dissatisfaction with Dr. McCranie was not a sufficient basis to order a change of physician and thus, Claimant failed to meet her burden of proof. (Finding of Fact 41).

The ALJ based this decision regarding a change in physician considering the need to ensure Claimant is provided reasonable and necessary medical treatment as required by §8-42-101(1), C.R.S. while at the same time protecting Respondents' interests in being apprised of the course of treatment for which they may ultimately be held liable. *Yeck v. Industrial Claim Appeals Office*, *supra*, 996 P.2d at 229. Accordingly, Claimant's request for change of physician is denied.

Temporary Disability Benefits

Respondents asserted Claimant's failure to appear for work on the date and at the time specified by the modified duty job offer bars the claim for temporary total and temporary partial disability benefits. Respondents argued they should not be penalized for making an accommodation, which was requested by Claimant. Respondents asserted this defense applied both to the claim for TTD and the claim for TPD benefits.

Claimant argued there was a disconnect in the communications between Employer's representative and her regarding the return to work. Claimant testified that part of the reason she requested a later start date was in order to complete her work conditioning program. Claimant asserted that her conversation with Ms. R_____ was simply about her availability for the work schedule and she was not aware of the impact on her workers' compensation benefits. Claimant contended that Respondents agreed to change her scheduled date for the return to work, which should not bar her claim for temporary disability benefits.

The ALJ evaluated the claim for TTD benefits first. Respondents relied upon the statutory basis for terminating said benefits, specifically § 8-42-105(3), C.R.S. (2018) which provides:

> "(3) Temporary total disability benefits shall continue until the first occurrence of any one of the following:
> …
>
> (d) (I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment."

Under the facts of this case, the offer to return to modified duty tendered by Respondents specified a start date of February 5, 2019. Claimant did not appear for work at that time and this bars the initial period of TTD benefits. (Finding of Fact 25).

However, the ALJ found that Respondents agreed to alter the terms of the modified job duty return and was persuaded by Claimant's argument that Respondents acquiesced in the request for a later start date for the modified duty. In effect, Claimant has argued Respondents should be estopped from asserting that Claimant's failure to return to work on February 5, 2019 precludes her claim for temporary disability benefits. As found, Employer agreed to modify Claimant's start date under the modified duty offer on two occasions. Each successive modified duty job offer superseded the preceding

one, which created new terms of employment under which Claimant was to return to work. (Findings of Fact 27-28).

In *Johnson v. Industrial Commission of the State of Colorado,* 761 P.2d 1140, 1146 (Colo. 1988), the Colorado Supreme Court considered the application of the doctrines of waiver and estoppel in a workers' compensation context [where Respondents sought to take an offset for Social Security disability benefits after a permanency award and after the time for reopening expired]. Colorado decisional law has long recognized the principle that "[a] statute cannot stand in the way of waiver or equitable estoppel when the facts demand their application in the interest of justice and right." [citation omitted]; *see also Greeley Gas & Fuel Co. v. Thomas,* 288 P. 1051 (Colo. 1930) [employer and workers' compensation insurer estopped from invoking statute of limitations as a bar to late-filed workers' compensation claim].

Estoppel is an equitable doctrine premised upon the principle of fair dealing and is designed to aid in the administration of justice when a rigid and inflexible application of the law would otherwise result in an injustice. *Mabray v. Williams,* 291 P.2d 677, 679 (Colo. 1955); *Sanger v. Larson Construction Co.,* 251 P.2d 930, 933 (Colo.1952). There are four basic elements to a claim of estoppel, all of which must be established by the party claiming the estoppel: the party to be estopped must know the relevant facts; the party to be estopped must also intend that its conduct be acted on or must so act that the party asserting the estoppel has a right to believe the other party's conduct is so intended; the party asserting the estoppel must be ignorant of the true facts; and the party asserting the estoppel must detrimentally rely on the other party's conduct. *Department of Health v. Donahue,* 690 P.2d 243, 247 (Colo.1984).

The ALJ concluded all four elements of estoppel were met in the case at bar. Respondent knew all of the relevant facts, as these related to the modified job offer. (Finding of Fact 19). By virtue of formally tendering an offer of modified duty, Respondents intended Claimant to act upon and comply with the terms set forth in the letter. (Findings of Fact 17, 23). Respondents then altered the terms of the modified duty offer, by changing the position Claimant was to fill, the wages and the start date. (Findings of Fact 27-28). Claimant did not know her request for an alternate schedule would have an impact on her workers' compensation benefits and was unaware that the manager position remained open for a period of time. (Finding of Fact 25). Claimant detrimentally relied on the offers tendered by Respondents. (Finding of Fact 28).

Accordingly, the ALJ concluded the doctrine of estoppel applies in this instance and given the circumstances of the case, Respondents were estopped from arguing that Claimant's failure to return to work on February 5, 2019 bars the claim for TTD and TPD benefits. Claimant proved she was entitled to temporary total disability benefits from February 12, 2019 through February 18, 2019. (Finding of Fact 29). Under the terms of the modified duty position, Claimant was entitled to TPD benefits, as she sustained a wage loss, which was attributable to the work injury. *Montoya v. Industrial Claim Appeals Office,* –P.3d -, 2018 COA 19 (Colo. App. 2018)

Wage records through May 11, 2019 were admitted into evidence. Based upon the wage records admitted at hearing, the ALJ determined Claimant was entitled to receive TPD benefits from February 19, 2019 through March 7, 2019 in the amount of $2,645.58. Claimant was also entitled to receive TPD benefits from March 8, 2019 and continuing. Since no doctor has placed Claimant at MMI or returned her to full duty, Claimant continues to be entitled to temporary partial disability benefits. No payroll records after May 11, 2019 were introduced into evidence. The ALJ makes no findings as to the amount of those benefits to which Claimant is entitled after May 11, 2019.

ORDER

It is therefore ordered:

1. Respondents shall pay for the cost of the February 26, 2019 MRI, pursuant to the Colorado Workers' Compensation Fee schedule.

2. Claimant's request for reimbursement for two office visits with Dr. Yurth is denied and dismissed.

3. Claimant's request for a change of physician to Dr. Yurth is denied and dismissed.

4. Claimant's request for TTD benefits from February 5, 2019 to February 12, 2019 is denied and dismissed.

5. Respondents shall pay TTD benefits from February 12, 2019 to February 18, 2019.

6. Respondents shall pay TPD benefits from February 19, 2019 through March 7, 2019 in the amount of $2,645.58. Respondents shall pay TPD benefits from March 8, 2019 and continuing.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he is unable to earn any wages in the same or other employment as a direct and proximate result of his industrial injury and entitled to permanent total disability benefits.[1]

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. At the time of the hearing, Claimant was 38 years old.
2. Claimant was injured in the course and scope of his employment as a maintenance and construction supervisor for eBuilding Services LLC on October 26, 2016. Claimant was injured while cutting zip ties from on top of a work van when the pocketknife he was using slipped, "continued to travel, and penetrated his left hand." He was initially treated at the University of Colorado, Colorado Springs Emergency Department later that day. *(Respondents Exhibit C)*
3. Claimant was initially diagnosed with distal radial nerve damage involving his left hand and underwent surgery. Unfortunately, Claimant's pain complaints worsened and he began to develop signs and symptoms consistent with Complex Regional Pain Syndrome (CRPS). After undergoing significant treatment and extensive diagnostic testing, Claimant was ultimately diagnosed with Complex Regional Pain Syndrome in the left upper extremity. *(Respondents Exhibit B)*
4. Claimant's diagnosis of CRPS is agreed upon by the majority, if not all of, the medical providers who have either evaluated or treated Claimant. The dispute, however, is the extent of the restrictions and symptoms that flow from such condition and the impact on his ability to obtain and maintain employment.
5. Claimant was placed at maximum medical improvement on January 2, 2019. His primary treating physician, Dr. Roberta Anderson-Oeser, provided Claimant a 15% whole person impairment rating for the CRPS. Dr. Gary Gutterman,

[1] The issue of "offsets and overpayments" was endorsed to be heard at the hearing. Moreover, the issue of social security offsets was discussed briefly at the beginning of the hearing. The parties agreed to attempt to resolve such issue after resolution of the PTD matter and the court agreed. Therefore, whether Claimant received social security disability benefits, whether Respondents can take an offset against any TTD benefits, and the amount of such offset, was not addressed at the hearing. Moreover, whether any offset against permanent total disability benefits can be taken, since Claimant was under 45 on the date of injury, was also not discussed and addressed at the hearing. Therefore, the issues involving SSDI offsets and overpayments are reserved.

Claimant's primary treating psychiatrist, provided Claimant a 5% mental impairment. The two ratings combined to a 19% whole person.

6. An amended Final Admission of Liability was filed on March 1, 2019. As set forth in the FAL, Respondents' asserted Claimant had reached the cap for indemnity benefits, and had been overpaid TTD in the amount of $4,731.69, based on TTD payments made from January 2, 2019 through February 11, 2019. Moreover, based on the indemnity cap being met, no permanent partial disability benefits were admitted and paid for any portion of the physical or mental impairment rating. *(Respondents Exhibit G)*

7. At the hearing, Dr. Anderson-Oeser was called by Claimant as a witness. Dr. Anderson-Oeser is a physician specializing in physical medicine and rehabilitation. She has been board certified in physical medicine and rehabilitation for almost 20 years. Her practice extends to treating persons with chronic pain, musculoskeletal injuries, nerve injuries, and brain injuries. She treats people with Complex Regional Pain Syndrome, and has done so for over 24 years. At the time of hearing, she estimated that she currently had approximately 30 patients suffering from Complex Regional Pain Syndrome and for whom she was providing treatment. The parties stipulated, and the Administrative Law Judge agreed, that Dr. Anderson-Oeser qualified as an expert in the field of physical medicine and rehabilitation.

8. Dr. Anderson-Oeser began treating Claimant on January 25, 2017, and has been seeing him approximately every one to two months since that time.

9. Dr. Anderson-Oeser diagnosed Claimant as suffering from Complex Regional Pain Syndrome, adjustment disorder with anxiety and depression, and chronic pain with significant psychological dysfunction. She noted that Claimant had previously suffered a radial digital artery and nerve laceration to the left hand, requiring surgical repair.

10. Dr. Anderson-Oeser has prescribed multiple modalities in an attempt to mitigate Claimant's pain symptomology associated with his Complex Regional Pain Syndrome. Such attempts have included prescriptions of Gabapentin, opioids, Tizanidine, and Lyrica in an attempt to manage his pain and muscle spasms and occupational therapy for desensitization techniques.

11. Dr. Anderson-Oeser described Claimant's symptomology associated with his Complex Regional Pain Syndrome. She noted that at times his left hand would turn red and purple. He has spasms and terrible tremors to the point that some days he is unable to even pick up a pen because his hand trembles so much. She described Claimant as guarding his hand by keeping it in a shirt or sweatshirt, because it is so painful.

12. Dr. Anderson-Oeser referred Claimant to Dr. Boyd, a neuropsychologist who provides cognitive behavioral therapies to assist Claimant in dealing with the psychological consequences arising from his chronic pain. Similarly, Dr. Anderson-Oeser referred Claimant to Dr. Gutterman, a psychiatrist, to provide medications to help manage Claimant's depression and anxiety, which flow from his CRPS.

13. Dr. Anderson-Oeser testified that Claimant's report of pain on the pain scale consistently runs between a seven and nine. She noted that he has days where his pain is so bad that he is unable to get out of bed or do anything.

14. Dr. Anderson-Oeser testified that Claimant's pain symptomology is increased by changes in temperature, blowing air (such as one might experience from indoor air conditioning), light touching of the left hand, (which she described as being as simple as rubbing a gauze bandage over the hand), stress, or vibration (which she described it as being something as simple as tapping on the hand or holding the steering wheel of his car).

15. Dr. Anderson-Oeser also noted that Claimant has difficulty sitting for prolonged periods. She opined that she believed remaining in a seated position allowed the Claimant to mentally focus on his pain, but being able to change positions frequently served as a distraction from the mental focus on his pain. She did note, however, that simply walking could aggravate his pain because of the airflow caused by walking.

16. Dr. Anderson-Oeser also noted that merely coughing can aggravate Claimant's pain levels.

17. Dr. Anderson-Oeser noted that Claimant's pain level is sometimes so severe as to cause him to vomit. His pain levels also interfere with his ability to sleep. As noted throughout the medical records, Claimant's sleep is oftentimes limited to approximately 4 hours per night.

18. Dr. Anderson-Oeser testified that Claimant's medications, cognitive behavioral strategies, and desensitization techniques sometimes helped take the "edge off" Claimant's pain levels so that he can perform some of his activities of daily living, but that nothing is very effective in controlling Claimant's pain.

19. Dr. Anderson-Oeser relayed that Claimant's pain is located in his left hand and fingers, and noted that Claimant's Complex Regional Pain Syndrome has spread up the left extremity, from the elbow distally, as well as into his left shoulder.

20. Dr. Anderson-Oeser opined that Claimant is restricted from lifting more than one to two pounds maximum with his left upper extremity, and that such lifting should be limited to 6% or less of the day. She considered this restriction to be very lenient, as opposed to restricting him from no use of the extremity, so as not to discourage Claimant from attempting to use his hand.

21. Respondents' IME physician, Dr. Schakaraschwili, opined in his deposition that Claimant might be able to use his left hand as a prop to assist with use of his right hand. Dr. Roberta Anderson-Oeser found this suggestion to be highly unlikely given that Claimant is unable to touch his hand without experiencing significant and an incapacitating increase in his pain.

22. Claimant is unable to perform grip strength tests because of pain. He does not have the ability in his left hand to close his thumb and index finger together. Claimant sometimes is unable to even pick up and hold a pen.

23. Dr. Anderson-Oeser testified the Claimant has cognitive limitations. His cognitive limitations, in part, arise from the pain itself, which is great enough that Claimant has a hard time reading and comprehending. Additionally, his medications have the side effect of drowsiness that further affect his ability to concentrate. Throughout her medical records, she noted Claimant is not to drive while taking his Oxycodone or Tizanidine, which she has consistently prescribed. She also noted that such medication side effects are consistent with the drug manufacturers' respective advisements. Overall, Claimant has difficulty focusing on tasks due to his pain and the adverse effects of his medications.

24. As of the last medical appointment documented in Claimant's hearing exhibits from Dr. Anderson-Oeser, which is dated April 11, 2019, she was still prescribing Claimant oxycodone for his severe pain and Tizanidine for his muscle spasms. She again advised Claimant that he was not to drive while taking either of those two medications.

25. Dr. Anderson-Oeser has diagnosed Claimant as suffering from depression, and anxiety with severe panic attacks. With treatment and medication, there has been some minimization of his depression and anxiety-related symptoms, including a decrease in frequency of panic attacks, but Claimant continues to experience such.

26. Dr. Anderson-Oeser explained that Claimant engages in "guarding" behavior. Essentially, he keeps his left arm next to his body so as to avoid any inadvertent contact with his left upper extremity. Claimant engages in this guarding behavior almost constantly.

27. Dr. Anderson-Oeser completed a Residual Functional Capacity Questionnaire, setting forth her opinions as to the functional limitations being experienced by Claimant. *See Exhibit 1.*

28. Dr. Anderson-Oeser further opined that Claimant's Complex Regional Pain Syndrome requires him to change positions to help distract his mind from the pain. As such, he is limited to sitting no more than 30 minutes at a time and standing no more than 20 minutes at a time. She believed that Claimant would need to get up and walk around every 30 minutes, for up to 7 minutes at a time, in order to distract himself from his pain. If there was any job that Claimant was able to do, it would need to accommodate Claimant's need to shift positions from sitting to standing or walking.

29. Dr. Anderson-Oeser opined that Claimant is unable to walk even a city block without severe pain. She explained that this is not based on a physical inability to walk, but that the movement substantially increases the symptomology and that Claimant always has severe pain.

30. Dr. Anderson-Oeser opined that in a work setting, Claimant would require unscheduled breaks that could last from 10 to 20 minutes, or as long as several hours.

31. Dr. Anderson-Oeser also limited Claimant's use of his right hand to 80% of the time, so as to avoid developing overuse syndrome of his functioning right upper extremity.

32. Dr. Anderson-Oeser testified the Claimant has days when his pain symptomology is so severe that he is unable to do anything. She opined that he would experience these "bad days" more than four times per month.

33. In *Exhibit 1*, Dr. Anderson-Oeser also noted that Claimant may only use his left hand to grasp, turn, and twist objects less than 5% of the day, to use his left fingers for fine manipulation less than 5% of the day, that he can only reach in front of his body with his left extremity less than 5% of the day, and he can only reach overhead with his left extremity less than 5% of the day.

34. In *Exhibit 1*, Dr. Anderson-Oeser also noted that his pain symptomology is constantly severe enough to interfere with his attention and concentration, so as to render him unable to even perform simple work tasks.

35. In *Exhibit 1*, Dr. Anderson-Oeser also noted he is unable to be in hot or cold work environments.

36. Overall, this ALJ found Dr. Anderson-Oeser's testimony to be credible and persuasive.

37. As noted above, Claimant was referred to Dr. Gutterman, a psychiatrist, for treatment of his depression and anxiety. Dr. Gutterman's records indicate he evaluated and treated Claimant on five occasions: December 12, 2017, March 5, 2018, June 11, 2018, October 9, 2018, and January 2, 2019.

38. Dr. Gutterman's records note that Claimant complained that it was hard to focus on occasion, that his mood fluctuated, and that he was only sleeping three to four hours per night. Claimant further noted that his energy was reduced and that his sexual libido had diminished. Dr. Gutterman initially diagnosed Claimant as suffering from an adjustment disorder, with mixed emotional features, as a result of his employment injury and chronic pain.

39. In his June 11, 2018 report, Dr. Gutterman noted that Claimant was still experiencing panic attacks three times per week.

40. On January 2, 2019, Dr. Gutterman concluded Claimant had reached MMI, psychiatrically, and completed a mental health impairment worksheet, contained within *Exhibit 7*. A 5% psychiatric impairment rating was assigned to Claimant. As noted on the worksheet, "… Impairment ratings based on chronic pain are not applicable within the mental/behavioral domain, but are restricted to physical examination with evidence of anatomical or physiological correlation and included within a physical impairment rating."

41. Dr. Gutterman opined that because of Claimant's depression and anxiety, his social functioning was minimally impaired, but that his thinking, concentration, and judgment were not impaired.

42. There is no credible and persuasive evidence that Dr. Gutterman assessed the effects of Claimant's chronic pain or medication on Claimant's cognitive abilities.

There is no credible and persuasive evidence that he tested or evaluated Claimant's ability to think, concentrate, and use good judgment while experiencing significant pain.

43. Dr. Gutterman's January 2, 2019 report, however, does note that Claimant continues to experience intermittent anxiety, despite medication to control such. It also notes Claimant is more irritable due to persistent pain, that he has trouble dealing with stress because of his pain, and that he is experiencing short-term memory issues associated with his medications.

44. On April 19, 2019, Claimant returned to Dr. Gutterman for a follow up psychiatric examination, i.e., maintenance evaluation for management of his medication. On his report from this date, Dr. Gutterman indicated, by placing an "x" in front of "Improving," that Claimant was improving. However, such notation must have been in error, because at this appointment, Claimant did not describe improvement and he was not improving. At this appointment, Dr. Gutterman noted the following:

> [Claimant] reports that his mood has been reasonably stable but he has been experiencing more anxiety and panic attacks over the past two months. This seems to have occurred since he started taking Clonazepam PRN as opposed to on tab BID. I had recommended that he decrease the frequency because he was experiencing forgetfulness. He reports that the forgetfulness is due to the Lyrica. As a result, I suggested that he resume Clonazepam 0.5 mg BID in order to treat the panic attacks and anxiety. It also appears the Buspirone, 7.5 mg QID is not benefiting him significantly, As a result, I recommend that he decrease the dose to TTD and perhaps we will titrate this down further in the future. He also reports that his sleep has not been particularly good getting only four hours of sleep per night and two hours during the day. As a result, I suggested that he discontinue Trazodone and start Mirtazapine, 30 mg, one tab HS.

45. Therefore, on April 19, 2019, Claimant's psychiatric problems due to his CRPS were getting worse and Dr. Gutterman was trying to manage such problems pharmacologically. Thus, instead of improving, Claimant was experiencing an increase in anxiety attacks, panic attacks, and forgetfulness. In addition, Claimant was continuing to have ongoing problems with sleep and was only sleeping about 4 hours a night.

46. Moreover, Dr. Gutterman's statement or conclusion that Claimant's thinking, concentration, and judgment were not impaired, even though Claimant was only sleeping 4 hours per night, is at odds with other information contained in the medical record. Therefore, Dr. Gutterman's statement regarding a lack of impairment in these areas does not seem well founded.

47. Claimant testified that his left index finger is permanently bent over and is unable to straighten it. Claimant is also unable to make a tightly-closed fist with his left hand.

48. Claimant testified that he has pain constantly from his left shoulder down to his left hand, with most of the pain being concentrated from the left elbow down to the hand.

49. Claimant testified that his hand is discolored at times and that he experiences swelling. The discoloration and swelling are associated with periods when he is experiencing severe pain.

50. Claimant testified that he is taking multiple medications, including Tizanidine, Lyrica, Buspar and Oxycodone. Even when he is taking his medications, he rates his average daily pain level between a 7 and 8 on the pain scale of 1 to 10.

51. Claimant testified that he experiences pain as high as a nine on the pain scale. He is not always able to ascertain what causes such a pain flare-up, but does know that bumping or brushing his arm up against anything results in such an increase, as does stress, and hot or cold weather.

52. Claimant testified that his pain is spread over time and during periods of flare-ups he will experience pain in his arm and into his hand, to the degree that he has used scissors to trim his armpit hair because it creates a “pulling sensation.”

53. Claimant testified that he engages in his desensitization exercises, which involve running a silk cloth over the affected areas, but that such desensitization exercises in and of themselves, have, at times, caused periods of exacerbation. He noted that coughing can exacerbate his pain, as does driving because of the bumpy roads and the difficulty reaching out with his left arm. Claimant described that even the back-and-forth motion of vacuuming, despite utilizing just the right extremity to move the vacuum, can result in flares.

54. Claimant testified that presently he experiences flare-ups that last entire days, two to three times a month. In the month of May, he described two extended flare-up periods, one lasting 3 days and another lasting 2 days. Additionally, Claimant also described flare-ups that did not last days, but could last several hours. Flare-ups always consist of a pain level that he associates with a nine.

55. Claimant described that the pain level is so severe during flare-ups that he lays in bed and that he considers bed to be his “safe space”. He also testified that during flare-ups, he does not eat much because he tends to vomit.

56. During a “normal day” when Claimant’s pain is a 7 to 8/10 pain level, Claimant testified that he is still very limited in his activities of daily living.

57. Claimant acknowledged that when he leaves his home he guards his left extremity by keeping it near his body, so as to avoid people or things inadvertently brushing up or hitting it.

58. Claimant testified that he has difficulty concentrating and paying attention. He described problems with following instructions as well.

59. Claimant indicated that he still attempts to use his left hand and will try to pick up light objects, such as keys or clothes. However, he drops things when he picks them up with his left hand because of weakness. He is also unable to hold a fork without dropping it.

60. Claimant testified that he is unable to tie his shoes and, as a result, wears shoes that are pre-tied or that have slipknots.

61. Claimant indicated that he is afraid to use his left hand for fear of experiencing flare-up episodes. He indicated that he has vomited from pain. Claimant indicated that he still experiences panic attacks, but acknowledges that they are less now that he is on medication. Despite that, he describes panic attacks occurring two to three times per week. When having a panic attack, Claimant indicated that it is like a heavy weight has been placed on his chest and he needs to go outside to breathe. His heart rate increases and he becomes sweaty. While he has learned biofeedback techniques to assist with these moments a panic attacks, the techniques do not always help. He testified that panic attacks last between half-an-hour and two hours.

62. During the hearing, the ALJ had the opportunity to observe Claimant during the hearing and during his testimony. During that time, Claimant was observed guarding his left hand. When Claimant was sitting next to his attorney during the hearing, he also appeared to have a flat affect and appeared depressed. Claimant's flat affect and depressed appearance continued through his testimony, and the remainder of the hearing. Claimant's overall appearance and body language exhibited a sense of despair, hopelessness, and lethargy.

63. This ALJ found Claimant's testimony and presentation to be credible and consistent with the majority of the medical record and the restrictions outlined by his primary treating physician Dr. Anderson-Oeser.

64. Claimant called Jammie Massey as a witness. Ms. Massey is a vocational rehabilitationist, and holds an undergraduate degree in psychology and a Master's degree in rehabilitation counseling. She has been certified in rehabilitation counseling by the commission of rehabilitation counselors, and has been so certified since 2006. Although not previously qualified as a vocational expert by the Colorado Division of Workers' Compensation, Ms. Massey was recognized by this ALJ as being an expert in the field of vocational rehabilitation.

65. Ms. Massey testified that a person with unskilled to low-end semi-skilled work will not be able to maintain employment if they experience more than two absences per month. If a person has skilled experience, a person might be able to miss as much is three days' work per month and maintain employment. Ms. Massey testified that Claimant's previous work experience placed him in the semi-skilled category.

66. Ms. Massey further explained that leaving work early for sickness would constitute an absence from work. Ms. Massey testified that if a person was required to miss four or more days from work per month, whether partial days or whole days, that such person would be unable to maintain competitive employment.

67. Ms. Massey testified that persons with unskilled and semi-skilled work assignments may only be off task 10% of the day, or less, in order to maintain competitive employment. If a person is working at a skilled level, a person may be off task approximately 15% of the day, and be able to maintain competitive employment. If a person exceeds such standards, they are considered unable to maintain employment.

68. Ms. Massey testified that the physical restrictions of limited use of the upper extremity one to two pounds of lifting less than 6% of the day, no reaching, no dexterity, and no fingering, that no competitive work is available on a part-time or full-time basis. She explained that the one to two pound lifting restriction would relegate somebody to sedentary seating capacity work, which typically requires bilateral use of the hands on a frequent, constant basis. Work that would accommodate such physical restrictions, by themselves, would constitute a sheltered work setting.

69. In her report, Ms. Massey also listed some of the problems Claimant described regarding his emotional response to his CRPS. Ms. Massey noted that Claimant experiences depression, anxiety, panic attacks, irritability, frustration, impatience, loss of self-worth and self-esteem, social isolation and withdrawal, embarrassment, and changes in his personality. She also noted that Claimant indicated that since his injury, he and his wife have struggled emotionally with coping and communication and have discussed attending marriage counseling. She also noted Claimant has a child with special needs and has an Individualized Education Plan (IEP) at his school. Claimant advised Ms. Massey that the school administration and teachers have requested that Claimant no longer attend meetings regarding his son's education due to his irritability and inability to communicate. She also noted that Claimant is no longer able to shower since his left upper extremity is unable to tolerate the water hitting it and that he now has to take a bath. She also noted Claimant had to install grab bars in his bathroom to assist with entering and exiting the bathtub and using the toilette. She further noted Claimant stated that prior to the injury, he enjoyed numerous recreational activities including spending time with family and friends, fishing, camping, snowmobiling, skiing, riding all-terrain vehicles, practicing judo, playing football, and shooting guns competitively. However, since the injury, she noted that Claimant said he has sold most of his recreational equipment since he is no longer able to use it and that he is also no longer able to shoot competitively.

70. The ALJ finds that the impact the injury has had on Claimant's marriage, raising his children, as well as his recreational activities is consistent with the physical restrictions issued by Dr. Anderson-Oeser and problems identified by Dr. Boyd, his psychologist. The ALJ also finds that the impact the injury has had on Claimant's marriage, raising his children, as well as his recreational activities is consistent with the limitations and symptoms described and exhibited by Claimant to his medical providers and at hearing.

71. During her testimony and in her report, Ms. Massey did not state the proper legal standard for determining whether Claimant is permanently and totally disabled under the Colorado Workers' Compensation Act. Moreover, based upon the

testimony of Ms. Montoya, Ms. Massey used some outdated data in assessing Claimant's ability to work. Despite these shortcomings, the ALJ still finds her testimony to be credible and persuasive in determining whether Claimant can earn "any wages in the same or other employment."

72. On February 17, 2017, Dr. Schakaraschwili saw Claimant at the request of Dr. Anderson-Oeser for diagnostic testing to assist in determining whether Claimant had Complex Regional Pain Syndrome. Based on the diagnostic testing performed by Dr. Schakaraschwili, Claimant had an abnormal thermogram, which objectively noted temperature asymmetries between the left and right hands, and an abnormal warming of the left hand. Claimant also had abnormal skin temperature and stimulated sweat output on the autonomic testing battery. According to Dr. Schakaraschwili, the test results indicated a high probability that Claimant was suffering from Complex Regional Pain Syndrome. At the time of the evaluation, Claimant had not undergone any sympathetic blocks.

73. On September 14, 2018, Dr. Schakaraschwili performed an independent medical exam at the request of Respondents' counsel, and upon agreement of the parties, since he was an authorized treating physician. This consisted of reviewing Claimant's medical records, obtaining a history from Claimant, and examining his affected left hand. Based on his physical examination of Claimant, he noted the following:

    a. There were no abnormal pain behaviors observed during the examination.

    b. Claimant had a flattened, depressed affect.

    c. Claimant's left hand was reddish and slightly swollen and held in a flexed position, especially the left index finger.

    d. There were healed surgical scars on both the dorsal surface of the hand over the first dorsal interosseous and in the palm "just ulnar to the midline."

    e. There was hyperhidrosis involving Claimant's palm.

    f. Claimant was sensitive to touch diffusely in the hand and in the arm.

    g. There appears to be slightly increased hair growth on the fingers and dorsum of the hand.

    h. Allodynia is most pronounced in the palm and index finger.

    i. The fingers feel cold to the touch.

74. Upon a thorough examination of Claimant and review of his medical records, which included Claimant's response to the sympathetic blocks, Dr. Schakaraschwili concluded Claimant has the following work related diagnoses which were caused by the October 25, 2016, industrial injury:

    a. Laceration of the left hand, left index finger radial digital artery, and left digital nerve laceration.

b. Complex regional pain syndrome of the left upper extremity, and

c. Depression, which is related to his injury and chronic pain.

75. The ALJ finds that Dr. Schakaraschwili concluded that there was no indication of symptom magnification during his examinations. In other words, there was no indication that Claimant's pain complaints and symptoms were out of proportion to Dr. Schakaraschwili's objective findings, physical examination, test results, and the underlying diagnoses.

76. Dr. Schakaraschwili testified by deposition. *(Claimant's Exhibit 9)*. Dr. Schakaraschwili is a physician specializing in physical medicine and rehabilitation, as well as electrodiagnostic medicine. He is board certified in each. It was stipulated that he is an expert in physical medicine and rehabilitation and electrodiagnostic testing.

77. Dr. Schakaraschwili testified that persons experiencing Complex Regional Pain Syndrome will develop a constellation of symptoms, including swelling, decreased range of motion, color changes, temperature changes, sweating, and changes in skin, hair, or nails. In particular, patients with Complex Regional Pain Syndrome experience allodynia, which is pain from stimuli that are not normally painful, such as a breeze against one's skin, water from a shower, or light touch.

78. As found above, Dr. Schakaraschwili described in his report his objective findings on physical examination that were consistent with, and the hallmark of, Complex Regional Pain Syndrome.

79. According to Dr. Schakaraschwili, the actual physiology of CRPS is not clearly understood. He testified that:

> There are speculations that it's an abnormal reaction of the body to pain and that the pain signals are causing something in the central nervous system or maybe more peripherally in the sympathetic nervous system to get disregulated, and it creates kind of a positive feedback, it gives you more pain, which irritates whatever is getting irritated even more, and you get this cycle of pain. Nobody really knows what's actually going on. *Schakaraschwili deposition, pg. 7*.

80. Dr. Schakaraschwili also noted that Claimant became tearful during examination of his left index finger and hand, which is an example of allodynia. Dr. Schakaraschwili also noted that Claimant had limited motor strength in his left-hand due to pain.

81. Dr. Schakaraschwili opined that Claimant's use of the left hand was restricted to very occasional activity. He indicated that the left hand did not have enough finger dexterity to make the left hand useful, but might be able to be used to steady objects being manipulated by the right hand.

82. Dr. Schakaraschwili considered the medical report of a Dr. Nnunukwe, dated November 14, 2017. It was noted that Dr. Nnunukwe had opined that Claimant was able to lift 50 pounds occasionally and 25 pounds frequently. Dr.

Schakaraschwili indicated that Claimant was clearly unable to do such with his left extremity and assumed that these were restrictions for the right extremity. However, Dr. Schakaraschwili did not clearly indicate how such strenuous use, such as lifting 25 pounds frequently, might impact Claimant's left upper extremity and pain levels.

83. Dr. Schakaraschwili opined that Claimant should be restricted to lifting no more than four pounds, very occasionally, with his left hand. He described "very occasionally" as 10 to 15% of the day. He indicated that if lifting four pounds with the left hand resulted in exacerbation or swelling that he would want to revise the restriction downwards.

84. Dr. Schakaraschwili acknowledged that Oxycodone, Lyrica, Tiznidine can have side effects of drowsiness.

85. Dr. Schakaraschwili admitted that Claimant might experience exacerbation of his pain, if he attempts to work within the four-pound lifting restriction.

86. Dr. Schakaraschwili acknowledged the Claimant might require unscheduled breaks because of his Complex Regional Pain Syndrome.

87. Dr. Schakaraschwili acknowledged that it is possible that Claimant would be absent from work more than four days per month, and that such absenteeism was not unreasonable, given Claimant's condition of Complex Regional Pain Syndrome. Dr. Schakaraschwili also acknowledged that Claimant might be forced to leave work early due to his symptomology as much as four times per month.

88. Dr. Schakaraschwili acknowledged that cold and hot environments could exacerbate Claimant's pain.

89. Dr. Schakaraschwili admitted that a physician who sees a patient on a regular basis, over the course of several years, has a better ability to assess a claimant's limitations that a physician who sees a person on a one-time basis.

90. Dr. Schakaraschwili did not obtain any history from Claimant about how often he experiences extended periods of heightened pain. Dr. Schakaraschwili did not recall asking Claimant whether his pain interfered with his ability to concentrate.

91. Dr. Schakaraschwili did, however, provide some testimony regarding how pain can interfere with someone's ability to concentrate. Although his examples were extreme, they were still illustrative. He was asked: Does severe pain that's sufficient to interfere with your concentration fall within that 9 to 10 pain level category? He responded by saying:

> Yes. And again, 9 to 10 -- the scale is not an objective measure of pain. It's a perception of pain. And true 10 out of 10 pain would be, okay, the equivalent -- okay, appendicitis, some types of childbirth. You don't expect a woman in labor to be able to, you know, type out a manuscript, say, at the same time, although there may be some tough ones that could do that.

> If I soaked your arm in gasoline and lit it, I wouldn't expect you to be able to concentrate enough to read a book. But 10 out of 10, nobody can really tolerate 10 out of 10 pain for any length of time, that's what it is. The ability to concentrate, there's no pain level that you could come up with and say, okay, pain level of 4 you can't concentrate. It really depends on the person, how stoic they are, how motivated they are to concentrate on whatever they're trying to concentrate. *Schakaraschwili Deposition pg. 37-38.*

92. Although Claimant's pain levels are subjective and cannot be measured, it is clear that pain can interfere with a person's ability concentrate, follow instructions, stay on task, complete a task, and interact appropriately with co-workers, customers, and the general public. Therefore, chronic pain can interfere and hinder a person's ability to perform their job and maintain their job.

93. While this ALJ found Dr. Schakaraschwili to be credible, greater weight was given to the testimony of Dr. Anderson-Oeser and the restrictions she assigned. Great weight was given to Dr. Anderson-Oeser's opinions regarding the work restrictions she placed on Claimant because she had the opportunity to treat and evaluate Claimant approximately once a month over the course of more than two years. This has provided her a greater opportunity to observe and examine Claimant and determine the extent of his restrictions and limitations that flow from his Complex Regional Pain Syndrome.

94. Respondents called Katie Montoya as a vocational expert. When presented with just the physical restrictions outlined by Dr. Schakaraschwili, (which consisted of no work requiring finger dexterity in both hands and lifting restricted to the left hand of no more than four pounds occasionally), Ms. Montoya opined that work was available for Claimant within such restrictions.

95. When presented with just physical restrictions outlined by Dr. Anderson-Oeser, (which consisted of no lifting or carrying with the left extremity greater than one to two pounds and no repetitive lifting with the left hand carrying, as well as no repetitive or frequent use of the left hand), Ms. Montoya opined that jobs were available for the Claimant within just these restrictions.

96. Based on just the physical restrictions assigned by Dr. Schakaraschwili or Dr. Anderson-Oeser, Ms. Montoya opined that Claimant should be able to work jobs as a hostess, a cashier, or an unarmed security guard.

97. Ms. Montoya, however, acknowledged that the "rule of thumb" is that only two days of unanticipated absences are generally accepted within the vocational community and that more absences would eliminate a person from competitive employment.

98. Ms. Montoya acknowledged that missing four days of work per month would generally render a person unemployable.

99. Ms. Montoya acknowledged that having unscheduled breaks during the workday, to the degree indicated by Dr. Anderson-Oeser, would render a person unemployable.

100. Similarly, Ms. Montoya acknowledged that vocational rehabilitation generally considers a person that will be off task 10 to 15% of the day to be unable to maintain competitive employment.

101. Ms. Montoya acknowledged that an unarmed security person/surveillance monitor is often required to use bilateral extremities. She was unable to state how many such positions were available, and how much erosion of job availability there would be to such positions, if a person is limited to one arm use. Ms. Montoya was also unable to state how much erosion there would be to security jobs if one was limited to indoor activity. Ms. Montoya was also unable to state how many host jobs were currently available, or how much erosion there would be to host jobs if someone is limited to one-arm work. Ms. Montoya was unable to state how many cashier jobs were available, or how much erosion there would be to cashier jobs if a person was limited to one-armed work.

102. While Ms. Montoya maintained that one-arm jobs were available, she did not identify an actual opening for any such job. Moreover, she did not indicate how successful Claimant would be in obtaining and maintaining such jobs. More specifically, she did not indicate how Claimant's flattened and depressed affect combined with his constant guarding of his left hand, all of which were visibly noticeable and apparent during the hearing, would impact his ability to get hired, especially when competing against available workers who were not constantly guarding their left hand and presenting with a flattened and depressed affect.

103. Dr. Anderson–Oeser referred Claimant to psychologist, Dr. William Boyd. Dr. Boyd first saw Claimant on April 13, 2017, and performed a psychological interview. Dr. Boyd's medical records are set forth in Exhibit 6. During this initial interview, Claimant endorsed feeling depressed and anxious. Claimant noted that he had panic attacks, problems sleeping, and loss of energy. Claimant reported difficulties with activities of daily living, including his hobbies, relaxing, dressing, and sex. Dr. Boyd noted that Claimant had a depressed affect.

104. Dr. Boyd administered psychological testing. Such testing included a Validity Index, which suggested that Claimant approached the test in an open and honest manner. Claimant's score on the Depression Scale supported a diagnosis of depression. Similarly, Dr. Boyd's interpretation of Claimant's score on the Anxiety Score suggested that Claimant may have trouble controlling his anger, may become irritated by situations and events that formally went relatively unnoticed, would be uncomfortable in social situations, and the Claimant would find it difficult to relax and make decisions. Dr. Boyd also suggested that clear logical thinking may be difficult for the Claimant and his coping skills may be strained.

105. Following psychological testing, Dr. Boyd prescribed cognitive behavioral sessions.

106. Following a completion of cognitive behavioral therapy, Dr. Boyd completed *Exhibit 2*, entitled "Mental Residual Functional Capacity Statement", which is dated October 2, 2017.

107. As noted in *Exhibit 2*, Dr. Boyd opined that Claimant's restrictions, associated solely with his mental problems of depression and anxiety, have little, if any, impact on Claimant's ability to function independently, appropriately, and effectively on a

sustained, consistent, useful, and routine basis, in a regular competitive work setting.

108. However, Dr. Boyd noted that the combination of Claimant's physical problems, along with any mental limitations, were such that Claimant would be precluded from completing work more than 30% of any given work day, that he would be absent from work five days or more per month, and that that he will leave work early because of an inability to complete his work day five days or more per month. When compared to an average worker, Dr. Boyd further opined that Claimant could only efficiently perform work duties eight hours per day, five days per week, on a sustained basis less than 50% of the time. The ALJ finds Dr. Boyd's opinions regarding Claimant's limitations regarding his ability to complete work, how often he might be absent, how often he might have to leave work early, and how often he could efficiently perform work duties to be credible and consistent with the testimony of Dr. Anderson-Oeser.

109. Claimant has established that it is more probably true than not that his medical condition will result in him being totally absent from being able and available to work on average four days per month or more. Similarly, Claimant has established that his medical condition will render him unable to complete a workday, if he were working that day, four times or more per month. Such findings are consistent with the medical reports and testimony of authorized treating physician, Dr. Anderson-Oeser, the medical reports and testimony of Respondents' independent medical examiner, Dr. Schakaraschwili, and the medical reports of authorized treating psychologist, Dr. Boyd. Although it cannot be predicted which days, in a 30 day period, Claimant will be unable to work or will have to leave work early – it is found that if Claimant were able to obtain some type of employment, Claimant's condition would ultimately cause him to miss time from work and leave early to such an extent that it would preclude him from being able to maintain that employment.

110. Based on the testimony of both vocational rehabilitationists Ms. Massey and Ms. Montoya, Claimant has established that it is more probably true than not that this degree of possible absenteeism, in any given month, renders him unable to obtain and maintain the same or other employment.

111. Claimant has established that this more probably true than not that his medical condition will require him to be off task more than 15% of a normal workday. Being off task is found to include inability to concentrate because of pain or side effects of medication, and/or the need to take unscheduled work breaks because of pain. Such findings are consistent with the medical reports and testimony of authorized treating physician, Dr. Roberta Anderson-Oeser, and the medical reports of authorized treating psychiatrist, Dr. William Boyd.

112. Based on both the testimony of vocational rehabilitationist Ms. Massey and Ms. Montoya, Claimant has established that it is more probably true than not that being off task to the degree of 15% of the day or more would render him unable to obtain or maintain the same or other employment.

113. On October 31, 2017, Claimant was interviewed evaluated by a psychologist, Dr. William Morton, Psy.D. Respondents contend Dr. Morton determined Claimant had

no memory impairment, no difficulty sitting for extended times, and no difficulty with mood or verbal expression. *(Respondents Exhibit A)*. However, the ALJ does not find Dr. Morton's report to be persuasive, reliable, or helpful in determining the extent of Claimant's psychological restrictions and impairments that will impact his ability to earn any wages. For example, Dr. Morton concluded Claimant has only mild mental limitations concerning interacting appropriately with supervisors, co-workers, and the public. However, Dr. Morton does not explain which portion of his examination and Claimant's medical record supports such conclusion. Moreover, this conclusion is inconsistent with Claimant's statements contained in Ms. Massey's report regarding his inability to interact appropriately with his son's teachers when discussing his son's IEP plan. In fact, Claimant's inability to regulate his behavior at the IEP meetings with his son's teachers resulted in Claimant being advised that he was no longer welcome to attend the IEP meetings.

114. Dr. Morton also concluded in his assessment that "There were no indications of memory impairment." However, his testing revealed that while Claimant was able to recall four unrelated words immediately, he was only able to recall three words after a ten-minute delay, and that he was unable to remember any of the words when given just the category, and ultimately only 1 word when given a multiple choice.

115. Moreover, in another section of his report, Dr. Morton indicated that when Claimant was asked why many foods need to be cooked, Claimant stated, "Disease." He also notes that when Claimant was asked why it is important to study history, he stated, "It repeats itself." From these two questions and Claimant's answers, Dr. Morton concluded Claimant's "judgement and reasoning appear to be fair." This ALJ is unable to determine how those two questions – and Claimant's answers – allowed Dr. Morton to conclude Claimant's judgment and reasoning were fair.

116. Lastly, Dr. Morton concluded Claimant's prognosis is fair and that his limitations will persist until adequately treated. This statement tends to show greater disability than Dr. Morton's other statements which tend to minimize Claimant's limitations. Consequently, the ALJ is unable to find the information contained in Dr. Morton's report to be persuasive in disputing Claimant's contention about the extent of his disability due to his CRPS and the psychological sequelae from such condition.

117. On November 14, 2017, Claimant presented to Dr. Nnunukwe. While noticing sensitivity in the left index finger, the doctor stated Claimant's strength was 5/5 in both the right and left upper extremity, as well as remaining fingers on both hands. The doctor gave Claimant no limitations for standing, sitting, reaching, travelling, or climbing. He also assigned lifting restrictions of 50 pounds occasionally and 25 pounds frequently. *(Respondents Exhibit B)* However, absent from Dr. Nnunukwe's report is any indication how Claimant's medications might impair his cognition and what impact Claimant's lack of restful sleep every night, which is limited to about 4 hours per night, will have on Claimant's ability to concentrate and stay on task in order to obtain and maintain employment. Moreover, there is no indication how Claimant's chronic pain will impact his ability to engage in the physical activities Dr. Nnuwuke contends claimant can perform without causing Claimant's pain to flare up. The ALJ does not find it credible that Claimant would be able to perform a job that would require him to lift with his right hand 50 pounds occasionally and 25 pounds

frequently without causing his CRPS to flare-up. In essence, Dr. Nnunukwe contends Claimant would be able to frequently lift with his right hand approximately 3 gallons of milk at one time and engage in this activity frequently during his workday while guarding his left hand and not have any flare-ups of his CRPS in his left hand. Moreover, Dr. Nnunukwe does not discuss how many flare-ups Claimant might have each month. He also fails to address how many days Claimant might be unable to work each month and how many days Claimant might not be able to complete a shift each month due to a flare-up. In the end, the ALJ does not find Dr. Nnunukwe's opinions to be persuasive.

118. Due to his work related injury, Claimant is unable to earn any wages in the same or similar employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S. (the "Act"), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

I. Whether Claimant established by a preponderance of the evidence that he is unable to earn any wages in the same or other employment as a direct and proximate result of the industrial injury and entitled to permanent total disability benefits.

To establish a claim for PTD, Claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. Sections 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003); *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). Claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995).

In weighing whether Claimant is able to earn any wages, the ALJ may consider various human factors, including the claimant's physical condition, mental ability, age, employment history, education, and availability of work that Claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). The ALJ may also consider Claimant's ability to handle pain and the perception of pain. *Darnall v. Weld County,* W.C. No. 4-164-380 (I.C.A.O. April 10, 1998). The critical test is whether employment exists that is reasonably available to Claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. The question of whether Claimant proved inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995).

As a matter of public policy, PTD benefits may be awarded even if Claimant has held, or currently holds, some type of post-injury employment where the evidence shows that Claimant is not physically able to sustain the post-injury employment, or that such employment is unlikely to become available to Claimant in the future in view of the particular circumstances. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001).

Claimant has been diagnosed with, *inter alia*, Complex Regional Pain Syndrome, depression, anxiety, and significant psychosocial dysfunction resulting from the industrial injury. Claimant credibly testified that he continues to experience various symptoms, which includes chronic pain, as a result of his work-related conditions, which have decreased his functionality and ability to work. Objective findings combined with

consistent reports of ongoing symptoms and difficulties performing various activities of daily living throughout the medical and vocational record corroborate Claimant's reports and testimony of ongoing symptomatology and disability.

There are some alleged inconsistencies in the record. For example, Dr. Anderson-Oeser has advised Claimant that he should not drive while taking Oxycodone or Tizanidine. The records indicate that Claimant drives to his medical appointments when he does not have alternative transportation available. However, the fact that Claimant is driving, when he should not, does not negate the fact that his medications are mentally impairing. Therefore, despite some inconsistencies contained in the record, the record as a whole supports Claimant's claimed disabilities.

Dr. Anderson-Oeser credibly opined Claimant is severely restricted in his ability to perform various physical activities which would be required for Claimant to work. She also credibly opined that Claimant will require, on average, 4 days off per month due to flare-ups and that Claimant will also have to leave work early and unpredictably due to flare-ups. Both Ms. Massey and Ms. Montoya agreed that such absenteeism would hinder Claimant's ability to maintain employment. The ALJ is mindful that if Claimant were able to obtain some type of employment, his anticipated flare-ups might not coincide with an actual work shift at least 4 times per month or cause him to leave early at least 4 times per month. Regardless, the unpredictable nature of his flare-ups will negatively affect his ability to obtain and maintain any employment. Furthermore, Claimant also suffers from mental limitations with respect to concentration, memory focus and comprehension as a result of his pain and medications.

Dr. Schakaraschwili gave some examples of events than would cause enough pain to prevent a person from concentrating and staying on task. Although the examples were extreme, such as childbirth and having an arm soaked in gasoline and lit on fire, they conveyed the point that pain can negatively impact a person's ability to concentrate and stay on task.

Claimant's continued symptoms, restrictions, and limitations were caused by his industrial injury. Based on the totality of the evidence, Claimant has established by a preponderance of the evidence that it is more likely than not that he is unable to earn any wages in the same or other employment and that he is entitled to permanent total disability benefits.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is permanently and totally disabled.

2. Respondents shall pay Claimant permanent total disability benefits as of January 2, 2019, pursuant to the average weekly wage of $1,211.78 per week, as reflected in the Amended Final Admission of Liability dated March 1, 2019.

3. As noted in footnote 1, the issue of "offsets and overpayments" was endorsed to be heard at the hearing. The issue of social security offsets was discussed briefly at the beginning of the hearing and it was ultimately agreed that the parties would attempt to resolve such issue after resolution of the PTD matter and the ALJ agreed. Therefore, whether Claimant received social security disability benefits and whether Respondents can take an offset against certain TTD benefits that have been paid, and the amount of such offset, was not addressed at the hearing. Moreover, whether any offset against permanent total disability benefits is allowed pursuant to Section 8-42-103(1)(c)(IV), C.R.S., since the injury on which the award for PTD is based occurred before Claimant reached 45 years of age, was also not discussed and addressed at the hearing. Therefore, the issues involving social security offsets and overpayments are reserved for future determination.

4. Respondent shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. Any issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 13, 2019

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-094-478-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 16, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/16/19, Courtroom 1, beginning at 8:30 AM, and ending at 11:00 AM). The official Spanish/English Interpreter was Jose Meza. shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 and 2 were admitted into evidence, without objection. Respondents' Exhibits A through I were admitted into evidence, without objection, with the exception of Exhibit B, pp. 11-14, which was originally objected to as to the translation, however, the official interpreter made notations amending the translation, and as amended, Exhibit B, pp. 11-14, was admitted without objection.

At the conclusion of the hearing, the ALJ permitted the filing of the post-hearing evidentiary depositions of Kay B[Redacted] and the Claimant, which were taken on May 17, 2019, and written transcripts thereof were filed on June 10, 2019. Thereafter, the ALJ ordered telephonic closing arguments, which occurred on July 22, 2019. At the conclusion of the arguments, the matter was deemed submitted for decision and the ALJ ruled from the bench, referring preparation of a proposed decision to counsel for the Claimant. The proposed decision was submitted on July 29, 2019, and Respondents filed technical objections on July 31, 2019, at which time the matter was submitted for decision. After considering the proposed decisions and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern average weekly wage (AWW); temporary partial disability (TPD) benefits from September 23, 2018 through October 20, 2018; temporary total disability (TTD) benefits from October 21, 2018 through March 20, 2019; and, Respondents' affirmative defense of Responsibility for termination/voluntary resignation.

The Claimant bears the burden of proof on all issues, with the exception of "responsibility for termination/voluntary resignation, in which case Respondents bear the burden of proof. The burden is "preponderance of the evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant's theory of AWW was $376.43. Respondents' theory of AWW was $362.33. Based on independent calculations,the ALJ finds that the Claimant's AWW is $366.71.

2. The parties stipulated and the ALJ finds that the Claimant continued to work at reduced wages and is, therefore, entitled to TPD is entitled to TPD benefits. It undisputed that the Claimant had restrictions which precluded her from performing her regular pre-injury duties.

3. The Claimant sustained an admitted industrial injury to her left knee on September 19, 2018 (Respondents' Exhibit A).

4. On September 20, 2018, Martin Kalevik, D.O., the Claimant's authorized treating physician (ATP) assigned restrictions of limited lifting, pushing and pulling to 10 to 15 pounds and to avoid crawling, kneeling, squatting and climbing (Claimant's Exhibit 1,,p..6).

5. Claimant's regular employment as a hotel housekeeper requires lifting over 15 pounds and kneeling in order to properly clean the bathrooms, empty trash, and change linens.

Temporary Total Disability/Voluntary Resignation

6. The Claimant stopped working on October 21, 2019. Respondents deny TTD benefits based on a claim that Claimant voluntarily stopped presenting for work. The Claimant claims that she stopped working because she could no longer perform work outside her restrictions. As found herein below, no persuasive evidence was presented that Claimant was warned, fired, or violated a company policy by her stopping work because she was performing work outside her restrictions.

7. On October 1 and 5, 2018, ATP Dr. Kalevik documented that the Claimant acknowledged she was working, however, "that she has been forced to exceed her recommended restrictions" (Claimant's Exhibit 1, pp. 8-11).

8. On October 15, 2018, the Claimant complained tto ATP Dr. Zachary Jipp, D.C., Ciropractor, that she was in a lot of pain and she thought work was making it worse. "She admit her co-workers are older people and she feels bad making them do all the work so she admits she is doing activities above her restrictions which aggravate her." In the assessment ATP Jipp notes, "work continues to aggravate her as she is performing duties above her restrictions. She is going to try to see a provider today to discuss this" (Claimant's Exhibit 1, p. 22).

9. Claimant reported feeling better two days later on October 17, 2019 "She saw the provider a couple of days ago and now is following her restrictions at work which is helping prevent flare ups for her" (Claimant's Exhibit 1, p.23).

10. On October 22, 2018, the Claimant reported to ATP Chiropractor Jipp that "her boss is giving her a hard time for missing work for these appointments and that he isn't accommodating her restrictions very well" (Claimant's Exhibit 1, p. 23).

11. On October 24, 2018, the Claimant reported, "She says she has been under tremendous amount of stress and she thinks the stress is what is preventing her from improving. She tells me her boss does not accommodate her restrictions and gets mad at her for missing work for her doctor appointments. She says that he is requesting more paper work from her but she has given him every piece of paperwork that she get and that she has" (Claimant's Exhibit 1, p. 25). The ALJ finds the Claimant credible in this regard. The peripheral details in her testimony reveal that she could not have had an opportunity to fabricate the details concerning how she was pressured to exceed her restrictions and, thus, constructively forced to stop coming to work. She consistently recounted the same pressure to exceed her restrictions.

12. Dr. Jipp noted, "She fails to progress as rapidly because she is under a lot of stress at work with her boss and is also being forced to work above and beyond her restrictions" (Claimant's Exhibit 1, p. 25).

13. After a two-week gap, the Claimant returned to Dr. Jipp. She reported, "she hasn't been coming because her boss has been intimidating her and making her

work beyond her restrictions and telling her she will have to pay for these treatments" (Exhibit 1, p. 26).

Evidentiary Deposition of Kay B[Redacted]

14. Respondents' representative Kay B[Redacted] testified by evidentiary deposition.. B[Redacted] testified that he always accommodated her restrictions and that Claimant simply stopped coming to work. B[Redacted]'s testimony amounted to a generalized denial of any pressure on his part in forcing the Claimant to exceed her restrictions. B[Redacted]'s testimony does **not** support a firing or violation of company policy,*e.g.* "no-call, no-show." In fact, no persuasive evidence regarding this proposition was presented.

15. Respondents failed to demonstrate that it is more probably true than not that Claimant was responsible for her termination. In considering the testimony at hearing and the evidentiary depositions, along with the exhibits, the ALJ is not persuaded that Claimant voluntarily stopped coming to work for the following reasons:

a. Claimant's medical records, created prior to litigation and contemporaneously with the events as they occurred demonstrate Claimant's state of mind – specifically that she felt that the work exceeded her restrictions, that her Employer questioned her missing work for medical treatment, and that she was not getting the assistance she needed.

b. The text messages and the testimony reflect that Claimant and Kay B[Redacted] had difficulty communicating. Claimant believed B[Redacted] could speak Spanish. B[Redacted] testified that he did not speak Spanish. The translated text messages reveal various translation errors, some of which could dramatically affect the message. For example in one, Claimant asked, "Are you firing me?" but it was translated, "I'm running."

16. The Claimant was placed at maximum medical improvement (MMI). by her ATP on March 21, 2019.

Ultimate Findings

17. For the reasons herein above specified, the ALJ finds the Claimant's testimony credible and persuasive. The ALJ further finds the testimony of Kay B[Redacted] lacking in credibility. The opinions of Dr. Kalevik and Dr. Jipp, D.C. are undisputed and credible.

18. Between conflicting lay testimony, the ALJ makes a rational decision, based on substantial evidence, to accept the Claimant's version of being forced to

exceed her restrictions and, thus, constructively forced to leave work on October 21, 2018.

19. The ALJ reviewed almost a full year of employer wage records and determined that this duration of time would be the fairest to determine temporary wage loss. The Claimant's AWW is $366.71, which is the baseline for temporary wage loss.

20. The Claimant was temporarily and partially disabled from September 23, 2018 through October 20, 2018 and, thus, entitled to $578.74 in TPD benefits for this period.

21. The Claimant was temporarily and totally disabled from October 21, 2018 through March 20, 2019, both dates inclusive, 151 days.

22. Respondents failed to prove their affirmative defense of voluntary separation from employment by preponderant evidence.

23. Based on her AWW of $366.71, a weekly TTD rate of $244.47 (or $34.9244) is yielded. For the period from October 21, 2018 through March 20, 2019, both dates inclusive, the Claimant has proven by preponderant evidence that she is entitled to aggregate TTD benefits of $5,273.59.

24. The Claimant failed to prove TTD from March 21, 2019 through the hearing date of May 16, 2019.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913);

also see Heinicke v. Indus. Claim Appeals Office, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's testimony was credible and persuasive. The testimony of Kay B[Redacted] was lacking in credibility. The opinions of Dr. Kalevik and Dr. Jipp, D.C. were undisputed and credible.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting lay testimony, the ALJ made a rational decision, based on substantial evidence, to accept the Claimant's version of being forced to exceed her restrictions and, thus, constructively forced to leave work on October 21, 2018, and to reject Kay B[Redacted]'s testimony.

Average Weekly Wage

c. Section 8-42-102, C.R.S. is designed to compensate for **total** temporary wage loss. *See Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, Claimant lost wages from the Employer and

Further, an ALJ has the discretion to determine a claimant's average weekly wage, including the claimant's cost for COBRA insurance, based not only on the claimant's wage at the time of injury, but also on other relevant factors when the case's unique circumstances require, including a determination based on increased earnings and insurance costs at a subsequent employer. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). By implication an ALJ has discretion in reviewing employer wage records, to use a period of time that most fairly illustrates wage loss/loss of earning capacity. As found, the ALJ determined that the Claimant's AWW is $366.71.

Temporary Partial Disability

d. As stipulated and found, the Claimant was TPD from September 23, 2018 through October 20, 2018, and entitled to aggregate TPD benefits of $578.74.

Temporary Total Disability

e. To establish entitlement to temporary disability benefits, the Claimant must prove that the industrial injury has caused a "disability," and that she has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not her responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair her opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals Office (ICAO), December 18, 2000]. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant was temporarily and totally disabled from October 21, 2018 through March 20, 2019, both dates inclusive, a total of 151 days.

f. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, based on her AWW of $366.71, a weekly TTD rate of $244.47 (or $34.9244) is yielded. For the period from October 21, 2018 through March 20, 2019, both dates inclusive, the Claimant has proven by preponderant evidence that she is entitled to aggregate TTD benefits of $5,273.59.

g. The Claimant has failed to prove entitlement to TTD benefits from March 21, 2019 through the hearing date, May 16, 2019.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on all issues with the exception of entitlement to TTD benefits from March 21, 2019 through the hearing date of May 16, 2019.

i. Respondents have failed to sustain their burden with respect to their affirmative defense of responsibility for termination/voluntary resignation.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents' affirmative defense of "responsibility for termination/voluntary resignation is hereby denied and dismissed.

B. Respondents shall pay the Claimant temporary partial disability benefits from September 23, 2018 through October 20, 2018. in the aggregate amount of $578.74, which is payable retroactively and forthwith.

C. Respondents shall pay the Claimant temporary total disability benefits from October 21, 2018 through March 20, 2019, both dates inclusive, a total of 151 days, at the rate of $244.476 per week, or $34.92 per day, in the aggregate amount of $5,273.59, which is payable retroactively and forthwith.

D. Any and all claims for temporary disability benefits from March 21, 2019 through May 16, 2019 are hereby denied and dismissed.

E. Respondent on all amounts of indemnity benefits due and not paid when due.

F. Any and all issues not determined herein are reserved for future decision.

DATED this 14th day of August 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-070-233-003

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable right upper extremity injury on January 30, 2018 during the course and scope of her employment with Employer.

2. A determination of Claimant's Average Weekly Wage (AWW).

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period January 31, 2018 until terminated by statute.

FINDINGS OF FACT

1. Employer is a temporary staffing company that provides janitorial services to the Colorado Convention Center. Claimant worked part-time for Employer performing janitorial duties. She specifically picked up trash and cleaned bathrooms during and after events.

2. Claimant worked for Employer from July 7, 2017 through January 30, 2018 or a period of 30 weeks and five days. Throughout Claimant's employment, she earned $14.53 per hour for "Regular," $5.27 per hour for "Fringe," $0.50 per hour for "Shift Differential" and $0.23 per hour for "Travel." Claimant testified that she received $23.50 per hour. She earned a total of $3,743.12 during her employment.

3. On January 30, 2018 Claimant was pushing a tilt cart on a concrete floor to remove trash, boxes, plastic and papers after an event at the Colorado Convention Center. The cart was made of plastic with rubber wheels and a metal handle. Claimant rolled the cart over a screw then hit a live wire that flashed and sparked. She experienced a jolt or shock in her right upper extremity. Claimant noted she specifically felt tingling, pain and numbness from her right shoulder down to her torso. She reported her injury to Employer and then went home and rested.

4. Frank Davis worked with Claimant on January 30, 2018 and was pushing a trash cart next to her at the time of the electrical incident. He completed an injury report form and testified at the hearing in this matter. In the report Mr. Davis stated that Claimant ran over a live wire and a screw with her trash cart. They saw a flash, were startled and contacted a supervisor. Mr. Davis noted "no injury occurred, [Claimant] was only stunned by the flash, but she was okay."

5. A supervisor's Accident Investigation Form, Incident Investigation Report, and a handwritten statement were submitted into evidence. The Investigation Form stated that there was a spark under the cart. The Incident Investigation Report noted the incident as a "near miss" and there was no burn or other injury. The Report further reflects that Claimant reported the incident over the radio and when she was asked whether she was okay she responded "she was in shock." The written statement attached to the incident report stated that Claimant called "over the radio saying that the cord sparked and that she was fine." The statement further recorded that "she was wearing rubber gloves and was pushing a plastic cart with rubber wheels." Finally, the statement specified that Claimant was cleared by medical and sent home to relax

6. Laurie Sarmiento is the owner of Employer. Ms. Sarmiento learned about the spark incident from a third person and first spoke with Claimant about the matter on January 30, 2018. Claimant remarked that she was fine but startled, and had been advised to go home and rest. On January 31, 2018 Ms. Sarmiento instructed Claimant to visit a doctor because she was still experiencing pain.

7. On January 31, 2018 Claimant visited Concentra Medical Centers for treatment. Claimant reported pain, achiness and numbness in her right upper extremity. A physical examination of Claimant's right arm was normal and did not reveal any bruises or burn marks. Medical providers diagnosed an electrical burn, upper extremity weakness and right upper extremity numbness. Physicians prescribed medications and assigned light duty work restrictions.

8. Claimant subsequently underwent conservative treatment including physical therapy. She continued to report aching, numbness and weakness in her right upper extremity. Physicians noted that Claimant did not exhibit any visible wounds or burns on her right arm.

9. On March 21, 2018 Gary Zuehlsdorff. D.O. performed a physician advisor review of Claimant's claim. He noted that Claimant had been pushing a tow cart at the Colorado Convention Center, struck a screw and then hit a wire that sparked. Dr. Zuelhsdorff commented that Claimant was wearing rubber gloves and the cart was plastic with rubber and plastic wheels. Concentra records revealed that Claimant did not suffer any dermatological changes or entrance and exit wounds. Dr. Zuehlsdorff concluded that it was "extremely unlikely that [Claimant] would have suffered any type of electrical injury given the above review of the physical setting." He emphasized that the cart was plastic, had rubber and plastic wheels and Claimant was wearing rubber gloves. Furthermore, there were no entrance of exit wounds but merely diffuse complaints of musculosketal pain. Dr. Zuehlsdorff determined that there was only minimal evidence to suggest that Claimant suffered any injury and the case should be closed for lack of causation.

10. On April 24, 2018 Claimant underwent a right shoulder MRI. The MRI revealed a "moderate grade partial-thickness superior rotator cuff tear with mild overlying

bursal inflammation." The imaging also reflected a possible superior labral tear and a low-grade partial thickness tear of the subscapular tendon.

11. On May 31, 2018 Claimant visited Armando F. Vidal, M.D. at UCHealth for an examination. Claimant reported that she suffered "an acute right shoulder electrocution-type injury to her right shoulder." She specifically remarked that on January 30, 2018 she was pushing a cart at work, suffered a shock from a live wire and experienced immediate pain in her right shoulder. She underwent physical therapy and a right shoulder MRI. An examination revealed acute inflammation in Claimant's right shoulder. The MRI reflected fluid in the subacromial and subdeltoid bursas. Dr. Vidal diagnosed Claimant with a moderate grade partial-thickness rotator cuff tear with mild overlaying bursal inflammation, a possible superior labral tear and a low-grade partial thickness tear of the subscapular tendon.

12. On June 28, 2018 Claimant underwent right shoulder surgery at UCHealth Surgical Care. The surgery consisted of a right shoulder arthroscopy, rotator cuff repair, biceps tenodesis and subacromial decompression.

13. On December 21, 2018 Claimant underwent an independent medical examination with John Raschbacher, M.D. Dr. Raschbacher explained that on January 30, 2018 Claimant was pushing a tilt trash cart in the Colorado Convention Center. The cart was made of plastic with four plastic wheels and had a metal handle. Claimant had her right hand on the metal handle of the cart while she was holding a piece of trash in her left hand. She reported that she felt a tingle and heard a pop while rolling her cart behind a coworker. Claimant specifically reported a shock and tingling in the right side of her neck down into her right hip. She remarked that surgery improved her symptoms and completely removed the burning sensation and electrical feeling from her right shoulder.

14. After reviewing Claimant's medical records and performing a physical examination, Dr. Raschbacher determined that it was not medically probable that Claimant suffered a right upper extremity injury while at work on January 30, 2018. He specifically noted that it was unlikely an electrical current was transmitted from a wire by a screw, across plastic or rubber wheels, through a plastic cart and into Claimant's right arm. Moreover, because Claimant may have been wearing rubber gloves, an electrical shock was even less likely. Dr. Raschbacher noted that the electrical incident involved a household current that would not have produced the symptoms described by Claimant or "an anatomical disruption in a shoulder joint requiring surgery." Moreover, there was no evidence of an electrical shock in the form of entry or exit wounds on Claimant's right arm. Dr. Raschbacher thus recommended denying liability for Claimant's January 30, 2018 claim.

15. Claimant testified at the hearing in this matter regarding the January 30, 2018 electrical incident. She explained that the tilt cart was made of plastic but rested on a metal frame. The wheels were attached to the metal frame. The cart also had a metal

handle and she was not wearing rubber gloves. When Claimant ran over the electrical cord with the trash cart she immediately felt a shock, pain, tingling and numbness on her right side from her shoulder down to her torso.

16. Dr. Raschbacher also testified at the hearing in this matter. He maintained that it was not medically probable that Claimant suffered an electrical injury to her right upper extremity while working for Employer on January 30, 2018. He reiterated that Claimant ran over a screw and wire with a plastic tilt cart that had plastic wheels and a metal handle. Dr. Raschbacher explained that Claimant did not exhibit any entry or exit wounds after the accident. Claimant also had a normal EMG of her right upper extremity and thus did not suffer any neurological damage. Finally, Dr. Raschbacher commented that, if Claimant had suffered an injury on January 30, 2018, her symptoms would have resolved and not increased over time.

17. Claimant has failed to establish that it is more probably true than not that she sustained a compensable right upper extremity injury on January 30, 2018 during the course and scope of her employment with Employer. Initially, on January 30, 2018 Claimant was pushing a tilt cart on a concrete floor to remove trash after an event at the Colorado Convention Center. The cart was made of plastic with rubber wheels and a metal handle. Claimant rolled the cart over a screw then hit a live wire that flashed and sparked. Despite Claimant's contention that she suffered an electrical injury to her right upper extremity because of the incident, the written reports, medical records and persuasive opinions reflect that she likely did not suffer an injury as a result of the January 30, 2018 incident.

18. Claimant and Mr. Davis testified consistently regarding the events leading up to and including the observation of a spark as Claimant pushed her tilt cart over a wire on the ground. However, there is significant divergence between Claimant's assertions at hearing and the written and testimonial record. Claimant testified and stated to her numerous treatment providers that she felt an immediate onset of symptoms including pain, numbness, tingling and aching in her right arm and shoulder. However, in Claimant's written statement immediately following the January 30, 2018 incident, there was no mention of an electrical injury or symptoms immediately following the event. Furthermore, Mr. Davis testified that Claimant did not exhibit any signs of injury or make any remarks about an injury after pushing the trash cart over the electrical cord. The written investigation reports included similar statements from Claimant suggesting that she was fine and was sent home to calm down instead of for any physical injury. Ms. Sarmiento also testified that during a telephone conversation with Claimant on the evening of January 30, 2018 Claimant stated she was fine. The accounts of Mr. Davis, Ms. Sarmiento, Claimant's own written report and the investigation report all suggest that Claimant was likely not injured during the spark incident on January 30, 2018.

19. The medical records also reflect that Claimant unlikely suffered an electrocution-type injury at the Colorado Convention Center on January 30, 2018. On

January 31, 2018 Claimant visited Concentra for treatment. A physical examination of her right arm was normal and did not reveal any bruises or burn marks. Claimant subsequently underwent conservative treatment including physical therapy. She continued to report aching, numbness and weakness in her right upper extremity. However, physicians noted that Claimant did not exhibit any visible wounds or burns on her right arm. Physician Advisor Dr. Zuehlsdorff concluded that it was "extremely unlikely that [Claimant] would have suffered any type of electrical injury given the above review of the physical setting." He reasoned that the cart was plastic, had rubber and plastic wheels and Claimant was wearing rubber gloves. Furthermore, there were no entrance of exit wounds but merely diffuse complaints of musculosketal pain. Dr. Zuehlsdorff determined that there was only minimal evidence to suggest that Claimant suffered any injury and the case should be closed for lack of causation. Furthermore, Dr. Raschbacher determined that it was not medically probable that Claimant suffered a right upper extremity injury while at work on January 30, 2018. He specifically noted that it was unlikely an electrical current was transmitted from a wire by a screw, across plastic or rubber wheels, through a plastic cart and into Claimant's right arm. Dr. Raschbacher noted that the electrical incident involved a household current that would not have produced the symptoms described by Claimant or "an anatomical disruption in a shoulder joint requiring surgery." Moreover, there was no evidence of an electrical shock in the form of entry or exit wounds on Claimant's right arm. The bulk of the persuasive evidence thus reveals that Claimant did not suffer an electrical injury while pushing a trash cart on January 30, 2018. There is a lack of a causal connection between pushing the trash cart over the electrical cord and Claimant's right upper extremity symptoms. More concisely, there was an insufficient mechanism of injury to produce Claimant's reported symptoms. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §840-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable right upper extremity injury on January 30, 2018 during the course and scope of her employment with Employer. Initially, on January

30, 2018 Claimant was pushing a tilt cart on a concrete floor to remove trash after an event at the Colorado Convention Center. The cart was made of plastic with rubber wheels and a metal handle. Claimant rolled the cart over a screw then hit a live wire that flashed and sparked. Despite Claimant's contention that she suffered an electrical injury to her right upper extremity because of the incident, the written reports, medical records and persuasive opinions reflect that she likely did not suffer an injury because of the January 30, 2018 incident.

8. As found, Claimant and Mr. Davis testified consistently regarding the events leading up to and including the observation of a spark as Claimant pushed her tilt cart over a wire on the ground. However, there is significant divergence between Claimant's assertions at hearing and the written and testimonial record. Claimant testified and stated to her numerous treatment providers that she felt an immediate onset of symptoms including pain, numbness, tingling and aching in her right arm and shoulder. However, in Claimant's written statement immediately following the January 30, 2018 incident, there was no mention of an electrical injury or symptoms immediately following the event. Furthermore, Mr. Davis testified that Claimant did not exhibit any signs of injury or make any remarks about an injury after pushing the trash cart over the electrical cord. The written investigation reports included similar statements from Claimant suggesting that she was fine and was sent home to calm down instead of for any physical injury. Ms. Sarmiento also testified that during a telephone conversation with Claimant on the evening of January 30, 2018 Claimant stated she was fine. The accounts of Mr. Davis, Ms. Sarmiento, Claimant's own written report and the investigation report all suggest that Claimant was likely not injured during the spark incident on January 30, 2018.

9. As found, the medical records also reflect that Claimant unlikely suffered an electrocution-type injury at the Colorado Convention Center on January 30, 2018. On January 31, 2018 Claimant visited Concentra for treatment. A physical examination of her right arm was normal and did not reveal any bruises or burn marks. Claimant subsequently underwent conservative treatment including physical therapy. She continued to report aching, numbness and weakness in her right upper extremity. However, physicians noted that Claimant did not exhibit any visible wounds or burns on her right arm. Physician Advisor Dr. Zuehlsdorff concluded that it was "extremely unlikely that [Claimant] would have suffered any type of electrical injury given the above review of the physical setting." He reasoned that the cart was plastic, had rubber and plastic wheels and Claimant was wearing rubber gloves. Furthermore, there were no entrance of exit wounds but merely diffuse complaints of musculosketal pain. Dr. Zuehlsdorff determined that there was only minimal evidence to suggest that Claimant suffered any injury and the case should be closed for lack of causation. Furthermore, Dr. Raschbacher determined that it was not medically probable that Claimant suffered a right upper extremity injury while at work on January 30, 2018. He specifically noted that it was unlikely an electrical current was transmitted from a wire by a screw, across plastic or rubber wheels, through a plastic cart and into Claimant's right arm. Dr. Raschbacher noted that the electrical incident involved a household current that would not have produced the symptoms

described by Claimant or "an anatomical disruption in a shoulder joint requiring surgery." Moreover, there was no evidence of an electrical shock in the form of entry or exit wounds on Claimant's right arm. The bulk of the persuasive evidence thus reveals that Claimant did not suffer an electrical injury while pushing a trash cart on January 30, 2018. There is a lack of a causal connection between pushing the trash cart over the electrical cord and Claimant's right upper extremity symptoms. More concisely, there was an insufficient mechanism of injury to produce Claimant's reported symptoms. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

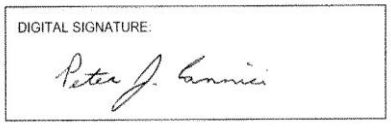
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 15, 2019.



_____

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **M,** Claimant, vs. **R,** Employer, And **N**, Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-044-197-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in the above-captioned matter was held before Administrative Law Judge Margot W. Jones on April 25, 2019, at 3:22 p.m. in Courtroom 4 in Denver, Colorado. Claimant was present in person and represented by _____, Esq. Respondents were represented by _____, Esq. Claimant's exhibits A-B and Respondents' exhibits A-E were admitted into evidence.

In this order, M shall be referred to as "Claimant," R shall be referred to as "Employer" and N Insurance Company shall be referred to as "Insurer." Employer and Insurer, collectively, will be referred to as "Respondents."

In this order, the Judge may use the following acronyms: C.R.S. refers to Colorado Revised Statutes (2018); the Act refers to the Workers' Compensation Act of Colorado, §§8-40-101, et seq., supra; OAC refers to the Office of Administrative Courts; OACRP refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and WCRP refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUE

Whether Claimant has proven by a preponderance of the evidence that the Synvisc injection recommended by William Sterett, M.D., is causally related to the industrial injury of March 29, 2017.

STIPULATION

Claimant's Average Weekly Wage is $1,636.45.

FINDINGS OF FACT

1. On March 29, 2017, Claimant sustained an admitted industrial injury to his right knee, right shoulder and left hand when he slipped while walking down a hallway while working for Employer. Respondents admitted liability for the injuries and provided Claimant with medical treatment.

2. Claimant first sought treatment from Aspen Medical Clinic on April 3, 2017, where he was seen by Kim Scheuer, M.D. Dr. Scheuer documented that Claimant's right knee pain was in the area located "behind" [posterior] and "outside" [lateral] his right knee, with "no instability." Dr. Scheuer assessed Claimant with acute pain of the right shoulder, right knee and left wrist, ordered x-rays of the left wrist and recommended physical therapy.

3. Claimant returned to Aspen Medical Clinic on April 12, 2017, where he was seen by Dewayne Niebur, M.D. Consistent with Dr. Scheuer's office note, Dr. Niebur documented that Claimant's right knee pain was "[p]osterior and medial/lateral" with "[n]o instability." Exhibit 1, p. 130. William I. Sterett, M.D. has performed multiple surgeries to Claimant's left knee, culminating in a total knee arthroplasty in March 2013. Therefore, Claimant requested a referral to Dr. Sterett and Dr. Niebur complied.

4. Claimant underwent right knee x-rays on April 19, 2017, which showed postoperative[1] and degenerative changes without acute fracture or effusion.

5. Dr. Sterett examined Claimant's right knee on April 24, 2017, documenting Claimant's complaints of right knee medial and lateral joint pain. Dr. Sterett recommended a right knee MRI.

6. Claimant underwent the right knee MRI on May 5, 2017, which Dr. Sterett reviewed on the same date and opined that the exam showed lateral meniscus posterior root tear, 2 loose bodies and patellofemoral and lateral compartment chondromalacia. His diagnosis was meniscus tear and loose bodies. Dr. Sterett specifically did *not* diagnose Claimant with osteoarthritis.

[1] Claimant underwent a right knee anterior cruciate ligament bone-patellar-bone reconstruction in August 1999. [Exhibit A2, pp. 51-52].

7. On May 30, 2017, Dr. Sterett performed right knee arthroscopic partial medial and lateral meniscectomies, bicompartmental chondroplasty, lysis of adhesions and removal of scar tissue and removed two loose bodies.

8. On July 12, 2017, Dr. Sterett documented that Claimant complained of medial sided catching, causing pain along the joint line of the right knee. Therefore, Dr. Sterett performed a steroid injection into the area of the catching.

9. The Aspen Valley Hospital Rehabilitation Services discharge summary indicates that as of July 17, 2017, Claimant denied pain in his right knee. On August 23, 2017, Dr. Sterett released Claimant from care with no restrictions, indicating that Claimant is making excellent progress and future treatment is not anticipated. Claimant was to seek treatment, as needed.

10. Claimant returned to Aspen Medical on August 24, 2017, where Dr. Niebur documented that Claimant stated his right knee symptoms were usually without pain, but he may ache if active. Claimant reported an injection resolved the medial knee pain. On the Pain Diagram for this visit, Claimant did not mark any pain in his right knee. On all of the Pain Diagrams prior to August 24, 2017, Claimant marked pain in his right knee.

11. On September 21, 2017, Dr. Niebur documented that Claimant reported his right knee was doing well with no pain or swelling. On the Pain Diagram for this visit, Claimant again did not mark any pain with his right knee. Dr. Niebur removed the right knee from the problem list in his medical records, providing assessments for only Claimant's right shoulder and left wrist.

12. Claimant testified that he essentially noticed no improvement from his right knee surgery. Claimant's testimony is not credible, as the physical therapy discharge note, Dr. Niebur's records and Dr. Sterett's records all document that Claimant's right knee was pain free and he was very active in August and September 2017. Claimant's reports to Dr. Sterett regarding his knee are deemed credible. The evidence established that Claimant made excellent progress postoperatively and was reporting no pain in his right knee. Thus, Claimant's testimony regarding his pain complaints and his response to surgery is not credible.

13. Claimant returned to Dr. Niebur on October 24, 2017, complaining of burning pain to the anterior and medial right knee and a sense of instability with swelling which occurred on transition from biking to hiking. Claimant's complaints in October 2017 are different from his complaints after his fall at work. After the fall at work, Drs. Scheuer, Niebur and Sterett all document that Claimant's pain complaints were in the posterior knee with no instability. In October 2017, after experiencing almost three and one-half months of no right knee pain, Claimant began to complain of pain in his anterior knee with instability.

14. On November 15, 2017, Dr. Sterett performed another steroid injection, and stated that if Claimant was not better, the doctor would order a repeat MRI of the right knee without contrast to evaluate for a possible medial meniscal tear.

15. The repeat MRI of the right knee was taken on January 4, 2018. On January 19, 2018, Dr. Sterett opined that the MRI revealed a progression of Claimant's lateral and patellofemoral osteoarthritis. Dr. Sterett opined that the cause of Claimant's right knee pain was secondary to chondromalacia and inflammation of the knee. Dr. Sterett recommended an injection of Synvisc One.

16. On March 16, 2018, Dr. Sterett opined that Claimant's meniscus tear resolved, but the chondral delamination was continuing to delaminate. Dr. Sterett's assessment was chondral delamination with multiple loose bodies patellofemoral joint of the right knee. Dr. Sterett recommended the Synvisc injection and related it to the original injury. However, Dr. Sterett recommended the Synvisc injection to treat Claimant's chondral delamination of the patella.

17. Based on Dr. Sterett's March 16, 2018, note, he reached the conclusion that the chondral delamination of the patella is related to the work related injury because he observed chondral delamination during the arthroscopic surgery on May 30, 2017. Claimant has the burden to prove that the chondral delamination of the patella observed and debrided by Sterett during surgery was caused, aggravated or accelerated by the incident on March 29, 2017. Claimant did not sustain his burden of proof on this issue.

18. Dr. Sterett's assessment on May 5, 2017, and May 25, 2017, was tear of the lateral meniscus and loose body of the right knee. In his letter dated February 7, 2019, when commenting specifically on causation, Dr. Sterett made no mention of Claimant sustaining an injury to his patella or chondral delamination. Dr. Sterett opined that Claimant sustained meniscal tears in the event on March 29, 2017. Yet, during surgery, Dr. Sterett chose to debride the patella. Dr. Sterett debrided Claimant's pre-existing, non-industrial chondral delamination of the patella since the doctor already was inside Claimant's knee on March 29, 2017. However, Claimant still has the burden of proving that the chondral delamination Dr. Sterett addressed during surgery on May 30, 2017, was caused or aggravated by the industrial injury. Claimant has provided no credible evidence to that effect.

19. Douglas Scott, M.D., credibly testified that the chondral delamination present in Claimant's knee before the surgery was pre-existing, caused by Claimant's long-standing osteoarthritis. This opinion is supported by Dr. Sterett's operative report, which found grade III changes of the patella that were debrided and Dr. Sterett's postoperative plan indicating that Claimant's knee was at significant risk for continued degenerative changes. Therefore, Claimant has failed to prove that the portion of the surgery in which Dr. Sterett debrided Claimant's patella to address the pre-existing non-industrial chondral delamination was necessitated by the incident on March 29, 2017.

20. Dr. Scott testified that if Claimant had no history of an injury on March 29, 2017, and no surgery on May 30, 2017, Claimant's pre-existing osteoarthritis would have become symptomatic at some point in the future because an injury or surgery is not a prerequisite to Claimant's pre-existing non-industrial osteoarthritis and chondral delamination of the patella becoming symptomatic. Claimant's medical records show that he was pain free and released from care for his meniscal tears, and more than three months later began to complain of a different pain to his anterior knee with instability, rather than the prior posterior knee pain without instability prior to his surgery. This different area of pain supports Dr. Scott's testimony that Claimant's pain is not coming from the meniscal tears or any area that was symptomatic prior to surgery.

21. Dr. Sterett issued a letter dated February 7, 2019, again addressing causation. Dr. Sterett stated that Claimant had continued deterioration of the knee. However, Dr. Sterett did not identify where that continued degeneration of the knee is occurring, or why that area of the knee is continuing to deteriorate. Since Respondents are not liable for the continued degeneration of the knee if that continued degeneration was not caused, aggravated or accelerated by the injury.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See Bodensleck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. Arenas v. ICAO, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. Cordova v. ICAO, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to

expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Benefits

4. The claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Proof of causation is a threshold requirement which an injured employee must establish by a preponderance of the evidence before any workers' compensation is awarded. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo.App.1997).

5. The Administrative Law Judge finds and concludes, considering the totality of the evidence that Claimant has failed to prove by a preponderance of the evidence that the Synvisc injection recommended by Dr. Sterett is causally related to Claimant's fall on March 29, 2017. Dr. Sterett opined that the portions of Claimant's knee surgery causally related to the fall were the meniscal tears and the loose bodies. Dr. Sterett also performed surgery on Claimant's degenerative chondral delamination of the patella, but Claimant has failed to prove that this portion of the surgery was causally related to the injury. Dr. Sterett now has recommended a Synvisc injection to address a continued degeneration of the chondral delamination of the patella, but has not addressed whether the issue of whether the non-industrial portion of the surgery on May 30, 2017, caused the continued chondral delamination.

ORDER

1. Claimant's request for the Synvisc injection recommended by Dr. Sterett is denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at ttp://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-611-293-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 20, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 6/20/19, Courtroom 1, beginning at 1:30 PM, and ending at 3:30 PM).

Claimant's Exhibits 1, 2 and 4 were admitted into evidence, without objection. Claimant's Exhibit 3 was rejected. Respondents' Exhibits A through I were admitted into evidence, without objection.

Transcripts of the evidentiary depositions of Jeffrey J. Sabin, M.D., and Jonathan Clapp, M.D., were lodged at the commencement of the hearing in lieu of their live testimony. Transcripts of the post-hearing evidentiary depositions of Kathy McCranie, M.D, lodged on July 10, 2019, and George Frey, M.D., lodged on July 22, 2019, were in lieu of their live testimony.

At the conclusion of the hearing, the ALJ established deadlines (after the lodging of all evidentiary depositions) for the filing of post-hearing briefs. The Claimant's opening brief was filed on July 23, 2019. Respondents' answer brief was filed on August 2, 2019. Claimant's reply brief was filed on August 5, 2019, at which time the matter was deemed submitted for decision.

ISSUES

The issues to be determined by this decision concern: (1) whether the spinal cord fusion surgery proposed surgery recommended by George Frey, M.D., the Claimants authorized treating orthopedic spine surgeon since 2004 is reasonably necessary and causally related to the Claimant's compensable injury of March 1, 2004; and, whether the ablation recommended by Joseph Fillmore, M.D. ir reasonably necessary and causally related to the compensable injury of March 1, 2004.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant sustained an admitted compensable on the job injury arising out of the course and scope of his employment on March 1, 2004, when he slipped and fell on ice.

2. The Claimant's date of birth is October 21, 1958 and he is presently 60 years old.

3. The Claimant initially underwent care and treatment with Dr. Frey as a result of the injuries sustained at the time in 2004 and Dr. Frey has been his treating orthopedist for his low back injuries since that time. The Claimant had a previous low back fusion performed in 1986 as a result of a motor vehicle injury and the fall that forms the basis of this compensable on the job injury resulted in a fracture of the L5 vertebrae and fused the L4-S1 levels of his back. (Tr. p. 16, ll.9-23).

4. Thereafter, the Claimant returned to work, with the Employer, the hardware was removed in 2009, and the Claimant continued to work for the Employer until January 2011, at which time he could no longer perform the work due to the fact that the pain was too distracting, it was too difficult to move around and that Claimant was suffering from fatigue due to the high level of pain (Tr. p. 17, ll. 3-9).

5. In January 2011, the Claimant was working part time as a systems engineer. At the time of the compensable injury in March of 2004 he was a program manager for the Employer.

6. According to the Claimant, Dr. Frey in approximately 2007 referred him to Joseph Fillmore, M.D., for pain management and thereafter was referred by Dr. Fillmore to Jonathan Clapp, M.D. for pain management as well.

7. Dr. Fillmore and Dr. Clapp have tried different medications to try to help alleviate the pain. Presently the Claimant is on MS Contin and Dilaudid for the pain. In conjunction with the pain management regime, Dr. Fillmore and Dr. Clapp have instituted a program of performing radiofrequency ablations or radiofrequency neurotomies to help alleviate the pain.

8. According to the Claimant, the ablations usually last between five and six months and after he has an ablation he is able to stop using the MS Contin for a period of time until the ablation wears off (Tr. p. 20, ll.23-25).

9. The Claimant had been getting the ablations every six months or so but recently in 2017 and 2018, Respondents would not authorize him to have them as frequently due to the medical opinions of Dr. McCranie that he should have them only once per year. As a result of the reduction in ablations the Claimant has had to increase his medication intake.

10. With his increase in leg pain over the last eighteen months or any surgical treatment modalities that would reduce his pain and alleviate some or all of his dependence on the medications.(Tr. p. 22, ll 16-25; p. 23. Ll.1-19).

Dr. Frey's Recommended Spinal Cord Fusion

11. Dr. Frey wants to perform a decompression of the facets and extend the lumbar fusion to the L3-4 level. Dr. Frey submitted a request for pre-authorization for such surgery in February of this year. The request was denied.

12. The Claimant understands the risks of the surgery that Dr. Frey wants to perform and further understands that the surgery will not alleviate all of his pain but given the fact that the ablations work for a period of time and he is more functional and is able to get off the MS Contin until the ablation wears off, the Claimant believes that having the surgery will alleviate the need for the ablations, get rid of some of his leg pain that is progressively getting worse and will help with reducing his medication intake (Tr. p. 24, ll. 10-24).

13. The Claimant presented as an highly intelligent, straight-forward, reasonable individual, who had a firm grasp on his medical condition and on managing it.

14. The Claimant understands that Dr. McCranie in her deposition and her reports states the opinion that the reasonable and necessary solution to the Claimant's condition is to become engaged in an extended multidisciplinary approach consisting of an inpatient pain program which, it is Dr. McCranie's belief, will help the Claimant learn how to deal with his pain. Considering the fact that Dr. Frey is a board certified orthopedic surgeon, who specializes in spinal surgery, and Dr. McCranie's is an occupational physician whose opinion is contrary to the opinion of Dr. Frey, the ALJ finds McCranie's opinion amounts to a mechanical application of the Division of

Workers' Compensation Medical Treatment **Guidelines** (hereinafter "MTG"), without regard to the clinical specifics of the Claimant's medical case. Further, her opinion is contrary to the weight of the medical opinions of physicians with more specific expertise than her, as illustrated by the evidence in the record. Therefore, the ALJ finds Dr. McCranie's opinion in this regard lacking in credibility.

15. The Claimant believes he has demonstrated that he knows how to deal with his pain as is shown by his being able to curtail the use of the MS Contin after the ablations and that he wants to undergo medical treatment that has a reasonable opportunity to alleviate some of his pain and radicular symptoms in his legs. for a longer term (Tr. p.27, ll. 5-15).

Jonathan Clapp, M.D.

16. The evidentiary deposition of Dr. Clapp served in lieu of his live testimony (Claimant's Exhibit 5). Dr. Clapp was accepted as an expert in pain and physical medicine and rehabilitation. He is a board member of the Colorado Pain Society and serves on the Colorado Medical Society's Prescription Drug Abuse Committee.

17. Dr. Clapp has been a treating physician for the Claimant since 2009 or 2010. He is of the opinion that if the Claimant cannot get the ablations as needed then the Claimant has a dramatic increase in his need for opioid medications. When the Claimant obtains the ablations as needed, there is a marked decrease in the need for medications and significant improvement in functioning.

18. Dr. Clapp indicated that he is familiar with the Colorado Division of Workers Compensation Medical Treatment Guidelines (hereinafter "MTG") and the opinions of Dr. McCranie concerning the frequency with which an individual Claimant should be entitled to ablations. Given his evaluation of the Claimant both before and after the ablations, the decrease in pain medications, and the demonstrated improved functioning, Dr. Clapp is of the opinion that this Claimant is one of those individuals who as long as the condition exists, needs ablations more frequently than the MTG would suggest. Dr. Clapp stated that it is probably due to genetic differences but it is difficult to tell as the doctor cannot have an exact visualization of the nerve during the cautery

19. Dr. Clapp further testified, when questioned about the MTG indication that with an ablation a claimant should be able to obtain six to eighteen months of relief, that: "I am aware of that but that is, in my opinion, contrary to the evidence in the literature" (Clapp Depo., p. 27, ll14-15).

20. Dr. Clapp when asked to weigh the increase in medication that would be needed to control the Claimant's pain versus the increase in the frequency of the radiofrequency neurotomies, which was more reasonable and prudent medical care for the Claimant, Dr. Clapp responded: 'by far the rhizotomies are the more reasonable, safer route to maximizing his function, decreasing the pain" (Clapp Depo., p.29, ll. 10-12). When asked why, Dr. Clapp stated: "Because opioids are dangerous, and he—to

do a procedure that is relatively safe and be able to decrease opioids with side effects like constipation, risks of overdose, risk to friends and family having lots of these medications around in the house, for 60 to 80 percent of the medications that are diverted in this country come from friends and family with or without their knowledge. This is by far the safest and most ethical way to proceed to take care of him." (Clapp Depo. p.29, ll.14-22).

George Frey, M.D./Surgical Recommendation

21. The evidentiary deposition of Dr. Frey served in lieu of his live testimony. Dr. Frey was accepted as an expert in the field of orthopedic surgery. He has specialized in complex spinal surgery since 1993, exclusively, and has performed approximately 300 fusions per year over the past 8-9 years (Frey evidentiary depo, p. 6 ll. 6-8).

22. Dr. Frey stated that the Claimant has been a patient of his since 2004 when he originally performed surgery on the Claimant. That surgery was a repair of a nonunion from a prior fusion done many years previously that had gone to nonunion as a result of the admittedly compensable on the job injury of March 1, 2004 (Frey evidentiary depo, p. 8, ll5-13).

23. Dr. Frey is of the opinion that the Claimant's condition has progressively gotten worse over the last couple of years. Dr. Frey has reviewed two MRIs, one from July of 2018 and one from June of 2019, an EMG from November of 2018, met with and physically examined the Claimant, noted the ongoing and progressive scoliosis and radicular symptoms that the Claimant is experiencing and has concluded that the best course of treatment for the Claimant is to perform a decompression of the facets and to extend the previous fusion performed in 2004 up to the L2- L3-4 level. Dr. Frey testified:as follows

> Well, we need to address his stenosis, his foraminal stenosis that has been identified by the radiologist subjectively and by myself as well at both the L2-3 and L3-4. We have to make room for those nerves"
>
> We also would be well advised to address the mechanical pain that he is having from those damaged facets that have been addressed up to now with these rhizotomies which we have recognized are temporary for him. And that would be done by extending his fusion, in other words, bridging those facet joints with bone and immobilizing those so they are no longer a pain generator. So it's a decompression and fusion extending that fusion to L2-L3-L4.

(Frey evidentiary depo, p. 12, l.25; p. 13, ll1-12).

24. When asked whether that type of surgery would limit the progression of the facet stenosis, Dr. Frey stated: "It would eliminate it altogether, because there is no further movement once the fusion is solid, there is no movement across those joints and, therefore, the facets are no longer mechanically under load, and they, therefore, won't continue to deteriorate. That becomes a permanent solution" (Frey evidentiary depo, p. 13, ll.15-21). The ALJ finds this opinion more credible than any opinions to the contrary.

25. Dr. Frey noted that the Claimant has two pain generators, the compression of the nerve roots and also the injured facet joints and in his opinion, based upon reasonable medical probability and his substantial experience performing these type of surgeries, the Claimant's best option is to have the surgery that he has requested be authorized.

26. Dr. Frey, when asked about Dr. Sabin's offered testimony that the surgery would not reduce the intake of MS Contin, would not reduce the pain and would not improve the Claimant's function, Dr. Frey emphatically disagreed. Dr. Frey believes that the surgery will help decrease the need for the medications, will reduce the pain levels that the Claimant is experiencing and thereby improve his functioning. Dr. Frey further testified that the Claimant in his opinion does have adjacent level disease which according to Dr. Frey is a condition that occurs by placing more stress in the transition between a fused area of the spine and the adjacent unfused area (Frey ervidentiary depo, p.17, ll21-25; p. 18, ll.1-9).

27. Dr. Frey further stated that he does not believe that at this point a multi-disciplinary pain program as suggested by Dr. McCranie would be of any benefit because would not alleviate the pain generators nor would it decrease the progression of the disease. "It is my opinion that a structural solution that actually addresses his pain generators, because they are addressable, would be the better option and the better solution for Mr. Auten at this time" (Frey evidentiary depo, p.19, ll8-11).

28. Dr. Frey indicated that he had explained the risks of the surgery to the Claimant and that while he could expect perhaps a 50 to 70% reduction in his symptoms but that if he would not have surgical intervention presently he will have increased mechanical back pain, an increase in radicular symptoms, deconditioning, psychological impact and increasing dependence on opioid medications along with increasing stenosis, and eventual motor loss with weakness in his extremities. (Frey evidentiary depo, pp. 23-24).

Respondents' Arguments Concerning Dr. Frey's Recommended Surgery

29. Respondents place substantial weight on the EMG result that was performed by Dr. Treihaft on November 7, 2018. Those results indicate that the Claimant has both lumbar radicular involvement (job related) and peripheral involvement. (non-job related). Dr. Frey in his deposition, in detail, explained that the lumbar radicular component is related to the spinal stenosis which would be eliminated by the decompression of the

facets and extension of the fusion. It would not, however, eliminate the numbness in the Claimant's feet which he considered to be peripheral in nature. Dr. Frey stated that this worsening leg pain was related to the spinal stenosis. Dr. Frey further had reviewed the most recent MRI performed on June 29, 2019, in conjunction with the MRI from July of 2018 and the EMG from November of 2018, along with examining the Claimant and advising him of the risks and concluded that a decompression and extension of the fusion was the best course of action. Respondents do not mention the fact that the Claimant has been Dr. Frey's patient for approximately 15 years and that Dr. Frey has specialized in complex surgery of the spine for the last 26 years exclusively and performs approximately 300 fusion surgeries annually (Frey evidentiary depo., p .6, ll. 6-8).

30. Dr. Frey's office originally requested pre-authorization for the surgery and Respondents denied it. Thereafter, on February 26, 2019, Dr. Frey's office sent in a much more detailed request for the surgery that was still denied.

31. Respondents place considerable weight upon the fact that Sanders (Dr. Frey's physician assistant) ordered an ESI injection which Dr. Frey indicated can be both diagnostic and therapeutic. Since Dr. Sabin testified that steroid injections are part of what should be considered before proceeding with surgery based on leg complaints, Respondents argue, by implication, that Dr. Frey does not have an adequate background upon which to perform surgery. Such an implied argument is ludicrous under the circumstances.

32. The records in evidence show that over the years, the Claimant has had a number of ESI injections, without apparent relief and that Dr. Frey testified that based upon his review of the matter including his personal knowledge of the Claimant, the diagnostic testing performed and the response to the ablations that the pain generator was clearly coming from the L3-4 level and that in his opinion an additional ESI would not serve a useful purpose in determining the appropriate course of treatment.

33.. While Dr. Frey could not detail the last time that he had seen the Claimant prior to the February request for pre-authorization, he was able to testify that he had seen the Claimant on the very day of his deposition (July 3, 2019) had examined the Clauimant, had gone over the additional MRI performed on June 29, 2019 along with the other diagnostic tests performed, was familiar with the Claimant's care and treatment since 2004 and was familiar with the Claimant's worsening lumbar related radicular complaints. Dr. Frey was also aware of the fact that after the ablations the Claimant was able to wean himself from the MS Contin until such time as the ablation wore off. As of the date of his deposition, July 3, 2019, Dr. Frey was succinct and credible in his belief that the most reasonable treatment for the Claimant was proceeding with the decompression and extension of the fusion.

34. Dr. Sabin and Dr. Frey have a difference of opinion as to whether the Claimant will have a significant amount of pain relief or that the surgery will result in functional gain. Dr. Frey is of the opinion that the surgery will reduce the Claimant's

reliance on pain medications but does not believe it will alleviate it all together. Dr. Sabin was asked whether it would alleviate the need altogether and Dr. Sabin indicated it would not. As far as functional gain is concerned, Dr. Sabin indicated that the surgery would not get the Claimant back to work which is not an issue in the case. Such a statement reveals that Dr. Sabin was out of touch with the totality of facts concerning the Claimant's case. The Claimant testified that after the ablations he was more functional, was able to get off the pain meds and had significant pain relief. Dr. Frey is of the opinion that the surgery would rid the Claimant of the radicular leg pain resulting in functional gain and alleviate some of the back pain. Dr. Sabin testified that if the Claimant was his patient, he would offer him the proposed surgery.

Jeffrey Sabin, M.D. Respondents' Independent Medical Examiner (IME)

35. Dr. Sabin testified by evidentiary deposition as an expert in orthopedic surgery. His two reports of April 1, 2019 and April 24, 2019 are also considered.

36. Dr. Sabin performed an IME evaluation of the Claimant at Respondents' request. He reviewed the MRI (magnetic resonance imaging) from July of 2018, examined the Claimant, reviewed the medical records submitted to him and stated that the "surgery could be done as long as the patient and the surgeon both had an understanding of what they were-what their expectations were, I wouldn't have terrific expectations that it would get him off the pain medicine, the heavy duty narcotics. And I don't think it would increase his functionality. It's hard to predict how much pain relief he would get. He may notice some pain relief, but it's likely not to be stellar" (Sabin evidentiary depo, p.11. ll8-17). The ALJ finds the opinions of Dr. Frey and Dr. Clapp substantially more credible and persuasive than the opinions of Dr. Sabin.

37. Dr. Sabin was asked to assume a hypothetical patient such as the Claimant coming to him as a patient and given the history, the findings, and the diagnostic tests and knowing the history, would he be willing to perform the surgery as suggested by Dr. Frey to which Dr. Sabin indicated: "I would call his pain management doctor… and I would say, here's the story, [Claimant] wants to have surgery, there is nothing further we can do but do surgery, it is my opinion that it could relieve his pain a little bit, but I don't have high hopes to get him off of pain medicine, in fact, it could increase it." (Sabin evidentiary depo, pp.33-34). The ALJ finds that the opinions of Dr. Frey and Dr. Clapp substantially outweigh the opinion of IME Dr. Sabin.

Kathy McCranie, M.D., Respondents' IME

38. The evidentiary deposition of Dr. McCranie serves in lieu of her live testimony. Also, the ALJ has considered her many reports commencing March 21, 2013 Dr. McCranie was accepted as an expert in physical medicine and pain and rehabilitation. Her reports are primarily concerned with the ablation procedures and whether the Colorado MTG permit the frequency of ablations that Dr. Fillmore and Dr.

Clapp were requesting. As to the last ablation that Dr. Fillmore requested, Dr. McCranie was of the opinion that another ablation procedure could be performed in July of 2019 as long as the Claimant continued to receive at least 80% relief for six months and improved function. To have them performed more often according to Dr. McCranie results in decreased musculature and increased degeneration. Based upon Dr. Sabin's report that Dr. McCranie interpreted as indicating that surgery was not an option, she believed that an inpatient 5-8 week multidisciplinary pain program was an appropriate method of treating the Claimant's ongoing complaints. While not testifying as to whether surgery was an appropriate option, Dr. McCranie was of the opinion that based upon Dr. Sabin's report, a pain program was a better option. Dr. McCranie had not examined the Claimant since 2013, 6 years ago. Dr. McCranie's opinions neither refute nor compromise Dr. Frey's opinions in any manner. Dr. McCranie acknowledged that the Claimant indicated and the records reflected that he had a reduction of his consumption of MS Contin immediately after the ablations. Dr. McCranie was of the opinion that she thought the MTG should be followed when possible but conceded that the Treatment Guidelines permitted deviations from them. The ALJ finds that Dr. Frey's opinion decisively supports a deviation from the MTG in the Claimant's specific case. Overall, the ALJ finds the opinions of Dr. Frey and Dr. Clapp considerably more credible and persuasive than the opinions of Dr. McCranie and Dr. Sabin.

39. The efficacy of a multi-disciplinary pain program, suggested by Dr. McCranie, and supported by Dr. Sabin, is not supported by the Claimant, Dr. Frey or by the totality of the evidence The Claimant testified, credibly, that after the ablations, he has been able to get off the MS Contin until such time as the ablation wears off. ((Tr. p. 27, ll, 5-15). Dr. Frey testified that with the decompression and the fusion extension, the ablations would no longer be necessary and "it would eliminate it altogether…the facets are no longer mechanically under load, and they, evidentiary depo, p. 12, ll. 15-21). Dr. Frey noted that the surgery would reduce the pain levels and improve function, and that "it is my opinion that a structural solution that actually addresses the pain generators, because they are addressable, would be the better option and the better solution for [Claimant] at this time" (Frey evidentiary depo, p. 19, ll. 8-11).

40. Respondents rely upon Dr. McCranie's report of May 14, 2019 and her deposition testimony regarding the multi-disciplinary pain program option for the Claimant. Dr. McCranie, solely relied upon Dr. Sabin's reports indicating that surgery was not an option and based upon that she was of the opinion that the pain program was the most viable alternative. She did not review Dr. Sabin's deposition testimony, review Dr. Frey's opinions regarding the pain generators and in fact, had not examined the Claimant since 2013. Dr. McCranie acknowledged that the Claimant throughout the period of time that he had been receiving the ablations consistently reported that he had

41. The ALJ infers and finds that Dr. McCranie's primary function in her evaluation of the Claimant, based upon the multitude of reports from her since 2013, appears to be to indicate whether the Claimant is entitled to an additional ablation procedure when a request has been made to perform one prior to the expiration of the

time period as set forth in the MTG. Dr. McCranie acknowledged that those Guidelines can be deviated from but she believes that they should be followed when possible.

Ultimate Findings

42. The medical reports, diagnostic tests and notes of treatment have been submitted and reviewed. Those records essentially support the above findings and the ALJ has reviewed all the evidence presented.

43. Dr. Frey, Dr. Fillmore and Dr. Clapp have been authorized treating doctors (ATPs) for the Claimant between the date of injury and the present time. The issue before the ALJ is whether the surgery proposed by Dr. Frey and/or the additional ablation requested by Dr. Fillmore are now reasonably necessary. Based on the totality of the evidence, the ALJ finds that the surgery proposed by Dr. Frey and the more frequent ablations requested by Dr. Fillmore are causally related to the industrial injury and reasonably necessary to maintain the Claimant at maximum medical improvement (MMI) and to prevent a deterioration of his work-related condition.

44. The medical opinions of Dr. Clapp and Dr. Frey are credible and persuasive. Dr. Clapp stated the basis upon which he believed that in the Claimant's case the Medical Treatment Guidelines should be deviated from and Dr. Frey, who has been the Claimant's orthopedic doctor for fifteen (15) years and has done thousands of the type of surgery that is being considered, is of the opinion that surgical intervention is the best option for the Claimant. This coupled with the Claimant understanding the risks and desiring to go forward with the surgery, given all of the conservative treatment modalities that have been tried, show that the overwhelming and substantially credible evidence dictates a finding that the surgery requested by Dr. Frey is reasonably necessary. Based upon the finding that the surgery by Dr. Frey is reasonably necessary and the agreement by the Respondents' expert, Dr. McCranie, that the Claimant is eligible for another ablation presently, the issue of the ablation is presently moot. It should be left to the determination of the treating physicians, Dr. Fillmore and Dr. Frey as to whether this Claimant should have another ablation before the surgery.

45. Based on the conflicting sets of medical opinions, *i.e.* Dr. Frey/Dr. Clapp /Dr.Fillmore vs. Dr. McCranie and Dr. Sabin, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Frey and Dr,. Clapp and to reject all opinions to the contrary.

46. As found herein above, substantial evidence supports Dr. Frey's request. for surgery.

47. Claimant has sustained his burden of proof by a preponderance of the evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the medical opinions of Dr. Clapp and Dr. Frey were credible and persuasive. Dr. Clapp stated the basis upon which he believed that in the Claimant's case the Medical Treatment Guidelines should be deviated from and Dr. Frey, who has been the Claimant's orthopedic doctor for fifteen (15) years and has done thousands of the type of surgery that is being considered, is of the opinion that surgical intervention is the best option for the Claimant. This coupled with the Claimant understanding the risks and desiring to go forward with the surgery, given all of the conservative treatment modalities that have been tried, show that the overwhelming and substantially credible evidence dictates a finding that the surgery requested by Dr. Frey is reasonably necessary and a deviation from the MTG is warranted.. Based upon the finding that the surgery by Dr. Frey is reasonably necessary and the agreement by the Respondents' expert, Dr. McCranie, that the Claimant is eligible for another ablation presently, the issue of the ablation is presently moot. It should be left to the determination of the

treating physicians, Dr. Fillmore and Dr. Frey as to whether this Claimant should have another ablation before the surgery.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, based on conflicting sets of medical opinions, *i.e.* Dr. Frey/Dr. Clapp and Dr. Fillmore, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Frey, Dr,. Clapp and Dr. Fillmore and to reject all opinions to the contrary.

Deviation From the Medical Treatment Guidelines

c. The Division of Workers' Compensation Medical Treatment Guidelines (MTG), Workers' Compensation Rules of Procedure (CRP), Rule 17, although fitted under a Rule are not rules but **Guidelines.** The MTG are limited to workers' compensation cases and therein may be considered as evidence of accepted standards of practice in workers' compensation cases.. *See Hall v. Indus. Claim Appeals Office,* 74 P.3d 459 (Colo. App. 2003). The MTG may be considered as evidence of accepted standards in the evaluation of causation. *See Cahill v. Patty Jewett Golf Course,* W.C. No. 4-729-518 [Industrial Claim Appeals Office (ICAO), February 23, 2009); *Simone v. Worldwide Flight Services,* W.C. No. 4-535-290 (ICAO, November 21, 2006). Also, when determining whether proposed treatment is reasonably necessary, an ALJ may consider the MTG because they represent accepted standards of practice in workers' compensation cases. Evidence of compliance, or non-compliance, with the MTG, however, is not **dispositive** of the question of whether medical treatment is reasonably necessary. Rather, an ALJ may give evidence regarding compliance with the MTG such weight as the ALJ determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co.,* W.C. No. 4-784-709 (ICAO, January 25, 2012); *Stamey v. C2 Utility Corners Health Care,* W.C. No. 4-484-220 (ICAO, April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.,* W.C. No. 4-503-974 (ICAO, August 21, 2008). The provisions of the Medical Treatment Guidelines are not

legally binding in any way. *Eldi v. Montgomery Ward,* W.C. No. 3-757-021 (ICAO, October 30, 1998). As found, the compelling opinions of Dr. Frey and Dr. Clapp, plus Dr. McCranie's concession, firmly establish that a **deviation** from the MTG to implement ATP Dr. Frey's recommended surgery and more frequent ablations is warranted.

Causal Relatedness and Reasonable Necessity of Recommended Surgery

d. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the compensable back injury of March 1, 2004. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). The same tests for post-MMI medical treatment, *i.e.,* causal relatedness and reasonable necessity apply. As found, the surgery recommended by Dr. Frey is reasonably necessary to maintain the Claimant at MMI and to prevent a deterioration of his work-related condition. § 8-42-101(1) , C.R.S. requires payment of medical benefits at the time of the injury " and thereafter during the period of disability to cure and relieve from the effects of the injury," *Grover v. Indus. Comm'n of Colorado,* 759 P.2d 705 (Colo. 1988) is the seminal case that defined the test for the provision of medical benefits to injured workers after the date of MMI: "(T)here must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease." As found, there is substantial evidence in the record that the surgery recommended by Dr. Frey and the more frequent ablations recommended by Dr. Fillmore are reasonably necessary to maintain the Claimant at MMI and to prevent a deterioration of his condition.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Clauinant has sustained his burden with respect to the surgery recommended by his ATP, Dr. Frey.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. In addition to other post maximum medical improvement benefits, Respondents shall pay the costs of the spinal cord fusion surgery recommended by George Frey, M.D., orthopedic surgeon specializing in spinal cord surgeries and the costs of more frequent ablations recommended by Joseph Fillmore, M.D., the frequency of which shall be in the clinical judgment of Dr. Fillmore, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this 21st day of August 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Have Claimant's shown, by a preponderance of the evidence, that Decedent suffered a compensable injury while working for Employer? In his instance, was Decedent last injuriously exposed to asbestos while working for Employer, resulting in fatal mesothelioma?

STIPULATIONS

I. Decedent's Average Weekly Wage ("AWW") is $245.65.

II. If this claim is deemed compensable, Respondents are entitled to a dollar-for-dollar offset against settlement proceeds paid from third-party defendants to Claimants.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Decedent's Exposure to Brake Components

1. Kathryn Lavender ("Decedent") was born on May 23, 1974. She began assisting her stepfather in performing brake jobs and other mechanic duties between age eight and seventeen. (Ex. D, p. 157). The Decedent took an auto shop class during her senior year of high school. Prior to working for Employer, she worked for Danny's Car Wash as an oil and lube technician. During this time, she did around twenty-five brake jobs. She also worked for Montgomery Ward, where she performed around five brake jobs by herself and around ten brakes jobs assisting other employees. After high school, the she attended Universal Technical Institute and graduated with an Associate's degree in automotive and diesel in February 1994. *Id at 158.* While in school, the decedent worked at several local companies performing brake and mechanic work. *Id at 154.*

2. Decedent worked for the Employer from 1994 through 1997, first as a mechanic and then as an administrative assistant. The Decedent recalled performing approximately 25 brake jobs and assisted on another 45 brake jobs in approximately eight months. (Ex. D, p. 155). Decedent later injured her knee, and she was placed on modified duty and moved to administrative work for the remainder of her time with the Employer. The Decedent alleged that she was exposed to mechanical work while in these administrative positions with Employer. (Ex. D, pp. 157-158).

3. At hearing, Claimant Alex Lavender described the process of working on brakes. He stated that brake dust was located inside of the adjustor, the springs, and on top of the wheel cylinder. He would then hit the drum with a hammer to pull the drum off,

which would release the brake dust. Additionally, Mr. Lavender stated that they would have to do a safety inspection with every car. This required the removal of the tires and the drums in order to inspect the front and rear brakes. In dealing with the dust, Mr. Lavender stated that they would use an air hose to spray the dust. For protection, Mr. Lavender stated that he and the Decedent only used safety glasses. They did not use a ventilator nor did they have anything to cover their mouths. Mr. Lavender stated that the majority of brakes during his time with the Employer were drum brakes; however, when he worked on disc brakes, he also had to deal with brake dust. Mr. Lavender also stated that he changed clutches while with the Employer. When changing clutches, Mr. Lavender stated that "stony black" dust would also be released in the air.

4. Claimant worked as a mechanic for Employer for about six months. The Decedent continued to work for the Employer from 1994 to 1998. During this time, Claimant would often visit the Decedent while at work. He explained that she spent the first year working as a mechanic. She then spent the next two years working in the dispatch area. Mr. Lavender explained that the dispatch area was located on the south part of the shop and allowed her to look over the entire shop. He stated that the dispatch desk was elevated and in the same area as the bays. There was no glass separating the dispatch desk from the rest of the shop. Mr. Lavender explained that the area was "all open" and that there was dust everywhere. He also explained that the Decedent would have to walk around the shop as well to do coding, go to the parts room, or to talk with the mechanics.

5. In the deposition of her civil suit, Decedent provided additional information about her time at dispatch stating that "[t]he dispatch center was right in the middle of the – to describe it, customers would bring in their vehicles in to either get oil changes or major service work[…] and every technician had four bays of their own. There's probably 30 bays in that area. And the dispatch desk sat right there. And so we had no protection from what those guys were doing, coming at us." (Ex. 3, p.8).

6. After her time at the dispatch desk, Decedent was transferred to the heavy truck center. Although there was a door from the shop to the desk, Mr. Lavender explained that it was always open because she, and the other mechanics, had to go back and forth between the desk and the shop. When he would visit the Decedent at work, Mr. Lavender stated that the Decedent would always have a tissue over her water glass in order to prevent dust from getting into her water. Mr. Lavender stated that there were no fans or ventilation in the truck area. Mr. Lavender has experience working with heavy trucks. He stated that because a brake drum is 15 to 16 inches around on a heavy truck, it would generate more dust.

7. Claimant and Decedent were married on May 13, 1995. The couple had two children, Rhett Lavender born October 23, 1998 and Jessica Lavender born February 6, 2000. In 1988, the Decedent left her job with the Employer. This was her last job working in the automotive industry.

8. During his marriage to Decedent, Claimant performed "shade tree work", and performed brake and clutch work on friends' and families' vehicles, as well as for

paying customers. The Decedent assisted when the Claimant performed this work. Claimant stopped performing this type of work in 2008. (Ex. D, p. 171).

9. The Decedent was diagnosed with mesothelioma in April, 2016. She died on December 20, 2017. Prior to her death, the Decedent also filed a civil claim in the 22nd Judicial Circuit Court in the state of Missouri against a number of defendants including the Ford Motor Company, Wester Auto Supply Company, and Advance Auto Parts, Inc.

Respondents' Expert Reports: Exposure to Chrysotile Asbestos

10. Mary Beth Beasley, M.D. reviewed the Decedent's medical records and answers to interrogatories completed by the Decedent prior to her death. Dr. Beasley noted that Decedent was diagnosed with malignant mesothelioma. Dr. Beasley opined that not all types of asbestos are equally potent. Specifically, chrysotile asbestos does not have the same association with mesothelioma as other forms of asbestos. (Ex. C, p. 149). Dr. Beasley opined that there is doubt that chrysotile asbestos causes mesothelioma. Dr. Beasley concluded that the Decedent's reported lifelong exposure to automobile brake and friction products did not cause her mesothelioma. (Ex. C, p. 149).

11. Similarly, Brian A. Taylor, M.D. reviewed the Decedent's responses to interrogatories, as well as the depositions taken of the Decedent, Claimant and the Decedent's stepfather regarding the Decedent's alleged lifelong exposure to asbestos. Dr. Taylor documented the decedent's alleged direct and secondary exposure to asbestos. (Ex. D, pp. 151-172).

12. Dr. Taylor opined that chrysotile and amphibole asbestos are quite different in their potential to cause disease. Specifically, chrysotile asbestos is estimated to have a potency between 0 and 1/200th compared with amphibole asbestos in causing disease. Dr. Taylor concluded that "no compelling evidence exists to implicate chrysotile as a cause of malignant mesothelioma." (Ex. D, p. 151). Dr. Taylor opined that the Decedent likely had some direct exposure to asbestos from occupational and non-occupational sources, but the medical and scientific literature has consistently failed to demonstrate an increased risk for malignant mesothelioma among automotive mechanics. Dr. Taylor concluded that it was reasonably certain that the Decedent's cumulative lifetime exposure to asbestos (all sources and pathways) was *de minimus,* and did not cause or contribute to her development of mesothelioma. (Ex. D, p. 175).

13. Dominik Alexander is a Principal Epidemiologist, with extensive experience in health research and disease causation, including exposure to asbestos and asbestos-related disease. (Ex. H, p. 261). After reviewing the Decedent's interrogatory responses and deposition testimony regarding her claimed lifelong exposure to chrysotile asbestos, Dr. Alexander opined that the epidemiology studies of work in occupations in which brake repairs and motor vehicle repairs were performed, the evidence did not support an increased risk of mesothelioma. (Ex. H, p. 275). Dr. Alexander concluded that since the epidemiological evidence did not support a causal

link to occupational exposure, the Decedent's work did not place her at risk for developing mesothelioma. (Ex. H, p. 276).

Respondents' Expert Fiona Mowat

14. Fiona Mowat, Ph.D., d/b/a Exponent, Inc., performed a risk assessment on this matter. Dr. Mowat testified at hearing that risk assessment as a process is well accepted, and that the federal government has set forth the four steps: hazard identification, dose response, exposure assessment, and risk characterization.

15. Dr. Mowat examined the Decedent's claimed lifelong exposure to asbestos. Dr. Mowat explained that asbestos is a generic term and refers to mineral silicates that occur in nature. The basic forms of asbestos are chrysotile and amphibole. Chrysotile makes up the most commonly used asbestos in the United States. (Ex. A, p. 20). Dr. Mowat testified that the scientific studies, including a study by the National Institute for Occupational Safety and Health ("NIOSH") show that chrysotile was the form of asbestos used in brakes, when asbestos was used for this purpose. Additionally, Dr. Mowat reported that beginning in the 1980s and into the early 1990s Ford phased out asbestos-in its brake products. (Ex. A, pp. 46-47).

16. Dr. Mowat documented the history of asbestos in automotive materials, specifically brakes and clutches. (Ex, A, p. 25). Chrysotile asbestos was selected for use due to its high heat resistance, thermal stability, strength, and reasonable cost. (Ex. A, pp. 25-26). Chrysotile asbestos was the sole type of asbestos used in brakes and clutches, because other forms of asbestos were too harsh. (Ex. A, p. 26). Dr. Mowat testified that during the braking process, heat and friction are both applied to the brakes which causes the chrysotile to degrade. The chrysotile then breaks down into "a blobby substance" that is called forsterite, which is not known to be harmful.

17. Dr. Mowat testified that the different forms of asbestos have different health effects. She testified that from a toxicology perspective, it is important to differentiate between the different types of asbestos, because different types of asbestos have different compositions, different durability and biopersistence (how long particles remain in the lung after inhaled). These characteristics impact the effect on human health. Dr. Mowat testified that chrysotile is a curly, flexible fiber, whereas amphiboles are more like a hard form of spaghetti. As such, the body can more easily clear chrysotile from the lungs, while amphiboles linger in the body for a much longer time, and the body cannot easily handle these fibers.

18. Dr. Mowat reported that these differences between the amphibole and chrysotile asbestos, result in amphibole being far more potent in causing mesothelioma. Chrysotile has shorter fiber lengths and a different chemical composition that affects its biopersistence. (Ex. A, p. 29). Dr. Mowat reported that short fibers have little to no disease-producing potential.

19. Dr. Mowat, citing several more recent studies, reported that "there is strong evidence that asbestos and short vitreous fibers shorter than 5 microns are

unlikely to cause cancer in humans". (Ex. A, p. 31). In addition to fiber size, the structure of chrysotile allows the body's natural defenses to remove it. The biological half-life of inhaled chrysotile fibers is only days or weeks, rather than years or decades, as is the case with amphibole fibers. (Ex. A, p. 32).

20. Dr. Mowat reviewed the Decedent's deposition transcript and responses to interrogatories in order to quantify the Decedent's claimed exposure to asbestos. Dr. Mowat testified that auto mechanics are exposure to decomposition products of brakes, so the dust in the wheel after braking contains less than 1% short-fiber chrysotile. Dr. Mowat opined that the extensive body of published epidemiologic literature shows there is no increased risk of mesothelioma associated with occupational exposures incurred during vehicle repair work. This includes long-term mechanics and those that work with brakes. (Ex. A, p. 46).

21. Dr. Mowat testified that the concentration and frequency are important when determining exposure risk. Dr. Mowat testified that in reviewing the literature, cumulative exposure (lifetime exposure), about 95% of mechanics are exposed to levels of asbestos less than the currently allowable limits permissible by Occupational Safety and Health Administration ("OSHA"). Dr. Mowat also testified that the epidemiologic studies have consistently demonstrated no increased risk of mesothelioma in automobile mechanics -including brake mechanics - compared with the general population.

22. Dr. Mowat testified that even if the decedent had continued her work as a mechanic, she would not have had the requisite exposure to cause mesothelioma because her exposure level was very low. Such exposure was also to short-fiber chrysotile that the body can handle. Dr. Mowat further testified that the robust body of epidemiological literature has demonstrated that long-term, career mechanics do not develop mesothelioma.

23. Dr. Mowat also noted that the decedent was born in 1974, and was 41 years old when she was diagnosed with mesothelioma. Mesothelioma has a long latency period and given the reduction to the potential exposure to asbestos since the 1970s, it is unlikely that the cause of the decedent's mesothelioma was asbestos related. (Ex. A, p. 47). Dr. Mowat concluded that after review of all of the Decedent's claimed exposure to asbestos, the claimed exposure to asbestos was inconsequential with regard to her development of mesothelioma.

Spontaneous and/or Unknown Causes of Mesothelioma

24. Dr. Taylor opined that spontaneous cell mutations arise and cancers can result. In other words, environmental agents are just one factor. Spontaneous cases of all types of cancer, including mesothelioma, do arise. (Ex. D, p. 175).

25. Dr. Mowat reported that while mesothelioma has been strongly associated with asbestos exposure, such exposure cannot explain all cases of mesothelioma. Dr. Mowat reported that additional studies have found other causal links for mesothelioma.

Several epidemiologic studies have found mesothelioma cases with no history of asbestos exposure at all, particularly in women. (Ex. A, p. 33). Indeed, Dr. Mowat noted there are cases of mesothelioma in children, so it is well accepted that there are cases of mesothelioma unrelated to asbestos. (Ex. A, p. 33).

26. James McCluskey, M.D., cautioned that use of the scientific methodology should be used in opining on causal links. A failure to do so results in arbitrary and incorrect causal associations. Dr. McCluskey opined that the scientific literature "clearly indicates" that auto maintenance and repair work does not result in a "biologically" significant exposure to asbestos. As such, Dr. McCluskey concluded that it is a possibility that the Decedent's disease was spontaneous, or that the Decedent had an unknown biologically significant exposure to amphibole at a level which was known to cause mesothelioma. (Ex. F, p. 199).

27. Dr. Alexander opined that studies have shown that a large proportion of mesothelioma in women have not been attributed to occupational or non-occupational exposure to asbestos. (. Ex. H, p. 276).

Decedent's Exposure to Chrysotile Asbestos

28. Dennis O'Brien, Ph.D., a retired representative of NIOSH and certified industrial hygienist, also reviewed the materials in the case and documented the history of asbestos hazards (Ex. B, p. 85). Dr. O'Brien noted that in 1972, OSHA published a comprehensive standard for asbestos, which indicated there were limits for which asbestos could be safely handled. (Ex. B, pg. 87). Dr. O'Brien noted the permissible exposure limits by OSHA for 1976, 1984 and 1994. (Ex. B, p. 88).

29. Dr. O'Brien opined that all of the Decedent's claimed exposure to asbestos during her lifetime did not put her at risk of mesothelioma. (Ex. B, p. 118). Dr. O'Brien, relying on numerous studies, opined that the exposures for mechanics were consistently below the applicable occupational standards in the 1970s, 1980s, and 1990s. (Ex. B, p. 118). Dr. O'Brien opined that the Decedent's exposure to asbestos would have been less than that documented in the studies, because typical U.S. mechanics perform three to four brake jobs per week. Based on the studies, the time weighted average ("TWA") exposure was far less than the requirements. (. Ex. B, p. 118). Additionally, Dr. O'Brien opined that most likely the brakes the Decedent encountered had non-asbestos brakes:

> Specific to Ford replacement brakes remanufactured by AER, her potential exposure would have been limited to only Ford used cars that would have had their brakes previously replaced with these products. Regarding her work with used cars, Genesove (1993) noted that about 60 percent of new car dealer (NCD) used cases are no more than 4 years old (1976-79). He further noted that only 10 percent of NCD cars sold are more than 7 years old. Thus, *most of the used vehicles she encountered likely had non-asbestos brakes.* (Ex. B, p. 120). (emphasis added).

30. Dr. Mowat also opined that mechanics' exposures to asbestos were well below the current regulatory permissible exposure limit for asbestos, including cumulative exposure. (Ex. A, p. 46).

31. Mary Finn, a certified hygienist, examined the decedent's exposure to asbestos in automobile clutches. (Ex. G, p. 217). Dr. Finn concluded that the Decedent's claimed lifelong exposure to chrysotile asbestos related to clutch work was below the dose allowed under the current permissible exposure limit set by OSHA in 1994. It was also less than the dose necessary for an increased risk to develop mesothelioma above the general public. (Ex. G, p. 254). Dr. Finn also opined that the decedent's dose would have been in the range of ambient levels. *Id at 255.*

32. William Ringo, certified hygienist, has a background in asbestos studies and has taught the Environmental Protection Agency courses in asbestos work. (Ex. I, p. 280). Dr. Ringo opined that it was unlikely many of the brakes used by the decedent from 1994 to 2015 contained any asbestos. (Ex. I, p. 283). Furthermore, Dr. Ringo concluded that fiber release associated with the use, handling, and removal of chrysotile-containing brakes (which was the only type of asbestos used in brake materials) did not present a hazard to users in the workplace. Specifically, the *de minimus* exposure of the products was significantly below the current OSHA regulatory exposure levels as a time weighted average. (Ex. I, p. 284).

Possible Environmental Exposure to Amphibole Asbestos

33. In addition, Dr. O'Brien opined that the decedent had exposure to amphibole asbestos based on the general environment. Dr. O'Brien opined that the decedent's Colorado residences were within 50 miles of several sources of naturally occurring asbestos, including amphibole forms, and this area of the country has shown higher instances of mesothelioma. (Ex. B, p 124).

Dr. Murray Finkelstein

34. Dr. Murray Finkelstein in an expert in epidemiology as well as occupational and environmental medicine. The majority of his career was spent as an occupational physician and epidemiologist with the Ontario Department of Labor where he would propose regulations on occupational exposure limits for asbestos.

35. Dr. Finkelstein determined that the Decedent was exposed to sufficient levels of asbestos during her time with the Employer to cause mesothelioma. In support of his opinion, he stated that asbestos is the only relevant known cause of mesothelioma and subsequently the only relevant cause of the Decedent's mesothelioma. In determining the cause of the Decedent's mesothelioma, Dr. Finkelstein first stated that, for most of the 20th century, friction components used in brakes contained approximately 25-60% asbestos. (Ex. 3, p. 14). Dr. Finkelstein then referred to number of brake jobs that Decedent performed with the Employer, the use of compressed air, and the bystander exposure at the dispatch desk and heavy truck

shop. Dr. Finkelstein relied upon the Decedent's own testimony in the deposition of her civil suit in which she stated that she performed about 65 brake jobs for the Employer.

36. During his deposition, Dr. Finkelstein stated that the friction products, including the brakes and clutches, encountered by the Decedent during her time with the Employer certainly would have contained asbestos with both chrysotile and tremolite asbestos fibers. Contrasting with reports submitted by the Respondents, Dr. Finkelstein testified that it is incorrect to say that the Decedent was exposed only to chrysotile asbestos, because the asbestos used at the time the Decedent worked for the Employer was actually Canadian-mined asbestos, which was a combination of chrysotile and tremolite asbestos fibers, and that this combination can cause mesothelioma.

37. Dr. Finkelstein stated that the Decedent "absolutely" would have been exposed to tremolite asbestos while working for the Employer and that the lung burden measurements on brake mechanics found more tremolite than chrysotile fibers. He further stated that, while the asbestos mills filtered the asbestos so that it could contain mostly short fibers, it would be impossible to reduce the asbestos to only short fibers. This resulted in a combination of short and long hair fibers in brakes and other friction products. Even with the short fibers, Dr. Finkelstein opined that there is "very little difference in toxicity between the shorter and longer fibers."

38. However, when asked about the possible causes of mesothelioma, Dr. Finkelstein opined:

> A. Well, we know a number of causes, asbestos being the most important. There are several other mineral fibers which are known to cause mesothelioma…so we know causation by mineral fibers, of which that [asbestos] is most important, and we also know that therapeutic radiation causes mesothelioma.
>
> Q. Is it possible for it to occur, as Dr. Mowat states, spontaneously or as a result of accumulations of mutations over one's lifetime?
>
> A. There – you know, *it is impossible to know* because everybody in the United States has inhaled asbestos fibers and has some asbestos in their lungs. Asbestos is a known cause of mesothelioma.
>
> *It is certainly possible* that aging processes lead to some of these mutations. It requires five or six mutations to occur in a cell before mesothelioma develops. So it is *certainly possible* that some are caused by asbestos fibers. Some are caused by other causes.
>
> But *we can't say that in any case,* particularly when there was occupational exposure, that his occurred spontaneously and is not caused by the known carcinogen, asbestos. (Deposition transcript, pp. 21-22) (emphasis added)

39. Dr. Finkelstein disagreed with the methods and epidemiology used by Dr. Mowat to formulate her opinion on the cause of the Decedent's mesothelioma. He stated that Dr. Mowat failed to consider any of the studies that were positive in finding a causal correction between brake mechanics and mesothelioma. Additionally, Dr. Finkelstein stated that, of the studies relied upon by Dr. Mowat, she failed to consider the work environment of the mechanics including the use of compressed air, whether the work was done indoors or outdoors, and whether sanding was used on the friction products.

40. Dr. Finkelstein disagreed with the notion that the braking process shortens the fiber length, explaining that the brake dust debris will often contain fibers that are 5 microns in length. Dr. Finkelstein further stated that he disagreed with the opinion that the measurements of brake mechanics indicate low exposure levels stating that "the exposure levels over a one-hour period of doing a brake job are about a hundred thousand asbestos fibers per cubic yard of air," which he stated is capable of causing disease.

41. Dr. Finkelstein has testified in an excess of 200 depositions and between thirty to forty trials on behalf of plaintiffs in asbestos related civil suits. Regarding Exponent Consulting, Dr. Finkelstein stated that Exponent has a "business model of doing work for defendants in toxic tort litigation." He explained that the big three automakers, including Ford Motor Company, spent in the range of $330 million to Exponent Consulting to sponsor research for the purpose of defense litigation in civil trials further stating that "the analysis of epidemiologic studies indicated that there was no increased risk of mesothelioma among brake mechanics, and that opinion is always expressed using that Exponent research."

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or

unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, expert testimony (and reports) has been elicited on both sides of this issue. The ALJ finds that such experts are all knowledgeable and sincere in rendering their respective opinions, thus all are, in a sense, "credible." In this case, the ALJ must decide who is simply more *persuasive* in light of what evidence is known.

Dependency Determination

4. Pursuant to §8-42-114, C.R.S. death benefits are payable to dependents of a decedent in the amount of two-thirds of the AWW subject to the applicable minimum. If there are wholly dependent persons at the time of the employee's death, they are entitled to weekly compensation equal to two-thirds of the decedent's AWW. §8-42-115(1)(b), C.R.S. 20. Section 8-41-501(1), C.R.S. designates classes of persons who are presumed to be wholly dependent on a decedent. Section 8-41-501(1)(a) provides that a widow or widower is wholly dependent "unless it is shown that she or he was voluntarily separated and living apart from the spouse at the time of the injury or death or was not dependent in whole or in part on the deceased for support." The statutory presumption of spousal dependency can thus only be rebutted by demonstrating that the surviving spouse was voluntarily separated and living apart from the decedent or was not dependent upon the decedent for any support. See Exeter Drilling v. Industrial Claim Appeals Office, 801 P.2d 20, 21 (Colo. App. 1990); Michalski v. Industrial Claim Appeals Office, 781 P.2d 183, 184-85 (Colo. App. 1989). 21.

5. Section 8-41-501, C.R.S. presumes that a decedent's minor children under the age of 18 years are wholly dependent on the decedent. Pursuant to §8-41-501(1)(c), C.R.S. minor children of a decedent who are over 18 years of age and under 21 years of age who are engaged in courses of study as full-time students at accredited

schools are also wholly dependent on the decedent. Section 8-42-121, C.R.S. grants discretion to the Director to apportion death benefits among the beneficiaries in the manner the Director deems just and equitable. Because the undersigned ALJ acts on 12 behalf of the Director in determining appropriate apportionment after a hearing, the ALJ is afforded the same power to apportion benefits.

6. It is undisputed that Alex Lavender in the Decedent's surviving spouse. They were legally married on May 13, 1995 and have lived together since 1992. It is also undisputed that Rhett and Jessica are the children of the Decedent and Mr. Lavender and that both are under the age of 18. The ALJ finds that Mr. Alex Lavender, Rhett Lavender, and Jessica Lavender are the wholly dependents of the Decedent.

Compensability, Generally

7. Compensable injuries involve an "injury" which requires medical treatment or causes disability. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009).

Causation

8. Chrysotile asbestos was used in brakes for a period of time. However, chrysotile asbestos is far less potent than amphibole asbestos, which is a known cause of mesothelioma. This is because chrysotile asbestos is short-fiber asbestos. It is also shaped differently, which allows the human body to handle and clear the asbestos. As such, chrysotile does not remain in the body for a very long time. Additionally, heat and friction cause chrysotile asbestos to lose its water content and change into forsterite, which is not known to be harmful.

9. Dr. Mowat concluded that in the Decedent's case, the Decedent would not have been exposed to asbestos at a harmful level while employed with the Employer. Dr. Mowat persuasively testified that extrapolating the asbestos exposure over her lifetime, still would not have put Decedent at an increased risk for mesothelioma.

10. Based on the opinions of Dr. Mowat regarding chrysotile asbestos, and the epidemiological studies refuting that exposure to chrysotile asbestos causes mesothelioma, the ALJ concludes that the opinions of Dr. Mowat, Dr. Taylor, Dr. Alexander and Dr. Beasley are persuasive that the Decedent's mesothelioma was not caused by her exposure to chrysotile asbestos. As found, chrysotile is a short fiber asbestos and due to its composition, its biopersistence is reduced. The ALJ concludes that the Decedent's asbestos exposure during her lifetime was *de minimus*. This extends to any residual tremolite, if any, that Decedent would have been exposed to.

11. Further, as evidenced by Dr. Finkelstein's candid admissions during his deposition, it is simply not possible to know in a given case what may have caused a person's mesothelioma. It can occur spontaneously, or as a result of the latent

asbestos that can be found in certain quantities in all of us – not merely those persons exposed in the workplace.

12. The ALJ therefore concludes that because the Decedent's exposure to chrysotile asbestos was *de minimus*, the decedent's development of mesothelioma was not caused by her work-related duties.

Compensability – Last Injurious Exposure

13. The employer in whose employment the employee was last injuriously exposed to the hazards of such disease and suffered a substantial permanent aggravation thereof and the insurance carrier if any on the risk when such employee was last so exposed under such employer shall alone be liable therefor, without right to contribution from any prior employer or insurance carrier. C.R.S. 8-41-304(1). Moreover, C.R.S. 8-41-304(2) provides that in the event of death, if such employee has been injuriously exposed to such disease while in the employ, the last employer will be liable.

14. An injurious exposure is a concentration of toxic material which would be sufficient to cause the disease in the event of prolonged exposure to such concentration. *Climax Uranium Co. v. Smith's Claimants*, 522 P.2d 134, 136 (Colo. App. 1974). Thus, the last injurious exposure need not be the cause in fact of the disease. *Id.*

15. The Supreme Court adopted this standard in *Union Carbide Corp. v. Industrial Commission*, 581 P.2d 734, 736 (Colo. 1978). The Court concluded that length of employment was immaterial to finding liability with a particular employer. *Id.* The Court reasoned that an employee must prove that he contracted an occupational disease and it was caused by his employment activities, but when an employee may have worked for several different employers, it may be that no single exposure was sufficient to cause the disease, but all the exposures contributed to the final result. Id. at 737. Nonetheless, an employee still must show "injurious exposure" which is an exposure to the chemical in a concentration that could cause the disease. *Id.*

16. Decedent worked for the Employer as a mechanic and administrative assistant in the mid-1990s. As found, OSHA set forth limits for which asbestos could be safely handled. The ALJ concludes that asbestos exposures for mechanics were well below the current regulatory permissible limits for asbestos as documented in numerous epidemiological studies. Finding the opinions of Dr. O'Brien, Dr. Finn and Dr. Ringo persuasive, the ALJ concludes the Decedent's exposure as a mechanic and bystander while working for the Employer was *de minimus* exposure and well below the OSHA regulatory exposure levels.

17. The ALJ is not persuaded by Dr. Finkelstein's hypothesis that if a given individual experiences occupational exposure to asbestos, then develops mesothelioma, that a causal link has been established, ipso facto. Taken ad absurdum,

such a causal link would be established if a brake mechanic performed one brake job, then quit that same afternoon – so long as that was his last job as a mechanic.

18. Further, by the time Decedent went to work for this Employer, asbestos, in any form, was being phased out - if not entirely removed - from Ford brake products and its associated after-market. It cannot be concluded that there was exposure to asbestos, *even in non-injurious levels,* during Decedent's tenure with this Employer. Assuming, arguendo, that the chrysotile asbestos mined in Canada contained harmful tremolite (as urged by Dr. Finkelstein), such exposure would still not have extended to Decedent's time at Phil Long. Decedent was working on newer cars by then, largely (perhaps entirely) free of asbestos in any form.

19. Therefore, the ALJ concludes that the Decedent was not last injuriously exposed to asbestos while working for the Employer because: 1) any claimed exposure was below OSHA regulatory exposure levels, and 2) it has not been shown that Decedent has been exposed to injurious levels of asbestos at all, since asbestos was largely phased out of the brake products Decedent would have been working with during her tenure with this Employer.

ORDER

It is therefore Ordered that:

1. Claimants' claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 21, 2019

/s/ William G. Edie

Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant overcame Dr. Mason's DIME opinion on permanent impairment by clear and convincing evidence.

II. Whether Claimant proved by a preponderance of the evidence additional medical maintenance treatment is reasonable, necessary and related to his December 7, 2017 work injury.

FINDINGS OF FACT

1. Claimant is a 73-year-old male who worked for Employer as a gate keeper. On December 7, 2017, Claimant sustained an admitted industrial injury when he was struck by a vehicle while attending the front gate entrance. Claimant flagged down a commercial truck attempting to enter the complex through the resident gate and advised the driver he needed to go through the commercial truck entrance. The driver became irritated and pulled away quickly, striking Claimant in the shoulder, back, and arm. Claimant immediately reported the incident to Employer and was sent to Concentra for treatment.

2. Glenn Peterson, PA-C evaluated Claimant at Concentra on December 7, 2017. Claimant presented with no neurological complaints or findings. PA-C Peterson assessed Claimant with a right shoulder contusion, acute cervical strain, thoracic sprain and lumbar strain. He referred Claimant for physical therapy, noting Claimant was already taking Meloxicam for pain and inflammation.

3. On December 12, 2017, Claimant presented to Thomas Corson, D.O. at Concentra with complaints of pain and aching in the right upper trapezius and shoulder blade and weakness in the right upper extremity with no tingling or numbness. Physical examination revealed tenderness in the right supraspinatus and distal tendon and painful right shoulder abduction. Dr. Corson prescribed Cyclobenzaprine and Lidocaine external patches.

4. Claimant saw Dr. Corson on December 20, 2017, January 3, 2018, January 4, 2018, February 7, 2018, March 7, 2018, March 21, 2018, April 4 2018 and April 25, 2018 with continued right shoulder complaints, at times radiating into the posterior neck and upper back. The records of these visits contain no mention of numbness or tingling. Lumbar exam findings were either normal or not noted. Neurological and psychiatric findings on examination, as well as cervical and thoracic spine findings were normal, with the exception of tenderness in the cervical and thoracic spine noted on April 4, 2018. Lumbar strain was sporadically noted as a diagnosis. Claimant continued on medication, physical therapy and dry needling.

5. Claimant underwent a right shoulder MRI on May 8, 2018. The impression was: (1) rotator cuff tendinopathy with non-displaced 5 mm full-thickness tear distally; (2) biceps tear with mild retraction and moderate cyst formation adjacent to the anchor without impingement on structures in the supra-scapular notch; (3) degeneration of the posterior labrum without a displaced tear; and (4) acromioclavicular arthropathy.

6. Dr. Corson reevaluated Claimant on May 9, 2018, noting the MRI revealed a right rotator cuff tear. Claimant complained of shoulder pain radiating to the right neck and right scapula. Tingling and numbness were noted under review of systems. Right shoulder range of motion was full with pain and tenderness. Neurologic and psychiatric exams were normal. Dr. Corson referred Claimant to an orthopedic specialist.

7. Claimant presented to Cary Motz, M.D. for an orthopedic evaluation on May 15, 2018. Dr. Motz diagnosed Claimant with a right shoulder small rotator cuff tear and chronic biceps tendon tear and performed a steroid injection into the subacromial space.

8. Claimant returned to Dr. Corson on May 30, 2018 and reported that the steroid injection only helped for 48-72 hours. Claimant continued to report right shoulder symptoms. Numbness was noted under the review of symptoms. Right shoulder active range of motion was 90 degrees flexion 45 degree extension and 90 degrees abduction. Cervical spine had full range of motion with tenderness. No lumbosacral findings were included. Neurologic and psychiatric findings were normal.

9. Dr. Motz reevaluated Claimant on July 17, 2018. Dr. Motz noted Claimant's shoulder had good function and minimal discomfort. Dr. Motz noted that if Claimant's symptoms worsened, he could consider a steroid injection under maintenance treatment.

10. Dr. Corson reexamined Claimant on August 1, 2018. Claimant complained of pain in the right posterior shoulder that did not radiate. On physical examination, Dr. Corson noted tenderness in the right shoulder and the following active range of motion measurements of the right shoulder: forward flexion 100 degrees, extension 45 degrees, and abduction 100 degrees. Dr. Corson noted cervical spine tenderness with full range of motion. Neurologic and psychiatric findings were normal. No lumbosacral findings were noted. Dr. Corson placed Claimant at maximum medical improvement (MMI) with no permanent impairment. His final assessment was acute cervical strain, right shoulder contusion, right shoulder strain, tear of right rotator cuff, and thoracic sprain. Dr. Corson released Claimant to full duty work with no restrictions and opined Claimant could follow up with Dr. Motz for another steroid injection within the next 12 months if needed.

11. Respondents filed a Final Admission of Liability (FAL) on August 14, 2018 consistent with Dr. Corson's August 1, 2018 report. Respondents admitted for reasonable and necessary and related medical maintenance care. Claimant objected to the FAL and filed an Application for a DIME. On the DIME Application, Claimant listed

"neck, back, right shoulder, and psychological" under the body parts/conditions to be evaluated.

12. At the request of Claimant, John Hughes, M.D. performed an independent medical examination (IME) on November 12, 2018. Claimant complained of right shoulder and neck pain. Physical examination revealed cervical spine and right shoulder tenderness. Cervical active range of motion measurements were as follows: left lateral flexion 9 degrees, left lateral rotation 31 degrees, right lateral flexion 17 degrees, right lateral rotation 45 degrees, flexion 51 degrees and extension 36 degrees. Right shoulder active range of motion measurements were 110 degrees flexion, 36 degrees extension, 97 degrees abduction, 23 degrees adduction, 70 degrees external rotation and 61 degrees internal rotation. Neurologic exam findings were normal. No lumbosacral findings were noted.

13. Dr. Hughes assessed Claimant with (1) cervical spine sprain/strain with residual cervical facet joint arthropathy, (2) right shoulder sprain/strain with a partial rotator cuff tear and labral tear, and (3) resolved lumbar spine sprain/strain. He agreed Claimant reached MMI, but assigned a total permanent impairment rating of 17% for the cervical spine and 10% for the right upper extremity, which combined for a whole person impairment rating of 22%. He opined Claimant should be permanently restricted from reaching or lifting and using the right arm above shoulder level. With regard to medical maintenance, Dr. Hughes' stated:

> At the present time, I do not have any recommendations for additional medical evaluation or treatment of [Claimant]. He does have cervical spine facet joint signs and symptoms and all these might be amenable to cervical spine injections. There really is no firm basis to proceed with this type of treatment. Instead, I would recommend a continuing course of home exercise with the use of heat. If cervical spine symptoms persist, it may be beneficial to revisit the idea of cervical spine interventional treatment.

14. On February 4, 2019, Claimant underwent a DIME with Kristin D. Mason, M.D. Claimant complained of right shoulder pain and grinding, occasional numbness and tingling and neck pain. Dr. Mason reviewed Claimant's medical records from the date of injury through Dr. Hughes' November 12, 2018 IME report. On physical examination, Dr. Mason noted "questionable decreased sensation in the right C5 and C6 distributions" and tightness in the right cervical paraspinal muscles. Cervical active range of motion was 43 degrees flexion, 50 degrees extension, 20 degrees right side bending, 35 degrees left side bending, 50 degrees right rotation and 70 degrees left rotation. Right shoulder active range of motion measurements were 130 degrees flexion, 30 degrees extension, 30 degrees adduction, 105 degrees abduction, 60 degrees internal rotation and 55 degrees external rotation. No lumbosacral findings were noted.

15. Dr. Mason assessed Claimant with a cervical sprain/strain with probable myofascial and facet-based components and chronic right shoulder partial rotator cuff

tear in the setting of mild degenerative arthritis. She specifically noted, "I was also asked to evaluate for back impairment and psychologic impairment. I do not see any evidence of significant complaints in either of those areas. In fact, the patient made no marks over his thoracolumbar spine on his pain diagram and denied any significant psychologic distress." Dr. Mason opined Claimant reached MMI on August 13, 2018 and assigned a 13% impairment rating for the cervical spine and 7% for the right upper extremity, which combined for a whole person impairment rating of 19%. She recommended permanent restrictions of lifting no more than 10-15 pounds with the right upper extremity and avoiding overhead lifting entirely and limiting overhead reaching. As maintenance care, Dr. Mason recommended follow up with Dr. Motz and steroid injections on an as-needed basis. She stated,

> Injections are somewhat risky because the patient is on anticoagulation. It appears that physical therapy had an equivocal benefit for him and he cannot take anti-inflammatories. If his neck complaints should worsen, I agree with Dr. Hughes that facet procedures might be an option but, again, the anticoagulation makes that somewhat risky. If he worsens with respect to his shoulder, a second opinion with another orthopedic surgeon would also be reasonable.

16. On March 8, 2019, Respondents filed a FAL admitting for a 12% upper extremity rating and 13% whole person rating and maintenance care.

17. Claimant testified at hearing he has current symptoms of right shoulder pain and headaches 5-7 days per week along with limited range of motion in his cervical spine. Claimant testified he continues to see his primary care physician due to neck pain and headaches and saw Dr. Motz on July 9, 2019 for further evaluation and workup due to ongoing issues with his right upper extremity and neck pain. Claimant testified he is able to perform his job with his current work restrictions.

18. Dr. Hughes testified by post-hearing deposition on July 11, 2019. He testified electrodiagnostic testing would have been a "reasonable thing to do" given Dr. Mason's finding of decreased sensation in the right C5 and C6 distributions. He acknowledged, however, that his examination did not indicate the presence of any neurological pathology, nor did he recall if the medical records tracked any neurological signs or symptoms. Dr. Hughes also took issue that Dr. Mason did not indicate she examined the lumbar and thoracic spine and only made a cursory reference to the back in her report. He, however, acknowledged that he examined Claimant's back and did not find that an impairment rating was warranted. Dr. Hughes testified that the difference in his and Dr. Mason's range of motion measurements was likely due to the variability of spinal stiffness to be expected in individuals of Claimant's age. He stated individuals with facet joint arthritis have waxing and waning in the clinical course, with good days and bad days. Dr. Hughes testified he had no criticism of Dr. Mason's measurements and had no reason to question the impairment ratings assigned by Dr. Mason.

19. Dr. Hughes testified he has not examined Claimant since his IME and was unaware Claimant has continued to treat for neck and shoulder pain. When asked what interventional treatment would he recommend for the cervical spine if Claimant is still treating, Dr. Hughes testified,

> Given the incomplete information currently available to me, I believe that he would be a candidate for a trial of facet joint injections for diagnostic purposes primarily, and potentially medial branch blocks leading up to a radiofrequency neurotomy procedure if he had a positive response to the medial branch blocks.

Dr. Hughes continued to opine Claimant remains at MMI, but agrees with Dr. Hughes that should Claimant's neck complaints worsen, facet procedures or medial branch blocks might be an option.

20. The ALJ finds Claimant's testimony credible and persuasive.

21. The ALJ finds Dr. Mason's opinion on permanent impairment, as supported by Dr. Corson's opinion and the medical records, more credible and persuasive than Dr. Hughes' opinion and testimony.

22. Claimant failed to overcome Dr. Mason's DIME opinion on permanent impairment by clear and convincing evidence.

23. Claimant proved by a preponderance of the evidence he is entitled to reasonably necessary and related maintenance treatment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and

draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME on Permanent Impairment

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

As found, Claimant failed to overcome Dr. Mason's DIME opinion on permanent impairment. Claimant argues Dr. Mason erred by not considering Claimant's potential neurologic impairment. Claimant points to his reported symptoms of numbness and tingling and Dr. Mason's exam finding of decreased sensation in the right C5 and C6 distribution. Importantly, Dr. Mason described the exam finding of decreased sensation as "questionable," indicating doubt as to the accuracy of the finding. Other than few sporadic reports of numbness in the records, the medical records do not reflect consistent neurological complaints, nor any abnormal neurologic findings, including at the time of MMI and at Dr. Hughes' evaluation. While Dr. Hughes testified decreased sensation in the right C5 and C6 distributions can be related to a neurologic condition, and it might have been reasonable to perform electrodiagnostic testing, in light of Dr. Mason qualifying the finding as "questionable" and the lack of complaints and findings throughout the records, there is insufficient evidence Dr. Mason erred by not further addressing Claimant's reported subjective neurological symptoms.

Claimant also argues Dr. Mason erred by failing to consider variability in spinal stiffness when measuring cervical range of motion and overall impairment. Claimant contends Dr. Mason's measurements likely to do not reflect the true extent of Claimant's limitations, pointing to differences in the measurements between Dr. Mason and Dr. Hughes. The ALJ is not persuaded by Claimant's contention. Dr. Hughes explained that variability in spinal stiffness is to be expected in an individual of Claimant's age. This variability in spinal stiffness likely accounts for the difference in measurements and supports a conclusion that Dr. Mason did not err in performing the range of motion measurements. Dr. Hughes specifically testified he had no criticism of Dr. Mason's measurements. There is no indication Dr. Mason felt the measurements were significantly non-physiologic requiring repeat measurements or use of measurements obtained by other providers. Accordingly, the ALJ is not persuaded that an alleged failure to consider variability in spinal stiffness resulted in an incorrect opinion on permanent impairment.

Lastly, Claimant contends Dr. Mason erred by failing to examine Claimant's lumbar spine. The ALJ is not persuaded Dr. Mason's exclusion of lumbar exam findings rises to the level of clear error in this circumstance. In the DIME report, Dr. Mason acknowledges she was asked to evaluate for back and psychologic impairment and clearly explains she did not see any evidence of significant complaints in either area. Although Claimant was initially diagnosed with a lumbar strain and this diagnosis continued to appear inconsistently throughout the medical records, the records reflect no further lumbar complaints or findings throughout the course of treatment, including at

the time Claimant was placed MMI and at the time of Dr. Hughes' IME. To the extent Dr. Hughes diagnosed Claimant with a lumbar sprain/strain, he noted that the injury had resolved over time; furthermore, Dr. Hughes testified he did not find any back impairment on his examination. As the medical records do not contain evidence of significant lumbar findings or complaints, no lumbar impairment was found by either Dr. Corson or Dr. Hughes, and Dr. Mason explained her basis for not further addressing the back in her report, any failure to include lumbar exam findings or to further expound on the lumbar spine does not render Dr. Mason's opinion highly probably incorrect.

Dr. Hughes testified he did not have any reason to question Dr. Mason's impairment ratings. To the extent Dr. Hughes' opinions vary from those of Dr. Mason, the ALJ considers this a mere difference of opinion that is insufficient to overcome Dr. Mason's DIME opinion.

Medical Benefits

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services,* W. C. No. 4-543-730, (ICAO, July 14, 2006).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant has met his burden to prove entitlement to reasonable, necessary and related maintenance treatment. Claimant's authorized treating providers, Drs. Corson and Motz, opined Claimant could undergo follow up and steroid injections as maintenance treatment. Dr. Mason also recommended follow up and steroid injections as needed. Dr. Hughes opined additional cervical intervention was reasonable in the event Claimant's cervical spine symptoms persisted. Claimant credibly testified he continues to experience symptoms. Based on the totality of the credible and persuasive evidence, Claimant has proven entitlement to maintenance treatment. Respondents retain the right to challenge the compensability, reasonableness and necessity of any specific treatments.

ORDER

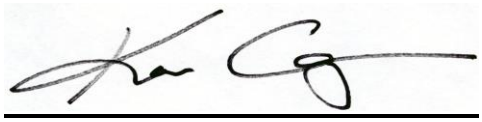
1. Claimant failed to overcome Dr. Mason's DIME opinion on permanent impairment by clear and convincing evidence.

2. Claimant is entitled to reasonably necessary and related medical maintenance treatment.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 23, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

W.C. No. 5-078-723-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF RESPONDENTS.

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for September 11, 2019, in Denver, Colorado. The hearing is hereby vacated.

The matter is before Edwin L. Felter, Jr., Administrative Law Judge (ALJ) on a Motion for Summary Judgment. Respondents filed the Motion for Summary Judgment on July 8, 2019, seeking to dismiss Claimant's "Petition to Reopen" and "Application for Hearing." Attached to the Respondents' Motion were Exhibits 1 through 15. Claimant filed no response. This Motion for Summary Judgment was deemed submitted for a decision on July 31, 2019.

ISSUE FOR SUMMARY JUDGMENT

The issue before the Court is whether there is a genuine issue of disputed material fact concerning whether Claimant's Application for Hearing did in fact challenge Respondents' Final Admission of Liability (FAL) as required by § 8-43-203(2)(b)(II), C.R.S., and whether Claimant's Petition to Reopen was filed before the case had closed, in which case that Petition to Reopen would be premature.

FINDINGS OF FACT

Based on Respondents' Motion for Summary Judgment and the attachments to that Motion, the ALJ makes the following Findings of Fact:

Undisputed Facts

1. Claimant sustained an admitted injury on February 6, 2018.

2. Under History of Present Illness, Amanda P. Cava, M.D., noted Claimant's complaints of left post hip/SI pain, pain in left buttock, lateral hip and anterior upper thigh, and right hip/buttock pain, as well as knee pain. Despite these complaints, Dr. Cava's assessment was tear of medial meniscus of right knee, status post right knee surgery. She limited her impairment rating to the right knee.

3. On September 21, 2018, the adjuster filed a Final Admission of Liability, (FAL), based on Dr. Cava's August 30, 2018 maximum medical improvement (MMI) date and 18% scheduled rating. Post-MMI medical benefits were also admitted pursuant to Dr. Cava's report.

4. Claimant objected to the FAL and requested a Division Independent Medical Examination (DIME) on October 15, 2018.

5. On October 30, 2018, Claimant returned to Dr. Cava for a maintenance appointment. He complained that his left post hip/SI pain was worsening over the past few months, even causing his leg to give out on multiple occasions. He also complained of numbness/tingling in his right buttocks and a pulling sensation down the left leg to the left foot, and right hip pain and heel pain. Dr. Cava referred the Claimant to John Aschberger, M.D., for further evaluation. She did not rescind her MMI determination.

6. On November 13, 2018, the Claimant was seen by Dr. Aschberger for a physical medicine consultation. Dr. Aschberger noted that the Claimant had persistent complaints of pain at the hips, right lumbosacral area pain, left groin pain and issues of the left leg buckling, and tingling at the lateral foot. Dr. Aschberger noted that there did not appear to be any predominant presentation of back complaints on review of the records. He ordered a lumbar MRI (magnetic resonance imaging).

7. The Claimant returned to Dr. Aschberger on December 4, 2018. Dr. Aschberger noted that the Claimant continued with issues of pain predominantly in the buttocks. He specifically noted that the Claimant had no radicular radiation of symptomatology. His assessment was lumbosacral strain and status post bilateral knee surgery for meniscal tear. He noted that the MRI scan was not significant for neural compromise or radiculitis.

8. On January 23, 2019, Dr. Aschberger stated he expected MMI was coming up and he was of the opinion that Claimant would warrant impairment for the knees and likely for the lumbar area.

9. On February 1, 2019, Dr. Cava noted that an impairment rating was performed previously for both knees and the Claimant may need an impairment rating assessment for lumbar spine. Although she had never rescinded her previous MMI date or given an opinion that the Claimant's condition had worsened, Dr. Cava noted Claimant was approaching MMI.

Division Independent Medical Examination of Kathy McCranie, M.D.

10. The DIME was performed by Kathy McCranie, M.D., on February 8, 2019. Her report is dated February 28, 2019. Dr. McCranie noted that the Claimant's primary complaints were of right buttock, heel, and left hip pain. In her records review, Dr. Cava had noted that Claimant's first mention of right hip pain in the available medical records was July 10, 2018, and his first complaint of low back pain was July 24, 2018. Dr. McCranie also noted that the Claimant had brought in pain diagrams ranging from November 30, 2017 through January 4, 2019. She noted the first indications of more diffuse lower extremity pain was on April 30, 2018, two months and three weeks after his work injury. She noted that, one month later, on May 30, 2018, the Claimant mentioned that he had low back pain and right foot numbness and tingling.

11. Dr. McCranie's impression regarding the work-related injury of February 6, 2018, was right knee pain: a. Right knee lateral horn medial meniscal tear with debridement of 15% of the meniscus and b. Status post debridement of medial plica and chondroplasty of the medial femoral condyle June 4, 2018. Dr. McCranie indicated the right buttocks/low back pain, complaints of left hip pain, and complaints of right heel pain were subsequent conditions. Dr. McCranie rated Claimant's knee injury but not the left hip or the lumbar spine. She noted there was no specific injury to the left hip and she did not find any indication of permanent injury on physical examination. Regarding Claimant's lumbar spine, she stated there was no indication that the later onset of lumbar pain was related to the work injury of February 6, 2018. She stated the same was true for his complaints of right heel pain. Based on the records received, she did not find a causal relationship between his complaints and that of his work injury. She also noted his reported mechanism of injury of tripping but not falling is not a mechanism that would cause a permanent lumbar injury, and his diagnosis of lumbar with sacral strain was not a diagnosis that would be permanent in nature.

12. On February 14, 2019, Dr. Aschberger noted Claimant reported persistent pain in the back and some radiation of symptomatology, and his pain level was unchanged. Dr. Aschberger scheduled him for an impairment rating.

13. On February 22, 2019, Dr. Cava released Claimant from care at maximum medical improvement. Her assessment on that date was strain of left hip, lumbar strain, tear of medial meniscus of right knee, status post right knee surgery.

14. On March 7, 2019, Dr. Aschberger performed an impairment assessment. He noted that the Claimant had had persistent complaints of pain at the "hips," at the groin, and at the back. Dr. Aschberger assigned a 14% lower-extremity rating (RLE) for Claimant's right knee and a 5% whole person impairment rating for "lumbosacral strain with component of SI irritation and restriction." Dr. Aschberger did not render an opinion that the Claimant's condition had worsened. In fact, Dr. Aschberger had the same information and impressions available to him, at the same time if not before, that DIME Dr. McCranie had available at the time of her examination.

15. On March 18, 2019, the Division of Workers' Compensation (DOWC) issued its notice that the DIME process was concluded.

16. On March 28, 2019, the adjuster filed a FAL, based on DIME Dr. McCranie's August 30, 2018 MMI date and 19% RLE scheduled rating. Maintenance care after MMI was also admitted pursuant to Dr. McCranie's report.

17. On April 22, 2019, the Claimant filed a Petition to Reopen on the ground of change in medical condition based on the March 7, 2019 report of John Aschberger, M.D. In fact, Dr. Aschberger's report was based on information and impressions contemporary with DIME Dr. McCranie's information and impressions.

18. On April 22, 2019, the Claimant filed an Application for Hearing endorsing the issues of Petition to Reopen Claim, Permanent Partial Disability Benefits, and "Claimant seeks to reopen his claim based on the March 7, 2019 report of John Aschberger, MD; Claimant seeks a determination of the date of MMI; Claimant seeks a determination of the amount of PPD benefits owed." Claimant did not check the box to indicate the hearing was requested in response to an FAL

Ultimate Findings

19. In his Application for Hearing, Claimant did not indicate that the hearing was requested in response to the FAL.

20. Claimant filed the Petition to Reopen twenty-six days after Respondents had filed their FAL during which time Claimant's case was still open.

21. Claimant's case automatically closed thirty days after the date the FAL was filed. That means Claimant's case is now closed. Yet, while Claimant's case is now closed, that does not mean that Claimant's premature Petition to Reopen has become ripe for review. This is because Claimant's grounds for reopening, which consisted of a March 7, 2019 report from John Aschberger, M.D, could have been used to timely challenge the FAL and the DIME, which it was not

22. The ALJ infers and finds that the Petition to Reopen amounts to an attempted "end-run" around the statutory provisions specifying how DIMEs are challenged, with the potential net effect of lessening the Claimant's burden of proof to "a preponderance," as opposed to "clear and convincing evidence."

23. There is no disputed issue of genuine material fact herein.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) (C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act). As found, the Respondents' Motion for Summary Judgment is supported by Exhibits 1 through 15. As further found, there were no timely responses to Respondents' Motion for Summary Judgment.

b. Summary judgment is appropriate when the pleadings show there is no genuine disputed issue of material fact and the movant is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegations of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the Motion for Summary judgment and the attached Exhibits establish that the facts in the present case are undisputed in showing that Claimant's Petition for Reopening was filed before the case had closed, and Claimant's Application for Hearing failed to challenge Respondents' Final Admission of Liability (FAL) as required by § 8-43-203(2)(b)(II), C.R.S.

c. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue of material fact that would require a hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). The failure of the opposing party to satisfy its burden entitles the moving party to summary judgment. *Gifford v. City of Colorado*

Springs, 815 P.2d 1008 (Colo. App. 1991). As found, Claimant did not respond in a timely manner to contend that there are genuine disputed issues of material fact. As found, there are no genuine issues of disputed, material fact.

Application for Hearing

d. Section 8-43-203(2)(b)(II), C.R.S. states, in pertinent part, that a case will be "automatically closed as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing."

e. Because Respondents filed the FAL on March 28, 2019, and because Claimant filed his Application for Hearing on April 22, 2019, it is undisputed that Claimant filed its Application for Hearing within thirty days after the date of the Final Admission of Liability (FAL), however, the Application failed to designate "overcoming the DIME" as an issue.

f. It is also undisputed that in his Application for Hearing Claimant contested neither the FAL nor the division-sponsored independent medical examination (DIME) on which the FAL was based. Rather, on his Application for Hearing, Claimant cited "Petition to Reopen Claim" as an issue to be considered, along with "a determination of the MMI" and "a determination of the amount of PPD benefits owed. Claimant failed to check the box or otherwise indicate that the Application for Hearing was in response to the FAL.

g. Claimant cannot circumvent the process for challenging a DIME, specified in § 8-42-107 (8) (b) (III), C.R.S., which provides an elevated standard of proof, *i.e.,* "clear and convincing evidence," by filing a petition to reopen before the deadline to challenge the DIME, the net effect being a lowering of thec standard of proof to a "preponderance of the evidence." For an analogous holding concerning circumvention of statutory processes in the Workers' Compensation Act, *see Story v. Indus. Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995).

h. Accordingly, because it is undisputed that Claimant failed to contest the FAL in writing within the requisite thirty days, Claimant's case, by operation of law, automatically closed as to the issues admitted in the FAL. *See* § 8-43-203(2)(b)(II), C.R.S..

Petition for Reopening

i. Also on April 22, 2019, Claimant filed a Petition for Reopening. An ALJ may reopen any award on the grounds of error, mistake, or change in condition. § 8-43-303(1), C.R.S. 2018. But, a petition to reopen is premature if the claim has not yet closed. *See Justiniano v. Indus. Claim Appeals Office*, 2016 COA 83, ¶ 13. A claim

closes thirty days after the Final Admission of Liability is filed. Section 8-43-203(2)(b)(II), C.R.S..

j Like the Application for Hearing, it is undisputed that Claimant's Petition for Reopening was filed twenty-six days after the FAL was filed. Because thirty days had not yet passed when Claimant filed his Petition for Reopening, Claimant's case had not yet closed. As found, because Claimant's case had not yet closed, the Petition to Reopening was premature.

k. As found, Claimant's case automatically closed thirty days after the date the FAL was filed. That means Claimant's case is now closed. Yet, while Claimant's case is now closed, that does not mean that Claimant's premature Petition for Reopening has become ripe for review. This is because Claimant's grounds for reopening, which consisted of a March 7, 2019 report from John Aschberger, M.D, could have been used to timely challenge the FAL and the DIME, which it was not. *See, e.g., Justiniano,* ¶¶ 12-15 (holding that a petition to reopen, filed prematurely, should not be addressed if it is based on information that a claimant could have used to timely challenge the FAL; this rule prevents claimants from avoiding the "clear and convincing evidence" standard that is required to overturn a DIME's findings).

l. Moreover, it is undisputed that Dr. Aschberger's medical report could have been used to timely challenge the FAL, as the Petition to Reopen, which cited that very report, was filed twenty-six days after the FAL was filed. And, as stated, a claimant has thirty days to timely contest the FAL. *See* § 8-43-203(2)(b)(II), C.R.S.

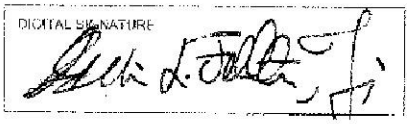
ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents' Motion for Summary Judgment is hereby granted.

B. The hearing of September 11, 2019 is hereby vacated.

DATED this 27th day of August 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

ISSUES

1. Whether Claimant has overcome the Division Independent Medical Examination (DIME) physician's opinion of the date of maximum medical improvement (MMI) and/or the permanent impairment rating by clear and convincing evidence.

2. If Claimant overcomes the DIME physician's opinion on MMI, whether Claimant is entitled to temporary total disability benefits from April 27, 2018 to January 11, 2019.

3. Whether an overpayment exists.

FINDINGS OF FACT

1. Claimant is a 33-year-old male who was employed by Employer as an automotive technician.

2. On August 22, 2015, Claimant sustained an admitted work related injury to his lower back when he was changing an oversized tire. Claimant reported at subsequent medical evaluations that he went to pick up the tire and felt a pop/tweak in his back and had immediate pain.

3. Claimant underwent medical treatment for the admitted work related injury.

4. On January 6, 2016, John Sacha, M.D. evaluated Claimant. Dr. Sacha noted that Claimant had a lumbar epidural that provided no short-term relief indicating a non-diagnostic response. Dr. Sacha opined it was unlikely Claimant had discogenic pain and that it was unclear what the pain generator was. Dr. Sacha opined that Claimant had an MRI with minimal findings of a disc bulge. Dr. Sacha opined that Claimant was at maximum medical improvement (MMI). On examination, Claimant reported pain with forward flexion. Dr. Sacha provided the impression of lumbosacral radiculopathy and noted that nothing further was appropriate for care other than a one time rheumatologic panel to ensure there were no work related entities causing ongoing symptoms. Dr. Sacha cleared Claimant for full duty work and opined that Claimant had a 7% whole person permanent impairment related to the injury. *See* Exhibit C.

5. Approximately one year later, Claimant underwent a Division Independent Medical Examination (DIME).

6. On January 18, 2017, Douglas Scott, M.D. performed the DIME. Claimant reported constant low back pain with pain into the anterior legs. Claimant reported back spasms in his low back, difficulty sleeping, pain with bending forward, and trouble working

without use of pain pills. Dr. Scott noted that the mechanism of injury was a lift greater than 50 pounds in a bent forward flexed position. Claimant reported no prior back injuries, low back pain, or low back treatment. Dr. Scott reviewed medical records and performed a physical examination. On examination, Dr. Scott opined that Claimant's pain and tenderness was with palpation at the belt line bilateral lumbosacral paraspinal region. Dr. Scott found muscle tone in the lower back and buttocks to be increased with very tight muscles in those areas. Dr. Scott opined that based on the mechanism of injury and symptoms, Claimant's injury was suggestive of a disc injury at L5-S1. Dr. Scott opined that Claimant still had symptoms related to the disc injury, was not stable, and that further treatment might reasonably be expected to improve Claimant's condition. Dr. Scott opined that Claimant was not at MMI, and recommended further evaluation and second opinion consultation to clarify diagnosis, design rehabilitation and treatment plan, and consider whether or not the pain was possibly due to facet joint disorder and whether facet joint injections would be beneficial. Dr. Scott also recommended massage therapy for the tight paraspinal and buttock muscles. *See* Exhibits 4, D.

7. Based on DIME physician Dr. Scott's opinion, Claimant received additional treatment.

8. On October 2, 2017, Dr. Ogin evaluated Claimant. Claimant reported chronic low back pain with no problems prior to an episode at work two years ago. Claimant reported aching and stabbing pain across his back with numbness and tingling into his buttocks. Claimant reported that his pain ranged from a 4-10/10 and that his pain was currently a 7/10. Dr. Ogin performed a physical examination and reviewed Claimant's MRI of the lumbar spine. Dr. Ogin noted a mild disc bulge at L5-S1 and mild facet arthropathy. Dr. Ogin provided the impression of possible discogenic pain, central L5-S1 disc protrusion, and negative reported response to facet blocks. Dr. Ogin noted that Claimant had been treated comprehensively without any lasting results. Dr. Ogin opined that the MRI findings were pretty minimal. Dr. Ogin noted it was possible that Claimant may have a component of discogenic pain and that it was reasonable to trial a one time epidural steroid injection. *See* Exhibit 6.

9. On October 17, 2017, Dr. Ogin performed bilateral L4-5 and L5-S1 intra-articular facet joint injections. Claimant reported pre-injection pain at a 4/10 at rest and at a 6/10 with walking and standing. Claimant reported his post-injection pain at a 2/10 with walking and standing. *See* Exhibit 5.

10. On November 21, 2017, Dr. Ogin performed left L3, L4, L5 medial branch blocks. Claimant reported his pre-injection pain at a 6/10 increasing up to an 8/10 with flexion and extension. Claimant reported his post injection pain at a 0/10 with provocative maneuvers. *See* Exhibits 5, 6.

11. On November 27, 2017, Dr. Ogin evaluated Claimant. Claimant reported an excellent response to the medial branch blocks. Dr. Ogin opined that Claimant had an excellent diagnostic response to facet blocks and to confirmatory medial branch blocks

and was a good candidate to move forward with radiofrequency neurotomy. *See* Exhibit 6.

12. On December 19, 2017, Dr. Ogin performed a radiofrequency neurotomy. Claimant reported on January 8, 2018 that he was doing quite well with his back pain down to a 2/10. Dr. Ogin had a long conversation with Claimant about MMI and maintenance care and recommended Claimant continue physical therapy to review core strengthening and stabilization and to do work simulation tasks. *See* Exhibit 6.

13. On January 9, 2018, Dr. Miller evaluated Claimant. Claimant reported that he had been doing well since his radiofrequency ablation. Claimant reported aching in the central lumbar spine but no longer had the continuous sharp pain. *See* Exhibit 7.

14. On January 29, 2018, Dr. Ogin evaluated Claimant. Claimant reported that he continued to do well and that his pain had stabilized at a 2/10. Claimant reported that he was continuing physical therapy. Dr. Ogin opined that Claimant was approaching MMI. Dr. Ogin assessed low back pain with positive results from lumbar left L3, L4, and L5 medial branch rhizotomies. *See* Exhibit 6.

15. On March 26, 2018, Dr. Ogin evaluated Claimant. Claimant reported that he was 70-80% better overall following his December 2017 neurotomy. Claimant reported that most of the time his pain was at a 2/10. Claimant reported that he took oxycodone rarely. Dr. Ogin provided the impression of facet syndrome, status post radiofrequency neurotomy, doing significantly better. He opined that Claimant was doing fairly well. *See* Exhibits 6, F.

16. On April 27, 2018, Dr. Ogin evaluated Claimant. Claimant reported that he had been attending work conditioning, had gotten quite a bit stronger, and had been going almost daily. Claimant reported that as a result of going daily to work conditioning, he had quite a bit of achy axial back pain that felt muscular and was at about a 7/10 on the pain scale. Claimant reported that he had gotten to 75 pounds lifting and believed that would get him back to full duty work. Claimant reported that he had ran out of all medications and had last taken occasional Percocet mid-February. On examination, Claimant ambulated without difficulty and had adequate lumbar flexion and extension. Dr. Ogin opined that Claimant was doing fairly well with some achy pain that was muscular related due to work conditioning. Dr. Ogin opined that the muscular pain should abate with time. Claimant reported he had made significant progress and that the radiofrequency neurotomy was quite helpful. Dr. Ogin noted that Claimant would continue with his independent exercise regimen and that if Claimant's facet pain recurred, they could consider repeating rhizotomy in the future, presuming that Claimant had a minimum of six to nine months of relief. Dr. Ogin gave Claimant Percocet for pain flare-ups as he was exercising. Dr. Ogin noted he would see Claimant back again in six weeks for maintenance care. *See* Exhibits 6, F.

17. On April 27, 2018, Dr. Miller also evaluated Claimant. Claimant reported that he had started work hardening and felt sore. Claimant reported progressive return

of the central lumbar spine aching pain shooting into the posterior and anterior left thigh. Claimant had pain with lumbar motion. Dr. Miller again opined that the gym pass was important and needed due to Claimant's deconditioning, lack of work, and chronic pain. Dr. Miller hoped to regain strength and function with work conditioning and the gym pass. *See* Exhibit 7.

18. On May 7, 2018, Claimant underwent physical therapy. The therapist noted that a December 2017 rhizotomy led to a big improvement in Claimant's symptoms. It was noted that Claimant could lift floor to waist bilaterally at 115 pounds and waist to shoulder bilaterally at 75 pounds which were increases over the weights one month prior. The therapist noted Claimant demonstrated good strength improvements with material handling testing and good improvements in non-material handling tasks. The therapist noted that Claimant could return to full time unrestricted duty and had met goals in the maximum lift/material handling of 75 pounds lifting. *See* Exhibit G.

19. On May 25, 2018, Dr. Miller evaluated Claimant. Claimant reported that he had completed work hardening and didn't feel much more fit but looked forward to using a gym pass to maximize his physical fitness. Claimant reported progressive return of his central lumbar spine pain and felt overall improved, but was worried about the progressive return of lumbar discomfort. *See* Exhibit 7.

20. On June 4, 2018, Dr. Ogin evaluated Claimant. Claimant reported some continued axial back pain. Claimant reported that as he had been doing more core conditioning and general work, he was developing more flexion-based central axial pain. Dr. Ogin opined that Claimant had some annular tearing along the lower discs. Claimant reported his pain level was at a 5/10 aggravated with bending and twisting. Dr. Ogin found mild tenderness to deep palpation. Dr. Ogin provided the impression of lumbar facet syndrome, significantly improved following radiofrequency neurotomy, probable discogenic low back pain with intermittent left leg radicular pain complaints, myofascial pain, and muscle deconditioning. Dr. Ogin opined that it was too soon to consider repeat radiofrequency neurotomy as Claimant was only six months out. Dr. Ogin opined that Claimant would really benefit from getting into a gym. Dr. Ogin noted he had discussed with Dr. Miller that Claimant would be at MMI after the epidural steroid injection, but opined that Claimant may require some additional rhizotomies as part of a maintenance program down the road. *See* Exhibit 6.

21. On June 22, 2018, Dr. Miller evaluated Claimant. Claimant again noted ongoing central lumbar spine pain that was slowly getting worse. Dr. Miller noted they were waiting final disposition on planned injections by Dr. Ogin and that MMI was pending progress with a gym pass and final disposition on the planned injections. *See* Exhibit 7.

22. On August 17, 2018, Dr. Miller evaluated Claimant. He noted that Claimant had been approved for lumbar epidural steroid injections and had finally been approved for a gym pass. *See* Exhibit 7.

23. On August 28, 2018, Dr. Ogin performed left L5 and S1 transforaminal epidural steroid injections. Claimant reported that his baseline pain level of 6/10 with provocative maneuvers was reduced with the injections to 0/10 in regards to his leg. Claimant continued to report mild aching in his back. *See* Exhibit 5.

24. On September 17, 2018, Dr. Ogin evaluated Claimant. Claimant reported that nearly all of his leg pain resolved following the epidural steroid injection. Claimant reported the injection did not help his back pain and that his back pain was getting worse and was now back to the point where it was prior to his rhizotomy nine months prior. Claimant reported that he had been trying to go to the gym but that his exercise tolerance was decreased. Dr. Ogin suspected that Claimant was reinervated and that Claimant's facetogenic pain had returned. Dr. Ogin set Claimant up for a repeat radiofrequency neurotomy and noted that Claimant had more than six months of good functional relief with the prior radiofrequency neurotomy. *See* Exhibit 6.

25. On October 2, 2018, Dr. Miller evaluated Claimant. Dr. Miller noted that Claimant had undergone epidural steroid injections with an excellent response in regard to his left leg symptoms. Dr. Ogin noted that Claimant was reported progressive return of his central mechanical low back pain and that a repeat radiofrequency ablation was scheduled based on a prior good response to rhizotomy. Dr. Miller addressed the possibility of MMI and Dr. Miller advised Claimant that pending the response to the planned radiofrequency ablation and a period of gym based workouts they might remove all work restrictions and proceed with evaluation for impairment with maintenance care. *See* Exhibit 7.

26. On November 13, 2018, Eric Ridings, M.D. was scheduled to perform an independent medical examination. Claimant did not appear for the evaluation. Dr. Ridings performed a medical record review and issued a report. Dr. Ridings indicated it was his strong opinion that Dr. Sacha appropriately placed Claimant at MMI and appropriately rated Claimant for a lumbar strain. Dr. Ridings opined that after Dr. Sacha, Dr. Miller repeated many treatments without effect. Dr. Ridings pointed out that Dr. Sacha had assessed Claimant for facet dysfunction, but found Claimant asymptomatic. Dr. Ridings also pointed out that the mechanism of injury description changed in subsequent treatment where Claimant began reporting a specific onset of pain while forward flexed and lifting a specific tire. Dr. Ridings opined that the new mechanism of injury was not a medically reasonable mechanism to injure the facet joints. Dr. Ridings opined that after being placed at MMI by Dr. Sacha on January 6, 2016, Claimant underwent treatment with Dr. Miller and Dr. Ogin that was not based on objective findings and was based on patient complaints with procedures done contrary to the medical treatment guidelines. Dr. Ridings opined that Claimant did not require any additional treatment or evaluation under the claim and did not require any activity restrictions. *See* Exhibit H.

27. On January 4, 2019, Dr. Scott performed a follow up DIME. He issued a report dated January 12, 2019. Dr. Scott reviewed medical records and performed a physical examination. Dr. Scott found no tenderness to palpation and no muscle spasms. Dr. Scott found active range of motion of the lumbar spine to be reduced. Dr. Scott found

Claimant's examination and lumbar range of motion to be about the same as it was on January 18, 2017 and opined that Claimant had returned to baseline prior to the radiofrequency neurotomy performed in December of 2017. Dr. Scott diagnosed facetogenic low back pain, recurrent. Dr. Scott opined that Claimant probably reached MMI for his August 22, 2015 low back injury around April 27, 2018 when Dr. Ogin noted significant improvement in low back pain and function following the radiofrequency neurotomy. Dr. Scott noted that Claimant's' lumbar range of motion improved after the first radiofrequency neurotomy and now had again worsened one year after the neurotomy with a repeat neurotomy recommended to restore range of motion function and improve pain levels. Dr. Scott opined that Claimant's current decreased range of motion values for the lumbar spine were not permanent and should not be given a permanent rating. Dr. Scott opined that Claimant's permanent impairment was 8% whole person. *See* Exhibits 3, I.

28. On January 8, 2019, Dr. Ogin performed left L3, L4, L5 medial branch radiofrequency ablation. No complications were noted. *See* Exhibit 5.

29. On January 21, 2019, Dr. Ogin evaluated Claimant. Claimant reported that his back pain was a lot better. Claimant continued to report that his leg symptoms were fairly well following the August epidural steroid injection. Dr. Ogin opined that Claimant was doing fairly well and discussed MMI with Claimant. Dr. Ogin noted he would see Claimant on an as needed basis and went over an independent gym program with Claimant. Dr. Ogin noted that if Claimant had recurrent back pain, he would consider repeat radiofrequency ablation if medically indicated and that if Claimant's leg pain got severe, he would consider repeating an epidural steroid injection one or two times per year. *See* Exhibit 6.

30. On April 12, 2019, Dr. Miller evaluated Claimant. Claimant reported that his second lumbar rhizotomy was performed on January 8, 2019 and that he had continued with his gym based workouts. Claimant reported that he felt stronger and was tolerating heavier lifting in the gym. Claimant reported that he continued to experience rather severe flares in symptoms including radiation of pain into his whole left leg. *See* Exhibit 7.

31. On May 28, 2019, Dr. Miller evaluated Claimant. Dr. Miller noted that Claimant saw Dr. Scott four days prior to a planned radiofrequency ablation and that Dr. Scott inexplicably backdated MMI to April 27, 2018 and did not include lumbar range of motion in the impairment calculation. Dr. Miller noted that Dr. Scott admitted that Claimant's lumbar motion was reduced from normal on examination but anticipated it to become normal after January 8, 2019 and the planned ablation. Dr. Miller opined that the logic of believing Claimant was maximally improved but would later achieve ongoing improvements in motion and function was failed circular logic. Dr. Miller noted that Claimant continued to be symptomatic although he felt stronger. *See* Exhibit 7.

32. Dr. Scott, the DIME physician, testified at hearing. Dr. Miller, Claimant's treating physician, also testified at hearing.

33. Dr. Miller testified that Claimant was not at MMI on April 27, 2018 and that Claimant reached MMI on June 21, 2019. In between April of 2018 and June of 2019 Dr. Miller testified that Claimant was improving, then stopped improving, then got worse. Dr. Miller testified that DIME physician Dr. Scott erred. Dr. Miller noted that Claimant was scheduled for a radiofrequency ablation four days after the January 4, 2019 DIME with Dr. Scott and testified that the procedure was meant to cure and relieve Claimant's symptoms. Dr. Miller opined that Dr. Scott's opinions about the planned procedure helping are indicative that Claimant was not at MMI yet.

34. Dr. Scott testified that the repeat radiofrequency ablation was recommended by Dr. Ogin as maintenance care and that it can be done as maintenance. Dr. Scott testified that after this type of procedure, a patient will be stable and issues will resolve, but that often nerves can grow back so the procedure is repeated under maintenance. Dr. Scott testified that reports around the time of April, 2018 supported that Claimant had met therapy goals, had improved function, and could do full time work and supported his opinion on an April, 2018 MMI date. Dr. Scott testified that his 8% whole person rating did not include range of motion and was rated 7% whole person under Table 53(II)(c) and 1% whole person under Table 53(II)(f) for the radiofrequency ablation and the documented pain and rigidity. Dr. Scott testified that he did not provide an additional rating for range of motion because Claimant did not have a permanent range of motion deficit. Dr. Scott testified that Claimant's range of motion was good after the first radiofreqency ablation and was expected to return to good again, so he did not include range of motion deficits in his 8% whole person rating as he did not believe Claimant had permanent range of motion deficits related to his 2015 injury.

35. On cross-examination, Dr. Scott testified that he thought the radiofrequency ablation set for January 8, 2019 would improve Claimant's condition and admitted it might have been a mistake to place Claimant at MMI and might have been better to bring Claimant back after the radiofrequency ablation had been performed. After this testimony, Dr. Scott also testified that Claimant was at MMI in April of 2018 but opined that it could be that Claimant was at MMI in April of 2018, then worsened, and after worsening needed a new radiofrequency ablation. He also testified that range of motion measurements are not required and that Claimant had no range of motion deficits due to the 2015 injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Burden to overcome DIME on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion,* W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No.

4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO, May 20, 2004);

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Claimant has failed to establish, by clear and convincing evidence, that DIME physician Dr. Scott erred. Dr. Scott, as noted above, changed his opinion and testimony at hearing. He initially confirmed what was in his report, then admitted he may have erred, then again went back to his report opinion. Although he went back and forth on his opinion, the ALJ finds his true opinion remains that Claimant reached MMI in April of 2018 with an 8% whole person impairment. This opinion has not been shown to be incorrect and has not been overcome by clear and convincing evidence.

As found above, Claimant initially underwent a DIME in January of 2017. At that time, DIME physician Dr. Scott believed Claimant still had symptoms related to the work injury, was not stable, and that further treatment might reasonably be expected to diagnose and improve Claimant's condition. At that time, Dr. Scott believed Claimant needed further evaluations and he specifically noted that there should be consideration as to whether or not Claimant's pain was possibly due to facet joint disorder and whether facet joint injections would be beneficial.

Claimant underwent additional treatment, which ended up including facet treatment. The additional treatment greatly relieved Claimant's pain and symptoms. In October of 2017, Claimant had facet injections. In November of 2017, Claimant had medial branch blocks. In December of 2017, Claimant underwent radiofrequency neurotomy. By January of 2018, after his facet pain had been identified and treated, Claimant reported he was doing well and that his sharp pain was gone. Dr. Ogin opined in January of 2018 that Claimant was approaching MMI. In March of 2018, Claimant

continued to report he was doing well. In April of 2018, Claimant was found to be significantly better. In May of 2018, physical therapy found Claimant to be able to lift 115 pounds bilaterally and Claimant was noted to have met his goals for lifting/material handling. The medical records support that by April of 2018, Claimant's work related condition had been diagnosed, treated, and Claimant was not only stable but very much functionally improved.

As expected, the results from a radiofrequency neurotomy can include the nerves growing back together. Here, it was not unexpected that Claimant's sharp low back pain might gradually return and that he might need another neurotomy in the future if that happened. However, Claimant was stable in April of 2018. There was no further treatment needed or reasonably expected to diagnose or improve his condition. His condition was well identified and was not likely to improve beyond the relief that the neurotomy provided. Although Claimant ended up needing an additional neurotomy as his nerves grew back, the additional neurotomy simply maintained the improvement that was gained in early 2018 when the doctors diagnosed and treated the pain generator. Claimant has failed to show that there was any reasonable likelihood that he would be improved by any further treatment past April of 2018. Claimant was at MMI in April of 2018 and although treatment was likely going to be needed down the road to maintain his status, there was no future treatment likely to diagnose or improve his work related condition.

There are significant differences of opinion between Dr. Miller and Dr. Scott. However, the differences do not rise to the level of clear and convincing evidence to show that Dr. Scott erred. The weight of the medical records as a whole support Dr. Scott's opinion that Claimant reached MMI in April of 2018 despite later needing an additional procedure to maintain his MMI status. Claimant was maximally improved in April of 2018. No further diagnostics or treatment were going to reduce his pain or improve his function. The ALJ finds persuasive that a second neurotomy is maintenance and is not intended to diagnose or improve Claimant's condition. Claimant's condition had been well diagnosed and was improved with the first procedure. Rather, this second neurotomy was meant to maintain the improvements that were reached when the pain generator was initially diagnosed/identified/treated.

Burden to overcome DIME on impairment

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Claimant has failed to overcome the opinion of DIME physician Dr. Scott as to his permanent impairment rating. It is found credible, persuasive, and consistent with the medical records that Dr. Scott did not believe Claimant had permanent range of motion deficit related to his work injury. Claimant's range of motion was good after his first radiofrequency ablation and Dr. Scott did not err when he decided not to rate range of motion as a permanent impairment as range of motion was anticipated to be good again once a maintenance radiofrequency ablation was performed. Claimant has not shown that he had a permanent loss in his range of motion due to his injury or that his impairment rating should be increased from the 8% whole person provided by DIME physician Dr. Scott.

Overpayment

Temporary total disability benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. As found above, Claimant reached MMI on April 27, 2018. As such, Claimant was only entitled to

TTD benefits until April 27, 2018. Any payment of TTD subsequent to that date would be payment of benefits to which Claimant was not entitled and constitutes an overpayment.

ORDER

It is therefore ordered that:

1. Claimant has failed to overcome DIME physician Dr. Scott's opinion on MMI. Claimant reached MMI on April 28, 2018.

2. Claimant has failed to overcome DIME physician Dr. Scott's permanent impairment rating. Clamant has a whole person impairment of 8% as a result of his work injury.

3. As Claimant reached MMI on April 27, 2018, Claimant was not entitled to temporary total disability benefits subsequent to that date. Temporary total disability paid between April 28, 2018 and January 10, 2019 is an overpayment.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 27, 2019

/s/ Michelle E. Jones

Michelle E. Jones

Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that his request for prior authorization for a trial [high frequency] spinal cord stimulator is reasonable, necessary, and related to his work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was originally a heavy equipment operator. The Claimant sustained an admitted work-related injury on November 26, 2012 when a boulder was dropped into the back of the truck he was operating. Claimant severely injured his lumbar spine. (Ex. 3, p. 25) (Ex. 2, p. 6).

2. As a result of his work injury, the Claimant has undergone a series of five lumbar spine surgeries, four of which involved a spinal fusion. (Ex. 7, pp. 83-99).

3. The Claimant was placed at maximum medical improvement ("MMI") on October 5, 2018 by his ATP, Dr. Matthew Young. The Claimant has received ongoing maintenance care including medications and injections. (Ex. 5, pp. 62-65; Ex. 3, pp. 8-44).

4. Claimant relocated to the State of Kentucky around May of 2018. Claimant relocated from Colorado to Kentucky primarily for health reasons related to his work-related lumbar injury. (Ex. 3, pp. 11). The Claimant's medical provider recommended relocating to a lower altitude with less temperature extremes.

5. Claimant testified at hearing. He continues experiencing chronic, constant low back pain. Claimant stated that he is never without back pain, and his lumbar pain fluctuates in severity. On some days, the Claimant's pain is severe enough that he is unable to engage in any activities; instead, he spends most of the day lying down. When the pain is really bad, he can remain bedridden for 4 or 5 days. On other days, the Claimant will try to do light activity as tolerated.

6. The Claimant testified that he also experiences intermittent pain in both legs, but primarily on the left. Although the Claimant advised that radicular pain is generally intermittent, the radicular symptoms are worsening. He cannot stand for long periods of time, and cannot travel for more than two hours.

7. Since relocating to Kentucky, the Claimant has received primary care for his work-related injuries under the direction of Brandon Gish, M.D., Commonwealth

Occupational Medicine. (See generally Cl. Ex. 3). He has received other forms of treatment, to include injections and a "block". Claimant also described a number of prescription medications he has tried.

8. Dr. Gish noted that the Claimant has failed conservative therapies and therefore prescribed Opioid medications, such as Percocet. Additional medications prescribed by Dr. Gish included Methocarbamol, Cymbalta, and Celebrex. (Ex. 3, pp. 11). Additional treatment provided by Dr. Gish included bilateral lumbar trigger point injections. (Ex. 3, pp. 21, 25).

9. On February 28, 2019, Dr. Gish noted that the Claimant's pain was worsening. The bilateral lumbar trigger point injections provided temporary relief as confirmed by Dr. Gish's medical records and the testimony of the Claimant. (Ex. 3, p. 25). The Claimant requested further trigger point injections in an effort to obtain further pain relief. (Ex. 3, pp. 26). The repeat trigger point injections were provided by Dr. Gish on March 11, 2019. (Ex. 3, pp. 30-31). Dr. Gish's medical report of April 28, 2019 notes that the Claimant's pain was worsening with an average pain scale of 8 / 10. Dr. Gish's medical report of that date noted pain radiating down the left lower extremity to the knee (thigh) which Claimant described as 'throbbing'. (Ex. 3, pp. 42-44).

10. As a result of the Claimant's worsening pain symptoms, including chronic low back pain and worsening intermittent radicular pain, Dr. Gish has now recommended a *high frequency* spinal cord stimulator trial. (Ex. 3, pp. 39, 45-46).

11. At hearing, Claimant testified that the type of spinal cord stimulator being proposed is a new, *high frequency* type to help his back. He is willing to take any psychological evaluation as a condition precedent. He testified that he understands such a stimulator will not cure his pain problem but is intended to mask his pain symptoms. He understands that a foreign body will be implanted, but wants to try the stimulator if it might benefit him.

12. In 2014, the Claimant underwent an EMG study to diagnose the source of his ongoing back pain. At that time, Michael Janssen, DO indicated the EMG was 'noncontributory' (Ex. A. p. 1). The CT of the Lumbar Spine without contrast that was ordered by Dr. Gish was completed on January 16, 2019 and did not demonstrate any nerve impingement. (Ex. 4). The radiologist's report notes, however, that disc herniations could be obscured by the streak from the metallic hardware. (Ex. 4, p. 48).

13. Dr. Kathy McCranie, MD provided a medical records review at the request of Respondents. Dr. McCranie did not evaluate or examine the Claimant. Her initial report was dated May 1, 2019. (Ex. A, pp. 1-7).

14 Dr. McCranie, citing the Medical Treatment Guidelines, concluded that the spinal cord stimulator trial was not reasonable and necessary. Dr. McCranie noted that the Claimant's symptoms are "predominately axial." In her report, Dr. McCranie states, "There was *one* notation of lumbar radicular symptoms an April of 2019. Otherwise,

however, *over the four years of medical records reviewed, Mr. Lay's symptoms were predominately, if not uniquely, axial in nature."* (Ex. A, p. 5) (emphasis added).

15. Dr. McCranie further stated that "operative procedures are geared to improve functional benefit, i.e., returning to work, deceasing restrictions or medications, or increasing range of motion and strength. *No such functional goals have been outlined or anticipated with this treatment. Id at p. 5* (emphasis added).

16. In a supplemental report dated August 1, 2019, Dr. McCranie indicates her opinion remains unchanged after reviewing Dr. Gish's medical records:

> Mr. Lay still does not fit the Medical Treatment Guidelines. These Guidelines indicate that to be an appropriate candidate for spinal cord stimulation, it is *necessary to have clear radicular pain*…..Records indicated a predominance of axial pain. There is *no evidence* of clear neuropathic radicular pain in Mr. Lay's case…..[said stimulator] *is not an option for individuals without clear radicular pain* such as Mr. Lay (Ex. A, p. 7) (emphasis added).

17. Dr. Young and Dr. Gish's medical records support the Claimant's hearing testimony that he experiences intermittent radicular symptoms, which are worsening. (Ex. 5, p. 50 (9/27/17), p. 53 – (11/21/17), p. 58 – (4/26/18), (Ex. 6, p. 68). Claimants' Functional Capacity Exam, dated 10/5/2018, reports that Claimant "reports continued low back pain which will *radiate into his right LE* with increased activity, decreased ROM in his lower back. (Ex. 6, p. 68) (emphasis added).

18. Dr. Gish reviewed the Medical Treatment Guidelines and advised that Mr. Lay would be referred for a psychological evaluation in accordance with the Medical Treatment Guidelines. (Ex. 3, pp. 39, 45). In support of the proposed spinal cord stimulator trial, Dr. Gish confirms that "high frequency stimulators may be used for patients with predominantly axial back pain." (Ex. 3, p. 45). In this regard, Dr. Gish diagnoses the Claimant with failed back syndrome due to his work-related injury, noting that he has undergone multiple lumbar fusion surgeries, yet had failed all other conservative options.

19. In conclusion, Dr. Gish notes:

> I feel that the denial that was issued did not examine the full scope of Mr. Lay's injury. The guidelines read that spinal cord stimulation is appropriate for patients with failed spinal surgery diagnosis…..If the guidelines were read in their entirely the reviewer would see that Mr. lay would in fact fit as a candidate. Mr. Lay's quality of life has severely been impacted by his multiple surgeries due to his injuries and he should at least be allowed to trial this therapy to see if it is successful at improving his quality of life and allowing him to reduce his medication intake. Should has pain complaints not be reduced by at least 50% during the course of

the trial then we would not proceed with the request to implant the device permanently. (Ex. 3, p. 46).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this instance, the ALJ finds Claimant to be entirely forthright and credible, both to his medical providers, and in his testimony, in a sincere effort to get well. There are no identifiable indicators of secondary gain, and reducing his dependence upon opioids is a laudable goal, in and of itself.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or

unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Treatment, Generally

D. The Respondents are liable for medical treatment reasonably necessary to cure or relieve the effects of an industrial injury. Section 8-42-101. Even if the Respondents admit liability, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Snyder v. City of Aurora, 942 P.2d 1337 (Colo. App. 1997); McIntyre v. Kl, LLC, W.C. No. 4-805-040 (July 2, 2010).The Claimant must prove that an injury directly and proximately caused the condition for which he seeks treatment, and that the treatment is reasonably necessary. Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office, 989 P.2d 251 (Colo. App. 1999); Snyder v. Industrial Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997).

Medical Treatment Guidelines

E. Under § 8-42-101(3)(b) and WCRP 17-2(A), medical providers must use the Medical Treatment Guidelines when furnishing medical treatment. As the arbiter of disputes about treatment, the ALJ may consider the Medical Treatment Guidelines as an evidentiary tool but is not bound by the Medical Treatment Guidelines when determining if requested medical treatment is reasonably necessary or injury- related. Section 8-43-201(3); Logiudice v. Siemans Westinghouse, W.C. No. 4-665-873 (January 25, 2011).

F. The Division of Workers Compensation most recently revised Rule 17, Exhibit 9 of the Medical Treatment Guidelines [Chronic Pain Disorder] on 10/6/2017, and they became effective on 11/30/2017. § H, Therapeutic Procedures-Operative reads, in pertinent part:

> 1. NEUROSTIMULATION
>
> a. Description: Spinal cord stimulation (SCS) is the delivery of low-voltage electrical stimulation to the spinal cord or peripheral nerves to inhibit or block the sensation of pain. The system uses implanted electrical leads and a battery powered implanted pulse generator (IPG). *There is some evidence that SCS is superior to reoperation in the setting of persistent radicular pain after lumbosacral spine surgery, and there is some evidence that SCS is superior to conventional medical management in the same Chronic Pain Disorder Page 158 setting. Success was defined as achieving 50% or more pain relief.* However, the study could not demonstrate increased return to work. *Some functional gains have been demonstrated.* These findings may persist at 3 years of follow-up in patients who had an excellent initial response and who are highly motivated. (emphasis added).
>
> There is some evidence that a **high-frequency,** 10 KHz spinal cord stimulator is **more effective than a traditional low frequency** 50 Hz stimulator **in reducing both back pain and leg pain** in patients who have had a successful trial of an external stimulator. Two-thirds of the patients had

radiculopathy and one-half had predominant back pain. **The high frequency device appears to lead to greater patient satisfaction than the low frequency device,** which is likely to be related to the fact that the high frequency device does not produce paresthesias in order to produce a pain response. In contrast to the low frequency stimulator, which requires recharging about twice per month, the high frequency stimulator is recommended for daily recharging for 30 to 45 minutes. A United Kingdom study of cost effectiveness for high frequency spinal cord stimulators found high cost effectiveness compared to traditional non-rechargeable or rechargeable stimulators, re-operation, or medical management. (emphasis added).

SCS can be used for patients who have CRPS II. Spinal cord stimulation for spinal axial pain has traditionally not been very successful. It is possible that future technological advances such as high frequency and burst stimulation may demonstrate better results for axial spine pain. Currently, **traditional spinal cord stimulators are not recommended for axial spine pain**. (emphasis added).

c. Surgical Indications: Patients with established CRPS I or II or a failed spinal surgery with persistent functionally limiting radicular pain greater than axial pain who have failed conservative therapy including active and/or passive therapy, pre-stimulator trial psychiatric evaluation and treatment, medication management, and therapeutic injections. Traditional SCS is not recommended for patients with the major limiting factor of persistent axial spine pain. **High frequency stimulators may be used for patients with *predominantly* axial back pain**. Traditional or other SCS may be indicated in a subset of patients who have a clear neuropathic radicular pain (radiculitis) with or without previous surgery. The extremity pain should account for at least 50% or greater of the overall back and leg pain experienced by the patient. Prior authorization is required. Habituation to opioid analgesics in the absence of a history of addictive behavior does not preclude the use of SCS. Patients with severe psychiatric disorders, issues of secondary gain, and one or more primary risk factors are not candidates for the procedure. The prognosis worsens as the number of secondary risk factors increases. *Approximately, one third to one half of patients who qualify for SCS can expect a substantial long-lasting pain relief;* however, it may not influence allodynia and hypesthesia. **Patients' expectations need to be realistic, and therefore, patients should understand that the SCS intervention is not a cure for their pain but rather a masking of their symptomatology which might regress over time.** There appears to be a likely benefit of up to 3 years, although some practitioners have seen benefits persist for longer periods. Prior to surgical intervention, the patient and treating physician should identify functional operative goals and the likelihood of achieving improved ability to perform activities of daily living or work, as well as possible complications. The patient should agree to comply with the pre- and post-operative treatment plan including home exercise. The provider should be especially careful to make sure the patient understands the amount of post-operative therapy required and the length of partial- and full-disability expected post-operatively. Informed decision making should be documented for all invasive procedures. This must include a thorough discussion of the pros and cons of the procedure and the possible complications as well as the natural history of the identified diagnosis. **Since many patients with the most common conditions will improve significantly over time, without invasive interventions, patients must be able to make well-informed decisions regarding their treatment.** (emphasis added).

In Conclusion

G. Claimant has consistently demonstrated chronic lumbar pain with intermittent radicular symptoms that are worsening. Dr. Gish recommends a high frequency trial stimulator, which according to the Medical Treatment Guidelines, has shown effectiveness even in injured workers with significant *axial* back pain. Although based in Kentucky, Dr. Gish has demonstrated greater knowledge of the Colorado Medical Treatment Guidelines in regards to the appropriateness of the trial stimulator for the Claimant than does Dr. McCranie.

H. In none of her reports does Dr. McCranie even reference the difference between high frequency stimulators and the traditional low frequency stimulators. Further, while Dr. McCranie notes exactly one reference to radicular pain in Claimant's medical records, in fact, they exist in several places, over a course of months. While it might not be cost-effective to arrange an IME exam across state lines, a simple phone call to Claimant would have yielded pertinent information, to wit: his ongoing description of increasing radicular pain. Dr. McCranie further notes that "no functional goals have been outlined or anticipated with this treatment." The ALJ does not concur with this assessment. Clamant would like his overall quality of life to improve, with all that entails. In summary, if Claimant did indeed suffer from near exclusive *axial* back pain (which he ALJ finds is not the case), and no functional goals were anticipated, and if Claimant were requesting a *low frequency* spinal cord stimulator (which he is not), the ALJ might well concur with Dr. McCranie. But those are not the facts here.

I. Under these facts, while the ALJ is free to deviate from the Medical Treatment Guidelines, it is not even necessary to do so here. The ALJ finds that the proposed (trial) high frequency spinal cord stimulator is within the Guidelines, and Claimant is an appropriate candidate. While time will tell if the trial phase will indicate permanent implantation, Claimant has suffered enough, and should not be denied the opportunity to find out for himself, in consultation with his ATP. The ALJ finds that this trial stimulator, as proposed by Dr. Gish, is reasonable and necessary [and related] to cure Claimant of the effects of his work injury.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the proposed [high frequency] trial spinal cord stimulator as recommended by Dr. Gish.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 27, 2019

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that the eyeglasses recommended by Dr. Randall Rottman constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted April 22, 2018 work injury.

- Whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondents pursuant to Sections 8-43-304 and 8-43-305, C.R.S. In the claimant's Amended Application for Hearing the claimant lists a number of alleged behaviors for which the claimant believes penalties should be assessed. At hearing the parties agreed to number these allegations as follows:

1. Penalties for the dates of October 21, 2018 and ongoing, for the alleged late denial of the eyeglasses recommended by Dr. Randall Rottman.

2. Penalties for the dates of November 23, 2018 through December 10, 2018, for the alleged late approval of the referral to Dr. Matthew Provencher.

3. Penalties for the dates of November 23, 2018 through January 8, 2019, for the alleged late approval of the referral to Dr. David Good.

4. Penalties for the dates of December 31, 2018 and continuing, for the alleged late approval of a nurse case manager.

5. Penalties for the dates of March 5, 2019 and continuing, for the alleged late approval of surgery recommended by Dr. Matthew Provencher.

6. B.[1] Penalties for the dates of December 21, 2018 and ongoing, for the alleged failure to exchange medical records utilized by a peer reviewer.

6. C. Penalties for the dates of September 28, 2018 through October 19, 2018, for the alleged failure to comply with PALJ Martinez Tenreiro's September 14, 2018 prehearing order for failure to mail the claimant's indemnity checks to his counsel's office and for alleged failure to exchange medical records within fifteen days.

[1] The request for penalties identified as "6.A." was withdrawn by the claimant.

- If the respondents are successful in demonstrating that any alleged violation listed above has been cured as allowed pursuant to Section 8-43-304(4), C.R.S., then the claimant's burden of proof will be to prove whether, by clear and convincing evidence, the respondent knew or reasonably should have known they were in violation for each alleged violation.

FINDINGS OF FACT

1. The claimant worked for the employer building, installing, and maintaining zip lines. On April 22, 2018, the claimant suffered an admitted injury when he was unable to stop while on a zip line he was maintaining for the employer. The claimant's injury occurred as he slammed feet first into a tree while moving at approximately 30 miles per hour on the zip line. The claimant's initial medical records indicate that the claimant did not hit his head at the time of the injury.

2. The respondents have admitted for the injury and the specific body parts of the claimant's head, neck, mid-back, and upper extremities.

3. The claimant has undergone a number of treatment modalities during this claim. His authorized treating provider (ATP) is St. Mary's Occupational Health. At that practice the claimant has been seen by James Harkreader, PA, and Dr. James McLaughlin. Mr. Harkreader and Dr. McLaughlin have made a variety of referrals for the claimant's medical treatment.

Referral to Dr. Randall Rottman and recommended eyeglasses

4. On October 4, 2018, Mr. Harkreader referred the claimant to ophthalmologist Dr. Randall Rottman. The claimant was first seen by Dr. Rottman on October 5, 2018. At that time, the claimant reported his vision symptoms as difficulty reading in which "the letters looked [three]-dimensional" and a feeling that his "eyes were not working/focusing together". Dr. Rottman opined that the claimant suffered a concussion "with no ocular manifestations". In addition, he diagnosed myopia, astigmatism, and presbyopia. On that date, Dr. Rottman prescribed corrective lenses for the claimant.

5. The claimant's counsel exchanged the October 5, 2018 eyeglass prescription with the respondents on October 10, 2018. On October 12, 2019, the claimant's counsel sent the October 5, 2018 medical record to the respondents. The claimant's counsel sent additional documents to the respondents on October 19, 2018 that supported Dr. Rottman's recommendation for eyeglasses. There is no indication in the evidence entered into evidence that Dr. Rottman sent any request directly to the insurer.

6. On October 30, 2018, the respondent's counsel notified Dr. Rottman in writing that the eyeglasses were denied pending a Rule 16 records review by Dr. Chester Roe.

7. The ALJ takes Administrative notice that October 19, 2018 was a Friday. Seven business days from October 19, 2018 was Tuesday, October 30, 2018. The respondents notified Dr. Rottman of the denial of the eyeglasses (pending a records review) on the seventh business day.

8. On November 19, 2018, Dr. Roe completed his medical records review and issued a report. Dr. Roe noted that the claimant had a normal eye examination with mild astigmatism, myopia and age appropriate presbyopia. Dr. Roe also noted that the records do not contain documentation of any injury to the claimant's eyes following the work injury. Dr. Roe opined that the claimant's need for glasses is age related and therefore unrelated to the April 22, 2018 work injury.

9. Based upon the opinion of Dr. Roe, the respondents denied authorization for the recommended eyeglasses. Dr. Rottman was sent a notice of this denial on December 6, 2019. On February 28, 2019, the claimant returned to Mr. Harkreader. At that time, Mr. Harkreader opined that the recommended corrective lenses could help the claimant's spatial issues.

Referral to Dr. Matthew Provencher

10. During this claim this claimant was referred to Dr. Keenan Vance for a surgical consultation. After examining the claimant, Dr. Vance ordered a left shoulder magnetic reasoned image (MRI). On November 6, 2018 the MRI of the claimant's left shoulder showed that although there was no tear to the claimant's left rotator cuff, there was a superior through posterior superior labral tear.[2]

11. Based upon the results of the MRI, Dr. Vance recommended that the claimant undergo a left shoulder arthroscopy with open biceps tenodesis. Subsequently, the surgery recommended by Dr. Vance was authorized by the respondents. However, rather than proceed with Dr. Vance as his surgeon, the claimant requested a referral to another provider.

12. On November 1, 2018, the claimant was seen by Mr. Harkreader. At that time, the claimant indicated that he wanted a second opinion from surgeons at Steadman Hawkins. Mr. Harkreader's note on that date includes the language "[the claimant] is referred to Steadman." The WC 164 of that same date provides that Mr. Harkreader's office "will fax referral to Dr. Provencher [*sic*] office to schedule". The November 1, 2018 medical record and related WC 164 were provided to the respondents on November 5, 2018. On November 29, 2018, the claimant was seen by Dr. McLaughlin who noted his opinion that "it would be reasonable for [the claimant] to have surgery at Steadman Hawkins". The ALJ notes that this appears to be the first medical record in which a provider opined regarding a referral to Steadman Hawkins.

[2] Also referred to as a "SLAP" tear.

The prior records state that it is the claimant that is requesting the second opinion. The ALJ finds as true that the first supported recommendation for a referral to Steadman Hawkins/Dr. Provencher was the November 29, 2018 medical record.

13. The referral to Dr. Provencher was authorized by the respondents no later than December 10, 2018. The respondents explained to the claimant that the delay occurred because the respondents were waiting for a referral from St. Mary's Occupational Health. The ALJ calculates that a total of five business days elapsed between the November 29, 2018 medical records and the notification to claimant of the approval on December 6, 2018. The provider was notified of the approval on the seventh business day, December 10, 2018.

Dr. Provencher's surgical recommendation

14. The claimant was seen by Dr. Provencher on January 3, 2019. This appointment was scheduled based upon the availability of the doctor. On February 19, 2019, Dr. Provencher mentioned that treatment options for the claimant would include an arthroscopic left shoulder debridement and open tenodesis. However, Dr. Provencher also noted that prior to undergoing the shoulder surgery, the claimant would need to follow up with Dr. Kirk Clifford , the surgeon who performed the claimant's prior neck surgery[3]. Despite the recommendation that the claimant first seek additional follow up with Dr. Clifford, on February 22, 2019, Dr. Provencher submitted a request for authorization to the respondents that was titled "ATTN: Prior Authorization".

15. At the request of the respondents, on March 5, 2019, Dr. Andrew Farber performed a peer review of the medical necessity of the shoulder surgery recommended by Dr. Provencher.[4] Based upon his review of the claimant's medical records Dr. Farber recommended that the respondents not authorize the left shoulder surgery. In support of his opinion, Dr. Farber noted that the claimant had no range of motion issues in his left shoulder and no documentation of instability. In addition, Dr. Farber noted no documentation of conservative treatment beyond physical therapy and the use of NSAIDs[5]. Dr. Farber opined that without additional conservative treatment modalities the recommended surgery did not meet the Colorado Medical Treatment Guidelines (MTG). However, Dr. Farber did not make any specific recommendations regarding appropriate conservative treatment for the claimant.

[3] On September 20, 2018, Dr. Clifford performed a C6-7 artificial disc replacement. Dr. Provencher seemed to suggest that it would be necessary to ascertain the condition of the claimant's neck prior to proceeding with shoulder surgery.

[4] The ALJ addresses the claimant's concerns specifically surrounding Dr. Farber's peer review below.

[5] Nonsteroidal anti-inflammatory drugs.

16. Based upon the opinion of Dr. Farber, the respondents denied authorization of the left shoulder surgery. This denial was communicated to the claimant and Dr. Provencher on March 5, 2019. The ALJ notes that February 22, 2019 was a Tuesday and Tuesday, March 5, 2019 was 7 business days later.

17. On March 25, 2019, the claimant did see Dr. Clifford for follow up, as recommended by Dr. Provencher. At that time, Dr. Clifford noted that the cervical disc replacement was healing "without evidence for concern." The respondents authorized the recommended left shoulder surgery on April 8, 2019. The claimant underwent left shoulder surgery on June 28, 2019.

Dr. David Good

18. On November 14, 2018, Mr. Harkreader completed a Notification by an Authorized Treating Provider (form WC 195). In that notice, Mr. Harkreader stated that a referral to psychiatrist, Dr. Daniel Good was prescribed treatment within the MTG. The claimant's counsel received this notice on November 15, 2018 and exchanged it with the respondents on that same date. In an email from the respondents' counsel dated December 4, 2018, the claimant was notified that treatment with Dr. Good had been authorized. The claimant first treated with Dr. Good on January 8, 2018. Ms. Miller, an employee of Dr. Good, testified that this date was selected based upon the doctor's availability.

19. November 15, 2018 was a Thursday. In addition, Thursday, 22, 2018 was Thanksgiving Day, which is a state and Federal holiday, and is therefore not a "business day". The ALJ finds that 12 business days elapsed between the date the notification regarding Dr. Good was provided to the respondents and the date the respondents' counsel communicated that the referral was authorized.

Nurse Case Manager

20. On November 29, 2018, the claimant was seen by Mr. Harkreader. In the form WC 164 of that date, Mr. Harkreader listed "nurse case manager" under the section titled Treatment Plan. However, the dictated medical note of that date does not mention this as a recommendation. That November 29, 2018 WC 164 form was submitted to the respondents on December 3, 2018. In a medical record dated December 14, 2018, Dr. McLaughlin opined that a nurse case manager could be helpful to the claimant.

21. Thereafter, on January 3, 2019, the respondents asked whether the claimant would agree to a nurse case manager. On January 7, 2019 the claimant's counsel stated to the respondents, via email, that the claimant agreed to a nurse case manager. On February 25, 2019, the respondents notified the claimant that assignment of a nurse case manager was authorized. On March 29, 2019, the respondents confirmed with a specific nurse case manager, Nacole Williams, had accepted the assignment to the claimant's case. It is undisputed that between the claimant's agreement to the use of a nurse case manager on January 7, 2019, and the

respondents' authorization on February 25, 2019, a new adjustor was assigned to the claimant's claim.

Records used in peer review

22. The claimant asserts that of the medical records reviewed by Dr. Farber in the completion of his March 5, 2019 peer review, there were ten records that were not properly exchanged with the claimant. However, since the issuance of the March 5, 2019 report, eight of the ten records have been exchanged. Ms. Riehl testified that as of the date of the hearing two medical records had still not been exchanged. These are records from the claimant's acupuncturist, Anita Alexander, L.Ac, dated January 16, 2019 and January 23, 2019. In her testimony, Ms. Riehl acquiesced that these two "missing" medical records from the claimant's acupuncturist had no bearing on the treatment of the claimant's left shoulder. Upon review of the exhibits entered into evidence it does not appear that the respondents had these Alexander records.

September 14, 2018 PALJ Order

23. On September 14, 2018, PALJ Elsa Martinez Tenreiro issued an order granting the claimant's motion to compel. In her order, PALJ Martinez Tenreiro ordered, *inter alia*, that the respondents send the claimant's indemnity checks to the office of the claimant's counsel. In addition, the respondents were directed to exchange all medical records within 15 days. PALJ Martinez Tenreiro ordered compliance with the order by September 28, 2018.

24. On October 4, 2018, the parties conferred regarding the status of the address used for the claimant's indemnity checks. On October 5, 2018, the respondents' counsel confirmed that the address had been changed to counsel's address. However, a check had been initiated October 5, 2018 prior to the address correction and could not be amended. Beginning October 19, 2018, the claimant's indemnity payments were received at the claimant's counsel's address. It is undisputed that the respondents have paid all indemnity payment owed to the claimant.

25. The claimant also asserts that the respondents are in violation of the September 14, 2018 order as medical records have not been exchanged within 15 days. Other than the records addressed above as related to Dr. Farber's peer review, the claimant has not indicated what medical records, if any, were exchanged beyond 15 days. Despite this, the claimant has requested additional penalties for this alleged violation.

26. On April 4, 2019, the claimant filed an Amended Application for Hearing endorsing the various penalty allegations in this case.

27. With regard to the request for eyeglasses/corrective lenses, the ALJ credits the medical records and the opinion of Dr. Roe and finds that the claimant's vision symptoms are not related to the work injury. On the contrary, the claimant has age appropriate vision diagnoses. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the recommended eyeglasses/corrective lenses constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

28. With regard to the claimant's request for penalties for the dates of October 21, 2018 and ongoing, for the alleged late denial of the eyeglasses recommended by Dr. Randall Rottman, the ALJ finds that monetary penalties are not appropriate. The ALJ credits the evidence entered into evidence and finds that the respondents responded to the request for eyeglasses on the seventh business day after receiving all supporting documentation. The ALJ finds that the behavior of the respondents was objectively reasonable.

29. With regard to the claimant's request for penalties for the dates of November 23, 2018 through December 10, 2018, for the alleged late approval of the referral to Dr. Matthew Provencher, the ALJ finds that monetary penalties are not appropriate. The ALJ credits the evidence entered into evidence and finds that five business days elapsed between the November 29, 2018 medical records and the notification to claimant of the approval on December 6, 2018. The provider was notified of the approval on the seventh business day, December 10, 2018. The ALJ finds that the behavior of the respondents was objectively reasonable.

30. With regard to the claimant's request for penalties for the dates of November 23, 2018 through January 8, 2019, for the alleged late approval of the referral to Dr. David Good, the ALJ finds that monetary penalties are not appropriate. The ALJ declines to use the dates proposed by the claimant for penalties as the end date of January 8, 2019 indicates the date the claimant first saw Dr. Good, despite authorization on December 4, 2018. The respondents' are not responsible for delays in treatment due to a providers' unavailability. The referral was authorized December 4, 2018, twelve business days after the request. The ALJ finds that the behavior of the respondents was objectively reasonable.

31. With regard to the claimant's request for penalties for the dates of December 31, 2018 and continuing, for the alleged late approval of a nurse case manager, the ALJ finds that monetary penalties are not appropriate. The ALJ credits the evidence entered into evidence and finds that a nurse case manager was not recommended, with supporting information, until Dr. McLaughlin's note of December 14, 2018. The ALJ finds that the prior mention of a nurse case manager on the WC 164 forms was not sufficient to notify the respondents that there was a request for authorization. Following the exchange of the December 14, 2018 medical record, authorization for a nurse case manager occurred on February 25, 2019. Although Ms. Williams was not appointed until March 29, 2019, the ALJ finds that any argument for penalties would be from the dates of December 14, 2018 to February 25, 2019. During that time the respondents asked for confirmation that the claimant wanted a nurse case

manager. The ALJ finds this to be objectively reasonable. Additionally, there was a change to the adjustor on the claimant's case. The ALJ finds that the behavior of the respondents was objectively reasonable.

32. With regard to the claimant's request for penalties for the dates of March 5, 2019 and continuing, for the alleged late approval of surgery recommended by Dr. Matthew Provencher, the ALJ finds that monetary penalties are not appropriate. The ALJ credits the evidence entered into evidence and finds that a notification for authorization request was submitted on February 22, 2019. The respondents asked Dr. Farber to perform a peer review which he did on March 5, 2019; seven business days following the request. The respondents denied the request on that same date. The ALJ finds that the behavior of the respondents was objectively reasonable.

33. With regard to the claimant's request for penalties for the dates of December 21, 2018 and ongoing, for the alleged failure to exchange medical records utilized by a peer reviewer, the ALJ finds that monetary penalties are not appropriate. The ALJ credits the evidence entered into evidence and finds that although there appear to have been ten medical records reviewed by Dr. Farber that were not exchanged with the claimant; eight of the ten were eventually exchanged. With regard to the remaining two acupuncture records, the ALJ is not persuaded that the respondents withheld those records as there is no persuasive evidence on the record that the respondents ever had those specific records. The ALJ finds that the respondents actions were objectively reasonable.

34. With regard to the claimant's request for penalties for the dates of September 28, 2018 through October 19, 2018, for the alleged failure to comply with PALJ Martinez Tenreiro's September 14, 2018 prehearing order for failure to mail the claimant's indemnity checks to his counsel's office, the ALJ finds that monetary penalties are not appropriate. The ALJ credits the evidence entered into evidence and finds that although the address was not corrected by September 28, 2018, as ordered, the respondents acted reasonably in confirming on October 5, 2018 the correct mailing address would be used. The process for payment that resulted in an October 5, 2018 payment being mailed to the claimant's personal address was objectively reasonable under the circumstances.

35. With regard to the claimant's request for penalties for the dates of September 28, 2018 through October 19, 2018, for the alleged failure to comply with PALJ Martinez Tenreiro's September 14, 2018 prehearing order for alleged failure to exchange medical records within fifteen days, the ALJ finds that monetary penalties are not appropriate. As noted above, other than the records related to Dr. Farber's peer review, the claimant has not indicated what medical records, if any, were exchanged beyond 15 days. The ALJ finds that the claimant has failed to demonstrate that the respondents did not comply with the PALJ's order in this regard.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

Medical Benefits

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the eyeglasses/corrective lenses recommended by Dr. Rottman are reasonable and necessary to cure and relieve the claimant from the effects the work injury. As found, the ALJ is persuaded by the opinion of Dr. Roe that the claimant's vision symptoms are age appropriate and not related to the work injury.

Penalties

6. Pursuant to Section 8-43-304(1), C.R.S. a claimant must first prove by a preponderance of the evidence that the disputed conduct constituted a violation of statute, rule, or order before a court can assess penalties against a respondent. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If respondent committed a violation of the statute, rule or order, penalties can be imposed only if respondents' actions were not reasonable under an objective standard. *Pioneers*

Hospital of Rio Blanco County v. Industrial Claim Appeals Office, 114 P.3d 97 (Colo. App. 2005); *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The standard is "an objective standard measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

7. As an initial matter, the respondents have argued that the claimant has cited incorrect citations in endorsing and arguing the various requests for penalties. The ALJ agrees. However, the ALJ finds the error to be harmless. It is undisputed that there was a change to WCRP Rule 16 effective January 1, 2019. Therefore, requests for authorization made prior to January 1, 2019 are to be evaluated pursuant to the prior version of the rule, while those requests made on or after January 1, 2019 are analyzed using the new iteration of the rule. The ALJ is cognizant of this distinction and applies the appropriate versions of WCRP 16 below.

8. Prior to January 1, 2019, WCRP Rule 16-11 allowed respondents seven days to contest a recommended medical treatment. If respondents failed to comply with the requirements of WCRP 16-11, the requested treatment is deemed authorized. That prior version of WCRP 16-11(B) provides, in part:

> [i]f the payer is contesting a request for prior authorization for medical reasons, the payer shall, within seven (7) business days of the completed request: (1) Have all submitted documentation . . . reviewed by a physician or other health care professional, as defined in section 16-5(A)(1)(a), . . .
>
> (3) Furnish the provider and the parties with a written contest that sets forth the following information: (a) An explanation of the specific medical reasons for the contest, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion; (b) The specific cite from the Medical Treatment Guidelines exhibits to Rule 17, when applicable; (c) Identification of the information deemed most likely to influence the reconsideration of the contest when applicable; and (d) A certificate of mailing to the provider and parties.

9. Prior to January 1, 2019, WCRP 16-10(E) provided that for an authorization request to be "complete" the medical provider "shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation." That version of WCRP 16-10(E) further identified supporting medical documentation as "documents used in the provider's decision-making process to substantiate the need for the requested service or procedure."

10. WCRP 16 was revised effective January 1, 2019. The 2019 version of WCCP 16-6(C) provides:

> Prior authorization for a prescribed service or procedure may be granted immediately and without medical review. However, the payer shall respond to all prior authorization requests in writing within seven (7) business days of the provider's completed request, as defined in section 16-6(E). The duty to respond to a provider's request applies regardless of who transmitted the request.

11. Previously the panel has addressed the requirement that Rule 16 request for preauthorization include documents included in the provider's decision making process. *Lichtenberg v. J.C. Penney Corp.*, W.C. No. 4-814-897 (July 19, 2012); *See Aguirre v. Nortrak*, W.C. No. 4-742-953 (March 19, 2012); *McDaniel v. Vail Associates. Inc. supra; Skelly v. Wal-Mart*, W.C. No. 4- 632-887 July 31, 2008); *Cross v. Microglide*, W.C. No. 4-355-764 (September 2, 2003) aff'd, *Cross v. ICAO*, 03CA1807 (Colo. App. 2004) (not selected for publication); *Wilkens v. First Lutheran Church*, W.C. No. 4-369-843 May 17, 001).

12. With the amendments to WCRP 16 effective January 1, 2019, what constitutes a "complete" request was further clarified at WCRP 16-6(E), which specifically states:

> To complete a prior authorization request, the provider shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation. Supporting medical documentation is defined as documents used in the providers' decision-making process to substantiate the need for the requested service or procedure. The following documentation is required:
>
> (1) An adequate definition or description of the nature, extent, and necessity for the procedure;
>
> (2) Identification of the appropriate Medical Treatment Guideline, if applicable; and
>
> (3) Final diagnosis.

13. It is the claimant's burden to demonstrate that there was a "completed request" for purposes of assessing a penalty for violation of Rule 16. *See McDaniel v. Vail Associates. Inc.*, W.C. No. 3-111-363 (July 18, 2011). A respondent is not required to plead insufficiency of a request for authorization as an affirmative defense. *Id.*

14. While Section 8-43-304, C.R.S., generally provides for the opportunity for penalties, Section 8-43-304(4), C.R.S. provides for a cure period of twenty days. This cure period begins from the date an Application for Hearing (AFH) is filed. That same section also provides that "[i]f the violator cures the violation within such twenty-day period, and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person in is violation, no penalty shall be assessed."

15. A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

16. With regard to the penalties requested by the claimant, the ALJ concludes that the appropriate remedy for a late response to a request for authorization is that the request will be deemed authorized. Therefore, the monetary penalties addressed in Section 8-43-304, C.R.S. are generally not applicable to the alleged behavior in the current case. The claimant has alleged five instances in which he believes that the respondent did not comply with the seven-day requirement of WCRP 16-10(E), for requests made prior to January 1, 2019, and the seven-day requirement of WCRP 16-6 (C) for requests made January 1, 2019 and thereafter.

17. The ALJ concludes that for each alleged violation of WCRP 16-10(E) or WCRP 16-6(C), the respondents cured the alleged violation within 20 days of the claimant's Amended AFH as allowed by Section 8-43-304(4), C.R.S. In some instances, the alleged violations were cured prior to the claimant's Amended AFH. Therefore, the claimant has the burden to demonstrate by clear and convincing evidence that the respondents knew, or reasonably should have known they were in violation of a rule. However, even if this burden is met, the ALJ has concluded that the proper remedy is automatic authorization of the requested treatment and not a monetary penalty.

18. As found, the claimant has failed to demonstrate that penalties are appropriate for the alleged late denial of the eyeglasses recommended by Dr. Rottman. A request with supporting documentation was submitted to the respondents on October 19, 2018. The respondents notified Dr. Rottman that the eyeglasses were denied, pending a records review, on the seventh business day, October 20, 2018. The respondents did not violate the 2018 version of WCRP 16. In addition, the ALJ is not persuaded that the respondents' actions were unreasonable.

19. As found, the claimant has failed to demonstrate that penalties are appropriate for the alleged late approval of the referral to Dr. Provencher. Although Mr. Harkreader documented the claimant's ongoing request to seek a second opinion from Steadman Hawkins, it was not until Dr. McLaughlin noted an opinion regarding the appropriateness of such a referral that a referral with supporting documentation was provided to the respondents. Therefore, the seven-day time period began to run on

November 29, 2018. Five business days elapsed between the November 29, 2018 paperwork and the notification to claimant of the approval on December 6, 2018. The provider was notified of the approval on the seventh business day, December 10, 2018. Therefore, the respondents did not violate the 2018 version of WCRP 16. Furthermore, the ALJ finds that the respondents' actions were objectively reasonable.

20. As found, the claimant has failed to demonstrate that penalties are appropriate for the alleged late approval of the referral to Dr. Good. The referral was authorized December 4, 2018, twelve business days after the request. Therefore, the authorization occurred five days after the seven-day deadline provided for in WCRP 16. As found, the ALJ concludes that the appropriate remedy is for the authorization to be automatic. The claimant does not also receive a second remedy of monetary penalties. The ALJ finds no persuasive evidence on the record that the respondents acted unreasonably. Additionally, this alleged violation was cured long before the claimant's Amended AFH was filed. The ALJ concludes that the claimant has failed to demonstrate by clear and convincing evidence that the respondents knew or reasonably should have known they were in violation.

21. As found, the claimant has failed to demonstrate that penalties are appropriate for the alleged late approval of a nurse case manager. As found, the failure to authorize or deny a requested medical benefit within seven days simply results in automatic authorization. The claimant does not also receive a second remedy of monetary penalties. In addition, this alleged violation was cured long before the claimant's Amended AFH was filed. The ALJ finds no persuasive evidence on the record that the respondents acted unreasonably. The ALJ concludes that the claimant has failed to demonstrate by clear and convincing evidence that the respondents knew or reasonably should have known they were in violation.

22. As found, the claimant has failed to demonstrate that penalties are appropriate for the alleged late approval of surgery recommended by Dr. Provencher. A request with supporting documentation was submitted to the respondents on February 22, 2019. Following Dr. Farber's peer review, the respondents denied the surgery on the seventh business day, May 5, 2019. The respondents did not violate the 2019 version of WCRP 16. The ALJ finds that the respondents' actions were objectively reasonable.

23. As found, the claimant has failed to demonstrate that penalties are appropriate for the alleged failure to exchange medical records utilized by a peer reviewer. As found, eight of the ten documents were exchanged prior to the Amended AFH, and thereby cured. With regard to the remaining two acupuncture records, the ALJ is not persuaded that the respondents withheld those records as there is no persuasive evidence on the record that the respondents ever had those specific records. The ALJ finds that the respondents actions were objectively reasonable. The ALJ concludes that the claimant has failed to demonstrate by clear and convincing evidence that the respondents knew or reasonably should have known they were in violation.

24. As found, the claimant has failed to demonstrate that penalties are appropriate for the alleged failure to comply with PALJ Martinez Tenreiro's September 14, 2018 prehearing order for failure to mail the claimant's indemnity checks to his counsel's office. As found, the respondents' correction of the mailing address on October 5, 2018, was objectively reasonable. Furthermore, the penalty of late compliance with the PALJ's order was cured prior to the filing of the claimant's Amended AFH. The claimant has failed to demonstrate by clear and convincing evidence that the respondents knew or reasonably should have known they were in violation.

25. As found, the claimant has failed to demonstrate that penalties are appropriate for the alleged failure to comply with PALJ Martinez Tenreiro's September 14, 2018 prehearing order due to failure to exchange medical records within fifteen days. Other than the records addressed above (as related to Dr. Farber's peer review), the claimant has not indicated what medical records, if any, were exchanged beyond 15 days. The ALJ finds that the respondents did not fail to comply with the PALJ's order in this regard. Therefore, there is no violation upon which to assess penalties.

ORDER

It is therefore ordered:

1. The claimant's claim for corrective lenses is denied and dismissed.

2. The claimant's claim for penalties for the dates of October 21, 2018 and ongoing, for the alleged late denial of the eyeglasses recommended by Dr. Randall Rottman are denied and dismissed.

3. The claimant's claim for penalties for the dates of November 23, 2018 through December 10, 2018, for the alleged late approval of the referral to Dr. Matthew Provencher are denied and dismissed.

4. The claimant's claim for penalties for the dates of November 23, 2018 through January 8, 2019, for the alleged late approval of the referral to Dr. David Good are denied and dismissed.

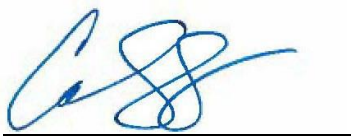
5. The claimant's claim for penalties for the dates of December 31, 2018 and continuing, for the alleged late approval of a nurse case manager are denied and dismissed.

6. The claimant's claim for penalties for the dates of March 5, 2019 and continuing, for the alleged late approval of surgery recommended by Dr. Matthew Provencher are denied and dismissed.

7. The claimant's claim for penalties for the dates of December 21, 2018 and ongoing, for the alleged failure to exchange medical records utilized by a peer reviewer are denied and dismissed.

8. The claimant's claim for penalties for the dates of September 28, 2018 through October 19, 2018, for the alleged failure to comply with PALJ Martinez Tenreiro's September 14, 2018 prehearing order for failure to mail the claimant's indemnity checks to his counsel's office and for alleged failure to exchange medical records within fifteen days are denied and dismissed.

Dated this 29th day of August, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 3-746-413-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on July 25, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 7/25/19, Courtroom 1, beginning at 8:30 AM, and ending at 11:15 AM).

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection. Respondents' Exhibits A, B, C, L, M and N were admitted into evidence, without objection. Claimant's objections to D, E and F were sustained and these proposed exhibits were rejected. Ruling was reserved on proposed Exhibits G and H and because an inadequate foundation was laid through the telephone witnesses, these proposed exhibits were rejected.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on or about August 6, 2019. Counsel for Respondents filed a lengthy Objection to the proposed decision, which resembles the launch of an appeal because it contains Respondents' arguments, many of which were not contemporaneously raised at hearing and insofar as raised were rejected by the ALJ. On or about August 9, 2019, counsel for Claimant filed a Response to Respondents' Objections.

RESPONDENTS' OBJECTIONS TO PROPOSED DECISION AND ALJ's DETERMINATIONS RELATIVE THERETO

1. Respondents object to the issues listed for determination in the Issues section of Claimant's Proposed Full Findings of Fact, Conclusions of Law, and Order, starting at page 2. At hearing Claimant argued that waiver and laches were not issues for hearing secondary to PALJ Broniak's prehearing conference order. Respondents argue that they were prevented from introducing evidence of waiver and laches, including Pinnacol's Claim File Notepad (Respondents' Exhibit H, which was rejected). Pinnacol's notepad allegedly supports the affirmative defenses of laches and waiver. There was an inadequate foundation for this rejected exhibit. In response to the ALJ's concern that there must be actual, hard evidence of prejudice to sustain the affirmative defenses of waiver and laches, Respondents' response was that the passage of time alone made hard evidence unavailable because evidence was desroyed for unknown reasons.. Ann R_____, who retired from Pinnacol in May 2009 (over ten years ago) testified on behalf of Respondents, without specifically identifying Exhibit H, testified that she remembered similar screen shots. Objection No. 1 is not factually correct and is not supported by the record.

2. Respondents object generally to the Proposed Findings of Fact to the extent it allegedly includes facts that were not entered into evidence at hearing or misrepresents the accepted evidence. Respondents' objection No. 2 is not only argument but it requests the opportunity to re-organize the ALJ's decision, presumably to give it a more favorable spin for the Respondents.

a. Respondents requested that **Proposed Findings of Fact Number 10** be moved to **Proposed Findings of Fact Number 3** (before the sentence starting "At some point"), and that the Court provide the following language to Proposed Findings of Fact Number 3 with respect to Claimant being represented by counsel: "Claimant was represented by John Breit, Esq. following his work injury, and before his last indemnity benefits were paid in September 1988 (Resp. Ex. B, bns 013, 017, 019, 026, 036, 040). The Division's chronological history does not indicate that Breit withdrew as counsel (Resp. Ex. A, bn 001). The Court took judicial notice that Breit perished in a plane crash in 1995. The ALJ rejects Respondents' suggestion that Claimant was still being represented by Breit on September 29, 1988, the date Pinnacol claims a full and final settlement check was issued on this claim." The ALJ finds Respondents' suggested language and re-ordering of the decision inappropriately designed to give the decision a more favorable spin when Respondents failed to sustain their burden on case closure by preponderant evidence.

b. Respondents object to **Proposed Findings of Fact Number 4** as

incomplete. Proposed Findings of Fact Number 4 includes Claimant's interpretation of the Division Chronological History entry "Conversion-[to] prevent Closur[e]". Proposed Finding of Fact Number 4 should also include a reference to the Division's Chronological History entry dated December 1, 1992 "File Destroyed" (Resp. Ex. A, bn 001), and the Division Claim Status History on the claim information screen: "Status: C - Close[d] Date Dec 1, 1992" (Id. at bn 002). Respondents argue, without adequate support, that Claimant Status History is unrefuted evidence that this claim was closed as of December 1, 1992. This is the opinion of R_____ and Claimant's counsel, based on their interpretation of a screen shot from 30 years ago. The ALJ rejects this argument because there is not an adequate foundation underlying it. Again, Respondents seek to augment the findings with shaky evidence some of which was rejected in order to place a more favorable spin on the decision.

c. Respondents argue that **Proposed Findings of Fact Number 5** should be modified to include the fact that R_____ testified that, in her opinion, Pinnacol had a settlement committee in September 1988 and that the settlement committee only settled claims on a full and final basis. This statement is without adequate foundation concerning all of the ramifications of resolving issues by Pinnacol,. As of today, the ALJ can just as easily infer and find partial settlement as opposed to a full and final settlement. There is no adequate foundation concernhing how R_____ would absolutely know that Pinnacol only did "full and final" settlements in 1988. The opinion of R_____ concerning what occurred 40 years ago is without foundation or support. Indeed, Respondents again desire the ALJ to add in fact findings, based on evidence rejected by the ALJ.. Although she was not there, Respondents argue that R_____'s testimony was not speculative, as R_____ testified to her alleged firsthand knowledge of these facts of 30 years ago—without notes or contemporaneous documentation. The The ALJ finds much of R_____'s testimony to be speculative. She testified by telephone and there is no indication that she had the same documents referenced in Respondents' exhibits before her when she rendered her opinions. The ALJ infers and finds that Respondents pushed the evidentiary envelope beyond the bounds of reason,

d. Respondents' request that **Proposed Findings of Fact Number 6.c.** be modified to read as follows: "Based upon Pinnacol's Indemnity Payment History (Ex. C, bn 056) and Pinnacol Comp Check screenshots from WCIS (Resp. Ex. D, which was rejected), Claimant was advanced $7,192 in PPD while collecting TTD

benefits. Claimant then received a $24,900 check on September 29, 1988. R_____ testified that the September 29, 1988 check was a full and final settlement check," in her opinion. She did not distinguish between full and final settlements and partial settlements. Again the ALJ finds R_____'s testimony inadequately supported and speculative.

e. Respondents request that **Proposed Findings of Fact Number 6.d** be modified to completely remove "Although there is no explicit reference to a "settlement" in any of Respondents' exhibits", and the word "interpreted" is used twice in this section. R_____ stated that based upon her knowledge (the ALJ finds this to be her opinion) of Pinnacol's practice and procedures during the period in question (September 1988) the notation on Respondents' Exhibit E "PERM PARTIAL1STIP-COMMITTE TO@ 0.00; Line Total: $24,900" indicates that a full and final settlement was reached in this claim, and the $24,900 check was a settlement check ordered by Pinnacol's Settlement Committee. Again, R_____'s opinion is speculative because she did not explain or distinguish "partial" settlements from "full and final" settlements.The ALJ sustained Claimant's objection to Exhibit E and Exhibit E was rejected,.

f. Respondents request that **Proposed Findings of Fact Number 6.e** be modified to remove the word "interpreted" as used in this proposed finding of fact. The ALJ finds that it would be more appropriate to substitute "speculatively opined" for "interpreted," however, R_____ did "interpret" what the legal coding contained in Respondents' Exhibit G means. R_____ stated based upon her opinion of Pinnacol's practice and procedures related to Pinnacol's alleged longtime use of legal codes that the legal status codes "81" and "17" when used together by Pinnacol indicate a full and final settlement was reached on this claim. The ALJ finds this assertion to be inadequately supported and speculative.

g. Respondents request that **Proposed Findings of Fact Number 6.g** be modified to remove the word "asserted" as used in that section. R_____ stated that based upon her personal knowledge of Pinnacol's practice and procedures during the time frame in question Pinnacol never paid any claimant PPD benefits beyond the PPD benefit cap. The ALJ finds this opinion testimony to be speculative along the lines of "never say never,."

h. Respondents request that **Proposed Findings of Fact 6.j.** be modified to remove the statement that " R_____'s 'opinion' that various codes and comments in Respondents' Exhibits C, D, E, and G (all of which were rejected in evidence because of inadequate

and speculative foundational considerations) establish a full and final settlement or case closure is highly speculative, lacks credibility, and is unpersuasive."

3. Respondents object to the proposed conclusions of law in so far as they include conclusions not held by the ALJ and misapply or misstate the pertinent and applicable laws. Rather than Respondents reading the ALJ's mind, underlying how he arrived at an application of the law to the facts, Respondents would be better served by strict legal argument. The ALJ has applied and stated the law applicable, according to his best lights

a. Respondents object to claimant's Proposed Conclusions of Law section entitled "**Settlement Requirements Under the Act**" in that Claimant incorrectly states the law. Colorado Rule of Evidence 1004 (1) provides that secondary evidence is admissible to establish the contents if the original(s) is lost or destroyed, unless the proponent destroyed it in bad faith. Thus, in a case with an alleged lost or destroyed document, such as the settlement documents in this case, Respondents are permitted to prove a settlement occurred with "secondary" evidence, however, the "secondary evidence" in the present case is without an adequate foundation because it's relevancy as "secondary evidence" is insufficient and based on the speculation of Ann R_____ and Candy Whitmer, who testified based on their memories of 30 years ago, which the ALJ simply does not find credible. To prove that a "full and final" settlement occurred, Respondents do not need to produce the actual settlement agreement, signed by the parties, approved in writing by a hearing officer or Director, and filed permanently with the Division, however, the 'secondary evidence" must be credible, which it is not. Also, the unavailability of the settlement documents, although suspicious in light of the fact that old "screen shots" were available, does not rise to the level of "bad faith" from an evidentiary standpoint. Secondary evidence can be used to prove a settlement occurred, even if it cannot be used to prove the terms of the settlement. See *In re Dalton*, W.C. No. 4-977-664-01 (September 22, 2016) (ALJ did not err in admitting and considering extrinsic evidence to determine whether a party failed to prove a full and final settlement by a preponderance of reliable evidence). As found herein below, Respondents failed to prove a **full and final settlement** by a preponderance of reliable secondary evidence.

b. Respondents object to **Proposed Conclusions of Law section 3.e.,** in that it claims Respondents failed to meet the statutory requirements through custom and usage. Again, Respondents need not prove the statutory requirements cited to prove a claim settled in a case where the settlement documents were lost or destroyed. Respondents only

> need to prove that the claim settled, which Respondents have failed to do. Respondents' evidence, including the indemnity ledger, the check history screenshots, and legal status codes, do not establish that the claim settled on or around September 29, 1988, **on a full and final** basis. R_____'s un-supported opinion as to what those documents mean do not show the claim settled. Mere suspicion that a full and final settlement may have occurred does not equate to preponderant evidence.

Ultimately, the ALJ considers Respondents' lengthy launch of an appeal as a Motion for Reconsideration, with a prayer for relief that the ALJ flip the outcome, reverse himself, and provide that the Respondents prevail. This "Motion," as herein below provided is effectively denied and dismissed.

CLAIMANT'S RESPONSE TO RESPONDENTS' OBJECTIONS

:

Claimant avers that for the most part, Respondents' Objections are argument. Objection No. 1, however – "Respondents were prevented from introducing evidence of waiver and laches, including Pinnacol's Claim File Notepad (Resp. Ex. H)" – is not factually correct and is not supported by the record.

While it is correct that Claimant *argued* that PALJ Broniak's order had reserved Respondents' equitable defenses for a later time, this ALJ specifically stated, "I'm not bound by prehearing judges' orders." Audio Recording of 7/25/19 Hearing, Courtroom 1 20190725 ("Audio) at 9:54am. In fact, the ALJ overruled Claimant's numerous relevance objections expressly because "I have to be mindful of one of Respondents' arguments and that is their position that there we'll see what comes out of the hopper." Audio at 9:53:40am. *See also, e.g., id.* at 9:29am ("They've raised the defenses of laches, waiver, estoppel . . . "); 9:55 ("I can envision that there can be a case closure by the operation of time by imposition of the laches doctrine on the grounds of prejudice") (overruling relevance objection at 9:56:51am).

Specifically regarding the Pinnacol Claim File Notepad (Resp. Ex. H), the record is clear that the ALJ excluded the document for lack of foundation – not because Respondents' equitable defenses were not the subject of the hearing. *Id.* at 10:22:38 – 10:24:00am.

Further, in closing, Respondents' counsel specifically argued that its equitable defenses were part of the hearing:

> [Claimant's] Counsel represents that Judge Broniak's order limits this to closure, but laches and waiver are issues. They've always been issues. They're on the case information sheet.[1]

[1] Claimant's Ex. 9 (Issues remaining for determination – ". . . waiver, estoppel, laches . . .").

Id. at 10:51:36am; *see also id.* at 10:54-55am (evidence of passage of time constitutes evidence of unconscionable delay and such delay prejudiced Respondents) (Respondents' closing argument).

Finally, the ALJ allowed Respondents to make their case but specifically found that Respondents failed to meet their burden of proof. on case closure. "The only evidence, if you will, that Pinnacol was prejudiced was their own fault. Their destruction of records. Laches and estoppel are issues for another day. Issues where there must be a showing of prejudice to the Respondents after they destroyed some of their own records for unknown reasons.

FINDINGS OF FACTS

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact;

1. The Claimant is 57 years old, and was born on November 26, 1961.

2. The Claimant was injured on July 19, 1984, at the age of 22, due to a fall of approximately 16 feet off of a roof while working (Respondent's Exhibit B at p.10). He sustained a closed head injury, as well as other physical injuries. *Id.* He had no memory of the incident or the days before the incident. In the months following, he had difficulty concentrating on one task at a time, appeared preoccupied with his inability to remember what he had done day-to-day, and had poor moment-to-moment recall. He also had poor attention span and an inability to follow instructions without repetition, and appeared bewildered. He had problems expressing himself, and his thinking was tangential and disorganized (Respondents' Exhibit B at p. 13). On January 30, 1985, the Claimant reported that he could not remember the two months following the accident. *Id.* at 15. He was diagnosed with "encephalopathy with cognitive and (RUE), either cervical root or local in the right shoulder." *Id.* at 14.

3. The Claimant's doctors continued to report difficulty with memory, confusion, and agitation from his "organic brain injury" *Id.* at 13, 17, 19, 21, 24, 26, 28, 30, 34, 36-37, 43, 46, 48, 52-54. Even after moving back home to California sometime in 1986, these same reports of memory, confusion, and agitation continued. *Id* at 40, 43, 46, 48, 52-54. At some point, for unknown reasons, Claimant stopped receiving medical care, however in 2013, there is a report of a Weschsler Adult Intelligence Exam performed by Marlene Frankel, Ph.D. back in Colorado. Dr. Frankel reported that "He previously received Workmen's Compensation and Social Security Disability benefits. He was confused and vague about why those benefits ended." After the testing, Dr. Frankel determined that that his "pattern of uneven scores and impaired processing speed is consistent with a traumatic brain injury." (Rs' Ex. I at 81). In 2017 and 2018, Lesley Moak, NP, reported that Claimant had no memory of his life prior to the early 2000's; he continued to experience memory loss; and that he was inattentive, disorganized, and needed frequent redirection during the medical appointments. (Respondents' Exhibit J at pp. 83-86, 88).

4. The Division (DOWC) received the First Report of Injury on July 27, 1984, and assigned the Workers' Compensation claim number 3-746-413 (*See* Respondents' Exhibit A--certified copy of DOWC file for claim number 3746413, Claimant [redacted] (June 20, 2018) and Claimant's Exhibit 1 (certified copy of DOWC file (June 6, 2018)). The DOWC's file documents that a hearing was held on Claimant's claim on May 3,1985 and that an ALJ Order was issued on June 17,1985. The file further documents that on July 13, 1991 there was a "Conversion- [to] prevent closur[e]" of

Claimant's claim. *Id.* Insure and/or its predecessors made regular indemnity payments to Claimant in conjunction with a compensable workers' compensation claim from August 1984 through at least September 1988. (Respondents' Exhibits C-E). The ALJ finds the documents of the parties admitted into evidence credible and persuasive to establish that Claimant made a prima facie showing that he had an open and compensable claim as a result of the July 27, 1984, incident.

5. Ann R_____ testified at hearing for Respondents. R_____ previously worked for Insurer, from February 24, 1986, through May of 2009, when she retired. Over her 25 years with the Insurer, she worked as an adjuster, a supervisor, and eventually the business director. She also served on the business requirements team and the design and implementation team, which determined what information would be transferred from the Insurer's claims' handling software prior to 1997 (known as MAGEC) to their new computer system (known as Workers Compensation Information System or "WCIS"). She stated that when the Insurer converted MAGEC to WCIS, the following information was transferred: payment information, including the check history of when the check was paid, the check number, and the type of check that was issued; the legal status codes; and basic information for the claim. Finally, she discussed that in the 1980s, the Insurer had a settlement committee that settled all claims with the claimants. R_____ admitted that she did not serve on that committee.

6. R_____ was not the adjuster for the Claimant's claim and had no personal knowledge of the facts of his case, but discussed the overall policies and her understandings of claims' adjusting for Insurer, as it related to the Claimant's claim:

a. would have been converted from MAGEC to WCIS.

b. R_____ identified Claimant's case file and stated that, based on the date of injury, the Claimant's case file (Respondents' Exhibit C) as Pinnacol's indemnity payment history for the Claimant's claim. She stated that this document was from the WCIS system and that it demonstrated Pinnacol or its predecessors had paid Claimant both temporary total (TTD) and permanent partial disability (PPD) benefits.

b. Based on the screenshots from WCIS in the Claimant's file (Respondents' Exhibit D), she expressed the opinion that the Claimant received an advance of PPD benefits of $3,000 on February 5, 1986, and $24,900 in permanent partial disability (PPD) on September 29, 1988. This fails to establish a full and final settlement.

c. Although there is no explicit reference to a "settlement" in any of Respondents' exhibits, R_____ interpreted

the notations on Respondents' Exhibit E "PERM PARTIAL1STIP – COMMITTE TO@ 0.00; Line Total: $24,900" to mean that a settlement occurred for $24,900 between the Insurer and thee Claimant. She interpreted the word fragment "COMMITTE" in Respondents' Exhibit E as a reference to the Insurer's settlement committee.

d. R_____ interpreted the legal codes "81" and "17" and the word "stipulation" on the screenshot of Respondents' Ex.hibit G to refer to a "stipulated settlement" negotiated by the settlement committee.

e. Rather than making explicit reference to a "settlement,". R_____ asserted that Insurer instead would report a settlement payment as a PPD payment on an indemnity payment summary when the computer systems were changed over from MAGEC to WCIS.

f. R_____ discussed that the PPD maximum at the time of the injury was $26,292, and the Claimant received a total of $32,092, which was more than the maximum benefit. She asserted that the Insurer did not pay PPD beyond the cap unless the claim was settled.

g. Reading Respondents' Exhibits C at 56, D at 64, E at 68, and G at 71 together, R_____ opined that on September 29, 1988, a settlement check was issued in the Claimant's case. She further stated the opinion that the Insurer would not issue settlement checks without signed settlement documents and a signed order from a judge. She had no personal knowledge that this was so in the Claimant's case nor did she have personal knowledge that the Insurer would never issue settlement checks without signed settlement documents nor did you distinguish checks issued in partial settlement. She could not say whether this approach was always followed.

h. R_____ noted that Insurer destroyed most of the records in the Claimant's case and there were no pleadings in his current file between 1984 and 1988. She stated that it was the Insurer's policy not to destroy open claim files. She admitted that she did not know whether that policy was always followed.

i. Finally, R_____ testified that the Insurer's records did not contain a written settlement agreement signed by both parties in the case, nor did she have knowledge otherwise.

> Additionally, upon reviewing the Insurer's documents relating to the Claimant's claim, she had not seen an order approving the settlement. The ALJ finds that R_____'s opinion that the various codes and comments in Respondents' Exhibits C, D, E, and G establish a full and final settlement or case closure is highly speculative, lacks credibility and is not persuasive. **Indeed, there is no persuasive evidence whatsoever the a judge approved a full and final settlement**

7. Respondents also called Candy Whitmer, a former claims' adjuster for Insurer. Before testifying to any matter of substance, the ALJ encouraged, and Respondents chose, to move to R_____'s testimony so she could testify live concerning the proposed exhibits. When the ALJ provided Respondents a second opportunity to call Whitmer back to testify after R_____'s live testimony, Respondents declined to do so.

8. The DOWC file for Claimant's claim notes that Claimant contacted the DOWC and/or attorneys in 2007, 2008, and 2010 about his benefits (Claimant's Exhibit 1 at p. 3; Respondents' Exhibit A at p. 3). Additionally, the DOWC file reports that, at a minimum, Claimant's file did not close in 1988, as it was still open in 1991. *Id.* ("CONVERSION-PREVENT CLOSUR").

9. In the DOWC file, there is no FAL (nor any other pleadings), no copy of an order dismissing or closing the claim, no copy of a settlement agreement, no order of the ALJ confirming an agreement, nor even records noting that any of the previous documents existed in Claimant's permanent record with the DOWC (Respondents' Exhibit A; Claimant's Ex.hibit 1). Further, Respondents did not produce a FAL, a settlement agreement signed by the parties, or an order of a judge confirming a settlement of Claimant's workers' compensation case.

10.. The ALJ takes administrative notice that Claimant was represented at some point in the 1980's by counsel, but that attorney has since passed away.

Ultimate Findings

11. The ALJ finds R_____'s ultimate opinion, piecing together screen shots and testifying from more than a ten-year old "memory" about Pinnacol procedures concerning full and final settlements in which she was not directly involved, lacking in credibility not because of prevarication but because there was no persuasive, foundational evidence that she possessed an eidetic memory that captured minor details of over ten years ago. Without R_____'s speculative opinions the secondary evidence, consisting of screen shots and isolated codes and fragmented documentary evidence is meaningless.

12. Although secondary evidence may establish the existence of a "full and final" settlement over 30 years ago, the secondary evidence herein is neither sufficiently credible or adequate to establish a full and final settlement.

13. Without a "full and final settlement, closing this case," the aggregate evidence establishes that the case remains open, *i.e.,* the claim was timely filed, there was never a final admission closing the case, nor was there any other credible indication that the case was closed.

14. Respondents have failed to prove, by a preponderance of the evidence, that there was a case closure, however, the issues of laches and estoppel remain viable factual issues

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad

discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, R_____'s ultimate opinion, piecing together screen shots and testifying from more than a ten-year old "memory" about Pinnacol procedures concerning full and final settlements in which she was not directly involved, lacking in credibility not because of prevarication but because there was no persuasive, foundational evidence that she possessed an eidetic memory that captured minor details of over ten years ago. Without R_____'s speculative opinions the secondary evidence, consisting of screen shots and isolated codes and fragmented documentary evidence is meaningless.

Full and Final Settlements

b. A workers' compensation claim "shall not be assigned, ***released***, or commuted except as provided in [the Act]." § 8-52-107(1), C.R.S. *See also City Market v. Indus. Claim Appeals Office,* 800 P.2d 1335, 1337-38 (Colo. App. 1990) (workers' compensation settlement agreement is not final unless it strictly adheres to the requirements of the Act). The 1984 Act, in effect at the time of Claimant's injury, established three ***mandatory*** requirements for the settlement of a workers' compensation claim:

1. The settlement agreement "***shall be in writing***" signed by a representative of the employer/insurer and signed and sworn by the injured employee.

2. The written agreement "shall be reviewed in person with the injured employee and ***approved in writing by a hearing officer or the director*** of the division ***prior to the finalization*** of such settlement."

3. The settlement agreement shall be ***filed with the division as part of the injured employee's permanent record***."

Section 8-53-105 (1984) (emphasis added) (Claimant's Exhibit 6, p.31); *see also (*Claimant's Exhibit 7 (excerpts of 1988 Workers' Compensation Rules), Section XI.G (Settlement), p. 44

c. The Colorado Court of Appeals and the Industrial Claim Appeals Office have long held that a workers' compensation settlement is not final and is thus unenforceable unless each statutory requirement has been satisfied. *See, e.g., Cook v. McLister,* 820 P. 2d 1167 (Colo. App. 1991) (release not approved by an ALJ or Director); *Oxford Chems. v. Richardson,* 782 P.2d 843, 845 (Colo. App. 1989) (settlement ineffective without approval of ALJ or the director); *Garrison v. Direct Tire Sales,* W.C. No. 3-892-130 (Dec. 28, 2007) (no written agreement signed by both parties; no Division approval); *Choate v. Corn Constr. Co.,* W.C. 3-057-954 (Feb. 16, 1993) (settlement agreement introduced at hearing lacked respondent's signature); *and*

see Jerla v. Henkels & McCoy, pp. *1-2, W.C. No. 4-263-427 (Jan. 10, 2005) ("Our courts have consistently held that failure to adhere to these statutory requirements prevents the enforcement of an alleged settlement)." For example, in *Cook*, the claimant entered into a written pre-claim settlement agreement that released employer for "any and all actions, claims and demands" and included compensation for lost wages. The court of appeals found that the settlement was ineffective to bar claimant's later workers' compensation claim because the settlement was not approved by an ALJ or the Director. 820 P. 2d at 1169-70.

d. In the present case, there is no credible or persuasive evidence that *any* of the Act's requirements for a final settlement were met: there is no written agreement signed by both parties; there is no record of an order from an ALJ or the Director approving a final settlement, and; there is no copy of the agreement or record of the agreement being filed in Claimant's permanent record with the Division. Indeed, the DOWC's docket list for Claimant's file contains no record of any of the required documents, not even a secondary reference. The absence of a record required kept and preserved in the ordinary course of a regularly conducted business activity is admissible "to prove the nonoccurrence or nonexistence of the matter." C.R.E. 803(7). Thus, Pinnacol failed to produce the documents the Act requires to finalize and enforce a full and final settlement. The ALJ concludes, that more likely than not, there was not a full and final settlement or a stipulation on future medical benefits, and Respondents' failed to meet their burden of the affirmative defense of "case closure."

e. Further, Pinnacol's attempt to meet its statutory requirements with the custom and usage testimony of retired employees purporting to interpret computer codes is not persuasive or credible. None of the records they attempted to interpret specifically used the term "settlement" and Ann R_____ lacked personal knowledge of the relevant facts of the case or the specific terms of any purported settlement. Even in non-workers' compensation cases, custom and usage evidence is admissible *only to interpret* the terms of an existing, written contract that the parties agree exists. Such evidence "***is not admissible where no contract has been first shown to exist***." *OC Kinney, Inc. v. Paul Hardeman, Inc.,* 379 P.2d 628, 631 (Colo. 1963) (emphasis added). Even so, the ALJ has considered all of the evidence, including the custom and usage evidence presented at hearing, and finds it unpersuasive and lacking in credibility Because the secondary evidence as specified herein above was lacing in credibility,. Respondents failed to meet their burden to prove that it is more likely than not that the case was closed by settlement, thus, they have failed to meet their burden by preponderant evidence.

Burden of Proof

f. The burden of proof is generally placed on the party asserting the affirmative of a proposition. In the present case, it is upon the Respondents to prove vtheir affirmative defense of case closure by a preponderance of the evidence. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, Respondents have failed to meet their burden on the affirmative defense of case closure. Claimant's case remains open.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents' affirmative defense of "case closure" is hereby denied and dismissed, without prejudice to the potential affirmative defenses of laches and estoppel.

B. All issues not determined herein are reserved for future decision.

DATED this 29th day of August 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he suffered a change in condition warranting reopening of his claim.

II. Whether Claimant proved by a preponderance of the evidence entitlement to medical benefits.

III. Whether Claimant proved by a preponderance of the evidence he is entitled to temporary total disability (TTD) benefits from October 13, 2018 through October 29, 2018.

FINDINGS OF FACT

1. Claimant is a 32-year-old male who works for Employer as a facility trainer. Claimant previously worked for Employer as an associate warehouse worker.

2. On A May 16, 2013, Claimant presented to his primary care physician at Kaiser Permanente with complaints of low back pain for three weeks and pain and numbness into his left leg. Claimant reported previously having back pain off and on. Claimant was diagnosed with lumbar radiculopathy and prescribed hydrocodone and etodolac.

3. On July 1, 2013, Claimant suffered an admitted industrial injury to his low back when his body was jarred while unloading a trailer. Claimant underwent treatment with his primary authorized treating physician (ATP) Linda A. Mitchell, M.D. at High Country Occupational and Travel Medicine. At his initial evaluation on July 3, 2013, Claimant reported low back pain and numbness and tingling in the lateral aspects of his calves and feet. Dr. Mitchell initially diagnosed Claimant with a lumbar strain.

4. A July 26, 2013 lumbar MRI revealed a disc bulge at L5-S1 causing slight displacement of the left S1 nerve root. Claimant was subsequently diagnosed with a herniated nucleus pulposus (HNP) at L5-S1 and residual left S1 radiculopathy. He underwent conservative treatment and was initially placed at maximum medical improvement (MMI) by Dr. Mitchell on November 1, 2013. At that time, Claimant reported total relief of radicular symptoms and occasional 1/10 left low back with certain motions.

5. Claimant's back pain and radicular symptoms returned in June 2014. Claimant subsequently underwent an L5-S1 laminectomy and discectomy on January 21, 2015. Claimant underwent postoperative therapy, including physical therapy and a left L5 transformational ESI on November 19, 2015.

6. Due to Claimant's worsening condition, Respondents filed a General Admission of Liability (GAL) on February 4, 2015 which admitted to medical benefits and ongoing temporary total disability (TTD) benefits from January 21, 2015 at a rate of $498.21 per week.

7. On July 17, 2015 Respondents terminated TTD benefits by filing an amended GAL with a Supplemental Report for Return to Work, which reflected Claimant's return to work on June 29, 2015.

8. Dr. Mitchell placed Claimant back at MMI on December 1, 2015. At this time, Claimant continued to report low back pain with pain and numbness radiating through the left buttock. Straight leg raise testing was positive on the left. Dr. Mitchell assigned 25% whole person impairment and permanent restrictions of no lifting/pushing/pulling/carrying over 50 pounds and no repetitive lifting of 25 pounds. As maintenance treatment, Dr. Mitchell recommended the use of Tramadol, three epidural steroid injections a year over the next five years, and six-month follow ups over the next year.

9. On January 12, 2016, Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Mitchell's December 1, 2015 report, admitting for a 25% whole person impairment rate and $81,706.44 in permanent partial disability (PPD) benefits. Claimant reached the statutory cap for indemnity benefits, resulting in only $69,338.10 in PPD benefits being owed. Claimant objected to the FAL and requested a Division Independent Medical Exam (DIME). A corrected FAL was filed on February 11, 2016. Claimant objected to the February 11, 2016 FAL. Respondents filed an amended FAL on April 28, 2016 and Claimant again objected and requested a DIME.

10. Franklin Shih, M.D. conducted the DIME on June 14, 2016. Claimant reported 4/10 ongoing back and proximal left lower extremity pain. Straight leg raise testing was moderately positive on the left. Dr. Shih assessed Claimant with chronic low back pain and radicular pain syndrome. He agreed Claimant reached MMI as of December 1, 2015 and assigned a 24% whole person impairment.

11. Respondents filed an amended FAL on June 17, 2016 consistent with Dr. Shih's DIME report, admitting for a 24% whole person impairment and post-MMI maintenance care. Claimant objected to the FAL and filed an Application for Hearing. Prior to a hearing taking place, Respondents filed a FAL on January 31, 2017 admitting to an MMI date of December 1, 2015, 24% whole person impairment, an average weekly wage ("AWW") of $840, disfigurement benefits and reasonably necessary maintenance care. The claim closed on the January 31, 2017 FAL.

12. Claimant continued to see Dr. Mitchell and attend physical therapy, chiropractic treatment and massage treatment as maintenance care. Records from Dr. Mitchell's evaluations and the chiropractic sessions note Claimant consistently reported 3-5/10 low back pain radiating to the buttock and down to the knee with numbness and tingling. At Claimant's last chiropractic session on July 31, 2017, Claimant reported 3/10 pain

that was present 30% of the time, with continuous sharp, tightness, numbness and tingling in low back.

13. Claimant testified that while at home on Saturday, October 13, 2018, he bent over to pick up a piece of paper that dropped on the ground and when he stood up he immediately felt pain in his lower back radiating into his bilateral legs down to his feet. Claimant testified he sat on the couch for the remainder of the day and reported his symptoms to Employer the following day, who advised Claimant to seek medical attention at Sky Ridge Medical Center.

14. On October 15, 2018, Claimant sought treatment at the emergency department at Sky Ridge Medical Center. He presented with back pain shooting down his bilateral legs, worse on the posterior left leg. It was noted the pain began after Claimant bent down to pick up a piece of paper and stood back up. Claimant reported having pain and left leg weakness prior to a previous back surgery. Physical exam revealed lumbar and paraspinal tenderness and positive straight leg raise bilaterally. Claimant underwent a lumbar spine MRI that demonstrated postsurgical changes present from the L5 left hemilaminectomy and a tiny left paracentral disc protrusion present at L5-S1 without resulting in canal stenosis or nerve root impingement. It was noted there was no abnormality identified on the MRI to explain Claimant's symptoms. Claimant was prescribed medication and discharged with instructions to follow-up with his spinal doctor.

15. While on complete restrictions from Dr. Mitchell, Claimant initially missed 10 days of work.

16. On October 16, 2018, Claimant returned to Dr. Mitchell with complaints of increased low back pain and radicular symptoms in both legs after bending over to pick up a piece of paper at home. Claimant was ambulatory with a walker. In his pain diagram from that appointment, Claimant noted 8/10 pain in his lower back, and radiating numbness through his left leg down to his ankle, and through his right buttock to his right upper thigh. On examination, Dr. Mitchell noted positive straight leg raise bilaterally and increased paraspinous lumbar tone. She diagnosed Claimant with lumbar disc with radiculopathy and removed Claimant from work. Dr. Mitchell recommended physical therapy for exacerbation and a surgical consultation with Dr. Rauzzino for worsening low back pain.

17. On October 25, 2018, Claimant saw Dr. Rauzzino, who requested authorization of a pelvic MRI, lumbar spine and pelvic x-rays, and an EMG/NCS. The requests were denied by Respondents.

18. Dr. Mitchell reexamined Claimant on October 29, 2018. Claimant reported resolution of his right lower extremity pain. Dr. Mitchell returned Claimant to modified duty working 4-hour workdays with no sitting or standing for more than one hour at a time.

19. Claimant presented to Dr. Mitchell on November 5, 2018 for a recheck of chronic low back pain with recent exacerbation. He reported feeling somewhat better and tolerating work at four hours a day. Dr. Mitchell noted no further evaluation was authorized pending an Independent Medical Examination (IME). She returned Claimant to his previous permanent work restrictions.

20. On December 21, 2018, Nicholas Kurz, D.O. performed an IME at the request of Respondents. Dr. Kurz performed a records review and physical examination of Claimant. On physical examination, Dr. Kurz noted a nontender lumbar spine with normal range of motion and negative straight leg raise testing bilaterally. Dr. Kurz focused on the July 1, 2013 and opined Claimant did not sustain a new injury or any acceleration or aggravation on July 1, 2013. He opined Claimant's back condition was pre-existing, and Claimant should not have received treatment under the workers' compensation system. Dr. Kurz further concluded that the "inappropriate medical maintenance" should be discontinued, as there was a non-work-related home mechanism of injury resulting from bending on October 13, 2018. He opined that the resultant emergency room visit, MRI and any additional workup should be covered through Claimant's private insurance as Claimant's condition it is degenerative in nature and unrelated to the claim.

21. In a note dated February 20, 2019 regarding a teleconference with Claimant's counsel, Dr. Mitchell wrote, "Discussed that [Claimant's] recent aggravation was due to a trivial activity and would not have occurred if he did not have the prior work injury and surgery. Issue of causality of initial work injury is not in question."

22. At Claimant's next appointment on March 28, 2019, Dr. Rauzzino prescribed lidocaine patches. Dr. Rauzzino noted that patient's condition was related to "Employment" and that the date of current injury was July 1, 2013, the date of Claimant's initial injury.

23. Claimant testified at hearing he has worked in several capacities for Employer as a result of his July 1, 2013 injury to accommodate his physical abilities and work restrictions. At the time Claimant reached MMI, he had already changed positions at his company to avoid heavy lifting. Claimant was able to perform all the requirements of his new jobs even with the restrictions provided by Dr. Mitchell until he had an aggravation/exacerbation of his injury on October 13, 2018.

24. Claimant further testified that the pain from the July 1, 2013 work injury never fully resolved and, between He testified that between July 2016 and October 2018 he experienced consistent 3-4/10 low back pain and pain radiating into his left buttock. However, after the October 13, 2018 incident, he experienced 9/10 back pain, 8-9/10 left leg pain, and 7-8/10 right leg pain and required the use of a cane.

25. Claimant testified that he requested Dr. Mitchell release him back to work on October 29, 2018 because he ran out of paid time off and his symptoms improved. When asked if he had returned to the baseline he had before October 13, 2018, Claimant testified, “The right leg is good. I still have some of the symptoms in my lower -- in my left leg that comes down to my buttocks and then my lower back. You know, I would say baseline, but I have worsening at the same time.” (Hrg. Tr. 39:15-19).

26. Dr. Kurz testified at hearing on behalf of Respondents as a Level II accredited expert in family medicine. Dr. Kurz testified that the October 13, 2018 was not a work-related incident because the incident did not occur on work grounds. He opined that there is no objective evidence of a worsening of a new injury, aggravation, or worsening of Claimant’s condition. On cross-examination, Dr. Kurz testified that the October 13, 2018 incident did not suffer an aggravation as a result of the October 13, 2018 incident, but, rather, an exacerbation.

27. Claimant’s testimony is found credible and persuasive.

28. The ALJ credits the opinions of Drs. Mitchell and Rauzzino over the opinion and testimony of Dr. Kurz and finds Claimant proved it is more probable than not he sustained a change in condition causally related to Claimant’s July 1, 2013 work injury and subsequent surgery.

29. Claimant proved it is more likely than not he is entitled to reasonable and necessary medical benefits related to the change in condition.

30. Claimant proved it is more likely than not he is entitled to TTD benefits from October 13, 2018 through October 29, 2018, as Claimant was removed from work due to his worsening back condition.

31. Evidence and inferences contrary to these findings were not found credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (the “Act”), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reopening

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that he is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO, July 19, 2004).

Respondents assert that while a worsening may have occurred, the worsening and the October 13, 2018 is due to the natural degeneration of Claimant pre-existing back condition evidenced in the May 16, 2013 Kaiser Permanente records. The ALJ is

not persuaded. While the May 2013 Kaiser medical record reflects Claimant had prior low back pain and left leg symptoms, Claimant suffered a significant admitted industrial injury on July 1, 2013, for which he underwent multiple years of pre-MMI and post-MMI treatment, including surgery, and ultimately received a 24% whole person impairment rating and permanent restrictions. When Claimant was placed at MMI by ATP Mitchell in December 2015, Claimant reported low back pain and numbness radiating to the left buttock. At the June 2016 DIME evaluation, Claimant reported 4/10 low back pain and left lower extremity pain. Straight leg raise testing was positive on the left and negative on the right at both the MMI evaluation and DIME evaluation. Claimant remained able to perform his job duties with restrictions. Although Claimant continued to experience symptoms, he credibly testified that between July 2016 and October 2018, his symptoms were limited to 3-4/10 low back pain radiating into the left buttock. This testimony is corroborated by the medical records.

On October 13, 2018, Claimant suffered an aggravation of his work injury and change in condition. Claimant's pain increased from 3-5/10 to 8/10 and expanded to include his right lower extremity along with left lower extremity. Physical examination at the October 13, 2018 emergency room visit and the October 16, 2018 visit with Dr. Mitchell revealed positive straight leg raise testing bilaterally. Claimant sought medical treatment as a result of the worsening of his condition. Additional medical treatment has been prescribed by Drs. Mitchell and Rauzzino. Additionally, the change in condition resulted in Dr. Mitchell temporarily removing Claimant from work. Dr. Mitchell noted Claimant suffered a recent aggravation of his condition that would not have occurred but for the prior work injury and surgery. The ALJ is more persuaded by Dr. Mitchell's opinion in this matter, as she has been treating Claimant since 2013 and is familiar with his injury, condition, and course of treatment.

Based on the totality of the credible and persuasive evidence, Claimant has proven it is more likely than not he suffered a change in condition that is causally connected to the July 1, 2013 work injury and subsequent surgery, warranting reopening of his claim.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if

it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006).

As found, Claimant met his burden to prove entitlement to medical treatment as related to his worsening condition. Accordingly, the treatment received at Sky Ridge Medical Center, and subsequent evaluations and treatment with Dr. Mitchell and Rauzzino are reasonably necessary and related.

TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

As found, Claimant met his burden to prove entitlement to TTD benefits from October 13, 2018 through October 29, 2018. Dr. Mitchell removed Claimant from work during this time period due to Claimant's worsened condition. Claimant suffered wage loss during this time period as a result.

ORDER

1. Claimant's claim for workers' compensation benefits shall be reopened pursuant to Section 8-43-303, C.R.S.

2. The medical treatment from the October 13, 2018 exacerbation/aggravation is reasonable, related, and authorized, including, but not limited to, the ER visit, and Dr. Mitchell and Dr. Rauzzino's visits, prescriptions, and referrals. Respondents

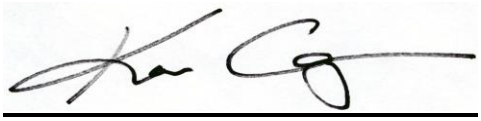
shall pay for that medical treatment according to the Colorado Medical Fee Schedule.

3. Claimant is entitled to TTD from October 13, 2018 to October 29, 2018.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 30, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that the bilateral pronator release surgeries recommended by Dr. Rhett Griggs constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury.

- Whether the claimant has demonstrated, by a preponderance of the evidence, that the right trigger finger release is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury.

- Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of the left upper extremity is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury.

FINDINGS OF FACT

1. The claimant is employed as a sergeant at the employer's detention center. The claimant's job duties include processing and interacting with inmates. In addition, the claimant performs a number of administrative duties in her role as a sergeant.

2. On November 8, 2017, the claimant was involved in training new employees. During the training, the claimant was playing the part of an inmate while another employee immobilized and handcuffed her. During this maneuver the claimant's right arm was pulled back while her right wrist was pushed down. The claimant felt a pop in her right elbow and pain in her right wrist. The claimant testified that the following day she had symptoms in her right hand and fingers that included numbness. In addition, she had pain in her right elbow.

3. The respondents have admitted for the November 8, 2017 injury as it pertains to the claimant's right upper extremity. However, the respondents have denied treatment of the claimant's left upper extremity.

4. The claimant's authorized treating provider (ATP) for this claim is Gunnison Valley Health Family Medicine Center. The claimant first treated with that practice on November 14, 2017 and was seen by Jodi Bauer, FNP. At that time, the claimant reported numbness in her right hand and fingers, with numbness in her right elbow. Ms. Bauer referred the claimant to physiatrist Dr. William Timothy for evaluation of a possible nerve injury.

5. Subsequently, the claimant began treating with Dr. Rhett Griggs on November 20, 2017. At that time the claimant reported that she had right elbow pain

with radiating numbness and pain into her right thumb, index, and long fingers. Dr. Griggs diagnosed a right elbow LCL sprain with traumatic right epicondylitis and medial nerve traction injury. He ordered a magnetic resonance image (MRI) of the claimant's right elbow and referred her to occupational therapy.

6. On December 5, 2017, an MRI of the claimant's right elbow showed low grade tendinopathy in the distal biceps and distal triceps without significant disruption of either. It also showed a small partial tear of the common extensor tendon at the lateral humeral epicondyle involving about twenty percent of the insertional footprint. The MRI also showed the collateral ligaments were normal.

7. On December 11, 2017, the claimant was seen by Dr. Timothy who performed electromyography and nerve conduction studies (EMG/NCS). Dr. Timothy diagnosed the claimant with severe carpal tunnel syndrome, on the right. In addition, Dr. Timothy noted that although the EMG/NCS testing was negative for radial tunnel syndrome, the physical examination was positive. Dr. Timothy suspected mild radial tunnel syndrome and referred the claimant to an orthopedic surgeon for consultation.

8. The claimant was seen by Dr. Griggs on December 14, 2017. In the medical record of that date, Dr. Griggs noted that the EMG/NCS testing showed moderate carpal tunnel syndrome. On that same date, Dr. Griggs reviewed the imaging from the MRI and diagnosed lateral epicondylitis of the right elbow.

9. On January 10, 2018, Dr. Griggs performed a surgery on the claimant's right elbow. That surgery included open lateral partial epicondylectomy, distal humerus ostectomy of a bone spur, ECRB degenerative tendon excision, ECRL and ECRB with EDC tendon repair at the lateral epicondyle, radial tunnel decompression, ECRB fasciectomy, and carpal tunnel release. In the surgical record of that date, the post-operative diagnoses are listed as: right lateral epicondylitis with lateral mobile wad tearing and degeneration, right radial tunnel syndrome, and right carpal tunnel syndrome.

10. On April 5, 2018, an MRI of the claimant's right wrist showed a horizontal peripheral triangular fibrocartilage complex (TFCC) tear, extensor carpi ulnaris (ECU) subluxation from the groove, and ECU tendinosis with thin intermediate signal.

11. On May 2, 2018, Dr. Griggs performed surgery on the claimant's right wrist that included arthroscopic TFC debridement, ECU subsheath repair with six dorsal compartment reconstruction, and de Quervain's first dorsal compartment release.

12. During this claim, the claimant has treated with, Jodi Lindner, Occupational Therapist. On July 16, 2018, Ms. Lindner noted that the claimant had pain in her bilateral forearms. Based upon the medical records entered into evidence, this is the first report of left sided symptoms.

13. On August 7, 2018, the claimant was seen by Dr. Griggs. On exam, Dr. Griggs noted that the claimant was tender over her right pronator and had pain over her left pronator. Dr. Griggs diagnosed the claimant with pronator syndrome and

recommended pronator decompression. On that same date, Dr. Griggs requested authorization for bilateral pronator release.

14. On August 20, 2018, the respondents asked Dr. Jonathan Sollender to review the claimant's medical records and opine regarding whether the recommended bilateral pronator release surgeries were reasonable, necessary, and related to the claimant's work injury. In his report, Dr. Sollender opined that bilateral pronator releases were not reasonable, necessary, or related to the claimant's work injury. With regard to a left sided pronator release, Dr. Sollender noted that the claimant's injury was to her right arm, and therefore treatment of the claimant's left upper extremity would not be related to the work injury. With regard to the right pronator release, Dr. Sollender noted that the claimant did not complain of any right forearm symptoms. In addition, the EMG and MRI failed to identify proximal forearm pathology of the median nerve. Therefore, it is Dr. Sollender's conclusion that the claimant's pronator region of the medial nerve was not injured at the time of the work injury. Based upon the opinions of Dr. Sollender, the respondents denied authorization of the requested pronator release surgeries.

15. Thereafter on September 28, 2018, Dr. Griggs authored a letter in which he recommended the claimant undergo bilateral pronator release. In support of his recommendation, Dr. Griggs noted that the claimant had pain in her bilateral forearms over her pronator teres and median nerve. Dr. Griggs also opined that the need for these procedures was due to the claimant's "compensating" with her left arm following procedures on her right arm.

16. On January 18, 2019, Dr. Griggs submitted a second request for bilateral pronator release surgery as well as authorization for a right thumb trigger release.

17. On January 26, 2019, Dr. Sollender was asked to review the claimant's medical records a second time. As with his prior report, Dr. Sollender was asked to opine regarding whether the recommended bilateral pronator release surgeries were reasonable, necessary, and related to the claimant's work injury. Dr. Sollender's opinion was unchanged from his August 20, 2018 report. In addition to his reasoning from that prior report, Dr. Sollender also noted that the Colorado Medical Treatment Guidelines (MTG) provide that "[w]hen no objective evidence is present and the patient continues to have signs and symptoms consistent with the diagnosis [of pronator syndrome] after 6 months of conservative treatment including a psychological evaluation, a second opinion should be obtained before operative treatment is considered." Dr. Sollender stated that in his opinion there was no objective evidence of pathology. Therefore, Dr. Sollender noted that, pursuant to the MTG, both a psychological evaluation and a second opinion would need to occur prior to pursuit of surgery. Dr. Sollender also recommended that the claimant undergo an independent medical examination (IME).

18. On April 22, 2019, the claimant attended an IME with Dr. Sollender. In connection with the IME, Dr. Sollender again reviewed the claimant's medical records, obtained a history from the claimant, and conducted a physical examination. In his IME report, Dr. Sollender opined that the claimant's bilateral trigger thumbs are not work

related. He also noted that, based upon his exam, the claimant does not have pronator syndrome.

19. On May 17, 2019, Dr. Sollender authored a letter in which he opined that splints for the claimant's bilateral trigger thumbs should not be authorized because the claimant's trigger thumbs are not causally related to the work injury.

20. The claimant's occupational therapist, Ms. Lindner, testified at hearing. Ms. Lindner testified that in her opinion the claimant's left upper extremity symptoms are causally related to the injury to the claimant's right upper extremity. More specifically, Ms. Lindner opined that the claimant has over used her left upper extremity to compensate for her injured right hand and wrist. This had resulted in repetitive stress to the claimant's left upper extremity.

21. Dr. Sollender's testimony at hearing was consistent with his reports. Dr. Sollender testified that the claimant does not have pronator syndrome. He also testified that the claimant underwent a carpal tunnel release (on the right) and her symptoms improved. Dr. Sollender opined that if the claimant had pronator syndrome, she would not have improved following her carpal tunnel release. Dr. Sollender also testified that he diagnosed carpal tunnel syndrome on the left. However, in his opinion the carpal tunnel in the claimant's bilateral wrists is unrelated to the claimant's work injury. Dr. Sollender also noted his disagreement with the opinions of Dr. Griggs and Ms. Lindner that the claimant has developed left sided symptoms because of overuse of her left hand and arm. In support of his opinion, Dr. Sollender noted that the MTG do not recommend "over use" as a diagnosis of a contralateral body part. With regard to the claimant's complaints of trigger finger, Dr. Sollender also opined that those symptoms are not related to the claimant's work injury. Dr. Sollender noted in his testimony that the trigger finger symptoms did not appear until a year after the claimant's injury.

22. The claimant testified that her current symptoms include pain in her fingers, with the most pain in her middle fingers. She also has pain in her left forearm that radiates into her left biceps. The claimant further testified that she wants the recommended surgeries so that she can return to work.

23. The ALJ credits the medical records and the opinions Dr. Sollender over the contrary opinions of Dr. Griggs and Ms. Lindner. The ALJ finds that the claimant does not have pronator syndrome and that the diagnosis of carpal tunnel in the claimant's left wrist is unrelated to the claimant's work injury. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the bilateral pronator release surgeries recommended by Dr. Griggs constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury.

24. The ALJ credits the medical records and the opinions Dr. Sollender over the contrary opinions of Dr. Griggs and Ms. Lindner and finds that the claimant's right trigger finger symptomology is unrelated to her work injury. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the need for right trigger finger release is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury.

25. The ALJ credits the medical records and the opinions Dr. Sollender over the contrary opinions of Dr. Griggs and Ms. Lindner. The ALJ is not persuaded that the claimant's left sided symptoms are the result of her "over use" of her left arm. The ALJ finds that the claimant's left sided symptoms are not related to the work injury. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that treatment of the claimant's left upper extremity is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the bilateral pronator release surgeries recommended by Dr. Griggs constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury. As found, the medical records and the opinions Dr. Sollender are credible and persuasive.

6. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the right trigger finger release is reasonable medical treatment

necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury. As found, the medical records and the opinions Dr. Sollender are credible and persuasive.

7. As found, the claimant has failed to demonstrate by a preponderance of the evidence that treatment of the claimant's left upper extremity is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 8, 2017 work injury. As found, the medical records and the opinions Dr. Sollender are credible and persuasive.

ORDER

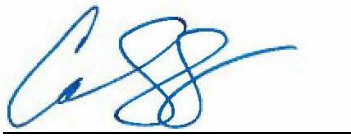
It is therefore ordered:

1. The claimant's request for bilateral pronator release surgeries is denied and dismissed.

2. The claimant's request for a right trigger finger release is denied and dismissed.

3. The claimant's request for treatment of her left upper extremity is denied and dismissed.

Dated this 3rd day of September, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-074-353-001

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable right shoulder injury on December 11, 2017 or February 11, 2019 during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that the right shoulder surgery requested by Satoru T. Chamberlain, M.D. is reasonable, necessary and causally related to his December 11, 2017 or February 11, 2019 industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Cattle/Livestock Driver. His job duties involved loading hogs into pens in a truck. He then delivered the hogs by unloading them from the truck. Claimant testified that the hogs each weighed from 280-315 pounds.

2. Claimant explained that on December 11, 2017 he was unloading hogs by pushing them out of a chute. He remarked that one of the hogs "locked up" and would not move. Claimant thus attempted to push the hog from the chute but experienced pain and a burning sensation in his right shoulder. He immediately reported his symptoms to his supervisor.

3. On December 22, 2017 Claimant visited primary care physician Arlyn La Bair, M.D. at the Haxtun Family Medicine Center for an evaluation. Claimant reported that he injured his right shoulder at work when he was pushing an approximately 320 pound hog out of a chute. He noted constant burning pain into his forearms that became worse with lifting and pushing. Physical examination revealed right shoulder tenderness and decreased range of motion. Dr. La Bair diagnosed Claimant with right rotator cuff repair syndrome after prior rotator cuff surgery and recommended an MRI.

4. Claimant previously underwent right shoulder surgery at Orthopaedic & Spine Center of the Rockies Orthopaedic Outpatient with Satoru T. Chamberlain, M.D. on October 8, 2016. The pre-operative diagnosis was right shoulder internal derangement with rotator cuff disparity of function. The surgical procedures included "arthroscopic debridement, bicipital tenotomy and synovectomy" of the right shoulder as well as debridement of the right rotator cuff. The post-operative diagnoses were: (1) biceps avulsion, significant intra-articular synovitis; and (2) rotator cuff tear with calcific deposition and dystrophic calcification. On January 26, 2017 Dr. Chamberlain released Claimant to full duty employment.

5. On December 26, 2017 Claimant underwent a right shoulder non-contrast MRI at Haxtun Hospital. The MRI reflected post-operative changes including a suture anchor in the greater tuberosity of the humeral head in the region of the posterior supraspinatus and anterior infraspinatus from a previous rotator cuff repair surgery. There were no findings of a re-tear of the rotator cuff. The MRI revealed mild acromioclavicular degenerative changes and a Type III hooked acromion.

6. On January 25, 2018 Claimant returned to Dr. Chamberlain for an examination. He reported anterior right shoulder pain with limitations of abduction and forward flexion. Claimant exhibited "quite good" range of motion. Dr. Chamberlain diagnosed Claimant with a "rotator cuff partial sprain, no true tear" after prior rotator cuff repair surgery.

7. On March 15, 2018 Claimant again visited Dr. Chamberlain for an examination. Claimant reported continuing right shoulder symptoms. After conducting range of motion testing Dr. Chamberlain determined that Claimant's symptoms were consistent with "subacromial irritation with an intact cuff." Dr. Chamberlain administered a corticosteroid injection and recommended physical therapy. He also continued light duty work restrictions.

8. On April 6, 2018 Claimant returned to Dr. Chamberlain. Claimant reported relief after the corticosteroid injection but recurrent right shoulder symptoms. A physical examination of the right shoulder revealed limited arc of motion and "grinding." Dr. Chamberlain recommended right shoulder surgery including diagnostic arthroscopy with possible revision rotator cuff tear based on a diagnosis of "irritation of rotator cuff muscle."

9. On May 2, 2018 Adam J. Farber, M.D. conducted a Rule 16 records review of Claimant's claim. After considering Claimant's medical records, Dr. Farber determined that Claimant's right shoulder symptoms were not solely related to the December 11, 2017 industrial incident. He explained that Claimant underwent a right shoulder arthroscopic biceps tenotomy with mini rotator cuff repair on October 8, 2016. Dr. Farber remarked that, because physicians prematurely returned Claimant to work after the October 8, 2016 surgery, he was at greater risk for future rotator cuff and shoulder problems. In specifically addressing Claimant's December 11, 2017 industrial incident, Dr. Farber commented that an MRI revealed subacromial bursitis but no recurrent rotator cuff or labral tearing. He emphasized that surgery was not warranted because Claimant's right rotator cuff remained intact. Dr. Farber explained that, although Claimant had been diagnosed with "subacromial irritation" and "irritation of the rotator cuff muscle" the irritation was more likely the result of a hooked Type III acromion than the December 11, 2017 industrial incident. He commented that Type III acromial morphology is a congenital issue associated with an increased risk of rotator cuff pathology. Furthermore, Dr. Farber remarked that Claimant's biceps tendon was extremely unstable after a tenotomy procedure and any biceps tendon irritation was more likely related to Claimant's October 8, 2016 surgery than the December 11, 2017 industrial incident. He summarized that

many of Claimant's current symptoms "can be attributed to his previous surgery and congenital acromial morphology but not entirely the incident of December 11, 2017." Specifically, the December 11, 2017 event did not warrant surgical intervention because Claimant did not suffer a rotator cuff tear and his Type III acromion is congenital.

10. On May 21, 2018 Dr. Chamberlain drafted an appeal letter contesting Dr. Farber's opinion that the proposed right rotator cuff repair surgery was not related to the December 11, 2017 work incident. Dr. Chamberlain acknowledged that Claimant's right shoulder MRI did not reveal a rotator cuff tear, but noted that an arthroscopic debridement and physical examination of the cuff constituted the "gold standard." He explained that Claimant's "recurrent symptoms occurred in a temporal relation to his normal and customary work activities." Dr. Chamberlain commented that the advancement in Claimant's underlying right shoulder pathology was "directly related" to his work activities of "loading animals" on December 11, 2017. Relying on the "eggshell skull principal," Dr. Chamberlain reasoned that Claimant would benefit from physical and arthroscopic subacromial and glenohumeral examination, followed by surgical treatment in the form of a bursectomy and an acriomioplasty with possible revision rotator cuff surgery.

11. On May 24, 2018 Dr. Farber authored a response to Dr. Chamberlain's appeal letter. Dr. Farber reiterated that Claimant's right shoulder MRI revealed an intact rotator cuff. He commented that Dr. Chamberlain relied on the temporal relation between Claimant's work activities and the development of rotator cuff irritation. However, Dr. Farber maintained that the irritation was more likely caused by Claimant's congenital Type III acromial morphology than the December 11, 2017 industrial incident. Accordingly, Dr. Farber explained that right shoulder surgery "should be handled on a non-industrial basis" to address Claimant's Type III acromion.

12. Claimant testified that on February 11, 2019 he suffered a second right shoulder injury while working for Employer. He explained that he was unloading hogs from his truck but one of the hogs refused to move. Claimant remarked that he reached over to slap the hog on its back but felt a burning sensation from the front of his right shoulder down through the bicep into his right hand.

13. On March 7, 2019 Claimant visited Bonnie Hablutzel, NP in Sterling, Colorado. She recited that on February 11, 2019 Claimant reached over to slap a pig on his back and felt a pop and pain in his right shoulder that radiated down to his right hand. NP Hablutzel described swelling and burning in Claimant's hand and noted that he suffered a previous injury with surgery on the right shoulder. She diagnosed Claimant with right shoulder pain, ordered an MRI of the right shoulder and referred Claimant back to Dr. Chamberlain. NP Hablutzel also assigned a work restriction of no lifting in excess of 15 pounds.

14. On March 11, 2019 Claimant underwent a non-contrast right shoulder MRI at Banner Sterling Regional Medical Center. The MRI revealed a possible post-surgical change in the supraspinatus. The tendon was attenuated but there was no "fluid-filled

gap or retracted fibers evident to suggest [a] full-thickness tear." There was also infraspinatus tendinosis and articular side fraying without a tear. The MRI reflected an attenuated but intact long head biceps tendon. Finally, there was labral fraying and degeneration without evidence of a tear.

15. On March 27, 2019 Claimant returned to Dr. Chamberlain for an examination. After conducting a physical examination, Dr. Chamberlain reviewed the March 11, 2019 right shoulder MRI. He remarked that the MRI revealed "a combination of rotator cuff insufficiency, biceps partial avulsion and some degenerative arthritis." The MRI confirmed that the rotator cuff was intact but attenuated. Dr. Chamberlain commented that Claimant would benefit from a limitation of activities and surgical intervention. He commented that he would like to proceed with "rotator cuff repair, arthroscopic examination as a diagnostic and therapeutic procedure and very likely labral and bicipital debridement."

16. On April 24, 2019 Dr. Farber reviewed additional records and issued a second Rule 16 records review. He maintained that the recommended right shoulder arthroscopic debridement and reassessment of the rotator cuff is not reasonable, necessary or causally related to Claimant's December 11, 2017 industrial incident. Dr. Farber initially noted that Claimant's pain symptoms radiating down from his shoulder to right hand with swelling and burning of his hand were not consistent with intrinsic shoulder pathology. He also explained that the March 11, 2019 right shoulder MRI did not reveal any new objective findings that warranted surgery. Dr. Farber specifically reasoned that there was no labral, biceps or chondral pathology in the glenohumeral joint that would warrant arthroscopic debridement. Furthermore, subacromial decompression to address Claimant's congenital Type III acromion would not be related to his December 11, 2017 industrial injury. Finally, the March 11, 2019 MRI did not reflect any partial or full-thickness rotator cuff tear justifying revision rotator cuff repair surgery. Dr. Farber summarized that the proposed arthroscopic surgery for Claimant's December 11, 2017 industrial incident was not reasonable and necessary because Claimant's shoulder complaints were inconsistent with intrinsic shoulder pathology and there were no surgical indications reflected on the March 11, 2019 MRI.

17. Dr. Farber testified at the hearing in this matter. He maintained that Claimant did not suffer compensable right shoulder injuries on December 11, 2017 or February 11, 2019. Dr. Farber specifically noted that the December 11, 2017 event simply involved pushing or pulling and in the February 11, 2019 incident Claimant simply reached over. He concluded that Claimant did not injure his right shoulder through either mechanism. Dr. Farber also explained that tears in that the March 11, 2019 MRI did not reveal any new tears. He suggested that the minimal bursitis seen in the MRI was not something that would require surgery. Dr. Farber commented that there was no difference between the December 26, 2017 and March 11, 2019 right shoulder MRI's. He thus summarized that right shoulder arthroscopic debridement and reassessment of the

rotator cuff was not reasonable, necessary or causally related to Claimant's December 11, 2017 or February 11, 2019 industrial incidents.

18. Claimant has established that it is more probably true than not that he sustained a compensable right shoulder injury on December 11, 2017 or February 11, 2019 during the course and scope of his employment with Employer. Initially, on December 11, 2017 Claimant attempted to push a hog out of a chute but experienced pain and a burning sensation in his right shoulder. Similarly, on February 11, 2019 Claimant suffered a second right shoulder injury when he reached over to slap a hog that would not move and felt a burning sensation from the front of his right shoulder down into his right hand. The medical records reveal that Claimant has consistently detailed the cause of his right shoulder symptoms. Prior to both of the preceding incidents Claimant was performing his regular job duties, but after the events he was restricted to light duty work.

19. Dr. Chamberlain persuasively explained that Claimant's "recurrent symptoms occurred in a temporal relation to his normal and customary work activities." He commented that the advancement in Claimant's underlying right shoulder pathology was "directly related" to his work activities of "loading animals" on December 11, 2017. In contrast, Dr. Farber concluded that Claimant did not suffer compensable right shoulder injuries on December 11, 2017 or February 11, 2019. He emphasized that Claimant's right shoulder symptoms were not solely related to his work activities. Dr. Farber commented that Claimant's premature return to work after the October 8, 2016 right shoulder surgery and congenital Type III acromial morphology increased his risk for developing right shoulder symptoms and were thus more likely the cause of his condition than the December 11, 2017 and February 11, 2019 industrial incidents.

20. Rather than justifying the denial of compensability, Dr. Farber's analysis that Claimant's premature return to work and Type III acromion increased his risk for right shoulder injuries suggests that Claimant was more likely to suffer a compensable aggravation of his pre-existing condition. Claimant's right shoulder symptoms shortly after the December 11, 2017 and February 11, 2019 incidents, in conjunction with the consistent medical records and persuasive medical opinion of Dr. Chamberlain, demonstrate that he suffered an industrial right shoulder injury at work. Accordingly, his work activities of moving hogs on December 11, 2017 and February 11, 2019 aggravated, accelerated or combined with his pre-existing right shoulder condition to produce a need for medical treatment.

21. Claimant has failed to demonstrate that it is more probably true than not that the right shoulder surgery requested by Dr. Chamberlain is reasonable, necessary and causally related to his December 11, 2017 or February 11, 2019 industrial injuries. Dr. Chamberlain recommended right shoulder surgery, including diagnostic arthroscopy with possible revision rotator cuff tear, based on a diagnosis of "irritation of rotator cuff muscle." He acknowledged that Claimant's right shoulder MRI did not reveal a rotator cuff tear, but

noted that an arthroscopic debridement and physical examination of the cuff constituted the “gold standard.”

22. In contrast, Dr. Farber persuasively explained that the right shoulder surgery proposed by Dr. Chamberlain was not reasonable, necessary or related to the December 11, 2017 or February 11, 2019 industrial injuries. He initially noted that Claimant’s pain symptoms radiating down from his shoulder to right hand with swelling and burning of his hand were not consistent with intrinsic shoulder pathology. He also explained that the right shoulder MRI’s did not reveal any new objective findings that warranted surgery. Dr. Farber specifically reasoned that there was no labral, biceps or chondral pathology in the glenohumeral joint that would warrant arthroscopic debridement. Furthermore, subacromial decompression to address Claimant’s congenital Type III acromion would not be related to his industrial injuries. Finally, the MRI’s did not reflect any partial or full-thickness rotator cuff tear justifying revision rotator cuff repair surgery. Although Claimant suffered an irritation of his right rotator cuff on December 11, 2017 and February 11, 2019 that constituted an aggravation of his pre-existing condition, the persuasive opinion of Dr. Farber reflects that the proposed surgery would not address his work-related symptoms. Accordingly, the recommended right shoulder arthroscopic debridement and reassessment of the rotator cuff is not reasonable, necessary or causally related to Claimant’s December 11, 2017 or February 11, 2019 industrial injuries.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §840-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

6. However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether a claimant has met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

7. As found, Claimant has established by a preponderance of the evidence that he sustained a compensable right shoulder injury on December 11, 2017 or February 11, 2019 during the course and scope of his employment with Employer. Initially, on December 11, 2017 Claimant attempted to push a hog out of a chute but experienced pain and a burning sensation in his right shoulder. Similarly, on February 11, 2019 Claimant suffered a second right shoulder injury when he reached over to slap a hog that would not move and felt a burning sensation from the front of his right shoulder down into his right hand. The medical records reveal that Claimant has consistently detailed the cause of his right shoulder symptoms. Prior to both of the preceding incidents Claimant

was performing his regular job duties, but after the events he was restricted to light duty work.

8. As found, Dr. Chamberlain persuasively explained that Claimant's "recurrent symptoms occurred in a temporal relation to his normal and customary work activities." He commented that the advancement in Claimant's underlying right shoulder pathology was "directly related" to his work activities of "loading animals" on December 11, 2017. In contrast, Dr. Farber concluded that Claimant did not suffer compensable right shoulder injuries on December 11, 2017 or February 11, 2019. He emphasized that Claimant's right shoulder symptoms were not solely related to his work activities. Dr. Farber commented that Claimant's premature return to work after the October 8, 2016 right shoulder surgery and congenital Type III acromial morphology increased his risk for developing right shoulder symptoms and were thus more likely the cause of his condition than the December 11, 2017 and February 11, 2019 industrial incidents.

9. As found, rather than justifying the denial of compensability, Dr. Farber's analysis that Claimant's premature return to work and Type III acromion increased his risk for right shoulder injuries suggests that Claimant was more likely to suffer a compensable aggravation of his pre-existing condition. Claimant's right shoulder symptoms shortly after the December 11, 2017 and February 11, 2019 incidents, in conjunction with the consistent medical records and persuasive medical opinion of Dr. Chamberlain, demonstrate that he suffered an industrial right shoulder injury at work. Accordingly, his work activities of moving hogs on December 11, 2017 and February 11, 2019 aggravated, accelerated or combined with his pre-existing right shoulder condition to produce a need for medical treatment.

Medical Benefits

10. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

11. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the right shoulder surgery requested by Dr. Chamberlain is reasonable, necessary and causally related to his December 11, 2017 or February 11, 2019 industrial injuries. Dr. Chamberlain recommended right shoulder surgery, including diagnostic arthroscopy with possible revision rotator cuff tear, based on a diagnosis of "irritation of

rotator cuff muscle." He acknowledged that Claimant's right shoulder MRI did not reveal a rotator cuff tear, but noted that an arthroscopic debridement and physical examination of the cuff constituted the "gold standard."

12. As found, in contrast, Dr. Farber persuasively explained that the right shoulder surgery proposed by Dr. Chamberlain was not reasonable, necessary or related to the December 11, 2017 or February 11, 2019 industrial injuries. He initially noted that Claimant's pain symptoms radiating down from his shoulder to right hand with swelling and burning of his hand were not consistent with intrinsic shoulder pathology. He also explained that the right shoulder MRI's did not reveal any new objective findings that warranted surgery. Dr. Farber specifically reasoned that there was no labral, biceps or chondral pathology in the glenohumeral joint that would warrant arthroscopic debridement. Furthermore, subacromial decompression to address Claimant's congenital Type III acromion would not be related to his industrial injuries. Finally, the MRI's did not reflect any partial or full-thickness rotator cuff tear justifying revision rotator cuff repair surgery. Although Claimant suffered an irritation of his right rotator cuff on December 11, 2017 and February 11, 2019 that constituted an aggravation of his pre-existing condition, the persuasive opinion of Dr. Farber reflects that the proposed surgery would not address his work-related symptoms. Accordingly, the recommended right shoulder arthroscopic debridement and reassessment of the rotator cuff is not reasonable, necessary or causally related to Claimant's December 11, 2017 or February 11, 2019 industrial injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable right shoulder injury on December 11, 2017 or February 11, 2019 during the course and scope of his employment with Employer.

2. Claimant's request for right shoulder surgery proposed by Dr. Chamberlain is denied and dismissed.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory*

reference, see section 8-43-301(2), C.R.S. (as amended, SB09070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 4, 2019.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he is entitled to post-MMI medical treatment, in the form of a permanent peripheral nerve stimulator as proposed by Dr. Barolat, to prevent the effects of his work injury and prevent deterioration of his condition?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained an admitted injury on December 7, 2016. (Ex. 2).

2. At the time of the injury, Claimant had been working for the Employer for 20 years. He was a heavy equipment operator, and sustained an injury to multiple body parts when a stack of risers on a cart tilted and he was caught underneath the cart and risers. (Ex. 1).

3. Claimant was initially treated at Penrose St. Francis hospital and then was treated by Dr. Michael Sparr, the Authorized Treating Physician (ATP).

4. Lumbar spine x-rays were taken of the Claimant on December 8, 2016. Dr. John Sherman noted "no definite instability" with deformity related to "dextrorotatory scoliosis and multilevel degenerative disc disease with probable facet arthropathy." (Ex. A).

5. Dr. Sparr's original medically documented injuries were: (L) hip contusion, ®hip contusion, lumbar strain/contusion. *Id at 258, 261.* Dr. Sparr referred Claimant for x-rays, prescribed medication and took Claimant off of work for 4 days.

6. Dr. Sparr followed up with Claimant on December 13, 2016, where his medically documented injuries changed to sacroilitis, hip contusion and trochanteric bursitis. *Id at 248,* as well as lumbar facet arthropathy. *Id at 250.* Dr. Sparr prescribed a left trochanteric burs and gluteal trigger point injection, referred claimant for a short course of physical therapy and continued medications. *Id.*

7. By the next visit on December 20, Dr. Sparr documented substantial decrease in pain and Claimant taking medications as needed only. *Id at 244*. Per this chart note Claimant felt he could return to eight hours of work.

8. Claimant had intermittent periods of TPD and TTD and conservative care as a result of his injuries. He was placed at MMI by Dr. Sparr on March 20, 2018 and

given a 14% whole person impairment rating. This was based on a 7% Table 53 II (c) impairment rating and a 7% loss of range of motion rating. (Ex. 4, pp. 17-18). At that time, Dr. Sparr indicated that the Claimant would need on going medical maintenance including ongoing medications, repeat medial branch block and repeat rhizotomy, for his multi-level chronic back pain. (Ex. 4, pp. 19-21).

9. Respondents admitted for the 14% impairment rating and post-MMI medical maintenance, and filed a Final Admission of Liability on April 25, 2018. (Ex. 4, p. 9). Claimant did not object to the FAL nor did he file a Notice and Proposal to Select a DIME.

10. Prior to being placed at MMI, Claimant had undergone a variety of treatments. His medical records start with the initial examination the day after the injury, with the Claimant being in 9/10 pain with central lumbar pain slightly above the belt, and left lateral hip pain. (Ex. 14, pp. 259-262). Claimant had "aggressive" manual physical therapy with Action Potential Physical Therapy. (Ex. 18), chiropractic care with Dr. Abercrombie, (Ex. 18), multiple trigger point injections with Dr. Sparr, (Ex. 14, pp. 250, 238, 230), facet injections with Dr. Scheper on March 21, 2017, (Ex. 14, pp. 224-225), left ESI injection with Dr. Scheper on May 2, 2017, (Ex. 14, pp. 210-211), repeat ESI injection performed by Dr. Scheper on June 13, 2017 (Ex. 14, pp. 202-203),

11. An EMG resulting in an abnormal study was performed by Dr. Sparr on July 28, 2017, (Ex. 14, pp. 184-193), Claimant also had X-rays, (Ex. 16, pp. 272, 280-282), An MRI was conducted on 2/23/2017, (Ex. 16, pp. 277-279), CT scans were done on April 14, 2017, (Ex. 16, pp. 275-276), and September 26, 2017 (Ex. 17, p. 283), A surgical evaluation was performed with Dr. Brian Reiss of August 16, 2017, (Ex. 20, pp. 314-315).

12. Claimant reported being in intense pain through August of 2017, which he described as "severe back pain which often makes it difficult for him to sit comfortably at night. Pain is in the central lumbar region, deep and achy." Dr. Sparr advised him to increase his medications; however, Claimant did not want to do anything that would cause him to have any cognitive dysfunction at work. Dr. Sparr noted that he had supplied all medical records for Dr. Reiss' appointment. In turn, Dr. Reiss suggested core conditioning and possible fact injections/medial branch blocks. "It is frustrating that he was not aware that we had already tried lumbar facet injections without significant diagnostic or therapeutic benefit. He [Dr. Reiss] advised that surgery would not be appropriate, as he reportedly would have to fuse five levels." (Ex. 14, pp. 179-180).

13. Thereafter, Dr. Sparr prescribed a lumbar discogram. This was performed by Dr. Scheper, and read by him as 'indeterminate'. (Ex. 14, pp. 173-174).

14. Claimant returned to Action Potential physical therapy on October 3, 2018. The physical therapist noted Claimant's rehabilitation potential was fair. Claimant had attended eight PT sessions. (Ex. C). The independent physical therapist did not assess Claimant's functional ability.

15. By October 6, 2017, Dr. Sparr placed a 10-pound lifting restriction on Claimant, but those restrictions were not being followed. (Ex. 14, pp. 167-168). Thereafter Dr. Sparr was assured that the Employer would follow the restrictions. Additional medial branch blocks were scheduled as a "last option." (Ex. 161-162).

16. The medial branch blocks were performed by Dr. Scheper on October 27, 2017. (Ex. 14, pp. 158-159). Claimant had excellent results, with pain reduction from a 7/10 pain level to a 2/10 for 60 minutes. He also had 5/10 until eight hours elapsed, at which time it increased to its previous level. Dr. Sparr thought this was an "excellent response to a medial branch block." (Ex. 14, p. 155). He thereafter recommended a bilateral lumbar radiofrequency neurotomy at L3, L4 and L5 to denervate the L4/L5 and L5/S1 facet joints. (Ex. 14, pp. 155-156).

17. The bilateral neurotomies were performed by Dr. Scheper on November 16, 2017 and November 26, 2017. (Ex. 14, pp. 152-153, 149-150).

18. Initially, it appeared that Claimant responded well to the neurotomies. Dr. Sparr thought it appropriate for the Claimant to try to increase his workload to full duties as of December 14, 2017. (Ex. 14, pp. 145-146). Dr. Sparr also wanted to maintain his medications, but to wean Claimant off narcotics initially. *Id*.

19. Upon a return to full duties, the Claimant had a flare up of his pain. He increased his pain medications, according to the evaluation of February 13, 2018. (Ex. 14, pp. 137-139). He was placed at MMI on March 20, 2018. (Ex. 4, pp. 17-18).

20. The pain diagrams of Claimant all show that he is complaining of pain at the beltline and across, and radiates more into the left than right thigh with pain greater on the left with consistent pain levels of 8/10 before MMI.

21. Claimant had another flare up, and was seen for maintenance treatment on June 1, 2018. Dr. Sparr reported that Claimant had a significant flare-up in the central lumbar pain and that the pain is at the beltline and the lumbar pain left somewhat greater than the right. Dr. Sparr recommended additional bilateral neurotomies similar to the one performed on November 16, 2017. These were performed by Dr. Sheper on June 19, 2018 and July 6, 2018.

22. Dr. Sparr permanently restricted the Claimant's lifting on June 28, 2018 to occasional shoveling and light materials of 10-15 pounds due to his lumbar facet disc pain. His lifting was limited to 50 pounds "occasionally" and "constantly" to 10 pounds. (Ex. 14, p. 122).

23. Claimant still had ongoing central lumbar pain, which Dr. Sparr continued to diagnose as lumbar discogenic pain and lumbar facet issues. Claimant had no relief from the additional neurotomies. He had no new trauma, but the he evidently was not

aware of the restrictions which had been placed on him by Dr. Sparr on June 28. (Ex. 14, p. 116).

24. Dr. Sparr suggested an additional MRI to see if there was any new disc herniation. Dr. Sparr noted that all conservative treatment modalities had been tried. Surgery was not an option, and "there is not a great deal more that can be done other than make certain that the patient follows his work restrictions and to see how he responds to the medication changes." (Ex. 14, p. 117).

25. As of August 30, 2018, Dr. Sparr had reviewed the new MRI results. He notes at the L5-S1 level that there was some progression of the right foraminal stenosis, and the facet arthropathy appeared unchanged. At L4-L5, there was chronic facet arthropathy and the same at L3-L4. There was an attempt at medication changes without success. Given the ongoing nature of Claimant's complaints, Dr. Sparr concluded that the Claimant was "an ideal candidate for a lumbar stimulator trial."

26. Dr. Sparr referred Claimant to Dr. Barolat for the trial of the stimulator as medical maintenance. This was approved by Respondents. Thereafter Dr. Sparr saw Claimant on January 31, 2019 and March 22, 2019. Dr. Sparr talked with Dr. Barolat regarding the trial, and spoke with the Clamant regarding his response to the trial. Based upon those conversations and the examinations, Dr. Sparr was of the opinion that Claimant would be an excellent candidate for the permanent stimulator implant. During the trial, the Claimant stated he had excellent relief, which was confirmed by Dr. Barolat.

27. After the stimulator was removed, Claimant had increased pain. By March 22, 2019, he was having increased central lumbar pain, right greater than left-sided with radiation down into the posterior and lateral thighs to the lateral legs bilaterally and was having extreme difficulty sleeping. Dr. Sparr's impression was worsening lumbar pain. He noted: "I'm concerned of his report of frequent shifting and popping within the lumbar spine during relatively normal activities….Certainly he had an exceptional response to the trial. He is an excellent candidate for such…." (Ex. 14, p. 102).

28. A Rule 16 record review evaluation was performed Dr. Allison Fall. She was also deposed on July 17, 2019. Dr. Fall testified as an expert in physical medicine and rehabilitation and is Level II certified by the Director of the Division of Workers' Compensation.

29. Dr. Fall testified that she is generally familiar with the technologies involved with the implant of a peripheral nerve stimulator, as they discussed in the Medical Treatment Guidelines. She testified that the difference between a spinal cord stimulator and a peripheral nerve stimulator is "where they are providing the stimulation."

30. Dr. Fall testified that a peripheral nerve stimulator implant was to only be used when there is a clear nerve injury. She felt that there was no cluneal nerve injury.

In Claimant's situation, he has chronic pain that covers a wide area. She reasoned that, since there has been no diagnosis of a peripheral nerve injury and since there has been no objective medical evidence that the majority of the Claimant's pain is in a nerve distribution, implant of a peripheral nerve stimulator is inappropriate.

31. Dr. Fall stated that the trial of the peripheral nerve stimulator was not performed in accordance with Rule 17 (9) of the Medical Treatment Guidelines since any functional gains during the trial were not substantiated by an independent physical therapist or occupational therapist along with the primary treating physician before discontinuation of the trial. Dr. Fall did not recall documentation of functional gain according to the Visual Analogue Scale. She opined that Dr. Barolat did not follow the Guidelines requiring an independent physical therapist or occupational therapist evaluate the Claimant during the trial.

32. Dr. Fall does not believe that any of the pain generators that the Claimant has would be addressed by a peripheral nerve stimulator, as the Claimant does not have radiculopathy. Claimant has a lot of diffuse pain for which a peripheral nerve stimulator would not be indicated.

33. After reviewing Dr. Goldman's report and his recommendations for ongoing treatment, Dr. Fall testified that those modalities are designed to alleviate pain symptoms without the risks inherent in a stimulator implant procedure. As far as the noted improvement during the trial as indicated by the Claimant and Dr. Barolat, Dr. Fall was of the opinion that such could have been a placebo effect.

34. Dr. Fall's conclusion was that, while she could not testify what the Claimant's pain generator was, since she did not believe that there had been any objective evidence identified as to the pain generator, she did not think that a peripheral nerve stimulator was appropriate. In fact, she concluded if there were complications, his function could decline. (Ex. D).

35. Dr. Giancarlo Barolat testified as a board certified expert in the field of neurosurgery, with a sub-specialty since 2005 of neurostimulation surgery, both with spinal cord stimulators and peripheral nerve stimulators. He testified that since he moved his practice to Colorado in 2005 that he has implanted nearly 2000 spinal cord stimulators and "hundreds" of peripheral nerve stimulators. Although not Level II certified, he has reviewed and is generally familiar with the Medical Treatment Guidelines and specifically Rule 17, Ex. 9 for the treatment of chronic pain patients. In his estimation, he has published approximately 80 articles and book chapters on spinal cord and peripheral nerve stimulation with five or six of those articles dealing with peripheral nerve stimulators.

36. Dr. Barolat testified that in the Claimant's situation there were two options when he first saw him on November 15, 2018, to wit: a spinal cord stimulator or a peripheral nerve stimulator. Dr. Barolat explained that, in Claimant's case, since he had mid and upper lumbar pain, it is easier to control the pain with a peripheral nerve

stimulator, rather than a spinal cord stimulator. Dr. Barolat testified: "my experience is that when people have pain in the mid to upper lumbar area, it's very difficult to control their pain with a spinal cord stimulator. It's -- it's much easier to control the pain with a peripheral nerve stimulator, and -- and so -- and I developed this over decades of doing these procedures with my experience." (Hearing Tr. pp. 26-27). When asked the difference between the two stimulator devices, Dr. Barolat stated that "a spinal cord stimulator, the electrode -- or electrodes are placed in the spine and the peripheral nerve stimulator, the electrodes are placed in the back under the skin on the nerves that go to the back." (Hearing Transcript. p. 26).

37. Dr. Barolat indicated that he had reviewed the report of Dr. Carbaugh, the clinical psychologist that the Claimant saw before the trial simulator. Based upon that, his review of the medical records sent to him by Dr. Sparr, and the physical examination, he thought that the Claimant was an appropriate candidate for the trial of the stimulator.

38. However, Dr. Barolat testified he never performed an epidural block or any other type of block which would have identified the source of the Claimant's pain. Dr. Barolat admitted he did not refer the Claimant to an independent occupational therapist or physical therapist to do a baseline physical examination as otherwise required by the Medical Treatment Guidelines.

39. Nonetheless, authorization was requested for the trial, which was nonetheless, in turn, approved by Respondent. The trial stimulator was placed on December 11, 2018. According to Claimant's reports from this trail, Claimant obtained excellent relief which lasted two and one half weeks, and he had an 80 to 90% improvement in his pain symptoms.

40. Dr. Barolat noted that in his opinion, there was not a placebo effect with the Claimant. He stated that usually if there is a placebo effect after 10 days it will usually go away. With Claimant's trial lasting as long as it did, Dr. Barolat opined that the improvement that the Claimant demonstrated was real. He spoke with other family members about the improvement, and felt that the Claimant was an excellent candidate for a permanent peripheral nerve stimulator.

41. Dr. Barolat disagreed with Dr. Goldman and Dr. Fall about the benefits of peripheral nerve stimulation and indicated, in his experience in the hundreds that he has performed, that patients benefit from the treatment modality for a decade and longer. As to Dr. Goldman's plan regarding physical therapy, gym membership and biofeedback, Dr. Barolat noted his disagreement as to the efficacy of that plan.

> I disagree with that. I agree that some physical therapy and a membership to a gym could be beneficial to him, but his pain is too high for -- for that to help. So once we bring his pain down with the stimulator, then I think it would be beneficial for him to stay active and -- and stay fit,

but at the present condition he can't do that. He just cannot do that because the pain is overwhelming. (Hearing transcript, p. 40).

42. Dr. Barolat testified that his opinion regarding the benefit to the Claimant of the permanent stimulator implant would not change if a physical or occupational therapist saw the Claimant before and during the trial. Dr. Barolat felt he was qualified to evaluate the patient. Further, the patient and his family members reported increased activity, improved sleep, and change in attitude during the entirety of the trial.

43. Prior to this work injury, the Claimant never had a back injury. The Claimant testified about the care and treatment he had prior to the trial. During the trial he felt great, his pain went down form an 8 to 9 all the way down to a 1 to a 2, his mood was perfect and he was able to sleep. After the trial concluded his pain levels went back up to an 8 to 9, up through the present time.

44. On May 17, 2019, the Claimant presented to Dr. Sparr reporting a fall at home he believed to be a result of his industrial injury. The Claimant alleged a back spasm, which caused his leg to go numb and give out. He was taken to Penrose Main Emergency Room, but no x-rays were obtained. He was diagnosed with myofascial strain and released. (Ex. B). Dr. Sparr concluded the fall was unrelated to the industrial injury and recommended the Claimant seek care under his regular insurance. The Claimant still complains of left sided pain as a result of the 2019 fall at home. *Id*

45. Dr. L. Barton Goldman testified as an expert in physical medicine and rehabilitation. Dr. Goldman indicated that he had reviewed the medical reports, had met with and physically examined the Claimant, and is familiar with the Medical Treatment Guidelines. He stated that peripheral nerve stimulators are rarely used for low back pain. They are typically used for more peripheral nerve injuries such as in the extremities.

46. Dr. Goldman does not think that a stimulator will help the Claimant, and is of the opinion that the Claimant probably had a placebo effect. He opined that the trial by Dr. Barolat did not conform to Ex. 9 of Rule 17 of the Guidelines. Dr. Goldman was asked whether he thought that the Claimant had an intervening event before he saw Dr. Sparr on June 1, 2018. He stated that the question was whether it was a temporary exacerbation or significant aggravation, which is something that he did not explore.

47. Dr. Goldman found nerve stimulators are generally unhelpful to workers like the Claimant who work in a medium or heavy work category. Dr. Goldman testified the heavy vibratory exposure in trucks and equipment is "almost always disruptive to how the stimulator stays in place and functions over time." Over 30 years, Dr. Goldman stated he had never seen or could imagine a peripheral nerve stimulator being successful under the Claimant's circumstances.

48. Dr. Goldman concluded a peripheral nerve stimulator is not reasonable necessary to maintain MMI as it has more risk than not "to worsen Mr. Kohne's overall functional and emotional health."

49. Dr. Goldman further testified that the type of peripheral nerve stimulation that Dr. Barolat desires to perform is not contained in the Guidelines. The stimulation that Dr. Barolat desires to do is to mask the multilevel pain that the Claimant has in his low back, and is not for neuropathic pain into Claimant's lower extremities. As such, it is not technically covered in the Guidelines in either Rule 17, Ex. 1 or Rule 17, Ex. 9.

50. In his written report, Dr. Goldman concluded that 90-95 percent of patients had a placebo effect with nerve stimulators in his experience. Furthermore, he found that permanent nerve stimulators were only meaningful for one to two years.

51. However, Dr. Goldman indicated that this was a two edged coin. For that reason, Dr. Goldman is of the opinion that the stimulator implant is "essentially investigational and experimental." Dr. Goldman noted that, in his practice if as a last resort he thinks that neurostimulation is needed for a patient, he sends the patient to Dr. Barolat, as he is "technically the best."

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. Section 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. Section 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. Section 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. Section 8-43-201.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the

evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. Section 8-43-201.

Post MMI Medical Care, Generally

4. Every employer shall provide medical care as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability and period of vocational rehabilitation, to cure and relieve from the effects of the injury. C.R.S. Section 8-49-101(1)(a). An injured worker can reach maximum medical improvement from an injury and yet require periodic medical care to prevent further deterioration in his or her physical condition. *Grover v. Indus. Com. of Colo.*, 759 P.2d 705, 710 (Colo. 1988).

5. An ALJ may "order the Employer to pay the Claimant's medical expenses for any future treatment reasonably necessary to relieve the claimant from the effects of the industrial injury." *Id*. Before an order for future medical benefits may be entered there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease. *Id* at 711. The employer may contest any future claims for medical treatment on the basis that such treatment is unrelated to the industrial injury. *Id*.

Unsuccessful Post MMI Medical Care to Date

6. Since Claimant's own ATP, Dr. Sparr, placed Claimant at MMI of March 20, 2018, the Respondent has been paying for the continuing medical maintenance care and treatment for the Claimant's ongoing low back complaints. It is of no small significance that Respondent, based upon the medical reports of Dr. Barolat and Dr. Sparr, *authorized the trial* of the peripheral nerve stimulator, which was placed in December of 2018. At the time the trial stimulator was approved, it was apparently of little concern to Respondents that Dr. Barolat was not Level II accredited. It was also presumably known that his reputation for success with these permanent devices preceded him, which begs another question: If Respondent's feel so strongly that nerve stimulators (be they spinal or peripheral) are highly prone to a placebo effect, why authorize the trial?

7. The medical records and diagnostic studies performed show that Claimant has been complaining of 8/10 lumbar back pain since the injury. None of the medical treatment-other than the trial of the stimulator-has been successful in alleviating his pain issues. The diagnostic testing confirms a pathological basis of his complaints of multi-level back pain.

Respondents' Expert Opinions

8. Dr. Fall has suggested that the peripheral nerve stimulator is not reasonable and necessary, since the results of the trial are not in conformity with Rule 17 of the Medical Treatment Guidelines. Dr. Goldman has testified that in his opinion, while not specifically within the parameters of the Guidelines, that the peripheral nerve stimulator implant proposal by Dr. Barolat is experimental and not reasonable and necessary. Dr. Goldman opines that there are other less invasive treatment modalities which may afford the Claimant relief and avoid the necessity of surgery. Dr. Goldman further testified that, when he has a patient that he believes is in need of a stimulator, he refers them to Dr. Barolat for evaluation and potential treatment, since he is "technically the best."

9. Respondent, based upon the opinions of Dr. Fall and Dr. Goldman, takes the position that the proposed medical treatment will not improve the Claimant's functioning, is invasive, and may cause, according to Dr. Goldman, the inability for the Claimant to continue in his position with the Employer. Dr. Goldman opines that other less invasive methods should be tried first. If those do not work, then peripheral nerve stimulation may indeed become an alternative. Such an opinion seems logical, sequential, and appealing on its face. The downside, however, is that Claimant is likely to endure chronic, near debilitating pain in the meantime, eventually winding up in the same position after exhausting every option conceivable. The ALJ finds that the failed conservative measures taken to date through his ATP are sufficient to conclude that the next step was warranted, i.e., the trial stimulator.

Dr. Barolat's Rationale for the Peripheral Nerve Stimulator

10. Based upon the evidence before the ALJ, substantial evidence supports a conclusion that the peripheral nerve stimulator implant surgery as requested by Dr. Barolat is reasonable and necessary medical treatment for this Claimant. The Claimant has lived with his condition relating to this injury since December of 2016. He has had a great number conservative treatment modalities for his low back complaints. Surgery to fix the problem is not being suggested by any of his doctors, including the Respondent's experts.

11. The ALJ finds the Claimant's testimony regarding the relief that he obtained from the trial of the peripheral nerve stimulator credible. Further, Dr. Barolat testified, and his concurrent notes reflect, that the Claimant reported significant improvement with the trial of the peripheral nerve stimulator. Dr. Barolat has been performing surgeries

exclusively in the fields of nerve and spinal cord stimulation over the past twenty (20) years and has performed hundreds of peripheral nerve stimulator implants with a high percentage success rate. His field of expertise is neurosurgery. Respondent's experts' fields of interest are in physical medicine and rehabilitation. As such, one might reasonably expect that their opinions would be based more closely upon the application of the Guidelines, than would those of a neurosurgeon. In this instance, despite the sincerely held professional beliefs of Drs. Fall and Goldman, the ALJ finds the rationale of Dr. Barolat to be more persuasive in determining whether to move forward with implanting this device.

12. The ALJ recognizes the Respondent's reliance on Rule 17 of the Medical Treatment Guidelines of the Division of Workers' Compensation and the fact that Dr. Barolat is not Level II certified by the Director of the Division of Workers' Compensation. The ALJ finds that there is a relative dearth of evidence-based medicine to form any specific guidelines on peripheral nerve stimulators as proposed by Dr. Barolat. While the procedure outlined in the Guidelines for review by a physical or occupational therapist before and after the trial seems reasonable, Dr. Barolat opines otherwise. Examining the Claimant during the trial, and speaking with the Claimant's family provides sufficient evidence to conclude that the permanent implant of the peripheral nerve stimulator would relieve the Claimant from the effects of his injury and prevent deterioration of his condition-perhaps for a decade or more.

13. The ALJ finds that, as to peripheral nerve stimulation in this Claimant, the Guidelines are not clearly based upon evidence-based medicine. As to spinal cord stimulation, Rule 17 cites to articles written by Dr. Barolat. That plus the testimony of Dr. Goldman, that he refers patients to Dr. Barolat for spinal cord stimulation, adds to the weight that the ALJ gives to the opinion of Dr. Barolat.

Deviation from the Medical Treatment Guidelines

14. The Guidelines themselves indicate that they are not mandates, but are to be used as a helpful aid in determining appropriate treatment when dealing with work injury. As the Guidelines are formulated on evidence-based medicine and there is relative lack of evidence supporting the portion of the Guidelines on peripheral nerve stimulation, the ALJ finds the experience of Dr. Barolat to be sufficient to conclude that the permanent implant is reasonable and necessary.

15. The Division of Workers' Compensation Medical Treatment Guidelines Workers' Compensation Rules of Procedure (CRP), Rule 17, although fitted under a Rule are not rules but *Guidelines.* The Guidelines are limited to Workers' Compensation cases and therein may be considered as evidence of accepted standards of practice in workers' compensation cases.. *See Hall v. Indus. ClaimAppealsOffice,*74 P.3d 459 (Colo. App. 2003). The Guidelines may be considered as evidence of accepted standards in the evaluation of causation. *See Cahill v. Patty Jewett Golf Course,* W.C. No. 4-729-518 (Industrial Claim Appeals Office (ICAO), February 23, 2009).

16. When determining whether proposed treatment is reasonably necessary, an ALJ may consider the Guidelines, because they represent accepted standards of practice in workers' compensation cases. Evidence of compliance, or non-compliance, with the Guidelines, however, is not dispositive of the question of whether medical treatment is reasonably necessary. Rather, an ALJ may give evidence regarding compliance with the MTG such weight as the ALJ determines it is entitled to considering the totality of the evidence. The provisions of the Medical Treatment Guidelines are not *legally binding* in any way. *Eldi v. Montgomery Ward,* W.C. No.3-757-021 (ICAO, October 30, 1998). As found, the persuasive opinions of Dr. Sparr and Dr. Barolat firmly establish that a *deviation* from the Guidelines to implement Dr. Barolat's recommended permanent peripheral nerve stimulator implant is warranted.

ORDER

It is therefore Ordered that:

1. The Post-MMI permanent peripheral nerve stimulator as proposed by Dr. Barolat is reasonable and necessary. Respondents shall authorize and pay for said surgery, and all related aftercare.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove a right total knee arthroplasty ("TKA") is reasonably necessary to cure and relieve the effects of her industrial injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a server. At the time of her industrial accident, she had worked nine years for Employer, and a total of 19 years as a server. Employer's restaurant is very busy, and Claimant commonly worked 50-60 hours per week.

2. Claimant suffered admitted injuries to her right knee and low back on November 24, 2017, when she slipped and fell on a wet floor. Her left foot slipped out from under her, causing her weight to shift awkwardly to her right leg before she fell. Her right knee hyperextended and twisted when she slipped.

3. Claimant reported the incident to her manager but did not request immediate treatment because she assumed she "just pulled a muscle." Claimant finished her shift that evening.

4. The next day, Claimant opened the restaurant and worked the lunch shift. Her knee felt sore but she completed the shift.

5. During her shift the following Wednesday (November 29), Claimant's manager noticed something seemed amiss and asked if Claimant was okay. Claimant reiterated she thought she had "pulled a muscle" when she fell. She indicated the knee was becoming more painful as she worked. She finished her shift that day and went home.

6. On Friday, December 1, Claimant asked to see a doctor because she realized the problem with her knee was "more than just a pulled muscle." Employer referred Claimant to its designated provider, Concentra.

7. Claimant saw PA-C Kerri McKee at her initial Concentra appointment on December 1, 2017. Claimant reported pain in her low back and right knee. The knee pain was primarily in the back of the knee and radiated down the back of the leg. Ms. McKee noted tenderness in the popliteal fossa, but none over the anterior knee for the medial tibial plateau. Medial and lateral McMurray's tests were negative. Her low back was tender with palpable muscle spasm. An x-ray of the right knee was interpreted as normal, with no apparent joint effusion or degenerative changes. Ms. McKee diagnosed a right knee sprain and a low back strain. She gave Claimant a large hinged knee brace and referred her to physical therapy. Ms. McKee opined Claimant could try to work with the knee brace and they would re-evaluate her status the following Monday (December 4).

8. Claimant attended her initial physical therapy session on December 4, 2017. She reported ongoing pain and difficulty walking. The therapist noted a mildly antalgic gait. Examination of the right knee showedreduced range of motion and slight weakness with flexion and extension. McMurray and Thessaly's tests were positive, suggesting meniscal pathology. The therapist diagnosed a "right knee sprain with possible meniscal involvement."

9. Claimant had her follow-up Concentra appointment after the physical therapy session on December 4. This time she saw Dr. Mary Nolan. In describing her fall to Dr. Nolan, Claimant stated she did not land on the knee but was "fairly certain" she twisted the knee as she fell. She denied any injurious activities or events outside of work. Claimant's pain was unchanged since the prior appointment. Examination of the knee showed tenderness in the hamstrings, the popliteal fossa, and in the back of the knee. Dr. Nolan "deferred" meniscal tests and other special tests. Dr. Nolan restricted Claimant to no lifting over 15 pounds with periodic position changes to relieve discomfort.

10. At her December 8, 2017 Concentra appointment, Claimant stated her knee pain had improved enough that she no longer needed any medications. She rated her knee pain at 2/10, but said it "could be more at the end of the day." She "still" had popping in the knee, but no instability, catching, locking. She was not wearing her knee brace and was said to be tolerating work activity well.

11. At hearing, Claimant credibly explained she stopped wearing the knee brace because it was too big for her and "it kept falling down." She also disagreed with the indication she was working without difficulty. Although she had no formal restrictions on shift frequency or length, Claimant self-limited her work by taking shorter shifts and "releasing" some shifts to coworkers. Even during the shorter shifts, she noted increasing pain with standing and walking.

12. Claimant's testimony regarding her work tolerance is corroborated by the December 11, 2017 physical therapy report, which notes, "after working a 4 hour shifts she was very sore at the following shift that lasted another 5 hours. She states the pain behind her right knee is a constant dull ache until after prolonged work it feels like a sharp pain with each step and after prolonged sitting."

13. Subsequent Concentra and PT records in December reflect gradual improvement in her knee pain and tolerance for prolonged standing, walking and sitting.

14. Claimant was evaluated by Dr. Thomas Corson at Concentra on December 29, 2017. Claimant stated she was "feeling much better" and only had "mild aching pain" in the right knee after prolonged sitting or bending down. She had stopped PT because, "she feels back to baseline and has been working full duty." She was doing home exercises and "wants to close her case today." Dr. Corson released Claimant at MMI with no restrictions.

15. Claimant worked on New Year's Eve, "one of our busiest nights." Soon after that shift, her knee pain flared significantly.

16. Claimant returned to Dr. Corson on January 23, 2018. Dr. Corson's report states,

> Her case was closed at MMI on 12/29. She returned to work and was doing well for about a week. Around January 6, she started experiencing throbbing pain throughout the right knee with swelling. Pain is worse with weightbearing and progressively worsens the more she is on her feet . . . . She reports feeling intermittent painful clicking with ROM in the knee, but no locking. She's been taking Motrin and tramadol since the pain recurred, which takes the edge off. She's had to give up several of her waitressing shifts because she can't walk for more than an hour or two without significant worsening of pain to the point that it becomes unbearable. The pain continues to progressively worsen each day.

17. Respondents authorized Claimant to resume treatment, so Dr. Corson ordered an MRI and referred her back to physical therapy.

18. The MRI was completed on January 30, 2018. It showed a posterior medial meniscus root tear with meniscal extrusion, a partially intact/partially ruptured popliteal cyst (Baker's cyst), grade 3-4 chondral degeneration on the weightbearing surface of the medial femoral condyle, bone marrow edema, and osteophytic ridging.

19. After reviewing the MRI report, Dr. Corson referred Claimant for an orthopedic evaluation.

20. Claimant saw Dr. Failinger, an orthopedic surgeon, who administered a cortisone injection. The injection was not helpful.

21. On April 13, 2018, Claimant saw another orthopedic surgeon, Dr. Michael Hewitt, for a second opinion. Dr. Hewitt explained it is difficult to treat a meniscal root tear in the context of underlying arthritis. He stated, "arthroscopy does not significantly alter the natural history of arthritis in root tear and prognosis for arthroscopy is guarded. She understands the final option is knee replacement."

22. Claimant was evaluated by Dr. Hewitt's partner, Dr. Phillip Stull, on May 29, 2018. Dr. Stull opined, "she is a reasonable candidate for both an arthroscopy of the knee or joint replacement. I explained the differences in detail to her. I explained that with arthroscopy she is likely to have some persistent symptoms. After thoughtful consideration, she has decided to proceed with arthroscopy of the knee which I do think is reasonable. We will put a request in for authorization."

23. Dr. Henry Roth performed a Rule 16 record review on June 6, 2018. He opined Claimant's ongoing right knee symptoms were not related to the November 24, 2017 work accident. He opined the pathology shown on the MRI was long-standing and degenerative, and the work accident did not cause, aggravate, or accelerate the pre-existing degenerative changes in Claimant's right knee. Based on the symptoms and clinical findings documented in the early medical records, Dr. Roth concluded, "the posterior knee pain is fully explained by a pre-existing degenerative popliteal cyst, which

more likely than not, ruptured." He further opined, "the surgical recommendation now, whether arthroscopy or arthroplasty, is not specifically directed at any anatomic change that occurred on 11/24/18 [sic] but rather now the diffuse pain [from] . . . advanced arthrosis, a pre-existing condition." Dr. Roth opined arthroscopy was not reasonable because it would not effectively treat the underlying arthritis. He recommended Claimant try NSAIDs and strengthening. If symptoms persisted, she should pursue a TKA under her personal health insurance.

24. Respondents denied the surgery based on Dr. Roth's report.

25. Claimant followed up with Dr. Corson on June 27, 2018. He noted, "surgery has been denied by the insurer. She is no better since her last visit and is still unable to return to her waitressing job due to her SXs and knee pain." Despite stating Claimant was "not at end of healing," Dr. Corson put Claimant at MMI and released her from care. The ALJ infers Dr. Corson's declaration of MMI was based on administrative issues (denial of surgery) rather than a medical determination.

26. Claimant saw Dr. Braden Mayer at the Steadman Hawkins Clinic on July 19, 2019 for another orthopedic opinion. Dr. Mayer noted Claimant "had no [knee] pain prior to her injury in November 2017 at work." He advised Claimant an arthroscopy would probably not give any long-lasting relief and may actually worsen the arthritis-related pain. He opined Claimant was a candidate for a TKA.

27. Claimant attended a DIME with Dr. William Watson on October 30, 2018. Dr. Watson noted Dr. Roth's analysis focused on degenerative arthritis and generic medical meniscal tears, whereas Claimant has a posterior medial meniscus *root* tear. He explained, "this is a different entity than a routine posterior horn tear of the meniscus which does not affect strength of the meniscus as a root tear does." He further explained a posterior root tear destroys the loadbearing ability of the meniscus and "results in a mechanical condition much like a total meniscectomy." This, in turn, leads to accelerated joint degeneration. Dr. Watson concluded,

> I believe in this case, the examinee indeed had pre-existing osteoarthritis but was well compensated because of the continuity of the medial meniscus. When she had her injury, she had immediate pain in the posterior aspect of the knee and following this, she had a clicking sensation. These are classic symptoms of the posterior root tear of the medial meniscus. She was able to function initially but as time progressed, I believe she had progressive extrusion of the medial meniscus out of the joint and therefore, had increasing difficulty. In other words, her previously compensated osteoarthritis became uncompensated because of the root tear . . . and subsequent extrusion. . . .
>
> I believe the proximate cause of her increasing symptoms from her pre-existing osteoarthritis was caused from the posterior root tear of the meniscus. Nothing else can explain why she could function for over 19 years as a waitress and then after one episode of traumatic injury to her

> knee, developed increasing symptoms of her osteoarthritis. Her MRI which showed the arthritis and extrusion of meniscus secondary to root tear was done over 2 months from the time of the injury. During this time she had progressive symptoms of medial joint arthritis secondary to loss of hoop strength from the medial meniscus root tear.
>
> I agree with the orthopedic surgeons who feel that a total joint arthroplasty is the best approach. There are mechanisms to repair the posterior root, however, I feel with the amount of extrusion she has had and the degenerative changes that the best approach would be to proceed with a total joint arthroplasty. I believe the proximate cause of her needing the total joint arthroplasty was her work-related injury. It should be noted this is a common injury to trivial trauma in a female of her age.

28. Dr. Watson opined Claimant was not at MMI pending the TKA.

29. Claimant returned to Dr. Stull on January 25, 2019. His report states, "the patient has thought more about management of her knee condition. We had discussed arthroscopy as an interim step, or joint replacement and at this time she is leaning more towards joint replacement because her knee is quite disabling to her." Dr. Stull opined, "joint replacement is certainly reasonable and most likely to provide definitive long-term symptom relief. She would like to proceed with that."

30. Respondents denied the TKA as unrelated to the work accident based on Dr. Roth's previous Rule 16 report.

31. On February 14, 2019, Respondents filed a GAL accepting Dr. Watson's MMI determination and reinstating TTD. Respondents maintained their denial of the TKA.

32. On March 1, 2019, Dr. Corson offered his opinion regarding the TKA, stating,

> [Claimant] NEEDS knee replacement surgery as a result of her work-related accident which I believe is a direct cause for her current physical injuries. I believe the surgery IS medically necessary in order for her to regain her preinjury activity status. This was also corroborated by Dr. Watson . . . . The longer she goes without the surgery, her chances of incurring more extensive damage and post-surgical disability greatly increase. (Capitals in original).

33. Claimant saw Dr. John Schwappach, an orthopedic surgeon, for an IME at Respondents' request on June 23, 2019. Dr. Schwappach provided a written report and testified via deposition for Respondents. He reached essentially the same conclusions as Dr. Roth regarding causation. He believed Dr. Hewitt's April 13, 2018 report was the first reference to twisting the knee when she fell, and "for her to now all of a sudden remember she had a twisting injury isn't very plausible." He apparently overlooked Dr. Nolan's December 4, 2017 report wherein Claimant said she was "fairly certain" she twisted her knee when she fell. Dr. Schwappach opined Claimant hyperextended her right knee when

she slipped and ruptured a pre-existing popliteal cyst in the back of her knee. He opined popliteal cysts generally develop because of meniscal tears, so the meniscal tear probably predated the accident. Dr. Schwappach opined Claimant's knee pain was explained by the partially ruptured degenerative popliteal cyst, secondary to a pre-existing meniscal injury. He saw no evidence in the early medical records that Claimant sustained a meniscal root injury when she slipped at work on November 24, 2017. It does not appear he reviewed the physical therapy records because he did not mention the therapist's exam findings suggesting meniscal pathology on December 4, 2017. Nor did he discuss the knee "clicking" Claimant experienced shortly after her accident. He opined the meniscal pathology shown on MRI was consistent with a slow, degenerative pattern, rather than an acute event. He emphasized Claimant had improved rapidly after the accident and returned to full duty, consistent with the partially ruptured popliteal cyst. Ultimately, Dr. Schwappach concluded the November 2017 accident did not cause, aggravate, or accelerate Claimant's pre-existing degenerative arthritis and cause a need for further treatment, including a TKA. Dr. Schwappach agrees a TKA is reasonable but does not believe it is related to Claimant's work injury.

34. Claimant's testimony at hearing was credible and persuasive.

35. Dr. Watson's opinions regarding causation are credible and more persuasive than contrary opinions in the record.

36. Claimant proved by a preponderance of the evidence a right TKA is reasonably necessary and causally related to her November 24, 2017 work accident.

CONCLUSIONS OF LAW

The respondents must provide medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). But the mere fact that a claimant suffers a compensable injury does not mean all requested treatment is reasonably necessary or caused by the industrial injury. A claimant is only entitled to treatment that flows proximately and naturally from the injury, and must prove the requisite causal connection by a preponderance of the evidence. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove the requested treatment is reasonably necessary, if disputed. *Id*.

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravated, accelerated, or combined with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved the proposed TKA is reasonably needed and causally related to her work accident. There is really no significant dispute regarding reasonable

necessity, because Respondents' experts agree arthroscopy is unlikely to help and a TKA is reasonable after failure of conservative treatment. The more challenging question here is causation. No doubt, Claimant has significant degenerative changes in her knee that predated the accident. But her knee was asymptomatic and nondisabling despite working long hours for years in a job that required constant standing and walking. The work accident provides a plausible injury mechanism, with hyperextension and twisting of the knee. The ALJ finds Dr. Watson's analysis and conclusions persuasive on the issue of causation. As Dr. Watson explained, from a biomechanical perspective, a posterior root tear is nearly equivalent to a total meniscectomy in terms of the increased load transmitted to the knee joint surfaces. The loss of mechanical integrity and subsequent extrusion of the medial meniscus would reasonably be expected to aggravate Claimant's underlying but previously asymptomatic arthritis. The ALJ also credits Claimant's credible testimony she was not doing as well in late December 2017 as it might appear from Dr. Corson's December 29, 2017 report. Claimant credibly explained her knee felt significantly better while she was limiting her shits, but the pain quickly returned when she resumed regular duties. Her testimony is corroborated by Dr. Corson's January 23, 2018 report noting she did well for approximately a week her before significant symptoms recurred. And Dr. Corson agrees Claimant's current condition is a "directly" result of her work accident.

ORDER

It is therefore ordered that:

1. Insurer shall cover the right total knee arthroplasty surgery recommended by Dr. Stull.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 6, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-061-774-003

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment on October 27, 2017.

II. Whether Claimant established, by a preponderance of the evidence, that he is entitled to reasonable, necessary, and related medical treatment.

III. Whether the medical treatment provided Dr. Yee at Advanced Orthopedics & Sports Medicine between August 13, 2018 and September 17, 2018 was reasonable, necessary, and related to Claimant's right shoulder injury.

IV. Whether Claimant established, by a preponderance of the evidence, that the right to select the authorized treating physician passed to Claimant, and that he selected Dr. Yee.

V. Whether Claimant is entitled to temporary total disability benefits.

VI. Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

Claimant's Pre-Existing Medical and Employment History

1. Claimant testified that he dislocated his right shoulder in middle school (*Hearing Transcript March 5, 2019, hereafter referred to as "H.T." p.42, ll.18-19*).

2. While the medical records show Claimant broke his collarbone in 2007, Claimant did not recall such incident at hearing (*H.T. p.42, ll.11-16*).

3. On December 2, 2011, Claimant treated with Dr. Yee and reported right shoulder pain due to an injury occurring during football practice (*R. Ex. p.189*). Claimant reported a prior clavicle fracture four years prior (*Id*.). After performing a physical examination, Dr. Yee diagnosed Claimant as suffering from a Type II SLAP tear and AC pain-ostolysis. Dr. Yee ordered an MRI, which Claimant underwent on December 19, 2011, revealing findings suggesting post-traumatic changes\possible separation of the AC joint with no evidence of rotator cuff tendon tear or displaced SLAP lesion (*R. Ex. p.156*).

4. On January 5, 2012, Claimant underwent an AC joint reconstruction with Dr. Yee (*R. Ex. p.151*).

5. On August 10, 2012, Claimant returned to Dr. Yee and reported right shoulder pain due to an injury occurring in football practice where he "heard a pop" (*R. Ex. p.178*). Dr. Yee ordered an MRI (*Id*.).

6. On August 15, 2012, Claimant returned to Dr. Yee to review his MRI (*R. Ex. p.176*). Dr. Yee diagnosed Claimant with a right shoulder SLAP re-tear (*Id*.).

7. On October 17, 2012, approximately two months after being diagnosed with a SLAP re-tear by Dr. Yee, Claimant returned to Dr. Yee complaining of additional right shoulder pain for the past two weeks, stating "he dislocated his shoulder two weeks ago and felt a pop" (*R. Ex. p.172*).

8. On August 27, 2013, Claimant returned to Dr. Yee with reports of right shoulder pain due to wrecking his bike and falling a couple of months prior (*R. Ex. p.171*). Based on Claimant's increasing shoulder pain, which had been present for about two months since wrecking his bike, Dr. Yee diagnosed Claimant as suffering from an additional SLAP re-tear (*Id*.).

9. Claimant testified he was involved in a motor vehicle accident on May 20, 2016, at which time his car flipped about six times (*H.T. p.48, l.14*).

10. At hearing, Claimant testified that he injured his hand, which led to the need for surgery, at his brother's graduation party (*HT p.35, ll.10-16*). Claimant also testified that even though he was involved in a motor vehicle accident in May 2016, and the car rolled about six times, that:

> [N]othing came of it because I wasn't injured or anything like that. And I never had to, like, seek treatment for it, because there was nothing wrong with me, I walked away from it. Not a scratch on me" (*H.T. p.34, ll.11-15*).

11. On the other hand, medical records from Kingman Regional Medical Center, Dr. Heyman, Dr. Milford and Dr. Hallier, as well as Claimant's statements to Mr. Bounds and Mr. Jarrett, contradict Claimant's testimony (R. Ex. D; M; N; H.T. p.100, ll.14-17; H.T. p.14, ll.1-23). According to a triage note from Kingman Regional Medical Center dated May 30, 2016, Claimant reported hand and wrist pain, "was in a motor vehicle accident one week ago where he injured it" (R. Ex. p.132).

12. In addition, on June 3, 2016, Claimant underwent surgery to his hand with Dr. Hallier at the Kingman Regional Medical Center (*R. Ex. p.129*). According to the surgeon, Claimant "was involved in a motor vehicle accident on May 20, 2016 where his right hand apparently impacted in the dashboard…the patient was complaining of persistent right hand pain…when he came in to see orthopedics after referral for this hand injury, he was noted to have complete instability of the fourth and fifth carpometacarpal joint of his right hand." Claimant underwent an open reduction and internal plate fixation of the right fourth and fifth carpometacarpal joint dislocations (*H.T. p.129*).

13. On June 7, 2016, Claimant returned to Kingman Regional Medical Center and reported that about 2 weeks prior, he was involved in a motor vehicle accident and stated that he noticed that the tendons on his fourth and fifth fingers on the right hand had popped up and out *(R. Ex. p.127*). Claimant reported that he pushed them back down and did receive medical attention (*Id*.). He reported that after such incident, about one week later, while playing with his brother, the two tendons again popped up and out (*Id*.).

14. On September 5, 2016, Claimant treated at Kingman Regional Medical Center for injuries sustained to his right upper extremity (*R. Ex. p.123*). Claimant reported that he was rock climbing and fell 10 feet and struck his right upper extremity (*Id*.).

15. Claimant had worked off and on for Employer from 2015 to 2017 (*H.T. p.117, ll.6-8*). In January 2017, Employer re-hired Claimant to start on a jobsite in Colorado (*H.T. p.12, l.2*). Claimant testified that he was still having some physical problems at that time and the Employer offered and he accepted a modified duty position. (*H.T. p.72, l.9; p.74, ll.8-14*). Claimant could not recall why he left his position in April 2017 (*H.T. p.73, l.3*).

16. Mr. Richard Bounds, superintendent for MDA Construction, testified that he had been superintendent since 2011 and that he became familiar with Claimant in about 2012, 2013 (*H.T. p.99, ll.18-24*). Before the alleged October 27, 2017 injury, Mr. Bounds testified that he was on a job site with Claimant, at which time Claimant was working light duty, and he discussed Claimant's restrictions with him (*H.T. p.100, ll.12-15*). In this context, when asked what had happened, Claimant responded to Mr. Bounds that he had injured his hand, arm and shoulder in a car accident *(H.T. p.100, ll.14-17*). Mr. Bounds explained that Employer was accommodating Claimant's restrictions then and that, "the company tries to help as best they can" (*H.T. p.101, ll.7-12*). Mr. Bounds testified that while working light duty, Claimant became unable to work due to his injuries and as such, he was asked to go recuperate *(H.T. p.101, ll.18-20*). Mr. Bounds explained that at the time, Claimant was living in an apartment owned by the employer and that due to his inability to work, he would need to provide his own housing and that, "after that…until he was healed and recovered, he could come back to work" (*H.T. p.101, ll.21-25*). Mr. Bounds explained that there was a gap where Claimant could not work because of his injuries in the motor vehicle accident from approximately April 2017 to September 2017 (*H.T. p.102, ll.2-10*).

17. On February 28, 2017, Claimant treated with Dr. Heyman and reported that he sustained an injury to his hand in May from a "car roll, then fractured it again two months later" (*R. Ex. p.111*). When questioned when the injury occurred, Claimant responded with, "a car accident and a subsequent injury while messing around hitting a concrete floor" (*Id.*). Because of painful hardware, Dr. Heyman noted that an attempt to remove the hardware may be performed but it may not be possible to get all of the hardware out (*R. Ex. p.111-115*).

18. On March 22, 2017, Claimant sought treatment at Parker Adventist Emergency Room for total body pain (*R. Ex. L, p.97*). Claimant reported being hit by a beam in the back three months prior, in December of 2016 (*Id*.).

19. On September 9, 2017, approximately 1 ½ months before his alleged work injury, Claimant sought treatment at Denver Health for various complaints and was diagnosed with ***right arm weakness*** (emphasis added) (*R. Ex. p.70*). Claimant denied any triggering event (*R. Ex. p.68.5*). However, at hearing, Claimant disagreed with this history as he attributed such complaints to a beam falling on him (*H.T. p.22-25; p.61, l.3*).

20. On October 20, 2017, Claimant underwent an MRI to his C-spine (*H.T. p.61, l.17*).

21. At hearing, Claimant testified that, "I had no prior shoulder problems before October 27, nothing at all. I was 100 percent…no problems at all." (*H.T. p.233 ll.2-5*) Specifically, Claimant disputed injuring his right shoulder again in 2012. (*H.T. 2 p.62, ll.12-13*). However, Dr. Yee documents Claimant's presentation of right shoulder pain, and a pop, which occurred during football practice. Due to this injury, Dr. Yee ordered an MRI and diagnosed Claimant as suffering from a right shoulder SLAP re-tear (*R. Ex p.176*). With regard to the August 27, 2013 injury at which time Claimant wrecked his bike, he testified he sustained "road rash, but they didn't work on anything with the SLAP tears." Yet, Dr. Yee's August 27, 2013 note specifically documents right shoulder pain for which he diagnosed another SLAP-re-tear (*R. Ex. p.171*). Claimant denied any injury at all while rock climbing (*H.T. 2 p.60, ll.10-18*). On the other hand, hospital records from Kingman Regional Medical Center document a reported 10-foot fall from a cliff "and hurt right arm" (*R. Ex. N, p.22*). After being provided with medical records documenting injuries, including dislocations and ongoing treatment to the right shoulder, Claimant conceded that he did treat for right shoulder injuries and pain after 2012 up through October 27, 2017.

Alleged October 27, 2017 Work Injury

21. Claimant asserts that he sustained a compensable work-related injury to his right shoulder on October 27, 2017. Specifically, Claimant testified that while lifting a shoring post, he felt a pop in his shoulder and his arm gave out and he fell back "on my shoulder. And at that point, that's when I felt—it knocked me down to my knees and I got out from underneath it…" (*H.T. p.19, ll.10-15*).

22. When questioned through discovery about the body parts Claimant alleged to be injured as a result of the October 2017 injury, he reported, "the right side of his head, all the way down to his right lower extremity," but at hearing limited the alleged injury to his right shoulder (*HT p.42, ll.1-8*).

23. Claimant testified at hearing that Respondents designated treatment and Claimant ultimately agreed to seek treatment at AFC Urgent Care (*HT p.20, ll.15-16*).

24. Mr. Bounds testified that on the morning of the alleged injury, Claimant came to see him and requested the day off, indicating, "my baby's momma is coming into town…can I have off, I need to get off" (*H.T. p.102, ll.20-25*). Mr. Bounds explained that he told Claimant no, due to the company being shorthanded, they needed him to work (*H.T. p.103, l.1*). Mr. Bounds testified that Claimant was very adamant about needing to get off of work to go meet his baby's momma *(H.T. p.103, ll.2-3*). Sometime thereafter, before lunch, Claimant reported to Mr. Bounds that he had

hurt his shoulder carrying a shoring post (*H.T. p.103, ll.5-9*). Claimant then said to Mr. Bounds that he just wanted to go home and rest his shoulder, to which Mr. Bounds said that if he was injured on the job, he would need to go to the clinic (*H.T. p.103, ll.11-16*). Claimant replied, "no, I don't want to go to the clinic, just—just—**just an old injury**" (emphasis added) (*H.T. p.103, ll.18-19*). Mr. Bounds explained that he asked Claimant to wait for him in the connex, and Claimant proceeded down the ladder using both hands (*H.T. p.104, ll.1-4*). Mr. Bounds explained that Claimant could have taken the stairs, but rather, climbed down the ladder using both hands (*H.T. p.104, l.6*). Mr. Bounds testified that he arranged for a ride for Claimant to obtain treatment at the AFC Clinic, where he failed a drug test (*H.T. p.104, ll.14-17; p.105, l.8*). Mr. Bounds testified that he terminated Claimant over the failing of the drug test, which was supported by the Respondent Employer's drug policy at the time, which is referenced under Respondents' Exhibit T, p.192 (*H.T. p.105, ll.18-20*). Mr. Bounds did testify that consideration is given to other factors when deciding whether to terminate an individual, including work ethic, prior terminations, consistency of coming to work, reliability, etc. (*H.T. p.107, ll.15-24*). Mr. Bounds testified that had Claimant not been terminated for testing positive for marijuana and he had in fact sustained some type of work-related or nonwork-related injury, Employer would have offered him modified duty (*H.T. p.109, l.10*). He further testified that this is supported by the fact they had done so in the past (*H.T. p.108, ll.11-12*).

25. While Claimant testified that he requested an ambulance at the time of the alleged work-related injury, Mr. Bounds testified that at no time did Claimant request an ambulance, but rather he did not even want to go to the doctor (*H.T. 2 p.72, ll.1-9*).

26. Brian Jarrett, Safety Director for Employer at the time of the alleged injury, testified that Claimant worked for a total of three different timeframes for Employer (*H.T. 2 p.13, ll.1-9*). Mr. Jarrett testified that he spoke with Claimant on the date of the alleged injury, October 27, 2017, due to the reporting of an alleged injury and as part of his investigation into the claim (*H.T. 2 p.13, ll.16-24*). Mr. Jarrett testified that Claimant reported to him that he had a previous injury to his shoulder due to a prior car accident and that his shoulder had been bothering him while moving a shoring post (*H.T. 2 p.14, ll.1-10*). Mr. Jarrett testified that Claimant never reported any type of post hitting him in the neck or shoulder, but rather, it was, "along the lines of the shoulder was aggravated, and that again, just kind of an ongoing issue from the—from the car" (*H.T. 2 p.14, ll.19-23*). Mr. Jarrett testified that, "out of an abundance of caution" he offered Claimant medical attention, to ensure that Claimant would be fit for duty (*H.T. 2 p.14, ll.23-25*). Mr. Jarrett testified that he specifically asked Claimant if he had previously injured his shoulder, to which Claimant provided, "a very short answer, he just said, 'yes, sir'" (*H.T. 2 p.29, ll.10-15*). Mr. Jarrett testified that it was his understanding that Claimant's shoulder condition "was kind of a constant issue, through my conversation with him" (*H.T. 2 p.29, ll.20-23*). Mr. Jarrett testified that based on his conversation with Claimant, it was conveyed to him that his shoulder condition was "kind of an on-ongoing thing that he had had. And he came to work that day, that it hurt most days, and that that day he had come to work, and he had done work" (*H.T. 2 p.31, ll.13-18*). Mr. Jarrett testified regarding receipt of the positive marijuana test based on a threshold

established by the department of transportation and that it had not been overturned by an MRO (*H.T. 2 p.40; p.42, ll.14-20*).

27. Mr. Jarrett testified that as Safety Director of Employer, all injuries that require medical attention require a five-panel drug test (*H.T. 2 p.15, ll.7-11*). Mr. Jarrett testified that Claimant underwent such five-panel drug test and tested positive for marijuana. While Mr. Jarrett is no longer employed with Respondent Employer, he testified that while there, he prepared the safety manual (*H.T. 2 p.18, l.23*). Mr. Jarrett testified that based on the section under Respondents' Exhibit, page 212, titled "Drugs and Alcohol," the presence of marijuana in the body is prohibited by the Employer (*H.T. 2 p.18, l.9*). Mr. Jarrett testified that had Claimant not been terminated because of the positive drug test, he would have of course been offered modified duty (*H.T. 2 p.24, ll.6-9*).

28. Mr. Jarrett testified that Claimant was provided modified duty in the early part of 2017 due to nonwork-related medical conditions, which ultimately precluded him from being able to continue work and as such, it was requested that Claimant recuperate and return to work when he was able (*H.T. 2 p.21, ll.1-14*). Mr. Jarrett testified about Employer's light duty program and that they try to encourage modified duty and accommodate, "whenever we can" (*H.T. 2 p.22, ll.14-18*). He added, "the owner of the company goes out of his way to be accommodating to people…you know, we are a second and third chance kind of company" (*H.T. 2 p.23, ll.5-9*).

29. Mr. Jarrett testified that as Safety Director, all supervisors report work-related injuries to him (*H.T. 2 p.24, ll.10-25*). While Claimant testified that he reported an injury occurring in February 2017, when he was allegedly hit in the head with a beam, and another injury in September 2017, when he allegedly sustained a concussion when something hit him in the head, Mr. Jarrett testified that he did not receive notice of either of these alleged incidences (*H.T. 2 p.25, ll.6-16*). To the extent Claimant testified that he was told by Employer to drive himself to the hospital, Mr. Jarrett adamantly refuted such assertion and testified that especially with a head injury, they never would have allowed an employee to drive themselves to receive medical care, and that their procedure is to have someone from the company drive them to a medical facility (*H.T. 2 p.26, ll.1-9*).

30. On October 27, 2017, Claimant went to the AFC Urgent Care Clinic and reported that while lifting something with his right arm, he felt his shoulder slip and is no longer able to raise his right arm. He reported having a prior injury to his right shoulder, which included a rotator cuff tear, labrum tear, and a fractured collarbone (*R. Ex. p.64*). Claimant's immediate reporting of the injury is completely devoid of any history of being hit in the shoulder or neck with a post and is further devoid of being knocked to the ground (*Id*.).

31. On October 30, 2017, Claimant saw Dr. Choudhry, the orthopedic specialist, to whom he reported injuring his shoulder while lifting up a metal post and his shoulder gave out on him (*R. Ex. p.56*). The history to Dr. Choudhry three days after the alleged incident is devoid of any reports of being hit in the neck or shoulder or being knocked to the ground. Of note, Claimant reported to Dr. Choudhry that

his shoulder started hurting in February 2017 while carrying a [beam], however, at hearing, Claimant denied any injury to his shoulder in February 2017 (*H.T. p.58, l.11*).

32. On October 30, 2017, Claimant was terminated for cause due to testing positive for marijuana on the date of injury. Claimant conceded Respondent Employer terminated him due to the positive drug test, which he admitted violated the Respondent Employer's policy (*H.T. p.69, ll.9-16*). While Claimant testified that he found out a few weeks after the positive drug test that he was terminated, it was actually three days later on October 30, 2017 (*R. Ex. p.191*). When presented with this fact, Claimant simply indicated it was hard to remember (*H.T. p.75, l.10*).

33. While Claimant initially denied any attendance issues while employed with Respondent Employer, he ultimately agreed he had attendance issues due to medical conditions before the alleged injury (*H.T. p.68, l.15*).

34. On November 10, 2017, Claimant filed a workers' claim for compensation and reported that his arm buckled while pushing up a shoring post, devoid of any mention of getting hit with the post or falling to the ground (*R. Ex. p.326*).

35. On July 11, 2018, Claimant saw Dr. Reichhardt based upon an agreement of the parties for determining whether an MRI of the right shoulder was reasonable (*R. Ex. F, p.48*). Claimant reported to Dr. Reichhardt that he was injured while putting up a shoring post. He stated that the metal post fell on his neck and shoulder, knocking him to his knees. Dr. Reichhardt noted in his report, "I do not see in the prior medical documentation of the injury that he was hit by the metal post and fell to the ground" (*Id*.). Claimant reported immediate onset of right upper trapezius, right shoulder and right neck pain. He reported the pain radiated down his right arm, into his forearm. Again, Dr. Reichhardt noted that he did not see any discussion of radiating arm pain, numbness or tingling in any of the other medical records (*Id*.). As far as other symptoms, Claimant reported bilateral headaches, right-sided neck pain, pain stretching from his neck to the right shoulder, along the upper trapezius and intermittent tingling throughout the whole right arm. He reported dizziness and lightheadedness, with episodes where his vision goes completely dark and that these vision problems began approximately two weeks after the injury. He also reported right-sided leg numbness and whole right leg numbness, which began two weeks after the alleged injury, and low back pain, which began one week after the alleged injury. As far as his past medical history, Claimant reported to Dr. Reichhardt that he had a prior shoulder injury playing football, but that his symptoms resolved completely four to six months after the surgery and he has had no other shoulder problems (*Id*.). Dr. Reichhardt examined Claimant and reviewed a complete set of medical records. Dr. Reichhardt opined that Claimant presented with a very complex presentation, which was difficult to explain based on his reported work-related injury. Nonetheless, due to the remote chance that Claimant could have sustained a herniated cervical disc, he ordered an urgent cervical MRI, which was normal. Dr. Reichhardt opined that it was reasonable to undergo the right shoulder MRI and referred Claimant for such. With regard to Claimant's myriad of other symptoms, Dr. Reichhardt opined that it was medically probable that all of the other symptoms were unrelated to his reported work-related injury.

36. While Claimant underwent an IME with Dr. Lindberg in May 2018, Dr. Lindberg recommended an MRI before making a final determination regarding causation. Claimant ultimately underwent the MRI and Dr. Lindberg issued a report dated August 27, 2018 (*R. Ex. B, p.2*). Claimant reported that in May 2017, a beam was dropped on him and he injured his back and neck. Then in October 2017, he reported lifting a heavy object overhead, felt a pain in his right shoulder and slipped down with pain and numbness into his right shoulder. Claimant's history is devoid of any reports of being hit in the neck or shoulder by the post, or any reports of being knocked to the ground. Claimant reported that in high school he had a dislocation and reconstruction surgery (*Id*.). Dr. Lindberg conducted a physical examination and extensive medical records review. He concluded that he agreed with Dr. Reichhardt's assessment in relation to Claimant's neurological abnormalities and that Claimant's history was inconsistent with mechanism of injury, time of injury and physical exams throughout the course of his treatment for alleged injuries at work (*Id. at p.6*). Dr. Lindberg opined that Claimant's need for treatment and ultimate surgery was not caused by the alleged injury, as such mechanism of injury is inconsistent with causing a posterior labral tear (*Id*.). He also opined that Claimant's symptoms were inconsistent with and not caused by a small labral tear (*Id*.). He opined that Claimant's other symptoms were bizarre and had nothing to do with the alleged injury (*Id*.).

37. On August 7, 2018, Claimant saw Dr. Yee, his personal physician, with whom he had treated for right shoulder problems in the past and reported right shoulder pain with an onset 10 months prior when his injury was caused by "fall" (*R. Ex. p.166*). Claimant reported that he was lifting a post and it fell on him and hit his shoulder and neck (*Id.*). Six days later on August 13, 2018, Claimant returned to Dr. Yee and reported that, "a heavy object fell and hit his right shoulder 10 months ago" (*R. Ex. p.164*). At hearing, Claimant confirmed the history of the purported mechanism of injury as reported to Dr. Yee of the post [slamming] down on his shoulder (*H.T. p.25, ll.1-3*).

38. On August 13, 2018, the same day Claimant saw Dr. Yee, he also sought treatment with Dr. Milford, his personal Neurologist for various complaints, including right shoulder pain, neck and back pain (*R. Ex. p.35; H.T. p.54, ll.2-11*). Claimant reported that: "last year he started to have neck pain. He's played American football for years and has been in a ***car accident that injured his shoulder*** (emphasis added). Claimant states the pain is more on the right side and it "shoots down into his shoulder" (*R. Ex. p.35*). Claimant presented with depression, entire right side numbness, inability to urinate, black outs and vomiting, vision and focus issues, headaches occurring seven days a week, sensitivity to light, dizziness, memory loss, blurred vision, chest pain, difficulty swallowing, balance disturbance, fainting, hearing loss bilaterally, tinnitus, anxiety, insomnia, fatigue, and lower back pain (*H.T. p.36*). Claimant reported neck pain that radiates to the posterior head and shoulders (Id.). Claimant did not report any type of purported work injury causing any of his complaints.

39. Claimant testified that before October 2017, he also sustained a prior work-related injury when a metal head fell on him, as well as a beam falling on him (*H.T. p.31,*

ll.23-24). However, Claimant testified that he did not pursue these injuries as they were not significant and did not prevent him from being able to work (*H.T. p.32, ll.1-12*). Yet he later testified he had "whole body weakness" for nearly a year after this alleged episode (*H.T. p.61, l.7*). This is consistent with the medical records where Claimant reports ongoing physical and cognitive issues including, but not limited to, diffuse neck and back pain, right sided numbness, ear pain, lower abdominal pain—all of which he reported on March 22, 2017 at Parker Adventist Hospital (*R. Ex. p.97*).

40. Claimant conceded at hearing that he denied any previous neck problems to Dr. Reichhardt (*H.T. p.66, l.6*). But Claimant underwent a cervical spine MRI seven days before the October 2017 alleged injury. Claimant also saw Dr. Milford less than one month after seeing Dr. Reichhardt on August 13, 2018, to whom Claimant presented with ongoing neck pain that he reported started one year prior (*R. Ex. p.35*).

41. Claimant's fiancé, Maria Paula Jimenez Venegas testified that Claimant was not having any health problems between March 2017 and October 2017 (*H.T. p.91, l.16*). But, upon presentation of the medical records, Ms. Jimenez Venegas conceded Claimant was in fact having several health issues which led to Claimant leaving his employment in April 2017 for purposes of recuperation (*H.T. p.92-95*). She testified that Claimant sought treatment with Dr. Milford solely for shoulder surgery. (*H.T. p.97, ll.6-12*). This is incorrect. Ms. Jimenez Venegas did not provide credible testimony about Claimant's medical history or treatment.

42. On September 17, 2018, Dr. Yee performed surgery (*R. Ex. p.336*). Dr. Yee was neither in the chain of referral for providers designated in this claim, nor did he request prior authorization from Respondents to perform the surgery (*H.T. p.12, ll.7-13*).

43. Claimant testified that he learned that his workers' compensation claim had been denied from his lawyer around a year after the alleged incident. However, a NOC was issued on December 26, 2017, less than two months after the alleged injury. (*H.T. p.23, l.25*).

44. When Claimant saw Dr. Reichhardt, he reported using about one gram of marijuana every two to three weeks. At hearing, Claimant admitted to such use (*H.T. p.68, l.18*).

45. At hearing, Claimant testified that on the day of the injury, he tested positive for marijuana and that he knew that he was not allowed to be on the jobsite if he had marijuana in his system (*H.T. p.69, ll.9-16*). He also testified that he was terminated due to violating Respondent Employer's drug policy (*H.T. p.70, l.1*). Claimant testified that he had been terminated and rehired on three different occasions by Employer (*H.T. p.71, l.3*).

46. Mr. Bounds testified that Claimant was terminated for the positive drug test, which violates Employer's policy contained on page 312 of Respondents' Exhibits under "Drugs and Alcohol" - *The use…or presence in the body of illegal drugs, controlled substances, marijuana…is strictly prohibited (*emphasis added*).*

47. Dr. Lindberg testified as an expert in orthopedics, specializing in shoulders (*H.T. p.197, l.13*). Dr. Lindberg testified that he evaluated Claimant in person and had the opportunity to review medical records dating back to 2011 (*H.T. p.137, ll.22-25; H.T. p.138, l.1*). Dr. Lindberg testified that to evaluate Claimant fully, he wanted to obtain an MRI, which was eventually ordered by Dr. Reichhardt (*H.T. p.139, ll.5-7*). Dr. Lindberg opined that after review of the MRI, as well as his physical examination, the purported mechanism of injury "would not have caused a posterior labral tear." Dr. Lindberg explained that the forces described to him were inconsistent with causing a SLAP lesion or a posterior labral tear (*H.T. p.140, ll.5-8*).

48. Dr. Lindberg explained that SLAP lesions are caused by forceful hyperabduction, external rotation and internal rotation, which are severe rotational forces that cause SLAP tears, or a dislocation of the shoulder (*H.T. p.140, ll.10-16*).

49. In support, Dr. Lindberg testified that Claimant's "car accident and rolling a car six times, bike wreck, history of playing football, multiple injuries and the rock climbing fall all have a higher probability of causing a SLAP lesion than did lifting that 30 pound beam" (*H.T. p.143, ll.15-18*). Dr. Lindberg testified that Claimant's histories to the various providers were all "different" (*H.T. p.141, l.4*). He testified that Claimant's reported mechanism of injury and symptoms thereafter were inconsistent with those reported to him (*H.T. p.144, ll.8-25*). Dr. Lindberg testified that inconsistencies noted under Dr. Reichhardt's exam of right shoulder range of motion and spontaneous movement typically indicate symptom magnification (*H.T. p.146, ll.1-7*). Dr. Lindberg testified that his opinions were supported by Dr. Reichhardt's opinion that Claimant's weakness and sensory loss were difficult to explain based upon the reported work injury (*H.T. p.146, l.17*). Dr. Lindberg testified that Dr. Choudhry, the orthopedic specialist who examined Claimant on October 30, 2017, noted discomfort around the AC joint region down to the scapular thoracic, which is inconsistent with a labral tear (*H.T. p.147, ll.1-5*). Based on the report of Dr. Choudhry, Dr. Lindberg opined that there was no concern for a shoulder joint injury (*H.T. p.147, l.14*).

50. Post-hearing Claimant requested that Dr. Hughes review Dr. Lindberg's IME report and Dr. Yee's operative report and provide post-hearing testimony via deposition taken May 20, 2019. Dr. Hughes testified as an expert in occupational medicine. Dr. Hughes testified that some kind of a prior trauma to the shoulder would increase the propensity for further injury to the shoulder (*Dr. H Dep. Tr. p.7, ll.13-15*). Dr. Hughes acknowledged that he did not have the training to answer questions pertaining to diagnosing a labral tear via an MRI with or without contrast, as he acknowledged he is not a radiologist, nor is he an orthopedic surgeon, unlike Dr. Lindberg (*Dr. H Dep. Tr. p.7, ll.23-25*). Dr. Hughes neither examined Claimant, nor did he interview Claimant (*Dr. H Dep. Tr. p.13, ll.1-4*). Dr. Hughes' review of the medical records was limited to the IME report of Dr. Lindberg and Dr. Yee's operative report (*Dr. H Dep. Tr. p.15, l.11*). Dr. Hughes' understanding of the reported mechanism of injury was limited to the operative report, which specifically indicated that a beam fell at work onto Claimant's shoulder and the history provided to Dr. Lindberg that he was lifting a heavy object overhead and it slipped down,

causing pain and numbness into his right shoulder (*Dr. H Dep. Tr. p.13, ll.11-25*). Dr. Hughes conceded that Claimant's reported mechanism of injury to Dr. Reichhardt and Dr. Choudhry was inconsistent with what he outlined in his interrogatories, as well as what he reported on the day of the alleged injury to Nurse Practitioner, Michelle Amacker (*Dr. H Dep. Tr. p.17, ll.18-21; p.18, ll.7-10*).

51. After being presented with Claimant's medical records, specifically concerning the purported mechanism of injury, Dr. Hughes agreed that there were inconsistencies in what happened at the time of the alleged work-related injury (*Dr. H Dep. Tr. p.22, ll.12*). Dr. Hughes acknowledged that Claimant's medical history as reported to Dr. Reichhardt was inconsistent with the medical record documentation (*Dr. H Dep. Tr. p.18, ll.5-6*). Dr. Hughes conceded that he had no knowledge of a motor vehicle accident or collision (*Dr. H Dep. Tr. p.25, ll.16-17)*. Dr. Hughes acknowledged that Claimant's history reported to Dr. Milford and that history provided to Richard Bounds was consistent, in that he injured his shoulder at the time of the motor vehicle accident (*Dr. H Dep. Tr. p.27, ll.20-21*).

52. Dr. Hughes testified that the motor vehicle accident was a possible explanation for the tears that were identified at the time of the surgery (*Dr. H Dep. Tr. p.30, ll.3*). Dr. Hughes testified that he was unaware that Claimant was working light duty due to his right upper extremity symptoms prior to the October 27, 2017 alleged injury. Dr. Hughes acknowledged that he did not even know what a type 2 SLAP tear was and that he would defer to an orthopedist regarding the difference between such tears (*Dr. H Dep. Tr. p.30, l.15; p.31. l.6*). Dr. Hughes testified that it would not take a massive muscle contraction to cause the kind of tear identified at the time of surgery, given Claimant's history of a reconstruction (*Dr. H Dep. Tr. p.31, ll.19-20*). However, Dr. Hughes acknowledged he had not had the opportunity to review Claimant's prior surgical records to obtain the location of where the surgery was actually performed (*Dr. H Dep. Tr. p.31, l.25*). When presented with all of the other symptoms that Claimant initially related to the work injury, Dr. Hughes agreed that none of the other symptoms related to such alleged injury (*Dr. H Dep. Tr. p.38, l.10*). Dr. Hughes conceded that Claimant's shoulder pain is possibly related to his preexisting conditions (*Dr. H Dep. Tr. p.46, l.3*).

53. In response to Dr. Hughes' testimony, Dr. Lindberg testified via deposition on June 13, 2019. Dr. Lindberg testified that Dr. Hughes' understanding of a SLAP tear was incorrect, and it is not a more specific type of labral tear (*Dr. L Dep. Tr. p.4, l.4*). He again opined that the most common way a SLAP tear occurs is with a circumduction motion, like throwing a football or a baseball with force, or falling with great force on an outstretched hand (*Dr. L Dep. Tr. p.4, ll.18-24*). Dr. Lindberg testified that Claimant most probably had a posterior subluxation or dislocation of his humeral head and that that is the most common cause, along with a grand mal seizure, of the type of force that is required to cause the tear identified at the time of surgery (*Dr. L Dep. Tr. p.5, ll.4-10*). He testified, "**there's no way that lifting the shoring post could have caused the posterior dislocation**" (emphasis added) (*Dr. L Dep. Tr. p.5, ll.15-17*).

54. As to the predisposition or weakened shoulder theory as proposed by Dr. Hughes, Dr. Lindberg testified that Claimant's original surgery reflected a labral type I tear

and that the location of the tears at question are completely different entities with different locations (*Dr. L Dep. Tr. p.6, ll.4-9*). He explained that the second surgical procedure in question was not involved at all with the prior location (*Dr. L Dep. Tr. p.6, ll.19*). He explained that at the time of the 2018 surgery, Claimant had a posterior labral tear and that there was nothing wrong with Claimant's posterior labrum at the time of the initial surgery (*Dr. L Dep. Tr. p.6, ll.17-19*). He emphasized that Claimant's acromioclavicular reconstruction the initial operation, "had nothing to do with his joint or his labrum." He explained that the AC joint is actually outside the shoulder joint itself and that inside the shoulder joint is where the labrum is, so his original surgery could not have caused any damage to the labrum (*Dr. L Dep. Tr. p.7, ll.1-7*). Dr. Lindberg testified, "once again, Dr. Hughes demonstrates lack of knowledge of the anatomy of the shoulder joint. The reconstruction of the AC—he had a reconstruction of the AC joint which had nothing to do with his labrum" (*Dr. L Dep. Tr. p.15, ll.24-25; p.16, ll.1-2*). At the time of the AC reconstruction, he also had a debridement of the type I superior labral tear, and that debridement of the labral tear would have nothing to do with a type II SLAP lesion (*Dr. L Dep. Tr. p.5, ll.21-23*).

55. Dr. Lindberg then drafted a diagram of the anatomy and identified the locations of the type I and type II tears, which are in different locations of the shoulder (*Dr. L Dep. Tr. p.7, ll.19-23; Ex. A to the Deposition Transcript of Dr. Lindberg)*.

56. To the extent Dr. Hughes testified that the mechanism of injury reported by Claimant would be enough to cause the labral tear if Claimant had prior trauma to the shoulder, particularly a glenohumeral dislocation, Dr. Lindberg explained that a glenohumeral dislocation can cause a labral tear, but not lifting the post as described by Claimant (*Dr. L Dep. Tr. p.9, ll.5-21*). Dr. Lindberg testified that Claimant has a history of prior glenohumeral dislocations (*Dr. L Dep. Tr. p.9, l.24)*. Dr. Lindberg explained that this was not an aggravation type situation and was not "the straw that broke the camel's back. Not even close." When asked about this theory, Dr. Lindberg opined:

> No, not—not even close. I mean, the straw that broke the camel's back theory is, in this case, completely inaccurate. If he suffered a subluxation of his shoulder, it would be secondary to a prior labral tear. There was no increase in the labral tear. There was no acute labral tear. That doesn't happen that way. This is a very trivial force. That doesn't cause a shoulder dislocation unless you have congenital ligamentous laxity or if you have a prior labral tear with prior dislocation that when—he has a subluxation when he lifted the beam—or the post. So that's a manifestation of his underlying instability. It's not the straw that broke the camel's back.
>
> (*Dr. L Dep. Tr. p.11, ll.4-15*).

57. Dr. Lindberg testified that the mechanism of injury is inconsistent with causing a SLAP lesion or a posterior labral tear (Dr. L Dep. Tr. p.14, ll.20-25). Dr. Lindberg testified:

> Dr. Hughes isn't an orthopedic surgeon. Dr. Hughes doesn't even know what a SLAP tear is. He doesn't know what a type I is. He doesn't know what a SLAP type II lesion is. How can he opine on causality when he doesn't even know what he's opining on a causality of?
>
> (Dr. L Dep. Tr. p.15, ll.13-17)

58. Dr. Lindberg testified about the importance of reviewing prior medical records regarding the body part for which the physician is providing an opinion on causation (*Dr. L Dep. Tr. p.16, ll.3-8*). Dr. Lindberg testified that there were more forces involved in rolling a vehicle six times than lifting a shoring post and that he agreed with Dr. Hughes that it was possible that Claimant sustained the tears identified at the time of surgery when he rolled his car six times (*Dr. L Dep. Tr. p.18, ll.8-18*). He further testified that this etiology was consistent with what Claimant reported to Dr. Milford on August 13, 2018 (*Dr. L Dep. Tr. p.18, l.25*). In sum, Dr. Lindberg testified that rolling a car six times, football, bicycle wreck, rock climbing accident, all of which are much more significant than lifting a shoring post for purposes of causing the tears identified at surgery (*Dr. L Dep. Tr. p.21, ll.12-14*).

59. Based on the evidence presented in this case, the ALJ does not find Claimant to be credible regarding his prior shoulder symptoms, the progression of his shoulder symptoms, and the cause of any increase in his shoulder symptoms.

60. Nor does the ALJ find Claimant's testimony about the purported mechanism of injury and the condition of his right shoulder immediately before the alleged work injury to be credible. Claimant has provided multiple, and inconsistent, versions about how he allegedly hurt his shoulder at work on October 27, 2017. And, the differences between the various versions are great and are not found to be minor and immaterial variations that can occur when someone describes an injury numerous times to different people.

61. The ALJ finds that the opinions of Dr. Lindberg as set forth in his report and during his testimony at hearing and during his deposition on June 13, 2019, to be credible and highly persuasive.

62. Moreover, based on Dr. Lindberg's testimony and expertise as an orthopedic surgeon and command of the anatomy of the shoulder joint and Claimant's underlying conditions for which he was seeking treatment, the ALJ credits his opinions over Dr. Hughes' opinions.

63. The ALJ finds Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable work injury to his right shoulder.

64. Thus, the ALJ is unable to find Claimant has met his burden of proof in establishing that he sustained a compensable injury on October 27, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment on October 27, 2017.

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

Determining whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is generally one of fact, which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996).

Claimant failed to establish by a preponderance of the evidence that it is more probably true than not that on October 27, 2017 he sustained any injury arising out of and in the course of his employment that proximately caused an injury necessitating the need for medical treatment or that caused any disability. Even if Claimant had an increase in symptoms on October 27, 2017, any increase in symptoms did not signal an injury to the shoulder. Instead, any increase in symptoms represented the recurrent consequences of his preexisting shoulder problems as reported to both Mr. Jarett and Mr. Bounds and as reflected in the prior medical records, notably the report to Dr.

Milford, his personal neurologist. As found, this conclusion is supported by the credible opinions of Dr. Lindberg with regard to the lack of a mechanism of injury sufficient to cause a tear necessitating the need for any medical treatment.

As found, Claimant's denial of prior shoulder problems is contradicted by histories the Claimant had given to medical providers, which the ALJ finds more reliable than Claimant's hearing testimony because the histories were given for the purpose of receiving the appropriate treatment for Claimant's shoulders and the hearing testimony was for the purpose of receiving workers' compensation benefits. Rather, the testimony of Brian Jarrett, who is no longer with the employer, and that of Richard Bounds is reliable as these individuals have nothing to gain by such testimony. In fact, Brian Jarrett testified he always really liked Claimant and Richard Bounds was a family friend and had worked with Claimant and Claimant's dad for years. These individuals have nothing to gain or lose by offering credible testimony. Claimant admittedly is a poor historian and could not recall specific events, injuries and treatment to his right shoulder, nor did he provide a consistent mechanism of injury to his providers that would support a causal connection between the alleged injury and need for any medical treatment.

As found, Dr. Lindberg's opinions are based on a complete review of Claimant's medical history and therefore based on a greater amount of research and study into the Claimant's specific case, thus, it is more credible than the opinion of Dr. Hughes, who conceded he had not reviewed Claimant's prior medical records. And Dr. Lindberg possesses the expertise as a shoulder surgeon, where as Dr. Hughes admitted to not even knowing the difference between a SLAP I and a SLAP II tear, an integral component to the causation analysis in this case.

Moreover, Dr. Hughes' causation opinions were based, in large part, upon the history provided by Claimant to other providers. And, as found, Claimant is not a reliable or credible historian when relating his prior history and what allegedly occurred on October 27, 2017. Claimant did not provide the various medical providers accurate, consistent, and reliable information about his prior shoulder problems, the progression of his shoulder problems, and the various accidents he was involved in before the alleged incident of October 27, 2017. For example, Dr. Hughes did not know that Claimant was in an automobile accident in May of 2016, which involved Claimant rolling his automobile six times. Dr. Hughes was also unaware of the climbing accident where Claimant fell about ten feet and sought medical treatment. In the end, Dr. Hughes had insufficient and unreliable information to use in forming his opinions. Like a house built on sand, an expert's opinion is no better than the facts on which it is based. *See Kennemur v. State of California*, 184 Cal. Rptr. 393, 402–03 (Cal. Ct. App. 1982). Thus, based on the insufficient and unreliable facts Dr. Hughes used in rendering his opinions, as well as his unfamiliarity with the medical conditions impacting Claimant's shoulder joint as admitted by Dr. Hughes and testified to by Dr. Lindberg, the ALJ does not credit Dr. Hughes' opinions.

Moreover, as credibly testified to by Mr. Bounds, on the morning of October 27, 2017, Claimant asked if he could have the day off so he could spend the day with his "baby's momma" who was coming to town. When Mr. Bounds told Claimant that they were shorthanded and needed him to work, Claimant was adamant that he had to have

the day off to be with his baby's mother. Then, around 11:00 a.m., Claimant told Mr. Bounds he hurt his shoulder and just wanted to go home and rest. When Mr. Bounds started to ask him some questions about the alleged injury, Claimant again said he had wanted off the day off and asked if he could just go home and rest his shoulder. Moreover, when Mr. Bounds indicated that if Claimant was alleging a work injury, he would have to go to the doctor to be evaluated, Claimant stated that it was an old injury and he did not want to go to the doctor - he just wanted to go home and rest. This exchange also establishes Claimant had prior shoulder problems and that his primary goal from the minute he got to work that day was to take the day off.

Therefore, based on the totality of the evidence, the ALJ finds and concludes Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable injury.

ORDER

Based upon the foregoing specific findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 9, 2019.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to withdraw their July 5, 2018 General Admission of Liability (GAL) acknowledging Claimant suffered an occupational disease in the form of left middle trigger finger that began on April 27, 2018 during the course and scope of her employment with Employer.

2. A determination of Claimant's Average Weekly Wage (AWW).

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive Temporary Partial Disability (TPD) benefits for the period June 25, 2018 through January 6, 2019.

4. A determination of Claimant's impairment rating for purposes of calculating Permanent Partial Disability (PPD) benefits.

FINDINGS OF FACT

1. Claimant began working for Employer in July 2012 as a meat cutter. The position required Claimant to use a hook with her left hand to pull meat toward her and a knife in her right hand to cut the meat. She developed middle finger swelling and pain shortly after beginning her employment. After receiving conservative medical treatment she began working in Employer's meat-packing department. She subsequently worked in the meat-packing department without restrictions until 2014.

2. Claimant sought a transfer to work on the "kill floor" of Employer's facility. She once again utilized a knife in her right hand and a hook in her left hand to cut and trim carcasses. Claimant noted she only experienced minor discomfort while performing her job duties. In February 2018 Claimant sought a transfer back to the meat-packing department. On approximately April 27, 2018 Claimant developed "locking" in her left middle finger. She subsequently sought medical treatment for her symptoms.

3. On June 8, 2018 Claimant underwent an initial occupational medical evaluation with Marc-Andre R. Chimonas, M.D. at Banner Occupational Health Clinic. Claimant explained that her job duties involved frequent moving of small pieces of meat weighing up to four pounds without any power gripping. Claimant reported increased pain of the MP and PIP joints of the left middle finger with occasional radiation to the volar forearm. She noted that she experiences frequent triggering with extension of the MP joint Claimant remarked that the pain in the MP joint had progressed rapidly within one week of returning to packaging. On physical examination, Claimant exhibited difficulty actively fully flexing all three joints in the left middle finger and there was "obvious palpable and audible triggering of the MP joint." Dr. Chimonas determined that Claimant had advanced trigger finger of the left middle finger. He concluded that it was unlikely that

Claimant satisfied the criteria in the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*) for a cumulative trauma disorder. Nevertheless, Dr. Chimonas noted that Claimant's trimming position might satisfy the criteria for a cumulative trauma disorder because it required forceful gripping of a hook with the left hand.

4. On June 22, 2018 Claimant returned to Dr. Chimonas for an examination. Claimant continued to report left third trigger finger symptoms. Dr. Chimonas mentioned that he had spoken to Employer's health and safety manager about Claimant's job duties. He explained that Claimant's duties involved placing meat weighing from 1-3 pounds into a plastic bag several times each minute. The temperature in Claimant's work environment was about 36 degrees. Claimant's job description reflected required grip strength of 5-25 pounds with constant repetitive hand use, hand grip and pinch grip. Dr. Chimonas thus determined that Claimant met the secondary risk factor in the *Guidelines* of cold work below 45 degrees for at least four hours. Furthermore, Claimant engaged in repetitive flexion of her digits. Dr. Chimonas thus concluded that Claimant satisfied the cumulative trauma criteria in the *Guidelines* for the development of trigger finger. He assigned restrictions including working at temperatures in excess of 45 degrees for at least five hours per shift, lifting no more than one pound with her left hand and no lifting greater than 15 pounds with her right hand to avoid cross strain.

5. On July 5, 2018 Respondents filed a General Admission of Liability (GAL) acknowledging Claimant suffered an occupational disease in the form of left middle trigger finger. Claimant subsequently received conservative treatment, including injections, for her symptoms. On August 13, 2018 Claimant underwent a left middle finger A1 pulley release procedure with Nicholas J. Noce. M.D.

6. Claimant continued to visit Dr. Chimonas for regular follow-up appointments. On September 28, 2018 Claimant confirmed that she had been working modified duty that included laundry and light cleaning work. On October 19, 2018 Dr. Chimonas noted that Claimant had made "no improvement" since their last appointment and she continued to be unable to completely extend the PIP and DIP joint of the affected digit. He further noted that her occupational therapy had ended because she was no longer making any progress in her recovery. Dr. Chimonas determined that Claimant had "plateaued" in her recovery and he referred her back to Dr. Noce. By November 9, 2018 Claimant had regained range of motion "quite rapidly" after undergoing additional injections with Dr. Noce.

7. On December 7, 2018 Claimant underwent an independent medical examination with Lawrence Lesnak, D.O. Dr. Lesnak reviewed Claimant's treatment records and conducted a physical examination. He noted full active and passive range of motion of Claimant's left middle finger, including her MCP, PIP and DIP joints. Dr. Lesnak remarked that there was no evidence of any "locking" whatsoever or residual signs of triggering. He commented that Claimant reported ongoing "pulling" sensations in her affected digit but denied the presence of any "locking" sensations. He further noted that Claimant reported significant improvement of her symptoms after her postoperative injection.

8. Relying on the *Guidelines*, Dr. Lesnak concluded that Claimant's left middle finger trigger condition was not caused by her job duties in Employer's meat packing department in April 2018. He explained that under Rule 17 of the *Guidelines*, diagnosis-based risk factors for trigger finger reflect that there is "some" evidence that hand tool use for six hours per day could be a risk factor. He further noted that non-evidence-based risk factors could include repetitive digital flexion for at least four hours per day. However, Dr. Lesnak emphasized that Claimant noted she did not begin experiencing triggering or locking symptoms until February 2018 when she was in a meat packaging position that met neither of the preceding factors. Although Dr. Lesnak agreed with Dr. Chimonas that Claimant's reported responsibilities in her "kill floor" position could "possibly be a risk factor" under the Rule 17 criteria, she commented that her locking symptoms did not begin until two months after she had already left the position. Dr. Lesnak therefore concluded that placing small pieces of meat into bags, without the use of hand tools, would not satisfy the criteria contained in Rule 17 of the *Guidelines*.

9. Dr. Lesnak also determined that no permanent impairment was appropriate because Claimant did not exhibit any evidence of range of motion deficits during his examination. He further commented that no post-MMI medical maintenance treatment would be reasonable, necessary or causally related to any occupational injury. Finally, Dr. Lesnak concluded that permanent work restrictions were not warranted.

10. On January 29, 2019 Dr. Chimonas determined that Claimant had reached Maximum Medical Improvement (MMI). On February 12, 2019 Dr. Chimonas assigned Claimant an 8% left middle finger impairment rating. The rating was based upon normal range of motion for the DIP and PIP joints, but slightly restricted flexion and extension of the MP joint. The impairment converted to a 2% left upper extremity rating. Dr. Chimonas did not assign any permanent work restrictions.

11. On June 6, 2019 the parties conducted the pre-hearing evidentiary deposition of Dr. Lesnak. He reiterated that Claimant suffered from left middle trigger finger. He explained that, under Rule 17, Exhibit 5 of the *Guidelines,* the diagnosis-based risk factors for trigger finger included evidence of hand tool use for six hours or more in an eight-hour workday and non-evidence based risk factors included repetitive digital flexion. Dr. Lesnak noted that Claimant's job duties consisted of standing at a table while placing four to five light pieces of meat into a plastic bag.

12. Dr. Lesnak noted that, since his independent medical examination, he had reviewed Claimant's detailed job description as a "chuck flap hind quarter pack." The job description specifically stated that Claimant did not utilize a hook or knife. The position only involved placing one to one and one-half pound pieces of meat into a plastic bag. Dr. Lesnak reasoned that, because Claimant did not use hand tools or engage in repetitive digital flexion, her work activities did not cause her left middle finger symptoms. He commented that Claimant did not report any symptoms until April 2018 or approximately two months after her return to the meat packaging position.

13. Dr. Lesnak disagreed with Dr. Chimonas' causation assessment. He noted that Dr. Chimonas had identified cold work as a risk factor for the development of trigger finger. However, Dr. Lesnak reiterated that a cold work environment is not a risk factor

for the development of trigger finger under Rule 17 of the *Guidelines*. He also noted that the Rule 17 *Guidelines* are specific to full flexion or continuous repetitive gripping of a handle, rather than grabbing pieces of meat. Thus, Dr. Lesnak determined that the job description of a "chuck flap hind quarter pack" did not meet the specific risk criteria for an occupational disease in the *Guidelines*.

14. The record includes a Physical Demands Summary for Claimant's position as a "Bag Chuck Flap" for Employer. The description provides that the employee stands in front of a work area, grasps the Chuck Flap or meat product with both hands and places the meat into a plastic bag on a worktable. After placing five pieces of Chuck Flap into a bag, the employee grabs the bag and puts it onto the belt line so it can move to the next work area. The average time to perform each job varies from about 15-20 seconds and the rest time between each job is about three seconds. Each piece of meat weighs between one and one and one-half pounds and a filled plastic bag weighs about five pounds. Employees do not use hand tools to perform the job of "Bag Chuck Flap." The Physical Demands Summary also specifies that the position involves constant, repetitive use of the hand; hand grip; pinch grip and pushing or pulling. The grip force strength is 5-25 pounds depending on the weight of each product.

15. For the 13-week period preceding Claimant's date of injury or from January 21, 2018 to April 21, 2018 Claimant earned total wages of $8,431.53. Dividing $8,431.53 by 13 yields an Average Weekly Wage (AWW) of $648.58. An AWW of $648.58 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

16. Respondents have failed to demonstrate that it is more probably true than not that they are entitled to withdraw their July 5, 2018 GAL acknowledging Claimant suffered an occupational disease in the form of left middle trigger finger that began on April 27, 2018 during the course and scope of her employment with Employer. Initially, on approximately April 27, 2018 Claimant developed "locking" in her left middle finger. She subsequently sought medical treatment for her symptoms. After considering Claimant's job duties, Dr. Chimonas noted that Claimant placed meat weighing from 1-3 pounds into a plastic bag several times each minute. The temperature in Claimant's work environment was about 36 degrees. Dr. Chimonas remarked that Claimant's job description reflects required grip strength of 5-25 pounds with constant repetitive hand use, hand grip and pinch grip. He determined that Claimant met the secondary risk factor in the *Guidelines* of cold work below 45 degrees for at least four hours. Furthermore, Claimant engaged in repetitive flexion of her digits. Dr. Chimonas thus concluded that Claimant satisfied the cumulative trauma criteria in the *Guidelines* for the development of trigger finger.

17. Dr. Lesnak disagreed with Dr. Chimonas' causation assessment. He noted that Claimant's job description specified she did not utilize a hook or knife. Dr. Lesnak remarked that the position only involved placing one to one and one-half pound pieces of meat into a plastic bag. He reasoned that, because Claimant did not use hand tools or engage in repetitive digital flexion, her work activities did not cause her left middle finger symptoms. He also noted that Dr. Chimonas had identified cold work as a risk factor for the development of trigger finger. However, Dr. Lesnak remarked that a cold work environment was not a risk factor for the development of trigger finger under Rule 17 of

the *Guidelines*. He also commented that the Rule 17 *Guidelines* are specific to full flexion or continuous repetitive gripping of a handle, rather than grabbing pieces of meat. Dr. Lesnak thus determined that Claimant's work activities did not meet the specific risk criteria in the *Guidelines*.

18. Despite Dr. Lesnak's analysis, a review of Claimant's job description in conjunction with the risk factors for the development of trigger finger delineated in the *Guidelines*, reflect that Claimant's work activities likely caused her to develop left middle trigger finger. The Physical Demands Summary for Claimant's position provides that the employee stands in front of a work area, grasps the chuck flap or meat product with both hands and places the meat into a plastic bag on a worktable. After placing five pieces of meat into a bag, the employee grabs the bag and puts it onto the belt line so it can move to the next work area. The average time to perform each job varies from about 15-20 seconds and the rest time between jobs is about three seconds. Each piece of meat weighs between one and one and one-half pounds and a filled plastic bag weighs about five pounds. Employees do not use and tools to perform the job of "Bag Chuck Flap." Notably, the Physical Demands Summary specifies that the position involves constant: repetitive use of the hand, hand grip, pinch grip and pushing or pulling. The grip force strength is 5-25 pounds depending on the weight of each product.

19. The temperature in Claimant's work area was about 36 degrees and thus constituted a cold work environment. Because cold environment is a Secondary Risk Factor pursuant to Rule 17, Exhibit 5 of the *Guidelines* a causation analysis for trigger finger is required. Digital flexion for four hours each day is listed as a non-evidence-based risk factor under Rule 17, Exhibit 5. The Physical Demands Summary specifies that Claimant's job duties involved constant: repetitive use of the hand, hand grip, pinch grip and pushing or pulling. Claimant's position thus includes an additional risk factor besides a cold work environment. Based on the Physical Demands Summary, a review of the medical records and the persuasive opinion of Dr. Chimonas, Claimant engaged in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities caused, intensified, or, to a reasonable degree, aggravated her left middle trigger finger condition to produce a need for medical treatment. Because Respondents have failed to demonstrate that Claimant's case is not work-related, they are not permitted to withdraw the July 5, 2018 GAL.

20. Claimant has proven that it is more probably true than not that she is entitled to receive TPD benefits for the period June 25, 2018 through January 6, 2019. On June 22, 2018 Dr. Chimonas assigned Claimant restrictions including working at temperatures in excess of 45 degrees for at least five hours per shift, lifting no more than one pound with her left hand and no lifting greater than 15 pounds with her right hand to avoid cross strain. Claimant was not released from the restrictions until she reached MMI on January 29, 2019. However, Claimant's regular job duties involved working at temperatures below 45 degrees and repetitively lifting pieces of meat weighing in excess of one pound. The work restrictions thus impaired Claimant's ability to effectively and properly perform her regular employment. Claimant is thus entitled to receive TPD benefits to the extent she suffered a wage loss during the period June 25, 2018 through January 6, 2019 based on an AWW of $648.58.

21. Claimant suffered a 2% left upper extremity impairment rating as a result of her April 27, 2018 left middle trigger finger injury. On February 12, 2019 Dr. Chimonas assigned Claimant an 8% left middle finger impairment rating. The rating was based upon normal range of motion for the DIP and PIP joints, but slightly restricted flexion and extension of the MP joint. The functional impairment converted to a 2% left upper extremity rating. In contrast, Dr. Lesnak determined that no permanent impairment was appropriate because Claimant did not exhibit any evidence of range of motion deficits during his examination. However, based on Dr. Chimonas persuasive determination, documented range of motion deficits and inability to adequately use her left hand, Claimant suffered a 2% left upper extremity functional impairment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by

> the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. When the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; see also *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." Specifically, respondents must prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1), C.R.S.

7. Rule 17, Exhibit 5 provides an algorithm for evaluating Cumulative Trauma Conditions (CTC) pursuant to the *Guidelines*. In addressing applicability, the *Guidelines* note that "CTC's of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures." W.C.R.P. Rule 17, Exhibit 5, p. 6. In determining a diagnosis when performing a cumulative trauma analysis the *Guidelines* delineate specific musculoskeletal conditions and peripheral nerve disorders. Nevertheless, the Guidelines provide that "[l]ess common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment." W.C.R.P. Rule 17, Exhibit 5, p. 21.

8. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's

> voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p. 20.

9. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing two pounds or more. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. If neither Primary nor Secondary Risk Factors are present, the *Guidelines* provide that "the case is probably not job related." W.C.R.P. Rule 17, Exhibit 5, p. 24.

10. Rule 17, Exhibit 5 of the *Guidelines* specifically delineates cold working environment as a Secondary Risk Factor. The Guidelines provide that the "risk factor does not stand alone. It is used in combination with other secondary risk factors. Refer to the following Diagnostic-Based Risk Factors Table." W.C.R.P. Rule 17, Exhibit 5, p. 27. The algorithm specifically provides that, if a Secondary Risk Factor is present, a causation analysis should proceed to step 4. W.C.R.P. Rule 17, Exhibit 5, p. 25. If a Secondary Risk Factor does not meet a diagnosis-based risk factor, then a determination must be made about whether other risk factors are present. The Risk Factors Definition Table for trigger finger includes hand tool use for six hours as an evidence-based risk factor and repeated digital flexion for four hours each day as a non-evidence-based risk factor. W.C.R.P. Rule 17, Exhibit 5, p. 32. The algorithm specifies that, if an additional risk factor is present from the diagnosis-based risk factor table that does not overlap the Secondary Risk Factor, "the case may be work related." W.C.R.P. Rule 17, Exhibit 5, p. 25.

11. As found, Respondents have failed to demonstrate by a preponderance of the evidence that they are entitled to withdraw their July 5, 2018 GAL acknowledging Claimant suffered an occupational disease in the form of left middle trigger finger that began on April 27, 2018 during the course and scope of her employment with Employer. Initially, on approximately April 27, 2018 Claimant developed "locking" in her left middle finger. She subsequently sought medical treatment for her symptoms. After considering Claimant's job duties, Dr. Chimonas noted that Claimant placed meat weighing from 1-3 pounds into a plastic bag several times each minute. The temperature in Claimant's work environment was about 36 degrees. Dr. Chimonas remarked that Claimant's job

description reflects required grip strength of 5-25 pounds with constant repetitive hand use, hand grip and pinch grip. He determined that Claimant met the secondary risk factor in the *Guidelines* of cold work below 45 degrees for at least four hours. Furthermore, Claimant engaged in repetitive flexion of her digits. Dr. Chimonas thus concluded that Claimant satisfied the cumulative trauma criteria in the *Guidelines* for the development of trigger finger.

12. As found, Dr. Lesnak disagreed with Dr. Chimonas' causation assessment. He noted that Claimant's job description specified she did not utilize a hook or knife. Dr. Lesnak remarked that the position only involved placing one to one and one-half pound pieces of meat into a plastic bag. He reasoned that, because Claimant did not use hand tools or engage in repetitive digital flexion, her work activities did not cause her left middle finger symptoms. He also noted that Dr. Chimonas had identified cold work as a risk factor for the development of trigger finger. However, Dr. Lesnak remarked that a cold work environment was not a risk factor for the development of trigger finger under Rule 17 of the *Guidelines*. He also commented that the Rule 17 *Guidelines* are specific to full flexion or continuous repetitive gripping of a handle, rather than grabbing pieces of meat. Dr. Lesnak thus determined that Claimant's work activities did not meet the specific risk criteria in the *Guidelines*.

13. As found, despite Dr. Lesnak's analysis, a review of Claimant's job description in conjunction with the risk factors for the development of trigger finger delineated in the *Guidelines*, reflect that Claimant's work activities likely caused her to develop left middle trigger finger. The Physical Demands Summary for Claimant's position provides that the employee stands in front of a work area, grasps the chuck flap or meat product with both hands and places the meat into a plastic bag on a worktable. After placing five pieces of meat into a bag, the employee grabs the bag and puts it onto the belt line so it can move to the next work area. The average time to perform each job varies from about 15-20 seconds and the rest time between jobs is about three seconds. Each piece of meat weighs between one and one and one-half pounds and a filled plastic bag weighs about five pounds. Employees do not use and tools to perform the job of "Bag Chuck Flap." Notably, the Physical Demands Summary specifies that the position involves constant: repetitive use of the hand, hand grip, pinch grip and pushing or pulling. The grip force strength is 5-25 pounds depending on the weight of each product.

14. As found, the temperature in Claimant's work area was about 36 degrees and thus constituted a cold work environment. Because cold environment is a Secondary Risk Factor pursuant to Rule 17, Exhibit 5 of the *Guidelines* a causation analysis for trigger finger is required. Digital flexion for four hours each day is listed as a non-evidence-based risk factor under Rule 17, Exhibit 5. The Physical Demands Summary specifies that Claimant's job duties involved constant: repetitive use of the hand, hand grip, pinch grip and pushing or pulling. Claimant's position thus includes an additional risk factor besides a cold work environment. Based on the Physical Demands Summary, a review of the medical records and the persuasive opinion of Dr. Chimonas, Claimant engaged in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities caused, intensified, or, to a reasonable degree, aggravated her left middle trigger finger condition to produce a need for medical treatment. Because Respondents have failed to demonstrate that

Claimant's case is not work-related, they are not permitted to withdraw the July 5, 2018 GAL.

Average Weekly Wage

15. Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *see In re Broomfield,* W.C. No. 4-651-471 (ICAO, Mar. 5, 2007). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell,* 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine whether fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability instead of the earnings on the date of the injury. *Id.*

16. As found, for the 13-week period preceding Claimant's date of injury or from January 21, 2018 to April 21, 2018 Claimant earned total wages of $8,431.53. Dividing $8,431.53 by 13 yields an Average Weekly Wage (AWW) of $648.58. An AWW of $648.58 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Partial Disability Benefits

17. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

18. As found, Claimant has proven by a preponderance of the evidence that she is entitled to receive TPD benefits for the period June 25, 2018 through January 6,

2019. On June 22, 2018 Dr. Chimonas assigned Claimant restrictions including working at temperatures in excess of 45 degrees for at least five hours per shift, lifting no more than one pound with her left hand and no lifting greater than 15 pounds with her right hand to avoid cross strain. Claimant was not released from the restrictions until she reached MMI on January 29, 2019. However, Claimant's regular job duties involved working at temperatures below 45 degrees and repetitively lifting pieces of meat weighing in excess of one pound. The work restrictions thus impaired Claimant's ability to effectively and properly perform her regular employment. Claimant is thus entitled to receive TPD benefits to the extent she suffered a wage loss during the period June 25, 2018 through January 6, 2019 based on an AWW of $648.58.

Permanent Partial Disability Benefits

19. Permanent Partial Disability (PPD) benefits do not require a showing of actual wage loss but are instead based on the potential loss of future earning capacity. *Duran v. Industrial Claim Appeals Office*, 883 P.2d 477 (Colo.1994); *see also Hussion v. Industrial Claim Appeals Office*, 991 P.2d 346 (Colo. App.1999) (TTD benefits compensate employee for lost wages, while PPD benefits compensate for the loss of future earning capacity). The Workers' Compensation system is premised on the assumption that the future earning capacity of a partially disabled worker will be less than that of a non-disabled worker. *Business Ins. Co. v. BFI Waste Systems of North America*, Inc. 23 P.3d 1261, 1265 (Colo. App. 2001). The preceding premise forms the basis for calculating permanent partial disability benefits. *Id*.

20. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The Judge must determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

21. As found, Claimant suffered a 2% left upper extremity impairment rating as a result of her April 27, 2018 left middle trigger finger injury. On February 12, 2019 Dr. Chimonas assigned Claimant an 8% left middle finger impairment rating. The rating was based upon normal range of motion for the DIP and PIP joints, but slightly restricted flexion and extension of the MP joint. The functional impairment converted to a 2% left upper extremity rating. In contrast, Dr. Lesnak determined that no permanent impairment was appropriate because Claimant did not exhibit any evidence of range of motion deficits during his examination. However, based on Dr. Chimonas persuasive determination,

documented range of motion deficits and inability to adequately use her left hand, Claimant suffered a 2% left upper extremity functional impairment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to withdraw the July 5, 2018 GAL is denied and dismissed.

2. Claimant earned an AWW of $648.58.

3. Claimant shall receive TPD benefits to the extent she suffered a wage loss during the period June 25, 2018 through January 6, 2019.

4. Claimant suffered a 2% left upper extremity functional impairment.

5. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with the employer on January 8, 2019.

- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received from Cedar Point Health, In Motion Therapy, and SCL Health Orthopedics (including surgery performed by Dr. Mark Luker), is authorized medical treatment that is reasonable and necessary to cure and relieve the claimant from the effects of the work injury.

- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that as a result of his work injury he is entitled to temporary total disability (TTD) benefits from January 11, 2019 through July 14, 2019

- If the claimant proves entitlement to TTD benefits, what is his average weekly wage (AWW)?

FINDINGS OF FACT

1. The claimant is employed with the employer as a Transportation Maintenance Worker I. The claimant's job duties include all manner of highway maintenance. During the winter months, this includes maintaining snow removal equipment.

2. On January 8, 2019, the claimant worked the "swing shift" which is from 4:00 p.m. to 12:30 a.m. On that date, mud, snow, and ice had melted from the snowplows onto the shop floor. The claimant's task was to clean up that debris from the shop floor. The claimant shoveled the debris into a wheelbarrow and then into the bucket of a large loader. Once the bucket was full, the claimant would drive the loader out of the shop to dump the load. He would then repeat this process.

3. The claimant testified that the driver seat of the loader sits approximately eight feet above the ground. In addition, the bucket on this particular loader holds approximately three yards of material.

4. While exiting this loader the claimant held onto a handrail with his left hand while attempting to step down out of the loader. This involves climbing down a small ladder that is not rigid at the two steps closest to the ground. As are result, those bottom steps swing in and under the loader. While exiting the loader in this way, the claimant's left hand extended above his head while he turned his body to see the location of the next step. While in the act of holding his arm up in this manner and

twisting, the claimant heard and felt a "pop" in his left shoulder. The claimant testified that he immediately felt significant pain in his left shoulder.

5. Due to the nature of the swing shift, only the claimant and one other employee, Michael, were on duty at that time. The claimant told his coworker that he had injured his shoulder. The claimant continued to complete his shift, but modified his activities because of pain in his left shoulder.

6. At the next shift change, the claimant informed another employee, Jose P_____, that he had injured his shoulder. Mr. P_____ is a lead worker, but is not considered the claimant's direct supervisor. The claimant testified that no supervisor was on duty until the following morning when the next day shift started.

7. The claimant was first able to speak with his direct supervisor, Mark B_____, on the morning of January 9, 2019. At that time, the claimant informed Mr. B_____ of his injury. The claimant and Mr. B_____ completed an incident report on January 10, 2019.

8. It was on January 10, 2019, that the claimant requested medical treatment from the employer. The claimant testified that the employer instructed him to seek treatment with Surface Creek Family Practice (Surface Creek). The claimant testified that he was not provided with a list of designated medical providers. However, the Employee Incident Statement the claimant signed indicated that he was provided with a provider list.

9. The employer scheduled an appointment for the claimant with Surface Creek for January 11, 2019. On that date, the claimant was seen by Dan Burnell, PA-C and reported that he slightly extended his left arm that resulted in pain in his anterior left shoulder. Mr. Burnell diagnosed the claimant with injury of the muscles and tendons of the left rotator cuff and bicipital tendinitis. Mr. Burnell recommended ice and over the counter pain relievers. In addition, he demonstrated rotator cuff exercises for the claimant to perform at home.

10. A second appointment with Surface Creek was scheduled. However, the claimant was contacted by the staff at Surface Creek and informed that his workers' compensation claim was denied. The claimant was also informed that if he wanted to continue to receive treatment from Surface Creek, the claimant would need to establish care as a new patient and make Surface Creek his personal care provider (PCP).

11. The claimant declined to become a new patient with Surface Creek because he already had a personal care provider at Cedar Point Health Care. After learning that his claim was denied by the respondents, the claimant sought treatment for his left shoulder at Cedar Point Health Care (Cedar Point).

12. The claimant was seen at Cedar Point by Dr. Lars Stangebye on January 25, 2019. On that date, the claimant reported that he had experienced left shoulder pain for two and a half weeks. Dr. Stangebye noted bilateral laxity in the claimant's shoulders and opined that the claimant had a bicep tendon tear. Dr. Stangebye administered an injection to the claimant's left subacrominal bursa and made

recommendations regarding rotator cuff exercises. In addition, Dr. Stangebye ordered a magnetic resonance image (MRI) of the claimant's left shoulder.

13. On February 27, 2019, the claimant returned to Cedar Point and was seen by Dr. Lindsay Meredith. At that time, the claimant reported that his shoulders "dislocate easily" and that he had previously injured his right shoulder, but had never injured his left. Dr. Meredith opined that the claimant had a partial tear in his shoulder that might be "progression of an underlying injury".

14. The claimant testified that the MRI ordered by Dr. Meredith was first denied by the claimant's personal health insurance United Health Care (UHC) pending additional physical therapy. Once the claimant completed further physical therapy, the MRI was authorized by UHC.

15. On March 13, 2019, an MRI of the claimant's left shoulder showed tearing of the posterior labrum and a small paralabral cyst.

16. On March 15, 2019, the claimant returned to Dr. Meredith who noted the MRI results as showing a posterior labral tear. Dr. Meredith referred the claimant for a surgical consultation.

17. On March 27, 2019, the claimant was seen at SCL Health Orthopedics by Daryl Haan, PA-C. Mr. Haan noted that the claimant had multi directional laxity in his left shoulder. Mr. Haan diagnosed a left shoulder posterior labral tear with chondromalacia of the glenoid. In addition, Mr. Haan opined that the claimant would benefit from surgical intervention to include a left shoulder arthroscopy with labral repair, debridement and chondroplasty.

18. On April 5, 2019, the claimant returned to SCL Health Orthopedics and was seen by Dr. Mark Luker. After examination, Dr. Luker diagnosed the claimant with a left shoulder posterior labral tear, a possible left shoulder anterior labral tear, and left shoulder multidirectional laxity. Dr. Luker recommended the claimant undergo surgery to his left shoulder including labral repair and chondroplasty.

19. On April 11, 2019, Dr. Luker performed a left shoulder arthroscopic posterior capsulorrhaphy and labral repair. Following surgery, the claimant underwent physical therapy with In Motion Therapy.

20. On July 2, 2019, the claimant returned to Dr. Luker and reported that his shoulder was stable. Dr. Luker opined that the claimant had returned to baseline and cleared him to return to work on July 15, 2019. The claimant confirmed in his testimony that he was off of work from January 10, 2019 through July 14, 2019, returning to work on July 15, 2019.

21. The claimant testified that he has had treatment for his right shoulder in the past. That treatment related to a work injury and not because of laxity in his shoulder. The claimant testified that his understanding is that he has more mobility in his shoulder joints than an average individual. The claimant also testified that prior to

the incident at work on January 8, 2019, he did not have any pain or other issues with his left shoulder. The claimant has been told that he has laxity in his shoulders.

22. On May 21, 2019, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. The audio recording from the IME was admitted into evidence. In his IME report, Dr. Lesnak recorded the claimant's description of the incident as "[the claimant] was climbing off the front loader while holding onto a handle attached to the front loader with his left hand using the steps on the front loader when he suddenly felt a 'pop' in his left shoulder." Dr. Lesnak also recorded that the claimant stated "he merely had his head turned slightly around looking at the ground with this incident occurred." It is this description of the mechanism of injury that Lesnak relied upon in issuing his opinions.

23. In his IME report, Dr. Lesnak opined that the claimant has a significant amount of joint laxity in his bilateral upper extremities. Dr. Lesnak further opined that although the claimant may have experienced an incident on January 8, 2019, he did not suffer a specific injury. In addition, Dr. Lesnak noted that in his opinion it is unlikely that the claimant's mechanism of injury would result in a left shoulder injury or an aggravation of a preexisting degenerative condition.

24. Dr. Lesnak's testimony at hearing was consistent with his written report. Dr. Lesnak testified that the claimant has a history of hypermobility in his shoulders. In his testimony, Dr. Lesnak questioned the claimant's mechanism of injury. Specifically, Dr. Lesnak noted that the claimant did not slip and did not experience any sudden injury. Dr. Lesnak testified that the claimant would not injure his shoulder from "just looking behind him". In addition, Dr. Lesnak opined that standing while holding the bar at chest level and looking around by rotating his neck would not put stress on the claimant's shoulder joint. Dr. Lesnak noted that the left shoulder MRI showed no acute injury. In addition, Dr. Lesnak testified that the claimant's pain symptoms were in the interior part of his left shoulder, but the MRI showed a tear in the claimant's posterior labrum. Dr. Lesnak testified that the claimant's mechanism of injury would not cause a labral tear; would not aggravate any preexisting pathology; any would not exacerbate a preexisting condition. Dr. Lesnak further testified that the findings on MRI of a labral tear with cyst are evidence of a chronic condition. Dr. Lesnak opined that the surgery performed by Dr. Luker treated that preexisting chronic condition.

25. The claimant testified that at the time of the IME he was approximately one-month post-surgery. In addition, the claimant had only been out of his shoulder sling for approximately one week.

26. The claimant testified that his medical treatment, including the surgery performed by Dr. Luker has been paid for by the claimant and his personal health insurance, UHC.

27. The claimant testified that his pay fluctuates during the year due to the needs of the employer. For example, the claimant has more "on call pay" in the winter months when compared to the summer. In addition, there is a different scheduling

system in the summer. The claimant asserts that the most accurate calculation of his average weekly wage (AWW) would be an average of his wages for an entire year.

28. Based upon the payroll records entered into evidence, from January 2018 through December 2018, the claimant was paid at total of $47,045.10. When this total is divided by 52 weeks, it is equal to $904.71.

29. The ALJ finds that the claimant has demonstrated that it is more likely than not that he suffered an injury to his left shoulder on January 8, 2019. The ALJ is persuaded by the claimant's testimony regarding his mechanism of injury and the resulting injury to his shoulder. In reaching this finding, the ALJ credits the claimant's testimony and the medical records. The ALJ is not persuaded by the opinions of Dr. Lesnak.

30. The ALJ finds that the claimant has demonstrated that it is more likely than not that the medical treatment the claimant has received for his left shoulder, including the April 11, 2019 surgery, is reasonable medical treatment necessary to cure and relive the claimant from the effects of the work injury. In reaching this finding, the ALJ credits the medical records, the testimony of the claimant, and the opinions of Dr. Luker.

31. The respondents argue that the medical treatment the claimant has received from Cedar Point Health, In Motion Therapy, and SCL Health Orthopedics (including surgery performed by Dr. Mark Luker) is not authorized treatment because the claimant's ATP for this claim is Surface Creek Family Practice. The claimant argues that Surface Creek refused to treat him following the denial of his workers' compensation claim. Therefore, it is the claimant's position that he was able to select his own ATP. The ALJ finds that Surface Creek did not refuse to provide the claimant with treatment. The claimant was notified of the steps necessary to establish care as a new patient, to ensure payment for treatment. The claimant had the opportunity to continue treating with Surface Creek, but he elected to seek treatment elsewhere. The ALJ is persuaded by the respondents' argument that Cedar Point Health, In Motion Therapy, and SCL Health Orthopedics (including Dr. Luker) are not authorized providers.

32. The ALJ finds that the claimant has demonstrated that it is more likely than not that that he suffered a wage loss as a result of the January 8, 2019 work injury for the period of January 10, 2019 through July 14, 2019. In reaching this finding, the ALJ credits the medical records, the testimony of the claimant, and the opinions of Dr. Luker.

33. The ALJ relies upon the wage records entered into evidence and calculates that the claimant's AWW at the time of the January 8, 2019 work injury was $904.71.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a

reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has demonstrated by a preponderance of the evidence that on January 8, 2019, he suffered an injury arising out of the course and scope of his employment with the employer. As found, the claimant's testimony and the medical records are credible and persuasive.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, the claimant has demonstrated by a preponderance of the evidence that the medical treatment the claimant has received for his left shoulder, including the April 11, 2019 surgery, is reasonable medical treatment necessary to cure and relive the claimant from the effects of the work injury. As found, the medical records, the testimony of the claimant, and the opinions of Dr. Luker are credible and persuasive.

8. Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018).

9. Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor."

10. Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018); *In re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAO, June 18, 2010).

11. The issue of whether the selection of an ATP passes to the claimant upon denial of a claim was addressed in *Yeck v. ICAO*, 996 P.2d 228 (Colo. App. 1999). In that case, the claimant was referred to an authorized provider by the employer and the claimant received treatment from that provider. In *Yeck*, the court found that "the right of selection of the physician is not conditioned on an admission of liability". In the present case, the ATP Surface Creek was selected by the employer and the claimant received treatment from that ATP. As found, Surface Creek did not refuse to treat the claimant. Rather, that practice explained the steps necessary to establish care as a new patient, to ensure payment for treatment. The claimant acted unilaterally when he chose to seek treatment elsewhere without requesting a change in his ATP.

12. The claimant relies upon to *Ruybal v. University of Colorado Health Service Center*, 768 P.2d 1259 (Colo. App. 1988) to support his argument that Surface Creek refused to treat him, thereby allowing him to seek another ATP. The claimant's reliance on *Ruybal* is unfounded. In that case, the employer did not offer the claimant medical treatment, so the selection of a provider passed to the claimant by statute. This is distinguishable from the present case as the claimant did receive treatment from Surface Creek and had the opportunity to continue to treat with that provider.

13. As found, the ATP in this case is Surface Creek. Although the treatment the claimant received from Cedar Point and that chain of referrals (including In Motion Therapy, SCL Orthopedics, and Dr. Luker) was reasonable and necessary medical treatment, it was not authorized.

14. Section 8-42-101(6)(b), C.R.S. states in pertinent part:

> If a claimant has paid for medical treatment that is admitted or found to be compensable and that costs more than the amount specified in the workers' compensation fee schedule, the employer or, if insured, the employer's insurance carrier, shall reimburse the claimant for the full amount paid. The employer or carrier is entitled to reimbursement from the medical providers for the amount in excess of the amount specified in the worker's compensation fee schedule.

15. As found, treatment the claimant received from Cedar Point, In Motion Therapy, SCL Orthopedics, and Dr. Luker was not authorized medical treatment. Therefore, the claimant cannot not be reimbursed for out of pocket payments he made to those unauthorized providers.

16. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician; a claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

17. As found, the claimant has demonstrated by a preponderance of the evidence that he suffered a wage loss as the result of his January 8, 2019 work injury. Therefore, the claimant has successfully demonstrated that he is entitled to TTD benefits for the period of January 10, 2019 through July 14, 2019. As found, the wage records are credible and persuasive.

18. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's average weekly wage (AWW) on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon his AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

19. As found, the claimant has demonstrated by a preponderance of the evidence that the appropriate calculation of his AWW is an average of an entire year of wages. As found, the claimant's AWW as of the date of the work injury was $904.71.

ORDER

It is therefore ordered:

1. The respondents shall pay for **authorized** medical treatment of the claimant's left shoulder, pursuant to the Colorado Medical Fee Schedule.

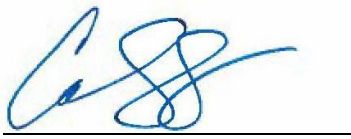
2. Medical treatment provided to the claimant by Cedar Point, In Motion Therapy, SCL Orthopedics, and Dr. Luker is not authorized.

3. The claimant is not entitled to reimbursement for treatment he received from Cedar Point, In Motion Therapy, SCL Orthopedics, and Dr. Luker.

4. The claimant is entitled to temporary total disability (TTD) benefits for the period of January 10, 2019 through July 14, 2019.

5. The claimant's average week wage (AWW) is $904.71.

Dated this 11th day of September 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-058-740-002

ISSUES

I. Compensability.

II. Medical Benefits.

III. Average weekly wage.

IV. Temporary partial disability benefits.

V. Temporary total disability benefits.

VI. Authorized provider.

VII. Reimbursement for co-pays, deductibles and funds for out-of-pocket medical expenses.

VIII. Reimbursement to health insurer for medical bills paid.

IX. Reimbursement of vacation, sick, and any other leave.

X. Replenishment of Claimant's Fidelity retirement account.

XI. Penalties for Employer's alleged failure to timely report the claim to the Division and Insurer.

XII. Penalties for Insurer's alleged failure to timely admit or deny liability.

XIII. Penalties for Employer's alleged failure to timely provide Claimant with a list of approved physicians pursuant to Rule 8-2.

STATEMENT OF THE CASE

Claimant alleges an occupational exposure injury due to being exposed to fragrances at work. Claimant contends her exposure to various fragrances at work, which were being emitted by co-workers, caused her to develop chronic headaches and migraines, necessitated the need for medical treatment, and caused her to miss time from work.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a 45-year-old female who worked for the employer as a customer service representative. Her job duties involved taking incoming calls from commercial customers and corresponding with customers. Claimant's workspace was a cubical in an office setting. Claimant's job duties did not require her to be at other workers' cubicles and Claimant was able

to complete her job duties at her desk. Claimant has alleged an occupational exposure with a date of injury of January 17, 2017, as a result of co-workers using scented fragrances while at work. Claimant has not returned to work since December 2017. (Hrg. Tr. 109:19 – 110:8, 112:23-25, 152:2-11; Ex. R; Ex. X).

Claimant's headaches and "triggers" have progressively changed over the course of the claim.

2. In the 10 months leading up to January 2017, Claimant had not had any reaction to scents or smells while working for the employer. Gradually, Claimant began experiencing headaches which she associated with co-workers wearing various scents. However, Claimant also experienced these headaches while she was away from work. She further testified that these headaches gradually worsened over time and, by the time of the hearing, had changed from migraine headaches to exertion headaches. Claimant testified that her exertion headaches could be caused by sneezing, laughing, talking, or anything strenuous. She further testified that smelling perfumes or candles over the holidays or at grocery stores also triggered her migraines along with dryer sheets, detergents, cold weather, and stress. Claimant also testified that smoke from BBQ pits and football game tailgates triggered her migraines along with litigation stress due to her workers' compensation claim. (Hrg. Tr. 33:12-15, 36:7-21, 37:16-24, 73:16 – 74:12, 78:17 – 79:9, 94:16-25).

Claimant did not initially report a work injury. She initially sought time off through FMLA.

3. In January 2017, Claimant reported to her direct supervisor Cesar R____ that she was having migraines and issues with allergies and was seeking treatment and would need to take time off work. Mr. R_____ is a manager with AT&T and supervised Claimant from July 2016 until approximately November 2017. At the time Claimant reported the headaches, she was not eligible for FMLA. Mr. R_____ was under the impression that Claimant was suffering from a personal health condition and looked into offering Claimant a job accommodation through AT&T's ADA process. The job accommodation was approved on February 24, 2017 which included time off work up to 48 hours per month due to her illness or incapacity. Claimant's ADA accommodations were eventually transitioned to FMLA once she was eligible. Claimant continued to take time throughout 2017 under both ADA and FMLA. Claimant ultimately requested that she be permitted to work from home which was denied. At no point prior to September 2017 did Claimant report that she was claiming a work-related injury or otherwise provide medical documentation that she had sustained a work-related injury. (Hrg. Tr. 35:6-9, 44:3-10, 75:1-7, 80:3-19, 108:1-25, 110:12-14, 111:1-3, 115:16 – 118:3, 145:17 – 146:3; Ex. N, p. 239-40, 245-64, 269-72, 276-79, 283-85, 309-322).

Claimant's complaints of co-workers wearing and emitting various scents is not supported by the testimony of her supervisor, Mr. R_____.

4. Claimant complained to her supervisor, Mr. R_____, on numerous occasions that certain co-workers were wearing scents and that such scents were triggering her migraines. Mr. R_____ testified that each time Claimant complained, he took her complaint seriously, even if he could not smell anything. He also testified that when he could not smell anything, he would sometimes have another manager come to the area to see if they could smell anything. A review of various Employer emails submitted by Claimant demonstrate that on one occasion, after Claimant complained about a co-worker wearing a scent, Mr. R_____ had two other managers go to the area. The emails demonstrate that one of the other managers said they could not smell anything and the other one said they could not smell anything excessive or pungent. Mr. R_____ further testified that out of approximately 20 complaints of which he

was aware, he only recalled there being a few occasions where a scent could be detected. Moreover, Mr. R_____ also testified that after repeated complaints by Claimant, against a certain co-worker, that co-worker started to get frustrated because he said he was not using any scents and felt like he was being harassed. The ALJ finds that Mr. R_____ took Claimant's complaints seriously, sought help from other managers to verify Claimant's complaints, and counseled Claimant's co-workers to make sure they were not wearing any scents. And, as can reasonably be expected, a co-worker who was not wearing any scents, but was being accused of such, got frustrated and felt like they were being harassed. Thus, the ALJ finds Mr. R_____' testimony to consistent, and the events he described to be probable, and his testimony to be credible. (Ex. 13; Hrg. Tr. 121-140.)

Claimant used FMLA along with short-term and long-term disability benefits.

5. Claimant testified that during 2017, she did not get paid for the hours and days she had to take off from work and used sick and vacation time instead. Claimant also testified that there were days in 2017 that she missed work for other reasons (e.g. sick and vacation days), however, Claimant was unaware of the specific dates. (Hrg. Tr. 43:8-17, 48:7-15).

6. Claimant subsequently received both short-term and long-term disability benefits. She also testified that she had to "cash out" her 401k. (Ex. P; Hrg. Tr. 70:16-20).

Employer made several accommodations for Claimant without any report of relief from her headaches.

7. In late January 2017, Claimant started reporting that various co-workers were using fragrances, which triggered her migraines. Claimant then discovered that the employer had a policy or guideline with regard to employees using perfume and various fragrances while at work. The policy or guideline provided that fragrances should be undetectable to others when seated at workstations. Claimant reported that she took various steps while at work to limit her exposure to scents, including getting an herb oil to "counteract…synthetic scents." (Hrg Tr. 38:15-16, 43:1-4; Ex. N, p. 230).

8. The employer addressed Claimant's reports of co-workers using cologne or hand lotion in an effort to assist Claimant, including moving Claimant's cubicle several times, sending out emails to the teams, changing out air filters in the building, conducting team meetings, meeting with employees individually, having employees change clothes or wash their hands, and moving co-workers. Despite Claimant's numerous reports, managers were often unable to smell or otherwise corroborate Claimant's complaints and many employees felt that they were being harassed. Regardless of the actions taken by the employer, Claimant continued to report issues, even though many of her co-workers were not located in close proximity to her workspace. (Ex. N, p. 233-38, 242-44, 265-68, 273-74, 286-90, 296-98, 301-07; Hrg. Tr. 121:14 – 127:5, 150:24 – 152:1, 152:8 – 153:24, 158:22 – 159:4).

Claimant filed a workers' claim for compensation on September 27, 2017.

9. On or about September 27, 2017, Claimant completed a Workers' Claim for Compensation alleging a work-related illness due to an allergic reaction to fragrances. This was filed with the Division on October 4, 2017 and assigned W.C. No. 5-058-740. Claimant testified that she was not aware that she had a potential workers' compensation claim until this time. She also testified that prior to this time, she had not told Mr. R_____ or any other supervisor that she wanted to report a work injury, had not provided any medical documentation evidencing a work injury, and had not asked that her employer send her for treatment. Claimant testified that she was not

aware that she may have suffered a work injury and she was unable to identify a specific date that the employer should have been on notice that she was claiming a work injury, but felt that the employer should have understood that she was reporting a work injury back in January 2017, despite the fact that she was not aware she had a potential claim until September 2017. However, Claimant was familiar with the workers' compensation process due to having filed a prior claim. Mr. R_____ testified that he did not learn that Claimant was alleging a work-injury until she filled out a claim for compensation and placed it on his desk in September. Mr. R_____ was under the impression that Claimant's migraines were a personal health condition and he proceeded based on the information Claimant presented to him. (Ex. Q, p. 329; Ex. R; Hrg. Tr. 61:6-21, 84:23 – 86:23, 119:7-16, 120:6-25, 121:1-13).

A Provider List was given to Claimant once the W.C. Claim was reported.

10. On September 28, 2017, Mr. R_____ provided Claimant via email with a list of medical providers in her area in order to be evaluated. Claimant selected Concentra to treat with under the w.c. claim and testified that she treated with both Concentra and another physician to whom she was referred. Claimant was not charged for these visits as they were paid for by Respondents. (Ex. N, p. 280-81; Hrg. Tr. 70:25 – 71:24, 88:23 – 89:5).

The Division assigned two Workers' Compensation numbers for the same claim and various documents were filed under separate numbers for the same claim.

11. On October 10, 2017, the Division issued a letter under W.C. No. 5-058-740 to Claimant indicating that her claim for compensation was received. The letter was copied to Old Republic Insurance Company and provided that a position must be stated within 20 days of the date of the letter. (Ex. 3). On November 13, 2017, the Division issued a letter under W.C. No. 5-058-740 to Claimant and Old Republic Insurance Company indicating that a position statement needed to be filed and that Claimant had a right to file for an expedited hearing. (Ex. 4). A Director's Order was subsequently issued on December 14, 2017 under W.C. No. 5-058-740 ordering Respondents to file a position statement within 15 days. (Ex. 5). Claimant was unable to provide any evidence as to when these documents were received by Respondents, however Claimant was aware that her claim was being investigated and was ultimately denied. (Hrg. Tr. 101:14 – 103:19).

12. A First Report of Injury was filed on November 14, 2017 via EDI and assigned W.C. No. 5-061-909 by the Division. A denial was issued on November 17, 2017 via EDI under W.C. No. 5-061-909. A Notice of Contest was issued on November 21, 2017 and mailed to Claimant. The date of injury was inadvertently listed as September 27, 2017 – which was the date the alleged injury was actually reported to the employer. Because of this, the second W.C. number was generated (W.C. No. 5-061-909). (Ex. Q, p. 330-331; Ex. S, p. 334; Ex. 6).

13. These claims were ultimately merged under W.C. No. 5-058-740 as they both pertained to the same alleged injury. (Ex. Q, p. 329; Ex. V). A second Notice of Contest was mailed to Claimant under the merged claim on January 11, 2018. (Ex. S, p. 339).

14. On February 22, 2018, Claimant initially filed an Application for Hearing and endorsed various issues, including several alleged penalties. This application for hearing was re-filed on September 19, 2018 after ALJ Michelle Jones issued a Bench Order on September 6, 2018, striking Claimant's application due to Claimant and Claimant's attorney's failure to appear at the August 14, 2018 hearing. (Ex. T).

Claimant has a history of headaches and severe allergies for which she received treatment.

15. Claimant testified at hearing that she has both a prior history of sinus headaches and a history of severe allergies. Dr. Ebadi had been her allergist prior to January 2017 and Dr. Ebadi had referred her to Dr. Elina Pales. (Hrg. Tr. 51:23-25, 89:7-14, 93:7-11).

16. Claimant presented to the emergency department on January 16, 2013 with complaints of a 9/10 headache for 3 days with sinus congestion and nausea. It was noted that Claimant had a history of headaches 1-2 times a week. Claimant was to follow-up with her primary care provider for chronic headache work-up. (Ex. K, p. 216-19).

17. On May 21, 2013, Claimant presented to allergist Dr. Ebadi who reported sneezing, nasal congestion, profound fatigue, insomnia, recurrent sinus infections, and "feeling sick all the time." Past medical history was positive for tension headaches, depression, anxiety, sleep apnea, and GERD. Skin testing revealed Claimant was "incredibly allergic to spring, summer, and fall pollen." Dr. Ebadi felt that environmental allergies were contributing to her fatigue, difficulty concentrating and recurrent sinus infections. Medication was prescribed. (Ex. I, p. 187).

18. Claimant contacted Dr. Ebadi's office on October 16, 2013 and reported the shots were making her sick and that she had stopped treatment due to "severe headaches" and fatigue. (Ex. I, p. 194).

19. On November 25, 2014, Claimant treated with Dr. Chaudhary for evaluation of musculoskeletal pain, including chronic fatigue and sleep disturbance. It was felt that Claimant had fibromyalgia, although her pain pattern was atypical. Medication was prescribed. (Ex. J, p. 211-12).

20. Claimant presented to Dr. Ebadi on December 19, 2016 with complaints of worsening sinus symptoms and hives. It was noted that scents increased her sinus symptoms. The reason for the visit was listed as "severe allergy reactions" and Claimant reported swollen face, hives, and severe pressure points throughout her face. There was no mention of migraines. Allergy medication was prescribed. (Ex. I, p. 176-77).

Claimant begins treatment for migraine-type headaches.

21. On January 17, 2017, Claimant presented to Dr. Ebadi due to sinus pain and pressure and headache. Claimant reported sinus headache, tension headache, fatigue, insomnia, anxiety, painful and stiff joints, and fibromyalgia. It was noted that Claimant did not want a CT scan. Norco was prescribed along with Allegra. (Ex. I, 174-75).

22. On February 16, 2017, Claimant presented to Dr. Elina Pales upon referral from Dr. Ebadi. Claimant reported that she had experienced "sinus headache forever" and that she was "allergic to everything outside." Claimant stated reported her *sinus headaches occurred 1 to 2 times per week*. About 2 months prior, Claimant reported that a new headache started with an intense tension pressure and it was occurring approximately 1 to 2 times per week, "almost instead of usual sinus headaches." Claimant noted associated odor and noise sensitivity. A family history of migraines was noted along with a prior history of a concussion. The assessment was migraine without aura, migraine with aura, and tension headache. Neurological examination was normal. Disability paperwork was completed "as requested by patient." Rebound headache was discussed and Claimant was to limit Tylenol. Ibuprofen and amitriptyline were prescribed along with management of allergies with Dr. Ebadi. (Ex. G, p. 137- 138).

23. By March 29, 2017, Dr. Pales noted that Claimant had not yet started amitriptyline and that disability paperwork was again filled out as requested by Claimant. (Ex. G, p. 135-36).

24. On July 24, 2017, Claimant presented to Dr. McElroy, her primary care physician, and reported that she had a sensitivity to strong smells and worked in an environment where her co-workers "wear a lot of perfume." Claimant was given a note indicating a need for a separate work environment. (Ex. H, p. 151-52).

25. On September 6, 2017, Claimant returned to Dr. Pales and reported worsening migraines. She stated that her co-workers' perfumes and colognes triggered her headaches along with stress at work. It was noted that Claimant was not taking amitriptyline because she was unable to tolerate it. Dr. Pales wrote a note for work for Claimant to work in an odor free environment. Verapamil was prescribed and Claimant was told to limit use of Excedrin due to rebound headaches. Disability paperwork was completed at Claimant's request. (Ex. G, p. 133-34).

Dr. Jones requests a causality opinion.

26. On October 26, 2017, Claimant presented to Dr. Randall Jones at Concentra and reported migraines due to co-workers wearing cologne and perfume. Claimant reported that she had no problems during the first 8 months of employment, despite having some exposure. Claimant further reported that "now any exposure anywhere will cause a [headache]." A referral was made for a causality opinion. Claimant was maintained on full duty work. (Ex. E, p. 116-118).

Dr. Reinhard opines that Claimant did not sustain a work-related injury.

27. Claimant presented to Dr. David Reinhard with Colorado Rehabilitation and Occupational Medicine on November 17, 2017 for a causality assessment regarding her migraine headaches. Claimant denied any prior history of migraine headaches or other headache condition, but did report a pre-existing history of numerous allergies. She reported that after 8 months of working for the employer, she started to develop headaches associated with significant nausea and sensitivity to light and sound. Claimant also reported problems with coordination and balance along with memory and concentration. Claimant reported that cologne and perfumes at work triggered her headaches. Dr. Reinhard noted that Claimant was taking Excedrin on a daily basis and "probably got into some problems with medication overuse headache/rebound." His impression was migraine with aura of unclear etiology. Dr. Reinhard opined that he could not causally relate her headaches to her employment to a reasonable degree of medical certainty. He noted that Claimant had been employed for 8 months prior to developing the headaches and that Claimant was experiencing headaches whether at work or not. He noted that it was "quite plausible to consider the possibility that she developed migraine headaches completely independent of her work activities." Dr. Reinhard also opined that daily use of Excedrin could make Claimant's headaches occur more frequently to the point of having a chronic migraine. Dr. Reinhard recommended treatment outside the Workers' Compensation system to include follow-up with her neurologist and a brain MRI. (Ex. D, p. 100-102).

Claimant's brain MRI shows a Chiari 1 malformation.

28. On December 20, 2017, Claimant underwent a brain MRI. The impression was cerebellar tonsillar ectopia (Chiari 1 malformation) and post-inflammatory residua of the paranasal sinuses. (Ex. F, p. 119, 1 D'Angelo, 29:4-11).

Ongoing treatment with Dr. Pales is aimed at treating symptoms related to Chiari Malformation and Claimant continues to report worsening headaches with new triggers despite not working for Employer.

29. Claimant returned to Dr. Pales on December 21, 2017 and reported that she was doing "poorly" and had been out of work for the most part since November 18th. Claimant reported daily migraines associated with visual changes, cognitive slowing, intermittent dizziness, grogginess, sleepiness, nausea, and vomiting. Claimant reported feeling weak and debilitated with an inability to perform activities of daily living. It was noted that Claimant was unable to function on Topamax even with the smallest dose. Claimant reported continued use of Excedrin. Dr. Pales noted the brain MRI showed a Chiari 1 malformation. The assessment included Chiari 1 malformation likely contributing to Claimant's headaches given the intractable and progressive course of her symptoms since the onset, their severity and associated neuropathic changes. Disability paperwork was completed for Claimant to stay off work for 1 month to assess symptomatic and functional improvement. Verapamil was again prescribed along with consideration of Botox injections. If no benefit, Claimant was to consult with the "Chiari Institute" at MC of Aurora. Claimant was to minimize use of Excedrin due to rebound headache. (Ex. G, p. 129-30).

30. On January 17, 2018, Claimant reported only mild improvement and felt that she may be allergic to amitriptyline. She reported that "even slight smells have been triggering headache lately" and that "she changed all of her laundry detergents and soaps" and was staying at home so she would not "encounter smells." Trigger point injections were performed. Claimant was maintained off work for another month. It was again noted that consultation with the Chiari Institute may be needed. (Ex. G, p. 127-28).

31. Claimant continued to report severe and debilitating headaches as of February 13, 2018. Constant fatigue was also reported. A sleep study was recommended and Claimant was maintained off work for another month. (Ex. G, p. 123-26).

32. As of June 13, 2018, Claimant continued to report daily headaches with debilitating migraines. It was noted that Claimant had side effects to propranolol and felt too sleepy on amitriptyline so both medications were discontinued. Botox was discussed, but she was afraid of reactions to the medication. Acupuncture also did not help. Dr. Pales noted that Claimant had failed Topamax, Verapamil, propranolol and amitriptyline and did not want to try a new medication. It was noted that sleep apnea was also possibly contributing to Claimant's symptoms. Claimant was recommended to remain off work unless her workplace would allow her to work from home. (Ex. G, p. 121A-B).

33. On September 7, 2018, Claimant again reported continuing daily, intolerable headaches. It was noted that "stress and physical exertion happen to be the main headache triggers lately." Claimant was referred to a neurosurgeon for consultation about potential skull base surgery for management of Chiari 1 malformation. Botox was again discussed, but Claimant was not interested. Aimovig was prescribed. (Ex. G, p. 120C-D).

34. Claimant returned to Dr. Pales on January 17, 2019 and reported daily headache triggered by exertion of any kind, including laughing, sneezing, exercise, and stress. Aimovig was injected and Claimant was to continue with avoidance of headache triggers. (Ex. G, p. 120A-B).

35. Claimant testified that she has tried several medications for her headaches, but none of them have worked or allowed her to return to work in any capacity. She stated that she was not seeking Botox injections, but wanted to continue treating with her doctor "to get things under control". Claimant also testified that, despite being at home for over a year, her headaches have not improved or subsided. (Hrg. Tr. 96:10 – 98:8).

Claimant has a pattern and practice of seeking disability for various health conditions.

36. In addition to a prior history of headaches and allergies, Claimant's medical records also document a consistent pattern and practice, both prior to and after the alleged work injury, of requesting that her providers declare her disabled and unable to work:

- April 23, 2013: Claimant presented to Dr. Von Lindeman's office and requested FMLA paperwork be completed. (Ex. H, p. 173).
- December 3, 2013: Dr. Von Lindeman contacted Dr. Ebadi's office and requested notes as Claimant was asking for FMLA paperwork to be filled out again. (Ex. I, p. 195).
- February 11, 2014: Debra Hoffman, NP for Dr. Lindeman noted that Claimant presented to the clinic and requested disability paperwork be filled out. (Ex. H, p. 171).
- July 15, 2014: Debra Hoffman, NP documented an encounter with Claimant regarding questions about disability. It was noted that Claimant expressed concern "about the conversation Dr. Von Lindeman had with the Disability office back in April." Claimant informed Nurse Hoffman that she believed she was "disabled and wants to know what additional testing needs to be done." (Ex. H, p. 167-68).
- September 18, 2014: Claimant returned to Debra Hoffman, NP with disability forms. It was noted that Claimant requested temporary disability to cover her for the next 6 months while she continued to seek medical care for her numerous medical issues. Claimant again indicated that she believed she qualified for permanent disability. Nurse Hoffman informed Claimant that she would not sign that Claimant was permanently disabled, although Nurse Hoffman did sign that Claimant could not work her usual job for at least 6 months. (Ex. H, p. 163-64).
- December 15, 2014: Claimant presented to Debra Hoffman, NP for completion of disability paperwork. An additional 6 months of temporary disability was provided. (Ex. H, p. 161-62).
- February 19, 2015: Claimant reported to Debra Hoffman, NP that she was "running out of time to be declared disabled." It was noted that Claimant did not "feel like she can work consistently…she wants to be declared disabled. Wants to know how they can facilitate this." (Ex. H, p. 159).
- February 26, 2015: Claimant contacted Dr. Chaudhary and asked if he would fill out disability paperwork. Dr. Chaudhary indicated that Fibromyalgia was not a rheumatological condition for which he would fill out disability paperwork. (Ex. J, p. 207).
- March 20, 2015: Claimant presented to Dr. Raford for evaluation of Social Security disability. Dr. Raford noted that it was unclear whether the reported diagnosis of Fibromyalgia was in fact valid given Claimant's atypical pattern of symptoms. He requested additional records and informed Claimant that Social Security disability required Claimant to be unable to perform any occupation. (Ex. H, p. 156-58).

- January 23, 2017: Claimant presented to Dr. Ebadi and requested a work note stating that she was dealing with symptoms so she did not lose her job. (Ex. I, p. 199).
- February 3, 2017: Claimant contacted Dr. Ebadi to fill out disability paperwork and ADA Accommodation Medical Evaluation form. Dr. Ebadi's office informed Claimant that this needed to be completed by a neurologist. (Ex. I, p. 200).
- February 16, 2017: Claimant presented to Dr. Pales and reported that she had had "sinus headache forever" and was "allergic to everything outside." Dr. Pales filled out the disability paperwork requested by Claimant. (Ex. G, p. 137-144).
- March 29, 2017, Dr. Pales again completed disability paperwork as requested by Claimant. (Ex. G, p. 135-136).
- September 6, 2017: Dr. Pales filled out additional disability paperwork as requested by Claimant and also indicated that Claimant be placed in an "odor free environment." (Ex. G, p. 133-134).
- November 17, 2017: Dr. Pales filled out disability paperwork as requested by Claimant. (Ex. G, p. 131-132).
- December 21, 2017: Dr. Pales filled out disability paperwork as requested by Claimant. (Ex. G, p. 129-130)

(See also Ex. A, p 31-34).

<u>An indoor air quality investigation reveals no toxic or harmful chemicals or volatile compounds</u>.

37. An indoor air quality investigation and sampling was conducted on March 12, 2018 by Robert Woellner of Quality Environmental Services and Technologies, Inc. (QUEST). Mr. Woellner conducted an indoor air quality inspection and sampling survey at the AT&T call center where Claimant worked. He also conducted monitoring of trace gases, including total volatile organic compounds (TVOCs), as well as sampling for volatile organic compounds (VOCs) toxics-in-air to investigate the indoor air quality concerns. It was noted that Claimant had been located in various cubicles on the first floor. Normal office equipment, one dry-erase board, "aromatherapy" type hand lotion and miscellaneous hand sanitizers were observed. The HVAC system included rooftop air handling units and ducted air supply. Mr. Woellner did not observe any chemical-emitting sources, anomalous odors, visible mold growth, or other environmental concerns. (Ex. B, p. 70-71).
38. A handheld MultiRAE PGM-6228 photo-ionization chemical detector was used to measure airborne concentrations of various gasses and compounds, including TVOCs throughout the first floor and outside the building. No TVOCs were identified and all concentrations were determined to be well within normal and expected values. (Ex. B, p. 71).
39. An air sample was also taken in a six-liter SUMMA canister for the first floor near cubicles where Claimant worked. The air sample was analyzed following method TO-15 which analyzes the broadest range of potential volatile organic compounds at the most sensitive detection limits. This includes testing for the measurement of subsets of the 97 volatile organic compounds (VOCs) that are included in the 189 hazardous air pollutants. Only three compounds were identified and each detected concentration was significantly below the lowest available or published odor threshold value. (Ex. B, p. 72).

40. Based on the investigation and air sampling, Mr. Woellner offered 4 recommendations - conclusions:

> (1) on the first floor, no chemical-emitting sources, anomalous odors, visible mold growth, or other environment concerns were observed;
>
> (2) trace gas concentrations were well within normal and executed values with no anomalies detected;
>
> (3) toxics-in-air sampling identified three VOCs and all three compounds were identified in concentrations that were well within the permissible exposure limits which appeared to be the result of background or regional building material off-gassing, emissions, automobile emissions, and/or construction, occupancy, cleaning, or maintenance activities; all other analytes, including acetone, were not detected at the method detection limit; and
>
> (4) any occupants who continued to experience adverse medical symptoms were recommended to seek medical attention and provide their physician with the air quality report. (Ex. B, p. 73-74).

Robert Woellner testified at hearing in support of his air quality study investigation.

41. Mr. Woellner also testified at hearing as an expert in industrial hygiene, indoor air quality, and environmental sampling. He testified that Quest Environmental was retained in this case by AT&T directly, prior to any litigation, for the purpose of identifying any potential environmental pollutants or chemicals at the AT&T building where Claimant worked. (Hrg. Tr. 163:3 – 167:8, 168:1 – 169:6).

42. Mr. Woellner testified that he used a combination of visual observations to identify sources of indoor air quality emissions and concerns, hand-held instruments to measure the total levels of those materials, followed by an air sample. Mr. Woellner explained that the concerns in this case involved smells which meant that the category being analyzed was airborne chemicals with volatile organic compounds. He testified that anything that smells is comprised of various volatile organic compounds and whether the scent is synthetic or natural, the compound is the same. Mr. Woellner further explained that scents that are in lotions or perfumes are comprised of volatile organic compounds. He testified that there are approximately 1,800 volatile organic compounds that are common in buildings, however only 80 of those are toxic, meaning they do adverse harm to the body at high enough concentrations. Fragrances and deodorizers are not comprised of toxic volatile organic compounds because they are intended to be smelled. Mr. Woellner further testified regarding the various protocols and thresholds for permissible and recommended exposure levels. (Hrg. Tr. 169:16 – 170:2, 173:17-25, 178:8 – 180:18, 184:13-25, 198:17-23).

43. Mr. Woellner testified that the handheld instrument tested for total volatile organic compounds (the combination of all volatile organic compounds together). The detection limit allowed him to measure down to a tenth of a part per million, or 100 parts per billion. The field instrument also helps locate where concentrations are highest and any major areas of concern and then an air sample is taken. The air sample is analyzed under EPA Method TO-15, which analyzes approximately 80 toxic compounds amongst the 1,800 volatile organic compounds that can be detected. Accordingly, the air sample analyzes those compounds that are toxic or hazardous. (Hrg. Tr. 173:23 – 174:4, 175:15 – 176:6, 184:6-11).

44. In this case, the hand held instrument identified 0.0 parts per million of total volatile organic compound. In other words, the hand held instrument did not detect any volatile organic compounds in the various areas of testing. The air sample identified 3 compounds, which Mr. Woellner testified were three of the most common compounds found in air samples and were the product of cleaning materials, cars, and air conditioning materials. However, he noted that these were extraordinarily low concentrations and were much lower than what is typically detected in other locations, such as homes. Mr. Woellner also opined that from an air quality perspective, office buildings tend to be much better than residential buildings due to requiring a fresh air exchange. The end result is that office building air generally has lower chemical concentrations than residential air. (Hrg. Tr. 187:1-4, 189:15-24, 190:8 – 192:3, 193:2-21).

45. Mr. Woellner further opined that Claimant's use of an oil to counteract other smells was ill-advised for someone who is allegedly chemically sensitive. He testified that the oil would still be a volatile organic compound and Claimant was merely "adding chemicals to chemicals." (Hrg. Tr. 199:7-18, 214:13-18). In other words, Claimant's use of scents to prevent her alleged reaction to scents is contradictory.

Dr. Kathleen D'Angelo performs an IME and opines no work related injury.

46. An IME was performed by Dr. Kathleen D'Angelo on May 7, 2018. Claimant's chief complaints included headaches, neck pain, problems thinking, and stress. She denied having any similar or previous problems. Claimant reported "synthetic" scents such as perfumes, colognes, lotions, detergents, and dryer sheets triggered her migraines, along with sugar and fructose, stress, and cold weather. It was noted that light did not affect her headaches, but noise exacerbated her pain. Claimant reported that she would get an "aura" with her migraine if it was severe and continuous. Claimant stated that she had not had any improvement in her migraines despite being off work since December 2017 and was still experiencing daily headaches. Claimant stated that she would get migraines when going grocery shopping or going to the movies if people had on perfume and colognes. (Ex. A, p. 2-8, 25).

47. Claimant reported that she had worked for the employer for some time before her symptoms developed. She also denied any change in what perfumes or scents people were wearing. Claimant also reported experiencing headaches even when working on the weekend and alleged that the scents were saturated in chairs. (Ex. A, p. 9).

48. Based on her review of the medical records and examination of Claimant, Dr. D'Angelo assessed Claimant with Chiari 1 malformation, Fibromyalgia, Anxiety, Post-Traumatic Stress Reaction, and Depression, all of which were not work related. Dr. D'Angelo did not believe there were any work-related diagnoses. Dr. D'Angelo noted that Claimant had a prior history of a closed head injury along with pre-existing complaints of headaches and memory loss (including a history of 1-2 headaches per week), along with a medical history positive for depression, anxiety, tension headaches and fatigue. Claimant also had a strong history of environmental allergies and a diagnosis of stress-induced Fibroymyalga. (Ex. A, p. 13-22).

49. Dr. D'Angelo noted that prior to the alleged date of injury, Claimant had been treating with her personal allergist Dr. Ebadi with complaints of ear and sinus pressure, facial pain, and headaches. When Claimant requested disability paperwork from Dr. Ebadi, Claimant was referred to neurologist Dr. Elina Pales where Claimant reported that she had had "sinus headache forever" and was "allergic to everything outside." Claimant reported that she would suffer sinus headaches 1-2 times per week at baseline, but had developed a new headache associated with odor and noise which occurred 1-2 times per week instead of the usual sinus headaches. Dr. D'Angelo further documented that providers at Concentra referred Claimant to Dr. Reinhard for a causality assessment, and Dr. Reinhard did not believe there was a work related exposure. (Ex. A, p. 23-28)

50. Dr. D'Angelo also based her assessment on the brain MRI which revealed a Chiari 1 malformation. She noted that headache is the hallmark sign of Chiari malformation, but other symptoms can include neck pain, dizziness, vomiting, insomnia, and depression. Dr. D'Angelo noted that Dr. Pales had documented that Claimant's Chiari 1 malformation was likely contributing to all of Claimant's symptoms. (Ex. A, p. 28-29).

51. Dr. D'Angelo further documented that an Air Quality Test had been performed and that no environmental concerns were noted and that trace gas concentrations were all within normal and expected values. (Ex. A, p. 29-30).

52. Ultimately, Dr. D'Angelo opined that Claimant's migraine headaches were incidental and causally unrelated to her work environment or alleged exposure to perfumes and/or fragrances used by co-workers. Dr. D'Angelo further opined that Claimant's copious subjective symptoms could be due to her Chiari 1 malformation and noted that this diagnosis was important in light of Claimant's evolving symptoms. This was especially true given that Claimant continued to report daily headaches despite being out of the workplace and away from work exposure to perfumes, cologne and other scents. Dr. D'Angelo noted that Claimant was employed at the AT&T call center for approximately 8 months prior to the onset of her headaches and that Claimant had multiple visits with her personal physicians prior to alleging that perfumes and scents at work were triggering her symptoms. Dr. D'Angelo opined that she could not link with medical probability Claimant's headaches to her work, work environment, work exposure, or any other air quality issue at the AT&T call center. (Ex. A, p. 30-31).

53. Finally, Dr. D'Angelo opined that there was a significance regarding the consistent pattern of Claimant's repeated requests for disability paperwork from Claimant's providers, which Dr. D'Angelo noted was unchanged before and after the alleged work injury. (Ex. A, p. 31).

Dr. D'Angelo testified that Claimant's congenital Chiari Malformation is the most likely cause of Claimant's symptoms and need for treatment.

54. Dr. D'Angelo testified via deposition as an expert in internal medicine and occupational medicine. Dr. D'Angelo is board-certified in internal medicine and has been Level II accredited since 2001. Her practice consists of almost 100% of occupational medicine. Dr. D'Angelo testified that she has treated many patients with Chiari malformations both as an internist in the emergency department and in private practice. (1 D'Angelo, 3:7 – 4:11; 2 D'Angelo, 100:3 – 101:8).

55. Dr. D'Angelo testified that Claimant reported a gradual onset of headaches approximately 7 to 8 months after working for the employer which Claimant associated with scents and perfumes used by co-workers. Claimant denied any issues in the first 7 to 8 months despite exposure during that time. At the time of her IME, Claimant reported similar issues with exposure to scents outside of the work environment, such as while grocery shopping or in a movie theater, along with scents such as fabric softener sheets and detergent. (1 D'Angelo, 6:10-24, 7:5-17, 50:16 – 51:23).

56. Dr. D'Angelo also explained the difference in various types of headaches. Sinus headaches are associated with frontal and periorbital pain, worsened with bending over. Tension headaches (muscular tension) typically begin in the upper back, thoracic, cervical, or suboccipital region and the pain radiates over the head. Migraine headache are genetic and involve an anatomical issue with nerves in which there is an excess of blood flow to the brain with increased intracranial pressure. Migraines are also associated with prodrome syndrome. Rebound headaches are characterized as "medical overuse headaches" which causes an increase in pain when medication wears off. Chiari headaches are due to Chiari malformation with typical

onset in early adulthood up to age 50 with symptoms including visual disturbances, vertigo, dizziness, faintness and are worsened by exertion. Exertional headaches involve increased intracranial pressure from things such as high blood pressure, a brain tumor, or a Chiari malformation. Dr. D'Angelo also testified that headaches, including the type of headache, the frequency of the headache, and the severity of the headache, are completely subjective and based on the patient's report. (1 D'Angelo 9:3 – 13:3, 43:8 – 44:8).

57. Dr. D'Angelo opined that Claimant's description of her headaches did not sound like a typical presentation of migraines. Dr. D'Angelo testified that the location of the headache (pain to both eyes, over her head, stemming from her neck, scapula and shoulder blades) was "incredibly unusual" for migraines. Dr. D'Angelo also testified that neurological changes (e.g. prodrome "prior to the headache) occur prior to a migraine occurring. Claimant's report of an aura after onset of the headache was also unusual along with her complaints of vertigo and faintness, as those are not typically associated with migraines. (1 D'Angelo 7:18 – 8:10, 13:4 – 15:22).

58. Dr. D'Angelo testified regarding the numerous medications that Claimant had been trialed on and noted that these were standard migraine treatments, however, Claimant had either been unable to tolerate the medications or did not experience any relief. Dr. D'Angelo opined that this raised the question of whether the diagnosis of migraines was correct or whether there was an issue of somatic symptom disorder or malingering. Dr. D'Angelo testified that factors of significance included a pre-existing pattern of requesting time off or using medical help as a means for secondary gain, the presence of litigation, and the fact that Claimant was alleging this as a work-injury. Dr. D'Angelo noted that Claimant had a pattern of arguing for disability long before the work injury and, of significance, Claimant alleged that multiple different conditions caused her disability at different times. (1 D'Angelo 16:13 – 23:11, 24:22 – 27:6).

59. In addition to the foregoing, Dr. D'Angelo opined that the diagnosis of migraines in this case was likely incorrect given Claimant's diagnosis of a Chiari 1 malformation on the brain MRI, which Dr. D'Angelo testified was likely the cause of Claimant's symptoms. Dr. D'Angelo testified that Chiari 1 malformation (cerebellar tonsillectomy) is a genetic and congenital condition which begins at the time of birth. A Chiari 1 malformation allows herniation of the cerebellum through the foramen which causes contraction around the brain tissue and can cause microbleeds which result in increasing intracranial pressure. Dr. D'Angelo testified that the most common symptom is headache, however, the typical onset occurs between ages 20 and 50. Chiari 1 malformation is also associated with worsening, more frequent headaches along with associated symptoms of dizziness, visual changes, muscular weakness, muscular numbness, fatigue, and focal and cognitive issues. Dr. D'Angelo noted that treatment with medications designed for migraines would not provide relief for a Chiari 1 malformation. She further explained that Claimant had a history of headaches which were replaced with new headaches, pre-dating the alleged work exposure and that it was entirely possible that her headaches and other symptoms (such as atypical Fibromyalgia) all along were due to her Chiari 1 malformation. (1 D'Angelo 18:7-11, 23:25 – 24:21, 27:7 – 32:22; 2 D'Angelo 117:1-15).

60. Dr. D'Angelo noted that Claimant's neurologist Dr. Pales had also opined that Claimant's Chiari 1 malformation was likely contributing to Claimant's symptoms given the "intractable progressive course of her symptoms since the onset, their severity, and associated neuropathic changes." (1 D'Angelo 32:11-15).

61. Additionally, Dr. D'Angelo specifically discounted that there was a work exposure which caused or aggravated Claimant's underlying headache condition. Dr. D'Angelo pointed out that with environmental work exposures, there is an expectation that a patient will improve once removed from the work environment. Here, Claimant was removed from work for several months and not only reported no improvement, but reported a worsening of symptoms. Dr. D'Angelo testified

that there are certain environmental contaminants which can cause long-term effects. This had been tested for and did not exist. Further, with environmental precipitants of headaches, once an individual is removed from the environment, the headaches will improve. Dr. D'Angelo also refuted Claimant's allegation that her chronic headaches were due to any prolonged exposure. Dr. D'Angelo noted that long-term effects caused by environmental contaminants were typically pulmonary in nature and she was unaware of any medical research which demonstrated an association with exposure to perfumes and colognes with long-term chronic headaches. Additionally, Claimant's reports that any exposure anywhere now triggers headaches and that Claimant was now experiencing exertional headaches triggered by stress, sneezing, and laughing was further evidence against a work-related exposure. This was further evidence that Claimant's symptoms are related to her Chiari 1 malformation and not due to her work environment. (1 D'Angelo 23:22 – 24:2135:13 – 38:3, 39:8 – 40:18, 40:23 – 41:15).

62. Dr. D'Angelo testified that Dr. Reinhard had also opined that Claimant's headaches were not work related and that ongoing work-up and treatment should be completed with her healthcare providers. Dr. D'Angelo testified that Dr. Reinhard was correct in his assessment and that she agreed with his reasoning. (1 D'Angelo 32:23 – 34:12).

63. In sum, Dr. D'Angelo testified that she had no explanation from an environmental standpoint with regard to the cause of Claimant's headaches and that scents and perfumes are a ubiquitous finding in the environment. She testified that Claimant did not have a work-related diagnosis based on the following:

    - Claimant was in the same work environment for 7 to 8 months and had smelled perfumes without any symptoms;
    - Claimant's description of her headaches was inconsistent with a typical presentation of migraines;
    - The industrial hygienist's evaluation ruled out anything toxic that would have had a deleterious effect on Claimant;
    - Environmental testing did not detect any volatile organic compounds, which would include fragrances and smells;
    - It was not medically possible that perfumes could trigger persistent, worsening, and changing headaches long after any exposure occurred;
    - Claimant's long absence from her work environment did not provide any relief or improvement and instead Claimant reported worsening symptoms with changes in the character of her headaches; and
    - Claimant has a structural abnormality (Chiari 1 malformation) which could cause all of the symptoms Claimant is reporting.

    (1 D'Angelo 41:12 – 42:25, 43:1 – 46:13; 2 D'Angelo 122:24 – 124:8).

64. Dr. D'Angelo also opined that there was no work-related aggravation of Claimant's pre-existing Chiari 1 malformation as that condition cannot be worsened by exposure to perfumes, colognes, or other scents. Dr. D'Angelo testified that Chiari 1 malformation has a history of very classic known structural abnormalities with worsening symptoms and there was no way to environmentally worsen Chiari 1 malformation by breathing in perfumes. She further testified that there are no known triggers for Chiari malformation to become symptomatic. (1 D'Angelo 46:14 – 47:7, 2 D'Angelo 115:3-21).

65. The ALJ finds Dr. D'Angelo's opinions to be consistent with, and supported by, the record as a whole. This includes the medical record and testimonial record of other witnesses. Therefore, the ALJ finds Dr. D'Angelo's opinions to be credible and persuasive.

66. The ALJ does not find Claimant's testimony that her headaches and migraines were caused or triggered by scents at work to be credible or persuasive.

67. The ALJ also does not find Claimant's contention as to the extent and duration of scents that were allegedly perceptible to her at work to be credible.

68. The ALJ finds Claimant has failed to establish that her headaches or migraines were caused, triggered, accelerated, or aggravated by scents at work.

69. The ALJ finds Claimant has failed to establish that her work caused, aggravated, or accelerated, her headaches, migraines, or Chiari malformation.

70. The ALJ finds Claimant has failed to establish a compensable work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should

consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Compensability

For a claim to be compensable, the Claimant must prove that: (1) the injury arose out of the Claimant's employment, and (2) that the injury was in the course and scope of the Claimant's employment. C.R.S. § 8-41-301(1)(b). The "course of employment" requirement is satisfied when it is shown that the injury occurred within the time and place limits of the employment relation and during an activity that had some connection with the employee's job-related functions. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991). An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). Whether an injury "arises out of" employment is determined by looking at the totality of the circumstances. *Lori's Family Dining, Inc. v. ICAO*, 907 P.2d 715, 717 (Colo. App. 1995).

Pursuant to C.R.S. § 8-40-201(14), "occupational disease" means a disease which results directly from the employment or conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside the employment. An occupational disease "occurs" when the disease becomes disabling. *See Union Carbide Corporation v. ICAO*, 128 P.3d 319 (Colo. App. 2005).

Finally, while a pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment, when the Claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAO, August 18, 2005).

The ALJ finds that Claimant failed to establish by a preponderance of the evidence that she sustained a work-related injury in the form of an occupational disease. Claimant worked for the employer for approximately 8 months prior to developing headaches. Further, Claimant has a long-standing and pre-existing history of headaches, allergies and other health conditions. Moreover, The ALJ credits the opinions and testimony of industrial hygienist Mr. Woellner that air quality testing did not identify any toxic chemicals, volatile organic compounds, or other environmental concerns.

The ALJ credits the opinions and testimony of Dr. Kathleen D'Angelo that Claimant's headaches and other various symptoms where not caused, aggravated, accelerated, or triggered by her exposure to any scents at work. The ALJ also credits Dr. D'Angelo's opinion that Claimant's symptoms are more likely directly related to her Chiari malformation, which was demonstrated on her MRI, and that this condition would not have been caused or aggravated by any occupational exposure. Dr. D' Angelo's opinions were consistent with the underlying medical record and the testimonial record of the witnesses that testified at hearing on behalf of Employer.

The ALJ is further persuaded by the opinions and records of Dr. Reinhard and Dr. Pales. Dr. Reinhard conducted a causation assessment and opined that Claimant had not sustained a work-related injury. Claimant's personal neurologist Dr. Pales also opined that Claimant's Chiari 1 malformation was likely causing or contributing to her ongoing symptoms and headaches. The ALJ further finds that the fact that Claimant's headaches have continued and changed, without any improvement, and despite not working for approximately one year, is further evidence that Claimant's headaches and ongoing condition is not causally related to any exposure to scents while at work.

In addition, the ALJ credited the testimony of Mr. R_____ that he could rarely confirm and smell a scent was present as reported by Claimant. Moreover, the ALJ did not credit Claimant's testimony that scents triggered her headaches or migraines. And, the ALJ did not did not credit Claimant's testimony that each time she complained about a scent at work there was actually a scent that was perceptible by Claimant or anyone else.

Therefore, the ALJ finds and concludes Claimant failed to establish by a preponderance of the evidence that her headaches, migraines, or any other condition was caused or aggravated by any exposure to scents at work. Accordingly, Claimant has failed to establish by a preponderance of the evidence that she suffered a compensable work injury in the form of an occupational disease.

II through XIII – (Remaining Issues)

The remaining issues raised by Claimant are moot.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail,

as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 11, 2019.

1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-082-650-002

ISSUES

- Whether Claimant established by a preponderance of the evidence that she suffered a compensable work injury on January 16, 2018.

- Whether the recommended left shoulder surgery is reasonable, necessary and related medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer is a small parts manufacturer. Claimant works as an Operator II assembling various small parts for Employer.

2. On January 16, 2018 Claimant's work duties included assembling what is known as a C-80. This assembly required Claimant to tighten caps to the end of cables using a wrench in each hand. To tighten the caps, Claimant would push the wrench in her right hand away from her body while simultaneously pulling the wrench in her left hand towards her body.

3. While performing this motion on January 16, 2018, the wrench in Claimant's left hand dislodged from the cap and the pulling force caused Claimant's left arm to jerk and her left hand to slam against her work table. She felt immediate pain from her left fingers up to her upper left arm. She then grabbed her arm, stood up and turned around to speak to her coworker, Pauline J_____.

4. Ms. J_____ also works for Employer as an Operator II assembling small parts. Her work station is directly behind Claimant's. The two work back to back only a few inches apart. Ms. J_____ testified she remembered an incident on January 16, 2018, involving Claimant. Ms. J_____ testified she heard Claimant drop a wrench while working on an assembly. Claimant stood, stated she was in a lot of pain, and then walked away from her work station. Ms. J_____ further testified that a few days later Claimant was still in pain and she told Claimant she should report a work injury to Employer.

5. Claimant did not report the incident, or her left arm pain, to Employer that day because she assumed the pain would subside with time. Rather, she stopped assembling the C-80, and began working on other small parts that were less demanding to assemble.

6. On February 9, 2018 Claimant was evaluated by Dr. Keith Rangel, M.D., for her annual physical. She testified she remembers verbally informing Dr. Rangel she

believed she pulled a muscle in her left upper arm at work. Dr. Rangel did not note this information in the medical record from this visit. Claimant testified Dr. Rangel informed her to follow up with Employer if she felt the need, and that he did not test her left shoulder or refer her for any medical treatment.

7. On March 23, 2018, Claimant reported her January 16, 2018 work injury to her supervisor, Greg G_____, Employer's Operations Area Manager because the pain in her arm continued to worsen.

8. On March 26, 2018 Mr. G_____ and Claimant filled out an Employer's First Report of Incident form.

- Claimant reported pain throughout her left arm up to her left shoulder area which was present for at least a month.
- She stated that she previously mentioned this to her personal doctor during her annual physical.
- Claimant identified Pauline J_____ as a witness to Claimant's injury.
- She noted that her pain began while she was assembling specific cable ends on the C-80.

9. Mr. G_____ testified that after meeting with Claimant he referred the C-80 assembly to be evaluated by Ryan R_____, Employer's Fabrication Specialist, to determine whether he could create a piece of equipment to make assembling the C-80 more ergonomic. He also interviewed Claimant's coworkers Pauline J_____ and Brian Lauzon, about the assembly process. Mr. G_____ testified that Mr. R_____ was successful, and that Employer currently uses the piece of equipment he created.

10. On April 3, 2018, Claimant met with Ryan LL, Employer's Environmental Health and Safety manager, and Derek V_____ to discuss Claimant's injury. She again indicated pain throughout her left arm that began while fastening connectors on the C-80. Mr. LL testified that during the conversation Claimant specifically indicated her injury began while working with the little wrenches required to compress the caps to the cables on the C-80, and that she had since stopped performing this build.

11. On April 6, 2018, Claimant met with Mr. LL again because she was "in tears" at work due to her left arm pain. Mr. LL scheduled Claimant to be evaluated by an occupational medicine doctor at UC Health to address her ongoing left arm issues.

12. Also on April 6, 2018, Mr. LL contacted Insurer to report Claimant's left arm injury. Mr. LL reported Claimant had been experiencing left arm pain for the past three months, and she reported the issue to her primary care doctor during her annual physical. Mr. LL also reported that Claimant indicated her left arm pain began while performing a specific task that she had since discontinued doing.

13. On April 9, 2018, Patrick Quigley, M.D. at UC Health evaluated Claimant. Claimant reported a three month history of left arm pain that began in mid-January when she was tightening cables using little wrenches. Dr. Quigley ordered a left shoulder x-ray and physical therapy. He also placed Claimant on restricted duty.

14. On April 19, 2018 Claimant underwent her first session of occupational therapy (OT) at Rebound Sports & Physical Therapy with Kevin Rhodes. Claimant reported left upper arm pain that began in "early January after twisting a small part on an assembly line."

15. On July 3, 2018, Claimant underwent a left shoulder MRI which indicated extensive bursal sided fraying of the supraspinatus with complete or near complete tear at the leading edge, a split tear of the biceps tendon, possible SLAP tear, and mild degeneration of the AC joint.

16. On January 11, 2019 Claimant underwent a Claimant-sponsored Independent Medical Exam performed by Dr. David Yamamoto, M.D. Dr. Yamamoto opined Claimant suffered an acute left shoulder injury while tightening cables at work on January 16, 2018. He further opined he believed Claimant had a pre-existing weakening of her left shoulder supraspinatus and the jerking motion of the wrench dislodging while pulling it caused the supraspinatus to tear.

17. On January 23, 2019 Claimant was evaluated by her orthopedist Dr. Eric Young, M.D., who recommended she undergo left shoulder surgery. Claimant testified she would like to proceed with this surgery. Respondents did not produce persuasive evidence to the contrary.

18. Claimant testified she had no issue with her left shoulder prior to January 16, 2018. There is no documentation indicating Claimant had any issues with her left shoulder prior to the January 16, 2018 work incident.

19. In her Employer's First Report of Incident form, Claimant also noted that assembling the C-80 this assembly had given her issues for the past 2-3 years. Based on context and the totality of the evidence, the ALJ finds that Respondents construed Claimant's complaint to be one of an occupational disease. For example, they sought to modify the C-80 assembly process and performed an ergonomic evaluation.

20. The ALJ notes that Claimant speaks softly and with a heavy accent. Based on context and the totality of the evidence, the ALJ finds that Claimant believed she had clearly reported a single occupational injury. Due to language barriers and a lack of sophistication in the workers' compensation arena, Claimant did not appreciate that Respondents were treating her claim as occupational disease.

21. The ALJ finds that Claimant established by a preponderance of the evidence that she suffered a compensable work injury on January 16, 2018.

22. The ALJ finds that Claimant established by a preponderance of the evidence that the recommended left shoulder surgery is reasonable, necessary and related medical treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, *supra*. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, *supra*. A workers' compensation case is decided on its merits. § 8-43-201, *supra*.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. § 8-43-201, *supra*.

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), *supra*; *Price v. Industrial Claims Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). The "arising out of" test is one of causation which

requires that the injury have its origins in an employee's work-related functions. An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). There is no presumption than an injury, which occurs in the course of employment, arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971).

A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004).

Claimant's testimony and accompanying evidence is persuasive and consistent with suffering an acute injury to her left upper extremity on January 16, 2018 while assembling the C-80. Claimant testified to build the C-80 she had to attach caps to the ends of cables by simultaneously using two wrenches to compress the caps to the cables. While pulling the wrench in her left hand it dislodged causing her left arm to jerk and her left hand to slam against her work table. She testified this incident caused immediate pain throughout her left arm, from her fingers to her shoulder area.

Claimant's testimony is strongly supported by the testimony of her coworker Pauline Jaramilo. Ms. J_____ testified she is a coworker of Claimant's who has no special relationship to her. That the two work back to back, only inches apart from each other. She further testified she remembers Claimant suffering an injury in mid-January 2018 while assembling the C-80. She testified she remembers an incident where she heard a wrench loudly strike Claimant's work table, and then Claimant stood up in pain walked away from her work station. Ms. J_____ further testified that days later Claimant was still in pain and Ms. J_____ encouraged her to report the incident to Employer.

Together Claimant and Ms. J_____'s testimony establish that when the wrench in Claimant's left hand dislodged it did so with enough force to cause a loud enough commotion for Ms. J_____ to hear it, stop working, and give her attention to Claimant. That Claimant was in enough noticeable pain that Ms. J_____ remembers how distraught she looked and that it caused Claimant to flee her work station. The probative evidence establishes this event happened and it caused Claimant to be in noticeable pain.

Claimant actions after this event are also persuasive and support the testimony that she suffered an acute injury on January 16, 2018. Claimant credibly testified she altered her work after the January 18, 2016 incident because of the injury it caused to her left arm. Her testimony is supported by the prior statements she made to her direct supervisor Greg G_____, the EHS Manager Ryan LL, and Dr. Quigley. She informed all of them she stopped performing the C-80 build, and other more laborious assemblies, in lieu of less strenuous builds. It makes little sense for Claimant to stop building the C-80, which she has built for years, if an injury did not happen on January 16, 2018.

Dr. Yamamoto's medical opinions are credible and persuasive regarding the causation of Claimant's left shoulder injury. Dr. Yamamoto opined Claimant had preexisting degeneration of the supraspinatus in her left shoulder that the jerking motion caused to tear when the wrench dislodged from the cap. This incident caused the preexisting asymptomatic degeneration to exacerbate resulting in pain, the need for medical treatment, and the need for left shoulder surgery. Dr. Yamamoto's opinions are supported by Claimant's testimony that she had no issues with her left upper extremity prior to January 16, 2018, and the lack of any documented injury or treatment to the left upper extremity prior to January 16, 2018.

The evidence is persuasive and consistent that Claimant suffered an acute injury as a result of an ergonomic flaw in the C-80 assembly process. The probative evidence makes it clear Employer was concerned with the ergonomics of the C-80 assembly after Claimant reported her injury. The conversations with both Mr. G_____ and Mr. LL centered on the ergonomic risks of assembling the C-80. Mr. G_____ marked "ergonomic" as the cause of injury on the First Report of Injury (FROI) form he filled out with Claimant. Mr. G_____ sat with Claimant during the C-80 assembly process, and had Employer's fabrication specialist Mr. R_____ develop a fixture to make the C-80 assembly more ergonomic. Mr. G_____ testified that Employer currently uses the fixture Mr. R_____ developed during the C-80 assembly.

The cumulative evidence is persuasive that Claimant's delayed reporting is the cause of the confusion as to whether she suffered an acute injury or one cause by repetitive motion. Claimant testified she did not immediately report the injury because she thought the pain would go away over time without medical care. She further testified the pain did not go away, and actually worsened over the two-plus-months between the injury happening on January 16, 2018 and reporting it on March 23, 2018.

Below is the evidence that indicates Claimant suffered an acute injury to her upper left extremity while assembling the C-80 on January 16, 2018:

- Claimant's testimony recalling the incident.
- Ms. J_____'s testimony about the incident, hearing the wrench hit the table, and Claimant being in immediate pain that caused her to flee her work station.
- Claimant informed Mr. G_____ on March 23, 2018 when the two filled out the FROI form that her pain began while assembling a specific cap to the end of a cable. This is an obvious reference to compressing the cap to the end of the cables as part of the C-80 assembly.
- Claimant informed the EHS team (Mr. LL and Mr. V_____) on April 3, 2018 that her pain began while fastening connectors. In the context of things, this is another obvious reference to compressing caps onto cables as part of the C-80 assembly.
- Mr. LL testified Claimant stated to him that her pain began while working with small wrenches on the C-80 assembly.
- On April 9, 2018 at Claimant's initial evaluation with Dr. Quigley she reported to him her pain began in mid-January while using little wrenches to fasten cables. Another obvious reference to the C-80 assembly.

- Claimant reported her pain began in mid-January while twisting a small part on an assembly line to Kevin Rhodes, OTR, CTH at her initial therapy session on April 19, 2018.

These are all ways of describing the same incident. These descriptions do not use the same wording, but all contain the same premise: Claimant's left upper extremity pain began as a result of an incident that occurred while compressing caps to cables as part of the C-80 assembly in January 2018.

If Claimant could go back in time and immediately report the injury on January 18, 2018, she would. If she could go back in time and use the exact wording with everyone she reported the incident and injury to, she would. However, she cannot and the confusion that has occurred as a result of her delayed reporting does not outweigh the evidence that strongly indicates an incident happened on January 16, 2018 while Claimant was assembling the C-80 that resulted in immediate pain and functional loss in her left arm that caused her to alter her work thereafter to less strenuous assemblies.

The cumulative evidence establishes Mr. G_____'s and Mr. LL's testimony and statements are not persuasive because they are not entirely consistent.

Mr. G_____ testified he believed Claimant's injury was due to repetitive motion based on poor ergonomics because she reported experiencing left arm pain for over a month without stating a specific incident. This testimony is inconsistent with the FROI form he filled out with Claimant which notes "Martha's primary concern was assembling specific ends onto a cable[.]" Also, in the FROI Mr. G_____ confuses when the injury happened and when Claimant reported the injury to her primary care physician during her annual physical. Mr. G_____ lists the injury happening in February when it happened in January, and Claimant undergoing her physical in January when it occurred in February. Lastly, Mr. G_____ noted and testified that Claimant indicated her left arm pain had been present for the past 2-3 years. To the contrary, Claimant testified she was stating the issue with assembling the cables on the C-80 had been an issue she had experienced for the past 2-3 years. The medical record supports Claimant's testimony because there is no evidence of any prior left shoulder issues prior to January 16, 2018.

Mr. LL testified he understood Claimant's injury to be a gradual onset caused by repetitive motions. This testimony is not supported by the notes he took throughout the investigation of the injury. Nowhere in the EHS team's notes, which Mr. LL is the manager of, does it state that Claimant's injury was believed to be due to repetitive motion with a gradual onset of pain. If it was so obvious Claimant's issue was a gradual onset due to repetitive motions one would expect this to be noted beyond stating there was an ergonomic concern with the C-80 assembly.

Ergonomics and repetitive motion are not synonymous. As Mr. LL testified, ergonomics means to shape the work to the worker, not the worker to the work. The probative evidence indicates after Claimant reported her injury to Employer both Mr. G_____ and Mr. LL became concerned with Hach employees using the small wrenches to tighten the caps to the cables on the C-80. The concern led Employer to ask Mr. Gerbenstein to create a fixture to aid in the cable assembly of the C-80. Mr. LL and Mr.

G_____ testified they were under the impression Claimant's injury was due to repeatedly using the wrenches. However, neither Mr. G_____ nor Mr. LL testified that Claimant reported a repetitive motion injury to them. The notion of a repetitive injury is what both surmised and assumed based on the ergonomic concern raised by Claimant. Claimant believes the same causation mistake happened with Dr. Quigley for similar reasons.

When Claimant began treatment in April 2018 the evidence supports she relayed the same mechanism of injury to Dr. Quigley that she did to Employer. Dr. Quigley noted that Claimant reported experiencing left upper arm pain in mid-January 2018 that began as a result of tightening cables using little wrenches. However, Dr. Quigley mistook what Claimant was trying to relay as an acute injury for one caused by repetitive motion.

Given the circumstances it is understandable why this misunderstanding happened. When Claimant was first evaluated by Dr. Quigley on April 9, 2019 it was almost three months after the injury occurred. She informed him she was a small parts assembler that constructed multiple items per day. She further informed him that she continued to work for the past-three months, and her pain worsened over that time. When examining the cumulative evidence the ALJ understand how both Employer and Dr. Quigley construed this to be a repetitive motion injury when it was actually a witnessed acute injury that occurred on January 16, 2018.

To be clear, Claimant is not alleging that her left hand hitting her work table is what caused her injury. Claimant testified her left arm injury occurred when the wrench in her left hand dislodged from the cable on the C-80 and caused her left arm to forcefully jerk and left hand to strike the table. Hitting the table was simply part of the incident that led to her work injury. This is supported by Dr. Yamamoto's opinion the injury was caused by the sequence of forcefully pulling a wrench when it dislodged and caused her left arm to forcefully jerk and left hand hit her work table.

Thus, the persuasive evidence establishes by a preponderance of the evidence that Claimant suffered an acute injury to her left upper extremity on January 16, 2018 while performing duties that arise out of her employment relationship with Employer and during the course and scope of her Employment relationship.

Medical Benefits – Reasonably Necessary

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). Whether the claimant sustained his burden of proof is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The preponderance of the evidence establishes the medical treatment Claimant underwent is reasonable, necessary, and related to her January 16, 2018 work injury. Dr. Yamamoto credibly opined the incident on January 16, 2018 while assembling the C-80

caused Claimant's already weakened supraspinatus to tear. Thus, the recommended surgery is reasonable, necessary, and related to Claimant's January 16, 2018, work injury because it is a result of Claimant's work injury exacerbating her preexisting asymptomatic shoulder condition.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant sustained a compensable work-related injury to her left upper extremity on January 16, 2018.

2. All medical treatment to the left shoulder to date is found to be reasonable, necessary, and related to Claimant's compensable work injury.

3. The recommended left shoulder surgery is reasonable and necessary medical treatment that is related to Claimant's compensable work injury.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 11, 2019

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered an occupational disease in the form of bilateral rotator cuff tears that began on March 20, 2018 during the course and scope of his employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence that the right shoulder surgery recommended by Mark S. Failinger, M.D. is reasonable, necessary and causally related to his March 20, 2018 occupational disease.

FINDINGS OF FACT

1. On August 16, 2017 Claimant began working for Employer as a Sanitation Worker. His job duties involved cleaning and sanitizing various machines and trashcans. Claimant worked approximately eight hours each weekday and five hours on Sundays for a total of about 45 hours per week.

2. Claimant explained that he reported bilateral upper extremity pain to Employer in March and April 2018. The medical records reflect that he initially visited Concentra Medical Centers for an evaluation on October 18, 2018. Claimant reported that he had been working for Employer for about one year. His job duties involved using a pressure water hose to spray and clean trashcans, machine parts and carpets. He initially squeezed a handle on the hose to spray water, but Employer switched to a twist nozzle after Claimant developed bilateral upper extremity pain in his hands, wrists, forearms and shoulders. However, Claimant continued to suffer symptoms after the switch to the twist nozzle. Claimant attributed his symptoms to repetitive work activities. After conducting a physical examination, Karen Larson, M.D. determined that Claimant exhibited right wrist symptoms consistent with Carpal Tunnel Syndrome (CTS), DeQuervain's tenosynovitis and bilateral shoulder impingement syndrome.

3. On November 14, 2018 Claimant underwent an EMG/NCS of his upper extremities. The study revealed subtle evidence of mild CTS in Claimant's right wrist. There was no evidence of left wrist CTS.

4. Dr. Larson referred Claimant to John T. Sacha, M.D. at Concentra Advanced Specialists for an evaluation. At a December 19, 2018 initial visit Claimant reported left shoulder pain that radiated into the left neck and arm area. He also noted numbness and tingling in his right hand. After conducting a physical examination, Dr. Sacha diagnosed Claimant with left shoulder impingement and right CTS. He detailed that Claimant had been holding a high power hose away from his body and developed left shoulder rotator cuff tendinopathy. His use of the power grip on the hose at work also caused him to develop CTS in his right wrist. Dr. Sacha recommended a left shoulder MRI and a right wrist splint.

5. At a subsequent follow-up appointment, Dr. Sacha remarked that the left shoulder MRI revealed a full-thickness supraspinatus tear. He explained that Claimant performed repetitive overhead work that likely caused his left rotator cuff tear. Dr. Sacha thus recommended a one-time surgical evaluation with an orthopedic specialist at Concentra Advanced Specialists.

6. On January 24, 2019 Claimant visited Mark S. Failinger, M.D. at Concentra Advanced Specialists for a surgical evaluation. After performing a physical examination Dr. Failinger diagnosed Claimant with right CTS and an apparent near full-thickness rotator cuff tear. He remarked that he was unable to access the MRI films but Claimant's condition "sound[ed] like" a right rotator cuff tear. In assessing causation, Dr. Failinger was unable to make a definitive determination because he lacked a description of Claimant's job duties. He reasoned that, if Claimant had been lifting moderate to significant weight and perfoming his job duties for the period of time outlined in the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Claimant's condition "could be" work-related. Dr. Failinger summarized that he would have to consider Claimant's job description and the duration of his work activities to determine whether his condition was work-related. He noted that, if Claimant's symptoms "started in March or April 2018 but only been there for a very short period of time, we would not deem that as work related."

7. After another evaluation with Dr. Sacha, Claimant returned to Dr. Failinger on February 7, 2019. Dr. Failinger reviewed MRI's of both shoulders and determined they exhibited full-thickness anterior supraspinatus tears. He noted that Claimant's right shoulder reflected a larger tear. Dr. Failinger remarked that Claimant had received an injection for his right wrist CTS and deferred to Dr. Sacha for additional CTS treatment. After performing a physical examination and reviewing the right shoulder MRI, Dr. Failinger diagnosed Claimant with a right shoulder medium full-thickness supraspinatus tear. He commented that Claimant wished to proceed with surgery.

8. On February 25, 2019 Claimant returned to Dr. Sacha for an examination. Dr. Sacha diagnosed Claimant with bilateral shoulder impingement and right CTS. The CTS had resolved. He noted that Claimant was waiting to receive authorization for shoulder surgery.

9. On May 23, 2019 Sara Nowotny completed a Job Demands Analysis and Risk Factor Analysis for the position of Sanitation Worker at Employer's facility. She issued a report on May 29, 2019. The Job Demands Analysis specified that Claimant spent 20-30% of his day pushing a cart and pallet jack with mats, parts and bins from the work area to a cleaning station. He then used a hose to clean floors and a squeegee to dry walls. He expended about 15-20% of his workday removing mats from a pallet jack, cleaning them and placing them back on the pallet. Claimant also spent about 15-20% of his day spraying and cleaning bins. Spraying, cleaning and stacking parts consumed about 15-20% of his workday. Finally, Claimant spent about 15-20% of his day pulling and cleaning stacks of trash receptacles. Notably, the bins and trashcans weighed 1-5 pounds, the small mats weighed 6-10 pounds, the medium mats weighed 11-20 pounds and the trash receptacles with meat and machine belts weighed 21-60 pounds.

10. Ms. Nowotny conducted time studies of Claimant's right wrist motion, overhead work activities and shoulder movements. She specifically determined that Claimant spent 3 hours and 59 minutes of cumulative time during his eight-hour work shift engaged in right wrist ulnar deviation, flexion or extension in excess of 30 degrees. Ms. Nowotny further determined that Claimant lifted greater than 10 pounds 108 times per hour or 864 times throughout his eight-hour workday. He also spent 2 hours and 53 minutes of his eight-hour work shift engaged in lifting greater than 10 pounds more than 60 times each hour or using two pounds of pinch force or 10 pounds of hand force three times or more per minute. Relying on the *Guidelines*, Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors for the development of right wrist or bilateral shoulder symptoms based on Claimant's job duties.

11. On May 27, 2019 Robert W. Watson Jr., M.D. conducted an independent medical examination of Claimant's claim. Claimant recounted that he developed bilateral shoulder symptoms and right wrist pain while performing his job duties at work. His job duties specifically included washing and cleaning, using a hose and lifting trashcans. Initially, he squeezed the hose nozzle with his right hand to spray water. However, a second nozzle only required twisting to spray. Dr. Watson commented that some of Claimant's activities were above shoulder level and others were below the waist. After reviewing Claimant's medical records and performing a physical examination, Dr. Watson diagnosed Claimant with right and left rotator cuff tears with impingement syndrome. He also commented that Claimant suffered right wrist CTS.

12. Dr. Watson explained that Claimant had been working for Employer for about one year and eight months. He noted that Claimant's job duties primarily involved cleaning equipment used in the processing of meat. Claimant's job required lifting and carrying parts weighing 40-50 pounds. Claimant also cleaned and stacked trash containers. However, in the absence of a job site evaluation, the duration of each of his job duties was unclear. Nevertheless, Dr. Watson summarized that Claimant's activities during his eight-hour work shift varied with respect to the use of his upper extremities.

13. Dr. Watson relied on the *Guidelines* in addressing the cause of Claimant's bilateral shoulder symptoms. The *Guidelines* specifically enumerate factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Dr. Watson concluded that it was unlikely Claimant's work activities for Employer caused his bilateral shoulder symptoms. Notably, because Claimant had only been working for Employer for one year and eight months, he did not meet the minimum threshold for a shoulder injury of working overhead for 30 minutes each day for five years pursuant to the *Guidelines*. Second, because Claimant engaged in a variety of job tasks and changed positions, it is unlikely that overhead work would constitute 80% of his work cycle. Based on the *Guidelines*, it was unlikely Claimant's shoulder pathology was related to his job duties for Employer. In considering Claimant's right wrist CTS, Dr. Watson commented that, because Claimant engaged in a variety of tasks throughout his work shifts, it was unlikely that he exceeded any of the criteria for

the development of CTS under the *Guidelines*. He remarked that it was unclear whether Claimant would satisfy the criteria for a Secondary Risk Factor pursuant to the *Guidelines*. Although Dr. Watson reasoned, it was unlikely Claimant's bilateral shoulder and right wrist CTS were related to his job duties, "a formal jobsite evaluation would clarify these issues."

14. On June 16, 2019 Dr. Watson issued an Addendum Report to his independent medical examination after reviewing the Job Demands Analysis performed by Ms. Nowotny. In addressing Claimant's right wrist CTS Dr. Watson noted that Claimant engaged in wrist flexion, extension and ulnar deviation for three hours and 59 minutes during his eight hour shift. Under the *Guidelines*, the minimum threshold is four hours per eight-hour work shift. Furthermore, Claimant only spent 2 hours and 53 minutes of his eight-hour work shift lifting greater than 10 pounds more than 60 times each hour or using two pounds of pinch force or 10 pounds of hand force three times or more per minute. There were also no risk factors for working in a cold environment. Dr. Watson concluded that there were no Primary or Secondary Risk Factors for the development of shoulder pathology under the *Guidelines*. Specifically, Claimant failed to engage in overhead lifting in excess of 30 minutes per day for a minimum of five years. Moreover, Claimant's work activities did not require shoulder movement greater than 15-30 repetitions per minute for more than 80% of a work cycle. Dr. Watson summarized that Claimant did not engage in forceful and repetitive activities for an amount of time that met the minimum threshold in the *Guidelines* for the development of shoulder pathology.

15. On July 8, 2019 the parties conducted the pre-hearing evidentiary deposition of Dr. Watson. Initially, Dr. Watson reiterated that Claimant suffered from bilateral rotator cuff tear impingement syndrome and right wrist CTS. He explained that Claimant's work activities did not satisfy the criteria for a work-related exposure pursuant to the *Guidelines*. Relying on the Job Demands Analysis, Dr. Watson maintained that Claimant did not engage in forceful and repetitive activities for an amount of time that met the minimum threshold in the *Guidelines* for the development of shoulder pathology or CTS.

16. On July 17, 2019 the parties conducted the pre-hearing evidentiary deposition of Sara Nowotny. Ms. Nowotny noted that she did not conduct the Job Demands Analysis over a full eight-hour workday, but instead extrapolated data based on four hours of observation. She explained that she did not observe the presence of any Primary or Secondary risk factors under the *Guidelines*. Ms. Nowotny specifically determined that there were no risk factors for Claimant's bilateral shoulder symptoms or right wrist CTS.

17. Claimant testified at the hearing in this matter. He explained that he began working for Employer in August 2017. He noted that his job duties involved cleaning and sanitizing machines and trashcans. Claimant detailed that, because of his bilateral shoulder symptoms, he no longer performs overhead work including sanitizing machines and lifting spare parts. He also no longer squeezes a handle to spray water from a hose, but uses a twist nozzle because he developed right wrist pain. Nevertheless, Claimant still moves barrels, cleans floors and works eight hours each day.

18. Ms. Nowotny testified at the hearing in this matter. She explained that she observed Claimant's job duties at Employer's facility for four hours. She recorded the frequency and duration of Claimant's activities. Ms. Nowotny prepared a Job Demands Analysis that delineated Claimant's job duties and the time spent on each task. She maintained that Claimant did not satisfy any Primary or Secondary Risk Factors for the development of shoulder or wrist symptoms under the *Guidelines*.

19. On August 5, 2019 the parties conducted the post-hearing evidentiary deposition of Dr. Watson. Dr. Watson reiterated that Claimant suffered from bilateral rotator cuff tear impingement syndrome and right wrist CTS. He explained that Claimant's work activities did not satisfy the criteria for a work-related exposure pursuant to the *Guidelines*. Relying on the Job Demands Analysis, Dr. Watson maintained that Claimant did not engage in forceful and repetitive activities for an amount of time that met the minimum threshold in the *Guidelines* for the development of shoulder pathology. Dr. Watson also noted that Claimant was not forthcoming with him or other physicians in his description of job duties or the onset of symptoms. Accordingly, Claimant did not likely suffer a cumulative trauma disorder to his shoulders while working for Employer during March and April 2018.

20. Claimant has failed to demonstrate that it is more probably true than not that he suffered an occupational disease in the form of bilateral rotator cuff tears that began on March 20, 2018 during the course and scope of his employment with Employer. Although Claimant attributed his bilateral shoulder symptoms to his work activities, a review of his job duties reflects that they lacked the requisite duration, force or repetition to cause a cumulative trauma disorder.

21. Relying on the *Guidelines* in conducting a Job Demands Analysis, Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. After conducting time studies of Claimant's work activities, Ms. Nowotny specifically determined that Claimant spent 20-30% of his day pushing a cart and pallet jack with mats, parts and bins from the work area to a cleaning station. He then used a hose to clean floors and a squeegee to dry walls. He expended about 15-20% of his workday removing mats from a pallet jack, cleaning them and placing them back on the pallet. Claimant also spent about 15-20% of his day spraying and cleaning bins. Spraying, cleaning and stacking parts consumed about 15-20% of his workday. Finally, Claimant spent about 15-20% of his day pulling and cleaning stacks of trash receptacles. Notably, the bins and trashcans weighed 1-5 pounds, the small mats weighed 6-10 pounds, the medium mats weighed 11-20 pounds and the trash receptacles with meat and machine belts weighed 21-60 pounds. Ms. Nowotny specifically determined that Claimant spent 3 hours and 59 minutes of cumulative time during his eight-hour work shift engaged in right wrist ulnar deviation, flexion or extension in excess of 30 degrees. She further determined that Claimant lifted greater than 10 pounds 108 times per hour or 864 times throughout his eight-hour workday. He also spent 2 hours and 53 minutes of his eight-hour work shift engaged in lifting greater than 10 pounds more than 60 times each hour or using two pounds of pinch force or 10 pounds of hand force three times or more per minute. Relying on the *Guidelines*, Ms. Nowotny did not find evidence of any Primary

or Secondary Risk Factors for the development of right wrist or bilateral shoulder symptoms based on Claimant's job duties.

22. Dr. Watson persuasively concluded that there were no Primary or Secondary Risk Factors for the development of shoulder pathology under the *Guidelines*. Specifically, Claimant failed to engage in overhead lifting in excess of 30 minutes per day for a minimum of five years. Moreover, Claimant's work activities did not require shoulder movement greater than 15-30 repetitions per minute for more than 80% of a work cycle. Dr. Watson summarized that Claimant did not engage in forceful and repetitive activities for an amount of time that met the minimum threshold in the *Guidelines* for the development of shoulder pathology. Moreover, on January 24, 2019 Dr. Failinger commented that, if Claimant had been lifting moderate to significant weight and perfoming his job duties for the period of time outlined in *Guidelines*, Claimant's condition "could be" work-related. However, Dr. Failinger noted that if Claimant's symptoms "started in March or April 2018 but only been there for a very short period of time, we would not deem that as work related."

23. In contrast, Dr. Sacha explained that Claimant performed repetitive overhead work that likely caused his left rotator cuff tear. However, Claimant began to develop bilateral shoulder symptoms within approximately eight months after beginning employment with Employer. His overhead work thus fell far short of 30 minutes per day for a minimum of five years. Moreover, the Job Demands Analysis reveals that Claimant's work activities did not require shoulder movement greater than 15-30 repetitions per minute for more than 80% of a work cycle. Based on the Job Demands Analysis, a review of the medical records and the persuasive opinion of Dr. Watson, Claimant did not engage in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. He likely did not suffer a cumulative trauma disorder to his shoulders while working for Employer during March and April 2018. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate his shoulders to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. Rule 17, Exhibit 5 provides an algorithm for evaluating Cumulative Trauma Conditions (CTC) pursuant to the *Guidelines*. In addressing applicability, the *Guidelines* note that "CTC's of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures." W.C.R.P. Rule 17, Exhibit 5, p. 6. In determining a diagnosis when performing a cumulative trauma analysis the *Guidelines* delineate specific musculoskeletal conditions and peripheral

nerve disorders. Nevertheless, the Guidelines provide that "[l]ess common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment." W.C.R.P. Rule 17, Exhibit 5, p. 21.

7. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing two pounds or more. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. If neither Primary nor Secondary Risk Factors are present, the *Guidelines* provide that "the case is probably not job related." W.C.R.P. Rule 17, Exhibit 5, p. 24.

8. The *Guidelines* also specifically delineate factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when addressing the likelihood of cumulative trauma contributing to shoulder pathology. W.C.R.P. Rule 17, Exhibit 4, p. 16.

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered an occupational disease in the form of bilateral rotator cuff tears that began on March 20, 2018 during the course and scope of his employment with Employer. Although Claimant attributed his bilateral shoulder symptoms to his work activities, a review of his job duties reflects that they lacked the requisite duration, force or repetition to cause a cumulative trauma disorder.

10. As found, relying on the *Guidelines* in conducting a Job Demands Analysis, Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. After conducting time studies of Claimant's work activities, Ms. Nowotny specifically determined that Claimant spent 20-30% of his day pushing a cart and pallet jack with mats, parts and bins from the work area to a cleaning station. He then used a hose to clean floors and a squeegee to dry walls. He expended about 15-

20% of his workday removing mats from a pallet jack, cleaning them and placing them back on the pallet. Claimant also spent about 15-20% of his day spraying and cleaning bins. Spraying, cleaning and stacking parts consumed about 15-20% of his workday. Finally, Claimant spent about 15-20% of his day pulling and cleaning stacks of trash receptacles. Notably, the bins and trashcans weighed 1-5 pounds, the small mats weighed 6-10 pounds, the medium mats weighed 11-20 pounds and the trash receptacles with meat and machine belts weighed 21-60 pounds. Ms. Nowotny specifically determined that Claimant spent 3 hours and 59 minutes of cumulative time during his eight-hour work shift engaged in right wrist ulnar deviation, flexion or extension in excess of 30 degrees. She further determined that Claimant lifted greater than 10 pounds 108 times per hour or 864 times throughout his eight-hour workday. He also spent 2 hours and 53 minutes of his eight-hour work shift engaged in lifting greater than 10 pounds more than 60 times each hour or using two pounds of pinch force or 10 pounds of hand force three times or more per minute. Relying on the *Guidelines*, Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors for the development of right wrist or bilateral shoulder symptoms based on Claimant's job duties.

11. As found, Dr. Watson persuasively concluded that there were no Primary or Secondary Risk Factors for the development of shoulder pathology under the *Guidelines*. Specifically, Claimant failed to engage in overhead lifting in excess of 30 minutes per day for a minimum of five years. Moreover, Claimant's work activities did not require shoulder movement greater than 15-30 repetitions per minute for more than 80% of a work cycle. Dr. Watson summarized that Claimant did not engage in forceful and repetitive activities for an amount of time that met the minimum threshold in the *Guidelines* for the development of shoulder pathology. Moreover, on January 24, 2019 Dr. Failinger commented that, if Claimant had been lifting moderate to significant weight and perfoming his job duties for the period of time outlined in *Guidelines*, Claimant's condition "could be" work-related. However, Dr. Failinger noted that if Claimant's symptoms "started in March or April 2018 but only been there for a very short period of time, we would not deem that as work related."

12. As found, in contrast, Dr. Sacha explained that Claimant performed repetitive overhead work that likely caused his left rotator cuff tear. However, Claimant began to develop bilateral shoulder symptoms within approximately eight months after beginning employment with Employer. His overhead work thus fell far short of 30 minutes per day for a minimum of five years. Moreover, the Job Demands Analysis reveals that Claimant's work activities did not require shoulder movement greater than 15-30 repetitions per minute for more than 80% of a work cycle. Based on the Job Demands Analysis, a review of the medical records and the persuasive opinion of Dr. Watson, Claimant did not engage in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. He likely did not suffer a cumulative trauma disorder to his shoulders while working for Employer during March and April 2018. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate his shoulders to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: September 11, 2019.

STATE OF COLORADO

W.C. No. 5-063-496-003

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 22, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 8/22/19, Courtroom 1, beginning at 1:30 PM, and ending at 3:30 PM).

The Claimant was present in person and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 11 were admitted into evidence, without objection.. Respondents’ Exhibits A through F were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on August 28, 2019. On August 30, 2019, Respondents filed objections to Claimant’s proposal. The gravamen of Respondents’ objection is that the ALJ lacks jurisdiction to order an authorized treating physician (ATP) to perform or direct a specific treatment suggested only by an unauthorized physician (presumably Respondents’ independent medical examiner, Michael Rauzzino, M.D.) , under a non-precedent

setting order of the Industrial Claim Appeals Office (ICAO) of 24 years ago, which is misplaced because Dr. Rauzzino agrees with , in principle, with the recommendation of ATP Bryan Andrew Castro, M.D. *See Short v. Property Management of telluride,* W.C. No. 3-100-726 (ICAO, May 4, 1995). After a consideration of the proposed decision and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUE

The issue to be determined by this decision concern whether or not the transforaminal epidural lumbar/sacral injection (ESI) at the L3-4 level is causally related to the admitted injury of November 26, 2017 and reasonably necessary to cure and relieve the effects thereof.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Posture/Findings

1. On May 8, 2018, Respondents filed a General Admission of Liability (GAL) admitting to medical benefits and at hearing represented to the ALJ that they are currently paying temporary total disability (TTD) benefits for the Claimant's admitted industrial injury of November 26, 2017 (Claimant's Exhibit 3, Bate Stamp (BS) 20.

2. On July 2, 2018, Respondents had the Claimant evaluated by Michael Rauzzino, M.D., whose medical opinion was that the Claimant suffered an acute lumbar disc herniation at L3-L4, in the course and scope of her employment, and that the Claimant would benefit from additional injections or could pursue surgery that would involve a minimally invasive microdiscectomy. (Claimant's Exhibit 10, BS 166).

3. On March 18, 2019, the Claimant filed an "Application for Hearing" endorsing the issue of medical benefits, specifically whether the transforaminal lumbar/sacral epidural injection at the L3-L4 level requested by authorized treating physician (ATP) Bryan Andrew Castro, M.D., was reasonably necessary and causally related to the Claimant's admitted November 26, 2017 injury, as the issue for hearing (Claimant's Exhibit 1, BS 1).

4. On March 25, 2019, Respondents filed a "Response to the Claimant's Application for Hearing," endorsing as an issue whether the request for the L3-L4 transforaminal injection was reasonably necessary and causally related to the Claimant's industrial injury.

5. On June 1, 2019, Respondents had the Claimant evaluated again, this time by Alfred C. Lotman, M.D., who examined the Claimant and whose medical opinion was that the Claimant suffered a "far right L3-L4 disc herniation" in the course and scope of her employment, but that she had reached maximum medical improvement (MMI) and had indicated to him that she was opposed to having a repeat injection at L3-L4 (Claimant's Exhibit 11, BS 172-173)..

Preliminary Findings

6. The Claimant was employed as a bartender and waitress for the Employer at the time of her injury.

7. On November 26, 2017, during the course and scope of her employment, the Claimant sustained an admitted industrial injury to her lumbar spine while moving a keg which was apparently mired in mud, tipping the keg and trying to roll it when she felt a pop in her back and immediate pain in her right buttocks. The Claimant continued to work but was worse by the next morning.

8. Medical records reflect that the Claimant was not able to perform her normal work activities after her injury and that prior to her injury she had always been employed in physical jobs, had worked in construction and in the service industry as a bartender, waitress and cook (Claimant's Exhibit 10, BS 158).

Medical History

9. On December 8, 2017, the Claimant was evaluated by authorized treating physician (ATP) Brian McIntyre, D.O., at Centura Centers for Occupational Medicine (CCOM) in Golden, who assessed the Claimant with a strain of the lower back, consistent with a history of a work-related mechanism of injury and assigned the Claimant temporary work restrictions (Claimant's Exhibit 4, BS 27-29).

10. CCOM referred the Claimant out for an MRI (magnetic resonance imaging) which occurred on January 5, 2018, which MRI reflected:

Multilevel degenerative changes as above described most pronounced within the L3-L4 level right neural foramina where there is a broad-based disc extrusion contributing to moderate right-sided neural foraminal narrowing as detailed. This is probably accounting for the patients' right-sided leg numbness.

(Claimant's Exhibit 6, BS 115).

11. The Claimant continued to treat with the medical providers at CCOM in Golden who eventually referred her out to Douglas C. Wong, M.D., at Panorama Orthopedics & Spine, who became her ATP.

12. On April 11, 2018 the Claimant was evaluated by ATP Dr. Wong who noted:

[Claimant] is a 61 yr female (works at [Employer] who notes right side back and right leg pain and tingling since lifting a Keg on 11/27/18. She denies any issues before that. She has done PT and had an ESI. MRI L spine (H1) shows a right L3-4 far lateral disc herniation. She dos not want any more ESI's. She wants to proceed with surgery, this would be an outpatient right L3-4 far lateral discectomy as an outpatient. (2hrs, Metric set, neuromonitoring)

X-rays do not show any instability

(Claimant's Exhibit 7, BS 117).

13. On April 17, 2018, ATP Dr. Wong's request for surgery was denied because the Claimant's claim at that time was currently under a Notice of Contest. (Claimant's Exhibit 7, BS 121).

14. On May 8, 2018, following the denial of the Claimant's surgery, a General Admission of Liability (GAL) was filed by the Respondents (Claimant's Exhibit 3, BS 20).

15. On June 15, 2019, because the Claimant was concerned with the surgery recommended by ATP Dr. Wong, CCOM sent her out for a second opinion with Bryan Andrew Castro, M.D. (Claimant's Exhibit 9, BS 125), where ATP Dr.Castro stated the following opinion:

Impression/Plan: Large right-sided far lateral disc herniation at L3-L4. At this juncture, she is having ongoing symptoms; however, MRI is several months old. There is a large free fragment component of this disc and actually, the disc herniation may have resolved somewhat in which case the treatment algorithm may have changed. I think it would be reasonable to get her in for a repeat lumbar MRI to better evaluate any neural encroachment or resolution of the disc herniation itself. Additionally, I think an EMG may be considered as well. If the MRI does not reveal a disc herniation currently and/or resolution of the prior disc herniation, I think surgical intervention may not be required. Indeed, the EMG may be positive even if the herniation has resolved, but would not, I think, result in the need for surgery if the MRI does not highlight any ongoing disc and/or nerve root compression.

(Claimant's Exhibit 9, BS 129).

16. On July 2, 2018, the Claimant was evaluated by the Respondents' selected independent medical examiner (IME), Michael Rauzzino, M.D., who reviewed the Claimant's MRI and stated the following opinion:

I reviewed two MRIs of the lumbar spine done at Health Images, one from 01/05/18 and another from 06/20/18. Both of these demonstrate a focal disc protrusion at L3-L4 on the right. This is a foraminal disc herniation, but I do not believe it is a far lateral disc herniation. She otherwise had multilevel degenerative changes that are age appropriate and not terrible.

(Claimant's Exhibit 10, BS 163).

17. Dr. Rauzzino then rendered an opinion that the Claimant had suffered an acute disc herniation at L3-L4 which was work related, that she had no history of a prior back injury and that subsequent imaging ordered by ATP Dr. Castro, showed disc protrusions still present as of June 20, 2018 (Claimant's Exhibit 10, BS 164)

18. Dr. Rauzzino was further of the opinion, in response to the question "what is your diagnosis, prognosis and recommended course of treatment, if any, . . . ?" that:

[Claimant] has an L3-L4 right foraminal disc herniation that is work related. Treatment algorithms could be as follows:

1) She could elect to continue as she is and allow the disc to try to heal on its own; it is slightly smaller than it had been in January but is still significant.

2) She could try another epidural steroid injection in the hope of alleviating her symptoms. [Claimant] had a single epidural steroid injection and this did not provide much relief. It might be worthwhile to repeat the injection once more to see if she gets relief, especially since the disc is getting somewhat smaller. However, if she does not want to pursue injections, she would be left with either living with the symptoms, in which case I believe she would be placed at maximum medical improvement, or she could consider surgical intervention.

3) She could also elect microdiscectomy in minimally invasive fashion. If she elects to proceed with surgery, I would respectfully disagree with Dr. Wong's indication that she would need a far lateral approach; this would be best approached through a standard midline approach given the location of the disc fragment.

4) EMG could also be done to assess the status of the nerve, although she has good motor strength on my examination today.

(Claimant's Exhibit 10, BS 164-165).

19. Dr. Rauzzino also was of the opinion, in response to the question "Do you feel that additional medical treatment and/or surgical intervention is indicated to improve the Claimant's condition? Is the proposed surgery by Dr. Wong related to the incident of November 26, 2017 or is it to correct degenerative changes?" that:

Yes; [Claimant] could benefit from surgery or additional injections.

The surgery proposed by Dr. Wong is related to the acute injury and would treat the L3-L4 acute disc herniation that has been presented on serial studies, albeit decreasingly so.

Surgery would be direct toward injuries related to the work incident of 11/26/17 at the L3-L4 level only and would not be directed to degenerative changes at other levels.

(Claimant's Exhibit 10, BS 165).

20. On September 7, 2018, ATP Dr. Castro noted that "a new MRI highlights an ongoing nerve root encroachment right side

**ATP Dr. Castro also noted:

We gave her the option of repeating the epidural injection. She did not have a ridge last time. I would recommend she do it with sedation this t4eim and get a ridge. **Alternatively, surgical intervention being a microdiscectomy is another option which could be helpful and I think effective because the herniation is still persistent** (emphasis supplied)**.** Lastly, expectant management only and see if this improves on its own is an option although somewhat unpredictable as far it is long-term course. She wants to think about these options and let us know which way she would like to proceed.

(Claimant's Exhibit 9, BS 134).

21. On September 7, 2018, ATP Dr. Castro also initiated a prior authorization request for a microdiscectomy and far lateral decompression of L3-L4 right sided, which was denied and which denial he appealed stating:

The plan is for a microdiscectomy and far lateral decompression of L3-L4, right-sided. She has ongoing **radicular symptoms related directly to the L3-L4 far lateral disc** herniation which she clearly has on MRI. I do not understand the nature of the denial. **This would certain conforms to the Workers' Compensation Guidelines.** We have tried conservative management inclusive of time, PT, and now an injection. There is no indication for further injection if she does not want to proceeded with them. Weakness is not an absolute indication for surgical intervention, i.e., the patient does not present with weakness prior to considering surgical intervention. **Surgical intervention in the form of a microdiscectomy is reasonable for lumbar radiculopathy in the setting of a large disc herniation which the patient has. We will resubmit for a microdiscectomy and decompression right side at L3-L4** (Emphasis supplied)..

(Claimant's Exhibit 9, BS 138)

22. On October 24, 2018, Respondents, after a medical record review, at their request, by Kimberly D. Terry, M.D., certified right L3-L4 laminectomy decompression lumbar surgery under anesthesia (Claimant's Exhibit 9, BS 139).

23. On January 10, 2019, the Claimant was scheduled for surgery with ATP Dr. Castro, which surgery was cancelled by ATP Dr.Castro who requested an additional MRI (*See*, for example, Claimant's Exhibit 4, BS 78 and 9, BS 147).

24. On February 8, 2019, ATP Dr. Castro noted that a review of the new MRI reflected "improvement, in my opinion, of the right-sided L3-L4 far lateral disc herniation. Fortunately, she is not having bad lumbar radiculopathy this time and it appears again on the MRI that the herniation seems to be smaller" (Claimant's Exhibit 9, BS 147).

25. Thereafter, ATP Dr. Castro requested "injection transforaminal epidural lumbosacral injection at L3-L4" which was denied by the Respondents (Claimant's Exhibit 9, BS 150).

26. On June 1, 2019, at the request of the Respondents, the Claimant was examined by independent medical examiner (IME) Alfred C. Lotman, M.D., who expressed the opinion that the Claimant was at MMI and did not need to undergo the L3-L4 injections because she did not desire them. It was Dr. Lotman's opinion that the Claimant had reached MMI and that she should proceed with a "home exercise rehabilitation program" (Claimant's Exhibit 11, BS 173).

27. The Claimant credibly testified that there was a miscommunication with Dr. Lotman and that she was not excited about the pain incurred by the injections, but she desired to pursue them to address the pain and numbness in her right buttock and right leg.

Ultimate Findings

28. The ALJ finds the opinions of ATP Castro and the Respondents' medical evaluator Dr. Rauzzino on reasonable necessity and causal relatedness highly persuasive and credible. The ALJ further finds the opinions of the Respondents' physician Lotman lacking in credibility on the reasonable necessity and causal relatedness of the L3-L4 transforaminal injections. The ALJ finds that the Claimant credibly testified there was a miscommunication and that she desires to pursue the lumbar injection to address the pain in her right lower extremity.

29. Between the conflicting medical and lay opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinion that ATP Castro and the Respondents selected physician Rauzzino, on the reasonable necessity and causal relatedness of the L3-L4 transforaminal injection and rejects opinions to the contrary. Both ATP Castrol and the Respondents selected physician Rauzzino established the work-relatedness of the herniated disc, with which even the Respondent examiner Dr. Lotman agrees was caused by the admitted industrial injury. Accordingly, the L3-L4 transforaminal injection is authorized, causally related to the injury and reasonably necessary to cure and relieve the effects of the November 26, 2017 injury.

30. The Claimant has proven by a preponderance of the evidence that the medical care for a lumbar spine involving an L3-L4 transforaminal injection recommended by ATP Castro and conferred in by the Respondents selected physician Rauzzino is causally related to the compensable injury and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of ATP Castro and the Respondents' medical evaluator Dr. Rauzzino on reasonable necessity and causal relatedness were highly persuasive and credible. As further found, the opinions of the Respondents' IME physician, Dr. Lotman, were lacking in credibility on the reasonable necessity and causal relatedness of the L3-L4 transforaminal injections. Additionally, as found, the Claimant credibly testified that

there was a miscommunication and that she desires to pursue the lumbar injection to address the pain in her right lower extremity.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between the conflicting medical and lay opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ATP Castro and the Respondents selected physician Rauzzino, on the reasonable necessity and causal relatedness of the L3-L4 transforaminal injection and to reject opinions to the contrary. Both ATP Castrol and the Respondents selected physician Rauzzino established the work-relatedness of the herniated disc, which even the Respondent examiner Lotman agrees was caused by the admitted industrial injury. Accordingly, the L3-L4 transforaminal injection is authorized, causally related to the injury and reasonably necessary to cure and relieve the effects

Causal Relatedness of the Claimant's Compensable Injury for Which The L3-L4 Injection is Reasonably Necessary

c. An "injury" referred to in § 8-41-301 C.R.S., contemplates a disabling injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc*., 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Company*, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, a claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). In order for an injury to be compensable under the

Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office*, 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of" employment if it would not have occurred but for the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez*, 318 P.3d 496, 2014 CO 7. A manner of conceptualizing the matter is, essentially, that a presumption of work-relatedness may arise when an unexplained injury occurs during the course of employment. However, it is incumbent to show that non-work-related factors caused the injury to avoid compensability. Nonetheless, proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office*, 24 P.3d 844 (Colo. App. 2000); *Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office*, 1 98 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant has proven that there was a causal link between her left L3-L4 disc herniation and the work-related incident on November 26, 2017. Therefore, she suffered a compensable injury and received authorized, reasonably necessary and causally related medical care and treatment for the injury since November 26, 2017 with little improvement and she has not reached MMI. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to her admitted back injury of November 26, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment , specifically, the transforaminal epidural lumber/sacral injection (ESI) at the L3-4 level was and is reasonably necessary.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim*

Appeals Office v.Jones, 688 P.2d 1116 (Colo. 1984). As found, Claimant has sustained her burden.

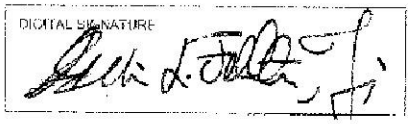
ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment, including the transforaminal epidural lumbar/sacral injection (ESI) at the L3-4 level, as recommended by authorized treating physician Bryan Andrew Castro, M.D., subject to the Division of Workers Compensation Medical fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this 12th day of September 2019..



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered an occupational disease in the form of bilateral Carpal Tunnel Syndrome (CTS) that began on July 17, 2017 during the course and scope of his employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical treatment designed to cure and relieve the effects of his July 17, 2017 industrial injury.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) and Temporary Partial Disability (TPD) benefits for the period July 17, 2017 until terminated by statute.

4. A determination of Claimant's Average Weekly Wage (AWW).

5. Whether Claimant is entitled to a disfigurement award pursuant to §8-42-108, C.R.S.

FINDINGS OF FACT

1. Claimant is a 51-year=old right-hand dominant male who was born on May 24, 1969. Claimant began working for Employer on March 20, 2017 as a Snout Trimmer.

2. Claimant performed his job as a Snout Trimmer on a platform approximately one foot high. The job involved completely removing the snout from a cow. The position specifically required Claimant to trim from the middle of the snout, move to the left, proceed around the snout and finish on the right side.

3. On July 17, 2017 Claimant visited Employer's Occupational Medical Department, complaining of swelling and pain in the left thumb CMC joint. The nurse who evaluated Claimant recommended ice, heat, massage and a 50% reduction in work.

4. On July 25, 2017 Claimant returned to Employer's Occupational Medical Department for further evaluation with Kathleen D'Angelo, M.D. Claimant exhibited full range of motion without pain in his left wrist. There were no ganglions as well as no erythema or swelling. Claimant's left hand was normal with the exception of a nodule on the lateral aspect of the CMC joint. Dr. D'Angelo assessed Claimant with a swollen left thumb and recommended a 50% reduction in work.

5. On August 10, 2017 Authorized Treating Physician (ATP) Carlos Cebrian, M.D. released Claimant from care. He noted that Claimant had reached Maximum Medical Improvement (MMI) with no permanent impairment.

6. On January 3, 2018 Claimant returned to Dr. Cebrian for an evaluation. Claimant reported a three-week history of pain in his left hand as well as numbness in the first, second and third digits. Claimant explained he does not use a tool in his left hand while performing his job, but grabs some of the loose tissue and pulls while he cuts with his right hand. He then washes his hands between each cut. Dr. Cebrian remarked that he had reviewed video of Claimant performing his job and noted the "repetition cycle was not very rapid."

7. On January 30, 2018 Claimant again visited Dr. Cebrian for an examination. Dr. Cebrian assessed left hand pain with swelling of the left thumb MP joint. X-rays revealed mild arthritic changes in the left thumb. Dr. Cebrian diagnosed a left thumb strain with aggravation of underlying osteoarthritis.

8. By April 10, 2018 Dr. Cebrian released Claimant to regular duty employment. He remarked that Claimant's osteoarthritis was not work-related, but work activities may have aggravated his symptoms.

9. On April 17, 2018 Dr. D'Angelo determined that Claimant had reached MMI with no impairment. She directed Claimant to follow-up with his personal physician for osteoarthritis.

10. On September 14, 2018 Claimant visited personal medical provider PA-C Eric Becker at Marathon Clinic. He reported left hand pain, numbness and tingling. Claimant also noted that he had developed a bump over the MCP joint. PA-C Becker diagnosed Claimant with localized arthritis of the left hand and left Carpal Tunnel Syndrome (CTS).

11. On October 10, 2018 PA-C Becker referred Claimant for EMG testing of the upper extremities. He also asked Dr. Cebrian to ""re-examine the left-hand issues with this patient. It appears this may be work-related carpal tunnel."

12. On October 12, 2018 Claimant returned to PA-C Becker and reported that the "pain, weakness, numbness and tingling seem to be getting worse." He remarked that his symptoms "started since taking the current job he [had] at [Employer] and feels this is directly from work." Claimant explained that he used his left hand to hold the mouths of cattle snouts while cutting with the right hand. After he demonstrated how he performed his job, PA-C Becker commented "it is quite concerning that the motion of his left hand is fully flexed throughout his display, which could possibly be the cause to this current condition." He ordered a neurological evaluation and directed Claimant to return to Employer's occupational health facility to discuss the possible relation to his work.

13. Subsequent EMG testing revealed bilateral CTS. The CTS was worse in the left wrist than the right wrist.

14. Dr. Cebrian evaluated Claimant on November 7, 2018. He commented that Claimant's work as a Snout Trimmer involved cutting with the right hand and pulling with his left hand. He remarked that there was not "a lot of force involved in this job with his left hand in order to pull the snout." Dr. Cebrian commented that "his exposure is limited."

In performing a causality assessment, Dr. Cebrian determined that Claimant did not have any Primary or Secondary Risk Factors for the development of a cumulative trauma condition under the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). He thus released Claimant from care.

15. Based on a referral from PA-C Becker Claimant underwent an evaluation at the Eastern Colorado Orthopedic Center. PA-C David Keller diagnosed Claimant with left-sided CTS.

16. On February 26, 2019 Claimant underwent left-sided CTS release surgery. On April 8, 2019 he was released to regular duty employment.

17. On May 22, 2019 Robert W. Watson Jr., M.D. conducted an independent medical examination of Claimant. Claimant reported numbness and tingling in his left thumb, index finger and middle finger beginning in July 2018. Claimant did not recall how the symptoms began because they developed over time. Based on a physical examination and review of the medical records Dr. Watson concluded that Claimant did not satisfy the criteria for the development of bilateral CTS pursuant to the *Guidelines*. In addressing causation, Dr. Watson explained that under the *Guidelines* there is good evidence that a combination of force, repetition and vibration are contributing factors to occupational CTS. Notably, the combination of repetition and force for more than six hours can contribute to CTS. There is also good evidence that a combination of repetition and force with tool use in an awkward position for six hours contributes to CTS. Another good-quality study identified the combination of repetition and force with awkward posture. After reviewing Employer's Physical Demands Summary, Dr. Watson determined Claimant meets the requirements for repetition. However, Claimant did not meet the requirements for force. Dr. Watson referenced other studies that have identified a combination of force and repetition as required factors for the development of occupational CTS. The studies also determined that repetition without force did not contribute to the development of CTS. Finally, Dr. Watson referenced a 2008 study by Rempel that took physiologic measurements of pressures in the carpal canal during repetitive activity and in the static position. The study found that radial and ulnar deviation up to 15% did not sufficiently raise the pressure in the carpal canal to damage the median nerve. Accordingly, Dr. Watson concluded that Claimant's bilateral CTS was not causally related to his work activities as a Snout Trimmer for Employer.

18. The record includes a Physical Demands Summary for Claimant's position as a Snout Trimmer for Employer. Claimant removed snouts from cows by trimming from the middle of the snout, moving to the left, going around the snout and finishing on the right side. There are four steps in completing the job. The employee first cuts on the front of the snout. Second, the employee holds the snout with the left hand and continues cutting. Next, the employee trims around the jawbone and returns to the right side. Finally, the employee completely removes the snout from the cow. The Physical Demands Summary also specifies that the position involves use of the right hand for 38 repetitions per minute and the left hand for 14 repetitions per minute. Claimant did not engage in hand or wrist flexion or extension greater than 15 degrees. Pronation of the right wrist happened less than 33% of the time and did not occur with the left wrist. The

Physical Demands Summary also noted that Claimant exerted zero pounds of grip force with his left hand in performing his job duties.

19. Claimant testified at the hearing in this matter. He explained that, in performing his work duties, he used his left hand to hold the snouts of cows as they moved along the production line while removing the skin of the cow with the right hand. He remarked that he used force to grab and turn the cattle with his left hand. The force included pulling, turning and squeezing. Claimant remarked that he usually repeated the snout-cutting task up to about 350 cows per hour. He thus removed the snouts from an average of 2,400-2,500 cows per day. Claimant noted that his level of force increased because the cattle were frequently bloody and slippery. Furthermore, he used more force and strength with his left hand when his knives were not sharp.

20. Dr. Cebrian testified at the hearing in this matter. He maintained that Claimant suffered from bilateral CTS. Relying on Rule 17, Exhibit 5 of the *Guidelines*, Dr. Cebrian explained that the combination of repetition, force and cycle time in Claimant's duties as a Snout Trimmer failed to meet the causation requirements for CTS. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Initially, Claimant's cycles per minute constituted insufficient repetition to cause a cumulative trauma condition under the *Guidelines*. Furthermore, Claimant's job activities lacked sufficient force to cause a work-related condition. Specifically, Dr. Cebrian remarked that no significant force is applied to the skin of the cow to avoid damaging the hide. Accordingly, Dr. Cebrian concluded that Claimant did not engage in forceful and repetitive activity at work for an amount of time that meets the minimum threshold in the *Guidelines* for the development of CTS.

21. Dr. Watson testified at the hearing in this matter. He reiterated that Claimant suffered from bilateral CTS. He explained that Claimant's work activities did not satisfy the criteria for a work-related exposure pursuant to the *Guidelines*. Relying on the Job Demands Analysis, Dr. Watson determined Claimant satisfied the requirements for repetition. However, Claimant did not meet the requirements for force. Moreover, Claimant's radial and ulnar deviation in performing his job tasks did not sufficiently raise pressure in the carpal canal to damage the median nerve. Dr. Watson summarized that Claimant's job duties did not satisfy the Primary or Secondary Risk Factors in the *Guidelines* for the development of occupational CTS.

22. Claimant has failed to demonstrate that it is more probably true than not that he suffered an occupational disease in the form of bilateral CTS that began on July 17, 2017 during the course and scope of his employment with Employer. Although Claimant attributed his bilateral CTS to his work activities, a review of his job duties, the medical records and the persuasive opinions of Drs. Cebrian and Watson reflect that his job duties lacked the requisite duration, force or repetition to cause a cumulative trauma disorder.

23. The Physical Demands Summary for Claimant's position as a Snout Trimmer provides that Claimant removed snouts from cows by trimming from the middle of the snout, moving to the left, going around the snout and finishing on the right side. The position involves use of the right hand for 38 repetitions per minute and the left hand for 14 repetitions per minute. Claimant did not engage in hand or wrist flexion or extension greater than 15 degrees. Pronation of the right wrist happened less than 33% of the time and did not occur with the left wrist. The Physical Demands Summary also noted that Claimant exerted zero pounds of grip force with his left hand in performing his job duties.

24. Relying on Rule 17, Exhibit 5 of the *Guidelines*, Dr. Cebrian explained that the combination of repetition, force and cycle time in Claimant's duties as a Snout Trimmer failed to meet the causation requirements for CTS. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Initially, Claimant's cycles per minute constituted insufficient repetition to cause a cumulative trauma condition under the *Guidelines*. Furthermore, Claimant's job activities lacked adequate force to cause a work-related condition. Specifically, Dr. Cebrian remarked that Claimant did not apply significant force to the skin of the cow to avoid damaging the hide. Dr. Cebrian thus concluded that Claimant did not engage in forceful and repetitive activity at work for an amount of time that meets the minimum threshold in the *Guidelines* for the development of CTS. Similarly, Dr. Watson explained that Claimant's work activities did not satisfy the criteria for an occupational exposure pursuant to the *Guidelines*. Relying on the Job Demands Analysis, Dr. Watson determined Claimant satisfied the requirements for repetition. However, Claimant did not meet the threshold for force. Moreover, Claimant's radial and ulnar deviation in performing his job tasks did not sufficiently raise pressure in the carpal canal to damage the median nerve. Dr. Watson summarized that Claimant's job duties did not satisfy the Primary or Secondary Risk Factors enumerated in the *Guidelines* for the development of occupational CTS.

25. Although PA-C Becker suggested that Claimant's bilateral CTS might be related to his job duties as a Snout Trimmer, he failed to perform a causality assessment. In contrast, Drs. Cebrian and Watson considered the Primary and Secondary Risk Factors in the *Guidelines* in assessing the cause of Claimant's bilateral CTS. A review of Claimant's job duties in conjunction with the persuasive opinions Drs. Cebrian and Watson demonstrates that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. He thus likely did not suffer the cumulative trauma condition of bilateral CTS while working for Employer as a Snout Trimmer on July 17, 2017. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate his condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers

at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the

disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. Rule 17, Exhibit 5 provides an algorithm for evaluating Cumulative Trauma Conditions (CTC) pursuant to the *Guidelines*. In addressing applicability, the *Guidelines* note that "CTC's of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures." W.C.R.P. Rule 17, Exhibit 5, p. 6. In determining a diagnosis when performing a cumulative trauma analysis the *Guidelines* delineate specific musculoskeletal conditions and peripheral nerve disorders. Nevertheless, the *Guidelines* provide that "[l]ess common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment." W.C.R.P. Rule 17, Exhibit 5, p. 21.

7. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing two pounds or more. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. If neither Primary nor Secondary Risk Factors are present, the *Guidelines* provide that "the case is probably not job related." W.C.R.P. Rule 17, Exhibit 5, p. 24.

8. The *Guidelines* specify that "good" but not "strong" evidence that occupational risk factors cause CTS include a combination of force, repetition, and vibration, or a combination of repetition and force for six hours, or a combination of repetition and forceful tool use with awkward posture for six hours, or a combination of force, repetition, and awkward posture. There is also "good" evidence that the combination of two pounds of pinch or 10 pounds of hand force three times or more per minute for three hours causes CTS. "Some" evidence of occupational risk factors for the development of CTS include wrist bending or awkward posture for four hours, mouse use more than four hours, and a combination of cold and forceful repetition for six hours. Notably, there is good evidence that repetition alone for six hours or less is not related to the development of CTS. W.C.R.P. Rule 17, Exhibit 5, pp. 28-29.

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered an occupational disease in the form of bilateral CTS that began

on July 17, 2017 during the course and scope of his employment with Employer. Although Claimant attributed his bilateral CTS to his work activities, a review of his job duties, the medical records and the persuasive opinions of Drs. Cebrian and Watson reflect that his job duties lacked the requisite duration, force or repetition to cause a cumulative trauma disorder.

10. As found, the Physical Demands Summary for Claimant's position as a Snout Trimmer provides that Claimant removed snouts from cows by trimming from the middle of the snout, moving to the left, going around the snout and finishing on the right side. The position involves use of the right hand for 38 repetitions per minute and the left hand for 14 repetitions per minute. Claimant did not engage in hand or wrist flexion or extension greater than 15 degrees. Pronation of the right wrist happened less than 33% of the time and did not occur with the left wrist. The Physical Demands Summary also noted that Claimant exerted zero pounds of grip force with his left hand in performing his job duties.

11. As found, relying on Rule 17, Exhibit 5 of the *Guidelines*, Dr. Cebrian explained that the combination of repetition, force and cycle time in Claimant's duties as a Snout Trimmer failed to meet the causation requirements for CTS. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Initially, Claimant's cycles per minute constituted insufficient repetition to cause a cumulative trauma condition under the *Guidelines*. Furthermore, Claimant's job activities lacked adequate force to cause a work-related condition. Specifically, Dr. Cebrian remarked that Claimant did not apply significant force to the skin of the cow to avoid damaging the hide. Dr. Cebrian thus concluded that Claimant did not engage in forceful and repetitive activity at work for an amount of time that meets the minimum threshold in the *Guidelines* for the development of CTS. Similarly, Dr. Watson explained that Claimant's work activities did not satisfy the criteria for an occupational exposure pursuant to the *Guidelines*. Relying on the Job Demands Analysis, Dr. Watson determined Claimant satisfied the requirements for repetition. However, Claimant did not meet the threshold for force. Moreover, Claimant's radial and ulnar deviation in performing his job tasks did not sufficiently raise pressure in the carpal canal to damage the median nerve. Dr. Watson summarized that Claimant's job duties did not satisfy the Primary or Secondary Risk Factors enumerated in the *Guidelines* for the development of occupational CTS.

12. As found, although PA-C Becker suggested that Claimant's bilateral CTS might be related to his job duties as a Snout Trimmer, he failed to perform a causality assessment. In contrast, Drs. Cebrian and Watson considered the Primary and Secondary Risk Factors in the *Guidelines* in assessing the cause of Claimant's bilateral CTS. A review of Claimant's job duties in conjunction with the persuasive opinions Drs. Cebrian and Watson demonstrates that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. He thus likely did not suffer the cumulative trauma condition of bilateral CTS while working

for Employer as a Snout Trimmer on July 17, 2017. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate his condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: September 16, 2019.

ISSUES

I. Has Claimant overcome the DIME opinion of Dr. Shih by clear and convincing evidence that Claimant was at MMI as of May 1, 2019?

II. Was Claimant's MMI status properly rescinded, effective September 21, 2018, in accordance with the opinion of the ATP, Dr. Zaremba?

III. Should the lumbar surgery performed by Dr. Syre on January 25, 2019 be retroactively deemed reasonable, necessary, and related to Claimant's work injury, such that Respondent must now be responsible for reimbursement to the provider?

IV. Has Claimant shown, by a preponderance of the evidence, that a gastric bypass procedure should be authorized as reasonable, necessary, and related to his original work injury?

V. Has Claimant received unemployment, social security, or other similar benefits for which Respondents would be entitled to a statutory offset?

STIPULATIONS

I. As of the hearing date, Claimant is not at MMI. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed as an electrical apprentice with Respondent, Elevation Staffing, LLC in Centennial, CO. His began work on January 17, 2016. [*Ex. A*, *p. 1*]

2. Claimant was injured at work on Friday, October 27, 2017, when he and two co-workers were pulling wire by hand through a conduit pipe. Claimant explained that he was pulling the wire across his body diagonally, from shoulder to hip, when the wire suddenly stopped. He felt pain in his low back at that time. Per Claimant, the incident occurred at approximately 9:00 a.m. but he continued working the remainder of the day.

3. Claimant reported his injury to the Employer, after which he was promptly provided with a list of designated medical providers. As he could not reach any designated providers over the weekend, Claimant was evaluated on Monday, October 30, by Dr. Lugliani at Colorado Occupational Partners. The following history appears in

Dr. Lugliani's October 30, 2017 medical report:

> He [Claimant] states that on October 27, 2017, at approximately 9:00 a.m. he was assisting in pulling an electric wire. When the wire got stuck he pulled hard and felt immediate pain in his low back. It radiated to his right gluteus and down his right leg. He has a current complaint of low back pain that he rates 9/10 severity that he describes as achy in nature or stabbing sensation. It is down into his sacrum and down the back of his leg involving his foot. He denies any bowel or bladder incontinence." [*Ex. L, p. 58*]

Dr. Lugliani diagnosed low back pain with right lumbar radicular symptoms. He imposed temporary work restrictions; prescribed pain medication and an anti-inflammatory; and referred Claimant for 4-6 visits of chiropractic treatment. Claimant was instructed to follow up with the clinic on November 2, 2017. *Id* at 59-61.

4. During a follow up appointment on November 2, 2017, Dr. Lugliani reported: "… He has persistent right-sided low back pain, with radiating symptoms down the back of his leg into his foot… He denies any bowel or urinary incontinence … He is experiencing some right lower extremity weakness. He informs me that prednisone has helped a little bit; tizanidine and Norco have had minimal benefit. He is requesting alternative pain medications… I am recommending a combination pain cream… The patient will continue with chiropractic treatment…" [*Ex. L*, *pp. 62-63*] Dr. Lugliani ordered a lumbar MRI and wrote a referral to Dr. Stephen Pehler (spine specialist) for consult. [*Ex. L, pp. 65-66*] Claimant was instructed to follow up with Dr. Lugliani on November 9.

5. The lumbar MRI was performed on November 3, 2017. [*Ex. P, pp. 145-146*] Findings included:

> **1.** Broad-based disc bulge with a large superimposed left posterior paracentral extrusion at L3-L4 which causes severe central canal stenosis with near complete obliteration of the CSF signal within the thecal sac through this level. There is buckling of the nerve roots superior and inferior to this level.
>
> **2.** Mild central canal stenosis at L2-L3 and L4-L5 as detailed above.

6. Clamant did not wait to see Dr. Pehler. .Rather, he presented to the emergency room at Swedish Medical Center on November 7, 2017. [*Ex. N*] The ER records note:

> Pt has had an MRI done at Touchstone Aurora and was seen by Dr. Lougliani, who diagnosed pt with a bulging disc. Patient has not received formal results of his MRI but states the office staff read the report and was informed she [sic] had a bulging disc. He was provided with a copy of his

> disc. He states the pain has gotten progressively worse since onset and is associated with right lower extremity numbness and weakness. Pt has been seen by a chiropractor as well, with a resulting numbness in his left foot … He reports last night he began to experience a burning sensation in his groin. Pt has appt with ortho on November 16th… Currently taking anti-inflammatories and steroid. States opiates and muscle relaxers do not work on him. He's been using marijuana with moderate relief of symptoms." [*Ex. N, pp. 80-81*]

The records further state:

> Last night he started noticing new onset of numbness/tingling in his left foot and burning sensation in his groin. This burning sensation has since resolved… Given his new symptoms he elected to present to the ED. Imaging was performed at Touchstone on 11/3 demonstrating a large L3-4 disc herniation protruding into the canal causing severe stenosis." [*Ex. N, p. 86*]

7. While at the emergency room on November 7, 2017, Claimant had a consult with a neurosurgeon (Dr. Peter Syre): "The (MRI) disc was reviewed by Dr. Syre who recommended surgery today.. "*Informed pt of consult with neurosurgery, he is agreeable to plan for surgery today."* [*Ex. N, p. 82*] At hearing, Claimant confirmed: "And I honestly did not meet Dr. Syre until right before surgery."

8. An operative report dated November 7, 2017 from Dr. Syre documents that Claimant underwent the following surgeries: **1.** L3-4 laminectomies. **2.** L3-4 left discectomy**. 3.** Repair of CSF leak. [*Ex. N, pp. 89-93*]

9. Claimant was discharged from the hospital on November 11, 2017: "… pain controlled on PO dilaudid, scheduled robaxin, Tylenol, valium PRN. Foley d/c'd, urinating without issues; has AFO for right foot drop; advance activity with PT/OT, no need for lumbar brace… okay to discharge from neurosurgical perspective…" [*Ex. N, p. 102*]

10. A lower extremity venous duplex ultrasound performed on November 13, 2017, revealed that Claimant had developed a DVT [deep vein thrombosis] in this right leg following surgery. [*Ex. P, p. 149*]

11. Pinnacol Assurance was not contacted for authorization prior to the November 7, 2017 surgery. They were billed after it had already occurred. That particular surgery was labeled as *emergent* in nature, and Claimant underwent the surgery the same day that he presented to the emergency room. As a result, Pinnacol did agree to pay the medical bills received from the November 7, 2017 surgery.

12. Claimant moved to Colorado Springs in January 2018. At that time, he began treating with a new occupational medicine physician – Dr. Joseph Zaremba at

Emergicare in Colorado Springs. [*Ex. Q*] The initial appointment with Dr. Zaremba was on February 8, 2018. The following history was noted:

> He states that he was pulling a rope from up to down across his body when he felt the pain. He continued to work through the pain. He was at home several days later and fell to the ground secondary to the pain with worsening right leg symptoms, and had stat MRI done and needed urgent surgery. He was told from the MRI he had nerve damage, and had 'obliterated' between L3-4. He had a laminectomy of 11/17. DOI 10/27. He states that the back pain is gone but he has so much nerve damage that it is difficult for him to get around well… He is also having some nighttime urinary incontinence. +weakness in the right leg, and numbness in right leg and a small area on the bottom of the left foot. PMH: Type 2 diabetes mellitus without complications; DVT after surgery, stopped his medication at end of December, R foot drop after surgery." [*Ex. Q. p. 164*]

Dr. Zaremba referred Claimant for EMG/NCV testing to evaluate for radicular cause vs. peroneal cause of the foot drop. [*Ex. Q, pp. 167-168*] He also referred Claimant for a MRI of the lumbar spine, and for an ultrasound of the right leg due to history of recent DVT to see if that was still present. The ultrasound was reported to be negative. [*Ex. P, p. 155*]

13. At hearing, Claimant testified that following his surgery in November 2017 with Dr. Syre, he lost power in his foot, and was numb from his right hip down into the right leg. He developed incontinence and had loss of strength/fatigue in his right quadriceps, which resulted in some falls at home.

14. Claimant had follow up appointments with Dr. Syre in Denver on December 27, 2017 and February 14, 2018. The February 14, 2018 report states:

> He presents today for evaluation of new urinary and bowel incontinence… To review, his preoperative axial low back pain and lower extremity radiculopathy (R>L) have resolved; his preoperative right dorsiflexion weakness remains stable and he uses an AFO for ambulation. Overall, he is pleased with his early outcome. Today he states that since January 1st of this year he has noticed urinary and bowl incontinence… He reports new weakness in his left foot and states he almost fell down the stairs last week because he couldn't get his right foot to 'move.' He has had a few instances of pain in his right foot and right posterior leg. His right foot numbness is stable… states he has an MRI scheduled for this afternoon…" [*Ex. O, p. 112*]

Claimant was referred for a urology work up.

15. A lumbar MRI report dated February 14, 2018 documents the following impressions:

1. Question of a transitional S1 vertebral body with lumbarization. Correlation with plain films of the lumbar spine would be helpful, which could change the disc space level assignments.

2. Moderate spondylosis of the L4-5 disc space with comparable broad-based posterior osteophyte formation, more to the left … There is evidence of moderate to severe segmental neural canal stenosis and minimal, if any, chronic cauda equina compression. Clinical correlation is advised. There is moderate left-sided neural foraminal stenois without evidence of nerve root impingement.

3. Moderate spondlylosis of the L3-4 disc space with a comparable broad-based posterior disc herniation slightly displaced cranially and caudally causing moderate neural canal stenosis without evidence of cauda equina compression.

4. Moderate spondylosis of the L5-S1 and S1-S2 disc spaces without evidence of nerve root impingement or cauda equine compression…"

[*NOTE: During his deposition, Dr. Reiss explained that different radiologists who read the November 3, 2017 lumbar MRI and the February 14, 2018 MRI labeled the spine levels differently.]

16. During a follow up appointment with Dr. Zaremba on February 22, 2018, Claimant was referred to Dr. Biggers for urinary incontinence. Dr. Zaremba commented: "It is unclear why he is having this now, Dr. Syre does not think it is from nerve compression. We are going to refer to a urologist for his opinion." [*Ex. Q. p. 172*]

17. Dr. Zaremba noted temporary work restrictions of maximum lifting of 5 pounds while sitting. In a follow up report dated March 26, 2018, Dr. Zaremba states: "Attending PT regularly. Not working. Taking no medications. He is still having right sided back pain and bilateral hip pain at night that is waking him up. He feels better through the day and his pain will drop to a 3/10… He is still having problems with incontinence. He has not seen urologist…We are going to refer to a gastroenterologist and urologist for opinion…" [*Ex. Q, p. 184*]

18. On April 16, 2018, Dr. Zaremba reported: "He states that he had a recent appointment with the urologist who states he had a bacterial infection, as well as possible nerve damage on his bladder. They will conduct a study today for that specific reason." [Ex. Q, *p. 203*]

19. On May 1, 2018, Dr. Zaremba reported: "…. He states that his back pain is unchanged … He states that the urinary symptom have been improving since seeing Urology. GI physicians are doing a bladder test and pending approval for a colonoscopy… Plan: Continue care with urologist. Referral for FCE [functional capacity evaluation] with Mike Moore. Referring for pool therapy." [*Ex. Q, p. 209*]

20. According to his May 1, 2018 report, Dr. Zaremba placed Claimant at MMI: "Patient is at MMI and he has impairment. Full report to follow by 5/15/18. He has permanent restrictions: No crouching, crawling, climbing, carrying, pushing and pulling. Occasional lifting from knuckle to shoulder level of 5 pounds… He requires **maintenance care** with pool therapy for 8 weeks, gastroenterology followup with colonoscopy x 6 months, urology follow up for 6 months with bladder testing. I also feel he would benefit from a gym membership for 12 months and up to 6 personal training sessions to help him learn fitness skills at his new level of functioning." [*Ex. Q, p. 211*] (emphasis added).

21. A Functional Capacity Evaluation was performed by Michael Moore at Excel Physical & Occupational Medicine on April 27, 2018. [*Ex. U*]

22. On May 10, 2018, Dr. Zaremba issued a report that included Claimant's permanent impairment. Dr. Zaremba summarized Claimant's treatment history to date and why he felt it was appropriate to have placed him at MMI on May 1, 2018. He assigned a 45% combined Whole Person rating. Permanent work restrictions and maintenance care recommendations were reiterated. [*Ex. Q, pp. 215-219*]

23. Respondents then filed a Notice & Proposal for Division IME ("DIME") on June 6, 2018, challenging the impairment rating assigned by Dr. Zaremba. [*Ex. B*]

24. Dr. J. Raschbacher performed an independent medical evaluation at the request of Respondents on June 8, 2018. [*Ex. W*] Dr. Rachbacher reported:

> 41 year old white male, single, with four children ages 20, 20, and then 2 year old twins… He lives alone in a house with his twins. He had twins with his ex-girlfriend, and he has custody of the children… He is not currently working and has not worked since the injury claim date. He states he is a 'full time father.' The twins' mother is around but they are not together anymore. He does all of his activities of daily living. *Id.*

25. Dr. Raschbacher reviewed video surveillance of Claimant." On 5/18/18 he is seen to exit the driver's seat of an SUV with his cane in one hand. He stands and moves next to the SUV and leans to into the back of it, into the second seat… At 12:13 he lift a child into the back seat of the truck, with some forward flexion at the lumbar spine. He appears to put the child in a car seat… On 6/01/18 he is seen to back a vehicle into the driveway and then exit .. At 9:38 at the rear door he bends forward and appears to put the child in a car seat… At 9:50 he gets out of the driver's seat and goes to the rear door and opens it on the driver's side and lifts the child out of the back seat to put the child on the ground… At 10:11 a.m. he has a grocery cart with two children in it. He bends forward and lifts one the children out and then turns to his left and puts the child in in the back seat of the truck and then appears to fasten that child into the sear. He then pushes the cart with the child around the vehicle to the other side, the passenger side, and appears to left that child from the cart and put her into the back at 10:12 … At 10:14 he gets into the driver's seat and drives off."

26. Dr. Raschbacher commented that Claimant's presentation at his office during the IME was not consistent with his level of function in the surveillance video. [*Ex. W, p. 361*] Claimant's level of physical activity and function in the surveillance was noted to be higher than Claimant portrayed during the IME.

27. At hearing, Claimant acknowledged that often exceeds his physical restrictions and he lifts his 3-year-old twins. The work restrictions imposed by Dr. Zaremba was 5 pounds occasional lifting. On cross exam, Claimant denied lifting his twins in and out of vehicles and car seats – although this was commented on by both Dr. Raschbacher and Dr. Zaremba.

28. Dr. Raschbacher opined that Claimant's findings included a large disc herniation at L3-4, with residual nerve root impairment at L5 and S1. He also felt that Claimant had some non-work related peripheral neuropathy findings, likely associated with diabetes. In his June 8, 2018 report, Dr. Raschbacher also commented on MMI status: "I do agree with an MMI date of 5/01/18, by Dr. Zaremba. It appears that his functional status essentially plateaued at that time. Of course, it remains to be seen what type of improvement he will have simply with the passage of time over the next 6 to 9 months, but in terms of his functional status for his injury claim MMI appears to have stabilized as of 05/01/18." [*Ex. W. p. 361*]

29. Dr. Raschbacher assigned a 25% Whole Person rating of the lumbar spine. Regarding permanent work restrictions, he noted: "Permanent work restrictions are appropriate. However, a limit of 5 pounds is not necessary or physiologic. Additionally, he can clearly lift over that per the video surveillance which showed him lifting toddlers from ground level up into car seats and then strapping then in. It would not be unreasonable to suggest a permanent restriction of lifting limited to occasional, and a limit of about 25 pounds… Presentation during the FCE, and subsequent lifting limits of 5 pounds are not physiologic or reasonable or necessary, and he is clearly able to exceed those." [*Ex. W, p. 362*]

30. Claimant continued to follow up with Dr. Zaremba post-MMI. During an appointment on May 24, 2018, Dr. Zaremba stated: "Acute embolism and thrombosis of unspecified deep veins of right lower extremity… *Sergio has an acute DVT of the right leg. He is still at MMI, but does need maintenance care with eliquis 5 mg tablets for 3-6 months, and follow up at Emergicare for 6 months. He also needs coagulation profile testing for clotting disorder. Prescribed Eliquis 5 MG tablet*…" [*Ex. Q, p. 226*] Dr. Zaremba was aware of the new DVT and treated it appropriately. He did not feel that this condition warranted rescinding MMI status at that time, and could be treated under maintenance.

31. In subsequent visits on June 7, 2018, July 18, 2018, August 1, 2018, and August 24, 2018, Dr. Zaremba specifically indicated that Claimant remained at MMI. [Ex. Q, pp. 229-231; 235-238; 240-242] Dr. Zaremba reiterated during these visits that the DVT was being addressed with Eliquis under maintenance. In the August 1st report,

Dr. Zaremba mentioned that Claimant was going on a trip to New Mexico.

32. Dr. Zaremba was provided with the same surveillance video that had been provided to Dr. Raschbacher. In response to a letter dated June 25, 2018 from the claims representative, Dr. Zaremba agreed that on the surveillance video Claimant was lifting more than his permanent restriction on 5 pounds. After considering the video, Dr. Zaremba did adjust Claimant's permanent restrictions as follows: "No crouching, crawling, climbing, occasional lifting 20-30 pounds. No carrying." [Ex. Q, p. 233]

33. Claimant was evaluated by Dr. Rook on August 19, 2018 for purposes of an IME. [*Ex. X*] Dr. Rook noted that Claimant developed problems post-operatively after the first surgery with Dr. Syre: "Postoperatively, the patient developed distal right lower extremity weakness, decreased sensation with altered proprioception, and a right foot drop." [*Ex. X, p. 373*] Dr. Rook disagreed with Dr. Sparr's interpretation from the EMG/NCV testing. [*Ex. X*, *p. 375*] He disagreed with Dr. Zaremba's decision to place Claimant at MMI in May 2018.

34. Dr. Rook discussed Claimant's DVT that arose around that time frame and the prescription for Eliquis medication, as well as Claimant's incontinence issues and ongoing low back and right leg (quadriceps) weakness. Dr. Rook assigned a provisional impairment rating of 47% Whole Person. [*Ex. Q, p. 386*]

35. Dr. Rook disagreed with both Dr. Zaremba and Dr. Shih regarding the May 1, 2018 MMI date. He even disagreed with Claimant's other expert (Dr. Castrejon), who didn't think it was unreasonable for Dr. Zaremba to have placed Claimant at MMI on May 1, 2018.

36. Dr. Rook felt that Claimant's lumbar spine was unstable and that further multilevel spinal fusion was warranted. Dr. Rook testified that Claimant had a "neurosurgical emergency" when he saw him in August 2018. Dr. Rook is the only physician who has suggested that Claimant had an emergent need for further lumbar surgery. Dr. Rook acknowledged that he had not indicated in this IME report that he thought there was an emergent need for surgery. While Dr. Syre's record indicated that the January 25, 2019 was an elective procedure, at hearing Dr. Rook responded: "I don't think it was quite an elective procedure."

37. Dr. Rook acknowledged that he had not reviewed a January 3, 2019 IME report from surgeon Dr. Brian Reiss. When asked whether he would at least be interested or want to be aware of Dr. Reiss's opinion, Dr. Rook stated: "I don't think it would have impacted my decision at all."

38. Dr. Rook testified at hearing that Claimant had a MRI on November 27, 2018 "which was much worse. It showed problems at multiple levels." Dr. Rook acknowledged at hearing that he had not reviewed any radiology films in this case. Rather, he relied upon the written reports.

39. On cross exam, Dr. Rook agreed that the lumbar fusion surgery on January 25, 2019 did not alleviate the need for the AFO or the use of a single point cane. He agreed that the surgery had not alleviated the need for ongoing treatment, including medications, for Claimant's incontinence issues. When asked about his suggestion that a fusion would further stabilize Claimant's spine and decrease falls, but that Claimant has actually experienced increased balance problems since the January 25, 2019 surgery, Dr. Rook testified: "So I don't know if I can render an opinion as to a significant improvement in his function, but I would maintain that it's only been three or four months since a major operation."

40. In his August 19, 2018 report, Dr. Rook commented: "It might be beneficial for this individual to undergo some sort of minimally invasive bariatric surgical procedure for weight loss *prior to* undergoing further spine surgery." [*Ex. X, p. 385*] In Dr. Rook's opinion, significant weight loss "would likely ensure a better outcome to any spine surgery that is performed in the future." Despite Claimant's medical history of obesity, Dr. Rook felt that such a weight loss procedure would not have been needed but for the work injury. [*Ex. X, p. 385*]

41. At hearing, Dr. Rook testified that gastric bypass surgery might decrease his pain levels and improve his function. [At hearing, Claimant testified that he did not even recall talking to Dr. Rook about weight loss]. Dr. Rook confirmed that he had listened to Dr. Castrejon's testimony at hearing, wherein he opined that a bariatric surgery this far removed from the January 2019 surgery date would be likely to be beneficial. Again, Dr. Rook disagreed with Dr. Castrejon.

42. Respondents applied for a Division IME to challenge the 45% impairment rating assigned by Dr. Zaremba. Dr. Shih was selected as the Division IME physician. He evaluated Claimant on August 22, 2018. [*Ex. Y, pp. 387-391*] This occurred a few days after the IME by Dr. Rook. In his report, Dr. Shih identified a lengthy list of records reviewed in conjunction with his evaluation of Claimant. Dr. Shih concurred that Claimant was at MMI as of May 1, 2018. Claimant's range of motion measurements, however, were deemed to be invalid by Dr. Shih. Therefore, Dr. Shih noted that Claimant would need to return for a follow up visit for repeat ROM measurements.

43. Claimant returned to Dr. Shih for the repeat range of motion testing on September 12, 2018. [*Ex. Y, pp. 393-396*] Dr. Shih noted pain behavior, submaximal effort, and inconsistent range of motion measurements. He Shih concluded: "Mr. Garcia is at MMI as of 05/01/18. He has 10% impairment per Table 53IIE for his L3-4 discectomy. I did not see full effort was given in range of motion so there was no impairment for range of motion. He has 17% impairment for the L5 and S1 neurologic deficit (see worksheet). His overall impairment is 25%." [*Ex. Y, p. 394*] Dr. Shih noted at the end of the September 12, 2018 report: "Mr. Garcia states he was seen by his surgeon and further surgery has been recommended. The available medical records do not support a need for further surgery but there **may** be information in the most recent evaluation that would change my opinion regarding that." (Emphasis added) [*Ex. Y, p.*

394]

44. Claimant returned to Dr. Syre's office on September 11, 2018. [*Ex. O, pp. 124-128*] It cannot be ascertained from this report if Claimant was seen by a Nicole Chasnow, PA-C, or Dr. Syre at that time. The report states:

> He returns today 7 months later. He reports seeing a urologist and being diagnosed with neurogenic bladder. He started taking Myrbetriq for OAB which appears to help. He report resolution of his urinary incontinence… He has intermittent low back pain and stable ongoing right posterior leg and foot numbness and right distal lower extremity weakness. He reports new right anterior thigh pain and right quad and hamstring weakness. He is doing water therapy which does help. He is not taking anything for pain because nothing helps. He has a new lumbar MRI to review. Of note, he is on Eloquis for DVT… His lumbar MRI demonstrates laminectomy defect noted with posterior fluid collection and clumping of nerve roots at the L3-4 level with large posterior vertebral body osteophyte causing canal compression at this level … L2-3 disc/osteophyte complex causing canal stenosis. We believe he likely has L3/4 instability causing increased osteophytic and worsening neural impingement at this level causing his symptoms. We would like to get a lumbar CT for surgical planning but feel he would likely benefit from a L3/4 decompression and a L2-4 interbody fusion. We did discuss that following surgery he would benefit from weight loss to help prevent further deterioration of his lumbar spine and this would best be achieved by bariatric surgery. He will follow up after his CT scan." [*Ex. O, p. 128*]

45. Dr. Zaremba subsequently rescinded Claimant's MMI status *effective* September 21, 2018. In his September 21, 2018 report, Dr. Zaremba noted: "He states his back has been doing worse since his last visit. He describes his pain as 4/10 currently. He saw Dr. Syre on 9/11 and they began talking about surgery for a fusion…Pt is not at MMI…" [*Ex. Q, pp. 250, 252*] At no point did Dr. Zaremba indicate that Claimant was incorrectly placed at MMI in the first instance on May 1, 2018. Rather, he rescinded MMI as of September 21, 2018 due to Claimant's increased complaints at that juncture.

46. Another 2½ months passed before Claimant returned to Dr. Syre's office. The report dated November 27, 2018 indicates that Claimant was having right leg weakness and constipation. [*Ex. O, p. 129*] It was noted that Claimant was using marijuana. Again, it is difficult to determine from the report if Claimant actually saw Dr. Syre that day or a PA-C, (Erin Erickson, PA-C). The report goes on to state:

> Lumbar CT demonstrates large posterior osteophytes at L2-3 and L3-4. Disc collapse and desiccation from L2-S1. Near autofusion at L4-5 and L5-S1 … we recommend a L2-4 decompression and fusion for definitive treatment but recommend follow-up with his PCP regarding his constipation prior to moving

forward with surgery." *Id* at 133.

Dr. Syre's office was not sending these records to Respondents. The fax date at the top of this report indicates that it was faxed on April 18, 2019 [almost 5 months after the appointment]. As reflected by the exchange date at the top of the report, Respondents' counsel then forwarded the report to Claimant's counsel.

47. Claimant was evaluated by Dr. Brian Reiss (spine surgeon) on January 3, 2019 at the request of Respondents. [*Ex. BB*] Dr. Reiss performed a records review and also viewed radiology films. Dr. Reiss opined that. as of January 3, 2019:

> From my review of the imaging studies, I do not see any true instability. I do not see significant enough continued right-sided nerve compression to account for any ongoing right lower extremity symptomatology. The right lower extremity symptomatology is probably secondary to nerve damage. I do not believe his symptomatology would be improved with either a decompression and/or fusion." [*Ex. BB, p. 419*]

48. Dr. Reiss opined that Claimant was not at MMI at the time of his evaluation. [Consistent with Dr. Zaremba having rescinded MMI status effective September 21, 2018.] He agreed that Claimant's bladder and bowel symptoms were related to the work injury. Dr. Reiss suggested treatment of Claimant's symptomatology with some neuro active medication, such as gabapentin. He also recommended that Claimant resume physical therapy core strengthening, aerobic conditioning, stretching and gait assistance along with continued right lower extremity bracing.

49. Dr. Zaremba subsequently prescribed gabapentin for Claimant, per Dr. Reiss's recommendation. The function of this medication was to help treat neuropathic pain.

50. Dr. Reiss's testimony was taken by post-hearing deposition on July 30, 2019. Dr. Reiss is level II accredited and is board certified in orthopedics. He has been practicing in the Denver area since 1988, limiting his practice to disorders of the spine. Dr. Reiss confirmed that as a spine surgeon, he reviews radiology films of the spine. He has performed numerous lumbar spine surgeries, including lumbar fusions. Dr. Reiss was offered as an expert in orthopedic spine surgery, with no objection. Dr. Reiss confirmed that since the time of his IME, he was provided with supplemental or updated records – including (but not limited to) the IME reports of Dr. Rook and Dr. Castrejon. He was also provided with and reviewed the transcript from the parties' June 11, 2019 hearing, which included the testimony of Claimant, Dr. Rook, and Dr. Castrejon.

51. Dr. Reiss testified about the symptoms that Claimant was reporting at the time of his evaluation. He indicated that Claimant was doing no core strengthening, stretching, or aerobic conditioning at that time. Claimant was not taking any medication.

He noted that Claimant was using an AFO on his right ankle, which he explained is a device to substitute for the lack of motor control of the ankle. He was also using a single point cane. Dr. Reiss testified regarding his review of the initial November 3, 2017 lumbar MRI, which showed multiple levels of degenerative change.

52. Dr. Reiss explained that there was a dural tear during the November 7, 2017 surgery by Dr. Syre, causing a CSF leak. This led to a worsening of Claimant's neurologic symptomatology. He explained: "So basically all of the neurologic damage occurred at the time of surgery and was not progressive but was over and done with at the time of surgery." He explained that this neurologic damage included Claimant's increased weakness in his right foot – both in plantar flexion and dorsiflexion, along with decreased sensation. Dr. Reiss further noted: "The spinal stenosis was dealt with appropriately, and according to the imaging studies after surgery, there was adequate decompression of the stenosis and no indication for any further surgery because the stenosis was dealt with."

53. During his deposition, Dr. Reiss discussed the MRI films of February 14, 2018:

> *And basically, that MRI was done with and without contrast, which is important because they have had surgery and you want to know the difference between scar tissue and current and continued nerve compression from something that isn't a scar. And clearly at that level, especially on the right-hand side, there is no continued, no significant nerve compression that would be amenable to any further surgery. There was some darkness on the left side which probably represented the continued spur formation, but he was not having left-side symptoms so that is not important. Not clinically relevant whatsoever.* ***What is important is, the spinal canal formation was sufficiently decompressed and there was no continued right-sided compression of anything and, therefore, there is no indication for further surgery because surgery would be designed to decompress the right-sided nerve roots; but if there is nothing pressing on them, there is no reason to decompress something that isn't there***." [Depo. Tr., pp. 14-15] (emphasis added).

54. Dr. Reiss also testified regarding the lumbar MRI film and report from August 16, 2018. When asked to compare the findings from that MRI to the February 14, 2018 study, he explained:

> The most important thing to note when comparing these two is that there are no post-contrast images. In other words, they did not administer contrast and, therefore, we are unable to compare those images. The pre-contrast images are exactly the same in my opinion. There is no change. If they had administered contrast, it would have probably shown the exact same thing as it did in February, which was that there was an

> adequate decompression and nothing further needed to be decompressed." [*Depo. Tr., p. 15*]

Dr. Reiss discussed the comments by the physician's assistant at Dr. Syre's office, who felt that the August 16, 2018 MRI showed Claimant had L4-4 instability causing increased osteophyte formation. That individual suggested that an L4 through L4 fusion and L3-4 decompression was probable. Dr. Reiss explained that an osteophyte is essentially a bone spur. The presence of osteophytes does not necessary imply instability. Per Dr. Reiss, in most cases osteophytes is just a degenerative process. Dr. Reiss noted: "And in this particular case, it was present prior to his surgery…" *[Depo. Tr., p. 17*] Dr. Reiss testified:

> There is no indication there was any instability to L3-4. There is also no indication there is any increase in osteophyte formation. That is something that would occur over years, not over a period of months, and there is no indication on the imaging studies that were performed that there was any change in the osteophytes that were present. It is pure speculation by a physician assistant. [*Depo. Tr., p. 17*]

55. Dr. Reiss testified about the results of the CT scan of Claimant's lumbar spine from September 20, 2018. He explained why the spur formation would not require additional surgical intervention: "They had already seen that at the time of surgery (referring to the first surgery in November 2017) and they dealt with a decompression on both sides. So even though the spur is present anteriorly, they decompressed him posteriorly on both sides. [*Depo. Tr., pp. 17-18*]

56. Dr. Reiss noted that there were no flexion-extension x-rays done prior to Dr. Syre proceeding with the multilevel fusion on January 25, 2019. Dr. Reiss stated: "… the imaging studies did not include flexion-extension X rays. There is a very small probability that it may have shown something different, and if they wanted to look for true instability, then they would have needed to have done those and not just gone ahead with surgical intervention based upon speculation." [*Depo. Tr., p. 19*]

57. During his deposition, Dr. Reiss elaborated as to the basis for his opinion that further surgery would be unlikely to improve Claimant's right lower extremity symptoms or his bowel and bladder symptoms:

> In order for a decompression surgery to be helpful, there needs to be something there to decompress. They had already decompressed that area, and from my evaluation of the imaging studies, there is no longer any significant compression of any of those nerve roots that would warrant further attempt at decompression. So you cannot improve a neurologic problem for a surgery's sake if there is nothing there to decompress. **Surgery is very unlikely to be helpful.** I don't see an indication there at all… With regard to a fusion, a fusion does not help neurological symptomatology. A fusion is useful for back pain in the

> presence of true instability. Not present. A multilevel fusion for back pain is not indicated per the Colorado Workers' Compensation Guidelines, not recommending more than two levels at most, if any. So, in this particular case, there is no indication that any of those levels were particularly his pain generator. So according to the Colorado Guidelines, you really need to identify clearly the pain generator, which was not done … Conservative care has not been accomplished as far as self-mitigation in this particular case as he is not exercising, which is the most appropriate treatment for back pain, not surgical intervention. In my opinion there is no indication either in my opinion with regard to treating such a patient or per the Guidelines for doing a multilevel fusion for back pain. **It is not indicated for his neurologic symptomatology because a fusion will not change neurologic symptomatology."** [*7/30/19 Depo. Tr., pp. 21-22*] (emphasis added).

58. After reviewing the transcript from the June 11, 2019 hearing, including Claimant's testimony, Dr. Reis does not believe that Clamant has had any significant improvement as a result of the elective lumbar surgery on January 25, 2019: "I don't believe so. I mean, the one thing that has changed, perhaps, is more numbness in the quadriceps, which simply would mask any burning or tingling because now that it is worse, it is numb. So that is certainly not an improvement. His urologic symptomatology was already improving prior to the surgery due to the medical management, so that [improvement] is not the result of the surgery. And I think his neurologic deficit was due to the original surgery and is not going to get any better with any further surgery but may get slightly better over time if he is lucky but not secondary to any further surgery." [*7/30/19 Depo. Tr., pp. 28-29*] Dr. Reiss noted that if Claimant's neuropathic pain is improved, it is likely due to the gabapentin medication – not due to surgery.

59. When asked whether he agreed with Dr. Rook's testimony that Claimant's condition constituted a neurosurgical emergency in terms of the January 25, 2019 surgery, Dr. Reiss responded: "No, I would say he is quite wrong." [*Depo. Tr., p. 25*] Dr. Reiss also disagreed with Dr. Rook's opinion that the surgery on January 25, 2019 was needed to stabilize Claimant's spine. [*Depo. Tr., p. 25*]

60. Dr. Reiss opined that a DVT is something that can be addressed under maintenance care. [*Depo. Tr., p. 27*]

61. Dr. Reiss testified that he disagrees that Claimant should receive a gastric bypass procedure as part of a rehabilitation plan for his work injury. Dr. Reiss opined that a gastric bypass procedure is not medically necessary or indicated in relationship to the work injury. [*Depo. Tr., p. 33*]

62. On January 8, 2019, Dr. Syre's office issued a letter addressed to Claimant: "You have been scheduled for the following procedure: L2-4 redo laminectomies and intradural exploration with L2-3, L3-4 posterior fusion with screws

and rods… Date of surgery: 01/25/2019… Your surgery will be CANCELLED AND RESCHEDULED for the following conditions: - We do not receive medical clearance 2 weeks prior to surgery; - Your insurance plan does not authorize your surgery." [*Ex. O, p. 134*] Pinnacol Assurance was not copied on that letter. It was simply sent to Claimant. An undated document captioned "Swedish Pre-Admit Clinic" addressed to Claimant states: "Dear Sergio A Garcia, You have been scheduled for ***elective surgery*** at Swedish Medical Center…" (Emphasis added) [*Ex. O, p. 136*] Again, Pinnacol Assurance was not copied on or otherwise provided with that information. (emphasis added).

63. At hearing, Claimant was asked if he was given the impression that the lumbar fusion on January 25, 2019 was an emergency procedure. Claimant responded: "No, it wasn't. It was a scheduled operation**.**"

64. Claimant confirmed during his testimony that the January 25, 2019 surgery had been authorized and paid for by Medicaid. Claimant has not received any medical bills.

65. Claimant testified about his personal fear that he might end up in a wheel chair without a fusion. Claimant testified that he decided to undergo further surgery with Dr. Syre on January 25, 2019 because he (Claimant) was optimistic that a second surgery "was going to help everything that has gone wrong up to this point."

66. Ryan Saladin is a Senior Claims Representative at Pinnacol Assurance. Mr. Saladin has been assigned to Claimant's claim since the outset, when the Employer filed the First Report of Injury on October 30, 2017. He was deposed on July 11, 2019. Mr. Saladin confirmed during his deposition that a request for authorization was never received by Pinnacol for the January 25, 2019 surgery by Dr. Syre. [*7/11/19 Depo. Tr, p. 5*] Dr. Syre's office did not send Pinnacol a copy of the operative note. Respondents did not even learn that the January 25, 2019 surgery had taken place under after the fact. [*Depo. Tr., p. 6*]

67. Mr. Saladin confirmed that Pinnacol has never received any medical bills for the January 25, 2019 surgery. Pinnacol has never received a lien from Medicaid requesting reimbursement. [*Depo. Tr., p. 6*]

68. Mr. Saladin further testified that Pinnacol has never received a request for authorization of a gastric bypass procedure from any treating physician in this case. [*7/11/19 Depo. Tr., p. 7*]

69. Mr. Saladin explained that Pinnacol filed a Final Admission of Liability per the DIME opinion of Dr. Shih. [Depo. Tr., p. 5]. A new General Admission was later filed on June 24, 2019, rescinding MMI status effective September 21, 2018 per the opinion of Dr. Zaremba (ATP). [*Depo. Tr., pp. 7-8*]

70. Claimant testified that he underwent a fusion of L2-L5 on January 25,

2019. After that surgery, he still has incontinence (but less severe). His right quad is numb with loss of power, and hi back is numb and tend to "spaz out every once in a while." He has developed increased balance problems since the second surgery on January 25, 2019. He has had further falls.

71. After surgery #2, Claimant testified he still has his right foot drop and continue to wear the AFO (ankle/foot arthrosis) for that problem. He continues to use a single point cane. Claimant has also complained of symptoms in his *upper* extremities. He continues to have problems with sleep.

72. Dr. Miguel Castrejon performed an IME at the request of Claimant's counsel on April 15, 2019, approximately 3 months after Claimant had already undergone the elective lumbar surgery with Dr. Syre under Medicaid. [*Ex. EE*] Like Dr. Rook, Dr. Castrejon is a Physical Medicine and Rehabilitation physician. According to his report, Dr. Castrejon asked Claimant about his condition since the January 25, 2019 surgery with Dr. Syre: "The claimant states that he has experienced improvement following surgery in some area and new symptoms in others…" [*Ex. EE*, *p. 439*]

73. Dr. Castrejon later reiterates in his report: "**The claimant's condition did not significantly improve following surgery**." [*Eh. EE, p. 455*] (emphasis added). At hearing, Dr. Castrejon agreed that after the January 25, 2019 surgery, Claimant still has the right foot drop. He still has increased numbness in the right quadriceps. He still has bowel and bladder issues. He has increased problems/difficulty with balance. He is still using an AFO brace. He is still using a straight cane. Dr. Castrejon testified that a new symptom since the January 25, 2019 surgery is "about balance problem and balance issues, knowing where his legs are because of abnormal sensory of the lower extremities."

74. Dr. Castrejon was aware from the history provided to him by Claimant that Dr. Syre had performed the January 25, 2019 lumbar surgery under Medicaid. Dr. Castrejon confirmed that he did not know the cause of any delay that may have occurred between the time that Dr. Syre mentioned a lumbar fusion in September 2018 and when the surgery was ultimately performed on January 25, 2019. As far as he knows, the delay could have been on the part of Dr. Syre's office.

75. Dr. Castrejon testified that it was his opinion that the need for the second surgery was a direct result of the industrial event. He acknowledged that he had not reviewed any radiology films in this case. In Dr. Castrejon's discussion of his review of the medical records, the report from Dr. Brian Reiss is not mentioned. Dr. Castrejon suggested that he had reviewed reports from Drs. Zaremba, Raschbacher, Reiss, and Rook. He then clarified on cross examination that he was unaware that Dr. Reiss had evaluated Claimant. When asked on cross exam if he would have liked to have had the benefit of reviewing another spine surgeon's (Dr. Reiss's) opinion, Dr. Castrejon responded: "*Yes, I would*." On redirect, Dr. Castrejon testified: "*Well, I'm not a spine surgeon, I am a physiatrist… The opinion of a board-certified spine surgeon certainly is one that would probably prevail*."

76. Dr. Castrejon was asked if he was somehow suggesting that the January 25, 2019 surgery was an emergency procedure. He agreed that, in his experience, if a spine surgeon is recommending emergency surgery, it would be typically be done on the same day or very near the time that it was recommended.

77. Dr. Castrejon suggested that Dr. Raschbacher did not support the second spinal fusion due in large part to his review of surveillance video. [In fact, Dr. Raschbacher did not speak to surgical questions in his report]. [*Ex. W*] Later on cross examination, Dr. Castrejon testified: "And it was not my – recollection that he was actually specifically questioned with regard to the need for (inaudible) lumbar fusion.

78. In his written IME report, Dr. Castrejon opined that Claimant was not yet at MMI. At hearing, however, Dr. Castrejon indicated that he would did not think that Dr. Zaremba placing Claimant at MMI on May 1, 2018 was unreasonable. Dr. Castrejon does not think it was unreasonable that MMI status remained intact until September 21, 2018, when Dr. Zaremba rescinded MMI as of that point. He testified: "***In reviewing my medical file, if I think of the position that Dr. Zaremba was in at the time that he felt the patient was at MMI, it probably would have been medically reasonably to have done so. And I state that with the caveat that that is often times a personal and professional decision that's made – maybe the training of the individua***l."

79. Dr. Castrejon confirmed on cross-examination that he thought it was medically reasonable for Dr. Zaremba to have placed Claimant at maximum medical improvement on May 1, 2018. He went on to say: "*And, subsequent, it was also reasonable to take to take him off MMI as his neurological status progressed and worsened*." Dr. Castrejon agreed that Dr. Zaremba documented in reports from May 1, 2018 thru September 21, 2018 that Claimant remained at MMI during that interim.

80. Dr. Castrejon was asked if he agreed that Dr. Shih's DIME opinion that Claimant was at MMI as of May 1, 2018, and was consistent with the reports of Dr. Zaremba. Dr. Castrejon responded: "*I do think that it's – was – in hindsight as we have here – that it was probably reasonable*."

81. In his report, Dr. Castrejon described Claimant as moderately obese. [*Ex. EE*, *p. 439*] In his IME report, Dr. Castrejon did not render an opinion on the question of a gastric bypass procedure. When asked about bariatric weight loss treatment for Claimant, he testified: "*There was mention of possibly undergoing a bariatric consultation, but I – I do not know or have knowledge if that was ever carried out. But the – I do not feel that that made a positive or negative effect on his (inaudible) outcome*."

82. When asked at hearing whether he felt that a gastric bypass procedure was reasonable this far removed from the January 25, 2019 lumbar surgery, Dr. Castrejon indicated that he did *not* think a gastric surgery at this point was likely to

result in any significant benefit to Claimant. He testified: "*This far, I do not think it – there would be any significant benefit with the bariatric procedure, only because he's post-surgery. I don't think it would make a substantial change*."

83. The issue of offsets was endorsed for hearing. Claimant testified that he applied for SSDI in June or July of 2019, and that he had a hearing in that case about a week prior to the June 11, 2019 worker's compensation hearing. Claimant was told that he could expect a decision within two months. There is currently no information regarding the outcome of the SSDI proceeding.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the Respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned

expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). The ALJ finds Claimant to be credible.

Overcoming the DIME Opinion on MMI, Generally

D. A DIME physician's findings of MMI, causation, and impairment, are binding on all parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome the DIME physician's opinion, "there must be evidence establishing that the DIME physician's opinion is incorrect and this evidence establishing must be unmistakable and free from serious doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

E. "Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. §8-40-2-1(11.5). A finding of MMI is premature if a course of treatment has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-1082 (Colo. App. 1990). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 950 (Colo. App 1998).

Has Claimant overcome the DIME on the issue of MMI?

F. Dr. Castrejon, who also testified as an expert for Claimant, voiced an opinion that was inconsistent with Dr. Rook on the question of MMI. Dr. Castrejon testified that in hindsight, *he did not think that it was unreasonable* for the ATP (Dr. Zaremba) to have placed Claimant at MMI on May 1, 2018. Dr. Shih then concurred with that MMI date. Dr. Castrejon felt it was within the ATP's discretion to then rescind MMI status at the later effective date of September 21, 2018, after the DIME occurred.

G Dr. Rachbacher evaluated Claimant on June 8, 2018. His opinion is consistent with, and further supports, the opinions of the DIME (Dr. Shih) and Dr. Zaremba that Claimant was appropriately placed at MMI as of May 1, 2018.

H. Respondent Insurer timely filed a Final Admission of Liability per the Division IME opinion of Dr. Shih. Respondent Insurer later filed a new General Admission of Liability rescinding MMI status effective September 21, 2018 per the opinion of the ATP, Dr. Zaremba. This GAL was consistent with the medical evidence

at that point in the process. *This does not mean, however, that Claimant was never at MMI in the first instance on May 1, 2018.* The records from Dr. Zaremba between May 1, 2018 and September 21, 2018 clearly state that Claimant remained at MMI until the September 21, 2018 date of service.

I. While Dr. Rook may disagree with the DIME opinion that Claimant was at MMI as of May 10, 2018, it is ultimately a difference of medical opinion, which does not rise to the standard of clear and convincing evidence, and the ALJ so finds. The DIME has not been overcome by clear and convincing evidence of the MMI date of May 1, 2018. Respondents then timely filed a GAL, rescinding MMI effective September 21, 2018, based upon new evidence from the ATP.

Medical Benefits, Spinal Fusion

Did Claimant have a "Neurosurgical Emergency"?

J. Dr. Rook testified that Claimant had a "neurosurgical emergency" and was in need of further spine surgery at the time of the DIME. That is not supported by the medical evidence:

- The correspondence from Dr. Syre's office to Claimant document that the January 25, 2019 surgery an "***elective***" procedure.

- During Dr. Reiss's deposition testimony, he explained why that the multilevel fusion performed on January 25th was not reasonable and necessary. Dr. Rook had not reviewed Dr. Reiss' report, yet took the position that Dr. Reiss' opinion would not change his position.

- Both Dr. Shih (DIME physician) and Dr. Zaremba (ATP) were aware of the medical issues that Dr. Rook emphasized at hearing. Dr. Shih and Dr. Zaremba both felt that Claimant was at MMI, and additional treatment could be addressed under maintenance care.

Reasonable and Necessary

K. Claimant underwent this elective surgery with Dr. Syre on January 25, 2019 for a fusion of L2 through L5. This surgery was authorized and paid for by Medicaid. A request for authorization was never submitted to Pinnacol Assurance, pursuant to Rule 16. Pinnacol has never received any bills associated with the January 25, 2019 surgery, nor have they received a lien or any other indication that Medicaid is now requesting reimbursement. There are no outstanding bills that are ripe and in dispute. Rather, Claimant is attempting to have Pinnacol held retroactively liable for the January 25, 2019 surgery with Dr. Syre that was already covered by Medicaid – despite the fact that Medicaid is not requesting reimbursement.

L. Aside from the January 25, 2019 elective surgery being authorized by Medicaid, was this procedure was reasonably necessary? To the extent that differing

opinions have been voiced by physicians in this case, this ALJ finds the testimony of Dr. Reiss to be the most persuasive. Dr. Reiss is an orthopedic spine surgeon and had the benefit of reviewing the comprehensive medical records, viewing radiology films, and also read the transcript from the testimony offered by Claimant, Dr. Rook, and Dr. Castrejon at the June 11, 2019 hearing. Dr. Reiss has credibly opined that the January 25, 2019 was not reasonably necessary, for the reasons set forth in his deposition testimony, and the ALJ so finds. There was insufficient medical evidence in the record of spinal instability at all. Secondly, the lumbar fusion would not address Claimant's neuropathic symptoms, as there was no evidence of any nerve compression or a pain generator that this fusion could address.

Medical Benefits, Gastric Bypass Surgery

M. Claimant is seeking to have a gastric bypass procedure authorized as part of his Worker's Compensation claim. No provider has submitted a request for authorization to Pinnacol, pursuant to Rule 16. Nonetheless, both Dr. Reiss and even Claimant's retained expert, Dr. Castrejon, do **not** support Claimant's request for the gastric bypass surgery. Dr. Reiss has indicated that the need for such surgery is not reasonably necessary or related to the work injury. Dr. Castrejon has opined that it is unlikely that Claimant would have any significant benefit from undergoing a gastric bypass procedure this far removed in time from his January 25, 2019 surgery.

ORDER

It is therefore Ordered that:

1. Claimant has not overcome the DIME opinion of Dr. Shih that Claimant reached MMI on May 1, 2018

2. After the Division IME, Claimant's MMI status was subsequently rescinded effective September 21, 2018 by the authorized treating physician (Dr. Zaremba). Respondents properly filed a new General Admission of Liability reinstating temporary disability benefits as of September 21, 2018.

3. Claimant's request that Pinnacol Assurance now be found retroactively liable for the January 25, 2019 surgery and responsible for repayment to Medicaid is denied and dismissed.

4. Claimant's Request for authorization of the gastric bypass procedure is denied and dismissed.

5. There is currently no information that Claimant has been awarded social security benefits. Therefore, Respondents are not presently entitled to a statutory offset. However, Claimant has an ongoing duty to update Respondents on the status of his social security claim since the outcome could result in the Respondents' entitlement to a statutory offset.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 16, 2019

/s/ William G. Edie

William G. Edie
Administrative Law Judge

2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Respondent is in default of § 8-43-409(1), C.R.S. by failing to insure or keep workers' compensation insurance while having employees from August 28, 2014 through July 25, 2018.

PROCEDURAL HISTORY

Petition filed an Application for Hearing in this matter on July 25, 2018. The issue endorsed was "whether Employer/Respondent's workers are employees or independent contractors." The matter was set for hearing but continued by the parties a few times. On December 21, 2018, Petitioner filed a Motion for Partial Summary Judgment and the motion was denied on January 15, 2019. On January 24, 2019, the parties appeared at a scheduled hearing before ALJ Margot Jones and asked for another continuance that was granted. No evidence or testimony was received on January 24, 2019. The matter was reset for March 29, 2019 and was heard by ALJ Michelle Jones.

At the outset of the March 29, 2019 hearing, ALJ Michelle Jones mistakenly believed default per § 8-43-409(1), C.R.S. was the issue for hearing. Petitioner, however, indicated the only issue they applied for a hearing determination on was the question of whether Respondent's workers were employees or independent contractors. Respondent argued that the determination sought had no effect and argued issues endorsed on its Response to Application for Hearing of ripeness and mootness. Respondent sought to have the issue of insurance coverage added to the case to avoid an order addressing only the question of employee versus independent contractor ruling and argued such an order would have no effect.

ALJ Michelle Jones initially denied the request to add the issue of insurance coverage to the case the day of hearing. The March 29, 2019 hearing went forward and was limited to testimony and evidence surrounding the workers and appropriate classification of Respondent's workers. After the March 29, 2019 hearing, ALJ Michelle Jones issued an order dated May 14, 2019 adding the issue of insurance coverage and allowed the parties to set a new hearing to address the insurance coverage issue. The order agreed with Respondent that without adding the issue of insurance coverage, a ruling on employee versus independent contractor status would be merely an advisory opinion with no effect. The order noted that jurisdiction under the WC Act is conferred and allows Petitioner to set the issue of an employer's default for hearing, but that default requires a two-part analysis including both employee status and lack of insurance coverage. The parties chose to schedule an additional hearing regarding the insurance coverage issue, which was held on August 5, 2019.

FINDINGS OF FACT

1. Respondent is a construction company in Colorado that performs primarily roofing and gutter work. Petitioner had investigated Respondent previously and Petitioner believed that Respondent's company had been dissolved.

2. At some point in 2017, Petitioner received a tip and information that Respondent was an active company and that Respondent may be in default of its workers' compensation insurance obligations. The tip came from Pinnacol Assurance.

3. Susan Stenman, an investigator for Petitioner, testified that she was surprised to receive the tip and to be assigned a second case involving Respondent as she believed Respondent's company had been dissolved.

4. Ms. Stenman began an investigation. She first attempted to see if Respondent was actually in business and performed internet searches. She found an active website for Respondent, an updated commercial advertisement, and newer/recent reviews on websites Yelp and Better Business Bureau. She also searched the National Council on Compensation Insurance website to see if Respondent had a current or active insurance policy and found a policy from February 28, 2013 that was cancelled April 19, 2013. *See* Exhibits 1, 2, 3, 4.

5. Ms. Stenman then decided to perform a site visit to see if Respondent was actually in business. On August 23, 2017, Ms. Stenman went to a storefront location along with another investigator from the Division.

6. When they walked in the storefront location for Respondent, the investigators were greeted by Suzanne J_____ who was at a desk near the entrance to the storefront. Ms. J_____ asked if she could help them. The investigators pretended to be interested in roofing repair work. The investigators observed a white board with lists of jobs and other information. They also observed Janet S_____ in an office in the back of the storefront location, and observed the owner Guy T_____ "Sonny" at the location. The investigators obtained business cards for S_____ Constructors and Roofing, LLC listing Janet S_____ as the Office Manager and Suzanne J_____ as the Assistant Office Manager. *See* Exhibit 5.

7. After the August 23, 2017 site visit, Petitioner issued a "Director's Notice to Show Compliance" on August 28, 2017. The Notice required Respondent to respond within twenty days and indicated the Division's belief that Respondent was likely required to but did not have workers' compensation insurance. A compliance questionnaire was attached to the Notice. Respondent was advised to complete and return the questionnaire and attach all workers' compensation certificates of insurance for three years prior to the date of the Notice. The Notice indicated that after the expiration of the twenty days to respond with the compliance questionnaire, the Director would make a finding regarding whether Respondent was required to have workers' compensation insurance, whether coverage had been maintained, and if not, would impose fines and/or

other sanctions. Ms. Stenman testified that she issued the notice and was looking for proof of workers' compensation insurance from August of 2014 through August of 2017 as it appeared to her that Respondent was in business, had employees, and lacked insurance coverage based on her investigation. *See* Exhibit 6.

8. On September 13, 2017, Respondent returned the compliance questionnaire. Respondent indicated in its answers that it had two employees, 5 or 7 contractors, and that its contract employees were independent contractors. Respondent did not attach any workers' compensation policies for the prior three years and indicated on its response that it was "exempt." Respondent attached a spreadsheet to the compliance questionnaire that contained seven entries with names and phone numbers of independent contractors. *See* Exhibit 7.

9. After receipt of Respondent's compliance questionnaire, Ms. Stenman spoke with Respondent's owner Mr. T_____ by telephone regarding the office workers listed on Respondent's compliance questionnaire. They discussed the distinction of employees versus independent contractors. Mr. T_____ indicated to Ms. Stenman that the office workers were covered by workers' compensation through their own policies for which he was reimbursing them. Mr. T_____ indicated his belief that he was in compliance as he was providing workers' compensation insurance for his two office workers through reimbursement.

10. On July 25, 2018, the Director and the Division of Workers' Compensation filed an Application for Hearing. The Application indicated that they had attempted to resolve the issues with Respondent and endorsed as an issue for hearing whether Respondent's workers were employees or independent contractors.

11. A hearing was initially scheduled for January 24, 2019 before ALJ Margot Jones. The matter was continued before any evidence or testimony was received. The matter was rescheduled and heard on March 29, 2019 before ALJ Michelle Jones.

12. At the outset of the March 29, 2019 hearing, from a brief review of the pleadings, the ALJ mistakenly believed default per § 8-43-409(1), C.R.S. was the issue for hearing. However, Petitioner indicated that the only issue they applied for hearing on and were ready to proceed on was a determination of whether Respondent's workers were employees or independent contractors.

13. Respondent noted that they had, in their response to the application for hearing, endorsed ripeness and mootness as they believed there was workers' compensation coverage for the workers. Respondent also argued that the determination sought by Petitioner was a law school type analysis with no real effect. Respondent sought to add the issue of insurance coverage to the issue of employee versus independent contractor status. Petitioner objected to adding the issue of insurance coverage on the day of hearing.

14. The ALJ sustained the objection and limited the issues at the hearing to a determination of whether Respondent's workers were employees or independent contractors. A full day hearing took place.

15. After hearing, by order, the ALJ reversed her decision and added the issue of insurance coverage to the case. The ALJ agreed with Respondent that without adding the issue of insurance coverage, the ALJ would merely be issuing an advisory opinion with no real effect. Under the WC Act, Respondent can have employees and can have independent contractors. The actual controversy includes the issue of both the classification of workers and whether coverage existed for the workers during the applicable time period.

16. The ALJ allowed the parties to set a new hearing on the issue of insurance coverage. The new hearing was held on August 5, 2019 and some additional evidence and testimony was received. The testimony and evidence was limited to the period of time dating three years prior to the Director's Notice to Show Compliance (August 28, 2014) through the date of the Application for Hearing (July 25, 2018).

17. The hearings covered the issue of default, a two part analysis, including both the question of whether Respondent has employees (heard at the 03/29/19 hearing) and the question of whether Respondent lacked the required insurance coverage (heard at the August 5, 2019 hearing).

18. Janet R_____ (maiden name Janet S_____) testified at hearing. Ms. R_____ worked for Respondent from 2012 through 2018, initially as an office worker, and then as an office manager. She answered phones, dealt with customer complaints, ordered permits for jobs, helped schedule jobs, and performed other duties as asked by the owner/manager Mr. T_____ or as asked by the project managers. When she was hired, one of the project managers, Ron G_____ signed her contract/agreement to work for Respondent. Ms. R_____ signed an independent contractor agreement and thought initially that she was hired as a contractor. Ms. R_____ worked generally from 8 a.m. to 5 p.m., although she switched her schedule at one point to come in and leave slightly earlier. Ms. R_____ had her own office at Respondent's storefront location and knew she was expected to work normal business hours. Ms. R_____ was provided with a desk, computer, and supplies needed to perform her job. Ms. R_____ regularly updated a whiteboard that listed all of Respondent's jobs.

19. Ms. R_____ initially was hired as an office worker but became the manager shortly after she began working for Respondent. When she became the office manager, Ms. R_____ talked with an accountant used by Respondent so that she could learn more about QuickBooks as she needed to know how to use their system. Ms. R_____ testified that there were staff meetings she was expected to attend approximately 2 times per month that included the office workers, Mr. T_____, and the project managers. She testified that the meetings were mandatory. Ms. R_____ testified that her employment was at will and she believed she could quit or be terminated at any time. Ms. R_____ performed the payroll for Respondent and paid the bills

including rent, phone, utilities. Ms. R_____ had business cards with Respondent's company name listed on the top, and her name listed as the office manager on the bottom.

20. Ms. R_____ testified that she created her own business entity, home sweet office before she was hired by Respondent. Ms. R_____ testified that the consulting work/at home customer service didn't work out and that she ended up taking the job working for Respondent instead. However, she testified that she considered her work for Respondent initially to be work as an independent contractor. Before 2015, Respondent paid Ms. R_____ by check made out to her business, home sweet office and home sweet office was provided 1099 tax documents. After 2015, Ms. R_____ testified that she was paid to her individual name and given a W-2. Ms. R_____ testified that her duties did not change in 2015 and that it was the same work and same pay by the hour as it was prior to 2015.

21. Ms. R_____ testified that she had a workers' compensation policy for herself that she obtained through Pinnacol Assurance. She testified that she kept the policy current from April 2013 through her resignation from employment with Respondent, paid the premiums monthly, and was reimbursed by Mr. T_____ for the premium costs of her policy. She testified that she was covered by workers' compensation the entire time she worked for Respondent.

22. Suzanne J_____ also testified at hearing. Respondent hired Ms. J_____ in September of 2014 as a part time office worker. Ms. J_____ testified that her duties included answering phones, taking leads for potential jobs, and giving the leads to project managers who would go out and look at/bid the potential roofing jobs. Ms. J_____ also dealt with phone calls dealing with customer complaints. Ms. J_____ testified that she had her own workspace near the front door of Respondent's storefront location and that Respondent provided her with a desk and computer. Ms. J_____ did not provide any of her own supplies. Ms. J_____ testified that she could leave or be terminated at any time and that she considered it to be an at will job. When a project manager has a job under contract, Ms. J_____ helped get the permits pulled, updated the whiteboard, and scheduled inspections when the job was finished. Ms. J_____ also wrote thank you notes and provided warranties to customers on behalf of Respondent. Ms. J_____ does not have an independent business and has never created her own business.

23. Ms. J_____ testified that when she was first hired, she was paid by 1099 and had to take care of her own taxes, but that beginning in May of 2015, she received a W2 with taxes withheld. She testified that she was paid hourly to her own personal name the entire time. Ms. J_____ testified that she had expected work hours during the business day. Ms. J_____ testified that she was trained by Ms. R_____. Ms. J_____ also testified that she has had a workers' compensation insurance policy for herself through Pinnacol Assurance since she began employment in September of 2014. She testified that she pays the premium for her individual policy and that she is reimbursed by Respondent for her monthly premium costs.

24. Ms. R_____ and Ms. J_____ are office workers and were employees while they worked for Respondent. They did not independently engage in any type of individual business and they do not qualify as independent contractors.

25. In addition to the two office workers employed by Respondent, Respondent had several project managers during the period of time at issue. Petitioner also contends that these project managers were employees. Respondent contends that they are independent contractors.

26. Several witnesses described the work of the project managers for Respondent. Ms. R_____ testified that at any given time during her employment they had 3-4 project managers. She testified that project managers were basically salesmen and that when Respondent received a call from a potential customer, the lead was given to a project manager who would try to get the business. The project managers would see customers, measure roofs, provide estimates, and if Respondent was hired for the job, they would get a signed contract and bring it back to the office. Ms. R_____ testified that if the project managers were able to get a signed contract, they handed it in to her. At the office, the once the signed contract was handed it, Ms. R_____ would order permits for the work, create a file, and put the job on the whiteboard to track the progress of the job. Respondent would also find and hire a crew to perform the actual work. Ms. R_____ occasionally would advertise for roofers on craigslist or would use roofers referred to them or that they had used in the past to perform the actual work. Ms. R_____ would all roofers fill out an independent contractor agreement and provide proof of proper insurance coverage. After the project managers converted job leads to signed contract work for Respondent, they were paid by commission, either a percentage of the total job or a flat rate depending on the job type. Ms. R_____ did not supervise the project managers or have supervisory capacity over them despite being the office manager. Ms. R_____ testified that the project managers came and went, that they had 3-4 at any given time, and that each project manager would have their own desk in one big room but that none of them had their own separate offices like the office workers and Mr. T_____.

27. Ms. R_____ testified that staff meetings were held approximately two times per month with the office workers, Mr. T_____, and the project managers. She also testified that safety meetings were held occasionally for the roofing crews/roofers they used and that occasionally product experts on shingles/roof products would come in to discuss new items and that anyone interested could attend.

28. Ms. J_____ testified that as an office worker, she regularly fielded calls from prospective clients and gave the leads to the project managers. She testified that there were approximately three project managers at any given time. She testified that the project managers could take a lead or refuse a lead as they saw fit and that it was up to them as to whether or not they wanted to quote a job and get a signed contract. Ms. J_____ testified that if one of the project managers said no to a job lead, she would try a different project manager. If they all say no to a job lead, she will take the job lead to Respondent owner Mr. T_____. Ms. J_____ testified that when a project

manager got a job under contract, she would order and get the permits for the job, help assign a roofer to perform the job, put the job on the production board, and track the jobs progress at all times. Ms. J_____ testified that if there was a problem with a customer, the project manager would usually handle it. She testified that she often called roofers, checked on inspections, and tracked the schedule of the jobs. Ms. J_____ testified that when the job was done, she wrote thank you cards to the customers.

29. Project manager Ron G_____ testified at hearing. Mr. G_____ testified that he had worked with Respondent for approximately 6-7 years as a project manager and continues to do so. Mr. G_____ first started as a project manager doing gutter estimates on a commission basis. He realized roof jobs paid better commissions and switched to that. Mr. G_____ testified that he works whatever hours he wants and that he takes leads from potential customers and looks at or measures a house and provides an estimate. Mr. G_____ testified that if there are any complaints with a job that he signed the contract on, he handles it but that he will give his advice if asked to other project managers. Mr. G_____ testified that there are two other project managers. Mr. G_____ testified that if a customer likes an estimate and signs a contract for the work, he is paid a commission based either on a percentage of the total work or a set amount depending on the job type. Mr. G_____ testified that the commission percentages were set by Respondent and that they were paid to him after the job was complete and the customer had paid. Mr. G_____ testified that he received job leads from the Respondent's office workers, from friends, or from whomever. Mr. G_____ testified that if he received a lead from Respondent's office but didn't like the location or job type, he wouldn't go and wouldn't quote the job lead and that he could make the decision to follow up or not. Mr. G_____ testified that he has a desk and work station at Respondent's office but that he also works from home. Mr. G_____ testified that he uses his own computer whether he is at the office, at his home, or at a site for an estimate. He testified that the tape measurers used to measure a job are his. Mr. G_____ testified that Respondent does not provide him any benefits and that he pays his own expenses. Mr. G_____ testified that if he has something to do, he will go into the office, but if not, he does not go in and that the time he spends in the office varies.

30. Mr. G_____ testified that Respondent provided him a computer program for performing estimates that he downloaded onto his own computer. Mr. G_____ also wears shirts with Respondent's company name on them when the shirts are clean, although he is not required to and does not always wear the shirts. Mr. G_____ testified that he received no real training from Respondent. Mr. G_____ testified that he attended meetings 1-2 times per year at Respondent's office. Mr. G_____ testified that he had no contract with Respondent and no reason for one. He testified that he does not make any business decisions on behalf of Respondent. Mr. G_____ testified that he has his own LLC, S-Corp, Ron G_____, LLC and that he is not required to and does not work exclusively for Respondent. Mr. G_____ testified that he also works for a Home Owners' Association and does maintenance, maintains dog stations, and does snow plowing. Mr. G_____ testified that he has a business card for the work he does with Respondent and a business card for the work he does with the HOA. Mr.

G_____ testified that he is paid by check made out to him personally for his commission percentages based on contracts signed to have Respondent perform work. Mr. G_____ testified that he is paid by 1099. Mr. G_____ testified that he pays for his own truck, his own fuel, and his own expenses for his work with Respondent because he is working for his own business Ron G_____, LLC and that he believes he is an independent contractor. Mr. G_____ testified that he could quit or be fired from Respondent at any time.

31. Mr. G_____ testified that he currently in the process of buying Respondent's company and signed a contract in January of 2019 to do so. Mr. G_____ took over the lease of the office space. Mr. G_____ testified that he has a workers' compensation policy that now includes two employees (office workers). Mr. G_____ testified that Respondent also owned two trucks that were part of the buy out that he will be taking over.

32. Mr. T_____ also testified at hearing. Mr. T_____ was the owner of Respondent company during the period of time at issue. Mr. T_____ testified that he signed a contract to sell the business in January of 2019. Mr. T_____ testified that Respondent had been a business entity since 1984 and was an LLC. Mr. T_____ testified that when he received the August 28, 2017 Director's Notice to Show Compliance he asked Petitioner why because he believed he was carrying workers' compensation insurance as required. Mr. T_____ testified that Pinnacol would not insure him due to a past situation and that Pinnacol was the only company that would insure a roofing company without paying extreme upfront fees/premiums that he could not afford without going out of business. Mr. T_____ testified that he had his office workers get their own policies that that he reimbursed them monthly for the premium costs. He testified that roofing was all that he knew and that he found a way to make sure his employees were covered. Mr. T_____ testified that he knew his subcontractors performing the roofing work were fully insured because they checked insurance policies before using them, and he testified that he was not worried about his project managers because they were independent contractors who could either carry their own workers' compensation or opt out. Mr. T_____ testified that he could not run his office without help, needed office employees, and after reading the statute decided the office employees could pay for their own policies and he could reimburse them and still be in compliance. Mr. T_____ testified that the he actually paid for all the premiums and that the office workers were always insured. Mr. T_____ testified that he believed he was in compliance. Mr. T_____ also testified that he never had a workers compensation claim or statutory employer claim due to an uninsured subcontractor.

33. Mr. T_____ testified that he had two trucks with his company's name on them that he was trying to transfer to Mr. G_____ as part of the sale of the business. Mr. T_____ testified that if the project managers had a big project or wanted a marked car to help sign a job, they could ask to use his trucks and he would let them. He testified that he paid for business cards for his office workers and his project managers and that they all had Sunny Constructors business cards with their names on them. He testified that he checked the workers' compensation policies of the roofing contractors he used for

jobs and that he guaranteed the work done by the contractors he hired. Mr. T_____ testified that he is a certificate holder and is notified if any of his roofing subcontractors' workers' compensation policies lapse. He testified that if a policy lapses, he will not use that contractor and will tell them to go get the insurance current before paying or assigning a new job to that contractor. He testified that if something was wrong with the roofing contractor's work, he would require his roofing contractor to go back out and fix the problem, or he would hire another roofing company to fix it. Mr. T_____ admitted that his two office workers were employees but testified that they were insured for workers' compensation and that he paid for the insurance as required. Mr. T_____ testified that he would reimburse his project managers for workers' compensation policies that they individually obtained as well, if they chose to have workers' compensation insurance.

34. Mr. T_____ testified that another project manager, Norm F_____, came into the office at will and told Mr. T_____ he wanted to come and go as he pleased.

35. Ms. Stenman testified at hearing that Respondent did not carry workers' compensation insurance as required during the time period at issue from April 28, 2014 through July 25, 2018. Ms. Stenman testified that, as part of her investigation, she checked the insurance database that showed the last time Respondent had workers' compensation coverage was in April of 2013.

36. Matthew Heidrich, an investigator with Pinnacol Assurance, testified at hearing. He testified that Pinnacol would not provide a workers' compensation insurance policy to Mr. T_____ due to a past situation. He testified that a prior investigation revealed that Mr. T_____ had forged a workers' insurance policy with Pinnacol listed, so Pinnacol will not insure Mr. T_____ or write him any type of policy.

37. Petitioner argued that under the WC Act, Employers must carry workers' compensation insurance for their employees. They argue that here, Respondent did not carry insurance but made its employees go out and get their own policies. Even though the employees were reimbursed, Petitioner argues that it is unlawful and against the requirements of the WC Act to require employees to pay for their own policies.

38. Respondent argues that policies were in place to protect the office workers and that Respondent was in a tough spot since he was in an environment where the last resort insurer, Pinnacol, would not insure him. Respondent argues that by reimbursing the office employees, Respondent was supplying and paying for the required workers' compensation coverage.

Conclusions of Law

The purpose of the Workers' Compensation Act of Colorado "the WC Act,", §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. As part of ensuring the overall purpose

of the statutory scheme, the general assembly has found, determined, and declared that it is in the best interest of the public to assure that all employers who fall under the provisions of the WC Act have in effect current policies of insurance or self-insurance for workers' compensation liability. *See* § 8-47-111(1), C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

To ensure all employers who fall under the provisions of the WC Act have in effect current policies of insurance or self-insurance for workers' compensation liability, the Division of Workers' Compensation, within the Colorado Department of Labor and Employment, is required to have a procedure to verify whether all employers doing business in the state of Colorado are in compliance. *See* § 8-47-111(2), C.R.S. When the Division has identified an employer that it believes is not in compliance with article 44 of the WC Act the Division, with the assistance and cooperation of the attorney general, is required to use all available means under the WC Act to ensure compliance. *See* § 8-47-111(2). To that end, Part 4 of Article 43 discusses enforcement and penalties.

Section 8-43-409(1), C.R.S. requires the Director of the Division of Workers' Compensation to investigate upon receiving information that an employer is in default of its insurance obligations. As part of the investigation, the Director may verify that all employees of that employer are insured through the employer's workers' compensation plan. *See* § 8-43-409(1), C.R.S. After investigation, if necessary, the statute states that the Director may set the issue of the employer's default for hearing**.** *See* § 8-43-409(1), C.R.S. In this case, as found above, the Division of Workers' Compensation received information through a tip that Respondent may be in default of its insurance obligations

under the WC Act. As required by statute, the Division performed an investigation. The Division, on August 28, 2017 issued a Director's Notice to Show Compliance requesting information on number of employees and requesting copies of insurance policies. Respondent responded on September 13, 2017 indicating their belief they were exempt. After investigation, the Director's Notice to Show Compliance, and the response to the Director's Notice to Show Compliance, a dispute remained and the issue of Employer's default remains for determination.

Default of insurance obligations under the WC Act requires a two-part analysis, a determination that an employer had employees for whom the employer must carry workers' compensation insurance AND that the employer does not or did not have a policy of workers' compensation insurance in effect. *See* § 8-43-409(2), C.R.S. To determine whether Employer in this case had employees for whom it needed to carry workers' compensation insurance, a determination of worker status (employee versus independent contractor) is necessary.

Employee versus Independent Contractor

Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent business related to the service performed." Moreover, pursuant to §8-40-202(2)(b)(I), C.R.S. independence may be demonstrated through a written document.

A necessary element to establish that an individual is an independent contractor is that the individual is customarily engaged in an independent trade, occupation, profession or business related to the services performed. *Allen v. America's Best Carpet Cleaning Services,* W.C. No. 4-776-542 (ICAO, Dec. 1, 2009). The statutory requirement that the worker must be "customarily engaged" in an independent trade or business is designed to assure that the worker, whose income is almost wholly dependent upon continued employment with a single employer, is protected from the "vagaries of involuntary unemployment." *In Re Hamilton,* W.C. No. 4-790-767 (ICAO, Jan. 25, 2011).

The "employer" may also establish that the worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. *See Nelson v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). The factors in §8-40-202(2)(b)(II), C.R.S. suggesting that a person is not an independent contractor include whether the person is paid a salary or hourly wage rather than a fixed contract rate and is paid individually rather than under a trade or business name. Conversely, independence may be shown if the "employer" provides only minimal training for the worker, does not dictate the time of performance, does not establish a quality standard for the work performed, does not combine its business with the business of the worker, does not require the worker to work exclusively for a single entity, does not provide tools or benefits except materials and equipment, and is unable to terminate the worker's employment without liability. *In Re of Salgado-Nunez,* W.C. No. 4-632-020 (ICAO, June

23, 2006). Section 8-40-202(b)(II), C.R.S. creates a "balancing test" to ascertain whether an "employer" has overcome the presumption of employment in §8-40-202(2)(a), C.R.S. The question of whether the "employer" has presented sufficient proof to overcome the presumption is one of fact for the Judge. *Id.*

If the evidence establishes that the worker was performing services for pay, and there is no written document establishing the worker's independent contractor status, the burden of proof rests upon the respondents to rebut the presumption that the worker was an employee. *Baker v. BV Properties, LLC,* W.C. No. 4-618-214 (ICAO, Aug. 25, 2006). The question of whether the respondents have overcome the presumption and established that the worker was an independent contractor is one of fact for the ALJ. *Nelson v. Industrial Claim Appeals Office, supra*. *See Industrial Claim Appeals Office v. Softrock Geological Services, Inc*., 325 P.3d 560 (Colo. 2015) (whether an individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed must be determined by applying a totality of circumstances test that evaluates the dynamics of the relationship between the individual and the putative employer). The analysis in *Softrock* reflects that tribunals must look not only at the nine factors to discern customary engagement in an independent business but must also examine other factors involving "the nature of the working relationship" is equally germane to that question in the context of a workers' compensation matter. *See In re Claim of Pierce*, W.C. No. 4-950-181-02) (ICAO, Sept. 18, 2018).

The evidence establishes that both Ms. R_____ and Ms. J_____ were office workers and employees. They were not free from Respondent's direction and control in the performance of their services. They were not customarily engaged in an independent business related to the services they performed. In fact, they were both office workers and Respondent admits that they were employees necessary for him to run his office. The factors of § 8-40-202(2)(b)(II), C.R.S. also overwhelmingly weigh in favor of an employee determination. Ms. R_____ and Ms. J_____ were paid hourly, assigned business work hours, could be terminated or end employment at will, provided supplies needed to do their job, paid personally (Ms. R_____ was paid both personally and to her business/trade name), and were integrated in Respondent's business operations. Ms. R_____ and Ms. J_____ were an integral part of the daily business operations of Respondent's business. Although both signed independent contractor agreements, the agreements were insufficient to create a presumption of independent contractor status and the agreements lacked basic language and information to create such a presumption. The evidence overwhelmingly supports the conclusion that the office workers were employees of Respondent during their terms of employment.

As found above, Respondent typically had 3-4 project managers at any given time. The project managers were salespersons and performed sales services for Respondent attempting to get business and signed contracts for roofing work. They performed services for Respondent for pay and received pay based on commission rates established by Respondent. As they performed services for pay, they are deemed to be employees unless they are free from control and direction in the performance of services and customarily engaged in an independent business related to the services performed.

The testimony from Mr. T_____, Mr. G_____, Ms. J_____, and Ms. R_____ and the evidence presented establishes that the project managers were generally free from the direction and control of Respondent. They were not required to work exclusively for Respondent, and Mr. G_____ in fact did not work exclusively for Respondent. The project managers' work was not overseen nor did Respondent instruct the project managers on how to perform the work other than provided software to assist in job estimates. The project mangers could take a lead, reject a lead, and schedule on their own time when they wanted to do the estimate for the potential customers. They were not paid hourly or salary rates, but were paid on a commission basis at the completion of a job for which they were the salesperson. They were not provided more than minimal training. They did not have set schedules and were not required to come into the office at any specific times. They were free to come and go as they wished and to schedule the estimates with potential customers as they wished.

Although they were mostly free from direction and control in the performance of their services, the project managers did somewhat combine business operations with Respondent. They would handle customer complaints and track the progress of jobs. They would have to assist in resolving complaints and would not be paid commission until the job was complete and the customer paid. They were required to attend staff meetings with Mr. T_____ and the office workers. They were able to use Respondent's company trucks for job estimate travel if they asked. They were provided and wore shirts with Respondent's name on the shirts. They were paid personally and not paid to a business name or entity. Mr. G_____ signed an independent contractor agreement on behalf of Respondent when Respondent hired office worker Ms. R_____. The project managers were also reimbursed workers' compensation insurance premiums by Mr. T_____, if they chose to individually obtain policies. The project managers did not have contracted periods of work performance, but rather could be terminated at will or leave at will if they wished. They were involved regularly with Respondent's office staff and had desk stations in the storefront office location. Further, even if they were completely free from direction and control in the performance of their services, there is a dearth of evidence indicating that the project managers were also customarily engaged in an independent business relating to the service performed. There is insufficient evidence that the project managers had their own salesperson businesses or that they customarily operated an independent business performing sales work. Rather, the testimony and evidence weighs in favor of a finding that the project managers were salesperson employees of Respondent and were not individual independent contractors operating their own individual sales businesses.

Insurance Coverage

The WC Act requires employers to secure workers' compensation insurance for all employees. *See* § 8-44-101(1), C.R.S. The WC Act also provides that it shall be unlawful for any employer, regardless of the method of insurance, to require an employee to pay all or part of the cost of such insurance. *See* § 8-44-101(2), C.R.S. Employers are required to insure and keep the insurance in force without allowing it to lapse. This is an ongoing requirement and the WC Act requires the Division to either order a defaulting

employer to cease and desist business operations and/or impose fines for every day an employer fails to maintain workers' compensation insurance. *See* § See 8-43-409(1), C.R.S.

As found above, Employer in this case did not secure workers' compensation insurance for all of its employees. Respondent was denied a policy by Pinnacol Assurance and Respondent found it too expensive to procure insurance coverage through a different insurance company. Respondent believed its project managers were independent contractors and provided no coverage for them, other than an offer to reimburse them for individual policies if they chose to get them. Respondent regularly reimbursed its office workers who obtained their own individual policies. However, under the WC Act, Employer cannot require an employee to pay for the cost of insurance. Here, Respondents office employees were paying for the cost of insurance and then were later reimbursed. Although this was a creative way to attempt to comply with the WC Act, Respondent violated the WC Act by failing, as an Employer, to secure and maintain workers' compensation. The burden to obtain a policy and maintain it falls on Employers and cannot be pushed onto employees.

Insurance coverage was not secured or maintained by Respondent for its office workers. Similarly, it was not secured or maintained by Respondent for its project managers. Respondent thus is in default of its obligations to provide insurance for it employees.

Respondent argues that it creatively found coverage for its office employees after Pinnacol Assurance unjustly refused to insure it for workers' compensation. Respondent makes a broad policy argument that Pinnacol cannot refuse to insure any Colorado employer and that since Pinnacol refused in this case, Respondent was stuck. This argument is not persuasive. Initially, Respondent is incorrect as to what is required by § 8-45-101(5)(f), C.R.S. That section states that Pinnacol Assurance shall not refuse to insure any Colorado employer…due to the risk of loss or the amount of premium. It does not require that Pinnacol Assurance issue a policy to a company that previously committed fraud by having a falsified insurance policy listing Pinnacol as insuring the company. Although Pinnacol could have issued a policy and imposed a premium surcharge under § 8-45-106(2), C.R.S., they were not required to issue a policy as Respondent argues.

Respondent points out that he was unable to obtain a workers' compensation policy through other insurance companies without paying a huge surcharge/premium up front. Although this may have forced him out of business or may have been a financial hardship, this does not allow Respondent to thwart or avoid the requirements of the WC Act. Every employer in the state of Colorado is required to provide its employees with workers' compensation insurance coverage. Despite any high premium requests or denials to insure from certain insurance providers, Respondent remains under the requirement. Although Respondent never had a workers' compensation claim during the time period at issue, the fact that it lacked any claims or injuries does not take away the

requirement that it was required to and failed to maintain workers' compensation insurance for its employees.

ORDER

It is therefore ORDERED:

1. Respondent is in default of § 8-43-409(1), C.R.S. by failing to insure or keep workers' compensation insurance while having employees from August 28, 2014 through July 25, 2018.

2. Respondent's office workers and project managers were employees during this time period, and they do not qualify as independent contractors.

3. All matters not determined herein are reserved for future determination.

DATED: September 18, 2019

/s/ Michelle E. Jones

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that the spinal cord stimulator (SCS) recommended by Dr. Haley Burke, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 14, 2015 work injury.

- Whether the claimant has demonstrated, by a preponderance of the evidence, that the stem cell treatment recommended by Dr. Haley Burke, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 14, 2015 work injury.

- Whether the claimant has demonstrated, by a preponderance of the evidence, that the ketamine injections recommended by Dr. Haley Burke, are reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 14, 2015 work injury.

FINDINGS OF FACT

1. On December 14, 2015, the claimant was injured when she slipped on ice and fell on her left side. The claimant testified that at the time of the slip and fall, she injured her low back, pelvis, left elbow, left hip, and left knee. The respondents have admitted liability for the December 14, 2015 injury. In addition to specific medical treatment discussed below, the claimant's medical treatment has included pain medications, physical therapy, and gait therapy.

2. Following the injury, the claimant's authorized treating physician (ATP) was Dr. David Olson with Pavilion Family Medicine. On May 19, 2016, Dr. Olson noted that the claimant had suffered a labrum tear of her left hip. At that time, Dr. Olson recommended a left hip steroid injection.

3. Subsequently, Dr. Olson referred the claimant to Dr. Thomas Dwyer. On June 9, 2016, the claimant was seen by Dr. Dwyer. At that time, Dr. Dwyer noted that the left hip magnetic resonance image (MRI) taken on the date of the claimant's injury showed a non-displaced tear of the anterior labrum. Dr. Dwyer recommended an active strengthening program.

4. On July 11, 2016, Dr. Olson referred the claimant for podiatry treatment of her foot symptoms. Dr. Olson opined that the claimant had suffered a sciatic injury that was causing the claimant's foot weakness.

5. On September 1, 2016, the claimant was seen by podiatrist, Dr. Terri Schmitt. Dr. Schmitt diagnosed the claimant with bilateral posterior tibial tendinitis, posterior tibial muscle weakness on the left, and increased pronation. Dr. Schmitt opined that these issues could be contributing to the claimant's left hip pain and prescribed orthotic insoles.

6. On September 16, 2016, the claimant returned to Dr. Dwyer and reported continuing pain in her lower back, left buttocks, and left hip. Dr. Dwyer noted that an intra-articular injection did not provide the claimant with relief. On that date, Dr. Dwyer recommended electrodiagnostic (EMG) testing of the claimant's left lower extremity.

7. On December 14, 2016, Dr. Mitchell Burnbaum performed the recommended EMG testing of the claimant's lower left extremity. In his report, Dr. Burnbaum noted it was an unremarkable EMG evaluation.

8. The claimant was referred to Dr. William Faragher by Dr. Dwyer. On February 21, 2017, the claimant was first seen by Dr. Faragher. At that time, Dr. Faragher opined that the claimant's left posterior hip pain was likely emanating from her sacroiliac (SI) joint. In addition, that the claimant's left anterior hip pain was possibly related to an anterior labral tear. Dr. Faragher made a number of treatment recommendations including a walking program, physical therapy, a TENS unit, lumbar traction, and a left SI joint injection.

9. On March 17, 2017, the claimant returned to Dr. Dwyer and reported that that her left lower extremity gave out and she fell down some stairs. As a result, the claimant experienced pain in her right foot with swelling and bruising. Dr. Dwyer reviewed x-rays of the claimant's right foot and noted a fracture of the claimant's right fifth metatarsal. Dr. Dwyer provided the claimant with a walking boot and took the claimant off of work.

10. On March 20, 2017, Dr. Faragher administered the recommended left SI joint injection. Thereafter on May 5, 2017, the claimant reported to Dr. Faragher that that the injection had provided some relief, but had worn off. Dr. Faragher noted that treatment opinions could potentially include PRP[1] or stem cell treatment.

11. On May 11, 2017, the claimant reported to Dr. Olson that the left hip injection provided relief "for a couple of weeks". At that time, they discussed surgical repair of the claimant's left acetabular labrum. Dr. Olson referred the claimant to Dr. Brian White for a surgical consultation.

12. On June 2, 2017, the claimant returned to Dr. Dwyer and reported no improvement in her right foot symptoms. In addition, right foot x-rays showed that the fracture of the claimant's right fifth metatarsal had not changed. Dr. Dwyer determined that new bone formation was "vary sparse" resulting in a nonunion. Dr. Dwyer ordered a computerized tomography (CT) scan of the claimant's right foot to better determine the status of the fracture.

[1] Platelet rich plasma.

13. On July 19, 2017, the claimant first treated with Shawn Harris, PA-C in Dr. White's practice. At that time, Mr. Harris noted the claimant's initial slip and fall. He also noted the fracture to the claimant's right foot. Dr. Harris diagnosed left hip femoracetabular impingement, labral tear, and "some underlying sacroiliac joint issues." Mr. Harris' treatment recommendations included an intra-articular diagnostic injection and possible hip arthroscopy. In the medical record of that same date, Dr. White also noted that a left femoral acetabular arthroplasty would be a way to "take away the mechanical pain and catching."

14. At an appointment with Dr. Olson on July 27, 2017, it was noted that the claimant's right fifth metatarsal was not healing. Dr. Olson instructed the claimant to continue to use her boot and follow up with orthopedics.

15. On August 18, 2017, Dr. John Ribadeneyra assumed ownership of Pavilion Family Medicine. As a result, Dr. Ribadeneyra became the claimant's ATP. The claimant first treated with Dr. Ribadeneyra on August 29, 2017. At that time, Dr. Ribadeneyra noted that the claimant's hip surgery was scheduled for October 2017.

16. On October 9, 2017, Dr. White performed the recommended left hip arthroscopy that included femoral osteoplasty and acetabular rim trimming.

17. On November 3, 2017, the claimant returned to Dr. Dwyer and reported that her right foot symptoms had improved. On that date, Dr. Dwyer determined that the claimant had reached maximum medical improvement (MMI) for her right foot.

18. On March 12, 2018, the claimant returned to Dr. Ribadeneyra and reported that her left hip was "buckling" and she had burning pain in her left thigh and buttock. The claimant also told Dr. Ribadeneyra that there was some belief that she had complex regional pain syndrome (CRPS). On that date, Dr. Ribadeneyra referred the claimant to Dr. Joel Cohen for psychological counseling. Based upon the medical records entered into evidence, the claimant began treatment with Dr. Cohen in June 2018.

19. On April 4, 2018, the claimant returned to Dr. White. At that time, the claimant reported that she continued to have burning pain around her pelvic rim and down her left thigh. Dr. White opined that the claimant could have "an early form of reflex sympathetic dystrophy (RSD) or complex regional pain syndrome (CRPS)." Dr. White also opined that the claimant's symptoms were related to her initial work injury. At that time, he recommended that the claimant see a physician specializing in RSD and CRPS, specifically Dr. Haley Burke.

20. The claimant was first seen by Dr. Burke on April 30, 2018. At that time, Dr. Burke diagnosed the claimant with neuropathic pain in the left lateral femoral cutaneous nerve, left sided ischial bursitis, trochanteric bursitis in the left hip, neuralgia, and chronic pain syndrome. Dr. Burke recommended a lumbar sympathetic nerve block, a left lateral femoral cutaneous nerve block, and a trochanteric bursa injection.

21. On May 10, 2018, Dr. Ribadeneyra referred the claimant to foot surgeon Dr. Waqqar Khan-Farooqi to address the claimant's ongoing foot issues.

22. On May 24, 2018, Dr. Burke noted that the claimant had symptoms consistent with CRPS. Dr. Burke recommended additional nerve blocks. In addition, she referred the claimant for CRPS testing; specifically, QSART[2] and thermography testing.

23. On June 14, 2018, the claimant was first seen by Dr. Khan-Farooqi regarding the fracture to her right fifth metatarsal. Dr. Khan-Farooqi opined that the claimant had a symptomatic malunion of her right fifth metatarsal. He recommended a weight bearing CT scan. In addition, Dr. Khan-Farooqi noted that the claimant could have CRPS and requested the results of the QSART and thermographic testing.

24. On June 25, 2018, a three-phase bone scan of the claimant's pelvis showed abnormal asymmetric uptake in the left acetabulum.

25. On June 28, 2018, the claimant returned to Dr. Burke and reported that the most recent nerve blocks provided relief for approximately three days. On that date, Dr. Burke noted the results of the three-phase scan and recommended an MRI of the claimant's left hip.

26. On July 20, 2018, the MRI of the claimant's left hip showed mild tendinopathy and trace bursitis. In addition, there was evidence of the prior surgical repair and no new tear was suspected.

27. A three-phase bone scan of the claimant's bilateral lower extremities was performed on July 20, 2018. That scan showed "patchy areas of heterogeneous mildly intense increased bony activity within the mid foot bilaterally including activity localized to the middle cuneiform on the right, base of the right second metatarsal and distal first metatarsal in the region of the sesamoid bone." The report also included a notation that the findings were nonspecific, but could be degenerative in nature.

28. On August 2, 2018, the claimant was seen by Dr. Burke who noted the results of the left hip MRI. On that date, Dr. Burke discussed with the claimant the possible use of a spinal cord stimulator (SCS) as a "potential future option" for treatment. In addition, Dr. Burke administered a right posterior tibial nerve block to address the claimant's right foot pain.

29. The claimant returned to Dr. Khan-Farooqi on August 27, 2018. At that time, Dr. Khan-Farooqi noted that the recommended testing for CRPS and not yet occurred. He recommended that the claimant would likely need surgical intervention to treat her right foot. He further recommended either a plantar flexing osteotomy of the right fifth metatarsal or shortening osteotomies of the second through fifth metatarsals.

[2] Quantitative Sudomotor Axon Reflex Test.

30. On October 16, 2018, the claimant was seen by Dr. Tashof Bernton for diagnostic testing for CRPS. In his report, Dr. Bernton noted that the Colorado Medical Treatment Guidelines (MTG) require two positive objective tests for a diagnosis of CRPS. He also noted that the MTG provide that a negative diagnostic test "does not rule out the diagnosis of [CRPS]." Dr. Bernton reported that the claimant's thermography testing was positive for CRPS, while the autonomic testing battery was negative. Dr. Bernton also read the claimant's response to sympathetic nerve blocks as a positive diagnostic test for CRPS. Based upon these test results, Dr. Bernton opined that the claimant does meet the MTG diagnostic criteria for CRPS. Dr. Bernton recommended that the claimant undergo endocrinologic testing. In addition, Dr. Bernton recommended the use of stem cell injections to assist in the healing of the stress fractures in the claimant's feet.

31. On October 17, 2018, the claimant returned to Dr. White and reported that she was diagnosed with "baseline CRPS" and had stress fractures in her feet. Dr. White recommended the claimant see Dr. Paul Miller to address issues with her bone density.

32. The claimant was seen by Dr. Burke on October 25, 2018 and reported increased stinging sensations and leg cramps. On that date, Dr. Burke noted that there were no further orthopedic or surgical treatments available to the claimant. Dr. Burke noted Dr. Bernton's diagnosis of CRPS. In addition, Dr. Burke noted Dr. Bernton's recommendations for testing of the claimant's endocrine system and stem cell injections. Dr. Burke had further discussions with the claimant regarding the use of an SCS.

33. On October 29, 2018, the claimant returned to Dr. Khan-Farooqi who noted that the claimant would not be a surgical candidate until her CRPS was managed. In the medical record of that date, Dr. Khan-Farooqi noted that the claimant would be undergoing a DEXA[3] scan. He also recommended an endocrinologic evaluation.

34. On October 30, 2018, a DEXA bone density studies of the claimant's lumbar spine, neck, and left hip were performed and read as normal.

35. On November 28, 2018, Dr. Burke referred the claimant to an endocrinologist and recommended a psychological consultation related to the recommended SCS. In addition, Dr. Burke requested authorization for stem cell treatment[4] related to the claimant's metatarsal fractures. In the medical record of that date, Dr. Burke opined that the claimant was a "very good candidate for administration of allograft to assist with proper healing of these bony structures especially on the left foot". Dr. Burke also noted "documented and anecdotal evidence for allograft administration for patients with wound healing problems as well as poorly healing and painful orthopedic conditions".

[3] Dual-Energy X-ray Absorptiometry.
[4] This treatment is also referred to as allograft treatment in the medical records.

36. In a medical record dated December 3, 2018, Dr. Ribadeneyra noted that the claimant's QSART testing was positive for CRPS. Dr. Ribadeneyra referred the claimant to Dr. Rothman for an endocrinology consultation. Dr. Ribadeneyra noted Dr. Burke's recommendation for stem cell injections. The medical record indicates that Dr. Ribadeneyra was in agreement with these injections.

37. On December 28, 2018, Dr. Cohen noted that it was his opinion that the claimant was a candidate for an SCS.

38. On January 8, 2019, Dr. Burke requested authorization for a SCS trial. Dr. Burke has also requested authorization for ketamine injections to treat the claimant's CRPS symptoms.

39. On January 31, 2019, the claimant attended an independent medical examination (IME) with Dr. George Schakaraschwili. In connection with the IME, Dr. Schakaraschwili reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Schakaraschwili recommended the denial of authorization of the SCS, stem cell treatment, and ketamine injections. In support of this recommendation, Dr. Schakaraschwili noted that stem cell treatment and ketamine injections are not supported by the Colorado Medical Treatment Guidelines (MTG). With regard to the recommended SCS, Dr. Schakaraschwili opined that the claimant does not clearly have CRPS. Therefore, it was Dr. Schakaraschwili's opinion that the SCS would not be appropriate treatment. Dr. Schakaraschwili noted that although the claimant was diagnosed with CRPS, the QSART testing was negative and the three-phase bone scan showed no evidenced of CRPS.

40. Dr. Schakaraschwili's testimony by deposition was consistent with this written report. Dr. Schakaraschwili reiterated his opinion that there was insufficient evidence to indicate ketamine injections or allograft injections. Dr. Schakaraschwili also noted his opinion that the claimant has not met the MTG criteria for an SCS. In supported of this opinion, Dr. Schakaraschwili noted that there is no evidence of a CRPS diagnosis in the bone scans. In addition, it is Dr. Schakaraschwili's opinion that the diagnostic blocks administered to the claimant were not diagnostic because they were performed simultaneously with other procedures. During his testimony, Dr. Schakaraschwili recommended additional testing including thermogram and QSART testing.

41. On February 20, 2019, Dr. Julia Rifkin performed testing of the claimant's endocrine system. In her report, Dr. Rifkin opined that it was unlikely that there was a metabolic cause of the claimant's metatarsal fractures. Dr. Rifkin also noted that "[i]t is unknown whether or not [CRPS] predisposes a patient to metatarsal fractures."

42. On April 19, 2019, the claimant was seen by Dr. Khan-Farooqi regarding a fracture to her right fourth metatarsal. Dr. Khan-Farooqi opined that a corrective realignment osteotomy would address that fracture, but noted that with the claimant's contralateral fracture (specifically the left third metatarsal) she was likely not stable enough to undergo surgery. As a result, Dr. Khan-Farooqi recommended recovery

sandals to properly cushion the claimant's feet. On that same date, Dr. Khan-Farooqi prescribed "bone growth stimulator" to address the fracture to the claimant's left foot.

43. The claimant testified that her current symptoms include spasms in her low back, tightness in her pelvis, incontinence, changes to her mental abilities (including difficulty with memory and concentration), and bilateral hip pain that radiates down her legs into her toes.

44. The claimant also testified that if she is able to pursue the recommended SCS, she would not need to pursue ketamine treatment.

45. With regard to the spinal cord stimulator (SCS), the ALJ credits the medical records, the claimant's testimony, and the opinions of Drs. Bernton, Burke, Ribadeneyra, and Khan-Farooqi over the contrary opinions of Dr. Schakaraschwili. In addition, the ALJ finds as persuasive the opinions of Drs. Bernton and Burke that the diagnostic testing performed on the claimant is sufficient to support a diagnosis of CRPS pursuant to the MTG. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that the recommended SCS is reasonable medical treatment necessary to cure and relive the claimant from the effects of the admitted work injury.

46. With regard to stem cell/allograft treatment, the ALJ credits the medical records, the claimant's testimony, and the opinions of Drs. Bernton and Burke over the contrary opinions of Dr. Schakaraschwili. The ALJ finds that the claimant has demonstrated that it is more likely than not that the recommended stem cell/allograft treatment is reasonable medical treatment necessary to cure and relive the claimant from the effects of the admitted work injury.

47. With regard to ketamine injections, the ALJ credits the claimant's testimony that if she is able to pursue the recommended SCS, she will not need ketamine treatment. Therefore, the ALJ declines to address the reasonableness and necessity of the recommended ketamine treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The Colorado Workers' Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG "set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

6. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); ***aff'd Jones v. Industrial Claim Appeals Office*** No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

7. As found, the claimant has demonstrated, by a preponderance of the evidence, that the SCS recommended by Dr. Burke is reasonable medical treatment necessary to cure and relive the claimant from the effects of the admitted work injury. As found, the medical records, the claimant's testimony, and the opinions of Drs.

Bernton, Burke, Ribadeneyra, and Khan-Farooqi are credible and persuasive on this issue.

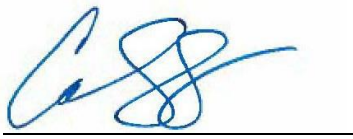
8. As found, the claimant has demonstrated, by a preponderance of the evidence, that the stem cell/allograft treatment recommended by Dr. Burke is reasonable medical treatment necessary to cure and relive the claimant from the effects of the admitted work injury. As found, the medical records, the claimant's testimony, and the opinions of Drs. Bernton and Burke are credible and persuasive on this issue.

9. With regard to ketamine injections, the ALJ declines to address the reasonableness and necessity of the recommended ketamine treatment. As found, the claimant's testimony is credible and persuasive on this issue.

ORDER

It is therefore ordered that the respondents shall pay for reasonable medical treatment necessary to cure and relieve the claimant from the effects of the December 14, 2015 work injury including the spinal cord stimulator (SCS) and stem cell/allograft treatment recommended by Dr. Burke, pursuant to the Colorado Medical Fee Schedule.

Dated this 19th day of September, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Castrejon that Claimant has not reached Maximum Medical Improvement ("MMI")?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant began working for the City of Colorado Springs as a police officer in March of 2008. (Ex. 1). He sustained an admitted compensable injury on December 4, 2017 when a fight occurred while he was making an arrest of a suspect. (Ex. 3).

2. At hearing, Claimant described what occurred at that time, including the mechanism of injuries that he sustained to his neck, mid and low back, left knee and shoulders.

3. Claimant had had a previous right shoulder compensable injury in January of 2010, for which he received physical therapy for a short period of time. There were no ongoing physical issues associated with that injury. (Ex. 10, p. 26).

4. Claimant also sustained a compensable injury on October 28, 2016 at which time he sustained injuries to his neck, mid and low back and a right ring finger dislocation. Claimant received treatment from Dr. Chad Abercrombie, a chiropractor, for those injuries. This included treatment for bilateral trapezius pain extending inferiorly into the levator scapulae and rhomboids, along with treatment for his neck, thoracic and lumbar pain.

5. Claimant was placed at MMI for these injuries on April 11, 2017. However, he had ongoing symptoms, and continued to receive intermittent chiropractic care for his October 2016 injuries from Dr. Travis Curd. (Ex. F).

6. On one visit to Dr. Curd on November 15, 2017, it was noted that pain was noted in both trapezius regions, but left more so than right. Continuing monthly visits were recommended. (Ex. F, p. 64).

7. Claimant acknowledges that prior to his work injury of December 4, 2017, he was still experiencing occasional neck and upper back pain and stiffness, but denies any ongoing shoulder complaints. (Ex. E, F; pp. 59-66).

8. On December 4, 2017, Claimant confronted a suspect who was involved in suspicious activity. While attempting to handcuff the suspect, the suspect turned quickly, forcing the Claimant to his left and a foot chase ensued. The Claimant was able to tase the suspect, but the suspect had heavy clothing on and the suspect was able to break the taser current. Claimant was eventually able to grab the suspect, and a fight occurred with the Claimant and the suspect falling to the ground. The Claimant forcefully brought down his right arm, striking the suspect with the taser. Claimant's left shoulder was punched by the suspect. During the fight, the Claimant recalled a pulling sensation in his right shoulder blade and falling forcefully to the ground on his right side. The Claimant was eventually able to subdue the suspect; however, following the arrest, Claimant noted stiffness in his neck and mid portion of his back.

9. Several hours thereafter the Claimant noted a sharp pain in his left shoulder and a pain in his neck extending into both shoulders and pain in his left knee.

10. The Claimant was initially seen in the Colorado Springs Occupational Health Clinic by P.A. Paula Homberger on December 7, 2017. He under her care until the visit of July 2, 2018 along with the doctors to whom P.A. Homberger referred him. (Ex. G-U).

11. Pain diagrams (rear upper torso view) were filled out on visits to this clinic on the following dates, summarized as follows:

12/7/2017….5/10 pain….mid back, left shoulder, neck (Ex. G, p. 69)

12/28/2017...6/10 pain….neck, upper back, left shoulder, and upper right shoulder (Ex. I, p. 72)

1/4/2018 …6/10 pain…midline neck, scapula region on left and right sides (Ex. 12. P. 244; Ex. L, p. 97)

1/23/2018….5/10 pain…neck, lower back, scapular region on left and right sides (Ex. M, p. 100)

2/7/2018…4-5/10 pain…low back, left shoulder and neck area (Ex. P, p. 107)

4/4/2018…3-4/10 pain….low back, upper mid back/lower neck. (Ex. S, p. 112)

7/2/2018…3/10 pain…low back, neck, upper right shoulder (Ex. U, p. 117)

9/7/2018…5/10 pain…lower right shoulder , and low back (Ex. W, p. 121)

11/2/2018…8/10 pain…..right shoulder, right neck, numbness running down right arm (Ex. Y, p. 125)

12. P.A. Homberger referred Claimant to Dr. Chad Abercrombie, chiropractor, for care and treatment. (Ex. 12, pp. 56-156).

13. On January 2, 2018, Claimant presented to Dr. Abercrombie. Claimant reported that "during an apprehension of a suspect an altercation occurred. He denie[d] any immediate symptoms, however, approximately a few hours later started having neck and upper back pain (ache), left sided with some referral to the right and started having headaches along the left occipital region." Cervical range of motion was limited

in flexion and extension secondary to upper and mid-para-cervical pain at end ranges. Bilateral lateral flexion and rotation were mildly limited with pain in the paracervical regions at end ranges of all planes, left side greater than right. There was increased muscle tone with tenderness across the left *greater than right upper* paracervical musculature including the semispinalis capitis, upper trapezius and levator scapulae. (Ex. J) (emphasis added).

14. On January 24, 2018, Claimant returned to Dr. Abercrombie. Claimant reported a good response to treatment with residual tightness and intermittent aching in the left side of his neck. He stated that tightness and pain were improving in frequency, duration and intensity. There was decreased muscle contracture and improved articular restriction across the left paracervical and cervicothoracic regions. There was an active trigger point along the left trapezial ridge that may have contributed to his neck symptoms. There was tightness along the upper trapezius and levator scapulae on the left. Articular restriction at C7-T1 and C2-3 were improved. There was minimal articular restriction at T3-4. Assessment included "Overall continued improvement with residuals affecting primarily the left cervicothoracic region." (Ex. N).

15. Dr. Abercrombie in his letter dated February 12, 2019, notes: “In review of these records, there has been mention of *right* shoulder and shoulder region symptoms/injury from the incident of December 4, 2017. Mr. Newton was treated in this office for cervical and upper thoracic pain for *both right and left sides* including the region of the *right* shoulder girdle which *became more of a complaint toward the end* of his treatment in my office.” (Ex. 12, p. 56) (emphasis added).

16. During the time that the Claimant was seeing Dr. Abercrombie, he was also receiving massage therapy. (Ex. 12). The reports show intermittent complaints of low back pain, along with the cervical and thoracic pain, but by April, 2018, P.A. Homberger’s notes indicated that low back was worse. Cervical thoracic, right hand contusion, left knee contusion and left shoulder contusion were resolved. The neck was still sore.

17. On July 2, 2018, according to P.A. Homberger, Claimant was complaining of “sharp, *right* thoracic pain *with running*”. Upon examination, P.A. Homberger noted complaints of mild tenderness near the right medical scapular border. The pain diagram noted pain at the neck and both shoulder blades. (Ex. L, p. 97).

18. The Claimant was seen for the first time by Dr. Nicholas Kurz on September 7, 2018. The pain diagrams that the Claimant filled out on that date depicted pain in the low back, *right* neck and shoulder as well as the *right* posterior shoulder below the level of the mid trapezius. Nonetheless, Dr. Kurz placed the Claimant at MMI without impairment, and no maintenance care.

19. At hearing, Claimant testified that the examination by Dr. Kurz was limited, and without any examination of his right shoulder. Dr. Kurz told the Claimant that he could come back for a one-time visit, but not before sixty days.

20. After this exam, Claimant testified that he resumed full duty, but continued to have right sided neck, upper back and right upper extremity pain with radiculopathy.

21. Claimant went back to see Dr. Kurz on November 2, 2018. Dr. Kurz agreed to have an MRI performed "in order to r/o [rule out] any previous issues from his last two claims, but it appears that his current complaints are not related to DOI of 12/04/17, but rather are more likely and to a greater hat (sic) 51% medical probability, *related to his non work related activities.* I will review the results." (Ex. 15, p. 211) (emphasis added).

22. At no point in Dr. Kurz' reports is there any reference to 'non work-related' activities which might cause such symptoms, except for the second [and final] visit of 11/2/2018; "He is getting intermittent R upper thoracic discomfort with non-work related running, which is improved with stretching, as patient states that he participates in non-work related Triathlons and trains frequently." (Ex. Y, p. 123).

23. The MRI was performed on November 5, 2018. The report showed "infraspinatus tendinopathy changes and possibly a small focus of subscapularis tendinopathy versus small tear" and a "questionable type II SLAP tear." Dr. Kurz concluded that these findings were not related to the compensable on the job injury, then told Claimant he should see his own Primary Care Physician for these injuries. (Ex. 15, p. 212).

24. As a result, Claimant went to see Dr. David Weinstein on December 10, 2018. (Ex. 11, pp. 51-54). Physical examination revealed the cervical spine has no midline tenderness with full range of motion. There is no obvious atrophy noted. The patient has a symmetrical trapezius shrug with no evidence of scapular winging. There is no tenderness over the sternoclavicular or acromioclavicular joint. The patient has tenderness over the anterior subacromial space and positive tenderness over the bicipital groove. Range of motion of the right shoulder revealed forward flexion to 180 degrees, external rotation to 70 degrees, and internal rotation to T8. Motor strength was rated at 4/5 with resisted external rotation and abduction. Positive speed's maneuver was noted. Positive impingement testing was noted. (Ex. 11).

25. Dr. Weinstein noted: "He has clear evidence of an *injury* to the right rotator cuff in the form of tendonitis. Fortunately there is no evidence of a full thickness right rotator cuff tear. He also has evidence of right biceps tendonitis. On his MRI scan he has evidence of right superior *labral tearing* involving the biceps anchor which would be consistent with his clinical exam. In addition, there is myofascial inflammation of the right scapular rotators which can be aggravated by compensation from his rotator

cuff/biceps *injury or a primary injury* to the soft tissue muscles in his neck. (Ex. 11, p 53) (emphasis added).

26. Based upon the MRI and his examination and patient history, Dr. Weinstein suggested a course of treatment for the Claimant, which included injections, physical therapy, a physiatry evaluation and additional chiropractic treatment. Further, Dr. Weinstein noted this exchange:

> The patient did ask me if his mechanism of injury would be consistent with his altercation at work, and I told him with him having no other obvious injury this could be consistent with the mechanism of injury he has described. (Ex. 11, p. 54)

27. Following Dr. Kurz' reports, Respondent filed a FAL on November 30, 2018. Claimant timely objected and requested a DIME. Dr. Miguel Castrejon was selected to determine causation, and MMI. If MMI were determined, what impairment rating would be attributable to the injury of December 4, 2017.

28. Prior to the DIME evaluation, the Respondent requested a Rule 8 IME from Dr. Annu Ramaswamy. Dr. Ramaswamy prepared two reports dated January 25, 2019 and May 13, 2019. His deposition testimony was also taken on June 24, 2019.

29. Dr. Ramaswamy noted that Claimant told him that his lower back pain had resolved, but that he had told P.A. Homberger in March of 2018 that with firearms training, he had more pain in the right shoulder and neck region. The Claimant told him that he was concerned when Dr. Kurz put him at MMI on September 7, 2018, as he was still noticing right shoulder discomfort. He was not back to baseline, and had further concerns that no MRI imaging had been performed. (Ex. A, p. 4).

30. Dr. Ramaswamy performed a review of the Claimant's previous medical history from his 2010 and 2016 compensable on the job injuries (Ex. A, pp. 7-13), as well as a chronological evaluation of the medical records from the December 4, 2017 injury. (Ex. A, pp. 13-18). He also performed a physical examination of the Claimant. Dr. Ramaswamy noted that Claimant had ongoing right paracervical/thoracic and posterior shoulder discomfort, likely related to right shoulder impingement. He stated, however, that he was "unable to link the right shoulder impingement diagnosis to the December 4, 2017 incident." (Ex. A. p. 20).

31. Dr. Ramaswamy stated that the Claimant's main clinical issue was right rotator cuff impingement, secondary to rotator cuff tendinitis. He did not think that such impingement was causally related to the work injury of December 4, 2017, as he indicated that if that was the case "one then would expect to see reports of right shoulder discomfort…in the medical records within a few days of the incident." (Ex. A, pp. 21-22)

32. After reviewing the DIME report of Dr. Castrejon, Dr. Ramaswamy issued an addendum report. He disagrees with Dr. Castrejon that the Claimant sustained an injury to the right shoulder or right shoulder girdle musculature in the injury of December 4, 2017 as "one would have expected myofascial pain and shoulder range of motion loss early on after the injury. Instead, the first mention of right shoulder girdle myofascial pain and weakness is not noted until the fall of 2018."

33. Dr. Ramaswamy reiterated during his deposition that the Claimant did not sustain a right shoulder girdle injury or right impingement injury in the incident of December 4, 2017. He did acknowledge that some of Claimant's pain diagrams actually did indicate the presence of right shoulder pain before the fall of 2018.

34. Dr. Ramaswamy also discussed Dr. Castrejon's unique provisional impairment rating. Dr. Castrejon did not provide a cervical Table 53 rating, but rather provided a 5% whole person rating for loss of range of motion in the cervical spine based on a portion of the impairment rating tips. Concerning the right shoulder, he issued a 6% upper extremity impairment based on right shoulder range of motion loss.

35. However, he opined, the Division of Worker's Compensation Impairment Rating Tips, indicate such a rating is only acceptable in cases of *severe* shoulder pathology where it is well justified by the clinician. Dr. Ramaswamy explained that Dr. Castrejon *erred* in providing the rating, as Claimant's physical examination demonstrated rotator cuff impingement and mild range of motion loss in the neck and shoulder, but no indications of *severe* shoulder pathology in the examinations of doctors Weinstein and Castrejon.

36. The Claimant testified that he injured his right shoulder and right scapula during the altercation that he had with the suspect on December 4, 2017. He testified that it was a long altercation with the suspect and that, during the fight, he hit the suspect as hard as he could with his right arm, swinging the taser down and hitting the suspect in the head. He then came down to the ground and "the right side of my body slammed into the ground at that point."

37. Claimant testified that he did tell P.A. Homberger early on about the symptoms that he was having in the right shoulder, like a pinching, and that she gave him some shoulder exercises to do. Dr. Abercrombie was treating the right side of his neck and that he actually did some "kind of massage therapy in my armpit trying to get to the right shoulder."

38. Claimant testified that when he saw Dr. Kurz on September 7, 2018 it was the first time that he had seen him. He told Dr. Kurz that most of the other injuries that he had sustained on December 4, 2017 had resolved but that he was "continuing to have issues with his right shoulder and right scapula…" Claimant testified that Dr. Kurz

did not do any examination of either the right shoulder or right scapula at that time and the total examination by Dr. Kurz took about five (5) minutes.

39. Despite this, Dr. Kurz placed the Claimant at MMI, without impairment, and with no medical maintenance. Claimant stated that at that time he asked Dr. Kurz to have imaging performed due to the ongoing nature of his issues with his right shoulder but that was denied.

40. Dr. Kurz did tell the Claimant that he could have an additional one-time appointment in six weeks. During that time, Claimant stated that his symptoms progressively got worse. He scheduled an appointment which occurred on November 2, 2018. This time Dr. Kurz did perform an evaluation of the right shoulder and scapula, which lasted about a minute, and Dr. Kurz then agreed to have a MRI performed. Upon receipt of the results of the MRI showing pathology in the right shoulder, Dr. Kurz called the Claimant and informed him that the condition was not work-related.

41. The Claimant testified that he did not sustain any additional injures to his right shoulder scapula area between December 4, 2017 and his appointment with the DIME on February 28, 2019. He further testified that he desires to undergo the treatment as recommended by Dr. Weinstein, and supported by Dr. Castrejon, as he wants to get better and perform his job without limitations.

42. Dr. Castrejon performed his DIME examination on February 28, 2019. The DIME report indicates a review of the mechanism of injury, the medical records and a detailed physical examination of the Claimant. Physical examination indicated tenderness in the trapezius and rhomboid musculature as well as the area overlying the levator. Dr. Castrejon identified mild impingement, as well as tenderness at the infraspinatus. (Ex. 10, p. 31).

43. Dr. Castrejon performed an evaluation of the medical records, including the Rule 8 IME report of Dr. Ramaswamy. Dr. Castrejon stated:

> Having had the opportunity to review the mechanism of injury, review the medical file and examine the claimant it is my professional opinion that the claimant's current condition represents the culmination of at least three work related injuries to the shoulder girdle musculature (trapezius, rhomboid, and levator). These injuries were not effectively treating, (Sic). The result has been the development of a 'scapular dyskinesis' contributed to by chronic muscle imbalance and myofascial pain. (Ex. 10, p. 41).

44. Dr. Castrejon further found that the Claimant had a mild impingement, and that the mechanism of injury was consistent with his opinion. He stated that for this type of injury, the treatment rendered to date had been ineffective and inappropriate. Dr. Castrejon believes that in the hands of a skilled physical therapist the condition may

have been significantly less pronounced. (Ex. 10, p. 43). Dr. Castrejon found the Claimant not to be at MMI for his injuries sustained on December 4, 2017.

45. Dr. Castrejon testified at the hearing on August 6, 2019 and was qualified as an expert in the field of physical medicine and rehabilitation. Dr. Castrejon had reviewed Dr. Ramaswamy's deposition. He testified that he was aware of the difference of opinion between him and Dr. Ramaswamy on whether the Claimant sustained an injury to his right shoulder and right scapula musculature on December 4, 2017. Dr. Castrejon stated that Dr. Ramaswamy was incorrect in his understanding of the definition of secondary impingement. Further, he stated that Dr. Ramaswamy was incorrect in his assertion that injury to the right shoulder had not been mentioned prior to the fall of 2018.

46. Dr. Castrejon testified that there is a direct correlation between the mechanism of injury and the Claimant's impingement problem. He provided a description of the anatomy involved in the Claimant's situation. He opined that the condition had not been properly treated, and that it was not until a full-blown impingement developed that it appears that the MRI was performed and the findings of impingement made.

47. At hearing, when asked if Claimant's symptoms met his definition of "severe" [re: Finding of Fact 35, *supra*], Dr. Castrejon replied in the affirmative, as the Rating Tips provide no further concrete definition when one provides a [provisional] impairment rating not using Table 53.

48. Dr. Castrejon, based upon his review of the medical records and his examination, is of the opinion that the December 4, 2017 injury aggravated the preexisting condition from the injury of October 28, 2016, which had not fully healed at the time of the December 4, 2017 injury.

49. Dr. Castrejon agrees with the treatment recommendations made by Dr. Weinstein. He believes the Claimant should undergo trigger point injections, deep tissue massage, and have a cervical MRI and EMG. He then explained the reasons for the additional treatment and evaluations.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers,

without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a worker's compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this case, the ALJ finds Claimant to be sincere, forthright, and credible at every stage of the process. He was candid with all medical practitioners, including the independent examiners. He was conscientious in keeping his appointments, and has demonstrated a sincere desire to manage his health, and perform his job without pain or restrictions. He rightfully advocated for himself when his ATP wanted to close his file.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ as well. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ finds that there are [as is commonly the case] sincere differences in medical opinion - often driven by sincere differences in medical philosophy - which do not necessarily reflect on one's *credibility.* Rather, the ALJ must determine who is more *persuasive* in their assessments, remaining mindful of the burden of proof.

Overcoming a DIME Opinion, Generally

E. The finding of a Division Independent Medical Examiner (DIME) may be overcome only by clear and convincing evidence. (CRS 8-42-107(8)(c). "Clear and convincing" evidence is stronger than a preponderance, is unmistakable, and is free from serious or substantial doubt. *Martinez v. Triangle Sheet Metal, Inc.* (W.C. 4-595-741, ICAO, October 8, 2008)*, citing Dilco v. Koltnow,* 613 P. 2d 318 (1980). A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* (W.C. 4-782-625. ICAO May 24, 2010). The question whether a party has overcome the DIME by clear and convincing evidence is one of fact for the ALJ's determination. *Metro Moving and Storage Co. V. Gussert,* 914 P.2d 411 (Colo. App. 1995.

F. The decisions of a DIME physician are only to be given presumptive effect when provided by the statute. Maximum Medial Improvement is defined at 8-40-201(11.5), C.R.S. as: "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." When a course of treatment has a reasonable prospect of success and a claimant willingly submits to such treatment, a finding of MMI is premature. *See, Reynolds v. ICAO,* 794 P.2d 1080 (Colo. App.1990). The definition of MMI found in the above section contains two components or requirements for a finding of MMI; first, that the condition resulting from the injury be stable and secondly, that no further treatment is reasonably expected to improve the condition. The use of the conjunctive "and" in the definition of MMI connotes that both stability of the condition and the absence of further treatment reasonably expected to improve the condition must be present in order for MMI to exist.

Have Respondents overcome the DIME Opinion on MMI?

The ATP's MMI Determination

G. Claimant initiated the DIME process after being placed at MMI by Dr. Kurz. After the first visit, despite continuing, [but improving, due to chiropractic appointments] complaints of right, upper thoracic pain while running, Dr. Kurz assessed Claimant's complaints to be muscle strains and contusions, all of which were fully resolved. He assigned no work restrictions, no impairment, and no medical maintenance.

H. After Claimant insisted on a second visit, Dr. Kurz attributed Claimant's ongoing complaints to non-work-related causes. The only non-work-related activity in the records is running while training for triathlons. Claimant reported no intervening *injuries.* Dr. Kurz' rationale, it appears, is that since Claimant experiences pain while running, the running itself must, ipso facto, be the injurious *cause* of his ongoing symptoms – to the point of reporting 8/10 pain, and numbness running the entire length of Claimant's right arm. The ALJ finds this reasoning to be highly unpersuasive. Claimant then rightfully advocated for an MRI. When it was finally ordered, some evidence of structural damage was noted. By the time this MRI occurred, there was no

way to determine if such damage was acute in nature, shortly after his work altercation. *As a standalone proposition,* the ALJ finds that Claimant was *not at MMI* when he was discharged by Dr. Kurz, and referred outside the Workers Compensation system.

Dr. Weinstein

I. In summary, Dr. Weinstein found that Claimant has suffered *injuries,* including tendonitis in his right rotator cuff and right biceps. The MRI revealed right labral tearing, and myofascial inflammation of his right scapular rotators-which he felt could indeed by caused by compensating for his rotator cuff/biceps injuries. He found Claimant's symptoms to be consistent with the mechanism of injury, and recommended conservative measures, including injections, physical therapy, a physiatry exam, and more chiropractic treatment. The ALJ finds this to be further evidence that Claimant was not at MMI from his work injury even while in the care of Dr. Weinstein.

Dr. Ramaswamy's IME

J. Dr. Ramaswamy and Dr. Castrejon do not seem to disagree that the Claimant has a medical issue- in the form of an impingement - in his right shoulder region. They do disagree whether that condition is related to the work injury from December 4, 2017. Dr. Ramaswamy's primary argument is that he would have expected a more pronounced presentation early on, immediately after the injury. He is sincerely unable to link Claimant's complaints to the work injury. He also has a sincere disagreement with Dr. Castrejon's provisional impairment rating. The details of the DIME's impairment rating rationale [which the ALJ *provisionally* finds was successfully defended] can wait for another day, as Claimant is not at MMI. Even if Dr. Castrejon's provisional rating rationale is subject to further question, his findings on MMI are found to be persuasive.

DIME Opinion on MMI

K. The DIME report and testimony of Dr. Castrejon are very detailed and explicit in setting forth the medical issues that the Claimant has with the right side of his neck, shoulder, trapezius and scapula. Claimant at the very least sustained an aggravation, in the form of a secondary impingement, to a preexisting condition in that region of his body, as a direct result of this work altercation of December 4, 2017. He still needs medical treatment, and Dr. Castrejon and Dr. Weinstein both agree that conservative treatment is the best approach to take for now. In the best scenario, such conservative measures with a conscientious patient will result in a complete recovery, without the need to debate the merits of an impairment rating at all.

L. A mere difference of opinion regarding the causation of a medically determinable condition as a result of a compensable injury does not rise to the level of overcoming a DIME's opinion by clear and convincing evidence. Substantial evidence supports the findings of the DIME physician on the issue of MMI. Respondent has not sustained his burden of proof of overcoming the DIME opinion.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Castrejon has not been overcome. Claimant is not at MMI.

2. Respondents shall provide all reasonable, necessary, and related medical treatment in order to return Claimant to MMI.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Compensability.
- Average weekly wage.
- Claimant seeks penalties for "Failure to insure and Failure to file General Admission of Liability and Final Admission of Liability."

FINDINGS OF FACT

1. Employer is a disability-owned business that provides maintenance and logistics services to government facilities in Colorado and other states. Mr. Worley, who owns the majority stake in the company, is legally blind. Ms. Bridget Worley is the vice president and handles most of the day-to-day operations of the company.

2. Claimant worked for Employer maintaining the rest stops on I-25 between Colorado Springs and Pueblo. On April 29, 2016, he slipped on ice and fell while putting garbage into a garbage can. He had tried to clear the ice with a shovel earlier that morning, but the ice reformed because he did not have any salt available. Claimant fell into the trash can on his right side, injuring his right shoulder and ribs.

3. The accident occurred at approximately 10:00 AM. Claimant reported the injury to his supervisor via telephone, and was referred to Emergicare in Pueblo. He was working alone at the time of the accident and no one was available to relieve him, so he worked until the end of his shift at 2:00 PM before going to Emergicare.

4. Dr. J. Douglas Bradley at Emergicare was Claimant's primary ATP. Dr. Bradley initially referred Claimant to physical therapy, which was not helpful. Dr. Bradley then referred Claimant to Dr. Michael Simpson, an orthopedic surgeon, who performed right shoulder rotator cuff repair in September 2016.

5. Claimant participated in approximately eight months of physical therapy after surgery. His symptoms improved but did not completely resolve.

6. Claimant underwent a Functional Capacity Evaluation (FCE) on June 1, 2017. The FCE demonstrated work abilities ranging from sedentary to medium level, depending on the task. The therapist also obtained shoulder range of motion measurements.

7. Dr. Bradley placed Claimant at MMI on June 9, 2017. He assigned permanent restrictions of lifting and carrying up to 20 pounds, but only 10 pounds overhead. He opined Claimant had suffered permanent impairment and noted "PPI due 6/23/2017." The ALJ interprets this to mean Dr. Bradley would complete an impairment

report by June 23, 2017. Dr. Bradley opined Claimant required maintenance care in the form of "Aleve 220mg BID for 3 months."

8. There is no impairment rating report from Dr. Bradley or any other Level II provider in the evidentiary record. The ALJ does not know whether Dr. Bradley ever completed the report, and if so, what the final rating would be. There is no persuasive evidence Employer ever received a copy of an impairment rating report.

9. Employer did not have workers' compensation insurance in effect at the time of Claimant's injury. Ms. Worley credibly testified Employer's insurance policy with Pinnacol Assurance was unpaid and lapsed due to an oversight. Employer usually had workers' compensation insurance except a short period around the time of Claimant's accident. Ms. Worley credibly testified Pinnacol Assurance reinstituted Employer's policy and has continuously insured Employer through the date of the hearing. The ALJ finds Employer's lack of insurance at the time of Claimant's accident was due to an honest mistake, and Employer had no intention to shirk its legal obligation to maintain workers' compensation coverage.

10. Employer ultimately paid a penalty to the Division of Workers' Compensation due to its temporary lack of insurance coverage.

11. Employer did not file a General Admission of Liability or a Notice of Contest regarding Claimant's injury.

12. Employer personally covered Claimant's injury-related medical expenses. Employer's exhibits show it paid more than $24,000 in medical bills to multiple providers. Claimant's health insurance may have paid some charges, but Ms. Worley credibly testified Employer paid every medical bill presented to it. Claimant conceded he had no unreimbursed out-of-pocket medical expenses related to his injury.

13. Claimant did not return to work for Employer after April 29, 2016. He was on restrictions and physically unable to perform his regular job since his initial visit with Emergicare. Although he could not work, Employer continued to pay Claimant's full wages through the date of MMI. In fact, Employer paid full wages until Claimant was formally terminated on January 31, 2018. There is no persuasive evidence Claimant suffered any injury-related wage loss before he was put at MMI.

14. Claimant presented no persuasive evidence he suffered any harm because of Employer's failure to admit or deny liability.

15. At the time of his injury, Claimant worked part-time and earned $9 per hour. He had the potential to work up to 28 hours per week, but his actual hours fluctuated based on the amount of work that needed to be done. Claimant testified he generally worked approximately 24 hours per week. Ms. Worley credibly testified Claimant averaged 24 hours per week, which equates to an average weekly wage of $216.

16. Claimant proved he suffered a compensable injury to his right shoulder on April 29, 2016.

17. Claimant's average weekly wage (AWW) is $216.

18. Claimant failed to prove Employer should be penalized for failure to timely admit or deny liability.

19. Claimant failed to plead his penalty claim for failure to file a Final Admission of Liability with specificity.

20. Claimant failed to prove Employer violated any rule or statute requiring it to file a Final Admission of Liability.

21. Claimant failed to prove a basis for a 50% increase in compensation for Employer's failure to carry workers' compensation insurance at the time of his injury.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). As found, Claimant proved he suffered a compensable injury to his right shoulder at work on April 29, 2016.

B. Average Weekly Wage

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

As found, Claimant's AWW is $216. Both parties agree Claimant was earning $9 per hour at the time of his accident. Claimant proposes to calculate his AWW based on the maximum 28 hours he could have worked in a week. Thad would result in an AWW of $252. Employer noted Claimant frequently worked less than 28 hours per week, which Claimant conceded in his testimony. Employer averaged Claimant's actual earnings over a period of time and calculated $216 per week. The ALJ concludes Employer's methodology of calculating Claimant's AWW is the most accurate and appropriate.

C. Penalties for failure to admit or deny

Claimant asks that Employer be penalized for "failure to file [a] . . . General Admission of Liability." The ALJ presumes Claimant is referring to penalties under § 8-43-203 for failure to timely admit or deny liability. The employer must admit or deny liability

within 30 days after it learns of an injury that results in "lost time from work for the injured employee in excess of three shifts or calendar days." Section 8-43-101; 8-43-203(1)(a). Under § 8-43-203(2)(a), an employer "may become liable" to the claimant "for up to one day's compensation for each day's failure" to file an admission or notice of contest with the Division.

The phrase "may become liable" means imposition of penalties under § 8-42-203(2)(a) is discretionary. *E.g., Gebrekidan v. MKBS, LLC*, W.C. No. 4-678-723 (May 10, 2007). The purposes of requiring the employer to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer's position so the Division can exercise its administrative oversight over the claim process. *Smith v. Myron Stratton Home*, 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties in general are to punish the violator and deter future misconduct. *May v. Colorado Civil Rights Commission*, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005). The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. *Dami Hospitality, LLC v. Industrial Claim Appeals Office*, 442 P.3d 94 (Colo. 2019). The claimant bears the burden of proof to establish circumstances justifying the imposition of a penalty under § 8-43-203(2)(a). *Pioneer Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005).

Claimant failed to prove Employer should be penalized under § 8-43-203(2)(a). Although Employer did not file an admission of liability, it paid injury-related medical expenses and continued to pay full wages without interruption. The ICAO has previously held that payment of benefits is a mitigating factor the ALJ can consider regarding imposition of a penalty. *Lightle v. Sonic Drive In*, W.C. No. 4-416-066 (June 30, 2000). In *Lightle*, the ICAO noted "[a]rguably, voluntary payment of temporary disability and medical benefits, and the claimant's receipt of these payments, alerted the claimant that she was involved in a proceeding with legal ramifications. Further, these payments may have diminished the financial injury which the claimant would have incurred had the insurer simply ignored all responsibility to the claimant." Here, Claimant presented no persuasive evidence of any prejudice he suffered because of Employer's failure to formally admit or deny liability. In fact, Claimant received a windfall because Employer continued to pay full wages after the accident rather than the lower TTD rate. Claimant proved a technical violation of the statute, with no actual harm. Finally, the ALJ notes Claimant has neither requested nor been awarded any compensation in this matter. He suffered no wage loss so he is not entitled to any TTD. If the reference metric for any penalty is "up to one day's compensation" per day, it seems incongruous and unnecessarily punitive to impose a penalty where the Claimant has not actually been awarded any compensation.

D. Penalties for failure to file a Final Admission of Liability

Claimant also seeks penalties against Employer for "failure to file [a] . . . Final Admission of Liability." The ALJ concludes this claim lacks merit for two reasons. First, Claimant did not specify any rule or statute he believes Employer violated, or identify the provision under which he requests penalties. For purposes of this discussion, the ALJ assumes Claimant seeks penalties under the "general penalty" provision at § 8-43-304(1). But any application for hearing on penalties "shall state with specificity the grounds on which the penalty is being asserted." Section 8-43-304(4). The specificity requirement serves two functions. First, it notifies the alleged violator of the basis of the claim so it may cure the violation within the statutory timeframe. Second, it ensures the alleged violator receives notice of the legal and factual bases for the penalty claim to protect its due process rights to present evidence, confront adverse evidence, and present argument to support its position. *Jakel v. Northern Colorado Paper, Inc.*, W.C. No. 4-524-991 (October 6, 2003).[1] The party seeking a penalty must plead the appropriate statutory section or rule justifying the penalty claim. *Carson v. Academy School District 20*, W.C. No. 4-439-660 (April 28, 2003). A penalty claim may be dismissed if it does not state the grounds for the alleged penalty with sufficient specificity. *E.g.*, *Maragara v. Xerox Business Services*, W.C. No. 4-946-815-02 (January 27, 2015); *Young v. Bobby Brown Bail Bonds*, *Inc.*, W.C. No. 4-632-376 (April 7, 2010); *Marcelli v. Echostar Dish Network*, W.C. No. 4-776-535 (March 2, 2010).

The ALJ concludes Claimant failed to plead his penalty claim with sufficient specificity. The point of the specificity requirement is to ensure the opposing party can readily ascertain *from the initial pleading* the exact factual and legal theory upon which the penalty claim is based. Although Claimant described of the conduct he believes should be penalized, *i.e.*, failing to file a Final Admission of Liability, his application invoked no specific provision of the Act that imposes a penalty, nor referenced any rule or statute requiring Employer to file a FAL. In *Jordan v. Rio Blanco Water Conservancy District*, W.C. No. 4-937-000-01 (June 23, 2015), the Panel held that a party seeking penalties under the general penalty provision must explicitly cite § 8-43-304(1). Noting that the Act contains a variety of penalty sections, the Panel held:

> A statement of the particular penalty remedy sought is a critical element of the grounds for the penalty claim. The direction that the specific grounds for the penalty be identified in the application would include specification of the penalty sought to be applied . . . . The claimant's pleading regarding a penalty claim was deficient to the extent it did not identify § 8-43-304(1) as the statutory penalty section for which she sought a penalty . . . .

Second, Claimant failed to prove Employer violated any rule or statute requiring it to file a FAL at a specified time. WCRP 5-5(E)(1) requires a FAL be filed "within 30 days after the date of mailing or delivery of a determination of impairment by an authorized

[1] These concerns are particularly pertinent in this case, with a *pro se* employer with no legal training who cannot reasonably be expected to fill in the details of a vague penalty claim with its own knowledge of applicable law.

Level II accredited physician . . . .” But WCRP 5-5(A) requires “[w]hen the final admission is predicated upon medical reports, he completed physician’s report of Worker’s Compensation injury form, *a narrative report* and *appropriate worksheets* shall accompany the admission.” (Emphasis added). Although Dr. Bradley completed a WC164 report on June 9, 2017 indicating Claimant had permanent impairment, he did not provide a rating. Instead, he stated the rating report would be forthcoming within two weeks. Claimant presented no persuasive evidence to show Dr. Bradley ever completed the report, whether such a report was ever sent to Employer, and if so, when it was sent. Even assuming Employer received the WC164 form, it could not file a FAL until it received the narrative report and appropriate worksheets. Moreover, under WCRP 5-5(E)(1)(b), Employer can request a DIME within 30 days after the impairment report is sent to it, in which case no FAL is required. Thus, Claimant failed to prove the predicate facts necessary to trigger any duty on Employer’s part to file a FAL, and therefore, did not prove a basis to impose penalties under the general penalty provision.

E. Increased compensation for failure to insure

The statue in effect at the time of Claimant’s injury provides that if the employer had no workers’ compensation insurance at the time of a claimant’s accident, “the amounts of compensation or benefits . . . shall be increased fifty percent.” Section 8-43-408(1) (2015). The fifty percent penalty for failure to insure only applies to indemnity benefits; it does not apply to medical benefits. *Industrial Commission v. Hammond*, 77 Colo. 414, 236 P. 1006 (1925); *Jacobson v. Doan*, 319 P.2d 975 (Colo. 1957); *Wolford v. Support, Inc*., W.C. No. 4-155-231 (February 13, 1998). Claimant suffered no compensable wage loss and did not establish entitlement to any indemnity benefits. Thus, the fifty percent increase under § 8-43-408(1) based on Employer’s lack of insurance coverage is inapplicable.

ORDER

It is therefore ordered that:

1. Claimant’s right shoulder injury on April 29, 2016 is compensable.

2. Claimant’s average weekly wage is $216.

3. Claimant’s request for penalties pursuant to § 8-43-203(2)(a) is denied and dismissed.

4. Claimant’s request for penalties for failure to file a Final Admission of Liability is denied and dismissed.

5. Claimant’s request for increased compensation based on Employer’s failure to insure is denied and dismissed.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove his worsened psychological condition after he was put at MMI on January 16, 2017 was causally related to his December 10, 2016 industrial accident?

- Did Claimant prove entitlement to TTD benefits commencing March 22, 2017?

- Did Claimant prove entitlement to medical benefits related to psychological treatment beginning March 22, 2017?

STIPULATIONS

1. Claimant's average weekly wage is $500.

2. The risk of an assault was within Claimant's usual work experience as a Detention Officer/Deputy Sheriff.

3. Claimant has not been diagnosed with Post Traumatic Stress Disorder (PTSD).

FINDINGS OF FACT

1. Claimant worked for Employer as a Detention Officer/Deputy Sheriff assigned to the Rio Grande County Jail. He started the job on June 20, 2016. Before that, he had been out of work for approximately two years because of a low back injury suffered in June 2014 while working for a different employer.

2. Patricia Robertson, FNP, has been Claimant's primary care provider since approximately 2007. Nurse Robertson was also Claimant's primary ATP for his 2014 low back injury.

3. Nurse Robertson and Claimant's wife had strongly counseled against taking the job as a Detention Officer because of concerns he could reinjure his back.

4. Claimant was involved in several altercations while working at the jail. Four days after he started the job, he was head-butted in the face by an inmate. He was treated at the Rio Grande Hospital emergency department for minor facial injuries and released. Another incident before Thanksgiving 2016 also resulted in Claimant going to the emergency room. In late November 2016, Claimant was "jumped" by a male inmate. He was taken to the emergency room and diagnosed with a concussion.

5. His current claim arises from a fourth incident, which occurred on December 10, 2016. Claimant and two other deputies were subduing a belligerent female inmate in her cell. During the scuffle, the inmate punched Claimant in the head and face.

6. After the assault, Claimant felt "very dizzy and unbalanced." He was taken to the Rio Grande Hospital emergency department where he complained of severe headache, dizziness, and nausea. Physical examination documented facial abrasions and slight swelling and tenderness of the upper right forehead. The ER physician, Dr. Dana Greene, diagnosed a concussion with loss of consciousness. Dr. Greene excused Claimant from work until December 14, 2016 and advised, "he should have a follow-up appointment with a doctor to clear him for return to full duty."

7. While lying on the gurney in the emergency department, Claimant decided to quit the job at the jail. He realized working as a Detention Officer was "a younger man's game," and the demands of the job required "a much younger man with quicker reflexes." Claimant concluded he was not fit for a job that required frequent physical confrontations with inmates. He thought, "if this woman could take me out, one of the men could — you know, am I going to be able to protect myself in any situation?" As "the newbie" at the jail, Claimant knew he was at risk for other injuries if he stayed there and decided it was not worth the risk. Claimant went to work the next day and resigned his position.

8. Ms. Bressman testified Claimant was "very afraid" and "afraid for his life" if he returned to work at the jail. Claimant similarly testified he was "fearful of my life." The ALJ does not find this testimony persuasive to the extent it is intended to imply Claimant's decision to quit was borne out of an intense fear reaction to the December 10, 2016 assault. While it is reasonable to infer Claimant had some level of worry or concern about the prospect of additional injuries, the ALJ credits Dr. Kleinman's opinion the decision to quit was not driven by a fear response from the assault. The decision to resign his position was not related to the work incident; rather, it was related to Claimant's reasoned decision he was not fit for the job.

9. Employer referred Claimant to Dr. Kent Lofley after the accident. Claimant's initial visit with Dr. Lofley was on December 14, 2016. Claimant reported ongoing concussive symptoms and daily headaches. Claimant denied depression, feeling stress, or personality changes. The physical examination was unremarkable. Dr. Lofley diagnosed a concussion and advised Claimant to take Tylenol as needed for his headaches. Dr. Lofley released Claimant back to work with restrictions on lifting and standing and walking.

10. Claimant returned to Dr. Lofley on December 30, 2016 and reported the headaches had resolved. Claimant told Dr. Lofley he quit his job after the altercation because he did not want to "put himself in harm's way." He reported sleep disturbance but denied depression or feeling stressed. Dr. Lofley prescribed hydroxyzine for sleep and lifted Claimant's work restrictions.

11. At his January 16, 2017 appointment, Claimant admitted to Dr. Lofley he had insomnia and fatigue before the work accident. He was having no further symptoms related to the concussion, so Dr. Lofley put Claimant at MMI and released him from care.

12. Claimant has a lengthy history of depression pre-dating the December 2016 accident. He was the victim of physical, emotional, and sexual abuse as a child, and struggled with suicidal ideation "since he was a teenager." He "worked with a counselor in the 1990's until that counselor was arrested and never went back to due feeling insecure about counseling due to the nature of his last counselor being arrested." There is also an indication in the record he was on antidepressants in 2001.

13. In December 2014, Nurse Robertson started treating Claimant for depression. She diagnosed situational depression that she attributed to ongoing chronic back pain from the June 2014 injury. She started him on sertraline (Zoloft) 100mg daily, and subsequently increased the dose to 150mg. On February 23, 2015, she noted he was still having depression and mood swings. The 150mg dose of sertraline made the depression worse, so Nurse Robertson switched him to Lexapro.

14. On March 25, 2015, Claimant reported minimal improvement in his depression and was still having "dramatic" mood swings weekly where "[he] goes from fine one minute and the next crying like a baby."

15. In June 2015, Nurse Robertson discontinued the Lexapro because Claimant felt it was "not working" and "depression is getting worse." Claimant reported depression, irritability, and crying spells, and often without provocation. She put Claimant back on sertraline.

16. Claimant tried to wean off sertraline on October 1, 2015. His back pain was 1-2/10, and with his pain under control, he wanted to come off the medication.

17. Nurse Robertson's October 29, 2015 report indicates the attempt at weaning failed, and Claimant's mood became significantly worse after the first week at a slightly lower dose. On January 4, 2016, Nurse Robertson stated she expected Claimant would need to remain on sertraline "long term."

18. Claimant discussed the detention officer job with Nurse Robertson on November 30, 2015. She strongly discouraged Claimant from taking the job because of his back injury and history.

19. On February 8, 2016, Claimant reported his depression was worse because his workers' compensation claim had not settled. He was irritable and crying easily despite being "on max dose" of sertraline.

20. Nurse Robertson's July 11, 2016 report indicates Claimant had again tried to wean from his antidepressant and sleep medication. His depression and insomnia got worse, so he resumed his normal dose.

21. Claimant returned to Nurse Robertson on October 12, 2016. His depression was "much improved," and he was enjoying his job at the jail. Claimant was once again trying to wean off the sertraline and had reduced his dose to 100mg per day. He was not sleeping well despite Lunesta.

22. Claimant's prescription records show he never stopped sertraline and stayed at the same dose for several months. He was still taking sertraline at the time of his December 2016 work accident.

23. After he quit his job in December 2016, Claimant did not even consider returning to work until well after the New Year. Ms. Bressman testified, "it was right before Christmas, and everybody knows that the end of the year is just crazy. Really, nobody's even thinking about hiring anyone." In January 2017, Ms. Bressman broached the subject of getting another job, but Claimant said "he needed a little bit more time because he was uncomfortable about leaving the house."

24. Claimant's mental status decompensated severely in late January or early February 2017. He became more and more isolated and unwilling to go out in public. He started living in an unheated pop-up camper parked outside his home.

25. On March 22, 2017, Claimant returned to Nurse Robertson in severe distress. He said, "his life is falling apart. His wife wants to leave him and states 'he's crazy.'" He had no motivation and "still isn't sleeping." His back had started hurting again. Nurse Robertson noted he had resigned his job at the jail because "he felt it wasn't worth jeopardizing his life." Claimant felt he had "lost himself" and wanted to see a counselor. Nurse Robertson increased the Sertraline to 200mg, although she was "not sure this will help." Nurse Robertson made an urgent referral to a therapist. She opined, "I am concerned we are dealing with PTSD. I also think not having a job is wearing on his self-esteem."

26. Increasing the sertraline was not helpful, and Claimant's mental condition continued to deteriorate. He started using marijuana heavily. He became increasingly depressed, paranoid, suicidal, homicidal, and delusional. Claimant took at least two long "camping" trips to the mountains and tried to commit suicide. The family's financial situation got more and more desperate, compounding his psychological problems. At some point in early 2018, his mental state stabilized somewhat and Claimant and his son planned to homestead. This was to include growing and selling marijuana-related products. Ms. Bressman's family (the owners of the property) refused to allow Claimant to grow marijuana on the property, so the family moved to the Arkansas Valley hoping to find land. Claimant's attempts to find employment or income continued to fail.

27. Claimant reached a breaking point in September 2018 when he became abruptly enraged, psychotic, and homicidal about arrangements to sell his camper. On September 17, 2018, he was taken by police to the HRRMC emergency department put on an M-1 hold. He was admitted to the Highlands Behavioral Health Inpatient Psychiatric Unit the next day. He reported auditory hallucinations "all the time," including "arguments in his head" for "years." Other symptoms included depression, suicidal thoughts,

increasing anger, inability to sleep, delusions, paranoia, and homicidal ideation. He reported a history of physical and sexual abuse by his father, which he did not want to discuss. He was prescribed antipsychotics (Zyprexa, Risperdal), a mood stabilizer (Depakote), anti-anxiety medication (Lorazepam), and an antidepressant (Effexor).

28. Claimant was released from the psychiatric hospital on October 1, 2018, but returned on October 4 because of increasing depression, suicidal ideation, anxiety, and irritability. His medications were adjusted, including changing the antipsychotic from Zyprexa to Haldol. He was released on October 12, 2018 and started outpatient treatment. At some point, another antipsychotic medication, Invega, was added to his regimen.

29. Claimant saw Dr. Robert Kleinman for a psychiatric IME on March 19, 2019 at Respondents' request. Claimant displayed significant cognitive impairment and psychomotor retardation, which was probably related to medication but could reflect a lack of effort. His mental status examination score raised was consistent with dementia, which Dr. Kleinman opined was not supported by Claimant's injury or the medical records. When asked why he quit his job at the jail, Claimant replied, "That's a young man's game." Claimant initially indicated he had no mental health issues before the 2016 work injury, but conceded the history when confronted with the medical records. Based on his presentation and inconsistencies in the record, Dr. Kleinman deemed Claimant an unreliable historian. Dr. Kleinman noted Claimant was treated for depression and insomnia before and at the time of the 2016 accident. Despite treatment, he continued to suffer from depression, mood swings, and chronic insomnia. Dr. Kleinman noted,

> Therapy and treatment with a psychiatrist were warranted prior to the injury of 12/10/16. Long-term use of mood stabilizing medications was warranted, as well. If he had seen a psychiatrist for medication management, it is likely that he would have been more effectively treated with mood stabilizing medicines.

30. Dr. Kleinman saw no indication Claimant suffers from PTSD. He thought Claimant's heavy marijuana use contributed to his declining mental state. Dr. Kleinman stated, "with the increased use of cannabis, unstable and improperly treated mood disorder, on top of the stress of marital separation and homelessness, [Claimant] had a psychotic episode."He opined the December 2016 did not cause, aggravate, or exacerbate his pre-existing condition, and his worsened mental reflected "the natural course of an inadequately and inappropriately treated mood disorder."

31. Dr. Kleinman diagnosed bipolar affective disorder, recurrent severe major depression with psychotic features, and cannabis use disorder. Dr. Kleinmant's rationale for diagnosing bipolar disorder was,

> [Claimant] reported that prior to the injury he had mood instability with periods of agitation and irritability followed by depression, with periods of euthymia. He had periods of decreased sleep and increased energy lasting a few days. In the past, he was diagnosed with major depression, though

> with this new information in addition to the recent psychotic episode, it appears that he had a bipolar affective disorder.

32. Dr. Kleinman noted, "[Claimant's] depression and mood instability waxed and waned. At times antidepressants were beneficial, and at other times they made him worse. Efforts to taper off were met with decompensation." He opined, "[Claimant] required treatment for his mental health disorder prior to and regardless of the occupational injury. He does not require any psychiatric treatment relative to the 12/2016 incident." Dr. Kleinman concluded,

> [Claimant's] mental illnesses lifelong and biological. It was inadequately treated until the hospitalization of 2018. Now that he is on proper medications, his mood is stable, but flat with significant side effects. He requires frequent appointments with a psychiatrist for medication management to find a balance between risk and benefit. This treatment, and any accompanying individual and marital treatment, is unrelated to the occupational injury and outside the scope of workers' compensation.

33. Dr. Kleinman testified at hearing, and provided opinions consistent with those expressed in his IME report.

34. Claimant underwent an IME with Dr. Stephen Moe at his counsel's request on April 3, 2019. Claimant displayed a generally flat affect with minimal psychomotor activity. He reported paranoia and some visual hallucinations but did not exhibit signs of psychosis during the interview. Dr. Moe considered Claimant a reliable historian, noting he "provided a coherent narrative of important events in chronological order that, with the help of some cuing that I provided using information contained in his records, was very useful in understanding the course of his feelings, cognition, and behaviors over time." Claimant reported he enjoyed working at the jail and thought it was "fun." He told Dr. Moe he quit the job after the December 2016 assault because,

> [W]hile lying on the gurney in the emergency department, he decided that he could no longer continue to work at the county jail. As to the basis for that decision, he stated he concluded that working at the jail was a "much younger man's game" given the demands of the job. The claimant had also come to realize that as "the newbie" at the jail, he was singled out for abuse and limit-testing.

35. Ms. Bressman confirmed she had strongly urged Claimant to quit because "to continue to put himself in harm's way would be ridiculous." Dr. Moe explored the possibility Claimant's mental decompensation was caused by the concussion, but noted,

> He opined that the effects of the concussion had an influence on his mental state at the time, although he could not articulate how the effects of a concussion mediated his psychiatric symptoms. (I raised the possibility of becoming demoralized by persistent post-concussive symptoms, and also

the possibility that the effect of the concussion on his brain simply caused him to feel depressed, but he did not have an opinion on the matter.)

36. Dr. Moe ultimately concluded Claimant's severe decompensation in early 2017 was a proximate result of the December 2016 accident. He explained his rationale as,

> [Claimant's] injury of 12/10/16 abruptly changed his fortunes for the worse. In suffering a concussion, which followed a previous head-butt injury involving his nose, he reasonably concluded that he would continue to be at risk working at the jail, a conclusion reinforced by his wife. In short, he was rendered too fearful to return to that line of work. [This outcome resulted, regardless of whether the claimant's fear of reinjury is captured by the diagnosis of PTSD (a possibility raised by Patricia Robertson), an Adjustment Disorder, or no psychiatric diagnosis at all.]
>
> In my opinion, the fear about the risk of reinjury was not itself the cause of the enduring psychiatric symptoms that followed. Instead, anxiety related to no longer feeling safe working as a Deputy Sheriff functioned as the spark that ignited a process that generated a sustained negative emotional state. . . . [T]hat process involved the nexus of unemployment and depressive symptoms, each of which was reinforcing of the other. In being rendered unemployed by fear generated by the assault, [Claimant] began to experience the negative effects of a loss of self-esteem, and absence of a sense of purpose, and the loss of a source of gratifying activity, leading to a recurrence of depressive symptoms as first documented by Ms. Robertson. In turn, the return of his depressive disorder effects caused [Claimant] to withdraw from family and others, retreat to an isolated existence of the mountains, and to give up on looking for work.
>
> Accordingly, it is my opinion that the workplace assault was the proximate cause of [Claimant's] mood symptoms and related behaviors (including his suicide attempts) during the first half of 2017, which I would account for with the diagnosis of Major Depressive Disorder, recurrent.
>
> [Claimant's] medical records and the information that he and his wife provided to me depict a stabilization, and even some improvement, in his depressive disorder by the first part of 2018. . . . [H]owever, a series of decisions that grew out of the plan to create a homestead caused the claimant's mental state to slide rapidly downward, culminating in another recurrence of his Major Depressive Disorder, which in late 2018 was accompanied by psychotic symptoms.
>
> Whereas the aggregation of negative outcomes from the various choices that [Claimant] made with his family were the acute drivers of his depressive symptoms in 2018, the impetus for all that followed was the decision to create a homestead. And in my opinion that decision was the product of

desperation created by the claimant's inability to find work in the wake of the loss of his job at the Rio Grande County Jail. As such, his work injury figures into the severe depressive disorder for which [Claimant] obtained a great deal of psychiatric treatment in 2018.

37. Dr. Kleinman's opinions regarding the cause of Claimant's psychiatric decompensation beginning in early 2017 are credible and more persuasive than the contrary opinions offered by Dr. Moe and Nurse Robertson.

38. Claimant failed to prove his worsened psychiatric condition starting in January or February 2017 was causally related to the December 2016 occupational injury.

CONCLUSIONS OF LAW

As a threshold matter, the ALJ concludes the special rules in § 8-41-301(2) regarding mental impairment claims do not apply to this claim because Claimant suffered a concomitant physical injury. The term "physical injury" contemplates an independently disabling injury to the claimant's person, not merely a coincidental and nondisabling insult to the body. *Goudett v. Stationers Distributing Company*, W.C. No. 4-135-027 (April 5, 1993). Claimant suffered a concussion from the December 10, 2016 assault, and was taken off work for three days. Thereafter, Dr. Lofley assigned work restrictions for two weeks. These facts establish a "physical injury" within the meaning of § 8-41-301(2). Accordingly, Claimant's entitlement to the TTD and medical benefits commencing March 22, 2017 is governed by a standard causation analysis.

To obtain disability or medical benefits, a claimant must prove a work-related accident "proximately caused" the condition for which he seeks benefits. Section 8-41-301(1)(c). A claimant must establish a "causal nexus" between the industrial injury and the disability. *Singleton v. Kenya Corp*., 961 P.2d 571 (Colo. App. 1998). The injury need not be the sole cause of a disability, but must be a "significant" factor in that there is a "direct causal relationship" between the injury and the disability or need for treatment. *See Subsequent Injury Fund v. Industrial Claim Appeals Office*, 131 P.3d 1224 (Colo. App. 2006) (defining proximate cause in the context of a death case); *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001) (defining proximate cause in the context of permanent total disability); *Siefried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986) (industrial injury must be "significant causative factor" of permanent total disability); *Krendel v. Hulcher Services*, W.C. No. 4-744-188-03 (November 4, 2014). Where the claimant has from a pre-existing condition, the claimant can still recover benefits if the industrial injury aggravates, accelerates, or combines with the pre-existing condition to cause disability or the need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

As found, Claimant failed to prove his psychological decompensation in approximately late January or February 2017 was proximately caused by his December 10, 2016 industrial accident. The post-injury treatment records show no immediate psychological sequela directly caused or aggravated by the work accident. Claimant suffered from depression since at least mid-2014. He also has a history of childhood

abuse and struggled with suicidal ideation “since he was a teenager.” Claimant was actively treating for major depressive disorder and taking high doses of sertraline a few months before the accident. He had tried to wean unsuccessfully from the medication multiple times, most recently in October 2016 (two months before the accident). As Dr. Kleinman explained, sertraline was ineffective at different doses, suggesting problems beyond mere depression, such as an undiagnosed bipolar disorder. Claimant subsequently spiraled into extreme depression and psychosis, and it required Depakote and antipsychotic medications to stabilize his mental state in late 2018. This indicates a genetically based mental health condition as opposed to situational depression or an adjustment disorder. The ALJ credits Dr. Kleinman’s opinion that Claimant’s worsened mental state starting in approximately February 2017 reflected the natural progression of his inadequately treated pre-existing condition, and was not a proximate consequence of the work accident. Dr. Moe does not ascribe the decompensation directly to the accident, such as the effects of a head injury or PTSD. Rather, he opined anxiety about further injury sparked a “reinforcing” cycle of unemployment and worsening depression. Dr. Moe’s theory of proximate cause is unpersuasive. Claimant’s decision to quit was not prompted by any injury-related psychological condition, but was a rational decision based on the realization the job was not appropriate job for him, and that staying there could expose him to other injuries. After quitting, Claimant chose not to look for work for reasons having nothing to do with any lingering effects of the accident. To the extent losing his job triggered or exacerbated Claimant’s downward spiral, it was not causally related to the work injury. Furthermore, the ALJ agrees with Dr. Kleinman that Claimant’s mood disorder would probably have relapsed regardless of the work accident.

While there is no doubt Claimant was severely disabled and required mental health treatment commencing in March 2017, his disability and need for treatment were not proximately caused by the December 10, 2016 accident.

ORDER

It is therefore ordered that:

1. Claimant’s request for TTD benefits commencing March 22, 2017 is denied and dismissed.

2. Claimant’s request for medical treatment for his psychological condition beginning March 22, 2017 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 20, 2019

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-085-791-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 12, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 9/12/19, Courtroom 1, beginning at 1:30 PM, and ending at 5:00 PM). The official Serbo-Croatian/English Interpreter was Jovo Popara.

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. The ALJ sustained Respondents' objection to Claimant's Exhibit 8 and it was rejected. Respondents' Exhibits A through O were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. It was filed, electronically, on September 17, 2019.. On September 19, 2019, Respondents filed objections. After a consideration of the proposed decision and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern: (1) whether the Claimant has sustained functional impairment beyond the arm so as to justify conversion of the admitted 15% right upper extremity (RUE) scheduled impairment to a 9% whole person impairment? and, (2 whether the Claimant is permanently and totally disabled.

The Claimant bears the burden of proof, by a preponderance of the evidence, on both issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. Prior to August 13, 2018, the Claimant had no ongoing symptoms or functional limitations in her right shoulder (RUE).

2. The Claimant arrived in the United States approximately 20 years ago, coming from Serbia. She is 61 years old, having a date of birth of June 12, 1958. The Claimant has limited English language skills.

3. The Claimant obtained a high school degree in Serbia and since arrival in the United States approximately 20 years ago has performed two jobs, that of a trimmer (of clothing) and that of a housekeeper.

4. On August 13, 2018, the Claimant sustained an admitted compensable injury to her right shoulder and low back in her employment as a cleaner when she was taking garbage outside to place it in the dumpster. While placing the garbage into the dumpster, the Claimant fell and had immediate pain in her right shoulder and low back.

5. The Claimant commenced medical care through the Respondents' designated medical providers at Concentra and was eventually released at maximum medical improvement (MMI) on February 12, 2019, assigned an impairment rating and permanent work restrictions of "may lift up to 10 pounds frequently, may lift up to 25 pounds occasionally, no repetitive overhead lifting with right arm."

6. On March 11, 2019, the Respondents filed a Final Admission of Liability (FAL) adopting the 15% RUE impairment rating assigned by authorized treating physician (ATP) Lynne Yancey, M.D., and leaving the claim open for maintenance medical care [Claimant's Exhibit 3, Bate Stamp (BS) 6-19].

7. On March 20, 2019, the Claimant accepted the FAL but maintained that she was permanently and totally disabled (Claimant's Exhibit 4, BS 20).

8. On March 22, 2019, the Claimant filed an Application for Hearing alleging that her permanent partial disability (PPD) award should be treated as a whole person impairment based on the situs of functional impairment and alleging that she was permanently and totally disabled due to the fact that at "age 60 with a high school education from Serbia and permanent work restrictions," she was unemployable (Claimant's Exhibit 2, BS 1-2).

9. On April 19, 2019, the Respondents filed a Response to Application for Hearing asserting that the Claimant was not permanently and totally disabled and challenging the Claimant's request to convert her extremity impairment rating into a whole person impairment rating.

Medical Treatment Prior to MMI

10. On August 13, 2018, immediately following the Claimant's admitted industrial injury, she was evaluated at the Employer's designated medical provider Concentra by physician's assistant (PA) Ashley A. Gonzalez and provided a working diagnosis of right shoulder strain and strain of the lumbar region (Respondents' Exhibit E, BS 43).

11. On October 12, 2018, the Claimant underwent an MRI (magnetic resonance imaging) of the right shoulder without contrast which reflected a "partial-thickness intrasubstance tear of the supraspinatus tendon at the distal insertion without retraction" and a subacromial-subdeltoid bursitis (Respondents' Exhibit C, BS 22-23).

12. On October 16, 2019, following the Claimant's MRI, her diagnosis from ATP Lynne Yancey, M.D., at Concentra was that of rotator cuff injury, strain of the lumbar region, and pain aggravated by anxiety (Respondents Exhibit E, BS 118).

13. On October 18, 2018, the Claimant was evaluated by Mark Failinger, M.D., at the request of ATP Dr. Yancey, and Dr. Failinger noted:

> Thank you for allowing me to see [Claimant] for consultation for right shoulder. As you know, she is a 60-year-old right-hand dominant. She is from Bosnia, so interpreter is here today. She states she injured her right shoulder back on 08/13/2018 in a job as a housekeeper. She was taking a very heavy trash bin out to a dumpster, and it was very heavy, she states maybe 50-60 pounds and she rolled it up and tried to take some of the trash out to lighten the load, and when she lifted this up, she thinks it weighed 50-60 pounds. She felt some neck and shoulder pain as she did that. The can did slip. She fell onto the can onto her right side. She states she had pain in the right lower hand and right shoulder. She went to Concentra and she was taken

off work. She had physical therapy, but that was canceled. She had an MRI of the right shoulder. She does have somebody looking at her back, it is Dr. Allison Fall, but she had a falling out and apparently no treatment was rendered, she states. She states she has pain in neck and she has pain in the shoulder. She has pain while sitting here it is 8/10 on a 0-10 scale, with 0 being no pain and 10 being the most severe pain you can imagine. There is worse pain with reaching. This is night pain. There are areas of neck pain. There is decreased range of motion and strength.

* * *

IMAGING: MRI of the right shoulder shows some rotator cuff tendinosis and subacromial bursitis.

IMPRESSION:

1. Cervical pain with periscapular pain and pericervical pain.
2. Right shoulder rotator cuff tendinosis.
3. Right shoulder AC joint strain.

RECOMMENDATIONS: With such a diffuse pattern of pain, I would recommended an evaluation by a physiatrist to look at the neck and see if there are things that have to be worked up there.

(Respondents' Exhibit E, BS 124 and 126).

14. On November 13, 2018, as recommended by ATP Dr. Failinger, the Claimant was evaluated by Scott Primack, D.O., a physiatrist who gave a diagnosis of:

DIAGNOSIS:

1. Cervical spine.
   A. At best, there has been a sprain/strain.
   B. MRI essentially unremarkable.
   C. Subjective symptoms as described.
2. Lumbar spine.

A. MRI essentially unremarkable.

B. The patient clearly has nonphysiologic findings.

C. Subjective symptoms as described.

3. Right shoulder.

A. It is apparent that the patient does not have a surgical shoulder.

B. The patient does have a partial thickness rotator cuff tear.

C. Subjective symptoms as described.

DISCUSSION: I had a long conservation through the interpreter with [Claimant and her husband]. I would not provide any type of injection therapy at the level of the shoulder. However, it would allow the patient to have some form of electrical therapy for pain control. This is issue of pain control, however, she will not get better with physical therapy, occupational therapy or any type of surgical intervention.

(Respondents' Exhibit E. BS 131).

15. According to the Claimant, after discussions with her physicians, she chose not to have the injection into her right shoulder.

16. On November 21, 2018, ATP Dr. Yancey kept the Claimant's assessment at that of rotator cuff injury, strain of lumbar region and pain aggravated by anxiety (Respondents' Exhibit E, BS 135).

17. ATP Dr. Yancey also referred the Claimant to Joel Cohen, Ph.D., a clinical psychologist, who on November 27, 2018 noted:

Today through my office at Concentra Advanced Specialists, I had occasion to see [Claimant] for a 45-minute injury-related psychotherapy session. She is accompanied to the office by a professional interpreter. Overall from a behavioral perspective, the client's presentation is essentially unchanged. She continues to walk with a very guarded gate pattern. I did, by the way, see her today with the interpreter, but without her husband. Prior to the visit, I reviewed most recent notes from Dr. Burris and Dr. Failinger. She also saw Dr. Scott Primack, but I could not apparently secure copy of that report, although I have requested one.

> Relative to Dr. Failinger's report by the way, he examined I believe the right shoulder, did not feel as though surgery was warranted, but did offer the option of a steroid injection, although the client chose instead to opt for the use of what she called in Dr. Failinger's presence an electrical stimulator as proposed by Dr. Primack. This was in fact a TENS unit and she brings it with her today. Hence at that point, relative again referring back to Dr. Failinger, she did not want to try the injection. For the record by the way, I defer obviously to Dr. Failinger in relationship to the direction of her medical care and psychologically at least pleased that she is not considered a surgical candidate because her psychological presentation would suggest that there would be major behavioral impediments to surgical response.
>
> * * *
>
> I have to wonder whether or not some of this has to do with behavioral response to pain, over-focus on the pain, anxiety around the situation she finds herself in, coupled with alteration in movement patters, which unfortunately likely as not the muscles tight and potentially painful. Otherwise, I would like to see the client back if only to assist her where possible in terms of accommodating to what the likely outcome of this whole process may be; and if in fact that is the case, then I also may want to involve her husband because acceptance for both may well be a relevant issue.

(Respondents Exhibit E, BS 143-144).

18. On January 24, 2019, the Claimant underwent a Functional Capacity Evaluation (FCE) requested by ATP Dr. Primack which found that the Claimant demonstrated the ability to occasionally lift 2 pounds from waist to shoulder, carry up to 2 pounds, push 6.7 pounds of force and pull 12.5 of force. The Claimant was unable to lift from floor levels due to increased pain levels reflection. Of note, the functional capacity evaluator noted: "[d]uring unaware observation, she did not demonstrate the ability to perform any tasks that she reported unable to perform. Functional movements such as sit to stand transfers, gait mechanics, forward bending, stair climbing etc. were all consistent throughout the testing" (Claimant's Exhibit 6, BS 29)

19. On January 29, 2019, the Claimant was evaluated and released from care by ATP Dr. Primack, who rendered the opinion that the Claimant had a partial rotator cuff tear and, therefore, was entitled to 15% RUE impairment rating, which would

convert to a 9% whole person impairment rating. ATP Dr. Primack stated the opinion, however, that "one could not place any type if impairment to the neck or back given the plethora of inconsistent/non-physiological findings." ATP Dr. Primack assigned work restrictions of safely lifting up to 25 pounds occasionally, 10 pounds frequently and no repetitive lifting with her right arm overhead (Claimant's Exhibit 3, BS 15-16).

20. Following completion of medical care with ATP Psychologist Cohen, ATP Dr. Primack, and ATP Dr. Failinger, ATP Dr. Yancey released the Claimant on February 12, 2019 at MMI with an assessment of "rotator cuff injury, strain of lumbar region and somatic symptom disorder" and adopted ATP Dr. Primack's work restrictions and impairment rating" (Respondents' Exhibit E, BS 169-175).

Respondents' Independent Medical Evaluation

21. Prior to the hearing, Respondents had the Claimant evaluated by Linda Mitchell, M.D., who testified at the hearing consistently with her report. (Respondents Exhibit A) that in her opinion, Dr. Yancey and Dr. Primack were in error to assign the Claimant permanent work restrictions, were in error to assign the Claimant impairment, but confirmed that the Claimant's working diagnosis was that of a right shoulder strain and somatoform disorder. Dr. Mitchell had no specific expertise in psychiatry or psychology, other than a Level II accredited occupational physician's knowledge. Therefore, the ALJ accords minimal weight to the "somataform disorder" working diagnosis.

22. Dr. Mitchell testified on the definition of somatoform disorder and how it involved an injured individual's response to an injury.

23. The ALJ finds the opinions of Dr. Yancey and Dr. Primack, ATP's, more credible and persuasive than the opinions of Dr. Mitchell.

Respondents' Vocational Evaluation

24. The Respondents retained the services of Katie Montoya, vocational expert. Montoya testified at hearing consistently with her report that there was work available to the Claimant in the commutable job market, in spite of the fact that the Claimant had never driven, does not retain a driver's license and would require some job accommodation due to her language (Claimant's Exhibit 7). The ALJ specifically finds that Montoya did, in fact, consider the human factors attendant to the Claimant's situation, however, the ALJ finds the opinions of Cynthia Bartmann, Claimant's vocational expert, more persuasive.

25. During cross-examination, Montoya agreed that if the Claimant was limited to 2 pounds lifting, there are no jobs available in the commutable market. It was a premise to Montoya's opinion, however, that the restrictions assigned to the

Claimant by ATPs Dr. Yancey and Dr. Primack would permit the Claimant to return to her job as a house cleaner and that work was reasonably available to the Claimant. The ALJ rejects this opinion concerning employability because the Claimant cannot drive to assignments, speaks very limited English, is 61 years old and the ALJ does not find Montoya's consideration of the human factors adequately supported or persuasive.

Claimant's Vocational Evaluations

26. At the request of the Claimant, the Claimant was evaluated by Cynthia Bartmann, CCM, CDS (Claimant's Exhibit 4).

27. Vocational evaluator Bartmann testified consistently with her report that when one considers the human factors including the Claimant's age, limited English and work restrictions from her FCE (Functional Capacities Evaluation) that the Claimant was precluded from competitive work in the competitive labor market as a result of her admitted industrial injury.

28. Based on Bartmann's vocational research, personal evaluation of the Claimant and the medical records, she was of the opinion that the Claimant is permanently and totally disabled. In fact, on cross-examination, Bartmann implied that even if the two-pound lifting restriction of the FCE was taken away and the restrictions were only those set forth by ATPs Dr. Primack and Dr. Yancey, the Claimant would still be unemployable at age 61 with her presentation and demeanor in combination with her permanent work restrictions and past work history, inability to drive, and lack of a facility for the English language.

Ultimate Findings

29. Based on the Claimant's un-contradicted testimony, and the opinions of ATPs Dr. Yancey and Dr. Primack, the Claimant has not established that her right shoulder impairment is a whole person impairment. It is implied from ATP Primack's medical record, assigning the impairment, that when he noted that he could not rate the neck or back that he was implying that the 15% extremity impairment rating was appropriate. The ALJ finds the opinions of Dr. Yancey and Dr. Primack vis a vis permanent impairment more credible and persuasive than the opinions of Dr. Mitchell, whose opinions were contrary.

30. Between conflicting vocational opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the ultimate opinion of Cynthia Bartmann, and to reject the ultimate opinion of Katie Montoya.

31. Considering the human factors, which vocational expert Bartmann focused on, in combination with the restrictions from ATPs Dr.Yancey and Dr. Primack, as well as the FCE results (excluding the two-pound lifting restriction), the Claimant has established that she is unemployable in the open, competitive job market on a

reasonably sustainable basis and she is, therefore, permanently and totally disability.

32. Katie Montoya's opinions that there was employment in the commutable labor market, which some employers may modify to accommodate Claimant's limitations, contains too many modifications and does not amount to employment in the open, competitive job market on a reasonably sustainable basis. Therefore, although Montoya considered the human factors in a conclusory fashion, Bartmann's ultimate opinion is more credible than Montoya's ultimate opinion. Thus,

31. The Claimant is 61 years-old, she speaks Serbo-Croatian, she has a high school education from Serbia. She has only worked two jobs since arriving in the United States. In the competitive job market with her current restrictions, and the inability to drive, the ALJ finds that in light of the permanent physical restrictions imposed by Drs. Yancey and Primack, plus the human factors specified herein above, the ALJ determines that the Claimant has proven, by a preponderance of the evidence, that the Claimant is permanently and totally disabled.

32. The Claimant has proven, by a preponderance of the evidence, that she is incapable of earning wages in the open competitive job market in the same, similar, or any employment and she is, therefore, permanently and totally disabled.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or

unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Yancey and Dr. Primack vis a vis permanent medical impairment were more credible and persuasive than the opinions of Dr. Mitchell, whose opinions were contrary. As further found, Katie Montoya's opinions that there was employment in the commutable labor market, which some employers may modify to accommodate Claimant's limitations, contains too many modifications and does not amount to employment in the open, competitive job market on a reasonably sustainable basis. Therefore, although Montoya considered the human factors in a conclusory fashion, Bartmann's ultimate opinion was more credible than Montoya's ultimate opinion.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting vocational opinions, the ALJ made a rational choice, based on substantial evidence, to accept the ultimate opinion of Cynthia Bartmann and to reject the ultimate opinion of Katie Montoya.

Conversion to Whole Person Medical Impairment

c. Where a claimant suffers an injury not enumerated in § 8-42-107 (2),

C.R.S., the claimant is entitled to whole person impairment benefits under § 8-42-107 (8), C.R.S. In the context of § 8-42-107(1), C.R.S., the term "injury" refers to the manifestation in a part or parts of the body which have been functionally impaired or disabled as a result of the industrial accident. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996); *Martinez v. Albertsons*, W.C. No. 4-692-947 [Indus. Claim Appeals Office (ICAO), June 30, 2008]. The determination of the site of functional impairment is distinct from a claimant's medical impairment rating; and, upper extremity impairment ratings contained in the *AMA Guides* may, or may not, be consistent with the scheduled injury ratings contained in § 8-42-107(2), C.R.S. *See Mountain City Meat Co. v. Oqueda*, 919 P.2d 246 (Colo. 1996). Indeed, there is a disconnect between the statutory schedule ("at or below the shoulder') and the *AMA Guides*. For this reason, the ICAO and the Court of Appeals came up with 'the site of functional impairment" test.

d. When an injury results in a permanent medical impairment not set forth on a schedule of disabilities, an employee is entitled to medical impairment benefits paid as a whole person. See § 8-42-107 (8)(c), C.R.S. Section 8-42-107(1)(a), C.R.S., limits medical impairment benefits to those provided in section (2) where a claimant's injury is one enumerated in the schedule. The schedule of injuries includes the loss of the "*arm at the shoulder*". See § 8-42-107(2)(a), C.R.S. The "shoulder," and "above the shoulder" is not listed in the schedule of impairments. *See Martinez v. Albertsons, supra; Maree v. Jefferson County Sheriff's Department*, W.C.No. 4-260-536 (ICAO, August 6, 1998); *Bolin v. Wacholtz*, W.C.N0. 4-240-315 (ICAO, June 11, 1998).

e. Whether a claimant has suffered the loss of an arm at his shoulder within the meaning of § 8-42-107(2)(a), C.R.S., or a whole person medical impaiby the ALJ on a case by case basis. *See DeLaney v. Indus. Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000); *Martinez v. Albertson's, supra*; *Keebler Company v. Indus. Claim Appeals Office*, 02CA1391 (Colo. App. 2003) (NSOP).

g. As implied from ATP Primack's impairment rating where he states that the Claimant's impairment rating is 15% extremity and does not include a neck or shoulder rating, Claimant has not established functional impairment beyond the glenohumeral joint. Therefore, the Claimant has failed to prove, by preponderant evidence that a conversion from 15% RUE to a whole person rating is warranted.

Permanent Total Disability

h. An employee is permanently and totally disabled if she is unable to earn any wages in the same or other employment. § 8-40-201(16.5) (a) C.R.S. The "full responsibility rule," applicable to claims for permanent total disability benefits, provides that the industrial injury need not be the sole cause of a claimant's permanent total disability. Under the rule, when an "employer hires an employee who, by reason of a pre-existing condition or by reason of a prior injury, is to some extent disabled, he takes the man (person) with such handicap," and the employer is liable for a "full award of benefits" if a subsequent industrial injury combines with the pre-existing disability to

produce permanent total disability. See *United Airlines, Inc. v. Indus. Claim Appeals Office,* 993 P.2d 1152, 1154-1155 (Colo. 2000). The only exception to the established rule is where the industrial injury is not a significant causative factor in the claimant's disability. See *Seifried v. Indus. Comm'n,* 736 P.2d 1262 (Colo. App. 1986) [the claimant suffered from several pre-existing ailments, and the treating physician opined that the claimant had reached maximum medical improvement, and concluded that the claimant remained disabled because of non-occupational factors].; *Lindner Chevrolet v. Indus. Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995). *See also Holly Nursing Care Center v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). As found, The Claimant has proven, by a preponderance of the evidence, that she is incapable of earning wages in the open competitive job market in the same, similar, or any employment and she is, therefore, permanently and totally disabled.

i. In determining whether a claimant is permanently and totally disabled, an ALJ may consider the claimant's "human factors," including the claimant's age, work history, general physical condition, education, mental ability, prior training and experience, and the availability of work that the claimant could perform. *Weld County School District RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998*); Joslin's Dry Goods Co. v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Indus. Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). The critical test is whether employment exists that is reasonably available to a claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. This means whether employment is available in the competitive job market, which a claimant can perform on a reasonably sustainable basis. *See Joslins Dry Goods Company v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). As found, the Claimant has proven that he is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to her. Permanent total disability does not necessarily need to be proven by medical evidence. *See Baldwin Construction, Inc. v. Indus. Claim Appeals Office,* 937 P.2d 895 (Colo. App. 1997). *Calvert v. Roadway Express, Inc.,* W.C. No. 4-355-715 [Indus. Claim Appeals Office (ICAO), November 27, 2002]; *In re Claim of Randy Blocker v. Express Personnel,* W.C. No. 4-622-069-04 (ICAO, July 1, 2013). As further found, the human factors as specified hereinabove compel a conclusion that the Claimant is incapable of earning wages in the open, competitive job market on a reasonably sustainable basis. Therefore, she is permanently and totally disabled.

Burden of Proof

j. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits beyond those admitted by the carrier.. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979).

People v. M.A., 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to prove that a conversion from 15% scheduled RUE to a whole person medical impairment is warranted. Nonetheless, Claimant's medical impairment is subsumed under her permanent total disability.

k. The Claimant has proven, by a preponderance of the evidence that she is permanently and totally disabled (PTD), having reached MMI on February 12, 2019.

l. The admitted average weekly wage (AWW) of $432.36 establishes a PTD weekly benefit rate of $288.24.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims for a conversion of 15% scheduled right upper extremity are hereby denied and dismissed.

B. Respondents shall pay the Claimant permanent total disability benefits of $288.24 per week from September 19, 2019 and continuing for the rest of the Claimant's natural life.

C. The payout for the admitted scheduled 15% right upper extremity was at the rate of $310.00 from February 12, 2019 through September 18, 2019. The excess payout, as measured against the permanent total disability benefit rate was $21.26 per week, or $3.04 per day. The period from February 12, 2019 (the beginning of the admitted scheduled payout of $310 per week) through September 18, 2019, a total of 219 days, resulted in an overpayment of scheduled benefits in the aggregate amount of $665.76 for this period of time.

D. Respondents are entitled to a credit of 100% for all scheduled permanent disability benefits paid through September 18, 2019, plus for the excess of $665.76, which may be recovered out of ongoing permanent total disability benefits from September 19, 2019, at the rate of $15.00 per week until satisfied with no interest applicable.

E. Any and all issues not determined herein are reserved for future decision.

DATED this 23rd day of September 2019.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-092-972-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 1, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 8/1/19, Courtroom 1, beginning at 8:30 AM, and ending at 12:00 PM).

The Claimant was present in person and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq. and Gabriel Kalousek, Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 –10 were admitted into evidence at the commencement of the hearing, without objection. Respondents’ Exhibits A-M were admitted into evidence, without objection.

A transcript of the post-hearing evidentiary deposition of Frederick Scherr, M.D., taken on August 22, 2019, was filed in lieu of his live testimony (herein after referred to a “Scherr Depo., followed by a page number).

.

After a consideration of the evidence in record and the facts before the Court, the ALJ hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern: compensability; if this claim is found compensable, whether Claimant has proved that the need for medical treatment was proximately caused by the October 31, 2018 incident; and, whether the Claimant proved that she was discharged for non-medical reasons by her treating physician.

The Claimant bears the burden of proof, by a preponderance of the evidence, on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Finding

1. At the commencement of the hearing, the parties stipulated and the ALJ finds that "[i]f this claim is found to be compensable, the average weekly wage will be $1,098.87" and the ALJ so finds. Also, "the issue of temporary disability benefits was withdrawn as an issue."

The Incident

2. On October 31, 2018, while working at the University of Colorado Health, the Claimant attempted to ride an on-premise elevator that malfunctioned on its way from the first floor to the ninth. On its way up, at floor eight, the elevator retreated back down to answer a call on the second floor instead of delivering the Claimant to the ninth floor.

3. As evidenced by the elevator security camera tape, the Claimant experienced two jolts while riding the elevator. The jolts occur at 0:29 and 0:54 in the 1:45 minute-long security tape video.

4. The Claimant reacted to the first jolt by scanning her employee badge and pressing the elevator's emergency call button. During her time on the elevator, the Claimant stood in the same spot, and never lost her grasp on her cellphone. When the elevator doors eventually opened on the proper floor, the Claimant exited the elevator.

Medical

5. The Claimant immediately reported the injury to her employer and was seen at the University of Colorado Health Emergency Department within a few hours.

The Claimant complained of pain in her neck and back. Claimant reported that these symptoms started immediately following the incident in the elevator.

6. On November 5, 2018, the Employer completed a First Report of Injury, noting the nature of the Claimant's injury, including that the Claimant reported that the elevator dropped 1-3 floors during the incident.

7. On November 7, 2018, the Claimant visited Dr. Henry Roth, M.D., the Employer's designated authorized treating physician. Following this visit, the Claimant emailed the Employer's Worker's Compensation Program Manager requesting a change of physician, which was denied by the Employer.

8. After filing a Worker's Compensation Claim with her Employer and being denied, the Claimant visited her Primary Care Physician, Kaiser, and subsequently underwent physical therapy, massage therapy, utilized a TENS unit, and had injections to alleviate her neck and back pain.

9. Previously, in 2011, Claimant sought treatment through Kaiser for neck and back issues. These issues were reported by Claimant in 2014, 2015, 2016, and 2017. The Claimant did not seek treatment for neck or back issues from June 2017 until October 2018.

Frederick Scherr, M.D,, Respondents' Independent Medical Examiner (IME)

10. Dr. Scherr performed an IME of the Claimant, at Respondents' request, on June 13, 2019.

11. Dr. Scherr listened to the Claimant's version of the incident and noted that the Claimant reported "her low back, especially the left side, was worse [following the incident] but that it was [her] entire low back as well as the neck and the thoracic back as well." Scherr. Depo. 8, 20-22. Dr. Scherr observed moderate pain behaviors during his examination of Claimant. In his examination of the Claimant, he found very minimal objective findings, but did note diffuse tenderness of the trapezia and around L4 on her left side, and limited range of motion with her back.

12. Ultimately, Dr. Scherr is of the opinion that the elevator incident did not cause the problems with the Claimant's back and neck. By necessary implication, his opinion negates work-relatedness. For the reasons articulated throughout these Findings, the ALJ rejects Dr. Scherr's opinions.

Faranghise S. Bahnage, M.D,, Claimant's Primary Care Physician (PCP)

13. On November 1, 2019, the date after her injury, Claimant consulted with her PCP regarding the elevator incident and her resulting injury. Claimant reported neck and back pain and continued to report the presence of such pain on December 10, 2018 and December 20, 2018.

14. On January 7, 2019, Dr. Bahnage noted Claimant's persistent back pain and ordered a lower back MRI and physical therapy. At various appointments in February and April, 2019, the Claimant continued to report symptoms in her neck and back, and a worsening of those symptoms over time. Throughout these visits, the Claimant continuously reported that she experienced these symptoms since the occurrence of the elevator incident.

Compensability

15. The totality of the credible evidence supports the proposition that the Claimant sustained a compensable injury by virtue of the elevator incident on October 31, 2018.

16. Although the Claimant had experienced pre-existing lower back issues, Claimant had not seen a doctor for over a year prior to her work injury. Claimant testified that she had instant pain and that the incident aggravated her lower back issues. The Claimant sought treatment throughout 2018 and 2019 for her neck and back pain, beginning immediately after the incident.

17. The ALJ finds Claimant's before and after condition is credible and convincing. While the elevator incident does appear to be minor, Claimant immediately reported the incident to her doctor on the day of its occurrence. Claimant testified credibly that she was in shock after the incident and tried to exit the elevator as soon as possible. Claimant testified that the unexpected jolts caused her immediate symptoms, for which she has continuously sought treatment for approximately ten months since the incident.

18. The ALJ find that although there are contrary opinions regarding whether this elevator incident caused Claimant's injury, the ALJ finds Claimant's testimony credible and persuasive. The ALJ finds that Claimant has proven by a preponderance of the evidence that on October 31, 2018, she sustained a compensable injury.

19. the ALJ finds that Claimant has proven by a preponderance of the evidence that the medical treatment she has received through Kaiser is reasonable, necessary, and related to her compensable injury. The ALJ finds that Claimant has proven by a preponderance of the evidence that Respondents, through Dr. Roth, refused to treat her for nonmedical reasons The ALJ finds that Claimant has proven by a preponderance of the evidence that Kaiser is an authorized treating physician.

20. The medical treatment the Claimant has received through Kaiser and Dr. Bahnage is reasonably necessary, and causally related to her compensable injury. The ALJ finds that Claimant has proven by a preponderance of the evidence that Dr. Roth refused to treat the Claimant for non-medical reasons, specifically, because the insurance carrier was denying the claim.

Ultimate Findings

21. The Claimant's testimony was persuasive, credible and supported by the medical records of Kaiser. The opinions of Dr. Roth and Dr. Scherr lacked credibility because of their erroneous assumptions that they could observe no jolt in the elevator nor outward signs of pain manifested by the Claimant. Respondents would have us believe that there is an unknown cause of the Claimant's present condition and that Claimant is disingenuously manufacturing the elevator incident to address her pre-existing condition. A before-and-after evaluation of the Claimant's condition renders this theory implausible.

22. Between conflicting testimony and opinions, based on substantial evidence, the ALJ makes a rational choice to accept the Claimant's testimony as supported by the Kaiser records and Dr. Bahnage of Kaiser, and to reject the opinions of Dr. Roth and Dr. Scherr.

23. The Claimant has proven, by preponderant evidence that she sustained a compensable aggravation and acceleration of her underlying back and neck condition to the point that Claimant required medical treatment resulting from the October 31, 2018 elevator incident.

24. The Claimant's original ATP, Dr. Roth, refused to further treat the Claimant for non-medical reasons, specifically, because the insurance carrier denied the Claimant's claim. Thereafter, Respondents failed to offer the Claimant subsequent medical care and treatment. Thus, the Claimant selected Kaiser for the treatment of her work-related back and neck aggravation and she came under the care of Dr. Bahnage. Consequently, Kaiser became an authorized treater and Dr. Bahnage became the ATP.

25. The Claimant's AWW is $1,098.87.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558

(Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Claimant and Dr. Bahnage were more credible and persuasive than the opinions of Dr. Roth and Dr. Scherr. As further found, the Claimant's testimony was persuasive, credible and supported by the medical records of Kaiser. The opinions of Dr. Roth and Dr. Scherr lacked credibility because of their erroneous assumptions that they could observe no jolt in the elevator nor outward signs of pain manifested by the Claimant. As found, Respondents would have us believe that there is an unknown cause of the Claimant's present condition and that Claimant is disingenuously manufacturing the elevator incident to address her pre-existing condition. A before-and-after evaluation of the Claimant's condition renders this theory implausible.

b. In *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), the Court of Appeals dealt with a situation wherein the injured worker could proceed no further with medical treatment and evaluations because the employer and the treating physician took the position that because the claimant had resigned employment, she was **not** entitled to further evaluations. Ultimately, the Court of Appeals concluded that a medical opinion was not necessary to prove causation because imposing such a requirement would be reading something into the statute that was not there. *See Jacoby v. Metro Taxi, Inc.,* 851 P.2d 245 (Colo. App. 1993). § 8-41-301, C.R.S., which specifies the conditions necessary for a compensability determination (this would include the compensability of a medical procedure or diagnostic tests) does **not** provide that a medical opinion is necessary to make such a determination. As observed in *Lymburn*, to require a medical opinion to support a causality determination would be to read something into the statute that does not exist. Consequently, *Lymburn* remains good law. As found, the Claimant's lay testimony was persuasive and supported by Kaiser records.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the testimony of the Claimant and the opinions of Dr. Bahnage, and to reject the opinions of Dr. Scherr and Dr. Roth.

Aggravation of Pre-Existing Condition

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the elevator, jolting incident aggravated and accelerated Claimant's underlying back and neck condition, thus, the incident caused a compensable injury.

Compensability

d. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** [presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment]. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant sustained a compensable aggravating injury on October 31, 2018, resulting from the elevator incident and this injury arose out of the course and scope of the Claimant's employment for the Employer herein.

Medical Benefits and Authorized Provider

e. Because this matter is compensable, Respondents are liable for medical treatment that is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(a), C.R.S.; *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997). To be a compensable benefit, medical care and treatment must be causally related to an industrial injury. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant proved by a preponderance of the evidence that the medical treatment she has received through Kaiser and Dr. Bahnage for her lower back and neck conditions is causally related to her October 31, 2018 industrial injury. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, Claimant has sustained her burden and proven that the medical treatment she has received through Kaiser and Dr. Bahnage for her lower back and neck conditions is reasonably necessary to cure and relieve the effects of her October 31, 2018 injuries..

f. Finally, because Respondents, through Dr. Roth, denied Claimant medical treatment and refused Claimant medical treatment for nonmedical reasons, Claimant's treatment through Kaiser is not only reasonable, necessary and related but authorized in light of Respondent's refusal to treat Claimant. Kaiser, Claimant's PCP, is an authorized provider. Dr. Roth is not an authorized treating physician. To be

authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). In other words, the ATP is refusing to treat for non-medical reasons. Thereafter, if the carrier does not offer a subsequent treater as is the case herein, the injured worker may select a new treater as was done here. The Claimant selected Kaiser and Dr. Bahnage.

g. The Claimant's stipulated and found AWW is $1,098.87.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO, March 20, 2002). *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to compensability, that the need for medical treatment was proximately caused by the October 31, 2018 incident, and that she was discharged for non-medical reasons by her treating physician.

ORDER

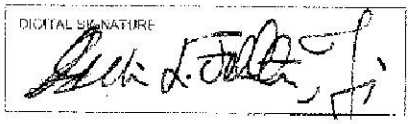
IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all the authorized medical costs of causally related treatment for the neck and back aggravating injuries of October 31, 2018, sustained a consequence of the elevator incident of October 31, 2018, subject to the Division of Workers' Compensation Medical fee Schedule.

B. The Claimant's average weekly wage s $1,098.87.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 23rd day of September 2019.



_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he sustained a traumatic injury to his lower back arising out of and in the course and scope of his employment with respondent on December 16, 2018?

II. If Claimant has shown that he sustained a compensable traumatic lower back injury, has he proven, by a preponderance of the evidence, that the specific medical benefits provided by C.C.O.M. Pueblo for his low back diagnoses are causally related to, and reasonably necessary to treat, his work injury occurring on December 16, 2018?

III. If Claimant has proven a compensable injury, has he proven, by a preponderance of the evidence, that the specific medical benefits provided by Pueblo Community Health Center are authorized?

STIPULATIONS

Assuming the ALJ finds the injuries to be compensable,

I. Claimant's Average Weekly Wage is $590.00.

II. Claimant would be entitled to Temporary Partial Disability ("TPD") benefits from December 18, 2018 to January 18, 2019.

III. Claimant would be entitled to Temporary Total Disability ("TTD") benefits from January 19, 2019, and ongoing to any applicable offsets. The issue of offsets is not before the ALJ at this time.

IV. Respondents reserved the Workers Compensation Fee Schedule for any awarded medical benefits.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked for the Employer as a grocery clerk. This position required a lot of stocking of new products that would arrive at night. Claimant had been working for the Employer for approximately three years prior to December 16, 2018. His date of birth is 3/26/1958. At hearing, Claimant testified that, prior to December 16, 2018, his back never impacted his ability to perform any of his work duties for the Employer.

2. Claimant testified he was on vacation from the Employer for the week before, beginning Sunday, December 9, 2018. Claimant spent most of his time off finishing his Christmas shopping and wrapping presents. He reported no injury to his lower back during this time, nor did he have any pain in his back during his time off.

3. Claimant returned to the Employer's store on Friday, December 14, 2019 to see his upcoming work schedule. This required him to walk up and down a flight of stairs in the store, approximately 15 steps each way. Claimant testified that he had no problems climbing or going down the flight of stairs. He now reports his ability to walk up and down stairs changed dramatically after December 16, 2019.

4. Claimant testified that he began work at approximately 6:00 a.m. on December 16, 2018. On this day, he was instructed by the overnight manager to finish up with the loading by the cooler. Claimant immediately noticed that the cooler was "packed full" due to overstock that was sent to the store. Claimant was also informed that the pallets containing the items had not already been 'broken down', as they typically are when he arrives. This process requires Claimant to use a "U-boat" to put items on so that they can take them to be stocked later. There was little room to maneuver within this space, given how much floor space was occupied by the overstock.

5. Claimant was told to get cartons containing 18 eggs from the cooler into a bunker cooler on the store's sales floor as the bunker cooler was out of cartons containing 18 eggs. Claimant took an empty U-Boat into the cooler to the pallet holding the 18 count egg cartons. There were meat packages on top of the egg cartons. He moved the meat from on top of the eggs onto the U-Boat. Claimant explained he was standing still while grasping the packs of meat in front of him, and then turned to his side to put the packages of meat onto the U-Boat. He moved the U-Boat with meat in it onto the store's floor where another employee took it away. He then unstacked the eggs, two packages at a time. While standing, he 'slid' two packages of eggs at a time down his leg on to the flat top. His turning ability was limited as the eggs were in front of him, and the flat top was at his side. Claimant testified he put eight packages of eggs on to the flat top.

6. Claimant said that he spent approximately 30 to 45 minutes in the cooler performing the activities that he believes caused his injury. He explained that he had to stand, reach in front of him, grab an item, turn, and without moving his feet at all due to the cramped space, then put various items on the U-boat from the pallet. After Claimant had finished loading all his items, he got onto his knees to unload some items where they needed to be. Claimant also spent time on his knees "breaking down" the crates that the eggs came in. When he attempted to stand up, he could not feel his legs, and used his arms to help push himself to a standing position.

7. Claimant recalled the "1:00 o'clock guy" coming in right around this time, thus he believed the incident occurred shortly after 1:00 p.m., because this person would have likely clocked in at 1:00 p.m. Claimant's shift ended at 1:30 p.m. that day. The only symptom Claimant recalled experiencing before walking to the parking lot was the weakness in his legs.

8. Claimant clocked out of work at 1:30pm. He started walking to his car when, suddenly, he felt a ratcheting in his lower back and staggered into a parked car. Claimant said he had sudden, severe pain in his lower back. He did not fall. Claimant did not say he tripped, stumbled, or that anything occurred to cause this pain. It just arose as he was walking normally. He continued to walk, putting his hands on other parked cars for balance, and got to his car. He opened the driver's door, got into the driver's seat, and drove himself home. Claimant's car was parked in the designated area for the employees to park. Claimant did not report an injury at this time. Instead, he went home, knowing he had the next two days off from work. At this time, he hoped he simply strained something in his back which would resolve with rest and home remedies.

9. On cross-examination, Claimant stated he moved less than usual in the cooler to move the meat packages off the egg packages, and to slide the 18 count egg cartons on to the flat top. Claimant affirmed that he felt no lower back pain while working in the cooler, until he was walking in the store's parking lot. When he went to stand up from the well of the bunker cooler after stocking the cartons of 18 eggs in that cooler, he confirmed he eventually able to stand, and he walked away from the bunker cooler without any symptoms at all in his lower back region, legs, or anywhere else. Claimant stated he could have continued to work, but realized he had not taken his second scheduled break. So he chose to stop working, to use his break time. No symptoms caused Claimant to take this scheduled break. Claimant confirmed he worked and walked normally around the store and out into the parking lot, without any symptoms, pain, tightness, or limitations. Claimant described a similar sudden occurrence at home on December 19, 2018, when his legs became weak and gave way, causing him to fall, when he walking down stairs leaving his home. Claimant stated he had experienced pains in this lower back before December 16, 2018, and took ibuprofen or aspirin for those symptoms. Claimant also testified he always wore a lower back belt wrap while working at King Soopers to protect his lower back's muscles.

10. Claimant's symptoms instead worsened, and he sent a text to the grocery manager, "Rowan," informing him that he had injured his back at work and wanted to get in to see a doctor about it. At this time, Rowan simply told Claimant to "Take care of yourself." Claimant testified that Rowan must have informed somebody higher up, as he was subsequently contacted, and was asked to come into work to complete an incident report. Claimant reported to work and met with Steve Barkus, the assistant store manager, to complete the incident report.

11. This incident report, [apparently filled out by Mr. Barkus, but apparently signed by Claimant] stated:

> Bill was in the Dairy cooler, he was working on a split palette and standing in a small area and had to twist his back to move the meat boxes in order to get the eggs he had to stock. He did not feel any pain until he was in the parking lot going to his car after his shift. (Ex. F, p. 74).

Mr. Barkus provided Claimant with a list of medical providers to choose from, and he chose CCOM.

12. Claimant first presented for treatment at CCOM on December 19, 2018. Claimant was examined by Brendon Madrid, NP. (Ex. 5, pp. 55-64). Mr. Madrid documented the following mechanism of injury: "This is a 60-year-old male patient who suffered a low back strain on December 16, 2018. He states on that day he was unloading knee pellets [sic] and eggs in a tight space. He states that after the day Ended [sic] he Clocked [sic] out and when walking to the parking lot to his car he felt a strain in his back. He describes his current symptoms as lower back pain, heart [sic] to stand and walk." *Id.* at 55. Claimant was sitting in a wheelchair in the trauma room awaiting Mr. Madrid. *Id.* at 56.

13. Physical examination revealed tautness to the muscles on each side of his lumbar spine. Claimant was able to bend forward without much difficulty, but standing erect and straight caused moderate discomfort. Claimant was observed to have a slowed gait with mild waddling. He was noted to be using a cane, and was slightly bent forward while walking due to difficulty and discomfort when standing straight up. Claimant was placed on work restrictions and diagnosed with a lumbar strain at this time. Mr. Madrid referred Claimant immediately for physical therapy. *Id.* at 58.

14. Claimant filled out an injury history form upon arrival at CCOM for this first appointment. This form states that he was working, unloading pallets in a cramped area requiring him to turn sideways to perform his job. (Ex. 5, p. 60). Claimant was also provided with a shot of Toradol into his right gluteal muscle. *Id.* at 62.

15. The First Report of Injury states that Claimant believed he was injured due to "twisting when moving product from one location to another." (Ex. 10, p. 119). The additional form completed states that it was not until after Claimant clocked out from his shift, and was walking directly to his car when he had severe pain in his back. On the formal "Employer's First Report of Injury" form completed by Steve Barkus, it states that Claimant was walking to his car and his back went out. It also states, "[Claimant] said he twisted his back while moving boxes that day at work. Strain or injury by lifting." (Ex. H).

16. Claimant was experiencing severe low back pain on December 20, 2018, prompting him to seek treatment from St. Mary Corwin Hospital. (Ex. 4, Ex. D). The reason for the visit was handwritten by Claimant, stating, "Hurt my back at work/King Soopers." *Id.* at 10. The medical report documents:

> 60 y.o. male no significant medical history was working *aching stupors* [sic- let's go with *"at King Soopers"*- the ALJ sure does] on the 16th. Patient was lifting boxes and putting them off to the side in a twisting motion. Patient that this prolonged period of time while at work (sic). Patient states that *after* moving all the boxes he had pain to his lower back with pain shooting down both of his legs. *Patient has no history of back problems.* (Ex. D, p. 56) (emphasis added).

17. Claimant was diagnosed as having acute bilateral low back pain, with bilateral sciatica, along with osteoarthritis of the lumbar spine. *Id.* at 14. A "high sensitivity" neuro exam was performed that revealed 'positive findings of increased pain with bilateral leg abduction.' *Id* at 16. Claimant was advised to continue treating under Workers' Compensation, and to start physical therapy.

18. Claimant returned to CCOM on December 27, 2018, this time using his mother's walker to ambulate. (Ex. 5, p. 66). He was noted to be "a bit more comfortable' than on his initial visit. Claimant's physical examination of his lumbar spine showed moderate to mild discomfort, with no obvious deformities. *Id.* at 67. Approval for physical therapy was still pending at this time.

19. Claimant was first seen by a physician at CCOM, Dr. Daniel Olson, on January 10, 2019. (Ex. 5, pp. 72-77). Dr. Olsen discussed the mechanism of injury for his causation analysis:

> The proposed mechanism was that he was working out [sic] cooler trying to get out some eggs but he had to move several items and he had limited space to maneuver. He therefore had to twist at the wait to maneuver the items. He does not recall any particular spasm, pop, or tweak. He did noticeable [sic] stiffness but he was actually able to continue working. It was only after he was leaving work that he felt a sharp ratcheting type pain in his lower back and since then he's been having a great deal of back pain, difficulty standing and walking. *Id.* at 72.

Dr. Olson recommended physical therapy and noted that it had been three weeks since the original request for therapy, with no approval. *Id.* at 73.

20. In the note from CCOM dated January 10, 2019, Dr. Olson states that it had still been three weeks and therapy had not yet been approved. (Ex. 5, p. 73). Respondents issued a Notice of Contest on January 17, 2019. The Notice stated the claim had been denied due to the injury/illness not being work related. (Ex. 3).

21. After treatment was denied, Claimant sought treatment with his primary care provider – Pueblo Community Health Center ("PCHC"). (Ex. 6). Claimant went to PCHC on January 21, 2019, complaining of ongoing lower back pain. The intake report notes:

> Patient states he had [a] work related injury on 12/16/19. Patient states that he was lifting boxes and putting them to the side in a twisting motion for a prolong [sic] period of time while at work. *Id.* at 78. Claimant reported that he was supposed to undergo physical therapy under his workers' compensation claim, but that was never referred. (Ex. C, p. 36)

The treating provider at PCHC—Paulina Adjei—working under the supervision of Dr. Mark Schwartz, performed a Toradol injection and referred Claimant for his physical therapy. *Id.* at 80.

22. Claimant's physical therapy went through Centura Health's Center for Rehabilitation. (Ex. 7). Claimant's intake notes indicates:

> Bill reports he injured his back while working at King Soopers when he was in the cooler and in a narrow walkway and he lifted from overhead to his right side and left side repetitively, he was unable to turn since the walkway was so narrow. He states when he was leaving work his back gave out on him. His legs also gave out and he fell down to the steps at home on December 19…He has had constant back and leg pain since that time…Pain level ranges from 4-10/10. *Id* at 95.

23. Claimant underwent an Independent Medical Examination ("IME") with Dr. Timothy Hall on February 20, 2019 at the request of his counsel. (Ex. 8). Claimant again denied any history of prior low back problems. Dr. Hall provided a summary of the mechanism of injury on Page 1 of his report. Claimant emphasized to Dr. Hall that "the work he did that day [was] out of the ordinary, not so much with respect to what he was doing, but how much of it and the circumstances/physical environment." *Id.* Claimant did not have pain at the time he was in the cooler, but reported difficulty standing after finishing the activity. Claimant then left work approximately half an hour later, at which time his back gave out as he was approaching his car.

24. Claimant reported to Dr. Hall that he had the next two days off, and felt the pain would go away. When it persisted, he called his supervisor and got in to CCOM for evaluation. Claimant had been treating at CCOM until his claim was denied. *Id.* at 105. Claimant's symptoms at the time of the IME included, but was not limited to, midline

lower back pain radiating laterally down the leg to behind the knee. His right sided leg symptoms were generally worse than the left. *Id.*

25. Dr. Hall's physical examination documented side bending limited by about 50% bilaterally. Claimant was hypertonic throughout his thoracolumbar paraspinal muscles along with tenderness into the gluteals. The psoas was found to be tight and spasming anteriorly. Straight leg testing caused back pain, but no lower extremity symptoms. *Id.* Dr. Hall ultimately diagnosed Claimant with a lumbar strain, pelvic obliquity/postural distortion, degenerative changes in the lumbar area as seen on x-ray, and probable piriformis syndrome. Dr. Hall felt Claimant likely did not have radiculopathy, though it was a possibility based on the information he had at the time. *Id.* Dr. Hall opined that the unusual positioning that Claimant was in and the amount of work that he performed on December 16, 2018 precipitated all of Claimant's symptoms. *Id.* Dr. Hall indicated that Claimant needed an MRI to further define the specifics of his injury. *Id.* at 106.

26. Claimant subsequently underwent an IME with Dr. John Burris, this time at the request of Respondents, on April 2, 2019. (Ex. 9). Dr. Burris took a history that was largely consistent with his prior reported mechanism of injury. Claimant indicated he had difficulty standing up after finishing the activity, but that he was not experiencing lower back pain at the time of the activity. *Id.* at 108. While leaving work, Claimant was walking across the parking lot to his vehicle when he experienced immediate pain across his low back that shot down his legs, ending above the knee. *Id.* Claimant continued to report diffuse pain across his low back with a pins and needles sensation down the sides of his upper legs. *Id.* Dr. Burris reviewed medical records pre-dating the date of injury in this matter. None of the records involved Claimant's lower back. *Id.* at 109-10.

27. Dr. Burris indicated that Claimant's first evaluation on December 19, 2018 was void of any objective findings supporting Claimant's complaints. Dr. Burris ultimately opined that Claimant did not sustain a work-related injury, and that his diagnosis was merely "Nonspecific low back pain." (Ex. 9, p. 114). Dr. Burris felt that Claimant's injury was not work related for a few reasons.

- First, he indicated that there was no "industrial incident" because Claimant was in the parking lot leaving work for the day when Claimant's pain began.
- Dr. Burris also reasoned that because the area Claimant was working in was smaller than usual, he was moving smaller materials than usual, thus requiring less force.
- Dr. Burris also found that Claimant's physical examination was entirely normal. *Id.* at 115.

28. Additionally, Claimant underwent physical therapy, with the last note of record dated March 13, 2019. [20 days before the IME with Dr. Burris]. (Ex. 9, pp. 100-03). Claimant reported being only approximately 60% better at this time. *Id.* at 100. Objectively, it was noted that the left side of Claimant's pelvis was elevated. *Id.* at 101.

29. Dr. Hall testified by telephone at hearing as a Level II accredited expert in the field of physical medicine and rehabilitation. Since authoring his report, Dr. Hall reviewed the IME report of Dr. Burris. He indicated that his opinions remained unchanged, in that Claimant did experience a compensable injury. Dr. Hall felt that Claimant sustained at least a lumbar strain as a direct result of his bending, squatting, lifting, and twisting on December 16, 2018. He explained that there are many ways these activities could cause a lumbar strain:

> Well, there are a couple of different ways. One is simply exceeding the tolerances of local musculature. As muscles fatigue, they become less distensible. They tighten up. And then, if one continues to perform an activity, they simply give out, and then you can have episodes of tearing of …the musculature.
> You can also put pressure loads on areas where the tendons attach to the bones and create microtrauma at these connections of the ligaments and tendons. Those are the two most common sources of this myofascial musculoskeletal pain, which I believe is…part of his problem.
> ….Just excessive loading and weightbearing on the joint space can lead to local inflammation and pain. (Hearing Transcript, pp. 17-18).

Dr. Hall's understanding was that it was not long after Claimant completed his tasks that he walked out towards his car for the day when he felt severe back pain. He opined that the most likely explanation for Claimant's symptoms of pain not striking him until walking through the parking lot was that the inflammatory process in the body was building up to that point.

30. Dr. Hall indicated that inflammation is sometimes slow to build. There is then going to a threshold where the inflammation becomes symptomatic, which in this claim occurred in the parking lot. Dr. Hall summarized that Claimant had no back problems prior, had no difficulty performing the activities of his job prior, and Claimant performed an unusual activity that resulted in back pain. Dr. Hall agreed it is possible that Claimant had "some idiopathic, unrelated, mysterious event" happen in his back, but that it was certainly more likely that his symptoms were caused by the activities in the cooler, as opposed to the spontaneous, idiopathic event in a man with no history of back problems.

31. Dr. Hall testified his exam revealed abnormal posture, loss of lumbar lordosis, limited range of motion, increased muscle tone through the paraspinals, tenderness to palpation in the gluteals, and hypertonicity in the psoas muscles. Specifically, Dr. Hall referenced pelvic obliquity. When certain muscles are strained, muscles in that area respond to that guarding as to unload the injured structure and this

guarding or “postural distortion” creates the perpetual pelvic obliquity problem. Because Claimant’s pelvis is now out of normal alignment, it is creating postural distortion.

32. Dr. Hall acknowledged that he did not ask Claimant what activities he engaged in outside of work, instead focusing on the mechanism of injury. During cross-examination, Dr. Hall testified it is important to know how long after the work activity in the cooler unloading pallets and moving products ended and claimant’s symptoms arose, and what work activities claimant did after his work in the cooler ended. Dr. Hall testified the more time between when the meat and egg package unloading in the cooler finished, and when Claimant was walking to his car in the parking lot, the less likely it is the symptoms of pain in the lower back suddenly appreciated by Claimant in the parking lot are causally related to the work activity of unloading and moving products in the cooler. Additionally, the more work activities Claimant engaged in after unloading the eggs and meat in the store’s cooler and the onset of symptoms in the parking lot, the less likely a causal correlation between the two exists.

33. Dr. Hall further explained that Claimant’s imaging revealed disc space narrowing, vacuum disc phenomenon, and posterior osteophyte formation, all of which can be aggravated by the activities Claimant was performing at work. In summation, Dr. Hall stated, “people normally don’t just, all of a sudden, as they’re walking to the parking lot, have pain that drops them to the ground unless something has happened. I really doubt that this is just, all of a sudden, the slowly evolving degenerative changes, for some mysterious reason, [becoming] symptomatic.” (Hearing Transcript, p. 24). Dr. Hall, was, however, unable to explain the loss of feeling in Claimant’s legs when he tried to get up initially.

34. Dr. Burris testified on behalf of Respondents as a Level II accredited expert in the field of occupational medicine. Dr. Burris testified that it was his opinion that Claimant would either have felt pain right away when there was any strain to any musculature. When one acutely exceeds the musculature’s tolerance, or sustains a muscle strain, one would appreciate symptoms at that time of the extreme fatigue or strain. While the inflammatory response in muscles that Dr. Hall discussed does occur, that inflammatory response takes more than a couple of hours to be appreciated by a patient, not the 30 minutes between Claimant’s work in the cooler on December 16, 2018, and his walking in the parking lot. Symptoms associated with an inflammatory process have a slower onset, and arising and increasing over time, not sudden acute pain as claimant alleges occurred. Alternatively, if it was an inflammatory process as Dr. Hall suggested, then it was his opinion such a process would take more than a “couple of hours” to become symptomatic. When asked about the significance of Claimant’s bilateral leg symptoms, their dissipation, and the significance of it, Dr. Burris indicated that, as Dr. Hall said, “We’re still trying to sort out exactly what the nature of the pain is.” Dr. Burris did acknowledge that Claimant’s testimony at the hearing was in line with what Claimant reported to him during his IME.

35. When Dr. Burris saw Claimant, he had full range of spine motion, no muscle spasms, normal strength in his legs, normal lower extremity reflexes, normal sensation, and no findings on physical exam or testing that would show any injury or

were consistent with any injury. There were no findings that would support any anatomic, physiologic injury. As he wrote in his report, "[M]r. Ryan's subjective complaints do not follow a dermatomal pattern and are out of proportion to his examination which reveals no objective findings." (Resp. Ex. A, pg. 8). He pointed out Claimant's non-specific lower back pain is common, and can arise spontaneously without any inciting event or injury mechanism. Dr. Burris said there is no specific activity that caused claimant's lower back pain and its occurrence on December 16, 2018, was idiopathic. Simply walking in the parking lot was a ubiquitous activity, and did not cause any injury to claimant's lower back or spine. Claimant does not need any medical treatment for, and has no restrictions related to, his work activities on December 16, 2018.

36. Steve Barkus testified at hearing as the assistant store manager for the Employer. Mr. Barkus has worked for the Employer for approximately 30 years; however, he worked at the same store with Claimant for approximately six months. Mr. Barkus indicated he is familiar with Claimant's job as a "stocker" and that the time around December 16, 2018 is "absolutely" busier around the holidays.

37. Mr. Barkus was not working on December 16, 2018. He does not recall what day he spoke to Claimant about his alleged injury, but he estimated it was around December 18 or 19, 2018. He recalled meeting with Claimant at the store to fill out paperwork regarding the incident. Mr. Barkus recalled specifically that Claimant "was unable to come up the stairs." Mr. Barkus testified that he asked Claimant if he recalled any specific incident at work where he injured his back. Claimant responded that he thought it was when he was breaking down the pallet and moving the meat and eggs repeatedly. He did not tell Mr. Barkus of the bilateral leg weakness episode when he stood up at the bunker cooler. On cross-examination, Mr. Barkus acknowledged that he had never heard Claimant complain of back pain prior, nor had he observed Claimant appear to have back pain prior to December 16, 2018.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102 (1), C.R.S. "Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App.

1993) Proof by a preponderance of the evidence requires claimant to establish that the existence of a contested fact is more probable than its nonexistence. *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO March 20, 2002). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. C.R.S. § 8-41-301 (1) (c); *Faulkner v. ICAO,* 12 P.3d 844 (Colo. App. 2000). In other words, claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores v. Industrial Claim Appeals Office,* 989 P.2d 521 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

B. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office,* 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things: the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000). Where a party presents expert opinion on the issue of causation, the weight, and credibility, of the opinion is a matter exclusively within the discretion of the ALJ as the fact-finder. *Cordova v. Industrial Claim Appeals Office,* P.3d (Colo. App. No. 01CA0852, February 28, 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990). To the extent that expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441, P.2d 21 (Colo. 1968).

Compensability, Generally

C. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of, and in the course of, his employment. *Loofbourrow v. Industrial Claim Appeals Office,* 321 P.3d 548 (Colo. App. 2011), ***aff'd Harman-Bergstedt, Inc. v. Loofbourrow,*** 320 P.3d 327 (Colo. 2014); § 8-41-301 (I) (b) and (c), C.R.S. The phrases "arising out of" and "in the course of" are not synonymous, and claimant must meet both requirements for the injury to be compensable. *Younger v. City and County of Denver,* 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,*

759 P.2d 17, 20 (Colo. 1988). The “in the course of” requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals,* supra*; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51; 552 P.2d 1033, 1036 (1976). The question of whether an injury "arises out of" employment is a factual question and is to be resolved by considering the totality of the circumstances. Triad Painting Co. v. Blair, 812 P.2d 638, 643 (Colo. 1991). The "arising out of" test is one of causation, requiring the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to employer. *Horodyskyj v. Karanian,* 32 P.3d 470, 475 (Colo. 2001); *Madden v. Mountain West Fabricators,* 977 P.2d 861, 863 (Colo. 1999); *Triad Painting Co. v. Blair,* 812 P.2d 638, 641 (Colo. 1991).

D. Under the Act there is a distinction between “accident” and “injury”. An “accident” is defined under the Act as an “unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence.” § 8-40-201 (1), C.R.S. In contrast an “injury” refers to the physical trauma caused by the accident. *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967); *see also*, § 8-40-201(2). Consequently, a “compensable injury” is one which requires medical treatment or causes disability. *Id.; Romero v. Industrial Commission,* 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.,* W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990); *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988); *Romine v. Air Wisconsin Airlines,* W.C. No. 4-609-531 (October 12, 2006). No benefits flow to the victim of an industrial accident unless the accident results in a compensable “injury.” *Romero,* supra; § 8-41-301, C.R.S. Given the distinction between the terms “accident” and “injury,” an employee can experience symptoms, including pain at work, without sustaining a compensable “injury.” This is true even when the employee is clearly in the course and scope of employment performing a job duty. See *Aragon,* supra; *McTaggart-Kerns v. Dell, Inc.,* W.C. No. 4-915-218 (ICAO, May 29, 2014)

E. Simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship. The panel in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-915-218 (ICAO, May 29, 2014) noted, “[C]orrelation is not causation.” Additionally, an incident that merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

F. The determination of whether there is a sufficient "nexus" or causal relationship between claimant's employment and any injury is one of fact which the ALJ

must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Moreover, the question of whether Claimant met his burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

G. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

Was this Work Incident a Compensable Injury?

H. Respondents argue that Claimant experienced no symptoms at the time of the alleged incident, and as a result, the symptoms he experienced shortly thereafter while walking to his car are therefore not related. As Dr. Burris states in his report, "there was no 12/16/2018 'industrial incident.' [Claimant] reports developing low back pain in the parking lot after leaving work for the day." However, there is no requirement that a specific, dramatic, incident, occurs for an injury to be deemed compensable. "This Court has many times sustained Commission findings of causation where the testimony indicated that the medical causes of an injury remained shrouded in mystery, *when the evidence as a whole* was sufficient to justify the Commission's legal conclusion that the injury was caused by the employment." *Industrial Commission v. Riley*, 441 P.2d 3, 591 (Colo. 1968) (emphasis added).

I. More recently, the Industrial Claim Appeals Office expounded on this rationale. "We do not dispute that a temporal relationship between an industrial event and the onset of symptoms does not compel the finding of a causal connection between the symptoms and the industrial event. However, the court of appeals has upheld an award of benefits even where the exact medical cause of the injury remains shrouded in mystery, *but the circumstantial evidence as a whole is sufficient to justify the inference that it was work-related." Schultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (November 17, 2000) (emphasis added) (Upholding an ALJ's finding that the DIME did not err in finding the claimant's symptoms that arose six weeks after the date of injury to be causally related to said injury).

J. The ALJ finds that the totality of the evidence suggests Claimant's lower back injury was more likely than not caused by his work activities on December 16, 2018. The ALJ credits the testimony of Claimant and finds him to be credible. There is no record of Claimant having any significant back problems whatsoever prior to December 16, 2018. The assistant store manager for the Employer testified that he had not witnessed Claimant have any difficulties performing his job prior to his arrival at work on December 16, 2018 and that he had never heard Claimant complain of back pain.

K. On this date, Claimant was performing a repetitive activity involving lifting and twisting in a cramped space. One could expect this type of movement to cause Claimant's symptoms, according to Dr. Hall. Respondents argue that Claimant has been inconsistent in reporting his mechanism of injury, thus undermining his credibility. The ALJ does not concur. At various stages of the process, to varying providers, Claimant has been convincingly consistent in what he describes. The fact that certain additional details were not provided (or were not asked, or there were simply insufficient lines to handwrite a narrative) on any given occasion does not mean Claimant's statements were *inconsistent.* The very fact that Claimant's version of events is not readily explained lends him some credence. Had Claimant intended to lie or game the system, he likely could have told something far more predictable.

L. Claimant argues the more likely cause of his sudden severe pain in the parking lot was a direct result of his kneeling, lifting, twisting, etc., while working that day. It was exceptionally busy due to the holidays, and this resulted in a backlog. In turn, this backlog caused 60-year-old Claimant to engage in uncustomary work activities in exceptionally close quarters. Respondents argue that there was no work injury, and that Claimant's degenerative condition(s) spontaneously became symptomatic with no cause whatsoever approximately 30 minutes after Claimant's work activities as described above ended.

M After considering the totality of the evidence, the ALJ finds Dr. Hall's reasoning to be more persuasive than Dr. Burris'. By a preponderance of the evidence, The ALJ finds that Claimant's work activity is the cause for his symptoms that began on December 16, 2018 and have continued through the present. At his age, Claimant had certain degenerative changes, arguably of a pre-existing nature. The ALJ alternatively finds that Claimant's pre-existing degenerative conditions became symptomatic as a direct result of his work activities.

Medical Benefits, Generally

N. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337

(Colo.App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo.App. 1997).

Medical Benefits are Reasonable, Necessary and Related

O. As stated *supra*, the ALJ found that Claimant sustained a compensable injury to his lower back. All treatment Claimant has had to date is found to be reasonable, necessary, and related, specifically the treatment with both CCOM and the subsequent treatment from PCHC and referrals from PCHC. Claimant is entitled to ongoing reasonable, necessary, and related treatment for his lower back.

Authorized Treating Physician, Pueblo Community Health

P. There remains a dispute as to whether the treatment Claimant received through Pueblo Community Health Center is the financial responsibility of Respondents. Respondents argue that PCHC was not an authorized provider, therefore any treatment rendered through PCHC or any referrals therefrom would not be the financial Responsibility of Respondents. The ALJ disagrees. The note from CCOM dated January 10, 2019 indicates that the referrals for Claimant's physical therapy had still not been approved after the request was made three weeks prior. Respondents issued their notice of contest one week later on January 17, 2019. There is nothing in the record indicating that Respondents offered Claimant ongoing care after their Notice of Contest was filed and the physical therapy was not approved. Claimant ceased treatment with CCOM after the Notice of Contest was filed, and his physical therapy not being authorized. Claimant therefore went to PCHC on January 21, 2019 and asked for a referral for physical therapy, as previously recommended by Dr. Olsen of CCOM.

Q. The insurer's right to select the treating physician contemplates the insurer will appoint a physician willing to treat the claimant based on the physician's independent medical judgment. See *Lutz v. Industrial Claim Appeals Office*, 24 P.3d 29 (Colo. App. 2000); *Ruybal v. University of Colorado Health Sciences Center,* 768 P.2d 1259 (Colo. App. 1988). Consequently, if the designated treating physician refuses to provide treatment for non-medical reasons, the insurer must designate a new treating physician or the right of selection passes to the claimant. The respondent must appoint a new treating physician "forthwith." *See Lutz v. Industrial Claim Appeals Office, supra; Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Whether the authorized treating physician has refused to treat the claimant for non-medical reasons is a question of fact for resolution by the ALJ. *Ruybal v. University Health Sciences Center, supra*. Based on the totality of the circumstances, the ALJ finds that Claimant's ATP refused to treat Claimant after the therapy was not approved and the notice of contest was issued, along with a lack of any notice by Respondents that ongoing conservative care would be approved after the notice of contest was filed. The Notice of Contest, along with the failure to approve conservative care, means Respondents failed to provide Claimant with medical care as required. The right of selection, therefore, passed to Claimant. As such, Claimant was free to choose his own

physician for ongoing care. Pueblo Community Health Center and all referrals therefrom are authorized providers.

ORDER

It is therefore Ordered that:

1. Claimant's injury to his lower back is compensable.

2. Respondents are responsible for all reasonable, necessary, and related treatment for this work injury, including all treatment to date from CCOM.

3. Pueblo Community Health Center is an Authorized Treatment Provider.

4. Claimant's Average Weekly Wage is $590.00

5. Claimant is entitled to TPD benefits from December 19, 2018, through January 18, 2019.

6. Claimant is entitled to TTD benefits beginning January 19, 2019, and ongoing, subject to any applicable offsets, until terminated by operation of law.

7. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 24, 2019

Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant was responsible for the termination of her employment and her resulting wage loss and whether her temporary total disability benefits should be terminated as of November 12, 2018.

FINDINGS OF FACT

1. Claimant is a 58-year-old female and was employed by Employer as a manager of personalized living. Employer employed Claimant from approximately 2002 to 2018. Claimant started employment as a receptionist and was promoted to a manager position in May of 2015. *See* Exhibit C.

2. Claimant's job duties as manager included managing the personalized living staff, performing evaluations, ensuring staffing coverage, ensuring that policies were followed, ensuring compliance with state surveys or other regulatory processes, marketing the program, coordinating clinical services for the program and overseeing the billing and scheduling of services, managing documentation process to ensure completeness, accuracy, timeliness, and compliance with guidelines, maintaining knowledge of national and state requirements, using sound judgment and experience to solve problems, and performing other duties as assigned. *See* Exhibit C.

3. On June 26, 2018, while employed as a manager, Claimant sustained a work related injury. Claimant reported that she was transporting a client and a dog when she bent and lifted the dog into a car and had the gradual onset of pain in her low back that became worse that evening and the following days.

4. Claimant reported the injury to her supervisor. Claimant was treated at the emergency department of Boulder Community Hospital on June 30, 2018. Claimant then was treated on July 3, 2018 and July 5, 2018 at Concentra. Claimant has not returned to work since July 5, 2018.

5. On July 9, 2018, Claimant returned to the emergency department of Boulder Community Hospital. Claimant reported ongoing and worsening lower back pain, right greater than left that radiated into her right buttock and right posterior leg. Claimant reported mild weakness in her right leg and that her right leg gave out when she stood. Claimant reported feeling dehydrated because she was unable to care for herself at home due to her pain. On examination, Claimant had tenderness to palpation over the right SI joint and had a positive straight leg raise on the right. A lumbar spine MRI was performed with the impression of: acute extruded right paracentral disc herniation at L4-5 associated with an annular tear; mild compression deformity of the superior endplate of the L5

vertebral body with bone marrow edema; subacute mild compression deformity of L2 vertebral body with probably underlying hemangioma; and left neural foraminal stenosis at L5-S1 due to broad based left foraminal disc protrusion. Claimant was admitted to the hospital. *See* Exhibit 3.

6. On July 11, 2018, neurosurgeon Sharad Rajpal, M.D. performed surgery on Claimant's lumbar spine. The surgery included a right L4-5 hemilaminotomy and micro discectomy. Claimant was found to have an epidural abscess and a CSF leak occurred. Following surgery, a lumbar drain was placed and Claimant was kept flat in bed for several days but then advanced activity.

7. On August 17, 2018, Erika Frieberg, PA evaluated Claimant. Claimant was noted to have been recently readmitted with a possible would infection. Claimant reported that she had been working with physical therapy a lot and thought she was making improvements daily but recently had an incident where she was lifted up aggressively with a gait belt and had worsening lumbar spine pain. PA Frieberg recommended a new MRI. PA Frieberg opined that Claimant continued to improve slowly after a lumbar decompression and wash out. PA Frieberg recommended continued physical therapy and wound care follow up and discussed that Claimant may require decompression and fusion at a later time but would need to clear her infection before placing any hardware. PA Frieberg opined that Claimant could return to work in October with restrictions of: returning October 15, 2018 mid-day with 4 hour work shifts, increasing length of shifts as tolerated; be allowed to take breaks throughout the day as needed to facilitate recovery; no lifting more than 15 pounds; no excessive bending or twisting; activity as pain allows; and use of a desk height chair with no arms or wheels. *See* Exhibit 2.

8. On September 10, 2018, Devin Jacobs, PA evaluated Claimant at Concentra. Claimant reported that since her last visit at Concentra on July 5, 2018, she had worse symptoms and went to Boulder Community Hospital emergency room where she was admitted and a lumbar micro discectomy surgery at L4-5 was performed. Claimant reported that after surgery she was transferred to an inpatient rehabilitation facility and was eventually discharged home on August 26, 2018. Claimant reported that she was told not to return to work until an October follow up. PA Jacobs ordered physical therapy and provided work restrictions of no work until Claimant's follow up. *See* Exhibit 1.

9. On November 12, 2018, Christine Zakar, PA evaluated Claimant. PA Zakar noted that Claimant had been seen at Boulder Community Hospital with evidence of nerve compression from an apparent lumbar disc herniation and underwent a right L4-5 hemilaminotomy and micro discectomy on July 11, 2018. PA Zakar noted that Claimant had not been seen by any provider for two months due to a workers' compensation claim denial and that Claimant reportedly did not know that she had health insurance through her employer. Claimant reported continuous pain, muscle spasms, incontinence, weakness, discomfort in positioning, and severe balance issues causing falls and further injuries. PA Zakar strongly recommended that Claimant start physical therapy for back spasms and gait difficulty. PA Zakar discussed with Claimant that Claimant may require

further imaging and surgical intervention in the future including possible decompression and fusion of the lumbar spine. PA Zakar opined that Claimant would have difficulty performing her job duties. Neurosurgeon Sharad Rajpal, M.D. approved PA Zakar's note and opinions on November 15, 2018. *See* Exhibit 2.

10. On January 14, 2019, the parties to this case signed a stipulation in which Respondents agreed to admit to the compensability of the claim. *See* Exhibit 4.

11. On April 16, 2019, Nancy Strain, D.O. evaluated Claimant. Dr. Strain noted that Claimant's claim was denied and Claimant had limited follow up and no physical therapy. Dr. Strain anticipated that Claimant would reach maximum medical improvement on December 31, 2019. Dr. Strain provided activity status of no work. *See* Exhibit 1.

12. On June 24, 2019, Respondents file a petition to modify, terminate, or suspend compensation. Respondents alleged that Claimant was terminated on November 12, 2018 after an audit where Claimant allegedly falsified documents by signing patients up for unnecessary services to ultimately allow the patients to obtain more reimbursement through insurance. *See* Exhibit B.

13. During her employment with Employer, Claimant underwent many training sessions. The training included significant training in an eRSP system including how to schedule, audit, note, and track client visits. Claimant completed Employer's personalized living foundations course and completed a course titled associate handbook. Claimant acknowledged that she could comply with Employer's business ethics and standards of conduct. Claimant completed basic manager training regarding state regulations, and covering client record content. Training records show and Claimant acknowledged that she was trained in proper client note entries and what was required, including receiving an eRSP manual. *See* Exhibit D.

14. In a July 2009 employee performance review, when Claimant was a receptionist, Claimant was noted to have a tremendous degree of detail in her work and was found to always complete tasks impeccably and quality of work was her highest rating category. Her evaluator noted that Claimant's attention to detail was strong and had contributed to many successes. It was also noted that other co-workers sought Claimant's help on project knowing they would be completed accurately. *See* Exhibit E.

15. Claimant continued to have overall positive employee performance reviews through 2015. *See* Exhibit E.

16. In May of 2015, Claimant was promoted to a manger position. Claimant's employee performance reviews began showing some problems during the next two years. *See* Exhibit E.

17. On August 30, 2017, Claimant was put on an action plan as part of a corrective action. The areas for improvement included leadership, organization/productivity, and eRSP utilization. *See* Exhibit E.

18. At a meeting to go over her action plan on October 4, 2017, Claimant was found to have not followed policy for claiming, scheduling, and documenting visits to clients. Claimant was found to have had an unprofessional leadership approach to a scheduler that did not want to work with Claimant. Claimant's supervisor planned to review in detail a recent eRSP audit and establish a timely plan of correction, planned to review and have Claimant reading "The 5 Languages of Appreciation in the Workplace" with a plan to review techniques to improve her leadership skills with her team. *See* Exhibit E.

19. The audit performed in 2017 showed several errors. On October 11, 2017, Claimant had a meeting with a supervisor where areas of improvement specific to the audit were discussed and documented. Supervisor Terri Dankelman noted that Claimant cared deeply for the residents in her communities but did not appropriately prioritize what needed to be done per her managers' checklist. Claimant was noted to be a good caregiver but concerns existed over Claimant's ability to manage and demonstrate leadership as a personalized living manager. *See* Exhibit F.

20. On February 28, 2018, Claimant received a corrective action from Employer. The corrective action indicated that Claimant was observed talking to associates in an unprofessional manner, not training associates properly, and not managing associates. Claimant was admonished that she was responsible for being a positive member of the team and providing quality customer services to residents and that her behaviors did not contribute to Employer's success. Claimant was reminded of an employee assistance program and was advised that improvement was her choice and that any further violations or any other performance issues may result in further corrective action up to/including termination of employment. *See* Exhibit E.

21. In October of 2018, another regularly scheduled annual audit was performed. Again, errors and concerns relating to Claimant and her entries were found during the audit.

22. On October 15, 2018, Claimant was placed on administrative leave for investigation/follow up of the recent clinical audit. At the time she was placed on administrative leave, Claimant was not working due to her no work restriction and her June 26, 2018 work related injury.

23. On October 22, 2018, a further and more detailed audit was performed and the errors noted were discussed with Claimant.

24. On October 31, 2018, Claimant was interviewed about some of the eRSP coding issues discovered by the October 22, 2018 audit. Claimant indicated in her interview with Employer that she had never provided documents to submit to the VA for billing. Claimant indicated that she understood a medication reminder code to require giving and watching the patient take medications and that if they were just asking a patient if they remembered to take the medications it would only be coded as an aid an

attendance qualifying visit since they weren't actually handing a patient pills. Claimant indicated that she was told a long time ago to use the safety check coding on aid and attendance clients when they weren't providing the service, but just checking to see if the patients did it on their own. Claimant said in the past she also questioned why the visits were coded as safety checks. *See* Exhibit J.

25. On November 7, 2018, November 8, 2018, and November 9, 2018, Employer attempted to contact Claimant to discuss Claimant's employment status. Claimant failed to return the calls and voice messages that Employer left on her voicemail.

26. On November 12, 2018, Claimant was sent a letter of termination. The letter indicated that Claimant had been placed on administrative leave on October 15, 2018 for the investigation/follow up of a clinical audit. The letter indicated that multiple attempts had been made to contact Claimant regarding her administrative leave and employment status including by phone on November 7, 2018, November 8, 2018, and November 9, 2018. Employer indicated they wanted to discuss Claimant's employment status with her in person but had been unable to contact Claimant. The letter informed Claimant that her employment was terminated effective November 12, 2018 for violation of Employer's guidelines for appropriate conduct. A personnel action form/termination form indicated termination for violation of company policy with her termination date listed as November 12, 2018. *See* Exhibit K.

27. A corrective action form dated November 12, 2018 listed "termination of employment" as the corrective action taken. It listed prior corrective actions on August 30, 2017 and February 28, 2018. It indicated that in December of 2015, Claimant had signed up one client for safety checks but listed and instructed the associate to list medication and meal reminder, while not actually doing a medication reminder and just asking the client if he remembered to take the medications. It also indicated that in June of 2018, Claimant signed up a client for services despite the client not needing the services and that Claimant instructed the associates to put in the comments "meal and bathing reminder" as it qualified for aid and attendance benefits through the VA. The instructions indicated the associates were to just chat with the client and make sure he was doing okay, getting to meals, and showering. The corrective action indicated that falsifying records and signing clients up for unnecessary services was a violation of the guidelines for appropriate conduct and that the decision had been made to terminate Claimant's employment. *See* Exhibit K.

28. Patti V_____ testified at hearing. Ms. V_____ is the regional clinical director for Employer. She trains employees on use of the eRSP system. She trained Claimant and advised Claimant that services performed had to match the services billed. She testified that Clamant was aware that entries had to be correct, consistent, and honest and had to match the plan, schedule, and eRSP entry. Ms. V_____ performs annual audits that are regularly scheduled. She testified that she found red flags during her October 2018 audit where something was coded one way but the instructions showed something different. Ms. V_____ testified that the records show Claimant was telling caregivers to chart something they weren't actually doing which is a violation of

procedures. Ms. V_____ testified that there was concern for misconduct as the coding was specific to receive VA benefits when a patient might not be eligible.

29. Ms. V_____ testified that after the initial audit she performed an expanded audit and found four separate clients where the task did not match the coding of the visit and where notes referenced qualification for VA benefits. Ms. V_____ testified that Claimant admitted to writing the instructions, but that Claimant alleged she was told to do so by a former manager. Ms. V_____ was unable to verify that another manager instructed Claimant but testified that Claimant underwent a lot of training and should have known this was a violation or should have clarified with higher-level supervisors what was appropriate.

30. Kimberly P_____ also testified at hearing. Ms. P_____ is the regional human resource business partner/director. She testified that employees are expected to accurately input entries without exception and that it was never permissible to code incorrectly due to the federal false claims act. Ms. P_____ testified that she was advised after an audit that there were suspicious eRSP entries and that she put Claimant on suspension pending further investigation. Ms. P_____ testified that she determined Claimant had entered information instructing associates to falsify care to say they were doing services they were not doing so that the client could bill the VA. Ms. P_____ testified that due to the seriousness of the violation, after investigation, the leaders reviewed the issues and decided to terminate Claimant's employment. Ms. P_____ testified that after attempting to reach Claimant to coordinate a meeting and not receiving a return call, a termination letter was sent to Claimant.

31. Katherine E_____ testified at hearing. Ms. E_____ is the regional director of operations for Employer. Ms. E_____ testified that it is against policy to bill a client for something not done. Ms. E_____ testified that if their notes write something just so a client could seek reimbursement from a federal agency when the services are not actually provided; there is a big problem/fraud to a federal agency. Ms. E_____ testified that Claimant was scheduling the least cost visit but telling staff to document greater services that weren't actually being provided so that the more expensive services could be sent by the client to the VA for reimbursement. Ms. E_____ testified that from her review of the records it clearly looks like Claimant is trying to help clients fraudulently bill. Ms. E_____ testified that there were multiple avenues Claimant could have used to seek help, but that Claimant did not. Ms. Evens testified that Claimant should have known how serious the actions were. Ms. E_____ testified that she thought Claimant was planning to return to work in October of 2018 and that her memory before these issues arose was that Employer was excited because Claimant's job had just been covered by others and that they were looking forward to having a manger return to alleviate the burden on everyone else. Ms. E_____ was unaware of whether Claimant actually returned or whether Claimant received any type of work release or modified job offer.

32. Claimant also testified at hearing. She testified that she injured her low back at work on June 26, 2018 and reported the injury verbally on June 27 and in writing

on June 28. Claimant testified that she did not seek treatment until June 30, 2018 at Boulder Community Hospital emergency room when she was in bad shape and Concentra was closed. Claimant testified that she then treated on July 3 and July 5 at Concentra and worked until July 5, 2018 when she was put on bedrest. Claimant testified that she has not worked since July 5, 2018 and that she has never been given a written request to return to work.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Termination

The termination statutes provide that, in cases where an employee is responsible for her termination, **the resulting wage loss** is not attributable to the industrial injury. *See* § 8-42-105(4), C.R.S.; *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). To establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. *Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992) (claimant disqualified from unemployment benefits after discharge for unsatisfactory performance when aware of expectations, even if not explicitly warned that job was in jeopardy). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

However, when temporary total disability (TTD) benefits are terminated due to misfeasance that happened prior to the injury, TTD benefits may not be stopped at a point when a Claimant is entirely disabled from all work. Courts have found that wage loss does not "result" from a termination if the injury has totally disabled the claimant such that he is not capable of performing any employment. In that situation, the wage loss stems entirely from the disability caused by the injury, not the claimant's conduct in causing the loss of prior employment. *Selvage v. Terrace Gardens*, W.C. No. 4-486-812 (September 23, 2002); *In re Claim of Frisch*, 101118 COWC, 5-033-012-02.

Similarly, in *Gilmore v. ICAO*, 187 P.3d 1129 (Colo.App. 2008), the claimant was discharged after his work injury because the post-injury blood tests revealed cannabis in his system. This constituted a violation of the employer's policy and the claimant was therefore terminated. The claimant was restricted from all work for the first month after his work injury. The employer declined to pay TTD benefits because the claimant had been terminated for cause pursuant to § 8-42-105(4). The ALJ only stopped the claimant from receiving TTD after he was released to some form of work and provided some work restrictions. **Prior to that point, when the claimant was completely taken off any type of work, but after the date he had been discharged, the claimant was awarded TTD benefits**. Claimant argued that he had to first be offered a modified duty job and then be fired in order for his wage loss to result from his termination. This was not found

persuasive and the court held that once Claimant was released to modified duty employment by an authorized treating physician, Claimant had wage earning capacity and only suffered wage loss because of his termination for violating employer's drug policy. Claimant was awarded TTD benefits for the period of time he was unable to work because of his injuries. Once claimant was released to modified work, the ALJ ordered that the disability benefits ceased. Had claimant not precipitated his termination by engaging in activities that violated employer's no-tolerance drug policy, he could have been offered modified work by employer. The fact that he was not offered modified employment because he had been terminated has no bearing on the critical fact that he was physically able to work. The court therefore concluded that the ALJ properly applied the law when he discontinued claimant's TTD benefits. *Gilmore*, supra at 1132. (Emphasis added); *In re Claim of Frisch*, 101118 COWC, 5-033-012-02

In both Selvage and Gilmore, the total removal of the claimant from work indicated that the claimant's wage loss was a result of the injury and not a result of the termination or discharge from employment. Thus, until the claimant is able to work in some capacity, § 8-42-105(4) cannot be applied to preclude temporary benefits.

Here, Respondents have established by a preponderance of the evidence that Claimant was terminated due to her volitional actions while employed and prior to her work injury. Claimant had twice been on corrective notice/performance plans and Claimant volitionally charted incorrectly. Claimant had the training and knowledge to perform her job to the standards required and she volitionally chose to chart incorrectly. Claimant had prior coaching and performance issues. After the October 2018 audit, serious violations were found that justified her termination. Claimant had the training and resources to adhere to Employer's policies and volitionally chose to chart her own way, outside of Employer's guidelines. Employer could have terminated Claimant even earlier due to Claimant's prior performance issues. However, this third violation and the volitional conduct by Claimant shows that Claimant had some control over the circumstances leading to her termination. Claimant was responsible for her termination on November 12, 2018.

Although Claimant's termination ended her employment with Employer on November 12, 2018, there is insufficient evidence that Claimant has been released to perform modified duty employment or any employment. Due to her June 26, 2018 work injury, Claimant underwent lumbar spine surgery on July 11, 2018. Claimant had complications from this surgery. Although PA Frieberg contemplated on August 18, 2018 that Claimant would be able to return to part time work with restrictions by October 15, 2018, the very next medical record in evidence establishes that Claimant was placed on no work status on September 10, 2018 by PA Jacobs. So in August, the PA treating Claimant contemplated that Claimant would be able to do at least some work by October, but in September and before Claimant ever was officially released to the modified work status, Claimant was again put on no work status by PA Jacobs. Thus, Claimant was never released to modified or regular duty employment and she remained off work. Again, on November 12, 2018, PA Zakar and Dr. Rajpal noted that Claimant would have difficulty performing her job duties. Claimant was not released to modified duty on November 12,

2018 and thus remained on no work status. More recently, Claimant was again noted to be on no work status with the restriction of no work given by Dr. Strain on April 16, 2019. There is no evidence in the record that Claimant has ever been released to modified or regular duty work. Although it was contemplated in August, 2018 that Claimant would be released in October, 2018, Claimant was never released.

Respondents, in their position statement, argue that Dr. Browne released Claimant to modified duty on November 12, 2018. There are no records from Dr. Browne submitted in evidence and Dr. Browne did not testify at hearing. The only reference to Dr. Browne lists her as Claimant's primary care provider in records authored by other providers. The only record from November 12, 2018 in evidence is authored by PA Zakar and was approved by Dr. Rajpal. This record notes Claimant's report of continuous pain, muscle spasms, incontinence, weakness, discomfort in positioning, and severe balance issues causing falls and further injuries. The November 12, 2018 record also notes the opinion that Claimant would have difficulty performing her job duties. It does not release Claimant to modified work duty.

Thus, prior to her termination and due to her June 26, 2018 work injury, Claimant was on no work status and her earning capacity was zero. Claimant's loss of earning capacity, until she is released by an authorized treating physician to some sort of work status, is still entirely due to her June 26, 2018 work injury. Once the Claimant is released to any type of modified or regular duty work activity, her wage loss from that point forward would then be attributable to her at fault termination as Respondents will not offer her modified or regular employment due to her at fault termination. This case is similar, in some ways, to the *Gilmore* case (supra). Like Gilmore, had Claimant not precipitated her termination, Claimant could have been offered modified work by Employer once she is released to regular or modified employment. However, since she engaged in volitional conduct that resulted in her termination, Claimant will not be offered modified employment once she is physically able to work. The discontinuance of any benefits, at the point when Claimant is eventually released to work, will result in wage loss due to her termination and not due to her injury.

ORDER

It is therefore ordered that:

1. Respondents have established by a preponderance of the evidence that Claimant was responsible for the termination of her employment on November 12, 2018.

2. Until Claimant is released to modified or regular employment by an authorized treating provider, her wage loss continues to result from her June 26, 2018 work injury.

3. Respondents are thus not entitled to terminate TTD benefits as of November 12, 2018. TTD benefits shall continue until Claimant is released to modified or regular work status.

4. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 25, 2019

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STATE OF COLORADO
OFFICE OF ADMINISTRATIVE COURTS
Workers' Compensation No. 5-049-992-001

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

In the Matter of the Workers' Compensation Claim of:

F,
Claimant,

vs.

R,
Employer,

and

SELF-INSURED,
Respondent.

Hearing was held on August 14, 2019, in Denver, before Administrative Law Judge Margot W. Jones. Claimant appeared in person and was represented by _____, Esq. Respondent appeared through _____, Esq.

The hearing convened at 1:30 p.m. in courtroom 5. Respondent's exhibits A-X and Claimant's exhibits 1-26 were admitted into evidence at hearing.

In this order, F is referred to as "Claimant" and R is referred to as "Respondent."

In this order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2018), "the Act" refers to the Workers' Compensation Act, Sections 8-40-101, et seq., supra, "OAC" refers to the Office of Administrative Courts, "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUE

Whether Claimant established by a preponderance of the evidence that he is entitled to reasonably necessary and related medical benefits, specifically, physical therapy, chiropractic care, reimbursement for a .22 caliber pistol, yoga,

massage, acupuncture, dry needling, an ergonomic evaluation and nutritional counseling.

FINDINGS OF FACT

1. Claimant is a wildlife officer for Respondent. He is a senior ranger and supervised two other officers and 8-10 non-commissioned workers. His job requires him to be POST certified. Claimant's regular job duties include law enforcement activities, customer service, supervision of subordinates, inspections of boats, campsites and wildlife management.

2. On June 27, 2017, Claimant was involved in a head on motor vehicle accident while driving to work. Claimant was driving his private vehicle while in uniform. He was headed to the main entrance of the Ridgeway State park at the time of the collision. Claimant was not wearing his seat belt.

3. Claimant suffered injuries in the accident including fractures to his right wrist, lower legs and a dislocated hip. Claimant has had multiple surgeries including a hip replacement.

4. Claimant has since returned to work in a light duty capacity. He works between 20 and 32 hours per week. He is not performing law enforcement activities as part of his light duties.

5. Dr. William E. Faragher, M.D. opined that Claimant's right hip symptoms were suggestive of hardware irritation and the hardware has been removed. Claimant failed to establish that any further care related to the right hip is necessary.

6. Claimant is observed on surveillance video recorded on April 5, 2019, at his home for approximately 70 minutes. On the video, Claimant is seen using a power saw, a power drill, a hammer, a crow bar and a hand sander with his right hand. Claimant is seen walking across his lawn while carrying equipment including a shop vac. Claimant is seen cutting pieces of wood with an electric saw while standing up. He is seen on the ground/floor with his legs crossed tearing up flooring materials. Claimant is seen getting up and down from a standing position to a sitting position repeatedly. He is seen working in a squatting position while working at ground level. Claimant is seen walking on uneven grass/ground.

7. Claimant has been able to engage in several different recreational activities since his work injury. He has been camping, boating, sailing, walking, and jogging. He has attended a Bronco football game and walked up stairs in the stadium to his seat. Claimant has done light plyometric (jumping) and has been shooting his .22 caliber revolver at a gun range. On October 30, 2018, Claimant hiked several miles without left hip problems.

8. Respondent has previously authorized numerous sessions of physical therapy in order to rehabilitate Claimant's left wrist, bilateral hips and bilateral lower extremities. Since the work incident, Claimant's function and stamina improved, his range of motion and strength have improved.

9. Claimant was seen in follow up by Dr. Adam Garry Cota, M.D. the surgeon who performed procedures on the right and left tib/fib injuries. In October of 2018, x-rays showed a healed fracture and stable position of the implants on the left leg. As to the right side, there was complete bridging on the bones confirmed by x-ray on March 13, 2019. Claimant's femur fracture was also completely healed.

10. Dr. Frazzetta sent Claimant to Dr. Faragher, an orthopedist, to see if he had other ideas for treatment even though Dr. Faragher was not one of the surgeons who performed surgery on Claimant. Claimant was already obtaining follow up care from his surgeons, Drs. Cota, Gammon and Judkins. Dr. Faragher saw Claimant on January 29, 2019, at Dr. Frazetta's request.

11. At that appointment, Claimant complained of hip pain (2/10) and weakness. However, the physical exam was near normal. The left hip showed no swelling, ecchymosis or deformity, hip strength was 5/5 in all muscle groups tested, sensation was intact, reflexes normal and symmetrical. Claimant's low back range of motion was normal and all special tests for the low back were normal. Testing of the right hip was normal.

12. Additional testing performed by Dr. Faragher on January 29, 2019, of the right and left lower extremity were also normal. The right and left lower extremities did not show tenderness, deformity, or injury. Range of motion was unremarkable. There was no gross instability and strength and tone were normal.

13. Despite the essentially normal results of the examination, Dr. Faragher did think a course of physical therapy (PT) might be useful with a focus on getting Claimant to an upgraded home exercise program. There is no indication that Dr. Faragher knew that by this time Claimant had over 100 PT visits. Dr. Faragher' s notes do not reflect that he had considered what therapy Claimant's primary surgeons had recommended or what Dr. Frazzetta and N.P. Swarts, FNP-C. were recommending.

14. Dr. Faragher did not explain why or how additional physical therapy would bring about further improvement in Claimant's already normal left hip and lower extremity strength and sensation or why the mild pain complaints of 2/10 justified further treatment in excess of the Medical Treatment Guidelines.

15. As of January 7, 2019, Claimant attended 101 physical therapy visits at Mountain View Therapy. He also had 15 cancellations. Claimant met all of his short term goals and all but two of his long term goals including a pain level of 2 or less with all activities of daily living. (ADL) If you consider Dr. Faragher's opinion on January 29, 2019, that Claimant's bilateral hip and lower extremity strength was normal, that goal had also been met. The final goal of the physical therapist was that of Claimant displaying

normalized body mechanics to allow efficient functional mobility in home and community in 12 weeks.

16. In February 2019, Claimant was working on high-level mobility such as jogging and high impact activities including vertical leaps and plyometric.

17. As of April 29, 2019, Claimant had been seen for 108 physical therapy visits with 23 cancellations. It is unclear why Claimant cancelled his appointments.

18. By April 29, 2019, Claimant's formal PT consisted of using an elliptical, light jogging on indoor track, going up and down 28 6" stairs, and fielding a tennis ball the therapist threw against a wall. Claimant attends the gym 2-5 times a week performing independent exercises. Claimant has access to the same equipment at the Montrose Recreational Center as is available in physical therapy. The attendance records at Montrose Recreational Center indicate Claimant's regular attendance.

19. Between January 2019 and April 2019, Dr. Frazzetta, Dr. Faragher and Dr. Coda made multiple and overlapping requests for physical therapy for the hips and lower extremities. These doctors were aware of overlapping requests and did not provide justification for the request.

20. Claimant has reached the final goal of his physical therapists, which is to be functional in the home and the community. The surveillance video taken April 5, 2019 establishes Claimant can take care of his home. Based on Claimant's own report, he has returned to work and community activities like football games and socializing with friends. He is functional in the community.

21. Dr. Cebrian and Dr. Frazzetta both opined that Claimant would have significant permanent impairment. In light of the permanent nature of the injuries, the physicians indicate that Claimant will have some functional limitations and some lingering symptoms.

22. None of the providers recommending additional physical therapy have addressed the specific functional deficits that remain or explained how additional formal physical therapy would remedy that deficit. Respondent timely denied the requests from Drs. Frazzetta, Dr. Cota and Dr. Faragher for therapy. The denials were based on valid medical reasons including lack of exhaustion of therapy that had already been approved, lack of documentation of functional deficit supporting the need for therapy and ready access to an independent home exercise self-directed program.

23. Dr. Cebrian performed an independent medical examination (IME) and concluded that Claimant does not need any further physical therapy.

24. Surgeon Steven Gammon, M.D. saw Claimant on June 4, 2019. Dr. Gammon noted that Claimant is now close to 2 years out from the fixation of his pelvis and his left acetabulum and about 17 months out from the conversion to a left total hip

replacement. On exam, Claimant had no erythema, drainage or fluctuance. He had no tenderness over either hip. Claimant had 5 out 5 strength with hip flexion on both the right and on the left side.

25. Dr. Gammon also found there was 5 out of 5 strength with hip flexion as well as knee, ankle and toe flexion. Extension on both the right and on the left sides was normal. Sensation was intact in both feet. Claimant's pulses and reflexes in both the patella tendons and Achilles tendons were normal. Dr. Gammon did not recommend any treatment for the left hip or lower extremities.

26. Claimant did complain to Dr. Gammon on June 4, 2019, of right sided pain in the sacroiliac area and Claimant did have the hardware removed on the right side to remedy this problem.

27. Prior to the work injury, Claimant had a relationship with chiropractor, Dr. Lundberg. He started seeing Dr. Lundberg in 2012 for occasional low back pain, hip pain and upper back pain. Claimant continued to see the chiropractor until shortly before the work related motor vehicle accident (MVA).

28. The records do not indicate Claimant advised Dr. Frazzetta or N.P. Swarts, FNP-C. that he had sciatica, low back and hip pain and pain prior to the work accident. Consequently, their recommendations for additional chiropractic care to treat sciatica have been made without the opportunity to consider whether Claimant has returned to baseline as to these complaints.

29. On November 12, 2018, Respondent authorized chiropractic care for the right knee and left quadriceps.

30. Dr. Frazzetta recommended 12 chiropractic visits for the right wrist on April 29, 2019. By then Claimant had completed his formal physical therapy recommended by the surgeon, had near normal grip strength in the right upper extremity and was under no physical restrictions from his surgeon. Dr. Frazetta took no formal measurements to document a perceived deficit or explain how additional chiropractic care would fix any actual limitations. Claimant's wrist surgeon had already placed Claimant at maximum medical improvement (MMI) on March 8, 2019, as to the wrist.

31. Dr. Frazetta's recommendation on April 29, 2019, for ongoing chiropractic care for the lower extremities was denied by Respondent. Dr. Frazzetta failed to document objective physical findings that could be corrected with chiropractic care. Claimant had completed substantial physical therapy and was engaging in a rigorous independent exercise regime. Dr. Frazzetta did not document on exam specific deficits that could be corrected with additional chiropractic care justifying additional care of this nature. Therefore, her request was properly denied.

32. Dr. Cebrian has opined that Claimant may still have various aches and stiffness in multiple body parts. However, chiropractic care and other treatments are not

reasonably expected to change this condition. Claimant will continue to have symptoms and will have impairment in the left hip, left ankle, right knee and right wrist. (Exh. A, p. 3). Dr. Cebrian credibly opined that these ongoing subjective complaints do not warrant additional chiropractic care.

33. Claimant testified he started attending Yoga classes when he was still using a cane as a consequence of the work related injury. He testified the yoga classes help him with his balance and flexibility.

34. On February 10, 2019, Dr. Frazzetta has prescribed 10 sessions of yoga for bilateral lower extremities, pelvis and chest. Respondent sent a request for Utilization Review to the insurer. Zaid Fadul, M.D. reviewed Dr. Frazzetta's request and recommended a denial of the treatment. Dr. Fadul attempted on two occasions to speak with Dr. Frazzetta regarding the requests and Dr. Frazzetta never called him back. Dr. Fadul recommended a denial of the yoga because there was insufficient clinical information to support the requested treatment. There was no comprehensive assessment of the treatment completed to date and the patient's response thereto. There was no current, detailed physical examination submitted for review and no notes with documentation of improvement. Therefore, medical necessity is not established in accordance with current evidence based guidelines.

35. On April 12, 2019, Dr. Frazzetta made another request for 6 sessions of yoga. The request was sent to Utilization Review, which denied the request. Again there were no notes submitted which established improvement from prior yoga classes. The yoga instructor kept no notes and is not a physician or non-physician provider under the definition of W.C.R.P.16-3.

36. The Colorado Medical Treatment Guidelines (MTG) indicate that up to eight weeks of yoga may be indicated. Claimant has attended more than 8 yoga classes. Dr. Cebrian credibly opined that formal Yoga classes after February 18, 2019, are not reasonable and necessary. Additional authorization of yoga classes is not shown to be reasonably necessary or related medical treatment.

37. Dr. Timothy Judkins performed a right wrist scapholunate ligament reconstruction with tendon transfer on September 4, 2018. This was an outpatient procedure. Claimant testified that after surgery he underwent physical therapy for the wrist. Claimant testified that he did not complete the full course of post-operative physical therapy because he did not feel he needed it.

38. This is consistent with the physical therapists notes dated March 8, 2019, which documented good functional right upper extremity strength and mobility with minimal complaints of grip strength when shooting with right hand.

39. On March 8, 2019, Dr. Judkins placed Claimant at MMI with respect to the wrist. He released Claimant from care and imposed no specific activity restrictions on the

use of the hand/wrist. As of March 15, 2019, Claimant's right hand grip strength was 96 lbs. and left was 100 lbs.

40. Claimant testified that he required a .22 caliber handgun to perform work hardening. He testified his wrist was too weak and his stance is too unstable to safely shoot his service weapon, which is a .40 caliber.

41. Dr. Cebrian credibly opined that the pistol is not reasonable, necessary or related medical care or treatment. The pistol is not medical care, nor is it incidental to obtaining medical care. The pistol is not durable medical equipment and it is outside of the Medical Treatment Guidelines. Therefore, in order for it to be authorized, Claimant would have been required to seek Prior Authorization per W.C.R.P. 16-6. Claimant did not provide credible evidence of such a request. Dr. Judkins did not write a prescription for a .22 caliber pistol. Claimant did not seek nor obtain prior-authorization from Respondent to purchase the pistol.

42. Therefore, Respondent did not authorize the purchase and there exist no basis for reimbursement of this expense.

43. Claimant seeks nutritional counseling arguing that this counseling is reasonable necessary and related to the work injury. It is found that Claimant has been thoroughly counseled by multiple providers as to the types of food he should eat and avoid and the type of exercise needed to reduce his weight. Claimant has received weight management counseling from his current providers. Additional nutritional counseling is not reasonable, necessary or related to claimant's work injury.

44. In the past, Dr. Frazzetta recommended that Claimant undergo a formal ergonomic evaluation. Dr. Frazzetta did not articulate a reason for the evaluation or how she would use the results of it to provide medical treatment to Claimant. Claimant testified he is working 24-32 hours per week in a light duty capacity. Claimant's job duties are variable. Claimant testified he is not performing any of the law enforcement functions of his regular duties. Dr. Frazzetta has reviewed Claimant's modified job duties and given her written approval for Claimant's modified job.

45. Dr. Cebrian credibly opined that a formal ergonomic evaluation is not reasonable, necessary or related to the work injury. Since none of Claimant's duties are performed in a highly repetitive manner, the evaluation is not necessary. Dr. Frazzetta has not opined that Claimant is suffering from a cumulative trauma condition and has not set forth a reasonable explanation as to why an ergonomic evaluation is necessary.

46. Claimant seeks an order for additional acupuncture, massage and dry needling. Dr. Cebrian credibly opined that none of these passive modalities are reasonable, necessary or related to the work injury. Earlier in the claim, Respondent authorized 6 out of the requested 15 session of acupuncture. Dr. Frazzetta's most recent request for 12 weeks of dry needling was denied because Claimant was functional in his exercise program and no specific deficits were identified.

47. Records from massage therapist Bill Tofflemoyer document that Claimant had 20 massages in the first seven months of 2019. Claimant had 20 sessions of massage from 10-23-17 to 12-26-17. Dr. Frazzetta does not identify a specific improvement in function resulting from such massages.

48. The MTG, W.C.R.P. 17 Exh. 9 suggest that the maximum duration for massage is 2 months. Claimant's massage treatment has extended well beyond that recommended in the guidelines. Further, the MTG, W.C.R.P. 17 Exh. 9, F. 14, discuss the use of passive modalities for treatment and indicate that they are principally effective during the early phases of treatment and are directed at controlling symptoms such as pain, inflammation and swelling and to improve the rate of healing of soft tissues. Claimant is well beyond the acute phase of his injuries.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences

from the evidence." *See Bodeneck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB,* 565 F.2d 1074 (9th Cir. 1977).

The Colorado Workers' Compensation MTG are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office,* 111 P.3d 549 (Colo. App. 2005). While it is appropriate for an ALJ to consider the guidelines while weighing evidence, the MTG are not definitive. *See Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006*); aff'd Jones v. Industrial Claim Appeals Office,* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the guidelines on questions such as medical diagnosis but the guidelines are not definitive); *see also Burchard v. Preferred Machining,* W.C. No. 4- 652-824 (July 23, 2008) (declining to require application of medical treatment guidelines for carpal tunnel syndrome in determining issue of PTO); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

The totality of the evidence presented at hearing, including the ALJ's observation of Claimant at hearing, establishes that Claimant is now highly functional and capable of a self-directed exercise program. Claimant has demonstrated immense measurable functional improvement since the accident and consistently reports very low levels of pain. Nevertheless, Claimant's authorized treating physicians, Dr. Frazzetta and N.P. Swarts, FNP-C, continue to recommend that Claimant continue chiropractic care, acupuncture, physical therapy, massage therapy, and dry needling.

Dr. Frazzetta and N.P. Swarts repeatedly requested passive modalities for Claimant without identifying objective physical exam findings of measurable deficits and without explaining how the same treatment can reasonably be expected to correct the deficits. Moreover, Claimant's subjective complaints are not credible given the activities recorded on surveillance and his admitted physical activities.

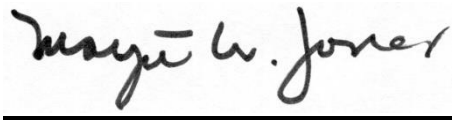
Claimant has failed to establish, by a preponderance of the evidence that additional chiropractic care, physical therapy, massage, Yoga, nutritional counseling, ergonomic evaluation, dry needling or acupuncture are reasonable, necessary and related to the industrial injury.

The claim for reimbursement for the pistol is denied. It is not medical care nor medical equipment.

ORDER

Claimant's claims for additional chiropractic care, physical therapy, massage, yoga, dry needling, nutritional counseling, acupuncture, ergonomic evaluation, and reimbursement for the pistol are denied.

Dated this 26h day of September, 2019



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-889-769-04

ISSUES

- Did Claimant prove he was entitled to recover penalties against Respondents for their failure to respond to the pre-authorization request made by Robert Kawasaki, M.D. on January 21, 2016?

PROCEDURAL HISTORY

This case has an extensive procedural history. A hearing was held on May 5, 2016. At issue was Claimant's request for medical treatment with Dr. Kawasaki. The subject matter of that hearing gave rise to the instant claim for penalties. The undersigned ALJ issued Findings of Fact, Conclusions of Law and Order on or about August 26, 2016, which concluded that the treatment recommended by Dr. Kawasaki was reasonable and necessary.

In the Application for Hearing filed on April 27, 2016, Claimant sought penalties against Respondents for alleged violations of the Colorado Workers' Compensation Act, WCRP and various court orders. The claimed penalties included the following:

1. Failure to respond to the June 26, 2015 letter from Claimant's counsel to Respondents' counsel requesting a copy of the claims file.

2. Violation of the Order compelling Respondents to respond to outstanding interrogatories issued by ALJ Felter on March 16, 2016.

3. Violation of the April 7, 2016 Order issued by PALJ Gallivan requiring Respondents to supplement their discovery responses.

4. Failure to respond to the pre-authorization request made by Robert Kawasaki, M.D. on January 21, 2016.

The October 5, 2016 hearing concluded with the ALJ taking under advisement Respondents' Motion to bar Claimant from submitting written and testimonial evidence. This Motion was denied. The ALJ further denied and dismissed Claimant's request for penalties for alleged failure to provide a copy of the claims file, the alleged violation of ALJ Felter's order and PALJ Gallivan's order. This Order was issued without prejudice to a request for sanctions under CRCP 37 and Claimant was allowed to present evidence in support of the request for penalties under category 4, *supra*. When the hearing recommenced on March 13, 2017, at the outset, Claimant's counsel confirmed Claimant was not seeking discovery sanctions.

A Status Conference in the above captioned case was held on July 12, 2019 before Administrative Law Judge Timothy Nemechek. The Status Conference was held

to confirm the remaining issue(s) to be adjudicated and to allow closing arguments to be presented on behalf of Claimant and Respondents.

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury on February 6, 2012, when he fell on the ice while working for Employer. Claimant injured his neck, back, right shoulder and elbow.

2. Claimant received treatment for the foregoing injuries from various physicians, including Dr. Kawasaki, Albert Hattem, M.D. and H. Andrew Motz, M.D.; who were ATPs.[1]

3. A Final Admission of Liability ("FAL") was filed on behalf of Respondents on November 6, 2014, which admitted for a 24% whole person impairment and an 8% scheduled impairment. This was based upon Dr. Hattem's medical impairment rating. The date of MMI was September 29, 2014. Dr. Hattem recommended maintenance treatment with regard to dental treatment and treatment related to the right elbow and right shoulder. The FAL admitted for "reasonable and necessary medical care related to this work injury, by an authorized treating physician".[2]

4. Claimant testified that after the FAL was filed, his neck got worse and he experienced radiating pain down his right and left arms. He received treatment through ATP, Dr. Hattem. There was no medical evidence in the record which documented Claimant's treatment with Dr. Hattem after September 29, 2014.

5. On April 25, 2015, Claimant underwent an MRI of the cervical spine and the films were read by Eduardo Seda, M.D. Dr. Seda compared the films with the MRI taken on January 31, 2013. Dr. Seda noted the cervical spine had normal vertebral body alignment, with no bony or bone marrow abnormalities. The spinal canal was normal size. Dr. Seda's impression was: stable degenerative disc and joint changes, without cord deformity. There were multiple stable levels with foraminal narrowing, which appeared predominantly bony, except for C5-C7 level, where there was a small new disc component extending into the left foramen.

6. In April 2015, Claimant was injured in a motor vehicle accident, which he testified aggravated the condition of his neck. Claimant initially estimated he had returned to baseline within a month or so of the accident.[3] Claimant then testified he returned to baseline by the time he was evaluated by Dr. Kawasaki in January 2016.

---

[1] Claimant's course of medical treatment with these ATPs was set forth in the Findings of Fact, Conclusions of Law and Order issued on August 26, 2016-Exhibit 13.

[2] Exhibit 1.

[3] Hearing Transcript ("Hrg. Tr.") p. 16:11-18.

7. There was no reference to the motor vehicle accident in Dr. Motz' notes. Claimant testified he did not tell Dr. Motz about the MVA, as he had been treating with him before the accident.

8. Claimant received massage therapy from Renee Schwengel, LCMT (dba Stressless Massage Therapy), starting in on July 9, 2015. (These documents referenced a date of accident of April 15, 2015). Claimant received thirty-nine (39) treatments for neck and back pain through May 2, 2016. There was no evidence in the record that Respondent-Insurer had these treatment notes when considering Dr. Kawasaki's request for authorization.

9. Claimant testified he told the massage therapist that he was seeing her strictly for because of the automobile accident and noted that in the history portion. Claimant received massage therapy for his neck and back. He was also treating with a Dr. Odekirk, who was a chiropractor, because of the automobile accident.

10. On January 18, 2016, Claimant returned to Dr. Kawasaki, who noted he had not evaluated Claimant since August 4, 2014. Dr. Kawasaki noted the MRI showed spinal stenosis at the L2-3 level, with some progression of the stenosis when compared to the prior MRI done in 2012. Claimant indicated the pain had been severe in the low back and left anterior thigh region. Claimant also reported increased pain in his left arm.

11. Dr. Kawasaki found tenderness to palpation through the posterior cervical musculature and upper cervical region, with tenderness at the occipital junction. Claimant also had increased pain with cervical extension, flexion and with the Spurling's test. Claimant's lumbar spine revealed tenderness to palpation diffusely. Dr. Kawasaki's impressions were: poly-trauma with multiple injuries; dental trauma; cervicogenic headaches, with the facetogenic pain generators, with diagnostic initial medial branch blocks at C2-3, C3-4 and third occipital nerve; left C7 radiculopathy with a change on MRI taken in July 2015; left lateral epicondylitis; L2-3 stenosis, with L3 radiculopathy.

12. Dr. Kawasaki opined that a diagnostic and potentially therapeutic left C6-7 transforaminal epidural steroid injection would help decipher how much the left C6-7 foraminal disc protrusion was contributing to the patient's pain. Claimant's clinical findings and symptoms were consistent with a C7 radiculopathy and Dr. Kawasaki recommended doing the epidural steroid injections at the C6-7 level first before proceeding with medial branch block and potentially rhizotomy procedures. Dr. Kawasaki also recommended a left L2-3 transforaminal epidural steroid injection, which could be administered at the same time.

13. On January 21, 2016, Shauna Smith (Injection Coordinator-Colorado Pain and Rehab) sent a document entitled "Injection Request to Adj Marchelle Robinson" via facsimile. This requested authorization for a left C6-7 TF ESI and left C3-4 TF ESI with

Dr. Kawasaki. Attached was a written referral, as well as a written description of the proposed procedure, signed by Dr. Kawasaki.

14. Claimant confirmed he did not disclose he was injured in the MVA and said he had undergone a number of diagnostic tests and extensive treatment. The ALJ credited that explanation, in part, but he did not fully explain his failure to tell Dr. Kawasaki of automobile accident.

15. Kelhai J_____ testified as a witness at the hearing. Ms. J_____ is employed by Insurer and was the adjuster to whom this case was assigned.

16. Ms. J_____ confirmed Insurer received a copy of Dr. Kawasaki's office visit notes and the request for authorization. The documents were sent by fax. A claims note, dated January 21, 2016 referenced receipt and review of the January 18, 2016 office notes from Claimant's visit that day with Dr. Kawasaki. The claims notes were admitted into evidence.[4]

17. The claims notes, dated January 26, 2016, indicated Ms. J_____ returned a call to Shawna (sic) at Dr. Kawasaki's office and advised that ESI injections at the cervical and lumbar were not authorized. The second set of medial branch blocks at C2-3 and C3-4 were the only injections that were authorized at that time. The ALJ inferred that this was a complicated request for authorization.

18. Ms. J_____ testified there was an agreement as to maintenance medical benefits after the FAL was filed. She did not believe that the agreement covered treatment for the neck and back, even though that had previously been provided. She was aware that a *Samms* conference had taken place with Dr. Kawasaki and both attorneys. It was Ms. J_____'s understanding that the condition of Claimant's C6-7 was not related to the workers' compensation injury. Part of the reason the cervical ESI was denied was because what she understood Dr. Kawasaki said at the *Samms* conference The ALJ found that Ms. J_____ was a credible witness, this did not excuse the lack of compliance with the WCRP.

19. Ms. J_____ testified that no written denial of the request for authorization was sent by Insurer. Ms. J_____ stated she had not gathered any medical records related to the MVA by January 2016.

20. There was no evidence in the record that documented a written denial was sent to Dr. Kawasaki and the parties in response to the request for authorization.

21. There was no evidence in the record that Respondent-Insurer obtained a review of the request from Dr. Kawasaki by a physician or other healthcare provider.

[4] Exhibit D, p. 35.

22. The ALJ concluded that Ms. J_____ did not provide objective medical evidence to Dr. Kawasaki and the parties upon which she based the denial of ESI injections for Claimant's cervical and lumbar spine in January 2016.

23. Claimant testified he did not receive a letter from either Insurer or Dr. Kawasaki that the procedure had not been authorized.

24. Records from February 9, 2016 evaluation of Claimant by Lawrence Varner, D.O. were admitted into evidence. This evaluation was done in connection with Claimant's injuries from the MVA (the date was listed as April 28, 2015). At the time of the evaluation, tenderness was noted in the anterior chest wall bilaterally, as well as left arm fatigue, weakness and tingling. The costoclavicular maneuver was positive bilaterally, more so on the left than right. Dr. Varner's impression was: left over the right thoracic outlet syndrome, posttraumatic; post-traumatic paraspinal cervical and lumbar myofascial myofascilitis. Dr. Varner requested a diagnostic lumbar MRI and gave Claimant a prescription for outpatient PT for thoracic outlet syndrome exercises, massages and a home stretching program. Flexeril and Ibuprofen were also prescribed.

25. On May 5, 2016, Claimant was evaluated by Dr. Motz. At that time, he was complaining of continued neck pain and radicular symptoms, which he characterized as mild-moderate. Dr. Motz' assessment was cervical disc disorder with radiculopathy, mid-cervical pain. The MRI was reviewed, which showed multiple DDD, as well as significant spinal stenosis, most severe at C4-67. Dr. Motz recommended cervical ESI to be performed by Giancarlo Checa, M.D. There was a written referral from Dr. Motz to Dr. Checa.

26. Dr. Varner saw Claimant for follow-up evaluations on March 8, April 12 and May 10, 2016. At the May 10, 2016 evaluation, Dr. Varner wrote a prescription for a cervical ESI.

27. A request for authorization of a Cervical Interlaminar ESI C4-5-6-7 (three levels) from Greater Colorado Anesthesia dba MD Pain was sent to Ms. J_____ on May 11, 2016.

28. Ms. J_____ sent a letter to Dr. Checa, dated May 20, 2016 denying the request for Cervical Interlaminar ESI C4-5-6-87 [sic]. Attached to the denial letter was a July 10, 2015 report from Dr. Failinger. (The report from Dr. Failinger was admitted into evidence as part of Exhibit D, p.p. 23-26.)[5] The reason given for the denial was that the treatment was for degenerative changes, not the 2012 work injury. The ALJ concluded that this denial of the request for authorization was made in a timely fashion and comported with WCRP 16-11.

29. A claims note from Insurer, dated May 23, 2016 was admitted into evidence. This documented the fact that Ms. J_____ returned a call to Nicole at MD Pain to advise that the request was denied. A claims note from June 9, 2016 was

[5] There was no reference to the April 2015 MVA in Dr. Failinger's report.

admitted into evidence. This note documented that Nicole from MD Pain requested a copy of the denial letter, which was sent.

30. The ALJ calculated there were 185 days between February 21, 2016 (30 days after receipt of the request for authorization) and August 24, 2016 when the authorization of the requested ESIs was ordered by the undersigned ALJ.

31. Claimant proved he was entitled to penalties for Respondent's failure to respond in writing to the request for authorization issued by Dr. Kawasaki. The ALJ determined penalties in the amount of $20.00 per day should be imposed for the violation, given the circumstances of this case.

32. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The credibility of Claimant, as well as the Ms. J_____ was determinative of the penalty issue.

Penalties

Whether statutory penalties may be imposed under § 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1000 per day where Respondent "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully

enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel". The failure to comply with the procedural rule is a failure to obey an "order" within the meaning of the foregoing section. *Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429, 435 (Colo. App. 2010)

Thus, the ALJ must first determine whether the Respondent's conduct constitutes a violation of the Act, a rule, or an order. As a starting point, the ALJ reviewed the WCRP, as it existed at the time of the request for authorization made by Dr. Kawasaki. The procedure for evaluating the request for authorization made by Dr. Kawasaki was governed by WCRP 16-11 (as it existed at the time). That rule provided in pertinent part:

> "16-11 PAYMENT OF MEDICAL BENEFITS
> …
>
> (C) Process for Contesting Payment of Billed Services Based on Medical Reasons
>
> When contesting payment of billed services based on medical reasons, the payer shall:
>
> (1) Have the bill and all supporting medical documentation under section 16-7(E) reviewed by a physician or other health care professional as defined in section 16-5(A)(1)(a), who holds a license and is in the same or similar specialty as would typically manage the medical condition, procedures, or treatment under review. After reviewing the supporting medical documentation, the reviewing provider may call the billing provider to expedite communication and timely processing of the contested or paid medical bill.
>
> (2) In all cases where a billed service is contested for medical reasons, the payer shall send the provider and the parties written notice of the contest within 30 days of receipt of the bill.
>
> The written notice shall include all of the notice requirements set forth in section 16-11(A)(1) and shall also include:
>
> (a) Date(s) of service(s) being contested, if date(s) was (were) submitted on the bill;
>
> (b) If applicable, acknowledgement of specific uncontested and paid items submitted on the same bill as contested services;
>
> (c) Reference to the bill and each item of the bill being contested;

(d) An explanation of the clear and persuasive medical reasons for the decision, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion;

(e) The specific cite from the Medical Treatment Guidelines exhibits to Rule 17, when applicable; and

(f) Identification of the information deemed most likely to influence the reconsideration of the contest, when applicable.

(3) Any notice that fails to include the required information set forth in this section is defective. Such defective notice shall not satisfy the payer's 30-day notice requirement set forth in this section.

(4) If the payer is contesting the medical necessity of any non-valued procedure provided without prior authorization, the payer shall follow the procedures given in sections 16-11(C)(1)and (2)."

As determined in Finding of Fact 16-17 and 19, Respondent-Insurer failed to deny the proposed ESI injections in writing, as required by WCRP 16-11(2). There was no dispute that Respondents received the request for authorization from an ATP and did not issue a written denial. (Finding of Fact 19). Respondent also failed to obtain a review by a physician or other healthcare professional, as required by WCRP 16-11(1). (Finding of Fact 21). The ALJ determined the language of the foregoing rule is mandatory and Respondent's failure to follow it constituted a violation.

In this regard, the Colorado Court of Appeals' holding in *Crowell v. Industrial Claim Appeals Office*, 298 P.3d 1014, 1016 (Colo. App. 2012) provides authority for the legal conclusion that a violation occurred in this case. In that case, Claimant sustained an injury that caused a deflated breast implant, which was surgically repaired. Claimant experienced symptoms and the ATP recommended further surgery to replace the implant. Respondents denied the requested surgery for nonmedical reasons under the WCRP. When the case went to hearing, the ALJ determined the question of whether the surgery was purely cosmetic was a medical determination and therefore Employer violated WCRP 16-10 (B). The ALJ imposed a one-time penalty of $500 for the failure to abide by the rule.

Writing for the Court of Appeals, Justice Ney concluded that the ALJ erred in determining that Employer[6] committed only a one-time violation. The Court noted that "as a matter of law" Employer violated Rule 16-10 (B) and both the ALJ and the Panel erred in determining otherwise. *Crowell v. Industrial Claim Appeals Office*, *supra*, 298 P.3d at 1014. The case was remanded for a determination of the amount of penalty to be imposed over the period of time at issue.

[6] Justice Ney's opinion referred to Employer and Insurer collectively as "Employer".

In the case at bar, under the holding of *Crowell v. Industrial Claim Appeals Office*, Insurer failed to abide by the Worker's Compensation Rules of Procedure with respect to Dr. Kawasaki's request and the language is mandatory requiring the carrier's compliance. The ALJ considered Respondent-Insurer's argument that the adjuster contacted the treating physician and verbally denied the request for authorization. No authority was proffered by Insurer to establish that a verbal denial complied with the WCRP. The ALJ was not persuaded that this excused the failure to issue a written denial of the requested authorization. Thus, the failure to issue this denial was a violation of the Worker's Compensation Rules of Procedure and the first prong was met in this case.

Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the Respondent's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp*., W.C. No. 4-187-261 (ICAO August 2, 2006), but see, *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that Respondent know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996).

The question of whether the Respondent's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office*, *supra,* 114 P.3d at 99. In the case at bar, the ALJ concluded Respondent's response in failing to authorize the medical treatment was not reasonable. Insurer's denial of the proposed procedure was not in writing and was not based on the report of a medical doctor or healthcare provider. (Findings of Fact 20-22). Also, while there was certainly evidence in the record of a potential intervening cause (motor vehicle accident), there was no evidence that this information was utilized by the adjuster to deny the treatment requested by Dr. Kawasaki. (Finding of Fact 19).

Insurer's conduct with regard to Dr. Kawasaki's request for authorization is mitigated somewhat by the explanation provided by Ms. J_____ that Dr. Kawasaki had expressed an opinion in the context of the *Samms* conference. She testified Dr. Kawasaki indicated that the neck was not related to the work injury. (Finding of Fact 18). As found, this provided some explanation for the lack of written response by Insurer, but not a complete one. The ALJ concluded this did not excuse the failure to follow the rules. In addition, Claimant was also being treated by multiple physicians and the ALJ inferred that this was a complicated request for authorization. (Finding of Fact 17). However, Insurer's subsequent response to the request for the same procedure by Dr. Checa complied with the WCRP. This raises the question why Dr. Failinger's July 10, 2015 report was not used to deny the procedure requested by Dr. Kawasaki. The ALJ concluded that Respondent's conduct was not reasonable and therefore penalties are appropriate in this case.

Finally, the ALJ determined that the amount of penalties should be on the lower end of the range of what is available under § 8-43-304(1), C.R.S. ($20.00 for day each day of the violation). (Finding of Fact 31). This was based, at least in part, on the failure of Claimant to provide Dr. Motz and Dr. Kawasaki with information concerning the automobile accident. (Findings of Fact 7 and 14). The failure by Claimant to provide this information to his ATPs deprived them of relevant and pertinent medical information that could have potentially impacted both treatment recommendations (including the cervical ESIs) and a determination of the relatedness of the neck condition to the work injury. Since neither physician had this information, it is impossible to assess the impact disclosure of this information would have made. Claimant also did not advise Dr. Failinger, who performed an IME on behalf of Respondents. Thus, the ALJ determined that the totality of the circumstances warrant a relatively *de minimis* penalty in this case.

ORDER

It is therefore ordered:

1. Respondent-Insurer shall pay Claimant the amount of $3,700.00 (185 days X $20.00 per day) in penalties for the failure to authorize the treatment recommended by Dr. Kawasaki, which was not denied in writing.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left ankle injury during the course and scope of his employment with Employer on February 9, 2019.

2. Whether Claimant has proven by a preponderance of the evidence that Respondents failed to timely provide a list of at least four designated physicians in compliance with §8-43-404(5)(a)(I)(A), C.R.S. and he is thus permitted to select a treating physician.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injury.

4. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period February 10, 2019 until terminated by statute.

5. Whether Respondents have proven by a preponderance of the evidence that Claimant abandoned his position and was responsible for his termination from employment under §8-42-105(4) C.R.S. and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $375.00.

FINDINGS OF FACT

1. On February 8, 2019 Claimant began working for Employer as a Dishwasher. On February 9, 2019 Claimant tripped on a floor drain in Employer's kitchen while performing his job duties.

2. Claimant testified that he stepped on the drain, the lid shifted and his left ankle rolled. He explained that he did not fall all the way to the ground, but dropped down to his left side. Claimant noted that he suffered immediate left ankle pain and swelling. He reported the injury to Manager Hildo Salvadore and was sent home. Claimant did not complete an incident report and Mr. Salvadore did not inquire whether he wanted to see a doctor. Claimant went home and iced his ankle.

3. Claimant testified that on February 10, 2019 he reported his injury to Manager Holly Empkey when he first arrived at work. He remarked that Ms. Empkey

inquired about his injury after seeing him limping at the beginning of his shift. Ms. Empkey asked him to complete his morning work and then sent him home. Claimant commented that he discussed seeing a doctor with Ms. Empkey, and they agreed he would go to Urgent Care on the following day. He then finished his morning duties and went home.

4. On February 11, 2019 Claimant visited Gina Nelson, M.D. at Urgent Care for an examination. Claimant reported that he was experiencing sharp left ankle pain. Dr. Nelson remarked that Claimant had previously suffered a left foot fracture and undergone three surgeries. She noted that he normally experienced constant numbness in his small toes and difficulty moving. Dr. Nelson diagnosed Claimant with a left ankle ligament strain. She referred Claimant to a specialist for further evaluation.

5. Claimant called Ms. Empkey shortly after he left Urgent Care. She advised him to stay off work for a few days but to call and let her know how he was doing. Claimant remarked that Mr. Salvadore called him later in the day. He returned the call but had to leave a voicemail.

6. Ms. Empkey testified that on February 10, 2019 she did not notice Claimant limping and he did not report an injury until about one hour into his shift. She inquired whether Claimant wanted to see a doctor, but he declined. On February 11, 2019 Claimant called Ms. Empkey to let her know how he was doing. Ms. Empkey remarked that they agreed he would report to work on February 14, 2019 at 8:00 a.m. However, when Claimant failed to appear on February 14, 2019, Ms. Empkey or Mr. Salvadore attempted to contact him. However, Claimant never returned the call. Ms. Empkey considered Claimant a no call/no show and determined that he had abandoned his job.

7. Claimant explained that he had suffered a prior left ankle injury while living in Costa Rica in May 2016. While attempting to break up a mugging, Claimant suffered stab wounds and a left ankle injury. He returned to New York a few days after the incident. On September 25, 2017 Claimant underwent left ankle arthroscopic surgery. On December 15, 2017 Claimant visited his surgeon and reported continued left ankle pain and swelling. The surgeon recommended continued progression of activities and stated that Claimant's ankle would heal on its own.

8. Claimant testified that, prior to his employment with Employer, he worked for Premium Retail Services converting stores. He remarked that the job required him to remain on his feet for long hours. Claimant commented that he did not have any left ankle symptoms prior to his February 9, 2019 industrial injury and has not received any left ankle treatment since December 2017.

9. On February 21, 2019 Claimant visited David B. Hahn, M.D, for an evaluation. Dr. Hahn recounted Claimant's history of left ankle problems. He detailed that in April 2016 Claimant had been preventing a mugging in Costa Rica when he sustained stab wounds and left ankle fractures. Claimant underwent left ankle surgery in September 2017 and subsequent physical therapy in Syracuse, New York. Dr. Hahn noted that Claimant's left ankle had been doing well until he suffered an injury at work on February 9, 2019. He detailed that Claimant had twisted his left ankle on a drain in

Employer's kitchen. Claimant subsequently suffered significant pain and partial locking of his left ankle. Dr. Hahn remarked that Claimant's left ankle symptoms were similar to what he had experienced prior to his left ankle surgery. After Claimant underwent x-rays, Dr. Hahn performed a physical examination. The examination revealed a very stiff left ankle with mild to moderate swelling. Dr. Hahn determined that Claimant had likely re-injured the area of a psteochondral defect in his left ankle and "might even have a loose body that is presently locking his ankle joint." Dr. Hahn recommended a left ankle MRI and referred Claimant for a surgical evaluation.

10. On February 26, 2019 Claimant underwent a left ankle MRI. The MRI revealed a tiny lateral talar dome osteochondral lesion that measured two by two millimeters.

11. On March 4, 2019 Claimant returned to Dr. Hahn for an examination. Dr. Hahn noted that Claimant suffered a Workers' Compensation injury when he twisted his left ankle on a drain at work. He remarked that Claimant has experienced left ankle problems in the past, but had not suffered any symptoms at work prior to twisting his ankle on February 9, 2019. Claimant reported that his ankle was still hurting and locking. An MRI revealed a small osteochondral lesion in the left ankle. Dr. Hahn reasoned that, because Claimant's ankle was locking and he had undergone surgical repair several years earlier, Claimant would likely require surgical intervention.

12. On March 5, 2019 Claimant visited Alan Ng, DPM at Advanced Orthopedic and Sports Medicine Specialists for a consultation. Dr. Ng reported that Claimant had been referred by Dr. Hahn for "complaints of chronic left ankle pain." He noted that Claimant had suffered an acute left ankle fracture in Costa Rica a few years earlier that "did not quite heal right." Claimant subsequently underwent left ankle surgery. He also recently suffered an acute left ankle sprain that caused severe pain. Bracing, medications and physical therapy failed to improve Claimant's symptoms. Dr. Ng diagnosed Claimant with "OCD lateral talar dome left ankle secondary to multiple acute injuries causing chronic and severe pain." Claimant and Dr. Ng discussed possible surgical repair.

13. On March 25, 2019 Claimant underwent left ankle surgery. Dr. Ng specifically performed a left ankle arthroscopy with extensive debridement and a repair of a large osteochondral defect.

14. On April 4, 2019 Claimant returned to Dr. Ng for an evaluation. Dr. Ng prescribed an immobilization boot. Claimant subsequently underwent physical therapy and transitioned out of the boot into supportive footwear.

15. On June 25, 2019 Claimant returned to Dr. Ng for an evaluation. Dr. Ng noted that Claimant presented to the clinic 10 weeks after a left ankle arthroscopy. Claimant subsequently underwent physical therapy. He reported pain on the left side of his ankle. The symptoms had been chronic and non-traumatic. Claimant commented that the injury had occurred at home. He remarked that his symptoms occur constantly and have worsened. Dr. Ng administered a cortisone injection for continued severe pain.

16. Claimant has demonstrated that it is more probably true than not that he suffered a compensable left ankle injury during the course and scope of his employment with Employer on February 9, 2019. Initially, Claimant explained that he tripped over a drain and twisted his left ankle while working in Employer's kitchen on February 9, 2019. The medical records consistently reflect that Claimant twisted his left ankle in Employer's kitchen and experienced stiffness, locking and discomfort. Although the record reveals that Claimant suffered a prior left ankle injury while living in Costa Rica in May 2016 that required surgical repair, Claimant credibly commented that he did not have any left ankle symptoms prior to his February 9, 2019 industrial injury. He has also not received any left ankle treatment since December 2017. Furthermore, on March 4, 2019 Dr. Hahn determined that Claimant suffered a Workers' Compensation injury when he twisted his left ankle on a drain at work. Notably, he remarked that Claimant has experienced left ankle problems in the past, but had not suffered any symptoms prior to twisting his ankle on February 9, 2019. Accordingly, the February 9, 2019 tripping incident at work aggravated, accelerated or combined with Claimant's pre-existing condition to produce a need for medical treatment.

17. Claimant has proven that it is more probably true than not that Respondents failed to timely provide a list of at least four designated physicians. Claimant credibly explained that he reported his left ankle injury to Mr. Salvadore on February 9, 2019. He also discussed his injury with Ms. Empkey on February 10, 2019. Employer thus had some knowledge of accompanying facts connecting Claimant's left ankle injury with his employment and suggested to a reasonably conscientious manager that the case might involve a potential compensation claim. However, the record is devoid of evidence that Employer provided Claimant with a list of four designated providers. Although Ms. Empkey testified that she offered Claimant medical care but he declined to see a doctor, the bulk of the credible evidence demonstrates that Employer did not refer Claimant for medical care. The right to select a treating physician thus passed to Claimant.

18. Claimant has established that it is more probably true than not that he is entitled to receive authorized, reasonable and necessary medical treatment for his February 9, 2019 left ankle injury. On February 11, 2019 Claimant visited Dr. Nelson at Urgent Care for an examination. Dr. Nelson diagnosed Claimant with a left ankle ligament strain and referred him to a specialist for further evaluation. Claimant subsequently received left ankle treatment from Dr. Hahn and underwent an MRI. Dr. Hahn reasoned that, because Claimant's ankle was locking and he had undergone surgical repair several years earlier, Claimant would likely require surgical intervention. On March 5, 2019 Claimant visited Dr. Ng at Advanced Orthopedic and Sports Medicine Specialists based on a referral from Dr. Hahn. On March 25, 2019 Dr. Ng performed surgery on Claimant's left ankle. Claimant subsequently visited Dr. Ng for follow-up treatment. The record reveals that Claimant's left ankle care constituted authorized, reasonable and necessary medical treatment for his February 9, 2019 industrial injury.

19. Claimant has demonstrated that it is more probably true than not that he is entitled to receive TTD benefits for the period February 10, 2019 until terminated by statute. On February 10, 2019 Claimant visited Urgent Care for his left ankle injury that occurred when he tripped on a drain in Employer's kitchen. Claimant was subsequently

unable to perform his job duties. Claimant has not received a release to return to regular employment or reached Maximum Medical Improvement (MMI). The record thus reveals that his left ankle injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

20. Respondents have failed to prove that it is more probably true than not that Claimant abandoned his position, was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Ms. Empkey testified that on February 11, 2019 she spoke to Claimant about how he was doing. She remarked that they agreed Claimant would report to work on February 14, 2019 at 8:00 a.m. However, when Claimant failed to appear on February 14, 2019 Ms. Empkey or Mr. Salvadore attempted to contact him. However, Claimant never returned the call. Ms. Empkey considered Claimant a no call/no show and determined he had abandoned his job. However, Claimant noted he called Ms. Empkey shortly after he left Urgent Care. She advised him to stay off work for a few days but to call and let her know how he was doing. Claimant remarked that Mr. Salvadore called him later in the day. Claimant returned the call but had to leave a voicemail. Despite Ms. Empkey's testimony, the bulk of the records do not support her contention. Claimant continued to receive left ankle treatment, was unable to perform his job duties and ultimately underwent surgery. More importantly, the record reveals that Claimant did not precipitate his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over his termination from employment. Claimant is thus not precluded from receiving TTD benefits. Accordingly, Claimant shall receive TTD benefits for the period February 10, 2019 until terminated by statute.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left ankle injury during the course and scope of his employment with Employer on February 9, 2019. Initially, Claimant explained that he tripped over a drain and twisted his left ankle while working in Employer’s kitchen on February 9, 2019. The medical records consistently reflect that Claimant twisted his left ankle in Employer’s kitchen and experienced stiffness, locking and discomfort. Although

the record reveals that Claimant suffered a prior left ankle injury while living in Costa Rica in May 2016 that required surgical repair, Claimant credibly commented that he did not have any left ankle symptoms prior to his February 9, 2019 industrial injury. He has also not received any left ankle treatment since December 2017. Furthermore, on March 4, 2019 Dr. Hahn determined that Claimant suffered a Workers' Compensation injury when he twisted his left ankle on a drain at work. Notably, he remarked that Claimant has experienced left ankle problems in the past, but had not suffered any symptoms prior to twisting his ankle on February 9, 2019. Accordingly, the February 9, 2019 tripping incident at work aggravated, accelerated or combined with Claimant's pre-existing condition to produce a need for medical treatment.

Right of Selection

8. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

9. As found, Claimant has proven by a preponderance of the evidence that Respondents failed to timely provide a list of at least four designated physicians. Claimant credibly explained that he reported his left ankle injury to Mr. Salvadore on February 9, 2019. He also discussed his injury with Ms. Empkey on February 10, 2019. Employer thus had some knowledge of accompanying facts connecting Claimant's left ankle injury with his employment and suggested to a reasonably conscientious manager that the case might involve a potential compensation claim. However, the record is devoid of evidence that Employer provided Claimant with a list of four designated providers. Although Ms. Empkey testified that she offered Claimant medical care but he declined to see a doctor, the bulk of the credible evidence demonstrates that Employer did not refer Claimant for medical care. The right to select a treating physician thus passed to Claimant.

Medical Benefits

10. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A

preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

11. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an Authorized Treating Physician (ATP) refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

12. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his February 9, 2019 left ankle injury. On February 11, 2019 Claimant visited Dr. Nelson at Urgent Care for an examination. Dr. Nelson diagnosed Claimant with a left ankle ligament strain and referred him to a specialist for further evaluation. Claimant subsequently received left ankle treatment from Dr. Hahn and underwent an MRI. Dr. Hahn reasoned that, because Claimant's ankle was locking and he had undergone surgical repair several years earlier, Claimant would likely require surgical intervention. On March 5, 2019 Claimant visited Dr. Ng at Advanced Orthopedic and Sports Medicine Specialists based on a referral from Dr. Hahn. On March 25, 2019 Dr. Ng performed surgery on Claimant's left ankle. Claimant subsequently visited Dr. Ng for follow-up treatment. The record reveals that Claimant's left ankle care constituted authorized, reasonable and necessary medical treatment for his February 9, 2019 industrial injury.

TTD Benefits and Responsible for Termination

13. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to

resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

14. Respondents assert that Claimant is precluded from receiving temporary disability benefits because he was responsible for her termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAO, July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing his assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAO, Sept. 27, 2001).

15. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive TTD benefits for the period February 10, 2019 until terminated by statute. On February 10, 2019 Claimant visited Urgent Care for his left ankle injury that occurred when he tripped on a drain in Employer's kitchen. Claimant was subsequently unable to perform his job duties. Claimant has not received a release to return to regular employment or reached Maximum Medical Improvement (MMI). The record thus reveals that his left ankle injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

16. As found, Respondents have failed to prove by a preponderance of the evidence that Claimant abandoned his position, was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD

benefits. Ms. Empkey testified that on February 11, 2019 she spoke to Claimant about how he was doing. She remarked that they agreed Claimant would report to work on February 14, 2019 at 8:00 a.m. However, when Claimant failed to appear on February 14, 2019 Ms. Empkey or Mr. Salvadore attempted to contact him. However, Claimant never returned the call. Ms. Empkey considered Claimant a no call/no show and determined he had abandoned his job. However, Claimant noted he called Ms. Empkey shortly after he left Urgent Care. She advised him to stay off work for a few days but to call and let her know how he was doing. Claimant remarked that Mr. Salvadore called him later in the day. Claimant returned the call but had to leave a voicemail. Despite Ms. Empkey's testimony, the bulk of the records do not support her contention. Claimant continued to receive left ankle treatment, was unable to perform his job duties and ultimately underwent surgery. More importantly, the record reveals that Claimant did not precipitate his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over his termination from employment. Claimant is thus not precluded from receiving TTD benefits. Accordingly, Claimant shall receive TTD benefits for the period February 10, 2019 until terminated by statute.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable left ankle injury during the course and scope of his employment with Employer on February 9, 2019.

2. Based on Respondents' failure to provide a list of four designated physicians, the right to select a treating provider passed to Claimant.

3. Claimant's medical treatment was authorized, reasonable and necessary for his February 9, 2019 industrial injury.

4. Claimant earned an AWW of $375.00.

5. Claimant shall receive TTD benefits for the period February 10, 2019 until terminated by statute.

6. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you

mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury to his right shoulder, neck, and brachial plexus?

II. If a compensable injury has been shown, is Claimant entitled to all reasonable, necessary, and related medical treatment for said injury, including, but not limited to, the EMG as recommended by Dr. Leggett?

STIPULATIONS

I. Claimant's Average Weekly Wage ("AWW") is $888.46.

II. Claimant's Authorized Treating Provider ("ATP") is CCOM.

The ALJ accepted these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant works for the Employer at the La Vista Correctional Facility. He has been employed at this facility from 2006 through the present. Claimant was a Correctional Officer I in late 2018 on the date of injury. Claimant is often required to physically restrain adult inmates. This often entails physically taking the inmate to the ground to be handcuffed.

2. Claimant testified that Employer performs annual defense tactics training to ensure the employees are adequately trained to restrain and defend themselves against combative inmates. Claimant has performed the annual defense tactics course every year since he began working for the Employer. He reports no prior physical difficulties performing the training in the past.

3. Claimant had a previous injury to his right shoulder, that he estimated to have been in approximately 2002 or 2003. He ended up having a "stretched" rotator cuff per his recollection, that resulted with arthroscopic surgery with Dr. David Weinstein. He did approximately six weeks of post-surgical rehabilitation, and indicated that his shoulder "felt great" after treatment had completed.

4. Claimant also had surgery on his neck in November of 2013; however, this surgery was simply to remove a cyst that was growing on the left side of

Claimant's neck. Claimant had no ongoing neck pain after the cyst removal. Claimant denies having any right shoulder or neck symptoms on the morning of December 21, 2018 before he began work that morning.

5. The trainees are required to sign a "Defensive Tactics Participation Form," indicating they are fit to perform the training. Claimant signed this form. (Ex. 10, p. 59). The form warns that the course requires a certain amount of physical strength and agility, and that it can be physically demanding. The course involves "joint manipulations," striking and taking body strikes, and pressure point compression. Examples given on the form of activities to be performed included:

    ● Lift arms above head and kick as high as own waist
    ● Stabilize another person to accomplish a controlled takedown
    ● Use arms, palms of hands, shins, and feet to deliver strikes
    ● Rotate body 90 degrees with feet planted for striking with foot or using a defensive tactic
    ● Get down on one or both knees and up again, unassisted, with multiple repetitions. *Id.*

6. Claimant's training course on Friday, December 21, 2018 began at about 8:00 a.m., and ended at approximately 4:30 p.m. The first two to three hours of the course focused on teaching by the instructors and watching instructive videos. Claimant was partnered up with Sergeant Aering for the physical portion of the training.

7. Claimant testified there was a particular maneuver and takedown done by Sgt. Aering on him during the training course that caused his injuries. He explained that Sgt. Aering approached him from the rear and he asked Claimant to put his hands behind his body and the following transpired:

> I'm instructed by Sergeant Erring [sic] to put -- lean over your upper torso, put your arms behind your back. And what he'll do is he'll grab one -- my right arm with his hand and place a cuff on it. At that point, you're instructed by the instructor to not comply with the officers' request. So you -- at that time you're asked to pull away as if, you know, you're going to try to get away from the officer.
>
> At that point, the officer is instructed to pull your arm and then whip you around and take you down to the floor and place your arm at an approximate 45-degree angle as the inmate is on their stomach. What the officer will then do is squat as your arm is pushed forward toward the body at a 45-

> degree angle, and you see they're holding the -- the instructor will say stop, I want (inaudible) to squat and what they'll do is they'll approach the body in the squat position as your arm is kept up; **that is a pretty extreme angle at the time**.
>
> Then they're asked to bend your arm, the inmate is told by the officer to bend your elbow and put the arm at the small of your back. At which time they will grab the other arm and cuff that with the other arm at that time. (Hearing Transcript, pp 28-29) (emphasis added).

On this occasion, Claimant described these movements as "slow and methodical." When asked what he felt right afterwards, Claimant stated: " Just tightness, a little bit of pain, but I mean, nothing to, you know, it's pretty normal." (Hearing transcript, p. 29)

8. The trainees are required to sign a form at the end of the training session indicating whether they had sustained any injuries as a result of the training. Claimant signed at 4:39 p.m., indicating that he did not incur any injuries as a result of participating in Defensive Tactics training. (Ex. 10, p. 59). Claimant testified that these are the same training maneuvers he had been performing since 2006. He said that it is "pretty normal" to feel sore after this particular training, and he assumed the pain he was experiencing at that time was run-of-the-mill soreness for a 59-year-old man.

9. Claimant testified that he was off work for the next three days, returning to work on Tuesday, December 25, 2018. Claimant spent his three days off relaxing and attempting to treat himself with stretching and ibuprofen. He testified that on December 24, 2018—the date before his return to work—he was still having soreness and tightness in the affected areas.

10. His plan was to return to work on December 25, 2018 and see how his body handled the work given the pain he was still in from the training. If he handled the workday fine, he was not going to file a claim. If the pain did not go away, he intended to file a claim. By the end of the workday on December 25, 2018, the pain had not gone away. Claimant promptly reported the injury the next day.

11. Claimant filled out a detailed First Report of Injury form on December 26, 2018. (Ex. 4, p. 9). Claimant described the incident in his own handwriting as follows:

> On Dec. 21, 2018 at 12:30pm, while practicing defensive tactics training, I was taken down to the mat by my right shoulder, my shoulder was extended a little too far toward my back. The soreness has not gone away and has been bothering me off and on since then." *Id.*

12. Claimant indicated on this form, however, that he did not intend to seek medical treatment. He explained at hearing that he formally reported the injury at this time in case the pain never went away. If the pain did not go away, he would have documentation that he reported the injury. If the pain subsided, then nothing would have come of it. Claimant eventually sought treatment on January 7, 2019 because the tightness and the pain in the shoulder only became more painful over time.

13. Claimant first presented for treatment at CCOM on January 7, 2019, and was evaluated by Brendon Madrid, NP. (Ex. 5, p. 14). He reported that he had suffered a right shoulder injury on December 21, 2018 after being taken down by another coworker during a training exercise. He did not recall a "pop" or any sort of other specific "ouch" moment, but he did feel sore and the soreness had not subsided from December 21, 2018 through January 7, 2019. On this date, he denied any numbness or tingling. Claimant disclosed his 2003 right shoulder injury that required surgery.

14. NP Madrid diagnosed Claimant with a strain of the muscles and tendons of the rotator cuff of the right shoulder. Physical examination also noted tautness to the muscles on the right side of Claimant's neck with reduction in range of motion. *Id.* at 15. Claimant was referred for physical therapy, and prescribed ibuprofen 800mg three times per day and Flexeril at bedtime.

15. The first physical therapy appointment took place on January 8, 2019. (Ex. 6, pp. 33-35). Sally Myers, PT, documents Claimant's reported mechanism of injury along with his corresponding symptoms. Claimant stated to her that he believed he injured himself during the aforementioned defensive tactics training. He reported pain in his right posterior, lateral, and superior shoulder, along with the right side of his neck into the right scapular region. *Id.* at 33. The objective findings regarding the cervical spine included abnormal cervical spine range of motion with pain radiating down to the lateral right shoulder. *Id.*

16. Claimant's next appointment at CCOM was with NP Madrid on January 23, 2019. (Ex. 5, pp. 18-20). Claimant was still complaining of achiness of the right shoulder, along with pain in the lateral and posterior deltoid and neck area. His shoulder pain at this visit was 7/10, 60 to 80% of the time. He did have full range of motion in his shoulders and neck. Claimant was also now complaining of a sensation of pins and needles in his right hand. *Id.* at 18. NP Madrid instructed Claimant to continue with therapy and his medications. *Id.* at 19.

17. Claimant's last authorized physical therapy occurred on February 6, 2019. (Ex. 6, p. 45). Claimant remained concerned about the numbness and tingling he was

experiencing running down the anterior/lateral shoulder and down into his right thumb.

18. An MRI was performed on February 15, 2019 at Open MRI of Pueblo. The results were interpreted by Dr. Charles Domsen, MD. Two **"Impressions"** were noted:

    1. Mild tendonosis in the supraspinatus tendon without tear.
    2. Mild biceps tendonitis without tear.

    A small effusion was also noted in the acromioclavicular joint. (Ex. 7).

19. Claimant was evaluated by Dr. Daniel Olson at CCOM on February 20, 2019. (Ex. 5, p. 24). It was noted that he had been through seven therapy sessions with "no significant improvement." He continued to complain of the numbness and tingling, now with mention of it extending into his thumb and next fingers. Dr. Olson reviewed the MRI of Claimant's shoulder that showed some tendinosis of the supraspinatus and biceps tendon, but no tearing. *Id.* On examination, Dr. Olson noted that Claimant "does have some tight myofascial areas noted in the brachialis of the deltoid." *Id.* at 25. Dr. Olson opined that the cause of Claimant's symptoms were related to his work activities.

20. Dr. Olson stated in his February 20, 2019 note, "I am concerned about the possibility of this being a brachial plexus injury or possibly an axillary nerve injury from the training incident." (Ex. 5, p. 25). Dr. Olson wanted either Dr. Dwight Leggett or Dr. Michael Sparr to evaluate Claimant, and perform an EMG, given Claimant's symptoms and his MRI, which was negative for tears. *Id.*

21. Claimant was evaluated by Dr. Dwight Leggett of Accelerated Recovery Specialists on March 19, 2019. (Ex. 8). Claimant reported a similar mechanism of injury to Dr. Leggett that he had told to his providers and his employer. Dr. Leggett noted that the intensity and frequency of Claimant's pain was getting better; however, the ongoing numbness and tingling had not gotten any better. He also noted that, "While [Claimant] is pleased with his improvement, he continues to have significant weakness into the right arm, as well as changes in the muscle size. There is an area over the lateral aspect of the right elbow where he sees a *tremendous difference in muscle bulk*." *Id.* at 51 (emphasis added). Claimant also reported ongoing neck tightness and intermittent burning coming from the trapezius region.

22. Dr. Leggett concurred with Dr. Olson's assessment:

    > I believe you are quite accurate with your assessment of his injury, with his symptoms being from brachioplexopathy, as well as injury

> to the axillary nerve. Based on [Claimant's] distribution of sensory abnormalities, weakness, and atrophy, I believe that he has injured the posterior cord of the brachial plexus, with profound effect on to the radial nerve." (Ex. 8, p. 53).

23. Dr. Leggett also indicated that examination revealed tightness and irritation into the cervical region, with the numbness and tingling traveling to the thumb, which, per Dr. Leggett, could represent a C6 radiculopathy. Dr. Leggett acknowledged he was only authorized for one evaluation, but it was his recommendation to proceed with an EMG "as soon as possible." *Id.*

24. Claimant's last appointment with an ATP before Respondents terminated treatment (and failed to authorize the EMG) was on March 22, 2019 with Dr. Olson. (Ex. 5, pp. 29-32). Dr. Olson noted that Dr. Leggett agreed with him that Claimant was likely suffering from a brachial plexus injury. Dr. Leggett was putting in for an EMG study.

25. Dr. Olson's final note, under treatment plan, states:

> 1. [Claimant] will undergo EMG testing hopefully soon.
> 2. I will recheck in 4 weeks and hopefully the test has been completed. *Id.* at 30.

26. At hearing, Claimant testified that he never had the EMG completed because it was his understanding that Respondents had denied the EMG and further care. Claimant continues to experience the numbness and tingling from his shoulder down to his right thumb.

27. Dr. Nicholas Kurz performed an IME of Claimant at the request of Respondents on July 1, 2019. (Ex. A). He was accepted at hearing as an expert in family practice and occupational medicine, and is Level II accredited. After reviewing the medial records, examining Claimant, and taking a history from Claimant, he concluded that this training maneuver did not cause a work injury to Claimant's shoulder or neck. He further opined that said maneuvers did not aggravate a preexisting condition.

28. Dr. Kurz based his opinion on the mechanism of injury as reported by Claimant, the delay in onset of symptoms, the "on and off' nature of the reported symptoms, Claimants declining medical treatment, and continuation of Claimant's work duties. Dr. Kurz felt that brachial plexus injuries often result in "cold stingers" or "burners" which typically last a few seconds or minutes. They can last for days on occasion. It was Dr. Kurz' opinion that traumatic rotator cuff injuries, labral tears, and brachial plexus injuries present with immediate complaints and acute issues, not slowly over months. *Id.*

29. Dr. Kurz opined further that one would not expect Claimant's injuries as reported to result from having his arm at a 45 degree angle and placed behind him. He deals with police officers and their training, and said training is padded up and full speed; yet he has not seen a brachial plexus injury. Dr. Kurz opined that Claimant's symptoms are more likely related to degenerative changes from Claimant's prior shoulder injury, and possibly from degenerative changes to his cervical spine. Even if there were some C6 involvement causing Claimant's right arm symptoms, it was not correlated to the work incident of Dec. 21, 2018, nor was the treatment rendered to date related to said work incident. Dr. Kurz opined that Dr. Olsen erred in not sending Claimant to his PCP, outside the Workers Compensation system, on 'day one.'

30. Dr. Timothy Hall performed an IME at the request of Claimant's counsel on July 19, 2019. (Ex. 9). At hearing, he was accepted as an expert in physical medicine and rehabilitation, and is Level II accredited. Dr. Hall's physical examination findings were similar to the examinations of Drs. Olson and Leggett *Id.* at 56. Dr. Hall's "Impressions" were as follows:

> 1. Soft tissue injury/sprain to the shoulder region (resolved)
> 2. Possible brachial plexopathy/thoracic outlet syndrome (resolving).
> 3. Symptoms of numbness in the upper extremity without dermatomal findings.

31. He opined in his report that Claimant should have an MRI of his neck, although that was not "absolutely necessary." He also testified at hearing he felt it reasonable for Claimant to undergo the EMG. Dr. Hall specifically testified that the position Claimant was put in during his training, particularly the internal rotation of the shoulder, put the nerves of the brachial plexus under strain. He opined that this injury was work related. Dr. Hall felt as though Claimant had appropriate treatment, but, "He [Claimant] had a fairly significant injury." *Id* at 57.

32. Dr. Hall testified at hearing. He addressed Dr. Kurz' opinion from his IME report, in which Dr. Kurz opined that a brachial plexus injury would be of high-force, high-impact which would yield immediate pain:

> ….If one had a tear, a complete avulsion of a nerve in the brachial plexus, well, obviously you would have immediate symptoms and very dramatic symptoms. It's clear in this case that that is not the case. He—he did not have a dramatic injury to his brachial plexus. He had what would be considered a fairly mild stretch injury which actually, probably occurs fairly commonly in the world, whereas full blown avulsions of nerves occur very infrequently…..

> Now when you have a lesser intense event, it's not the least bit unusual to not have a lot of symptoms initially to have perhaps, some musculoskeletal symptoms first which would be local discomfort of aching or muscle tightness and the nerve situation to show up later…(Hearing transcript, pp. 17-18)

33. Dr. Hall also addressed the non-dermatomal findings, and how they might relate to a brachial plexus injury:

> Brachial plexus injuries are usually not in – in dermatomal distributions….If you have your lesion really high, sometimes you could get a dermatomal patter, but that's unusual. Most of the problems are usually more distal, and you just don't get dermatomal distribution. But my point is, if the symptoms are from the cervical spine, they're almost always dermatomal, which his are not. (Hearing transcript, pp. 18-19).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should

consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

Compensability, Generally

D. Claimant must prove by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); S*ee*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

E. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.*

F. Under the Act there is a distinction between "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." § 8-40-201 (1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967); *see also*, § 8-40-201(2). Consequently, a "compensable injury" is one which requires medical treatment or causes disability. *Id.; Romero v. Industrial Commission,* 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.,* W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990); *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988); *Romine v. Air Wisconsin Airlines,* W.C. No. 4-609-531 (October 12, 2006). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero,* supra; § 8-41-301, C.R.S. Given the distinction between the terms "accident" and "injury," an employee can experience symptoms, including pain at work, without sustaining a compensable "injury." This is true even when the employee is clearly in the course and scope of employment performing a job duty. See *Aragon,* supra; *McTaggart-Kerns v. Dell, Inc.,* W.C. No. 4-915-218 (ICAO, May 29, 2014)

G. Simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship. The panel in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-915-218 (ICAO, May 29, 2014) noted, "[C]orrelation is not causation." Additionally, an incident that merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

H. The determination of whether there is a sufficient "nexus" or causal relationship between claimant's employment and any injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Moreover, the question of whether Claimant met his burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant suffered a Compensable Work Injury

I. Respondents argue that Claimant experienced minimal symptoms during the training, and as a result, the symptoms he experienced thereafter are therefore not related. The ALJ does not concur in this instance. There is no requirement that a specific, dramatic, incident, occurs for an injury to be deemed compensable. "This Court has many times sustained Commission findings of causation where the testimony indicated that the medical causes of an injury remained shrouded in mystery, *when the evidence as a whole* was sufficient to justify the Commission's legal conclusion that the injury was caused by the employment." *Industrial Commission v. Riley*, 441 P.2d 3, 591 (Colo. 1968) (emphasis added).

J. More recently, the Industrial Claim Appeals Office expounded on this rationale. "We do not dispute that a temporal relationship between an industrial event and the onset of symptoms does not compel the finding of a causal connection between the symptoms and the industrial event. However, the court of appeals has upheld an award of benefits even where the exact medical cause of the injury remains shrouded in mystery, *but the circumstantial evidence as a whole is sufficient to justify the inference that it was work-related." Schultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (November 17, 2000) (emphasis added) (Upholding an ALJ's finding that the DIME did not err in finding the claimant's symptoms that arose six weeks after the date of injury to be causally related to said injury). In this instance, there is no evidence that Claimant's symptoms arose from either non work-related causes, or due to preexisting conditions.

K. The ALJ finds that the totality of the evidence suggests Claimant's injuries were more likely than not caused by his training on December 21, 2018. The ALJ credits the testimony of Claimant and finds him to be credible-both in his reporting his symptoms to his medical providers, and in his testimony. Claimant underwent defense tactics training and signed a form at the end of the training indicating he did not sustain

any injuries during the training; however, in reviewing the totality of the circumstances, the ALJ finds it reasonable that Claimant did not report an injury at that time as he felt he was experiencing general soreness from the strenuous training-involving *joint manipulation.* As is frequently the case in law enforcement, Claimant's first instinct was to try to 'tough it out,' especially since he was going to be off work for the next few days. Claimant credibly testified that he returned to work for one full day afterwards to test his body to see if he needed to file a formal report of injury. It became apparent to Claimant after his work on December 25, 2018 that his "soreness" could well have been an injury, and he duly reported it forthwith.

L Claimant's ATP, Dr. Olsen, believed his injuries were work-related, and treated him as such. Within the Workers Compensation system, Claimant was referred to Dr. Leggett, who also believed Claimant suffered a work-related brachial plexus injury. The MRI showed no actual tears, but did demonstrate tendonitis of the biceps and tendonosis of the supraspinatus, consistent with the mechanism of injury. Said MRI yielded no information - either way - regarding a possible brachial plexus injury. An EMG as suggested by Dr. Leggett could have told the tale, but it was denied. While Dr. Kurz sincerely believes that a brachial plexus injury would have manifested itself in dramatic fashion, Dr. Hall presents a more nuanced picture, and one which the ALJ finds more persuasive. In this case, it is clear that the nerve was not avulsed completely (which would result in dramatic symptoms, as predicted by Dr. Kurz). Instead, these nerves were subtly stretched, and manifested themselves gradually. Dr. Hall's theory also better explains the non-dermatomal symptoms as described by Claimant. In summary, Claimant has shown, by a preponderance of the evidence, that he suffered a compensable work injury to his right shoulder and brachial plexus, and neck, on December 21, 2018. Said injuries required medical treatment.

Medical Benefits

M. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a Claimant's entitlement to benefits is disputed, the Claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo.App. 1997). Whether the Claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo.App. 1997).

N. The ALJ has found that Claimant sustained a compensable injury to his right shoulder, neck, and brachial plexus. All treatment Claimant has had to date is found to be reasonable, necessary, and related. Claimant is entitled to ongoing care for his work injuries, specifically, but not limited to, authorization of the EMG for further testing.

ORDER

It is therefore Ordered that:

1. Claimant has suffered a compensable injury to his shoulder, neck, and brachial plexus, which required medical treatment.

2. Respondents shall pay for all reasonable, necessary, and related medical treatment for Claimant's work injuries, including, but not limited to, the EMG as recommended by Dr. Leggett.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 30, 2019

Colorado Springs, Colorado 80906

ISSUES

- Did Claimant prove by a preponderance of the evidence that she is entitled to receive TTD benefits after her admitted work injury?
- Did Respondents prove by a preponderance of the evidence that Claimant was responsible for her termination on February 12, 2019 and therefore not entitled to temporary disability benefits after that date?
- Did Respondents show that Claimant's work-related accident was caused by Claimant's intoxication, thereby entitling Respondents to the statutory intoxication reduction penalty of 50%?
- If Claimant is entitled to TTD benefits, should these be offset against Claimant's receipt of unemployment insurance benefits?

FINDINGS OF FACT

1. Claimant was hired as a sales associate for Employer in December 2018. Claimant had worked in the automotive industry for seven years.

2. Claimant testified she had moved from Boulder to Westminster and had looked at the various dealerships in the area. Part of the reason she applied to be a sales associate with Employer was that she learned, through an online article, that Employer would hire job applicants who test positive for marijuana in drug screenings. Claimant said because Employer no longer tested for marijuana as part of the hiring process, she believed at-home marijuana use would not result in termination. Claimant was not asked about drug use during her interview, but was told there was a pre-employment drug test.

3. Claimant testified that she uses marijuana in her personal time. She also found this helped her anxiety. She stated that she never used marijuana at work.

4. As part of the hiring process, Claimant underwent a pre-employment drug screen. Claimant passed the drug screen, which did not test for marijuana.[1] Claimant testified she did not see the results of the pre-employment drug test and was told she had passed.

5. Stacy S_____ testified on behalf of Employer. Ms. S_____ is employed as the market HR manager and oversees 14 stores. She has worked in that role since 2004, including in the payroll and HR departments. In that capacity, Ms.

[1] Exhibit K.

S_____' job duties include for hiring, termination, benefits, worker's compensation and unemployment. She also responds to issues raised by managers.

6. Ms. S_____ testified employer has a pre-employment drug testing program. It tests for substances such as methamphetamine, opiates and cocaine. In Colorado, the drug screen does not test for marijuana.

7. Ms. S_____ testified new employees are sent a link through Talent Edge and have eighteen (18) documents to sign as part of the on-boarding process. New employees have three days to complete the process. New employees are expected to read the Associate Handbook and there is a specific acknowledgment for the Associate Handbook. The most up-to-date version of the handbook is available on the company's intranet. Ms. S_____ testified that Employer's preference is that new employees review the documents at work so that a manager is always available for any questions.

8. Claimant testified she went through one week of training when she started her employment. Claimant testified Employer's drug policy was not discussed during her training. Claimant said she signed forms online and confirmed that she had access to the Associate Handbook and the employment forms online. Claimant testified that she skimmed the handbook, including the part which detailed Employer's drug policy. Based upon the articles she read, her understanding was the policy prohibited coming to work while under the influence and they were not to have marijuana while on the company premises.

9. On December 29, 2018, Claimant electronically signed an acknowledgement of receipt of the employment handbook.[2]

10. The acknowledgment provided as follows:

"I understand that by clicking the 'Acknowledge' button below I acknowledge that I have read and had access to print this document [the associate handbook], and further that I agree to accept/abide by the terms and conditions of this document. I understand that if I do not wish to agree to this document's terms and conditions or otherwise do not wish to acknowledge receipt of this document, I should not click the 'Acknowledge' button. I further understand that if I do not click the 'Acknowledge' button, I will not be considered for employment with the Company".

11. Employer's Associate Handbook specified Claimant's employment was terminable at-will.

12. Employer's Associate Handbook also had a specific provision that set forth the company's Drug and Alcohol Policy. The policy specified:

Drug and Alcohol Policy

[2] Exhibit 4, p.107.

"Alcohol and drug abuse ranks as one of the major health problems in the United States. You are our most valuable resource, and your safety and health are vital concerns of ours. We are therefore committed to providing a safe working environment to protect you and our Customers, to provide the highest level of service, and to minimize the risk of accidents and injuries.

Restrictions

We prohibit the unlawful possession, use, sale, manufacture, or distribution of illegal substances or other unauthorized or mind-altering or intoxicating substances by any Teammate while on Company premises (including parking areas and grounds) or on Company business. You are prohibited from reporting to work and/or conducting Company business while you are in possession of illegal drugs/alcohol, or have illegal drugs/alcohol in your system, except, as to alcohol, in approved situations. Included within this prohibition are lawfully controlled substances that have been illegally or improperly obtained. This policy does not ban the possession and proper use of lawfully prescribed drugs taken in accordance with the prescription."

13. The policy also had a provision applicable to those states in which marijuana was legalized. It provided:

"While certain states have legalized possession and/or use of marijuana, possession and/or use of marijuana remains illegal under federal law. Therefore, Teammates who possess or use marijuana are still subject to this policy, even in states that have stopped criminal prosecution for, or otherwise claim to 'legalize,' possession or use of marijuana."

14. Employer's Drug and Alcohol Policy also set forth that there would be post-accident drug and acohol testing, as follows:

"**Drug and Alcohol Testing Program**

…

All of our current Teammates are required to be tested for the presence of illegal drugs or alcohol in the event of work-related accidents in which they are involved whether or not they result in bodily injury or property damage, in accordance with state and/or local law. A 'work-related accident' is defined by both the Worker's Compensation Law in effect in the jurisdiction of the Teammate's work location, and/or any physical complaint associated with, or from, a work related activity…"

15. Finally, Employer's policy set forth the discipline to which employees were subject for a violation of the Drug and Alcohol policy. Specifically, the policy stated:

"In addition, except in rare circumstances, if you are injured in the course and scope of your employment and then test positive on a drug or alcohol test, you are considered in violation of this policy. If you test positive on a drug or alcohol test or

refuse to take a post-accident drug or alcohol test, you may forfeit your eligibility for Workers' Compensation benefits. Also, if you refuse to take a drug or alcohol test, in accordance with state and/or local law, you have violated this policy which may result in legal and/or disciplinary action, up to and including termination of employment."

16. The ALJ determined Employer's drug and alcohol policy informed employees they would be subject to discipline, up to and including termination, for a violation of the policy. A positive drug test after a work-related injury was considered a violation of the policy.

17. Claimant testified that she did not expect to be tested for marijuana, given what she knew about Employer. On cross-examination, Ms. S_____ confirmed that she did not specifically tell Claimant she could be terminated for a positive drug test (marijuana). Ms. S_____ did not receive a report at any time that Claimant was intoxicated at work.

18. On February 2, 2019 (Saturday), Claimant was showing customers a car on Employer's lot. She slipped on ice and fell on her right side. She sustained injuries to her right shoulder and elbow, as well as her hip. That same day, Claimant reported this incident to her supervisor, Bob Coldwell. She completed an accident report that day.

19. There was no evidence in the record that Claimant was using marijuana on the date of her accident. Claimant testified she had used marijuana ten (10) days before the injury occurred. Claimant volitionally chose to use marijuana at that time.

20. Claimant testified the effects of the marijuana had worn off by the time she worked again. She worked five shifts before the date of her injury. Claimant stated she was not intoxicated at the time her injury occurred. The ALJ credited Claimant's testimony.

21. There was no evidence in the record that Claimant was intoxicated at the time of her injury. Ms. S_____ testified she never received any reports that Claimant was smoking marijuana or appeared intoxicated on the day Claimant was injured.

22. On February 4, 2019 Claimant took a mandatory urine drug screen and tested positive for marijuana (THC). The ALJ inferred Claimant had THC in her bloodstream when she was injured. The test results was signed by Stephen Kracht, D.O. Claimant did not dispute or challenge the positive drug screen.

23. The ALJ concluded THC intoxication was not the cause of Claimant's work injury.

24. On February 4, 2019, Claimant was evaluated by Trina L. Bogart, M.D. at Concentra, the ATP for Employer. Dr. Bogart's assessment was: right wrist sprain, sprain of right shoulder, sprain of right elbow, sprain of right forearm, lumbar sprain, and

contusion of knee. Dr. Bogart prescribed Claimant Ibuprofen, Prednisone, and Methocarbamol for her injuries. Dr. Bogart also scheduled x-rays of Claimant's right elbow, right wrist, and right humerus.

25. Dr. Bogart also issued work restrictions. Those work restrictions were: may lift up to 2 pounds occasionally; may push/pull up to 2 pounds occasionally; no reaching above shoulders with affected extremity; no use of right upper extremity; should be sitting 50% of the time; no squatting; no kneeling; may not walk on uneven terrain; no climbing ladders; wear sling and splint at all times except to drive and shower.

26. Claimant's work restrictions precluded her from returning to her position and she missed time from work following her injury.

27. Claimant is entitled to TTD benefits from February 2, 2019 to the date of her termination.

28. Claimant was terminated from her sales associate position on February 12, 2019. Claimant met with Mr. Coldwell and an unidentified woman. Mr. Coldwell advised her she was being terminated for the positive drug test.

29. The termination notice cited the portion of the Drug and Alcohol Policy that prohibits the unlawful use of intoxicating substances, as set forth above. Marijuana is an intoxicating substance. The ALJ found Employer's policy prohibited an employee from reporting to work when he or she had illegal drugs in their system. The termination notice stated that based on the above mentioned violation, Claimant's employment was terminated effective immediately.[3]

30. Ms. S_____ testified that if an accident occurs on the premises, it is Employer's policy to ensure it was not due to drugs or alcohol. For that reason, all employees are required to submit to post-accident drug screens and breath alcohol tests. Ms. S_____ stated that if any post-accident drug screen was positive for any substance, the employee is terminated. This occurs in 100% of the cases when there is a positive drug/alcohol test. She testified that although Employer is more lenient with pre-employment testing as concerns marijuana, it follows federal law concerning marijuana following an accident. Ms. S_____ testified that Employer has terminated approximately 6-7 employees in Denver for positive post-accident drug screens this year.

31. Ms. S_____ was not involved in the decision to terminate Claimant.

32. Claimant was responsible for the termination of her employment.

[3] Exhibit 5.

33. On February 22, 2019, a Worker's Claim for Compensation was completed by Claimant. It stated she was injured while showing cars to a customer and injured her right arm, right shoulder and neck, which included a nerve injury.

34. Claimant testified she is still treating for her injuries. This includes physical therapy. Claimant continues to have work restrictions, although these have lessened since her injury.

35. There is no evidence in the record that any authorized treating physician has placed Claimant at MMI.

36. Claimant testified she received unemployment insurance benefits from March 2, 2019 through May 22, 2019, from the State of Colorado at the rate of $234.00 per week. This was confirmed by the records admitted at hearing.[4]

37. Claimant obtained a new job in approximately May 2019.

38. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792, 800 (Colo. 1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. 2018. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the

[4] Exhibit 8.

evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Temporary Total Disability Benefits

Claimant is entitled to TTD benefits if the injury causes a disability, the disability causes Claimant to leave work, and Claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Claimant must establish a causal connection between a work-related injury and the wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions that impair Claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co*., 964 P.2d 595 (Colo. App. 1998).

In the case at bench, Claimant proved by a preponderance of the evidence that she is entitled to TTD benefits from the date of her injury to the date of her termination. As found in Findings of Fact 25-27, Claimant was given physical restrictions by her ATP as a result of the admitted work injury. She missed time from work and lost wages as a result. (Finding of Fact 26). Therefore, Claimant is entitled to TTD benefits up to the date of termination.

Responsibility for Termination

Respondents asserted the affirmative defense of Claimant's responsibility for termination as a defense to TTD benefits. §§ 8-42-105(4)(a), C.R.S., and 8-42-103(l)(g), C.R.S., (the so-called "termination statutes") state that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury". Respondents bear the burden of proof to establish the applicability of these provisions. *Witherspoon v. Metropolitan Club*, W. C. No. 4-509-612 (Dec. 16, 2004). Respondents averred that Claimant violated the Employer's policies by her own volitional action and was terminated as a result.

In order to meet their burden of proof, Respondents must show Claimant performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. With such a determination, Claimant can be found to be responsible for his/her termination. *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Gonzales v.*

Industrial Commission, 740 P.2d 999 (Colo. 1987). That determination must be based upon an examination of the totality of circumstances. *Id*.

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1064 (Colo. App. 2002), the Colorado Court of Appeals construed the foregoing statutes and noted the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault". In that case, Claimant suffered disabling injuries in a one-vehicle accident when the trash truck he was driving ran off a curve in the road and rolled. Claimant was cited for careless driving. The ALJ determined that although Claimant acted carelessly while working as a driver and caused the accident, he was not responsible for his termination. Claimant was entitled to receive TTD benefits. That interpretation was affirmed by the Colorado Court of Appeals. *Colorado Springs Disposal v. Industrial Claim Appeals Office*, *supra,* 58 P.3d at 1064-1065.

An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996) (unemployment insurance); *Harrison v. Dunmire Property Management, Inc.*, W.C. no. 4-676-410 (ICAO, April 9, 2008). Ultimately, the question of whether Claimant was responsible for her termination is one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008).

As a starting point, Employer adopted written policies concerning drug and alcohol use. (Finding of Fact 12). These policies were expressed in the Associate Handbook. The language of Employer's drug and alcohol policy specifically proscribed the presence of illegal drugs in the system of employees. *Id.* There was also a provision addressing use of marijuana in cases states such as Colorado where it had been legalized. (Finding of Fact 13-15). Employer's policies regarding use of drugs were promulgated to new employees, such as Claimant. (Finding of Fact 7). Claimant was expected to review the policies, as part of the new hire process and had access to the handbook. *Id.* Claimant executed an acknowledgment of receipt of Employer's policy and was therefore subject to these rules. (Findings of Fact 8-9).

In addition, Employer's policy provided for post-accident testing when an employee suffered the work injury. (Finding of Fact 15). The specific terms of the policy provided for discipline, including termination, if the post-accident drug test was positive. (Finding of Fact 16).

Under Colorado law, an employer is allowed to adopt personnel policies which prohibit the use of marijuana. The Colorado Supreme Court affirmed the right to do so in *Coats v. Dish Network, LLC*, 350 P.3d 849, 852 (Colo. 2015). In *Coats*, Plaintiff had a medical marijuana card and used it because he suffered from painful muscle spasms. There was no evidence in the record that Plaintiff ever used marijuana at work. Under the employer's policies, employees were subject to random drug testing and Plaintiff

tested positive for marijuana. He was terminated for a violation of employer's personnel policies.

Plaintiff argued he was protected by the Colorado's lawful activities statute, § 24-34-402.5(1), C.R.S. 2018, since he had a medical marijuana card and used marijuana when he was not working. The Colorado Supreme Court held that marijuana use was not protected under the statute, since it was not "lawful" under federal law. *Coats v. Dish Network, LLC*, *supra*, 350 P.3d at 852-853. Because Colorado's lawful activities statute did not extend to marijuana use, Plaintiff could not assert a violation of this provision and bring a civil action for damages, including lost wages or benefits. *Id.*

Similarly, Employer in the instant case adopted policies which restricted the use of marijuana and provided for consequences for such use in the event employee was injured. (Findings of Fact 12-15). When a work injury occurred, if an employee tested positive, that employee was subject to discipline. (Finding of Fact 15). As in *Coats*, Employer defined marijuana as an illegal substance under its policies, utilizing the federal definition. *Coats v. Dish Network, LLC*, 350 P.3d 849, 852 (Colo. 2015) remains good law and no authority was provided limiting its application. Therefore, Claimant's termination was allowable under Colorado law.

As determined in Finding of Fact 19, Claimant volitionally chose to use marijuana despite the proscription contained within the Employer's policies. Even though this recreational use occurred off the premises and not when Claimant was working, nonetheless she was subject to post-accident testing under the terms of the personnel policies. The specific language of the handbook provided that the presence of an illegal substance was a violation of the policy and further the policy defined marijuana as an illegal drug under federal law. (Finding of Fact 13, 15). Employer then terminated Claimant's employment based on a violation of the drug and alcohol policy. (Findings of Fact 28-30).

In *Gilmore v. Industrial Claim Appeals Office*, *supra*, the Colorado Court of Appeals considered a factually similar case where Claimant was terminated for using marijuana. In that case, the ALJ found Claimant was responsible for the termination of his employment and denied his request for continuing TTD benefits. The employer's policy specified it had a drug free workplace program and not employee individuals who test positive for drug use. Claimant testified that he was not told he would be terminated if he failed a drug screening, which occurred. Claimant later admitted that four days prior to the accident, he had smoked marijuana provided to him and his coworkers by a supervisor.

Writing for the majority, Judge Graham noted Claimant's voluntary conduct led to his termination and therefore he was not entitled to TTD benefits. Despite the fact that consumption of cannabis was accepted and the supervisor supplied it to him at the workplace, Claimant accepted and smoked the cannabis of his own volition. Employer's policies were clear regarding the consequences of a violation. The Court affirmed the ALJ's factual determination that Claimant knew or should have known that these actions would result in his termination. *Gilmore v. Industrial Claim Appeals Office*, *supra*, 187

P.3d at 1132-1133. The holding in *Gilmore* impels a similar result in this case, as Claimant was responsible for her termination. (Finding of Fact 32).

The ALJ considered Claimant's argument that she was not responsible for her termination since she did not expect marijuana use to result in loss of employment. Indeed, Claimant testified one of the reason she sought employment with Employer was because of the information that it did not test for marijuana as part of the hiring process. (Finding of Fact 2). Claimant also said there was no discussion regarding Employer's policies during her training, specifically with regard to the use of marijuana. (Finding of Fact 8). Finally, Claimant testified that while she read employer's drug and alcohol policy use in their entirety, she did not read all of the Associate Handbook. (Finding of Fact 8). Claimant was a credible witness.

In effect, Claimant is requesting the ALJ to infer that her subjective belief regarding marijuana use was a reasonable one, despite Employer's written policies. Implicit in this argument is the suggestion that because Employer did not test for marijuana as part of its new hiring process, that practice was inconsistent with a termination for a violation of the Drug and Alcohol Policy where marijuana was present in Claimant's system. Taken to its logical conclusion, if the ALJ were to allow Claimant's failure to fully read the policies and follow their terms, Employer's policies would have no force and effect. As found, Claimant explicitly agreed to Employer's policies with regard to drug use and acknowledged receipt of those policies. (Findings of Fact 9-10). Despite her rationale for taking the job, Claimant was bound by Employer's policies and subject to discipline for a violation. Accordingly, Claimant was "responsible" for her termination in the legal sense of the term. See § 8-42-103(1)(g), C.R.S. 2018, and § 8-42-105(4)(a), C.R.S. 2018.

Intoxication

Employer contends that award of TTD benefits should be reduced by 50% because Claimant's injury resulted from marijuana use. This Court disagrees. Pursuant to § 8-42-112.5, C.R.S. 2018, nonmedical benefits such as TTD benefits are reduced to fifty percent "where the injury results from the presence in the worker's system, during working hours, of controlled substances, as defined in section 18-18-102 (5), C.R.S., that are not medically prescribed….., as evidenced by a forensic drug or alcohol test conducted by a medical facility or laboratory licensed or certified to conduct such tests. If the test indicates the presence of such substances or of alcohol at such level, it is presumed that the employee was intoxicated and that the injury was due to the intoxication. This presumption may be overcome by clear and convincing evidence".

Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt". *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). Causation is also a question of fact for the Administrative Law Judge, and the Administrative Law Judge may make reasonable inferences from the circumstantial evidence presented. *Arenas v. Industrial Claim Appeals Office of State of Colo.,* 8 P.3d 558 (Colo. App. 2000).

In this case, there was evidence of a controlled substance in Claimant's system and therefore Respondents were entitled to the presumption that she was intoxicated at the time of her accident. However, Claimant met the burden of proof by clear and convincing evidence and overcame the presumption that her injury was caused by the marijuana in her system. First, there was no evidence that Claimant was actually intoxicated at the time she was injured. (Finding of Fact 19-21). Claimant credibly testified that she had used marijuana approximately 10 days before her work-related injury. (Finding of Fact 18). Claimant confirmed that she was not feeling the effects of the marijuana and worked several shifts before she was injured at work. There was no evidence that Claimant was in fact under the influence of marijuana when she suffered her work-related injury. (Finding of Fact 20). This fact was corroborated by Ms. S_____ on cross-examination. (Finding of Fact 21).

Second, the ALJ determined THC intoxication was not the cause in fact of the accident in question. (Finding of Fact 23). In this regard, although the toxicology report documented the presence of THC, no other evidence was presented to persuade the ALJ that Claimant was actually intoxicated at the time of her injury. (Finding of Fact 20). This fact was corroborated by Ms. S_____, the management witness who testified on behalf of Employer. (Finding of Fact 21). The specific circumstances of this case persuaded the ALJ that marijuana intoxication did not cause Claimant's industrial injury. Under *Arenas v. Industrial Claim Appeals Office of State of Colo., supra,* 8 P.3d at 562, the ALJ's determination of the legal cause of an injury should be affirmed if supported by substantial evidence. Therefore, Claimant introduced a sufficient quantum of evidence to overcome the statutory presumption and her TTD benefits shall not be reduced by 50%.

Unemployment Offset

Next, Employer contends that Claimant's TTD benefits should be offset by Claimant's receipt of unemployment insurance benefits, pursuant to § 8-42-103 (f), C.R.S. The statute provides:

…

> "In cases where it is determined that unemployment insurance benefits are payable to an employee, compensation for temporary disability shall be reduced, but not below zero, by the amount of unemployment insurance benefits received…"

As found, Claimant received unemployment insurance benefits from March 2, 2019 through May 22, 2019, more than one month after her termination on February 12, 2019. (Finding of Fact 36). Because Claimant received unemployment insurance benefits after her termination, her TTD benefits shall not be offset by her receipt of unemployment insurance benefits.

ORDER

It is therefore ordered:

1. Respondents shall pay TTD benefits from the date of Claimant's injury on February 2, 2019 to the date of Claimant's termination on February 12, 2019.

2. Claimant's claim for TTD benefits after February 12, 2019 is denied and dismissed.

3. Respondent shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **M,** Claimant, vs. **J,** Employer, And **A,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-086-593-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on July 12, 2019, before Administrative Law Judge Margot W. Jones in Greeley, CO. Claimant was present and was represented by Travis Barbarick, Esq. Claimant required Spanish language interpretation which was provided by Porcia Berry. Respondents were represented by Nicole Porter, Esq. The hearing was digitally recorded beginning at 4:00 p.m. The parties' exhibits 1-9 and A-E, H and I were made part of the record.

In this order, the Judge refers to Marina Rodriguez de Soto as Claimant, to Respondent Employer JBS, LLC, as Employer, and to Respondent-Insurer American Zurich Insurance Company as Insurer. The Judge may refer to Employer and Insurer collectively as Respondents.

Also in this order, the Judge may use the following acronyms: C.R.S. refers to Colorado Revised Statutes (2018); the Act refers to the Workers' Compensation Act of Colorado, sections 8-40-101, et seq., supra; OAC refers to the Office of Administrative Courts; OACRP refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and WCRP refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUE

- Whether Claimant's right shoulder injury resulted in functional impairment beyond the schedule of impairments listed under section 8-42-107(2)(a), C.R.S. or whether her impairment was limited to her right upper extremity.

STIPULATION OF FACT

1. The parties stipulate and agree that Claimant's average weekly wage is $639.91; and

2. The parties stipulate and agree that Respondents will pay Claimant $2,957.23 as compensation for lost wages resulting from her work injury from June 9, 2017, to August 31, 2018.

FINDINGS OF FACT

1. Claimant is a 37 year old female who began her employment with Employer on April 22, 2014. On June 9, 2017, Claimant reported an injury to Employer complaining of shoulder pain as a result of repetitive motions. Prior to this injury, Claimant worked exclusively as a "Flank Trimmer" for the Employer. Claimant credibly testified that this position required her to pull meat toward her, cut the meat with her right hand and throw pieces of meat over her head. Claimant reported her injury in June 2017, however, Claimant first sought treatment for her injury in January 2018.

2. Claimant began to develop pain and functional loss in her right upper extremity in April 2017, due to the repetitive nature of her job as a flank trimmer. When the pain and functional loss worsened, Claimant reported these issues to Employer in June 2017. Claimant received in-house treatment. Approximately six to nine months after Claimant's pain began, Claimant was referred to Banner Health on January 29, 2018.

3. On January 29, 2018, Claimant completed a "New Patient Questionnaire" and indicated that she experienced pain throughout both arms, right trapezius, and right periscapular area. Records reflect that June 9, 2017, was selected as Claimant's date of injury. Dr. Linda Young diagnosed Claimant with a right shoulder rotator cuff strain, scapular dyskinesia and adhesive capsulitis. Claimant was referred for physical therapy, prescribed over-the-counter medication, and assigned work restrictions. By March 26, 2018, Dr. Young opined the slow progress of Claimant's recovery was likely due to the length of time Claimant's injury was untreated.

4. Claimant received a course of treatment inclusive of physical therapy, massage therapy, dry needling, trigger point injections, subacromial injections, and orthopedic evaluation. Claimant's course of treatment was not confined to Claimant's right upper extremity; nor did she only complain of limitations and pain in her right arm. Physical therapy, dry needling, massage therapy, and injections were all performed beyond Claimant's right glenohumeral joint, including to her left shoulder, cervical and thoracic spine, and the periscapular musculature of the right upper extremity.

5. Claimant began physical therapy on February 5, 2018. Sandra Starkovich, PT, DPT, diagnosed right shoulder rotator cuff strain and scapular dyskinesia. Ms. Starkovich noted in her assessment that Claimant had multiple areas of soft tissue tightness/restriction including in her bilateral shoulders, scapula, rib cage, and thoracic spine, which would require treatment. Ms. Starkovich also opined Claimant's left shoulder was limited and in pain likely due to compensating for the right shoulder. Claimant's last physical therapy session was June 5, 2018. She received treatment to her bilateral shoulders, right trapezius, pectoral, scapula, subscapular area, ribs, and thoracic spine. Claimant's course of physical therapy included treatment beyond her right shoulder to address the limitations and pain beyond the right glenohumeral joint.

6. The same is true regarding Claimant's course of massage therapy. Her initial session with Wendy Castillo, RMT, at Medical Massage of the Rockies was on March 1, 2018, and her last session was June 7, 2018. Her treatment involved massage to Claimant's right upper quadrant, inclusive of the right shoulder, trapezius, scapula, ribs and both the cervical and thoracic spine.

7. On March 26, 2018, Claimant received a right subacromial injection by Dr. Linda Young. On April 25, 2018 Claimant underwent an MRI of her right shoulder that indicated she suffered from a partial thickness tear of the supraspinatus and a low-grade thickness tear of the subscapularis tendon. On May 4, 2018, she was diagnosed with adhesive capsulitis and partial rotator cuff tear by orthopedist Dr. Daniel Heaston, who recommended further conservative treatment before considering surgery.

8. On June 6, 2018, Claimant began pain management with physiatrist Dr. Gregory Reichhardt. Dr. Reichhardt noted pain over Claimant's right periscapular area, particularly the upper trapezius and interscapular area. Dr. Reichhardt diagnosed right periscapular pain, and performed trigger point injections into Claimant's right periscapular area, including the right levator scapula, upper trapezius, and right rhomboid. Dr. Reichhardt recommended Claimant undergo EMG/NCS testing of the right upper extremity. This took place on July 2, 2018, and indicated Claimant was also suffering from claim related mild right median neuropathy at the wrist and probably mild carpel tunnel syndrome.

9. On August 10, 2018, Claimant returned to Dr. Heaston for orthopedic evaluation. Dr. Heaston opined that, while surgery is indicated, Claimant is not a surgical candidate until her shoulder range of motion improved. On this date, Claimant underwent a second right subacromial injection.

10. On August 22, 2018, Claimant returned to Dr. Reichhardt for evaluation. Dr. Reichhardt placed Claimant at MMI. He assigned permanent restrictions and recommended maintenance care. He also assigned a 17% scheduled permanent impairment rating to Claimant's right upper extremity. On August 31, 2018, Dr. Young agreed with Dr. Reichhardt and placed Claimant at MMI as of August 22, 2018, with a 17% scheduled impairment to her right upper extremity.

11. Claimant underwent an independent medical exam with Dr. Stephen Gray on April 30, 2019. Dr. Gray opined Claimant's permanent impairment should be awarded based on the whole person "due to the regional involvement of anatomical structures, primarily musculature and tendons, found proximal to the glenohumeral joint."

12. Claimant relies on Dr. Gray's opinion as medical evidence that her functional impairment is beyond the schedule of impairments, and the 10% whole person impairment opined by Dr. Reichhardt and Dr. Young should be awarded due to the impact of the work injury on parts of the body not on the schedule of impairments. The doctors opined that Claimant experienced functional limitations on the right-sided shoulder girdle, parascapular and cervicothoracic musculature causing a whole person decrease in function.

13. The medical records reflect that the situs of Claimant's admitted work injury is beyond her right shoulder joint and causes impairment to her whole person. It is well documented Claimant received treatment to multiple areas of her body beyond her right shoulder joint to address pain and functional loss to those areas. Claimant also credibly testified to how her admitted work injury negatively impacts her ability to meet the personal, social, and occupational demands of her life. Claimant credibly testified she suffers ongoing pain and functional loss resultant of her work injury. She testified she experiences pain in all planes when moving her right shoulder, including pain into her back and neck. This makes performing personal tasks more difficult, and often prevents her from doing certain things she could do prior to the work injury. She testified the effects of her work injury make simple things likes cleaning and parenting more difficult. That, due to the effects of her work injury, she had to purchase a car with an automatic transmission because the manual transmission caused pain while shifting gears. She credibly testified she experiences pain and weakness while washing and stacking dishes, and that she cannot push the vacuum with her right arm. That taking care of her personal hygiene is more challenging. Also, she is now limited in the activities with her seven year old, such as doing her daughter's hair or playing catch.

14. Claimant's work injury resulted in permanent work restrictions that negatively impact her ability to meet the occupational demands of her job. She works modified duty for Employer. Claimant has a 10 pound restriction to her right upper extremity resultant of her work injury.

CONCLUSIONS OF LAW

1. The purpose of the Act is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the *ALJ. Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in section 8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* section 8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998).

5. When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* section 8-42-107(8)(c), C.R.S.

6. Because section 8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare,* 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under section 8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under section 8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office,* 30 P.3d 691, 693 (Colo. App. 2000).

7. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick,* W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood,* W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp*., W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

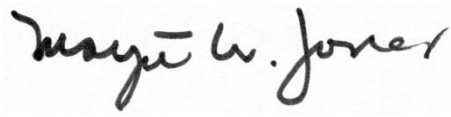
8. On the basis of the totality of the record, it is found and concluded that Claimant's work injury involving the right upper extremity extends beyond the arm at the shoulder. Claimant credibly testified how her admitted work injury negatively impacts her ability to meet the personal, social, and occupational demands of her life. Claimant credibly testified she suffers ongoing pain and functional loss resultant of her work injury. She testified with record support that she experiences pain in all planes when moving her right shoulder, including pain into her back and neck.

9. Claimant proved by a preponderance of the evidence that she is entitled to a whole person impairment rating because her work injury caused functional impairment extending beyond the arm at the shoulder.

ORDER

Claimant is entitled to a 10% whole person impairment rating for her right upper extremity injury.

DATED: October 4, 2019



Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Mark Winslow, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) from her February 18, 2017 admitted lumbar spine injury.

2. Whether Claimant has demonstrated by a preponderance of the evidence that the disc arthroplasty surgery recommended by Michael Janssen, M.D. is reasonable, necessary and causally related to Claimant's February 18, 2017 admitted industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Flight Attendant. On February 18, 2017 she suffered an admitted lumbar strain during the course and scope of her employment. Claimant specifically stepped in a pothole while taking a walk between flights. She did not fall, but immediately suffered pain in her lower back.

2. Claimant reported her injury to Employer and was directed to report to Concentra Medical Centers for treatment. Claimant went on vacation after her layover but presented to Concentra on February 27, 2017. She reported that she injured her lower back when she stepped into a pothole and twisted. Claimant advised Jerald Solot, D.O. that she was experiencing radiating pain into her toes. Dr. Solot assessed Claimant with a lumbar strain and referred her for physical therapy.

3. Claimant treated conservatively with little improvement and underwent a lumbar MRI on April 4, 2017. The MRI revealed a small central disc bulge mildly indenting the dural sac without root sleeve deformity. The radiologist's assessment was lumbosacral spondylosis with sacroiliac joint dysfunction and lumbar facet dysfunction at L4-L5, L5-S1 and potentially L3-L4.

4. In May 2017 Claimant visited Allison M. Fall, M.D. for an evaluation. Dr. Fall recommended right side L4-L5 and L5-S1 facet injections with a right SI joint injection and referred Claimant to Robert Kawasaki, M.D. Claimant underwent the SI joint injection with Dr. Kawasaki. Based on her response Dr. Kawasaki recommended L4-L5 and L5-S1 medial branch blocks instead of the facet injections. Dr. Kawasaki administered medial branch blocks in August and September 2017.

5. On July 30, 2017 Kathleen D'Angelo, M.D. performed an independent medical examination of Claimant. Dr. D'Angelo determined that Claimant's underlying degenerative spine disease was aggravated by her work injury and she should proceed

with the injections recommended by Dr. Fall. Dr. D'Angelo concluded that Claimant was not a surgical candidate. She noted that, if the injections were not helpful, then Claimant would reach Maximum Medical Improvement (MMI) after concluding physical therapy. Dr. D'Angelo remarked that aggravation of an underlying condition is a temporary issue and Claimant would not require maintenance treatment after MMI.

6. On October 31, 2017 Claimant visited Michael Janssen, D.O. for an orthopedic evaluation. Dr. Janssen noted that Claimant suffered a twisting injury when she stepped in a pothole. He determined that Claimant suffered vertical instability, dehydration and loss of structural integrity of the posterior annulus at lumbar level L4-L5. Dr. Janssen remarked that Claimant might require a fusion or disc replacement at L4-L5. He planned to speak with Claimant's Concentra physician regarding whether Claimant was a surgical candidate and should undergo a discography.

7. On January 6, 2018 Dr. Fall determined that Claimant had reached MMI. She diagnosed Claimant with the following: (1) chronic pain disorder; (2) lumbar degenerative changes; and (3) the probability that psychological issues played a role in her presentation and perceived disability. Dr. Fall reasoned that surgery was unlikely to benefit Claimant and declined to recommend a discogram. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*), Dr. Fall assigned Claimant a 5% whole person lumbar impairment rating pursuant to Table 53. She noted that Claimant's range of motion was self-limited and did not represent her true function. She therefore declined to provide additional impairment for range of motion deficits. Dr. Fall released Claimant to work with no restrictions.

8. On February 12, 2018 Claimant underwent a psychological evaluation with Gary S. Gutterman, M.D. Dr. Gutterman concluded that Claimant was an appropriate psychological candidate for a discogram.

9. On April 12, 2018 Kathy McCranie, M.D. performed an independent medical examination of Claimant. She determined that Claimant's subjective complaints outweighed her objective findings. Dr. McCranie remarked that Claimant had sustained a minor mechanism of injury that caused a lumbar strain. She determined that Claimant's lumbar MRI was essentially normal and reflected only mild degenerative disc disease. Dr. McCranie agreed with Dr. Fall that Claimant had reached MMI. She assigned a 5% whole person lumbar impairment rating pursuant to Table 53. However, Dr. McCranie also assigned a 3% impairment for range of motion deficits. Combining the ratings yields an 8% whole person permanent impairment rating.

10. On May 21, 2018 Claimant underwent a second lumbar MRI. The MRI reflected a central disc extrusion at L4-L5 that had increased in size since the prior MRI and L4-L5 retrolisthesis that was new since the prior MRI.

11. On September 21, 2018 the parties executed a Stipulation. The agreement specified that Respondents would provide a discogram and post-discogram CT scan with Dr. Janssen. The Stipulation also specified that Claimant reached MMI on

January 26, 2018 and suffered a 5% whole person lumbar impairment rating as determined by Dr. Fall.

12. Respondents subsequently filed a Final Admission of Liability (FAL) pursuant to the Stipulation. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME).

13. On September 25, 2018 Claimant underwent a CT scan and lumbar discography of L3-L4 and L4-L5. After reviewing the discography, Dr. Janssen determined Claimant was a surgical candidate for a disc arthroplasty. He sought surgical authorization but the request was denied.

14. On October 17, 2018 Dr. Gutterman issued a second psychological report. He concluded that Claimant was an appropriate surgical candidate. Dr. Gutterman remarked that there was no reason to preclude surgery based on psychiatric functioning.

15. On February 12, 2019 Mark C. Winslow, D.O. conducted a DIME of Claimant. Dr. Winslow noted Claimant specifically stepped in a pothole while walking between flights. She did not fall, but immediately suffered pain in her lower back. Dr. Winslow diagnosed Claimant with pre-existing "chronic stable clinically quiescent lumbar degenerative disc disease" and an aggravation of her pre-existing condition that caused an "interruption of the integrity of the lumbar disc" because of her work injury. He commented that, if Claimant's degenerative disc disease was aggravated by the work accident and Claimant requires surgery to address the degenerative disc disease, then it is clear the injury caused the need for surgery. Dr. Winslow reasoned that Claimant had exhausted all conservative management and qualified for the surgery recommended by Dr. Janssen. He concluded Claimant had not reached MMI and recommended surgical treatment at the discretion of Dr. Janssen. Dr. Winslow assigned a provisional 20% whole person lumbar rating consisting of 5% pursuant to Table 53 and 16% for range of motion deficits. He obtained and documented valid range of motion measurements of Claimant's lumbar spine pursuant to the *AMA Guides*.

16. On April 20, 2019 Claimant underwent a second independent medical examination with Dr. McCranie. She received updated medical records and reviewed the opinions of Drs. Janssen and Winslow. Dr. McCranie disagreed with Dr. Winslow's assessment that Claimant's degenerative disc disease had been aggravated by the injury. She remarked that Claimant's April 4, 2017 lumbar MRI was essentially normal with no evidence of a discogenic injury. Moreover, Claimant's treating physician Dr. Fall did not determine there had been an aggravation. Dr. McCranie reasoned that Dr. Winslow erred in his assessment of causality when he determined that, because Claimant's degenerative disc disease was aggravated by the work injury and surgery was necessary to address the degenerative condition, the work injury caused the need for surgery.

17. Dr. McCranie considered Dr. Winslow's failure to address the significant differences between Claimant's April 4, 2017 and May 21, 2018 lumbar MRIs. Specifically, the May 21, 2018 MRI revealed a larger L4-L5 disc extrusion and new retrolisthesis. Dr. McCranie determined that any aggravation of Claimant's degenerative disc disease occurred between April 4, 2017 and May 21, 2018 and would thus be unrelated to the February 18, 2017 work injury. She maintained that Claimant had reached MMI. Dr. McCranie also reviewed Dr. Winslow's provisional 20% whole person rating. While she agreed with his 5% rating under Table 53, she disagreed with Dr. Winslow's range of motion measurements. Dr. McCranie commented that Dr. Winslow failed to compare his measurements with those of prior examiners to assess consistency.

18. On July 18, 2019 the parties conducted the pre-hearing evidentiary deposition of Dr. Janssen. Dr. Janssen maintained that Claimant's need for lumbar surgery is causally related to her February 18, 2017 industrial injury. He explained that Claimant suffers vertical instability in which her disc is unable to withstand loads. Dr. Janssen determined that the changes in Claimant's April 4, 2017 and May 21, 2018 MRI's reflect the worsening of her lumbar spine as a result of the February 18, 2017 industrial injury. He detailed that Claimant's disc injury from February 18, 2017 "progresses and collapses and gets further tears in it, and then sometimes starts developing this progressive vertical instability." The May 21, 2018 MRI did not reveal new findings, but simply a progression of the findings from the April 4, 2017 MRI.

19. On August 21, 2019 the parties conducted the post-hearing evidentiary deposition of Dr. McCranie. Dr. McCranie maintained that Dr. Winslow's causation assessment was erroneous. She testified that the findings in Claimant's April 4, 2017 MRI were very common and the literature reflects 77% of women under the age of 50 will have degenerative changes of the lumbar spine. Dr. McCranie commented that the aggravation of degenerative changes requires a mechanism of injury that would change the spine pathology. A traumatic fall or a heavy lifting incident would change spinal pathology, but something as minor as stepping into a pothole would not. Dr. McCranie explained there was a significant difference in the May 21, 2018 lumbar MRI because it reflected a L4-L5 disc extrusion that had only been a disc bulge on April 4, 2017. Claimant now also has retrolisthesis at the L4-L5 level. Dr. McCranie concluded that the changes reflected in the MRIs are not related to Claimant's work injury. The proposed surgery is thus unrelated to the minor February 18, 2017 work injury. Dr. McCranie agreed with Dr. Fall that Claimant reached MMI on January 6, 2018.

20. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Winslow that Claimant has not reached MMI from her February 18, 2017 admitted lumbar strain. Initially, Claimant suffered an admitted lumbar injury when she stepped in a pothole while taking a walk between flights. She did not fall, but immediately suffered pain in her lower back. Dr. Winslow diagnosed Claimant with pre-existing "chronic stable clinically quiescent lumbar degenerative disc disease" and an aggravation of her pre-existing condition that caused an "interruption of the integrity of the lumbar disc" because of her work injury. He commented that, if

Claimant's degenerative disc disease was aggravated by the work accident and Claimant requires surgery to address the degenerative disc disease, then it is clear the injury caused the need for surgery. Dr. Winslow reasoned that Claimant had exhausted all conservative management and qualified for the surgery recommended by Dr. Janssen. He concluded Claimant had not reached MMI and recommended surgical treatment at the discretion of Dr. Janssen. Dr. Winslow assigned a provisional 20% whole person lumbar rating consisting of 5% pursuant to Table 53 and 16% for range of motion deficits. He obtained and documented valid range of motion measurements of Claimant's lumbar spine pursuant to the *AMA Guides*.

21. In contrast, Dr. Fall determined that Claimant had reached MMI on January 6, 2018. She diagnosed Claimant with chronic pain disorder and lumbar degenerative changes. Relying on the *AMA Guides*, Dr. Fall assigned Claimant a 5% whole person lumbar impairment rating pursuant to Table 53. Similarly, Dr. McCranie disagreed with Dr. Winslow's assessment that Claimant's degenerative disc disease had been aggravated by the work injury. Dr. McCranie considered Dr. Winslow's failure to address the significant differences between Claimant's April 4, 2017 and May 21, 2018 lumbar MRIs. Specifically, the May 21, 2018 MRI revealed a larger L4-L5 disc extrusion and new retrolisthesis. Dr. McCranie determined that any aggravation of Claimant's degenerative disc disease occurred between April 4, 2017 and May 21, 2018 and would thus be unrelated to the February 18, 2017 work injury. Furthermore, Dr. McCranie commented that the aggravation of degenerative changes requires a mechanism of injury that would change spinal pathology. Finally, Dr. McCranie noted Claimant reached MMI on January 6, 2018 and disagreed with Dr. Winslow's range of motion measurements because he failed to compare them with the readings from prior examiners to assess consistency.

22. Respondents have failed to demonstrate that Dr. Winslow improperly applied the *AMA Guides* or otherwise erred in concluding that Claimant has not reached MMI. Dr. Winslow explained that Claimant suffered an aggravation of her pre-existing degenerative lumbar spine condition on February 18, 2017. However, Drs. Fall and McCranie disagreed with Dr. Winslow's MMI determination because Claimant's current lumbar condition is unrelated to his February 8, 2017 industrial injury. The disagreement is insufficient to demonstrate that Dr. Winslow's conclusion was clearly erroneous. Notably, Dr. Janssen supported Dr. Winslow's determination by persuasively explaining that the change in Claimant's April 4, 2017 and May 21, 2018 MRI's reflected the worsening of Claimant's lumbar spine as a result of the February 18, 2017 industrial injury. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Winslow's determination that Claimant has not reached MMI is incorrect.

23. Claimant has demonstrated that it is more probably true than not that the disc arthroplasty surgery recommended by Dr. Janssen is reasonable, necessary and causally related to her February 18, 2017 admitted industrial injury. Dr. Janssen explained that Claimant's need for lumbar surgery is causally related to her February 18, 2017 industrial injury. He specified that Claimant suffers vertical instability in which

her disc is unable to withstand loads. Dr. Janssen detailed that the change in Claimant's April 4, 2017 and May 21, 2018 MRI's reflected the worsening of Claimant's lumbar spine as a result of the February 18, 2017 industrial injury. He specifically remarked that Claimant's disc injury from February 18, 2017 "progresses and collapses and gets further tears in it, and then sometimes starts developing this progressive vertical instability." The May 21, 2018 MRI did not reveal new findings, but simply a progression of Claimant's condition from the April 4, 2017 MRI. Moreover, based on a lumbar discography of L3-L4 and L4-L5, Dr. Janssen determined Claimant was a surgical candidate for a disc arthroplasty. Finally. Dr. Gutterman conducted a psychological evaluation of Claimant and concluded that she was an appropriate surgical candidate. Dr. Gutterman remarked that there was no reason to preclude surgery based on psychiatric functioning.

24. In contrast, Dr. McCranie commented that the aggravation of Claimant's degenerative lumbar condition would have required a mechanism of injury sufficient to change spinal pathology. A traumatic fall or heavy lifting would change spinal pathology, but something as minor as stepping into a pothole would not. Dr. McCranie explained there was a significant difference in the May 21, 2018 lumbar MRI because it reflected a L4-L5 disc extrusion that had only been a disc bulge on April 4, 2017. Claimant also has retrolisthesis at the L4-L5 level. Dr. McCranie concluded that the changes reflected in the MRIs are not related to Claimant's work injury. She summarized that the proposed lumbar spine surgery would not be related to Claimant's minor work injury. However, Dr. Janssen persuasively determined that the changes in Claimant's lumbar MRI's were caused by the progression of her February 18, 2017 work injury. Moreover, the record reflects that the proposed surgery is designed to address Claimant's work-related symptoms. Accordingly, the recommended lumbar spine surgery is reasonable, necessary and causally related to Claimant's February 18, 2017 industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings

as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." *See Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable

and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Winslow that Claimant has not reached MMI from her February 18, 2017 admitted lumbar strain. Initially, Claimant suffered an admitted lumbar injury when she stepped in a pothole while taking a walk between flights. She did not fall, but immediately suffered pain in her lower back. Dr. Winslow diagnosed Claimant with pre-existing "chronic stable clinically quiescent lumbar degenerative disc disease" and an aggravation of her pre-existing condition that caused an "interruption of the integrity of the lumbar disc" because of her work injury. He commented that, if Claimant's degenerative disc disease was aggravated by the work accident and Claimant requires surgery to address the degenerative disc disease, then it is clear the injury caused the need for surgery. Dr. Winslow reasoned that Claimant had exhausted all conservative management and qualified for the surgery recommended by Dr. Janssen. He concluded Claimant had not reached MMI and recommended surgical treatment at the discretion of Dr. Janssen. Dr. Winslow assigned a provisional 20% whole person lumbar rating consisting of 5% pursuant to Table 53 and 16% for range of motion deficits. He obtained and documented valid range of motion measurements of Claimant's lumbar spine pursuant to the *AMA Guides*.

9. As found, in contrast, Dr. Fall determined that Claimant had reached MMI on January 6, 2018. She diagnosed Claimant with chronic pain disorder and lumbar degenerative changes. Relying on the *AMA Guides*, Dr. Fall assigned Claimant a 5% whole person lumbar impairment rating pursuant to Table 53. Similarly, Dr. McCranie disagreed with Dr. Winslow's assessment that Claimant's degenerative disc disease had been aggravated by the work injury. Dr. McCranie considered Dr. Winslow's failure to address the significant differences between Claimant's April 4, 2017 and May 21, 2018 lumbar MRIs. Specifically, the May 21, 2018 MRI revealed a larger L4-L5 disc extrusion and new retrolisthesis. Dr. McCranie determined that any aggravation of Claimant's degenerative disc disease occurred between April 4, 2017 and May 21, 2018 and would thus be unrelated to the February 18, 2017 work injury. Furthermore, Dr. McCranie commented that the aggravation of degenerative changes requires a mechanism of injury that would change spinal pathology. Finally, Dr. McCranie noted Claimant reached MMI on January 6, 2018 and disagreed with Dr. Winslow's range of motion measurements because he failed to compare them with the readings from prior examiners to assess consistency.

10. As found, Respondents have failed to demonstrate that Dr. Winslow improperly applied the *AMA Guides* or otherwise erred in concluding that Claimant has not reached MMI. Dr. Winslow explained that Claimant suffered an aggravation of her pre-existing degenerative lumbar spine condition on February 18, 2017. However, Drs. Fall and McCranie disagreed with Dr. Winslow's MMI determination because Claimant's

current lumbar condition is unrelated to his February 8, 2017 industrial injury. The disagreement is insufficient to demonstrate that Dr. Winslow's conclusion was clearly erroneous. Notably, Dr. Janssen supported Dr. Winslow's determination by persuasively explaining that the change in Claimant's April 4, 2017 and May 21, 2018 MRI's reflected the worsening of Claimant's lumbar spine as a result of the February 18, 2017 industrial injury. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Winslow's determination that Claimant has not reached MMI is incorrect.

Medical Benefits

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

12. As found, Claimant has demonstrated by a preponderance of the evidence that the disc arthroplasty surgery recommended by Dr. Janssen is reasonable, necessary and causally related to her February 18, 2017 admitted industrial injury. Dr. Janssen explained that Claimant's need for lumbar surgery is causally related to her February 18, 2017 industrial injury. He specified that Claimant suffers vertical instability in which her disc is unable to withstand loads. Dr. Janssen detailed that the change in Claimant's April 4, 2017 and May 21, 2018 MRI's reflected the worsening of Claimant's lumbar spine as a result of the February 18, 2017 industrial injury. He specifically remarked that Claimant's disc injury from February 18, 2017 "progresses and collapses and gets further tears in it, and then sometimes starts developing this progressive vertical instability." The May 21, 2018 MRI did not reveal new findings, but simply a progression of Claimant's condition from the April 4, 2017 MRI. Moreover, based on a lumbar discography of L3-L4 and L4-L5, Dr. Janssen determined Claimant was a surgical candidate for a disc arthroplasty. Finally. Dr. Gutterman conducted a psychological evaluation of Claimant and concluded that she was an appropriate surgical candidate. Dr. Gutterman remarked that there was no reason to preclude surgery based on psychiatric functioning.

13. As found, in contrast, Dr. McCranie commented that the aggravation of Claimant's degenerative lumbar condition would have required a mechanism of injury sufficient to change spinal pathology. A traumatic fall or heavy lifting would change spinal pathology, but something as minor as stepping into a pothole would not. Dr. McCranie explained there was a significant difference in the May 21, 2018 lumbar MRI

because it reflected a L4-L5 disc extrusion that had only been a disc bulge on April 4, 2017. Claimant also has retrolisthesis at the L4-L5 level. Dr. McCranie concluded that the changes reflected in the MRIs are not related to Claimant's work injury. She summarized that the proposed lumbar spine surgery would not be related to Claimant's minor work injury. However, Dr. Janssen persuasively determined that the changes in Claimant's lumbar MRI's were caused by the progression of her February 18, 2017 work injury. Moreover, the record reflects that the proposed surgery is designed to address Claimant's work-related symptoms. Accordingly, the recommended lumbar spine surgery is reasonable, necessary and causally related to Claimant's February 18, 2017 industrial injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

.1 Respondents have failed to overcome Dr. Winslow's DIME opinion that Claimant has not reached MMI.

2. The disc arthroplasty surgery recommended by Dr. Janssen is reasonable, necessary and causally related to Claimant's February 18, 2017 admitted industrial injury.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Is the 22% whole person rating assigned by the DIME highly probably incorrect?
- If so, did Claimant prove entitlement to a PPD award by a preponderance of the evidence?

FINDINGS OF FACT

1. Claimant worked as a caregiver at Employer's assisted living facility. Her duties involved assisting elderly and disabled patients with activities of daily living such as bathing, dressing, and bed transfers. The job was physically demanding and required frequent heavy lifting. Claimant had worked for Employer "on and off" for approximately nine years, and continuously for approximately eighteen months before the work accident.

2. Claimant suffered an admitted low back injury on October 13, 2017 while helping a patient get dressed. After getting the patient out of bed, she bent down in an awkward position to pull up his pants. When she started to pull the pants up, she felt a painful pop in her low back. The pain was bad enough Claimant had difficulty standing up straight for a few minutes. She helped the patient to a chair and then reported the injury to her supervisor.

3. Claimant has a history of low back problems that is pertinent to Respondents' arguments regarding impairment. She saw her primary care provider at Peak Vista Community Health Centers on March 5, 2014 for low back pain. The report states, "31 y/o female here c/o worsening low back pain over the last couple months. She states long Hx of low back pain for many yrs possibly related to work injury that she saw a work comp doctor for. She states having some sort of imaging at that time showing DDD. She has not had further avowal since then. She denies pain radiating down legs but occasional numbness in the back of right calf." The pain was described as moderate, fluctuating, and dull, aggravated by activity and alleviated with ibuprofen. Physical examination showed mild tenderness to palpation of the paraspinal muscles, "good" range of motion, negative straight leg raise, and normal strength. The provider ordered x-rays and referred Claimant to physical therapy. She recommended stretching and recommended Claimant return if she failed to improve or got worse. Claimant had the x-rays April 8, 2014, which were "normal." Claimant did not go to physical therapy and her condition improved shortly thereafter.

4. There is no further mention of any low back problems in the medical records until January 16, 2017. On that date, Claimant saw Dr. Randall Jones at Concentra for a work-related injury two days earlier. A resident had pulled Claimant's left arm when she was trying to break up a fight with another resident, causing neck, mid back, and low back pain. The pain was on the left side of her neck and back. Examination of the lumbar spine

showed minimal tenderness in the left paraspinal muscles and full, painless range of motion. Claimant was diagnosed with neck, thoracic, and low back strains. Dr. Jones recommended moist heat and OTC ibuprofen. He reassured Claimant she "should do well" and anticipated she would reach MMI quickly. He imposed no work restrictions.

5. Claimant's symptoms were not much better at her next Concentra visit on January 26, 2017, so Dr. Jones recommended physical therapy. Claimant attended two sessions of PT and stopped going because she felt better. There is no indication she received any further treatment until the October 2017 injury.

6. Claimant testified to episodic low back pain and "soreness" before the October 2017 accident, primarily associated with work activities. The episodes typically resolved quickly without treatment. Claimant testified she performed all the duties of her job without limitation or difficulty before. Claimant's testimony on these points was credible and persuasive.

7. Employer referred Claimant back to Concentra after the October 13, 2017 accident. She saw Dr. Walter Larimore at her initial visit on October 18, 2017. She reported 6/10 pain making it difficult to sleep. Her pain diagram indicated pain in the mid-to-right-side low back and sacral area. Dr. Larimore noted no previous low back pain or injury. Physical examination revealed right-sided muscle spasms and impaired range of motion. Dr. Larimore diagnosed a lumbar strain and prescribed Flexeril and diclofenac. He referred Claimant to physical therapy and imposed work restrictions of no lifting over 20 pounds.

8. Claimant saw Dr. Ronald Peveto on October 20 and October 25, 2017. His physical examinations revealed tenderness and sharp pain on the right side of her low back and limited lumbar range of motion. There was no palpable spasm noted.

9. Claimant attended several physical therapy sessions, which temporarily lessened her low back and SI joint pain. She had to cancel some appointments due to a family emergency and having to move on short notice.

10. On December 5, 2017, Dr. Peveto ordered a lumbar MRI because Claimant was not better and reported shooting pain in her back and legs.

11. Claimant had the MRI on December 6, 2017. It showed bulging discs at L3-4, L4-5, and L5-S1 without evidence of nerve root impingement, and a tear of the L4-5 disc. After reviewing the MRI, Dr. Peveto referred Claimant to Dr. Timothy Sandell, a physical medicine and rehabilitation specialist.

12. Claimant saw Dr. Sandell on December 18, 2017. Physical examination showed diffuse tenderness to palpation of the low back, bilateral SI joints, gluteal muscles, and sciatic notch. The neurological examination was unremarkable. She demonstrated approximately 80-90 degrees of lumbar flexion and 10 degrees of extension, with pain. He diagnosed low back pain with intermittent right lower extremity radicular symptoms and mild disc bulges without nerve impingement at L3-4, L4-5, and L5-S1. He recommended a lower extremity EMG and prescribed a Medrol Dosepak.

13. In January 2018, Claimant reported worsening pain with new shooting pain into her left leg.

14. Claimant returned to Dr. Sandell on January 22, 2018 for the EMG. The Medrol Dosepak had not help and rated her pain 7/10. Dr. Sandell noted the new left leg pain down the back of the leg to the knee. Claimant still had some radiation down the right leg sometimes went to the foot. She noticed numbness in those same areas, but no weakness. The EMG showed no evidence of nerve entrapment or radiculopathy. Dr. Sandell referred Claimant back to physical therapy and requested "a course of dry-needling to see if we can reduce some of the muscular symptoms that I think is the primary underlying cause of her back pain."

15. Claimant followed up with Dr. Peveto on January 26, 2018. Her low back pain was a bit worse since the last visit, and she had developed discomfort in her mid and upper back "due to overcompensation from the lower back." Claimant noted she periodically had to work outside of her restrictions because her clients sometimes could not sustain their weight. Dr. Peveto tightened her work restrictions to lifting no over 10 pounds and no patient care responsibilities that might involve lifting patients. He referred Claimant to Dr. Randy Knoche, for chiropractic, core strengthening, and dry needling.

16. Dr. Knoche evaluated Claimant on February 6, 2018. He was impressed with possible bilateral SI joint dysfunction besides the low back pain. Dr. Knoche diagnosed a lumbosacral sprain and a sacroiliac joint sprain with attendant muscle spasm and inflammation.

17. Dr. Knoche documented myofascial trigger points in the piriformis and gluteus musculature on at least three occasions.

18. Dr. Sandell reevaluated Claimant on February 21, 2018. His examination showed focal tenderness in the lower portion of the SI joints, worse on the left side. He noted, "She has responded somewhat to the tri-needling and the chiropractic care. However, this seems to be helping some of the muscular symptoms in the upper back and lower thoracic region. Her low back pain remains unchanged. I do have a greater concern that there may be a different etiology, such as sacroiliitis." Dr. Sandell recommended a trial of bilateral SI joint injections.

19. Dr. Sandell administered the bilateral SI joint injections on March 16, 2018. Claimant followed up with Dr. Sandell on March 30, 2018, and reported "about 50% pain reduction from the SI joint injections." Her pain had level had decreased to a "2 or 3." Dr. Sandell recommended Claimant return to Dr. Knoche or PT and then transition to a home exercise program. He opined Claimant might need additional SI joint injections if her pain flared.

20. At her April 9, 2018 appointment with Dr. Jones, Claimant reported "marked relief" from the SI joint injection and told Dr. Jones, "she is 75-80% back to normal and states no pain today." Dr. Jones released her to try full duties because her pain was so much better. He opined she could be at MMI in approximately three months depending

on how she tolerated regular duty. He wanted her to follow up with Dr. Sandell in three weeks.

21. Claimant returned to Dr. Peveto on April 13, 2018 and reported "pain in my back feels like sharp and shooting pains getting worse since I got off restrictions." Examination showed sciatic notch tenderness and reduced lumbar range of motion. Dr. Peveto put her back on restrictions of no lifting over 20 pounds, occasional bending, and the freedom change positions periodically to relieve discomfort.

22. Claimant saw Dr. Sandell on April 18, 2018. He opined she might need more SI joint injections but noted her pain "may be calming down with adjustment in activity." He suggested Claimant try aquatic therapy.

23. On May 4, 2018, Dr. Jones advised Claimant to have the SI joint injections and referred her for aqua therapy.

24. Also on May 4, 2018, Dr. Peter Garcia performed a utilization review and recommended Respondents deny the repeat SI injections.

25. Claimant went back to Concentra on May 17, 2018 and saw Dr. George Johnson for the first time. She had an appointment scheduled for May 25 but came in early because her low back and SI joint pain were "extreme" and the medication was not helping. Massage therapy was making the pain worse. Examination of her low back showed diffuse paraspinal tenderness throughout and limited range of motion. Dr. Johnson determined Claimant was at MMI. His rationale was,

> The patient is not getting better. She has had significant PT and chiropractic. She has been on light duty for many months. She has had an MRI and EMG which were both essentially normal. She had bilateral SI joint injections which helped for a short period of time. She has not been able to return to full work. Will close and placed at MMI. Will need permanent restrictions and a rating.

26. Dr. Johnson obtained lumbar range of motion measurements, which he indicated equated to an 18% whole person rating. Despite noting the lumbar flexion measurements were invalid, he included them in the rating anyway, without explanation.

27. Claimant followed up with Dr. Sandell on May 22, 2018. He documented "palpable tenderness over the bilateral SI joints . . . increased pain with extension versus flexion . . . [and] pain with SI joint provocation maneuvers." Dr. Sandell opined,

> I still think it is best that we pursue the SI joint injections . . . She reported doing very well following the SI joint injections that were performed on March 16, 2018. Initially, she felt she had approximately 80% relief. She then returned to work and when she was taken off all work restrictions, she had increase in pain and return of symptoms. Therefore, the injection lasted until she had a significant change in activity that caused reaggravation in probable increased inflammation in the SI joints. Up to that point, she had

> reported improved function and she was able to return to work within her restrictions. She is now under permanent work restrictions and therefore, we are not anticipating return to the previous level of function that caused recurrence of her symptoms.
>
> She had not been using any medications other than Tylenol or anti-inflammatory medications. With the delay in getting some SI joint injections, she has now been prescribed some tramadol for use. She was not requiring tramadol or any stronger pain relief when she had treatment for the SI joint pain. Therefore, I would like to pursue the bilateral SI joint injections . . . .

28. On May 22, 2018, Respondents' claims adjuster asked Dr. Johnson, "if we were to override the UR's decision and approve the repeat injections, would that change the injured worker's permanent restrictions?" Dr. Johnson responded, "I do not think that any treatment will be of much benefit for the patient's condition at this time."

29. Dr. Johnson completed a rating report on June 4, 2018. He gave a 5% specific disorder rating under Table 53(II)(B), combined with 18% for lumbar range of motion, for an overall rating of 22%. Dr. Johnson noted, "not all of the [ROM] measurements were valid" without further discussion. He opined apportionment was not applicable because Claimant had no prior injury. Dr. Johnson assigned permanent restrictions of no lifting over 20 pounds and no repetitive bending at the waist.

30. Claimant was involved in a motor vehicle accident on May 30, 2018. She went to the Memorial Hospital emergency department on June 5, 2018. The report states she "presents with back pain exacerbation onset status post MVC one week ago. The patient was a restrained driver in the front seat of a vehicle that was impacted by another car. Airbags did not deploy. She did not hit her head or lose consciousness. She was able to self extricate and ambulate on scene. Presently, she complains of diffuse back pain and hip pain. . . . She has a history of sciatica." Physical exam showed diffuse tenderness of her neck, mid back, and low back. She was diagnosed with a "neck strain," a "back strain," and "myalgia" and advised to follow up with primary care.

31. Claimant went to Peak Vista Community Health Centers on June 11, 2018. She told the provider, "the motor vehicle accident has aggravated her previous injury." She was prescribed ibuprofen and referred to physical therapy. Claimant returned to Peak Vista on June 19, 2018 and was prescribed meloxicam and prednisone. She did not go to physical therapy. There are no further records of treatment specifically related to the MVA. The ALJ finds the MVA temporarily exacerbated Claimant's low back injury, but she returned to baseline and suffered no permanent aggravation.

32. Respondents requested a DIME to challenge Dr. Johnson's impairment rating. Dr. James Regan performed the DIME on October 19, 2018. Dr. Regan considered Claimant "a solid historian." He noted, "she still has significant pain and I did observe her shifting her weight in the chair (did not impress me as a 'show' but rather learned behavior from a chronic problem)." He agreed with the May 17, 2018 MMI date given by Dr. Johnson. Dr. Regan opined apportionment was not warranted because "she was fine and

at full duty at the time of her injury." He assigned a 5% specific disorder lumbar spine rating under Table 53(II)(B).[1] He also obtained lumbar range of motion measurements, which are internally valid and correspond to a 13% whole person rating. Dr. Regan concluded,

> Her whole person impairment today would be 17%. She reached MMI on 05/17/2018. She seems to have enjoyed some improvement in ROM. For rating purposes, it is appropriate to use the measurements made the day of her MMI visit and accordingly I feel 22% still represents her whole person impairment.

33. The DIME Unit requested clarification of the rating, and on November 19, 2019, Dr. Regan replied,

> I feel her rating should be the one from her date of reaching MMI, with is 22%. The date of MMI is 5/17/2018. My report explains why 22% is the more representative rating, as compared to my rating made 5 months after she had reached MMI.

34. Dr. Lawrence Lesnak performed an IME for Respondents on February 26, 2019. Dr. Lesnak noted mostly normal physical exam findings with only non-localized tenderness around the gluteal regions. Claimant's lumbar range of motion was reduced, but invalid due to "submaximal effort." Dr. Lesnak agreed Claimant was at MMI as of May 17, 2018, but opined she suffered no permanent impairment. He interpreted the medical records as showing "many years" of chronic low back pain before the work accident. He believed Claimant gave "false information" to her ATPs by failing to disclose her prior back problems. He opined "the mere activity of bending over at the waist" to pull up a man's pants would not cause any low back or SI joint injury. Dr. Lesnak believed Claimant's subjective pain complaints did not correlate with any objective findings. He noted the MRI showed no evidence of any acute injury or trauma-related pathology, and the findings were relatively normal for someone over the age of 18 to 20. He opined Claimant's response to the SI joint injections was "completely non diagnostic and non therapeutic." He concluded Claimant had no impairment from the work accident and had returned to baseline regarding her pre-existing "chronic progressive low back pain."

35. Claimant saw Dr. Jack Rook for an IME at her counsel's request on April 9, 2019. On examination, Dr. Rook appreciated severe tenderness to palpation of the bilateral SI joints and "palpable spasm" in the bilateral paralumbar musculature. Lumbar range of motion was decreased in all planes. Dr. Rook disagreed with Dr. Lesnak's argument Claimant's ongoing low back problems merely represent a continuation of a long-standing "chronic" problem. He noted Claimant had minimal pre-injury treatment for low back pain and had no difficulty performing her physically demanding job before October 2017. He emphasized that much of her pain emanates from the SI joints, and there was no indication of any pre-injury SI joint problems. He opined Claimant had a traumatic incident on October 13, 2017 associated with a painful pop in her back and "has

[1] This is the same base rating Dr. Johnson applied.

not been the same since that time." Dr. Rook opined Claimant qualified for a 5% lumbar rating under Table 53(II)(B), combined with range of motion.

36. Dr. Rook and Dr. Lesnak provided testimony to elaborate on their respective opinions. Dr. Rook opined the term "rigidity" in Table 53(II)(b) is synonymous with "stiffness" and can be evidenced by documented range of motion deficits. Dr. Lesnak conceded "[rigidity] really is not a well-defined entity," but disagreed it equates to "stiffness." He offered two contradictory definitions of "rigidity." At hearing, he opined it implies palpable paraspinal muscle "ropiness," but in his deposition he said, "it's a joint restriction or something like that. It may not cause range of motion loss, per se, but something internal and not dealing with soft tissues." Dr. Lesnak opined the treatment records demonstrate no rigidity, and only show subjective pain complaints unsupported by objective findings. He emphasized that "mere subjective complaints" do not qualify for a Table 53 rating without objective findings.

37. Dr. Rook explained Dr. Regan's decision to adopt Dr. Johnson's 22% rating was incorrect because Dr. Johnson's underlying lumbar flexion measurements were invalid. The ALJ agrees this constitutes clear error on Dr. Regan's part. Dr. Rook opined the most appropriate rating is 17% based on the valid range of motion measurements Dr. Regan obtained at the DIME appointment.

38. Dr. Rook's opinions are credible and more persuasive than the contrary opinions of Dr. Lesnak.

39. Dr. Regan's 22% rating is highly probably incorrect.

40. Claimant proved by a preponderance of the evidence she suffered a 17% whole person impairment because of her industrial accident.

CONCLUSIONS OF LAW

A DIME's determination regarding whole person impairment is binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(C). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A DIME physician must rate impairment consistent with the *AMA Guides*. Section 8-42-101(3.7); *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2003). The DIME's deviation from the rating protocols is evidence from which the ALJ can determine the DIME's rating was overcome. *Wilson v. Industrial Claim Appeals Office, supra; McCardie v. Transit Concrete Co*., W.C. No. 4-964-260-01 (January 19, 2018).

Both parties agree Dr. Regan's 22% rating is incorrect. Therefore, the DIME has been overcome by agreement. Even without an agreement, the ALJ concludes the 22% rating is highly probably incorrect because the underlying lumbar flexion measurements were invalid. Dr. Regan's decision to adopt Dr. Johnson's invalid range of motion measurements was clearly wrong.

When a DIME's impairment rating has been overcome "in any respect," the proper rating becomes a factual matter for the ALJ's determination ALJ based on the preponderance of the evidence. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (October 14, 2016). The only limitation is that the ALJ's findings must be supported by the record and consistent with the *AMA Guides* and other rating protocols. *Serena v. SSC Pueblo Belmont Operating Company LLC*, W.C. 4-922-344-01 (December 1, 2015). In determining the rating, the ALJ can take judicial notice of the contents of the *AMA Guides*, Level II Curriculum, the Division's Impairment Rating Tips (Desk Aid #11), and other such documents promulgated by the Division of Workers' Compensation. *Id*.

The crux of the disagreement here is whether Claimant qualifies for a Specific Disorder rating under Table 53 of the *AMA Guides*. The parties agree a Table 53 rating is a prerequisite to any rating for spinal ROM deficits.

Table 53(II)(B) provides for a 5% whole person rating where the claimant has lumbar "disc or other soft-tissue lesions . . . with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with none-to-minimal degenerative changes on structural tests."

Claimant proved the required elements for a Table 53(II)(B) lumbar rating are present here. Three Level II physicians (Dr. Johnson, Dr. Regan, and Dr. Rook) agree she qualifies for a Table 53 rating, and their opinions are supported by the evidence of record. Claimant's injury was "medically documented" in a consistent manner by numerous physicians. She has experienced and was treated for low back and SI joint[2] pain for over six months. Multiple physicians noted muscle tenderness to palpation, and at least three providers documented muscle spasm, including Dr. Larimore at the initial visit. The records repeatedly documented decreased range of motion, which satisfies the rigidity criteria. Dr. Lesnak's narrow definition of "rigidity" is not persuasive, particularly because the Level II accreditation materials state, "there is currently not an accepted definition for rigidity, thus the documented need for treatment over 6 months is the main criteria."[3] Dr. Rook's testimony that rigidity can be equated with "stiffness" is persuasive and consistent with common usage. For example, *The American Heritage College Dictionary*, (3d ed. 1993) defines the word "rigid" to include: "1. Not flexible or pliant; stiff." Similarly, *Roget's II The New Thesaurus*, (3d ed. 1995) includes "stiff" as a primary synonym for the word "rigid." Since there is no specific *medical* definition of "rigidity," the ALJ sees no reason to depart from its well-established common meaning.

Dr. Lesnak's opinion that Claimant's ongoing low back pain is merely a continuation of a pre-existing "chronic" condition is not persuasive. His argument is largely predicated on a single note from Peak Vista dated March 5, 2014 referencing a "long Hx of low back pain for many years." But the physical examination on that date was largely benign, with only mild muscle tenderness to palpation, and "good" ROM and lower extremity strength. There was no suggestion of any sacroiliac joint pain. Claimant was

[2] Per the Impairment Rating Tips, SI joint dysfunction is rated as a lumbar spine impairment under Table 53(II)(B) "in most circumstances."

[3] Level II Accreditation Curriculum (rev. 01/2019), "Spine and Pelvis Impairment Ratings, p. 191. https://tinyurl.com/y6y2psfo

given the nonspecific diagnosis “low back pain,” sent for x-rays, advised to use NSAIDs, and referred to physical therapy. Lumbar x-rays on April 8, 2014 were normal and there is no evidence Claimant ever went to therapy. The Peak Vista records after March 5, 2014 make no further mention of low back problems. The lack of treatment corroborates Claimant’s testimony the prior episodes of low back pain were infrequent and self-limiting. Even if Claimant experienced intermittent low back pain between 2014 and 2017, it was not severe enough to require any medical treatment or cause any functional limitations. Claimant worked a physically demanding job without difficulty or limitation until she suffered a minor lumbar strain while breaking up a fight in January 2017. That injury resolved after a couple of therapy sessions, and she was released with no impairment, no restrictions, and no need for follow-up care. By contrast, Claimant has been continuously symptomatic since the October 2017 work accident, and was given permanent work restrictions by the ATP.

The lumbar ROM measurements obtained by Dr. Regan at the DIME were internally valid per the *AMA Guides* criteria, and equate to a 13% impairment. Combined with the 5% specific disorder rating under Table 53(II)(B), Claimant’s overall whole person impairment is 17%.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD benefits based on a 17% whole person rating.

2. Insurer shall pay statutory interest of eight percent (8%) per annum on all benefits not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on March 7, 2019.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical benefits including a hernia surgery.

FINDINGS OF FACT

1. Claimant is a 64 year old male who is employed by Employer as an environmental specialist III. Claimant has been employed by Employer since approximately 2006.

2. Claimant works in an office location.

3. On March 7, 2019, Claimant arrived to his office location at approximately 8:00 a.m. Claimant parked in the parking lot and walked a short distance to a stairwell where he entered a door at the parking lot level, and planned to walk up stairs to the floor of his office.

4. The parking lot was snow covered and had slushy ice. This extended into the area of the base of the stairwell inside the door to the stairwell that Claimant entered.

5. Claimant had his lunch box in one hand and a box of bagels in his other hand. At the base of the stairwell, when he was about to start climbing the stairs, Claimant slipped and fell backwards.

6. Claimant fell onto his back and right side and his head struck the wall or the floor. Claimant testified that the fall happened quickly, that he was in shock for a few minutes, and that he then recovered and continued up the stairs to the floor of his office and to his cubicle.

7. Claimant testified that he had pain on the right side of his body, his groin, up his waist and to the right side of his lower back. Claimant testified that his neck and head were sore but that the pain in his neck and head were not as severe as the pain in the right side of his body.

8. Claimant testified that he started work at his cubicle, but that when he got up to use the restroom, he was limping. Claimant testified that a co-worker saw him limping and told him to report his injury and that he reported it to his supervisor.

9. Claimant testified that he was in discomfort for the next several days but thought he would heal normally because everyone trips and is sore, but that after the days passed, his soreness and discomfort turned to more pain and became intolerable. Claimant

10. On March 18, 2019, Claimant was evaluated at Concentra. Claimant reported that he slipped and fell in slush on March 7 and that he hit the right side of his body and head. Claimant reported that 2-3 days later he was fine with no pain, but that since then the pain in the right groin had increased and was radiating to the right lower abdomen and lower back. Claimant reported pain on the right side of his neck worse with turning his head to the right. Claimant reported that his groin area on the right side was hurting on and off. Claimant reported that he had to drive a long distance to work and that using his right leg to driver was exacerbating his condition. On examination, Claimant had tenderness in the right hip, pain in the proximal quadriceps, pain with forward flexion, and pain with extension. Claimant also had tenderness in the right paraspinal and right trapezius muscle and painful right cervical spine rotation. Claimant was assessed with lumbar strain, cervical strain, and groin strain and was referred to physical therapy. *See* Exhibit 5.

11. On March 21, 2019, Claimant was evaluated at Concentra. Claimant reported that he felt worse after physical therapy. Claimant reported right side neck pain, right upper back pain, and right groin pain. Claimant reported that physical therapy exacerbated his lower back pain. Claimant also reported right testicle pain worse when lifting. Claimant reported a history of lower back pain and a prior L5/S1 herniation with conservative management a few years ago that had not completely gone away but that felt better prior to his March 7 fall. An ultrasound was recommended top evaluate for inguinal hernia. *See* Exhibit 5.

12. On March 28, 2019, Claimant was evaluated at Concentra. Claimant reported that massage therapy had helped improve his range of motion and reduced his pain but that he felt like physical therapy was aggravating a prior back injury that he had. Claimant reported neck pain, back pain, and right groin pain. *See* Exhibit 5.

13. On April 3, 2019, John Sacha, M.D. evaluated Claimant. Claimant reported a slip and fall on an icy area at work and that he hit his head and landed on his back. Claimant reported that he had low back and right groin pain and that physical therapy increased his pain. Claimant reported pain in the low back with radiation to the right groin and pain in the right neck with some periscapular pain. Claimant reported a prior work related low back injury in 2009. On examination, Dr. Sacha found cervical paraspinal spasm and segmental dysfunction in the mid cervical spine. On the lower back examination, Dr. Sacha found some lumbar paraspinal spasm, some pain with straight leg raise, and pain with extension and external rotation on the right. Dr. Sacha provided the impression of cervical facet syndrome, posttraumatic in nature, whiplash associated disorder, and lumbar radiculopathy. Dr. Sacha opined that Claimant had some ongoing

pain consistent with lumbar discogenic pain as well as a mild mid cervical whiplash injury. *See* Exhibits 6, D.

14. On April 11, 2019, Claimant was evaluated at Concentra. Claimant reported neck pain, back pain, and groin pain. A cervical spine x-ray performed showed anteriorly fused C4-5, 5-6, and 6-7, typical of deseminated intravertebral sclerotic hyperostosis (forestier's disease). *See* Exhibit 5.

15. On April 17, 2018, Claimant underwent a hernia ultrasound. The impression provided was right sided reducible direct inguinal hernia, containing only fat but no intestines corresponding to Claimant's point of tenderness. *See* Exhibit 8.

16. On April 22, 2019, Claimant was evaluated at Concentra. Claimant reported that an ultrasound a few days prior revealed a right fat containing inguinal hernia and that his pain was not constant but intermittent with movements. Claimant reported that his lower back and right groin hurt getting into and out of the car and that his neck pain as worse with sudden movements. Claimant reported that he had difficulty driving due to the gas and brake pedals and that he had those problems prior to the March 7 fall when his workplace moved to a more distant location, but that it had been even worse since his March 7 fall. Claimant reported that his prior lower back injury was non-surgical. *See* Exhibit 5.

17. On May 2, 2019, John Weaver, M.D. evaluated Claimant. Claimant reported a slip and fall with an acute onset of right groin pain. Claimant reported no prior history of hernias or hernia surgeries and that his pain in the right groin was a 2/10. Dr. Weaver reviewed an ultrasound that showed a 3 X 4 cm right inguinal hernia. Dr. Weaver agreed that Claimant had a right inguinal hernia and likely had a groin strain on top of that. Dr. Weaver noted that Claimant wished to proceed with surgery. *See* Exhibit 7.

18. On May 22, 2019, Dr. Sacha evaluated Claimant. Dr. Sacha noted that a recent MRI of the lumbar spine showed evidence of a possible compression deformity at the L5 level that may or may not be from the March 7 fall and may be a coincidental finding but had some evidence of possible bone marrow edema. Dr. Sacha opined that it also could just be subchondral reactive changes from disc degeneration. Dr. Sacha recommended a one-time bone scan to make sure that it was not a coincidental finding. Dr. Sacha noted mild degenerative changes otherwise in the lumbar spine without significant foraminal or canal narrowing that would not explain the ongoing low back and leg symptoms. Dr. Sacha opined that a recent MRI of the cervical spine showed multilevel degenerative disease and facet spondylolysis with some bilateral foraminal and canal narrowing at multiple levels. Dr. Sacha opined that Claimant may have a mild form of DISH or just advanced degenerative changes. Dr. Sacha opined that full driving was reasonable and that driving required no restrictions despite Claimant's request for no driving restrictions. Dr. Sacha opined that Claimant had moderate to severe pain behaviors. Dr. Sacha recommended Claimant discontinue using a cane and opined that there was no benefit to it and that it was likely causing more symptoms. *See* Exhibits 6, D.

19. On June 26, 2019, Claimant underwent a bone scan. Planar images of the whole body in the anterior and posterior projections were obtained. Mild increased uptake was noted at the sternoclavicular joints as well as at the bilateral shoulders, bilateral knees, and bilateral feet and were opined to be likely degenerative. Asymmetric focal increased radiotracer uptake was seen about an area of irregularity along the right lateral L5 endplates with underlying increased sclerosis and mild volume loss. The mild volume loss and endplate irregularity along the right lateral L5 vertebral body demonstrated increased radiotracer uptake. The reading physician, Rustain Morgan, M.D. opined that the findings were nonspecific but could represent acute to subacute compression deformity at the site. *See* Exhibit 8.

20. On July 8, 2019, Claimant was evaluated at Concentra. Dr. Corson reviewed a note from Dr. Sacha where Dr. Sacha opined that a bone scan showed evidence that an endplate contusion was likely related to the March 7 injury with subacute findings now appearing healed. Claimant reported to Dr. Corson that he was developing new pain in his bilateral lower back with twisting. Dr. Corson opined that Claimant appeared more comfortable than on any prior visit. *See* Exhibit 5.

21. On August 1, 2019, Claimant underwent an independent medical evaluation performed by Tashof Bernton, M.D. Claimant reported that on March 7, 2019 he tripped and fell backwards on his back and hit his head on the wall when going upstairs after walking through lots of slushy ice in the parking lot. Claimant reported there was water and ice inside the door leading from the parking lot to the stairwell. Claimant reported that for the first three days his right side of the abdomen and groin hurt but that he had no neck or lower back pain, but that one week later he started feeling pain in his back and neck and pain in the lower back on the right when getting out of bed that worsened over time. Dr. Bernton noted that Claimant reported a past medical history as not significant to Concentra, when Claimant had past history of both neck and back complaints. Claimant reported to Dr. Bernton that his neck was naturally fused and that his neck hurt every once in a while prior to March 7. Dr. Bernton reviewed cervical spine x-rays from June, 2018 that showed interval progression of prominent osteophytes bridging from C3-4 through C7-T1 consistent with skeletal hyperostosis/Forestier's disease in the cervical spine. Dr. Bernton pointed out that the impression provided was progressing forestier's disease and that Claimant was seen in June of 2018 for back pain, neck clicking/popping worsened with prolonged slouching. Dr. Bernton pointed out a job stress and psychiatric assessment just prior to the March 7 injury and opined that was of significance clinically. *See* Exhibit A.

22. Dr. Bernton pointed out that when Claimant was evaluated by Dr. Sacha, Claimant denied any prior neck pain despite Claimant having had an x-ray in 2018 for neck symptoms where he was found to have forestier's disease. Dr. Bernton opined that there was no work related medical condition consistent with Claimant's current complaints and that there was no basis where a fall at work could have resulted in minimal symptoms immediately, no symptoms for several days, then onset of symptoms a week later with progressive severity. Dr. Bernton opined that Claimant's neck symptoms were consistent

with his pre-existing forestier's disease. Dr. Bernton opined that if Claimant's low back symptoms had been a result of the fall, the symptoms would have been acute and severe as compression fractures due to a fall present with severe pain and muscle spasm acutely and not a week later. Dr. Bernton also opined that the there was no physiologic mechanism by which a fall can cause a hernia. Dr. Bernton thus opined that Claimant did not sustain work related conditions requiring medical treatment or resulting in impairment. Dr. Bernton opined that Claimant had psychologic distress, forestier's disease of the neck, and inguinal hernia, and lumbar pain and radiculitis that all should be treated on a non-work related basis. *See* Exhibit A.

23. Dr. Bernton testified at hearing consistent with his report. Dr. Bernton noted that Claimant had initially reported no symptoms for the first few days after his fall and that he had no neck or lower back pain, with symptoms in the neck and back occurring one week later. Dr. Bernton opined that the reports were not consistent with an acute compression fracture of the lumbar spine and that an acute fracture has marked immediate pain and obvious spasm. Dr. Bernton testified that a compression fracture can be degenerative and happen over time. Dr. Bernton also testified that a compression fracture requires force through the spine and compression that was not consistent with Claimant's mechanism of injury. Dr. Bernton pointed out that Claimant had chronic low back pain with spasms, had MRIs that showed significant degenerative findings, and that in 2018 Claimant was undergoing chiropractic, massage, and physical therapy for the chronic prior complaints. Dr. Bernton testified that Claimant had an assessment in 2015 of groin pain and hernia discomfort in the groin with palpation. Dr. Bernton testified that a hernia in the inguinal area can be due to congenital weakness and that if it is caused acutely it is usually due to increase in abdominal pressure as with lifting. Dr. Bernton testified that falling is not a reasonable pathophysiology to cause an inguinal hernia. Dr. Bernton opined that Claimant did not sustain any injury requiring treatment in this case and that Claimant's fall did not cause an injury.

24. Claimant testified that after his fall he was in discomfort for the first few days, but that the real pain came on as the days passed. Claimant testified that one year prior to the fall, he had MRIs of his neck and back that showed no fractures. Claimant testified that the hernia related discomfort was new after the fall and that he had never had right groin pain before and never had a hernia before. Claimant testified and admitted that he had pain with driving over one hour before his fall, but testified that the fall aggravated his discomfort while driving.

25. Claimant's supervisor Jessica M_____ testified at hearing. Ms. M_____ testified that in May of 2018 Claimant reported that he was having difficulty driving due to groin pain and gout. At that time, Claimant requested he be allowed to work from home or from an office closer to his house. The request was denied.

26. As pointed out by Dr. Bernton, Claimant has a significant prior treatment history. On December 16, 2009, Claimant was evaluated for a permanent impairment rating due to a prior work injury. Claimant reported that he was okay but that he continued to have low back pain, at about a 5/10 increased with twisting movements. Claimant

reported his pain was across the lower back at the beltline usually a little worse on the right than left. Claimant was diagnosed with lumbosacral sprain with resultant chronic low back pain and with a small central disc protrusion at the L5 level. Claimant was released to regular work and it was recommended that he finish physical therapy, complete home exercises, and continue with medications. Claimant was provided an impairment of 11% whole person. *See* Exhibit E.

27. On October 30, 2014, Claimant was evaluated by Cheryl DelosReyes, M.D. Claimant reported occasional pains in his testicles, and back pain. Dr. DelosReyes did not visualize or feel any hernias on general examination, but she assessed back pain and abdominal hernia. Dr. DelosReyes recommended Claimant start dilaudid tablets for his back pain and recommended Claimant obtain an abdominal truss or hernia belt to wear while playing tennis and weight lifting. *See* Exhibit C.

28. On January 6, 2016, Claimant was evaluated at Kaiser and reported bilateral foot pain, groin cramping, and calf muscle cramping. *See* Exhibit B.

29. On June 26, 2016, Claimant underwent an MRI of his lumbar spine that showed mild degenerative changes, no clear evidence for nerve impingement, and minimal changes except for a small midline posterior L5/S1 annular tear. *See* Exhibit B.

30. On June 26, 2016, Claimant also underwent an MRI of his cervical spine that showed C4/5 and C5/6 plus or minus C3/4 anterior end plate fusion with no clear neural compression despite mild spinal canal narrowing. *See* Exhibit B.

31. On October 23, 2017, Claimant was evaluated at Kaiser and reported low back pain. Claimant was given flexeril to use as needed. *See* Exhibit B.

32. On May 9, 2018, Claimant was evaluated at Kaiser and assessed with back pain. It was noted that Claimant had seen the chiropractor twice and that Claimant was advised to get physical therapy. Claimant reported no back injuries and that his back pain would come and go. *See* Exhibit B.

33. On May 29, 2018, Claimant was evaluated at Kaiser and reported bilateral low back pain. Claimant reported a many year history of low back pain in the low central back into the bilateral musculature and reported that a prior MRI showed a disc bulge at L5/S1. Claimant reported that his pain in the low back was a 5/10 worse with walking. Claimant underwent a physical therapy evaluation and was instructed on independent home exercises. It was stated as a goal at physical therapy that Claimant would be able to perform all activities of daily living and his job without limitation in 3-4 weeks and return to tennis without increased symptoms in 6-8 weeks. *See* Exhibit B.

34. On June 25, 2018, Claimant was evaluated at Kaiser. Claimant was diagnosed with low back pain, myofascial pain syndrome, lumbar disc degeneration, and cervical disc degeneration. Claimant reported back pain and neck clicking/popping. Claimant reported his pain was worse with prolonged slouched sitting, bending over with

flexed spine, and standing from slouched sitting. Claimant had paraspinal tenderness with palpation at L4 and L5. *See* Exhibit B.

35. On August 17, 2018, Dr. DelosReyes evaluated Claimant to re-establish care after Claimant had been with Kaiser for the 3 prior years. Dr. DelosReyes noted Claimant's chronic low back pain, anxiety, chronic insomnia, and situational stress. *See* Exhibit C.

36. On August 23, 2018, Dr. DelosReyes evaluated Claimant. Claimant reported that he was stressed out by his job supervisor, not sleeping well, getting more anxious, and getting depressed. Claimant requested medications. Dr. DelosReyes prescribed Lexapro for depression with anxiety. *See* Exhibit C.

37. On October 29, 2018, Dr. DelosReyes evaluated Claimant. Claimant reported he was still under a lot of stress at work. Claimant reported that he was not sleeping well, was achy all over his body, was anxious, had right calf stiffness and metatarsal pains. Claimant reported he had low back pain 2 hours or so after ejaculation but not without ejaculation. Dr. DelosReyes assessed lower extremity pain, low back pain, situational stress, anxiety. *See* Exhibit C.

38. On February 26, 2019, Dr. DelosReyes evaluated Claimant. Claimant reported stress at work and trouble sleeping. Dr. DelosReyes listed Claimant's past medical history to include chronic low back pain, abdominal hernia, and other issues including anxiety and chronic insomnia. *See* Exhibit C.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the

testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015). The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990); *Marjorie Jorgensen v. Air Serve Corporation,* W.C. No. 4-894-311-03, (ICAO, Apr. 9, 2014). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

Claimant has failed to establish, by a preponderance of the evidence that he sustained a compensable injury. Although he fell in the stairwell after slipping on the snowy/slushy ground on March 7, he has failed to establish that this fall caused disability or the need for medical treatment.

Dr. Bernton is credible and persuasive that the fall did not cause any medical condition requiring treatment. The pre-existing medical records and the overall weight of the evidence supports Dr. Bernton's opinions. Claimant has significant pre-existing cervical spine issues including a pre-existing diagnosis of forestier's disease. Claimant failed to disclose his significant cervical spine history when treating for this fall. Claimant also treated extensively for lower back pain prior to this fall. In May of 2018, Claimant reported his back pain was at a 5/10, would come and go, and Claimant underwent physical therapy where he was given home exercises and goals to complete. Additionally, despite denying any prior history of hernias, Claimant was assessed in October of 2014 with an abdominal hernia and it was recommended that he get a truss or belt to use with activity. Claimant further had groin cramping and issues with pain in January of 2016, and requested to be allowed to work from home due to groin pain causing him difficulty driving in May of 2018.

Dr. Bernton is credible and persuasive that if the fall had caused an acute lumbar spine compression fracture, Claimant would have had immediate and severe pain in his lumbar spine. He also is credible that the fracture seen after March 7 could have been a degenerative type fracture due to Claimant's significant lumbar spine degenerative history. The neck symptoms reported after March 7 are also consistent with Claimant's pre-existing condition and history. Finally, Dr. Bernton is persuasive that a fall is not a physiologically likely cause of an inguinal hernia. Claimant had prior assessments of hernia with recommendations to wear a truss or belt and prior mentions of groin pain and cramping made to medical providers and Employer. Claimant has failed to meet his burden. Although it is possible the March 7 fall aggravated Claimant's pre-existing neck, low back, and groin/hernia issues, Claimant has failed to establish more likely than not that it did so. Claimant has failed to show that his need for treatment currently is different or aggravated/accelerated from his need for treatment prior to March 7. Claimant has failed to establish that his fall on March 7 caused any additional disability or need for medical treatment that did not exist prior to March 7. Dr. Bernton is persuasive and his opinion is consistent with the weight of the evidence.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish, by a preponderance of the evidence, that he sustained a compensable work related injury on March 7, 2019. His claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 10, 2019

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-935-055-002

ISSUES

I. Whether Claimant overcome the opinion of the Division Independent Examiner, Dr. Kevin Nagamani, that she reached MMI on November 15, 2018.

II. Whether Claimant established she is entitled to maintenance medical treatment.

III. Whether Claimant established she is entitled to an award of temporary total disability from November 15, 2018, until terminated by statute.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was injured in an admitted accident on September 7, 2013, in the course and scope of her employment with the Employer. The injury occurred when, while restocking product, a shelf extender fell, landing on the distal portion of the claimant's left foot on the top of her closed toe, closed heel, non-skid shoes. *Hearing Audio; Exhibit C, Bates 30*. The shelf extender which landed on the claimant's foot weighed approximately five pounds. The claimant completed her work shift and went home.

2. Claimant initially presented for care at the Mount San Rafael Hospital Emergency Room on September 8, 2013. The claimant gave a history of pain at a level 10/10, with numbness/tingling/paresthesia to her toes. X-rays were performed and read as showing no fracture or dislocation, with only chronic degenerative changes noted. *Exhibit B, Bates 18, 21*.

3. Claimant subsequently selected Dr. Douglas McFarland as the provider designated to treat her work injury. Dr. McFarland first evaluated the claimant on September 11, 2013. Based on his evaluation, Dr. McFarland assessed a contusion to the left foot and numbness in the left toes. Dr. McFarland imposed work restrictions and prescribed medications. *Exhibit C, Bates 30*.

4. Employer offered Claimant a job within the physician-imposed work-restrictions, which the claimant accepted. On October 8, 2013, Dr. McFarland opined, "She may be at maximum medical improvement in 2 or 3 months, depending on her rate of recovery. I expect that she will regain sensation and function in the foot and I doubt that there would be a role for any surgical intervention." *Exhibit C, Bates 33*.

5. Dr. McFarland restricted Claimant from all work activity on October 29, 2013, based on the claimant's report that Employer was not accommodating the imposed work restrictions. *Exhibit C, Bates 34*.

6. Dr. McFarland referred Claimant to orthopedic surgeon, Dr. Michael Simpson. Dr. Simpson evaluated Claimant on December 9, 2013. Based on his examination, Dr. Simpson assessed claimant as suffering from a contusion to the left foot with residual neuropathic pain. Dr. Simpson also noted the absence of vasomotor changes associated with Chronic Regional Pain Syndrome (CRPS). *Exhibit D, Bates 63*. Dr. Simpson referred the claimant to pain management specialist, Dr. Keith Caughfield.

7. Dr. Caughfield evaluated Claimant on March 8, 2014. Dr. Caughfield documented give-way strength with toe extension, ankle dorsiflexion, plantar flexion and knee flexion and extension. Dr. Caughfield noted the absence of discoloration of the foot or hypersensitivity to touch. He also noted normal hair and nail growth and normal capillary refill. *Exhibit 25*. Dr. Caughfield recommended EMG testing of the left lower extremity, which he performed on April 8, 2014. The EMG was read as a normal study of the left lower extremity, without evidence of peripheral nerve entrapment or lumbar radiculopathy. *Exhibit 25*.

8. Claimant continued treatment with Dr. McFarland. Dr. McFarland referred Claimant for a left foot MRI, which was performed on January 28, 2014. The left foot MRI was read as showing arthritis in the Lisfranc joints, worse in the second and third metatarsal cuneiform joints. Atypical arthritis was suspected, possibly including gout. *Exhibit C, Bates 41; Exhibit E, Bates 71*. Dr. McFarland referred Claimant to Dr. Miguel Castrejon. Dr. Castrejon evaluated Claimant on December 10, 2014. Based on his review of the medical records and his evaluation of Claimant, Dr. Castrejon expressed concern for the presence of sympathetically mediated pain and referred Claimant for diagnostic testing.

9. Claimant underwent a triple-phase bone scan on April 8, 2015. The bone scan was read as showing mildly asymmetric increased left foot arterial and blood pool phase activity and a focus of increased activity in the right midfoot. The final report stated three-phase increased activity over the left foot, which is a nonspecific finding that may be due to severe arthritis, recent traumatic injury, and/or less likely infectious disease. *Exhibit R, Bates 349*.

10. Dr. George Schakaraschwili evaluated the claimant on August 13, 2015, shortly after Claimant had undergone an unrelated surgery to her right foot. Dr. Schakaraschwili documented the absence of visible asymmetry of skin coloration, skin appearance or nail or hair growth. *Exhibit 23*. Dr. Schakaraschwili performed QSART and thermogram testing, which he interpreted as suggestive of a CRPS diagnosis. Dr. Schakaraschwili subsequently referred Claimant to Dr. Stephen Ford for a left lumbar sympathetic block. *Exhibit 23.*

11. Dr. Ford evaluated Claimant on October 5, 2016. On physical exam, Dr. Ford noted Claimant's right foot and ankle appeared warm and swollen in comparison to the left foot. However, Dr. Ford concluded that Claimant's left foot did not have signs or symptoms that would be consistent with CRPS. Therefore, Dr.

Ford declined to perform lumbar sympathetic blocks because Claimant's presentation was not consistent with CRPS. *Exhibit N, Bates 200*.

12. On February 21, 2017, Claimant was evaluated by Dr. Kevin Nagamani for purposes of a 24-month DIME. Based on his review of the medical records and his evaluation of Claimant, Dr. Nagamani opined Claimant was not at MMI. Dr. Nagamani reasoned that Claimant underwent a very long period of immobilization in a boot, but she had not undergone any significant sustained rehabilitative process of the foot. According to Dr. Nagamani, it is very common after a foot or ankle injury to have persistent pain if adequate rehab is not undertaken. Dr. Nagamani noted that Claimant had only undergone two very short courses of physical therapy. The first course was discontinued due to pain. The second course was discontinued secondary to lack of follow-up. Dr. Nagamani noted that on clinical examination, objective physical signs of CRPS were not prominent. He recommended proceeding with an extensive course of physical therapy for at least six weeks. *Exhibit R, Bate 350*.

13. Despite the DIME's recommendations, and her off work status, Claimant did not return to Dr. McFarland until July 11, 2017.

14. On July 11, 2017, Claimant was returned to Dr. McFarland. At this appointment, he noted Claimant complained of constant pain on the medial aspect her left leg from her knee down to the medial part of the dorsum and sole of her foot, including the 1st and 2nd toes. He also noted that she complained of complete numbness on the lateral aspect of her leg from the knee down involving the lateral part of the dorsum and sole of her foot and the lateral 3 toes. In addition, he noted that Claimant stated the sole of her foot was also involved in a similar distribution. At that time, Claimant rated her pain at 7/10. Lastly, during his physical examination, he also noted that although he attempted to test Claimant's reflexes, he had to stop before he could perform a complete examination due to Claimant's pain complaints. There is no indication whether he determined her complaints fit any type of dermatomal pattern or were consistent with her original work injury. However, based on Dr. Nagamani's recommendations, he referred Claimant for 18 sessions of physical therapy, to be completed over a six-week period, three sessions per week. *Exhibit C, Bates 53*.

15. On November 8, 2017, Claimant was seen by Dr. Castrejon. At this appointment, Dr. Castrejon noted Claimant ambulated with an antalgic gait.

16. From February 6, 2018, through February 10, 2018, Respondents obtained surveillance video of Claimant. *Exhibit T*. The surveillance video shows Claimant walking and Claimant appears to be walking in a manner that appears normal for her stated age and build. In the surveillance video, Claimant does not appear to be in any distress and does not appear to walk with an antalgic gait due to her left foot injury. Claimant's presentation on the surveillance video seems to be in stark contrast with her presentation to Dr. McFarland in July of 2017.

17. Despite Dr. McFarland prescribing physical therapy for Claimant, based on the recommendations of the DIME, Claimant did not start the physical therapy for approximately 8 months.

18. Pursuant to the DIME, absent a diagnosis of CRPS, the primary treatment Claimant had to undergo in order to reach MMI was physical therapy. Therefore, absent a diagnosis of CRPS, the DIME physician opined Claimant would be at MMI after undergoing an extensive course of physical therapy for at least 6 weeks. *Exhibit 14, Bates 129,130*.

19. On March 21, 2018, Claimant started the physical therapy Dr. Nagamani recommended in his February 21, 2017, DIME report and subsequently prescribed by Dr. McFarland 8 months earlier. *Exhibit P, Bates 262*.

20. On March 21, 2018, Claimant attended the first physical therapy appointment after the DIME. However, the report demonstrates Claimant was not very eager to actually start and undergo the physical therapy. The report notes Claimant stated she was there only for an evaluation and not for treatment. The therapist indicated the doctor's report accompanying Claimant's prescription for physical therapy stated otherwise, i.e., she was there for treatment. *Exhibit P, Bates 220*.

21. And, although it took Claimant over a year to start the physical therapy recommended by the DIME physician on February 21, 2017, Claimant was paid temporary total disability benefits during that period of time, and ongoing, since she was found to not have reached MMI. *Exhibit A, Bates 1.*

22. On May 1, 2018, approximately 6 weeks after her first physical therapy (PT) appointment, Claimant returned for her second PT appointment. Claimant failed to follow through with Dr. McFarland's prescribed treatment of physical therapy 3 times per week for 6 weeks. Had Claimant followed through with Dr. McFarland's recommendations, she would have completed the prescribed physical therapy by the end of that week.

23. The May 1, 2018, physical therapy report states Claimant indicated she fell in her kitchen last night and hurt her left knee. It is also noted that Claimant rated her pain at 10/10, but denied the need to go to the emergency room. The physical therapist also noted:

> Patient with 10/10 self-reported pain rating, however she is in no signs of distress, is able to bear weight on her (L) LE, able to carry on a full conversation without deviation, and smiled 4 times during treatment session in conversation with PT.
>
> *Exhibit P, Bates 222*.

24. Claimant underwent additional physical therapy on May 3rd, 4th, 11th, 2018. At each of those appointments, the physical therapist specifically noted that although Claimant complained of 10/10 pain, Claimant never appeared to be in any obvious signs of distress. *Exhibit P, Bates 223-229*.

25. On May 18, 2018, Claimant returned to physical therapy. At this appointment, the report notes Claimant had a migraine Wednesday morning, and fell twice that same morning inside her house. Claimant complained of new complaints involving her left foot. The report specifically provides the following:

> Patient/Caregiver comments: Patient states her 2nd toe on her (L) foot is completely numb. She states that now she

> can't feel from the 2nd to her 5th toe. She states that she still has feeling in her (L) big toe, but is concerned that the numbness has now spread to her 2nd toe. She states that she had a migraine Wednesday morning and fell twice inside her house that morning. She states she was able to get up independently from both falls. She rates her pain as 10/10.
>
> Therapist Summary on Status/Progress: Despite her 10/10 pain rating, patient is in no obvious signs of distress, is able to ambulate independently, perform exercises and carry on a normal conversation. Despite (L) ankle DF AROM of -4 degrees, patient was observed to have functional (L) ankle dorsiflexion during ankle pumps and with gait (heel strike on (L) with toes not touching floor). This PT had other PT onsite (Amy Proctor, PT, OPT) observe both of these activities as well. Will send progress report of today's visit to patient's referring physician for review of newly reported symptoms.
>
> *Exhibit P, Bates 232*.

26. On May 15, 2018, Claimant presented to Arkansas Valley Regional Pain Center with complaints of not feeling well and a migraine headache. *Exhibit J, Bates 169*. Claimant also reported "slipping" the last Saturday and Monday in April and her leg bent and she landed on her left knee. There is no indication she slipped due to her prior left foot injury. *Exhibit J, Bates 173*.

27. On May 21, 2018, Claimant returned to PT. At this appointment, Claimant started reporting pain of 10/10 in her left knee. *Exhibit P, Bates 233.*

28. On October 17, 2018, Claimant was evaluated by Dr. Simpson. Claimant gave Dr. Simpson a history of "hurting her knee" and that "caused her second toe to become numb as well". However, Claimant was not complaining of any knee pain. *Exhibit D, Bates 65*. Dr. Simpson assessed "left ankle pain" and opined, "It appears she does seem to have chronic pain syndrome. I do not profess to be an expert in chronic pain, but at this point, I do not see any musculoskeletal abnormalities that would require further interventional procedures and/or surgery. *Exhibit D, Bates 67-68*.

29. On September 23, 2018, in response to interrogatories propounded by the Respondents, following review of surveillance video from February 2018, Dr. McFarland placed Claimant at MMI as of February 7, 2018, with no restrictions and no need for medical treatment to maintain MMI. The ALJ infers and finds that Claimant's presentation on the surveillance video was in stark contrast to Claimant's presentation to Dr. McFarland at the July 11, 2017 appointment, and that the surveillance video was a factor in his decision to place Claimant at MMI. He also noted that after her July 11, 2017, appointment, Claimant failed to attend her next scheduled appointment with him. *Exhibit C, Bates 56*. Claimant's failure to attend her follow up appointment with Dr. McFarland provides additional evidence that Claimant was not interested in undergoing the treatment that was recommended to improve her condition. Claimant's failure to keep her medical appointments and undergo the recommended treatment in a timely manner

further diminishes her credibility as it relates to nature and extent of her symptoms.

30. Claimant returned to Dr. Nagamani on November 15, 2018, for a follow-up Division IME. Claimant gave Dr. Nagamani a history of falling in April while cooking and injuring her left knee. Claimant did not relate the fall to the September 7, 2013, work injury. After reviewing additional medical records since his first DIME, and re-evaluating Claimant, Dr. Nagamani opined Claimant was at MMI as of the date of his evaluation with no further treatment recommendations or maintenance care. It should also be noted that Dr. Nagamani specifically referenced reviewing Dr. Castrejon's August 2018 report. In Dr. Castrejon's August 2018 report, he noted Claimant's fall and injury to her left knee due to her alleged inability to sustain her weight with her left leg. However, despite that information, Dr. Nagamani did not indicate the knee injury was related since he placed Claimant at MMI, limited his diagnosis to her left foot, and did not recommend maintenance medical treatment. Dr. Nagamani, however, did provide Claimant a fourteen percent scheduled impairment for her left foot injury. *See Exhibit R, Bates 353-358*.

31. Respondents filed a February 1, 2019, Final Admission of Liability consistent with Dr. Nagamani's opinions on MMI, impairment, and medical treatment post-MMI. *Exhibit 1.*

32. Dr. Miguel Castrejon testified as Level II accredited physician with expertise in physical medicine and rehabilitation. Dr. Castrejon testified the diagnosis of CRPS had not been excluded in Claimant. Dr. Castrejon also testified that CRPS does not have the type of delineation or distribution of symptoms in a dermatomal fashion as exhibited by Claimant. Dr. Castrejon performed a repeat EMG, which was incomplete. Dr. Castrejon testified that there was an abnormality in the posterior tibial nerve, which would potentially be consistent with a tarsal tunnel syndrome. According to Dr. Castrejon, tarsal tunnel can be treated with physical therapy and anti-inflammatories. Dr. Castrejon did not have the records of the claimant's prior physical therapy available for review. Dr. Castrejon testified that CRPS is a very functionally debilitating condition. Dr. Castrejon did not review Dr. Nagamani's November 15, 2018, DIME report. Dr. Castrejon did not review the video surveillance reviewed by Dr. McFarland and Dr. Cebrian. Dr. Castrejon was unable to make a judgment as to Claimant's MMI status without reviewing all the relevant information.

33. Dr. Cebrian credibly testified that the claimant does not carry the diagnosis of CRPS. *Cebrian Depo., p. 8-9*. Dr. Cebrian credibly testified that Claimant's provisional diagnosis of tarsal tunnel syndrome is not related to the admitted work injury. *Cebrian Depo., p. 15, l. 25; p. 16, ll. 1-12*. Dr. Cebrian credibly testified that based on his review of the surveillance video, Claimant did not appear to be functionally limited. *Cebrian Depo., p. 17, ll. 12-23*.

34. Dr. Cebrian also testified about Claimant's fall on her left knee. He credibly testified that during his IME, Claimant indicated she fell when she turned to take something off the stove and lost her balance. He testified that Claimant did not relate her fall to any numbness in her left foot, which might arguably be related to her work injury. Moreover, he testified that based on his evaluation of Claimant,

the numbness was on the top of her foot, not the bottom or posterior portion of her foot. Therefore, he credibly opined that her fall on her left knee was not related to her work injury. *Cebrian Depo., pp. 11-12*.

35. Dr. Cebrian also credibly and persuasively testified that based on the physical therapy notes, it appeared Claimant's pain complaints – as well as her complaints of limited function regarding her left ankle, were inconsistent with the observations of the physical therapist. *Cebrian Depo., pp. 13-14.*

36. Lastly, Dr. Cebrian credibly and persuasively opined that Claimant does not require any medical treatment to maintain MMI. *Cebrian Depo., pp. 13-14; See also Exhibit Q.* His testimony regarding maintenance medical treatment was consistent with his opinion and conclusion in his July 17, 2019, IME. In such report, Dr. Cebrian credible and persuasively concluded the following:

> No maintenance care is medically reasonable, necessary or related to the 9/7/2013 claim.
>
> a. Ms. DeSantis has had extensive medical treatment without reports of improvement.
>
> b. Neither Dr. McFarland nor Dr. Nagamani recommended any maintenance care.
>
> c. The video surveillance demonstrated Ms. DeSantis was doing better than she reported to her medical providers.

Exhibit Q, Bates 345.

37. Dr. Cebrian's opinions are consistent with the underlying medical record, surveillance video, and findings of many of the other medical providers. Therefore, the ALJ finds Dr. Cebrian's opinions and testimony to be credible and persuasive.

38. The ALJ finds Claimant is not a reliable or credible historian regarding her symptoms. This includes the onset of her symptoms, the extent of her symptoms, and the cause of her symptoms. This is based on the ALJ's review of the surveillance video, medical records, and testimony of Dr. Cebrian, which established various inconsistencies, as well as Claimant's unwillingness to undergo prescribed treatment in a timely manner.

39. Claimant has failed to overcome the opinion of the Division IME regarding maximum medical improvement by clear and convincing evidence.

40. Claimant has failed to establish by a preponderance of the evidence that she is entitled to maintenance medical treatment to relieve her from the effects of her industrial injury or to prevent further deterioration of her industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant overcome the opinion of the Division Independent Examiner, Dr. Kevin Nagamani, that she reached MMI on November 15, 2018.

Maximum medical improvement exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). Under the statute, MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various

components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007).

A finding that Claimant needs additional medical treatment to improve her injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc*., W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining Claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra.* Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

As found, Claimant is not a reliable or credible historian regarding her symptoms. This includes the onset of her symptoms, the extent of her symptoms, and the cause of her symptoms. As found above, the ALJ made this finding based on the ALJ's review of the surveillance video, medical records, and testimony of Dr. Cebrian, which established various inconsistencies, as well as Claimant's unwillingness to undergo prescribed treatment in a timely manner.

In this case, the DIME physician, Dr. Nagamani, opined that Claimant's work-related diagnosis is a left foot crushing injury, from which she reached MMI on November 15, 2018. The DIME physician's opinion that Claimant is at MMI is adequately supported by the medical evidence as well as the opinions of Dr. Cebrian and Dr. McFarland. Both the DIME physician, Dr. Nagamani, and Dr. Cebrian, opined Claimant lacked findings on physical examination to suggest CRPS. Moreover, the ALJ finds the opinions of the DIME physician and Dr. Cebrian to be credible and persuasive.

To the extent Dr. Castrejon's opinions are contrary to a finding of MMI, the ALJ does not find his opinions to be credible or persuasive since they appear to be heavily based upon Claimant's subjective complaints and her contention about the onset, development, and extent of her symptoms, which the ALJ does not find credible. Moreover, he did not have and review all of the records that were available to Dr. Cebrian, such as the final DIME report, Claimant's prior physical therapy records, and

the surveillance of Claimant. Like a house built on sand, an expert's opinion is no better than the facts and data on which it is based. *See Kennemur v. State of California*, 184 Cal. Rptr. 393, 402–03 (Cal. Ct. App. 1982).

The ALJ finds and concludes Claimant has failed to overcome the DIME physician's opinion regarding MMI by clear and convincing evidence. Therefore, Claimant reached MMI on November 15, 2018, for her left foot injury.

II. Whether Claimant established she is entitled to maintenance medical treatment.

The need for medical treatment may extend beyond the point of MMI where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). Moreover, an award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services,* W. C. No. 4-543-730, (ICAO, July 14, 2006).

Again, and as found, Claimant is not a reliable or credible historian regarding her symptoms. This includes the onset of her symptoms, the extent of her symptoms, and the cause of her symptoms. As found above, the ALJ made this finding based on the ALJ's review of the surveillance video, medical records, and testimony of Dr. Cebrian, which established various inconsistencies, as well as Claimant's unwillingness to undergo prescribed treatment in a timely manner.

As found and stated above, the ALJ finds the opinions of Dr. Nagamani and Dr. Cebrian to be more persuasive that Dr. Castrejon. Dr. Cebrian credibly and persuasively concluded in his report that:

> No maintenance care is medically reasonable, necessary or related to the 9/7/2013 claim.
>
> a. Ms. DeSantis has had extensive medical treatment without reports of improvement.
>
> b. Neither Dr. McFarland nor Dr. Nagamani recommended any maintenance care.
>
> c. The video surveillance demonstrated Ms. DeSantis was doing better than she reported to her medical providers.

Dr. Cebrian also persuasively and credibly testified consistent with his report and again concluded Claimant does not need any maintenance medical treatment due to her work injury.

Therefore, the ALJ finds and concludes that Claimant failed to establish by a preponderance of the evidence that she is in need of maintenance medical treatment for her left foot injury.

ORDER

Based upon the foregoing specific findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to overcome the MMI opinion of Dr. Nagamani, the DIME physician, that Claimant reached MMI on November 15, 2018, for her compensable injury, which is limited to her left foot.
2. Claimant reached MMI for her compensable left foot injury on November 15, 2018.
3. Claimant's claim for maintenance medical treatment is denied.
4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 11, 2019.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove he suffered whole person impairment to his right knee or left shoulder?
- Did Claimant prove entitlement to medical benefits after MMI for any of his claims?
- Did Claimant make a proper showing for a change of physician to Dr. Timothy Hall?
- Disfigurement.
- The parties agreed to reserve issues relating to Respondent's claimed overpayment pending the outcome of this hearing.

FINDINGS OF FACT

1. Claimant worked for Employer as a firefighter. He suffered three the admitted industrial injuries that are the subject of this consolidated hearing. The left ankle injury occurred on October 6, 2016 (WC 5-080-777) when Claimant jumped off an elevated surface and landed on a push broom, causing him to roll the ankle. Claimant injured his right knee on November 28, 2016 while performing rehabilitation exercises for the left ankle. He injured the left shoulder using a pike pole to pull material from a ceiling at a fire scene.

2. Claimant has treated at Employer's Occupational Health clinic for all three injuries. His care was primarily managed by Dr. Jay Neubauer and PA-C Paula Homberger, PA-C. He saw Dr. Nicholas Kurz twice, on September 7, 2018 for MMI on the left shoulder and on February 19, 2019 for MMI on the left ankle. He received orthopedic treatment from Dr. Christopher Jones for the knee and shoulder injuries, and Dr. Brad Dresher for the ankle.

Left Ankle — WC 5-080-777 — DOI October 6, 2016:

3. Claimant was initially diagnosed with an ankle sprain and provided conservative treatment. He was ultimately referred to Dr. Brad Dresher, who performed left ankle surgery on June 29, 2018. Dr. Dresher later administered three platelet rich plasma (PRP) injections in the left ankle for persistent symptoms. He discharged Claimant on December 11, 2018.

4. Claimant has a one-time impairment evaluation with Dr. Nicholas Kurz on February 19, 2019. Claimant was "feeling much improved and is ready to be released." Dr. Kurz put Claimant at MMI and assigned an 8% lower extremity rating. He opined no

maintenance treatment was required. Respondent filed an FAL on March 15, 2019 based on Dr. Kurz' report.

Right Knee — WC 5-036-847 — DOI November 28, 2016:

5. Claimant injured his right knee on November 28, 2016 while performing rehabilitation exercises for his injured left ankle. He was referred to Dr. Christopher Jones, who diagnosed a complex medial meniscus tear. On April 18, 2017, Dr. Jones performed an arthroscopic partial medial meniscectomy and chondroplasties of the patella and medial femoral condyle. The surgery helped but did not resolve Claimant's knee symptoms.

6. Dr. Jones wrote to the claims adjuster on August 18, 2017 and explained, "I did discuss the possibility of platelet rich plasma injection treatment for [Claimant's] right knee due to the cartilage damage that he has both on his patella and his medial femoral condyle. . . . He continues to have symptoms that are arthritic in nature . . . consistent with his findings at the time of arthroscopy." He discussed and included copies of "literature that show significant benefit in treating under pages with early degenerative arthritis with platelet rich plasma. . . . The majority of studies have done a series of 3 injections of platelet rich plasma and showed good results up to 2 years out from the procedure. Additionally, these treatments have proven to be superior to viscosupplementation . . . ."

7. Respondent approved one PRP injection, which Dr. Jones administered on September 14, 2017. He noted, "My protocol is usually to do 3 injections in succession, however since work comp is [offering] this treatment I think it is reasonable to reassess in a month and go from there."

8. On November 6, 2017, Dr. Jones reported, "We did a single PRP injection to the right knee about 2 months ago. We had requested a series of 3 injections however only 1 was approved. He felt like it may have helped a little bit but he continues to have pain especially going up and down stairs and especially when he is loaded with weight."

9. Respondent ultimately approved three additional PRP injections, which were done on February 19, February 26, 2018, and March 5, 2018.

10. On June 14, 2018, Dr. Jones discussed the PRP injections and noted, "he has not noticed a huge improvement in his pain but has noticed that he's had less swelling. He still feels pretty limited on a day-to-day basis. Apparently he has a functional capacity evaluation in this going to have some permanent restrictions going forward which will likely result in medical retirement. Dr. Jones also noted, "As we've discussed in the past they certainly do not think we can cure [Claimant] of these problems. Although he certainly has a history of chronic trauma given his job, chondromalacia is a degenerative process which will continue. In the future he can certainly try stem cell injections in the form of bone marrow or umbilical cord products. I'm hopeful he can get many years out of his knee prior to arthroplasty. He'll return to see me as needed regarding his knee."

11. Dr. Neubauer evaluated Claimant on July 17, 2018 and reported, "The patient now presents for evaluation of MMI and impairment rating. He continues to complain of a 2/10 general ache in the right knee which increases to 6/10 with movement/walking or stair climbing. He also has difficulty with kneeling, climbing ladders, and squatting. He continues to use ibuprofen and ice occasionally for pain management. Dr. Neubauer assigned a 14% lower extremity rating. He recommended no post-MMI treatment.

Left Shoulder — WC 5-041-859 — DOI February 25, 2017:

12. Claimant injured his left shoulder while using a "pike pole" to pull down ceiling material at a fire scene on February 25, 2017. He tried conservative care for nearly a year and eventually Dr. Jones performed an arthroscopic rotator cuff repair and chondral debridement of the humeral head on January 2, 2018.

13. Claimant had his final appointment with Dr. Jones for the left shoulder on August 20, 2018. Dr. Jones documented, "He does have pain still at this point. He also has limitations and particularly lifting overhead. He reports he still has trouble pulling hose as a fireman, climbing ladders or certainly lifting ladders overhead." Dr. Jones opined, "going back to work as a fireman is not going to be possible for him. I think he is looking at treatments in the future that may include arthroplasty or replacement. Other options for treating the arthritic component of this would be to consider Visco supplements, PRP or even stem cell treatments." Dr. Jones released Claimant from active care and advised him "to return if pain or symptoms arise."

14. Claimant saw Dr. Kurz for an impairment rating on the left shoulder on September 7, 2018. He reported "an intermittent positional ache in the L shoulder with certain movements and increased discomfort with overhead activities." Dr. Kurz opined Claimant was at MMI with a 13% upper extremity/8% whole person rating.

15. On September 12, 2018, the claims adjuster sent Dr. Kurz a copy of a 2013 Final Admission admitting for a 6% scheduled rating for a previous shoulder injury. Dr. Kurz determined apportionment was appropriate and revised the rating to 10% upper extremity/6% whole person.

16. Claimant underwent several IMEs in conjunction with his Fire and Police Pension Association ("FPPA") medical retirement. He saw Dr. Robert Bess on July 30, 2018. On examination of left shoulder Speed's test, O'Brien's test, and impingement signs were positive. Scapular lift-off test was very painful. The right knee examination was unremarkable. Dr. Bess opined Claimant is "permanently occupationally disabled [because] [h]e is unable to perform the usual and customary duties required of a firefighter."

17. Claimant saw Dr. Messenbagh on July 31, 2018, who focused on the left shoulder and right knee. Regarding the shoulder, Dr. Messenbaugh noted, "he indicated that he was experiencing persistent pain in and about his left shoulder, noted increased pain if he was to lie upon his left shoulder . . . increased pain about his left shoulder with

attempts to abduct and externally rotate his left upper extremity. He stated he was unable to use his left arm above shoulder level even for lifting fairly light weights on an upper shelf. He stated he occasionally took ibuprofen for his left shoulder discomfort." Regarding the knee, Claimant reported persistent "aching" pain in and about the right knee, aggravated by walking, going up and down stairs, and kneeling. Dr. Messenbaugh concluded Claimant was permanently disabled from his occupation as a firefighter because of "limited, painful, restricted function of left shoulder and right knee."

18. Dr. Alfred Lotman examined Claimant for the FPPA claim on August 1, 2018. Claimant described weakness and "clicking and popping" in his shoulder. On examination, Dr. Lotman observed, "a mild degree of deltoid atrophy in his left shoulder more than what would be anticipated in a right hand dominant male." Range of motion was limited in all planes. There was no tenderness or pain about the sternoclavicular or acromioclavicular joints. Claimant reported clicking and popping in the knee, difficulty going up and down stairs, increased swelling with activity, and interference with his sleep. Dr. Lotman noted, "1 to 2+ quadriceps atrophy in his right thigh" and mild effusion. Dr. Lotman opined Claimant was permanently disabled from his occupation as a firefighter.

19. The final FPPA exam was conducted by Dr. Annu Ramaswamy on August 28, 2018. He concurred with the previous examiners' conclusions Claimant is permanently disabled from his job as a firefighter.

20. Claimant underwent a DIME with Dr. William Watson on December 18, 2018 regarding the left shoulder and right knee. He described 4/5 pain in the right knee worse going up and down stairs. He stated he could not perform overhead activities with the left shoulder. Dr. Watson assigned a 17% extremity/7% whole person rating for the knee, and a 1% extremity/1% whole person rating for the shoulder (after apportionment). Regarding medical treatment after MMI Dr. Watson opined,

> [Claimant] has requested the possibility of stem cells for the right knee]. In reviewing rule 17, these have not been approved through the division. He has had some limited success with platelet rich plasma and I believe over the next year this could be repeated two times with three injections into the knee over a period of three weeks.
>
> As far as the left shoulder is concerned, stem cells have not been approved for this entity. He did not get a good result with the platelet rich plasma and I believe the best result would be to continue the Celebrex on a regular basis.
>
> This is all part of maintenance care and will not change the date of maximal [sic] medical improvement. In the future, because of the injuries he has sustained as a firefighter, the shoulder x2 and the knee x1, he may require total shoulder arthroplasty in the future and total knee arthroplasty in the future. Both of these would be related to the original injuries.

21. On March 11, 2019, Respondent filed FALs in both claims based on Dr. Watson's DIME report. Both FALs denied liability for medical benefits after MMI.

22. Claimant saw Dr. Timothy Hall for an IME at his counsel's request on July 3, 2019. Dr. Hall opined,

> Regarding maintenance care, Dr. Watson felt that PRP injections regarding the knee would be appropriate. I agree. I do not understand the rationale for restricting that to a one-year time period. If anything, the situation in his knee is likely to worsen over time and he is going to require management of the situation more in the future than in the next year. I would recommend these maintenance PRP injections in his knee one to two times a year into the foreseeable future. I agree that PRP involving the shoulder is probably not as helpful.
>
> He is probably going to come to knee replacement and shoulder replacement in the future. As per my understanding, this is not really "maintenance" care. It is more an issue of worsening of condition over time, which would require reopening the case and following through with the procedures.

23. Dr. John Burris performed a record review for Respondent on July 29, 2019. He also testified at hearing to elaborate on his opinions and conclusions. Dr. Burris opined there was no basis to rate the shoulder as a whole person impairment because the injury was limited to the "ball and socket" with "no proximal involvement." He pointed out the chondral fissuring Dr. Jones repaired was on the humeral head. He also saw no evidence of functional impairment beyond the leg that would warrant a whole person rating for the knee. Dr. Burris opined Claimant requires no treatment after MMI for the knee or shoulder. He noted PRP injections were not helpful so it made no sense to repeat them. He opined stem cells are outside the MTGs and not supported by medical literature. He provided a similar opinion regarding Claimant's use of CBD oil.

24. Claimant testified that the PRP injections to the knee helped reduce the swelling even though they did not relieve the pain. His testimony in this regard is supported by Dr. Jones' June 14, 2018 report. He would like more PRP injections and wants to try stem cell treatment for the knee. Claimant uses CBD oil for the knee and shoulder, and feels it reduces pain and swelling.

25. Claimant described limitations from the knee such as waking down stairs, difficulty squatting, kneeling and crawling, and inability to run long distances or exercise as he did before the injury. He described no symptoms affecting parts of his body beyond the leg.

26. Claimant testified his shoulder felt "somewhat better" after surgery, but he still has pain in the "anterior part of the deltoid, and inside the joint." He that certain movements cause "popping and grating" inside the joint. He described no proximal symptoms affecting areas such as his neck, trapezius, scapula, or chest. Claimant has

limited use of his left arm because of his residual shoulder pain. For instance, he described difficulty lifting, performing overhead activities, and reaching away from his body. The shoulder soreness worsens with activities such as shoveling snow and maintaining his yard.

27. Claimant failed to prove he suffered functional impairment to his knee or shoulder not listed on the schedule of disabilities. The ALJ credits Dr. Burris' opinions that the functional impairment associated with Claimant's left shoulder and right knee is limited to his arm and leg, respectively.

28. Claimant wants to try Visco supplementation, PRP, and stem cell treatments for the shoulder, as suggested by Dr. Jones. He no longer takes Celebrex or ibuprofen because NSAIDs upset his stomach.

29. Claimant failed to prove he requires any treatment after MMI for his left shoulder. Dr. Jones did not actually recommend viscosupplementation, stem cells, or PRP for the shoulder, but merely listed those as "options . . . to consider." Dr. Burris and Dr. Watson explained stem cell treatment is not recommended under the Lower Extremity MTGs. CBD oil (or other marijuana-derived medicinal) is not an appropriate treatment in a Workers' Compensation claim, notwithstanding any perceived benefit it may provide Claimant. The possibility Claimant may need a shoulder arthroplasty at an undefined time in the future is too speculative to serve as the basis for a general award of medical benefits after MMI. The ALJ credits the opinions of Dr. Burris, Dr. Watson, and Dr. Hall that further injections to the shoulder are not warranted and the only reasonable option at this point would be anti-inflammatories. Because Claimant cannot tolerate and does not take NSAIDs, there is no persuasive evidence he needs any further treatment for the shoulder.

30. Claimant proved entitlement to a general award of medical treatment after MMI for the right knee. The ALJ credits Dr. Watson and Dr. Hall's opinions periodic PRP injections for the knee are reasonably necessary to relieve the effects of his knee injury and prevent deterioration of his condition.

31. Regarding change of physician, Claimant testified overall he received "good care" from Employer's clinic, but he "was told" his issues are "different" from what they are used to, and there may be other treatment modalities available that the providers are not open to. Claimant would prefer a physician who works in the private sector who is more "in tune" with treatment modalities that could help him.

32. Claimant failed to make made a proper showing for a change of physician to Dr. Hall for post-MMI treatment directed to his right knee.

33. Claimant suffered visible disfigurement to his right knee consisting of: (1) two ½ inch diameter arthroscopic surgery scars on the right knee around the patella, (2) a 1 inch long by 1/8 inch wide discolored, irregular surgical scar on the medial aspect of the right knee, (3) a ½ inch long by 1/8 inch wide discolored, irregular surgical scar on the

medial aspect of the right knee. This disfigurement is normally exposed to public view. The ALJ finds Claimant should be awarded $900 for this disfigurement.

34. Claimant suffered visible disfigurement to his left shoulder consisting of: (1) four ¼ inch diameter, discolored, indented arthroscopic surgery portal scars about the left shoulder, and (2) a three-inch long by 1/8 inch wide, indented surgical scar on the lateral left shoulder. This disfigurement is normally exposed to public view. The ALJ finds Claimant should be awarded $1,500 for this disfigurement.

35. Claimant suffered visible disfigurement to his left ankle consisting of: (1) six inch long by 1/8 inch wide discolored, irregular, partially indented, partially raised surgical scar on the lateral malleolus, (2) at least nine associated pairs of suture scars that significantly enhance the noticeability and apparent size of scar #1, (3) a ¼ inch diameter discolored surgical scar immediately adjacent to scar #1, (4) a ½ inch long by 1/8 inch wide discolored surgical scar on the medial aspect of the left ankle. This disfigurement is normally exposed to public view. The ALJ finds Claimant should be awarded $2,600 for this disfigurement.

CONCLUSIONS OF LAW

A. Whole person impairment

Whether a claimant has sustained a scheduled or whole person impairment is a question of fact for determination by the ALJ. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The term "injury" as used in the context of permanent partial disability "refers to the manifestation in a part or parts of the body which have been impaired or disabled as a result of the industrial accident." *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). In resolving this question, the ALJ must determine "the situs of the functional impairment," which refers to "the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co*., 942 P.2d 1390, 1391 (Colo. App. 1997). The claimant must prove a non-scheduled impairment by a preponderance of the evidence. *Cassius v. Entegris*, W.C. No. 4-732-489 (March 26, 2010). The schedule of disabilities refers to the loss of "an arm at the shoulder" and "a leg at the hip." Section 8-42-107(2)(a), (w). Thus, in this case, Claimant must show functional impairment to part(s) of his body other than his "arm" or "leg" to obtain a PPD award based on a whole person rating.

Functional impairment need not take any particular form and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may show functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). For example, referred pain and limitation in the neck, trapezius, and scapular area can cause functional impairment beyond the arm. E.g., *Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Similarly,

pain in the low back can represent a functional impairment beyond the leg. E.g., *Nichols v. Lafarge Construction*, W.C. No. 4-743-367 (October 7, 2009) (ankle injury caused problems extending up the entire leg and into the low back); *Webb v. Circuit City Stores, Inc*., W.C. No. 4-467-005 (August 16, 2002) (knee injury caused claimant to limp which led to low back pain and difficulty bending). Although medical opinions may be relevant to this determination, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

As found, Claimant failed to prove he suffered functional impairment from his left shoulder or right knee not enumerated on the schedule. The ALJ credits Dr. Burris' opinions that Claimant suffered no functional impairment beyond the arm or leg. Claimant's residual symptoms from the knee injury are confined to the right leg. His shoulder pain is around the anterior deltoid and "inside" the shoulder joint. The ALJ acknowledges Claimant's knee and shoulder injuries caused significant *disability,* including the unfortunate loss of his career. But the dispositive question is whether the claimant has functional impairment of *parts of his body* beyond the "arm" or the "leg." Although activity limitations related to a claimant's impaired body part(s) can be important evidence of non-scheduled impairment (e.g., inability to perform overhead work with a shoulder injury), those limitations must ultimately be tied to bodily structures that have been impaired by the injury. Here, all of Claimant's functionally-impaired body parts are listed on the schedule of disabilities. The limitations Claimant described relating to his shoulder are a function of his inability to use his arm. The same rationale applies to the knee; his disability is caused by limitation in using his leg, not any part of the body proximal to the leg. That Claimant's shoulder and knee impairments combine to produce significant disability is understandable, but is not a basis for whole person impairment absent persuasive evidence of functional impairment beyond his arm or leg.

B. Medical treatment after MMI

The respondents are liable for medical treatment from authorized providers reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if the claimant requires maintenance care to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute compensability, reasonableness, or necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI nor prove that a particular course of treatment has been prescribed to obtain a general award of *Grover*-type medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The DIME's opinion regarding medical treatment after MMI is not entitled to any special weight but is simply another medical opinion for the ALJ

to consider when evaluating the preponderance of the evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995). The claimant must prove entitlement to medical benefits after MMI by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant failed to prove he requires any treatment after MMI for his left shoulder. Dr. Jones did not actually recommend viscosupplementation, stem cells, or PRP for the shoulder, but merely listed them as "options . . . to consider." Dr. Watson and Dr. Burris explained the MTGs do not recommend stem cell treatment, and the ALJ sees no persuasive basis to deviate from the MTGs in this instance. CBD oil (or other marijuana-derived medicinal) is not an appropriate treatment in a Workers' Compensation claim, notwithstanding any perceived benefit it may provide Claimant. *See* Chronic Pain MTG, Rule 17, Exhibit 9 (eff. 11/30/2017) § (G)(10)(d) ("marijuana use is illegal under federal law and ***cannot be recommended*** for use in this guideline. The Colorado Constitution also states that insurers are not required to pay for marijuana."). The possibility Claimant may need a shoulder arthroplasty in the future is too speculative to serve as the basis for a general award of medical benefits after MMI. The ALJ credits the opinions of Dr. Burris, Dr. Watson, and Dr. Hall that further injections for the shoulder are not warranted, and the only reasonable option at this point would be anti-inflammatories. Because Claimant cannot tolerate and does not take NSAIDs, there is no persuasive evidence he needs any further treatment for the shoulder.

Claimant proved entitlement to a general award of medical treatment after MMI for the right knee. The ALJ credits Dr. Watson and Dr. Hall's opinions periodic PRP injections for the knee are reasonably necessary to relieve the effects of his knee injury and prevent deterioration of his condition. Claimant credibly testified the PRP injections in his knee reduced the swelling in his knee. Dr. Burris' opinion PRP injections are outside the MTGs is inaccurate, because the Lower Extremity MTGs explicitly state,

> There is some evidence that, in the setting of knee OA [osteoarthritis], intra-articular injection with PRP is more effective than HA [hyaluronic acid] or placebo in improving knee function and pain. . . . Therefore, it may be used for patients with significant functional deficits who are not yet eligible for or to forestall an arthroplasty.

Claimant's right knee causes significant functional deficits, including inability to work in his chosen occupation. Several physicians have noted the likelihood Claimant may need a knee arthroplasty in the future. Accordingly, the ALJ is persuaded it is reasonable to allow Claimant access to periodic PRP injections as outlined by Dr. Watson and Dr. Hall.

C. Change of physician

A claimant can request a change of physician "upon the proper showing to the division." Section 8-43-404(5)(a)(VI)(A); *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). Section 8-43-404(5)(a)(VI)(A) does not define a "proper showing," and the ALJ has broad discretion to decide if the circumstances justify

a change of physician. *Jones v. T.T.C. Illinois, Inc*., W.C. No. 4-503-150 (May 5, 2006). The ALJ should exercise this discretion with an eye toward ensuring the claimant receives reasonably necessary treatment while protecting the respondents' legitimate interest in being apprised of treatment for which they may ultimately be held liable. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Landeros v. CF & I Steel*, W.C. No. 4-395-315 (October 26, 2000). The ALJ may consider a variety of factors including whether the claimant has received adequate treatment, whether the claimant trusts the ATP, the level of communication between the claimant and the ATP, the ATP's expertise and skill at managing a condition, and the ATP's willingness to provide additional treatment. *E.g*., *Carson v. Wal-Mart*, W.C. No. 3-964-07 (April 12, 1993); *Merrill v. Mulberry Inn, Inc*., W.C. No. 3-949-781 (November 1995); *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (December 5, 1995); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (August 23, 1995). An ALJ does not have to approve a change of physician because of a claimant's personal reasons, including mere dissatisfaction with the ATP. *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (November 27, 2007). On the other hand, the ALJ is not precluded from considering the claimant's subjective perception of his relationship with the physician. *Gutierrez v. Denver Public Schools*, W.C. No. 4-688-075 (December 18, 2008).

As found, Claimant failed to make a proper showing for a change of physician to Dr. Hall for his right knee treatment. The ALJ sees no evidence Employer's clinic provided substandard treatment; in fact, Claimant concedes he received "good care" from the clinic. Nor is there persuasive evidence PA-C Homberger is unwilling to provide further treatment. Claimant's speculation regarding potential "other modalities" is not supported by any persuasive medical evidence. The treatment Claimant finds most helpful is CBD oil, which is not a covered benefit under his claim regardless of any ATP's willingness to prescribe it. Dr. Watson and Dr. Hall agree the only viable option at this point is PRP injections. Dr. Jones will likely be the one to administer PRP going forward. Dr. Jones remains authorized and the ALJ sees no reason Claimant could not follow up with him regarding possible PRP injections or other treatments.

D. Disfigurement

Section 8-42-108(1) provides for additional compensation if a claimant is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant suffered visible disfigurement to his right knee, left shoulder, and left ankle. The ALJ concludes Claimant should be awarded $900 for disfigurement of his right knee, $1,500 for disfigurement of his left shoulder, and $2,600 for disfigurement of his left ankle.

ORDER

It is therefore ordered that:

1. Claimant's request for a PPD award based on a 7% whole person rating for his right knee is denied and dismissed.

2. Claimant's request for a PPD award based on a 1% whole person rating for his left shoulder is denied and dismissed.

3. Claimant's request for a general award of medical benefits after MMI for his left shoulder is denied and dismissed.

4. Respondent shall cover reasonably necessary treatment to relieve the effects of Claimant's industrial right knee injury and/or prevent deterioration of his condition.

5. Claimant's request for a change of physician is denied and dismissed.

6. Respondent shall pay Claimant $900 for disfigurement of his right knee under WC 5-036-847. Respondent may take credit for any disfigurement previously paid in connection with this claim.

7. Respondent shall pay Claimant $1,500 for disfigurement for his left shoulder under WC 5-041-859. Respondent may take credit for any disfigurement previously paid in connection with this claim.

8. Respondent shall pay Claimant $2,600 for disfigurement of his left ankle under WC 5-080-777. Respondent may take credit for any disfigurement previously paid in connection with this claim.

9. All issues regarding Respondent's claimed overpayment are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Whether Claimant has established by a preponderance of the evidence that he is entitled to return home from an assisted living facility to receive reasonable and necessary attendant care through a provider and from his wife for his admitted April 15, 2010 industrial injuries.

FINDINGS OF FACT

1. Claimant was born on August 29, 1962. He worked for Employer as a Ruminant Nutritionist. Claimant's job duties included traveling to various locations to teach courses in his specialty area.

2. On April 15, 2010 Claimant was struck by a motor vehicle when crossing a street in Birmingham, Alabama during the course and scope of his employment. He sustained catastrophic physical and neurological injuries. Claimant is permanently and totally disabled.

3. Claimant subsequently spent approximately one year in various hospitals and rehabilitation facilities. He then returned to his cattle ranch located about 14-15 miles outside of Akron, Colorado. Claimant lived at the ranch with his wife of 37 years Sandra Campbell and two of their four children. Over time the children moved out of the family home. Claimant and Mrs. Campbell operated the ranch by themselves. However, because Claimant was unable to maintain the ranch after his injuries, Claimant and his wife sold the property. They then rented a home in Sterling, Colorado.

4. Claimant became angry about the sale of the family ranch and his living situation with Mrs. Campbell became untenable. Because Mrs. Campbell provided all of Claimant's necessary attendant care at the time, she was the focus of Claimant's frustration and anger. Mrs. Campbell testified that "things got bad." Claimant yelled at her and became physically aggressive. Eventually, Mrs. Campbell could no longer live with Claimant. Although the couple considered divorce, they instead separated.

5. On December 17, 2016 Claimant underwent an independent medical examination with Kathleen D'Angelo, M.D. Mrs. Campbell attended the evaluation with Claimant. Mrs. Campbell explained that she had been Claimant's primary caregiver for six years. She remarked that she was exhausted and had been the target of Claimant's anger and frustration. Mrs. Campbell had repeatedly requested assistance but was denied. She commented that they had just moved off the ranch because it became "too much." Dr. D'Angelo extensively documented the couple's troubled relationship. She noted that Claimant "requires 24-hour surveillance and care giving."

6. On May 29, 2018 the parties executed a Stipulation. They agreed that Claimant had been placed in an assisted living facility identified as Catherine's Quality of Life Homes on April 28, 2018. The facility is located at 3225 South Reed Court in Lakewood, Colorado 80227. Prior to Claimant's move to Catherine's he had been under the care of Harmony Home located at 703 Holly Drive, Sterling. Colorado. He began care with Harmony on January 16, 2018. Claimant previously received home health care from Mrs. Campbell.

7. On November 2, 2018 Claimant's treating neurologist Hakumat Rai Kakkar, M.D. drafted a letter regarding treatment at Catherine's. Dr. Kakkar explained that Claimant's family was required to drive approximately three hours from Sterling to visit him in Lakewood, Colorado. Claimant reported that he had become more withdrawn and depressed because of the inconsistent and decreased amount of time he was able to spend with his family. Mrs. Campbell was also concerned that the long travel distance had placed a strain on Claimant and his family. Dr. Kakkar determined that Claimant's distance from home negatively affected his health and emotional state. He explained that Claimant would benefit physically and mentally if placed in a facility closer to his family.

8. On November 7, 2018 Claimant visited Gary S. Gutterman, M.D. for an outpatient psychiatric consultation. Mrs. Campbell also attended the meeting. Dr. Gutterman recounted that Claimant suffered a traumatic brain injury while at work on April 15, 2010. Mrs. Campbell explained that Claimant had been relocated from the family home in Sterling, Colorado to an assisted living facility in Lakewood, Colorado. She commented that she was unable to care for Claimant because he became aggressive and angry. Claimant's long distance from his family caused him to feel increasingly depressed. Dr. Gutterman determined that Claimant was suffering an Adjustment Disorder with Mixed Emotional Features including mood liability and depression. He specified that Claimant's mood had become less stable since moving far away from his family home. Dr. Gutterman thus increased Claimant's medications. He concluded that moving to a facility closer to Sterling would help stabilize Claimant's mood.

9. On November 29, 2018 Claimant returned to Dr. Gutterman for a follow-up psychiatric examination. Claimant reported that his sleep cycle had improved. Mrs. Campbell remarked that she took Claimant to the family home in Sterling for 10 days over Thanksgiving. He behaved "quite reasonably." Dr. Gutterman determined that, based on Claimant's successful home trial, it would "be in his best interest to return to his home in Sterling in the near future." Mrs. Campbell noted that "she was very much up for this" if she received adequate medical support in caring for Claimant.

10. On December 4, 2018 Claimant returned to Dr. Gutterman for a psychiatric evaluation. Dr. Gutterman reported that Claimant remained fairly depressed because of persistent limitations and his continued placement in an assisted living facility far from home. He increased Claimant's dosage of psychotropic medications.

11. On February 20, 2019 Dr. Gutterman authored a letter to Claimant's counsel regarding a return to the family home in Sterling. Dr. Gutterman specified "[i]t remains my opinion that it would be in the best interest of [Claimant] from a psychiatric perspective

to leave the facility in Littleton, Colorado where he currently resides and return to living at home." He explained that Claimant and Mrs. Campbell "believe that [Claimant's] depression would lessen if he were able to live at home." Mrs. Campbell remarked that she could "handle" Claimant at home with periodic assistance.

12. On May 23, 2019 Claimant returned to Dr. Gutterman for a follow-up psychiatric examination. Dr. Gutterman noted that Claimant had been home for a couple of weeks and responded extremely well. His mood had noticeably improved. Dr. Gutterman remarked that "[i]t is evident to me that he needs to be at home on a full time basis." He commented that Claimant would probably require evening and nighttime coverage "due to mobility issues and the risk of falling. Otherwise, things probably will go reasonably well."

13. On August 14, 2019 Dr. Gutterman authored a letter after reviewing additional medical records regarding Claimant's care and treatment. He concluded that "[f]rom a review of the records, it remains my opinion that [Claimant] should return to live with Ms. Campbell full time at this point." Dr. Gutterman explained that Mrs. Campbell had returned to employment and had arranged for companion care when she needs a respite three to four days per month. Mrs. Campbell had also arranged various activities for Claimant that would benefit his "overall psychological functioning and add to his quality of life." She further informed Dr. Gutterman that her overall health has improved and she had received positive test results from her oncologist. Dr. Gutterman explained that he had reviewed the December 17, 2016 independent medical examination of Dr. D'Angelo. He commented that, at the time of the evaluation with Dr. D'Angelo, Claimant and his wife were separated. Mrs. Campbell was exhausted and she had her own health conditions. Dr. Gutterman specified that it seemed the question before Dr. D'Angelo was whether Claimant could live independently without returning to Mrs. Campbell. However, if Claimant returned home he and Mrs. Campbell would be living together, Mrs. Campbell had made adequate provisions to care for Claimant, her health had improved and she had "developed strategies to deal with [Claimant's] episodes of regression" that have been effective. Dr. Gutterman summarized that "allowing [Claimant] to have the appropriate structure in the home setting, as well as more social interactions, would not only be helpful to his emotional well-being but would also be the humane measure to take at this time."

14. Mrs. Campbell testified at the hearing in this matter. She remarked that she attempts to visit Claimant at least once every 7-10 days. Depending on traffic, it takes Mrs. Campbell about 2-3 hours to drive to Catherine's. Claimant has not seen his children or grandchildren very often since he moved to the facility. Mrs. Campbell noted that she has brought Claimant home for family visits. She remarked that, since Claimant began treating with Dr. Gutterman, his behavior has changed and he is much calmer than he was when the couple lived together. Mrs. Campbell testified that treatment with Dr. Gutterman has been effective and Claimant's mood has substantially improved. The treatment has resulted in a substantial decrease in Claimant's anger and frustration.

15. Mrs. Campbell testified that she was diagnosed with breast cancer shortly before Claimant's April 15, 2010 industrial injuries. Treatment for her cancer included a

double mastectomy and a hysterectomy. Her treatment extended for several years and she was only recently released from care. Mrs. Campbell explained that isolation with Claimant as his sole attendant care provider for several years exhausted and overwhelmed her. The increased anger and frustration manifested by Claimant after the ranch was sold precipitated the crisis that caused the couple's separation. However, Mrs. Campbell commented that Dr. Gutterman's treatment beginning in the fall of 2018 has resulted in a substantial decrease in Claimant's anger and frustration. Furthermore, Mrs. Campbell obtained mental health treatment for herself. Finally, she recently began working at a part-time job on Tuesdays.

16. Claimant requests that Respondents pay for attendant care services in the family home for 10 hours every Tuesday. Mrs. Campbell noted that she works on Tuesdays and attendant care services will allow her to continue working. Claimant also requests that Respondents pay for attendant care 24 hours per day for four days each month. The arrangement will allow Mrs. Campbell to spend some time each month focusing on her own needs. Third, Claimant has requested $15.00 per hour for eight hours each day for Mrs. Campbell when she provides attendant care services. Mrs. Campbell noted that Claimant requires eight hours each day of direct intervention.

17. Claimant has established that it is more probably true than not that he is entitled to return home from an assisted living facility to receive reasonable and necessary attendant care through a provider and from his wife for his admitted April 15, 2010 industrial injuries. Initially, on April 15, 2010 Claimant suffered catastrophic injuries when he was struck by a motor vehicle in the course and scope of his employment. Claimant requires attendant care 24 hours per day. Mrs. Campbell provided care for Claimant for a number of years at the family ranch. However, the arrangement eventually became untenable when Claimant focused his frustration and anger at Mrs. Campbell. Mrs. Campbell also faced her own health problems, became overwhelmed and the parties contemplated separation after their lengthy marriage. On May 29, 2018 the parties executed a Stipulation and agreed to place Claimant in an assisted living facility identified as Catherine's on April 28, 2018. The facility is located at 3225 South Reed Court in Lakewood, Colorado 80227.

18. On November 7, 2018 Claimant began receiving psychiatric care from Dr. Gutterman. After a number of visits with Claimant and Mrs. Campbell, Dr. Gutterman persuasively concluded that Claimant should leave Catherine's and return to live with his wife. He specified that Claimant had become depressed and suffered mood lability as a result of living in a facility far from his family. Dr. Gutterman explained that Mrs. Campbell had returned to employment and had arranged for companion care when she needs a respite three to four days per month. Mrs. Campbell also arranged various activities for Claimant that would benefit his "overall psychological functioning and add to his quality of life." Mrs. Campbell further informed Dr. Gutterman that her overall health has improved and she had received positive test results from her oncologist. Dr. Gutterman summarized that "allowing [Claimant] to have the appropriate structure in the home setting, as well as more social interactions, would not only be helpful to his emotional well-being but would also be the humane measure to take at this time." Furthermore, Claimant's treating neurologist Dr. Kakkar determined that Claimant's long distance from

home negatively affected his health and emotional state. He explained that Claimant would benefit physically and mentally by being placed in a facility closer to his family.

19. In contrast, Dr. D'Angelo completed an independent medical examination and extensively outlined the couple's troubled relationship. She determined that Claimant requires 24-hour surveillance and care giving. However, Dr. Gutterman explained that he had reviewed Dr. D'Angelo's independent medical examination. He commented that, at the time of the evaluation with Dr. D'Angelo, Claimant and his wife were separated, Mrs. Campbell was exhausted and she had her own health conditions. Dr. Gutterman specified that it seemed the question before Dr. D'Angelo was whether Claimant could live independently without returning to Mrs. Campbell. However, under the current proposal Claimant and Mrs. Campbell would be living together, Mrs. Campbell has made adequate provisions to care for Claimant, her health has improved and she has "developed strategies to deal with [Claimant's] episodes of regression" that have been effective. Finally, Mrs. Campbell credibly explained that she has brought Claimant home for family visits and he exhibited a significantly improved demeanor. She remarked that, since Claimant began treating with Dr. Gutterman, his behavior has changed and he is much calmer than he was when the couple lived together.

20. Based on the persuasive reports of Dr. Gutterman, in conjunction with the opinion of Dr. Kakkar and testimony of Mrs. Campbell, Claimant has established that he is entitled to leave Catherine's assisted living facility and return to his home. Because Claimant requires care 24 hours per day, Respondents shall pay for attendant care services in the family home for 10 hours every Tuesday. Respondents shall also pay for attendant care 24 hours each day for four days per month. Finally, Mrs. Campbell shall receive $15.00 per hour for eight hours each day that she provides attendant care services to Claimant. The preceding care is reasonable, necessary and causally related to Claimant's admitted April 15, 2010 industrial injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. Section 8-42-101(1)(a), C.R.S. addresses the provision of medical services and provides:

> Every employer, regardless of said employer's method of insurance, shall furnish such medical, surgical, dental, nursing, and hospital treatment, medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury.

The preceding provision has been applied to compensate injured workers for a variety of related services. See *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997) (childcare services); *Suetrack USA v. Indus. Claim Appeals Office*, 902 P.2d 854, 856 (Colo. App. 1995) (home health care services), *Atencio v. Quality Care, Inc.*, 791 P.2d 7, 9 (Colo. App. 1990) (attendant care and housekeeping services). The duty under section 8-42-101(1)(a), C.R.S. includes furnishing treatment for conditions representing a natural development of the industrial injury as well as providing compensation for incidental services necessary to obtain the required medical care. *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo.App. 1995). The duty has also been construed to include treatment of unrelated conditions when the treatment is necessary to achieve optimum care of the industrial injury. *Public Service Co. v. Industrial Claim Appeals Office*, 979 P.2d 584 (Colo.App. 1999); *see In re Walling*, W.C. No. 4-760-050-02 (ICAO, Dec. 10, 2013).

6. When assessing any requested service the "expenses must be for medical or nursing treatment, or incidental to obtaining such medical or nursing treatment." *Country Squire Kennels* 899 P.2d at 363. "In other words, to be considered a medical benefit under the statute, the service must be a medical service that is reasonably necessary for treating the injury or that provides therapeutic relief from the injury's effects." *Nanez v. Indus. Claim Appeals Office*, 444 P.3d 820, 825 (Colo. App. 2018); *see* also Bellone, 940 P.2d at 1117 ("The service must be reasonably needed to cure and relieve the effects of the injury and be related to a claimant's physical needs."). The service must be medical in nature so that it directly relieves the symptoms or effects of the injury or is associated with the claimant's physical needs. *See Kuziel v. Pet Fair, Inc.*, 931 P.2d 521, 522 (Colo. App. 1996). To be compensable as "incidental" to medical treatment, the services must enable the claimant to obtain medical care or be relatively minor in comparison to the medical care and treatment. *Country Squire Kennels*, 899 P.2d at 364. Whether services "are either medically necessary for the treatment of a claimant's injuries or incidental to obtaining such treatment" is a question of fact to be determined by the ALJ. *Atencio*, 791 P.2d at 8; *In re Rajabi*, W.C. No. 5-044-870-01 (ICAO, Aug. 6, 2018)

7. As found, Claimant has established by a preponderance of the evidence that he is entitled to return home from an assisted living facility to receive reasonable and necessary attendant care through a provider and from his wife for his admitted April 15, 2010 industrial injuries. Initially, on April 15, 2010 Claimant suffered catastrophic injuries when he was struck by a motor vehicle in the course and scope of his employment. Claimant requires attendant care 24 hours per day. Mrs. Campbell provided care for Claimant for a number of years at the family ranch. However, the arrangement eventually became untenable when Claimant focused his frustration and anger at Mrs. Campbell. Mrs. Campbell also faced her own health problems, became overwhelmed and the parties contemplated separation after their lengthy marriage. On May 29, 2018 the parties executed a Stipulation and agreed to place Claimant in an assisted living facility identified as Catherine's on April 28, 2018. The facility is located at 3225 South Reed Court in Lakewood, Colorado 80227.

8. As found, on November 7, 2018 Claimant began receiving psychiatric care from Dr. Gutterman. After a number of visits with Claimant and Mrs. Campbell, Dr. Gutterman persuasively concluded that Claimant should leave Catherine's and return to live with his wife. He specified that Claimant had become depressed and suffered mood lability as a result of living in a facility far from his family. Dr. Gutterman explained that Mrs. Campbell had returned to employment and had arranged for companion care when she needs a respite three to four days per month. Mrs. Campbell also arranged various activities for Claimant that would benefit his "overall psychological functioning and add to his quality of life." Mrs. Campbell further informed Dr. Gutterman that her overall health has improved and she had received positive test results from her oncologist. Dr. Gutterman summarized that "allowing [Claimant] to have the appropriate structure in the home setting, as well as more social interactions, would not only be helpful to his emotional well-being but would also be the humane measure to take at this time." Furthermore, Claimant's treating neurologist Dr. Kakkar determined that Claimant's long distance from home negatively affected his health and emotional state. He explained that

Claimant would benefit physically and mentally by being placed in a facility closer to his family.

9. As found, in contrast, Dr. D'Angelo completed an independent medical examination and extensively outlined the couple's troubled relationship. She determined that Claimant requires 24-hour surveillance and care giving. However, Dr. Gutterman explained that he had reviewed Dr. D'Angelo's independent medical examination. He commented that, at the time of the evaluation with Dr. D'Angelo, Claimant and his wife were separated, Mrs. Campbell was exhausted and she had her own health conditions. Dr. Gutterman specified that it seemed the question before Dr. D'Angelo was whether Claimant could live independently without returning to Mrs. Campbell. However, under the current proposal Claimant and Mrs. Campbell would be living together, Mrs. Campbell has made adequate provisions to care for Claimant, her health has improved and she has "developed strategies to deal with [Claimant's] episodes of regression" that have been effective. Finally, Mrs. Campbell credibly explained that she has brought Claimant home for family visits and he exhibited a significantly improved demeanor. She remarked that, since Claimant began treating with Dr. Gutterman, his behavior has changed and he is much calmer than he was when the couple lived together.

10. As found, based on the persuasive reports of Dr. Gutterman, in conjunction with the opinion of Dr. Kakkar and testimony of Mrs. Campbell, Claimant has established that he is entitled to leave Catherine's assisted living facility and return to his home. Because Claimant requires care 24 hours per day, Respondents shall pay for attendant care services in the family home for 10 hours every Tuesday. Respondents shall also pay for attendant care 24 hours each day for four days per month. Finally, Mrs. Campbell shall receive $15.00 per hour for eight hours each day that she provides attendant care services to Claimant. The preceding care is reasonable, necessary and causally related to Claimant's admitted April 15, 2010 industrial injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant shall leave Catherine's assisted living facility and return to his home.

2. Respondents shall pay for attendant care services in the family home for 10 hours every Tuesday.

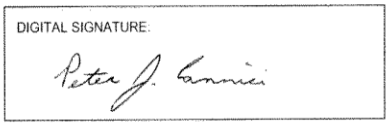
3. Respondents shall pay for attendant care services 24 hours each day for four days per month.

4. Mrs. Campbell shall receive $15.00 per hour for eight hours each day that she provides attendant care services to Claimant.

5. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: October 15, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: B, Claimant, vs. C Employer, and SELF-INSURED, Respondent.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** WC No. 5-063.493-003

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on September 12, 2019, before Administrative Law Judge (ALJ) Margot W. Jones in Denver, Colorado. The hearing was held in Courtroom 4 convening at 8:30 a.m. Claimant was present at the hearing and represented by _____, Esq. Respondent appeared through _____, Esq. The parties' exhibits 1-16 and A-L were made part of the record at hearing.

In this order,B_____ is referred to as "Claimant" and C_____is referred to as "Respondent."

Also, in this order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2018), "the Act" refers to the Workers' Compensation Act, Sections 8-40-101, et seq., supra, "OAC" refers to the Office of Administrative Courts, "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUES

1. Whether Respondent proved by clear and convincing evidence that the DIME physician's impairment rating is most probably incorrect.

2. Whether Claimant proved by a preponderance of the evidence that her scheduled impairment rating should be converted to a whole person rating because Claimant's functional impairment extends beyond the arm at the shoulder.

FINDINGS OF FACT

1. Claimant is a 27-year-old right-handed female who works as a patrol officer in Respondent's Police Department. On August 12, 2017, Claimant was involved in a takedown of a suspect during the course of her police work. During the struggle, Claimant took the suspect to the ground, and sustained a left upper extremity injury in the process.

2. Claimant was initially seen in the Denver Health Emergency Department (ER). The ER report indicates that Claimant complained of pain in her left shoulder and numbness in the two middle fingers of the left hand. The ER report also indicates Claimant had previously injured the same extremity with similar symptoms in April 2016.

3. Following the ER visit, Claimant was seen at Concentra by Jerald Solot, MD, the authorized treating physician. Dr. Solot initially diagnosed left arm paresthesia and a left shoulder sprain, noted concern for possible nerve injury, and referred Claimant for physical therapy. Claimant did not make significant improvement and was subsequently referred for an MRI.

4. Claimant underwent an MRI of her left shoulder on September 5, 2017, finding: mild infraspinatus fraying, mild congenital glenoid dysplasia, and glenoid chondral fibrillation. The MRI showed no evidence of a traumatic injury to the left shoulder. That same day, Claimant underwent an MRI of her left elbow, finding possible focal ulnar neuritis.

5. Claimant was next seen at Concentra on September 8, 2017, reporting continuing pain in both her left shoulder and elbow. Dr. Solot found that Claimant's shoulder had full range of motion and no pain with movement, but did ache after activity. Claimant's elbow pain was more severe, as was the persistent hand numbness and tingling. As a consequence, Claimant was referred to Alireza Alijani, MD, an orthopedic hand specialist.

6. On September 26, 2017, Claimant returned to Dr. Solot who noted, "She reports improvement in symptoms but still gets tingling in the fourth/fifth digits of the hand and irritation at the elbow with prolonged flexed positions. She denies any pain or discomfort at the shoulder."

7. Claimant was seen by Dr. Alijani on September 29, 2017. At this evaluation, Dr. Aligani diagnosed left elbow ulnar neuropathy and recommended a left upper extremity EMG. Dr. Alijani noted Claimant had full range of motion in her left shoulder and no pain complaints for this joint.

8. Claimant was seen by Dr. Aschberger on October 18, 2017 for EMG testing. Dr. Aschberger found positive EMG results consistent with left ulnar neuropathy at the elbow. Dr. Aschberger examined Claimant's left shoulder and found it to have full range of motion without pain complaints. Dr. Aschberger's left shoulder findings were consistent with Dr. Solot's evaluation on October 24, 2017, at which time there were no left shoulder complaints noted.

9. Claimant next saw Dr. Alijani on November 10, 2017 to review EMG results. Dr. Alijani found the results confirmed left cubital tunnel syndrome and ulnar neuropathy, and recommended a left ulnar nerve transposition.

10. Claimant underwent a left ulnar nerve neurolysis and transposition with Dr. Alijani on December 6, 2017. Claimant had a difficult recovery from surgery. On December 14, 2017 it was noted, "She is still having a lot of pain in the elbow and is still on narcotic medications." On December 16, 2017, Claimant was seen in the Emergency Department for severe elbow pain post-surgery. On December 23, 2017, at a follow-up evaluation with Dr. Solot, Claimant was diagnosed with left arm paresthesia and neurapraxia of the left ulnar nerve, and was referred to John Sacha, MD for a diagnostic injection. Claimant was also hospitalized for two weeks in January 2018 due to cellulitis in her left arm at the surgical site. Hospitalization began on January 4, 2018 with an infectious disease evaluation for probable IV antibiotics. Following the evaluation, Claimant was diagnosed with a likely postoperative wound infection.

11. Claimant was first seen by Dr. Sacha on January 25, 2018. At this evaluation, he performed a left stellate ganglion block and conscious sedation. There was an initial reduction in pain complaints, which Dr. Sacha noted could lead to a diagnosis of complex regional pain syndrome (CRPS). However, Dr. Sacha also noted Claimant had received pain relieving medications as part of the injection, which could also explain an immediate reduction in symptoms. Ultimately, the stellate ganglion block was determined to be non-diagnostic.

12. Claimant next saw Dr. Sacha on February 7, 2018. At this appointment, due to possible diagnostic response to the stellate ganglion block, Dr. Sacha

recommended a triple-phase bone scan for further investigation of CRPS. Dr. Sacha noted Claimant had no left shoulder pain at this evaluation.

13. Claimant underwent the triple-phase bone scan on March 14, 2018. Claimant saw Dr. Sacha on March 19, 2018, in follow up to this scan. The bone scan results showed no evidence of CRPS, an only slight evidence of an incompletely treated infectious process. The latter was consistent with Claimant's January hospitalization for postoperative infection. Dr. Sacha specifically stated, "No evidence of sympathetic mediated pain or CRPS." Dr. Sacha's diagnosis was medial epicondylitis and ulnar neuropathy secondary to medial epicondylitis and continuing therapy was prescribed.

14. On March 23, 2018, Claimant returned to see Dr. Solot. At this evaluation, he had ongoing complaints of elbow pain, specifically complaining of pain into her left triceps, but no complaint of left shoulder pain. On March 26, 2018 Dr. Sacha reevaluated Claimant and recommended ongoing physical therapy. Consistent with Dr. Solot's March evaluation, Dr. Sacha's physical examination noted no allodynia, hyperpathia, or skin trophic changes, and no complaints of left shoulder pain. At this evaluation, Dr. Sacha had formally ruled out CRPS as a possible diagnosis.

15. On April 18, 2018, Claimant was seen by Dr. Sacha who found: Since last being seen, she is doing quite a bit better. She has returned to work at her part time light duty job and this is providing benefit for her. She was seen by infectious disease and there is no evidence of ongoing infection, just some residual inflammation in the area of her medial elbow. At this point, I am very comfortable with how she is doing and I think her prognosis is great. All I recommend from this point on, prior to case closure and hopefully getting her back to full duty, is the one time left medial epicondyle PRP injection – being done by my partner, Dr. Rick Zimmerman, and finishing PT and strengthening, and hopefully in about a four week timeframe, she will be approaching MMI, case closure and full duty.

16. On referral from Dr. Sacha, Claimant received a platelet-rich plasma (PRP) injection in the left elbow from Dr. Zimmerman on May 4, 2018. In evaluating Claimant, Dr. Zimmerman concurred with Dr. Sacha's diagnosis ruling out CRPS. Additionally, Dr. Zimmerman did not note any complaints of left shoulder pain in his physical examination.

17. Dr. Sacha placed Claimant and MMI on June 11, 2018. At MMI, Dr. Sacha recommended a gym/pool pass for Claimant to continue an unsupervised exercise program for post MMI maintenance. Dr. Sacha provided an 8% scheduled left upper extremity impairment due to 2% loss of range of motion and 6% for left ulnar motor loss.

18. On June 15, 2018 Claimant returned to Dr. Solot. He noted no complaints of left shoulder pain, full range of motion in the left elbow, and recommended a trial of full duty. On June 22, 2018, at a follow-up evaluation, Dr. Solot found "The patient endorsing good results from a trial of full duty." Dr. Solot placed Claimant at MMI on June 22, 2018, provided a 6% scheduled left upper extremity impairment for residual left ulnar nerve symptomatology from the elbow, and released Claimant to full duty. As part of his impairment rating, Dr. Solot performed a thorough physical examination of the left upper extremity, found no left shoulder pain and declined to rate the left shoulder for any impairment related to the work incident.

19. Dr. Sacha performed a second impairment rating on July 9, 2018, providing a 10% left upper extremity impairment rating based on 3% for loss of range of motion, 6% for ulnar sensory loss and 3% for motor loss. It is not clear why Dr. Sacha elected to rate Claimant a second time. Regardless, his evaluation is consistent with Dr. Solot's impairment rating and also consistently notes no impairment or pain complaints for the left shoulder.

20. Respondent filed a Final Admission of Liability consistent with Dr. Solot's impairment rating on July 19, 2018. Claimant timely objected to this admission and sought a Division IME.

21. A Division IME was conducted by James Regan, MD on November 30, 2018. Dr. Regan agreed with Drs. Solot and Sacha that Claimant reached MMI on June 22, 2018. However, he provided a 15% left upper extremity rating which diverged from the diagnosis of the treating physicians. Dr. Regan found Claimant had CRPS Type II in her left elbow as a result of surgery as well as impairment to the left shoulder for loss of range of motion. In providing a CRPS diagnosis, Dr. Regan relied on the Budapest Criteria, a series of subjective clinical evaluations. Dr. Regan also appeared to find a difference in extremity temperature, however his report fails to indicate whether or what type of diagnostic equipment was used to perform this analysis.

22. Claimant indicated at hearing that Dr. Regan's deposition testimony would be necessary. However, Claimant ultimately waived the right to take the testimony of Dr. Regan in support of his opinion. The report of Dr. Regan is inconsistent, placing several medical evaluations out of chronological order, failing to explain why objective testing was ignored and failing to explain why Dr. Regan diagnosed conditions in such contradiction to those of the treating physicians.

23. Respondent filed a Final Admission of Liability consistent with Dr. Regan's DIME report on January 3, 2019. Claimant filed an Application for Hearing seeking conversion of the admitted scheduled impairment. In their Response to Application for Hearing, Respondent endorsed overcoming the DIME with respect to impairment.

24. In advance of hearing, Dr. Sacha testified by deposition on May 29, 2019. Dr. Sacha confirmed the steps he took to diagnose Claimant, explaining why Claimant does not have CRPS and is both credible and persuasive. First, Dr. Sacha explained that the January 25, 2018, stellate ganglion block only gave a strong suspicion of some form of sympathetic mediated pain. Ultimately, this injection did not confirm a diagnosis of CRPS. Second, the triple-phase bone scan produced a negative result. Third, Dr. Sacha testified that Claimant lacked the clinical diagnostics for CRPS including her failure to have vasomotor, sudomotor edema or motor trophic symptoms.

25. Dr. Sacha also testified that, per the Medical Treatment Guidelines, the diagnostic components of clinical CRPS require the physician to consider more probable alternate diagnoses (see subsection D). Dr. Sacha credibly testified that the ulnar neuropathy and residual neuropathic pain better explain Claimant's symptoms and are the more likely diagnosis. Dr. Sacha persuasively testified that an impairment rating for CRPS would have been inappropriate; instead the basis for Claimant's impairment is ulnar neuropathy and loss or range of motion due to medial epicondylitis.

26. The testimony of Dr. Sacha is found credible and persuasive. Further, the testimony of Dr. Sacha is found reliable as based on numerous physical examination, review of objective testing and based on methodology consistent with the Medical Treatment Guidelines.

27. Dr. Lesnak performed a records review and independent medical examination of Claimant on March 26, 2019. Dr. Lesnak testified at hearing consistent with his IME report. He provided an analysis consistent with Dr. Sacha's regarding how a diagnosis of CRPS was eliminated. Dr. Lesnak also explained how Dr. Regan's reliance on the Budapest Criteria failed to properly take into consideration Claimant's ulnar neuropathy, a clear and obvious alternate explanation for Claimant's elbow pain. Further, Dr. Lesnak explained that Dr. Regan had ignored the objective findings from Dr. Sacha's testing, which would conclusively rule out a CRPS diagnosis.

28. Dr. Lesnak performed a physical evaluation of Claimant, including a careful evaluation of the left shoulder. Dr. Lesnak found no clinical evidence of symptomatic left shoulder joint pathology, including rotator cuff impingement signs or symptomatic rotator cuff pathology. He found no loss of range of motion, nor loss of strength in the musculature surrounding the shoulder and going into the whole person. Dr. Lesnak testified regarding the lack of left shoulder pain complaints in records of multiple treating physicians and explained that there is not a ratable impairment to claimant's left shoulder.

29. The testimony of Dr. Lesnak is found credible and persuasive. Like Dr. Sacha, Dr. Lesnak based his analysis of CRPS on the Medical Treatment

Guidelines and objective data. Further, Dr. Lesnak's findings are consistent with those of Drs. Sacha and Solot, and take into consideration the repeated observations of the treating physicians throughout their course of treatment.

30. Claimant testified at hearing about her injury, course of care, current levels of pain and functional ability. Claimant testified that she currently has pain in her left shoulder and elbow. Claimant testified to pain radiating into her neck and to some changes in activity due to her pain. Claimant also testified that she works out using the affected arm 5-6 days per week with no adverse effects other than some soreness post-workout.

31. Claimant testified that she can complete her work requirements with no issue and "doesn't think about" the pain while at work. Claimant confirmed in testimony that she can perform all the essential functions of her job, including running up to one mile in order to apprehend a suspect; walk, crawl, run, or climb to reach a vantage point, target, or observation post; use physical force or hand tools when necessary to effect entry into a structure, arm-hand steadiness in order to accurately aim a firearm; and physical ability to subdue and arrest a resisting individual.

32. Claimant also made a physical presentation at hearing, asking the ALJ to observe her shoulders and compare any difference in appearance. On observation, there does appear to be a difference in musculature between Claimant's left and right shoulders.

33. Claimant testified credibly to pain, but not to loss of function beyond the extremity. Claimant did not testify to loss of strength in her whole person, loss of range of motion in her chest or back, or loss of functional ability in her upper torso. Claimant did testify to being physically active, athletic and being able to perform to rigorous functions of a police officer. Claimant's testimony provided no persuasive evidence of loss of function beyond the extremity, instead focusing on pain and loss of function of the extremity.

34. The ALJ credits the opinions of Drs. Sacha, Solot and Lesnak over the opinion of Dr. Regan with respect to Claimant's diagnosis and impairment.

35. The ALJ further finds, based on the totality of the evidence that Claimant has failed to meet her burden of proof to show her shoulder should be converted from a scheduled impairment to that of a whole person impairment.

36. The ALJ finds, based on the totality of the evidence, that Respondent has overcome the opinion of the DIME physician as to Claimant's permanent impairment rating.

CONCLUSIONS OF LAW

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case must be interpreted neutrally, neither in favor of either the rights of the claimant or nor in favor of the rights of the respondents, and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in Section 8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* Section 8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998).

5. When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* Section 8-42-107(8)(c), C.R.S.

6. Because Section 8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a

functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under Section 8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under Section 8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

7. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

8. In this case, Claimant has failed to carry her burden to show impairment to a part of the body not located on the schedule. Claimant testified to pain in her shoulder and neck that occurs after activity with occasional flare-ups. However, pain alone does not prove the location of Claimant's impairment. As explained by Dr. Lesnak, Claimant may have referred pain from her elbow into her shoulder. This does not give Claimant a loss of function beyond her extremity and into her whole person.

9. Claimant testified to limits with working out, and changes in her workout regime, but did not testify as to loss of function in her whole person. Claimant testified that she has no work limitations because of this injury and that she is able to engage in a physically demanding job.

10. Claimant's physical presentation at hearing was not persuasive. While Claimant may have muscular differences between her dominate and non-dominate shoulders, this is not evidence of functional impairment, and is not evidence of functional impairment extending into the whole person.

11. Finally, Claimant relies on Dr. Regan's medical report in support of her argument for conversion based on his rating of her left shoulder. As found, Dr. Regan's erred in finding Claimant had a ratable impairment to her left shoulder. As explained by Dr. Lesnak, the medical records were silent on any shoulder injury within a few months of the incident and the radiology of Claimant's shoulder shows no acute injury. Instead, impairment ratings of Drs. Sacha and Solot, which exclude impairment to Claimant's shoulder, are more

reliable evidence of Claimant's true impairment, and provide no evidence of loss of function beyond the extremity.

12. As found, Claimant failed to carry her burden of proof to show her scheduled left upper extremity impairment should be converted to whole person impairment.

13. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; Peregoy v. Industrial Claim Appeals Office, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004). The question of whether the DIME physician rating was overcome by clear and convincing evidence presents questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

14. However, in *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998), the court *citing Askew v. Industrial Claim Appeals Office,* 927 P.2d 1333 (Colo. 1996) noted that whether a particular component of the claimant's overall medical impairment was caused by the industrial injury is an inherent part of the rating process under the AMA Guides. Therefore, the Egan court determined that in order to challenge and overcome the causation conclusion by the DIME physician a party must present clear and convincing evidence. However, the Egan court further explained that the statutory scheme, requiring causation questions to be challenged through a DIME, applies only to injuries resulting in whole person impairment. The Egan court concluded that when there is a dispute concerning causation or relatedness in a case involving only a scheduled impairment, the ALJ will continue to have jurisdiction to resolve that dispute.

15. Here, respondent has established by a preponderance of the evidence that Dr. Regan erred in diagnosing Claimant with CRPS. Dr. Regan relied exclusively on the Budapest Criteria in reaching his CRPS diagnosis. In doing so, he ignored the requirement that other more likely diagnoses be ruled out prior to diagnosing CRPS. Claimant's obvious ulnar neuropathy, and treatment for this condition, is the more likely diagnosis. Failing to account for this diagnosis is clear error. Further, Dr. Sacha following the CRPS criteria found in the guidelines, including implementation of objective testing, accurately

concluded Claimant does not have CRPS. Dr. Regan's ignoring of these objective diagnostic tests was in error.

16. Dr. Regan further erred when he concluded that Claimant has a ratable injury to her left shoulder. The medical records were silent on any shoulder injury within a few months of the incident and the radiology of Claimant's shoulder showed no acute injury. The lack of any objective evidence of injury, as explained by Dr. Lesnak in his report, invalidates the finding of Dr. Regan. Further, Dr. Regan provided no explanation why his shoulder rating, based on Claimant's diffuse and subjective complaints, would differ so substantially from the more credible opinions of the treating physicians, Drs. Sacha and Solot, which were made closer in time to both MMI and the injury.

17. The opinions of Drs. Sacha and Lesnak are more credible and persuasive than the opinion of Dr. Regan. Both Drs. Sacha and Lesnak provided thorough explanations on Claimant's actual diagnosis, supported by the medical records and opinions of other physicians, such as Drs. Aschberger, Zimmerman and Solot.

18. As found, Respondent has overcome the opinion of Dr. Regan by a preponderance of the evidence. Claimant has no ratable impairment in her left shoulder and does not have CRPS.

19. Claimant's impairment rating is 6% scheduled impairment of the left upper extremity.

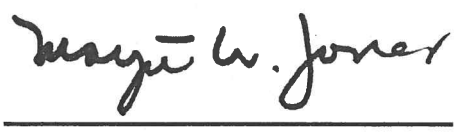
ORDER

1. Claimant has not met her burden of proof with respect to conversion of her left upper extremity impairment, thus Claimant is not entitled to a whole person rating of her left upper extremity.

2. Respondent has overcome Dr. Regan's opinion on causation and impairment by a preponderance of the evidence. Claimant's true impairment, as found by the authorized treating physician Dr. Solot, is 6% scheduled impairment of the left upper extremity.

3. Issues not expressly decided herein are reserved for future determination.

DATED: October 16, 2019



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove he suffered a compensable injury on April 9, 2019?
- Is Claimant entitled to TTD benefits commencing April 10, 2019?
- Who is the authorized treating physician?
- The parties stipulated to an average weekly wage of $1,010.22.

FINDINGS OF FACT

1. Employer operates various mining and aggregate production facilities around Colorado. Claimant was hired in March 2017 as a laborer. He was assigned to operate a water truck at the Riverbend Sand and Gravel plant in Brighton. The water truck sprays water on dirt roads and other areas around the facility to control dust. Operating the water truck is a seasonal task, performed primarily in the warmer months.

2. Employer uses a large conveyor belt to transport raw materials from the mine to be processed. The conveyor passes through a "mud shack" where workers remove clumps of mud or clay that are too large to fit in the machinery. The workers push, shove or lift the clumps off the conveyor belt into an adjacent chute. The clods typically range from approximately the size of a softball to a soccer ball.

3. In February 2018, Claimant was taken off the water truck and assigned the mud shack. Claimant did not like working in the mud shack; he preferred driving the water truck. Claimant's supervisors noticed a change in his attitude and the quality of his performance after being moved to the mud shack. The plant manager, Russell B[Redacted], got the impression Claimant was "trying to get out of jobs he didn't like to do."

4. Claimant alleges he injured his left shoulder, low back, and neck removing a clod of frozen mud and rock from the conveyor belt on April 9, 2018. According to Claimant, the clod was approximately 2 feet wide and 5-6 inches thick. Claimant gave conflicting testimony regarding the alleged mechanism of injury. When first asked how he removed the clod, Claimant described and demonstrated sliding it off the conveyor toward the chute using only his right arm. On follow up questioning, he said he lifted the clod with both hands, turned to the left, and dropped it into the chute. Claimant testified he felt pain in his low back and a "snap" in his left shoulder.

5. On April 9, Claimant told Mr. B[Redacted] and another manager (Preston K[Redacted]) his left arm was bothering him while sorting mud clods. Claimant said his

"whole arm was sore." He mentioned no specific incident or injury and said it was from a pre-existing condition.[1] Claimant said nothing about his low back or neck.

6. Employer referred Claimant to Advanced Care in Fort Lupton to determine his fitness for work. Claimant saw PA-C Shasta Van Sickle at his initial visit on April 9, 2018. Claimant told Ms. Van Sickle he had been feeling pain in his low back and left shoulder since he had been lifting rocks/clay at work "5 weeks ago." He stated, "he does this repetitive activity 8-9 hours every day." He did not mention any specific incident that triggered his symptoms. Nor did he mention any neck pain. X-rays showed degenerative disc disease with foraminal narrowing at L4-5 and L5-S1, but nothing acute. His cervical range of motion was normal and "pain-free." Ms. Van Sickle opined, "Although these are chronic findings, he likely irritated an already underlying issue, which makes injury acute on chronic." She diagnosed lumbar DDD and left AC joint arthritis. Ms. Van Sickle imposed work restrictions of no lifting over 10 pounds and frequent postural changes. Ms. Van Sickle spoke with Claimant's supervisor and advised, "[Claimant] will need to return to his driving job and not this twisting and lifting job that he has been doing."

7. Claimant met with Mr. B[Redacted] and Mr. K[Redacted] on April 10, 2018 to discuss his work status. He could not return to the mud shack or operate the water truck because of the 10-pound restriction. He did not report any work-related injury during the meeting. Claimant was told he would need to pursue physical therapy under his health insurance because he had not claimed a work injury. Claimant was advised Employer does not provide modified duty for non-work-related medical conditions. Because he had not reported a work-related injury, Claimant would need a full duty release before Employer would bring him back to work.

8. Shortly after that, Claimant called Eddie O[Redacted], Employer's HR and safety manager, to ask about filing for short-term disability and FMLA. He said nothing about any work-related injury. Mr. O[Redacted] referred Claimant to Kerri Cook in HR to get the necessary paperwork.

9. Claimant had his first appointment with Back to Action Physical Therapy on April 16, 2018. He provided his Blue Cross Blue Shield health insurance information for billing.

10. Claimant followed up with Ms. Van Sickle on April 23, 2018. The therapy had helped his back but was bothering his shoulder. Examination of his low back and neck were normal, and the only significant findings related to the left shoulder. Ms. Van Sickle indicated, "[his] low back pain has resolved." His shoulder exam suggested possible impingement and Ms. Van Sickle gave Claimant a cortisone injection to "help define AC joint versus rotator cuff etiology." She thought he might need an MRI if his shoulder did not improve.

11. Claimant filled out his portion of the FMLA paperwork on April 28, 2018. He stated he had been doing laborious work for six weeks and "back pain and left shoulder

[1] Several years before, Claimant had surgery and received a permanent impairment rating for a prior work-related left rotator cuff injury.

pain arose from constant compensated form over the material band." There was no mention of any alleged incident on April 9, 2018 (or any other day).

12. On May 3, 2018, Claimant told the physical therapist his low back "feels good."

13. Claimant saw Dr. Kalina Ehrenreich-Piot at Salud Family Health Centers on May 8, 2018, to establish care and have the FMLA physician certification completed. He told Dr. Ehrenreich-Piot his physical problems were from, "4-6 weeks of repetitive lifting of 1-15lbs from side to side at work next to a conveyor belt. After the 2nd or 3rd week of this work, pain began in his left shoulder and right hip." He mentioned no specific injury or incident at work.

14. Claimant called Salud on May 14, 2018 to find out when his FMLA paperwork would be finished. He told the medical assistant, "He feels better and is ready to go back to work but would like to get paid for the time he was not able to work." Dr. Ehrenreich-Piot filled out the form and noted, "during the initial injury he was unable to perform repetitive movements. He is now able to resume these without restriction." She attributed the onset of Claimant's left shoulder and right hip pain to "repetitive use for several weeks at work." She stated his treatment was "now complete" but he may experience intermittent flares.

15. Claimant received five weeks of retroactive STD benefits on or about May 20, 2018.

16. On May 23, 2018, Dr. Ehrenreich-Piot faxed Employer a note that Claimant "may return to work without restrictions."

17. Claimant stayed in regular contact with Employer in April and early May 2018 regarding his status but stopped following up with Employer after Dr. Ehrenreich-Piot released him to full duty.

18. Claimant saw PA-C Deanna Romero at Salud on June 1, 2018. He reported "pain in L shoulder since 4/9/18, was moving a lot of things on conveyor belt, was heavy clay, 8-10 hrs a day x 6 days a wk. Since then has bothered his shoulder."

19. An MRI of the left shoulder on June 21, 2018 showed: (1) mild tendinopathy with low-grade interstitial tearing, but no high-grade or full-thickness tear or muscle atrophy, (2) AC joint capsular edema, consistent with osteoarthrosis or a possible mild AC joint injury, (3) anterior/inferior labral tearing's last maceration with a 1 cm paralabral cyst, and (4) mild glenohumeral joint osteoarthrosis.

20. Claimant received his last STD check on June 25, 2018.

21. The next day, June 26, 2018, Claimant completed a Workers' Claim for Compensation form. He described the injury as "I was picking up clay from a conveyor belt and felt pain in my low back and left shoulder."

22. On or about June 26, 2018, Claimant called Mr. O[Redacted] and asked about the procedure for pursuing a workers' compensation benefits. Claimant reported no specific incident or injury to Mr. O[Redacted] during the call.

23. Claimant's FMLA leave expired on July 2, 2018.

24. Claimant saw Dr. Nirav Shah, an orthopedic surgeon, on July 12, 2018 regarding his shoulder. Dr. Shah noted, "he reports pain that began on 4/__/2018 after moving clay from his truck." Dr. Shah diagnosed a partial rotator cuff tear, AC joint arthritis, and glenohumeral arthritis. He gave Claimant a cortisone injection and asked him to come back in three weeks to assess his response.

25. Claimant followed up with Dr. Shah on August 2, 2018. The injection had not helped, and he reported radiating pain into his neck. Dr. Shah took x-rays, which showed significant degenerative changes in the neck. He ordered a cervical MRI "to evaluate whether this may be cervical in etiology." This report is the first mention in the records of a potential cervical problem.

26. On August 9, 2018, Dr. Shah reviewed the MRI and noted it showed "significant arthritic change with compromise of the spinal canal volume." He recommended an evaluation with one of his partners for potential cervical radiculopathy and impending myelopathy. Dr. Shah opined the symptoms were probably cervicogenic given Claimant's poor response to therapy and injections.

27. Claimant saw Dr. Mathew Gerlach, a spine surgeon, on August 13, 2018. Claimant told Dr. Gerlach, "he has been experiencing neck pain for approximately 4 months with no mechanism of injury." Claimant said the onset of neck and left arm pain was "gradual" and progressively worsened over several months. Dr. Gerlach referred Claimant for a cervical ESI.

28. On September 17, 2018, Dr. Gerlach noted Claimant had received temporary relief from the ESI and recommended a C4-7 anterior cervical discectomy and fusion.

29. Claimant saw Dr. Shah on October 1, 2018 regarding the shoulder. Dr. Shah opined, "he continues to have neck pain and shoulder pain. Previous subacromial and glenohumeral cortisone injections failed to offer any improvement in pain. MRI showed interstitial tendonitis, but no frank tear. As such, I do not believe he would benefit from shoulder surgical intervention."

30. Two weeks later, Dr. Gerlach reiterated his recommendation for a C4-7 fusion. He described the rationale for surgery as,

> Patient's severe spinal stenosis C4-5, C5-6, C6-7 correlates with his radiculopathy. Bilateral hand numbness also likely consistent with early-stage myelopathy also correlating with his severe spinal stenosis.

31. On December 5, 2018, Claimant started seeing Dr. Rebecca Zak at Clinica Family Health. Despite Dr. Shah advising Claimant he was not a surgical candidate for his shoulder, he told Dr. Zak he was scheduled to have shoulder surgery after the neck surgery but lost his insurance and could not proceed. He now had Medicaid and wanted a referral back to orthopedics. Claimant reported "neck pain for several years," with no mention of any neck injury.

32. Claimant saw Dr. Linda Mitchell on December 6, 2018 for an IME at Respondents' request. He complained of neck pain radiating to the left shoulder, and numbness and tingling along the left arm extending to the radial aspect of the forearm. Claimant told Dr. Mitchell "on 04/09/18, he picked up a large chunk of mud and ice and felt a painful pop in his right low back. He states he also injured his left shoulder and his neck at the same time." Dr. Mitchell noted he complained of "a lot of popping in the RIGHT shoulder." Dr. Mitchell opined it was "implausible" Claimant injured his back, neck, and shoulder lifting a chunk of mud and ice at work on April 9, 2018. Based on Claimant's statement he felt a "pop" in his back she indicated he "could have sustained a lumbar strain," but it had resolved by June 1, 2018. She noted Claimant had symptoms consistent with osteoarthritis in both shoulders. She though Claimant "might" temporarily aggravated his pre-existing left shoulder condition, but the symptoms were probably related to cervical spondylosis. She noted spondylosis is common among people over 50 and was not caused or aggravated by Claimant's work.

33. Claimant has a lumbar MRI in February 2019. On March 1, 2019, Dr. Zak noted the MRI showed degenerative disc disease and facet arthropathy. There was "no evidence of nerve root impingement to account for the clinical history of ongoing pain . . . [or anything] that would be amenable to steroid injections or surgery."

34. The testimony offered by Mr. B[Redacted] and Mr. O[Redacted] testimony was credible and persuasive.

35. Claimant's testimony was not credible or persuasive.

36. Claimant failed to prove he suffered a compensable injury on April 9, 2018.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. The Workers' Compensation Act recognizes two types of compensable injuries: accidental injuries and occupational diseases. An accidental injury is "traceable to a definite cause, time and place." *Martin Marietta v. Faulk*, 407 P.2d 348, 444 (Colo. 1965). An occupational disease is not caused by a discrete incident, but results from occupational exposure over time. Section 8-40-201(14). A pre-existing condition does not disqualify a claim for compensation if a workplace accident or exposure aggravates,

accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The mere fact that an employee experiences symptoms at work does not compel a conclusion that the symptoms were caused by the employment. *Garamella v. Paul's Creekside Grill, Inc.*, W.C. No. 4-519-141 (March 6, 2002). Rather, the claimant must prove the symptoms were proximately caused by their work activity.

Claimant failed to prove he suffered a compensable injury on April 9, 2018. He has underlying pre-existing conditions affecting his left shoulder, low back, and neck, and the MRIs and x-rays show no persuasive evidence of any acute injury. The symptoms he described are probably related to his pre-existing conditions rather than his work activities. Claimant's testimony regarding an alleged accidental injury while moving material from a conveyor belt on April 9, 2018 is not credible or persuasive. Numerous inconsistencies lead the ALJ to this conclusion. Claimant initially told the Employer his left arm was "sore" but did not report low back or neck pain. He said the pain was from a pre-existing condition and did not mention any incident. At the first appointment with PA-C Van Sickle, he complained to left shoulder and low back pain, but there was no indication of any neck issue. Claimant attributed his symptoms to "repetitive activity" at work and said nothing about any specific incident. The next day, he told his supervisors he was not claiming a work-related injury. Shortly after that, he asked Eddie O[Redacted] how to request short-term disability and FMLA leave but reported no work-related injury. He stated on the FMLA paperwork his back and shoulder problems arose from "constant compensation" at work rather than a specific accident. On May 8, 2018, he told Dr. Ehrenreich-Piot his symptoms started after two or three weeks of "repetitive lifting of 1-15 lbs from side to side at work next to a conveyor belt." Again, no mention of a specific incident. Claimant ultimately requested and received STD benefits, and only filed a workers' compensation claim the day after he received the last STD check. The June 26, 2018 Worker's Claim for Compensation form contains the first indication of an alleged accidental injury. Claimant's inconsistent reports continued after he filed the claim. For instance, in August 2018, Claimant told Dr. Gerlach his neck pain started "gradually" approximately four months ago "with no mechanism of injury," and in March 2019, he told Dr. Zak he had neck pain "for several years." But he testified his neck pain started immediately after the alleged incident on April 9, 2018. Claimant told Dr. Mitchell he felt a "pop" in his back when he removed the clod from the conveyor belt, but testified at hearing he felt a "snap" in his left shoulder. These inconsistencies severely undermine the credibility of Claimant's testimony.

Nor did Claimant prove a compensable occupational disease, notwithstanding the opinions of Ms. Van Sickle and Dr. Ehrenreich-Piot that repetitive work activities caused or contributed to his symptoms. First, Claimant filed and litigated his claim as an accidental injury, which suggests not even he considers an occupational disease theory persuasive. More importantly, an occupational disease theory is inconsistent with Claimant's testimony attributing his injuries to a specific incident on April 9, 2018. Ms. Van Sickle and Dr. Ehrenreich-Piot have no knowledge of any potentially injurious cause beyond what Claimant told them. The ALJ does not find Claimant's allegations credible, and therefore does not give any weight to medical opinions based primarily on his statements.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 16, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury.

II. If Claimant proved he sustained a compensable injury, whether Claimant proved by a preponderance of the evidence his medical treatment is authorized and reasonably necessary and related to the industrial injury.

III. If Claimant proved he sustained a compensable injury, whether Claimant proved by a preponderance of the evidence he is entitled to temporary total disability (TTD) benefits from August 22, 2018 and ongoing.

FINDINGS OF FACT

1. Claimant is a 63-year-old male who worked for Employer as an inventory crew member. Claimant's job duties included moving and lifting parts, some of which Claimant estimates weigh over 50-75 pounds.

2. Claimant has a prior history of right shoulder symptoms dating back to at least 2011 when he was diagnosed with right shoulder impingement syndrome and right shoulder joint pain.

3. On May 19, 2016, Claimant presented to his primary care physician John Willard, D.O. for evaluation of his right shoulder and a possible sinus infection. He was diagnosed with, inter alia, shoulder pain and referred to an orthopedist.

4. On June 13, 2016, Claimant presented to David Oster, M.D. with a history of right shoulder pain for several months. Claimant reported the pain began insidiously and he did not recall any specific injury. A July 1, 2016 right shoulder MRI revealed a large rotator cuff tear with retraction. Dr. Oester referred Claimant to Mark Failinger, M.D., who evaluated Claimant on July 20, 2016. Dr. Failinger noted Claimant's "…symptoms developed suddenly while the patient was doing nothing in particular and the pain gradually increased." Claimant saw Cary Motz, M.D. on July 26, 2016, who noted the onset of Claimant's symptoms was not associated with any specific activity and developed gradually over a period of months. Claimant then sought treatment at UC Health where he was seen by Jonathan Bravman, M.D. and Chris Joyce, M.D.

5. On November 2, 2016, Claimant presented to Dr. Joyce with right shoulder symptoms that began approximately nine months prior. Dr. Joyce noted Claimant reported "the onset of symptoms was chronic and that he injured his shoulder during work most likely. He does not recall a specific injury, but several episodes of acute pain in the shoulder while lifting large loads at work." A MRI obtained the same day

demonstrated a large complete right rotator cuff tear, right biceps tear, right subacromial bursitis and right AC arthrosis.

6. On November 25, 2016, Claimant completed documents requesting short-term disability and a leave of absence under the Family and Medical Leave Act (FMLA) in connection with his right shoulder condition. Claimant checked "No" to the question "Was an accident involved?" Dr. Bravman also completed a section of the paperwork. In response to the question, "Did this sickness or injury arise out of patient's employment?" Dr. Bravman checked "No."

7. On December 12, 2016, Claimant underwent a right shoulder rotator cuff repair, biceps tenodesis and distal clavicle resection performed by Dr. Bravman. Claimant's medical treatment and surgery was paid for by Claimant's private health insurance. Claimant underwent post-operative physical therapy and ultimately returned back to work performing his regular job duties.

8. Claimant alleges he sustained an industrial injury to his right shoulder in January or February 2018. Claimant offers January 31, 2018 as the approximate date of injury. Claimant testified that, on or around January 31, 2018, he experienced pain in his right shoulder when lifting a brake pad from a top shelving unit. Claimant did not report the injury to Employer nor seek treatment for the alleged injury until several months later. Claimant continued performing his regular job duties.

9. On March 5, 2018, Claimant presented to his his primary care physician, Dr. Willard, for concerns of strep throat. The medical record for this evaluation contains no mention of right shoulder symptoms or an alleged work incident.

10. On March 14, 2018, Claimant presented to Dr. Bravman with right shoulder complaints. Dr. Bravman noted Claimant had returned to work after his 2016 right shoulder surgery and,

> [H]ad a fairly normal shoulder, though in January he was lifting four to five boxes of brakes overhead and had a tearing or ripping type sensation through the front and anterolateral aspect of the shoulder, from which he has had difficulty recovering and returning. He has had some pain and discomfort.

On physical exam, Dr. Bravman noted slight contour difference of the biceps with reported cramping but no bruising or weakness. X-rays were within normal limits. Dr. Bravman concluded Claimant likely disrupted his biceps tenodesis. He recommended Claimant undergo a repeat right shoulder MRI.

11. On April 4, 2018, Claimant returned to Dr. Bravman, who noted the recent MRI revealed a massive re-tear of the superior rotator cuff with retraction to the glenohumeral joint and biceps tenodesis failure. Surgical options were discussed. Dr. Bravman noted Claimant "states he cannot have surgery until the end of the year…"

12. Claimant testified he mentioned his alleged injury to Kelly Grooms and Martin Schninger in April 2018. He testified he reported the alleged injury to those individuals at that time because he had since seen his physicians and now knew his diagnosis.

13. Kelly Grooms was Claimant's supervisor in 2018. Mr. Grooms testified at hearing and explained Employer's procedure for reporting a work injury. Mr. Grooms testified that an employee is required to report a work injury to a manager within 24 hours of the injury. The manager subsequently completes an incident report and notifies Employer's human resources department. Mr. Grooms testified Claimant did not report any work incident to him in April 2018. He further testified Mr. Schninger did not work at the distribution center in April 2018. Mr. Grooms explained that if Claimant would have reported a work injury to himself or Mr. Schninger, a report would have been filed. Mr. Gross further testified that in July 2018 Claimant mentioned that he was experiencing right shoulder pain. Claimant did not mention the alleged January 2018 incident nor indicate he injured his shoulder at work, despite Mr. Grooms specifically asking him if he believed his condition was work-related. When Claimant asked to be placed on light duty, Mr. Grooms informed Claimant he would need to provide a doctor's note, which Claimant did not do.

14. Claimant testified he continued treating with Dr. Bravman because he did not get a "response" from Employer regarding his work injury. Claimant continued working his regular job duties until being placed on restrictions by Dr. Bravman on August 22, 2018. On August 22, 2018, Claimant returned to Dr. Bravman with complaints or worsening right shoulder pain, particularly over the past week. Dr. Bravman recommended surgical intervention and scheduled Claimant for a right reverse total shoulder arthroplasty on October 8, 2018. He released Claimant to return to work until surgery, with restrictions of no lifting, pushing, pulling, or carrying more than five pounds with the right upper extremity, and no climbing or lifting overhead with the right upper extremity.

15. On August 22, 2018, Claimant completed FMLA paperwork requesting a leave of absence beginning October 8, 2018 in connection with his right shoulder condition. Claim also completed paperwork for short-term disability. Claimant again responded "No" to the question on the form asking if an accident was involved. Dr. Bravman completed the physician's section on the short-term disability form, checking "No" to the question, "Did this sickness or injury arise out of patient's employment?"

16. Joanne Middleton works for Employer as a human resources administrator. Ms. Middleton testified at hearing that, on August 22, 2018, Claimant came in and completed short-term disability and FMLA paperwork and then, five days later, came back in and stated he wanted to file the alleged injury under workers' compensation. She testified August 27, 2018 was the first time Employer was notified of any alleged worker's compensation claim for Claimant's shoulder. Ms. Middleton further testified Employer records do not contain any indication Claimant reported a work injury in April 2018.

17. Ms. Middleton completed an Employers First Report of Injury noting an injury/illness date noted of August 1, 2018. She noted Employer was notified of the alleged injury on August 27, 2018. Regarding the mechanism of injury, Ms. Middleton noted Claimant was counting brake pads that were stacked on a top shelf when he felt pain in his right shoulder.

18. Upon notification of the alleged work injury on August 27, 2018, Employer provided Claimant a list of designated providers the same day, from which he chose Midtown Occupational Health Services.

19. Claimant presented to Lloyd Thurston, D.O. at Midtown on August 27, 2018. Dr. Thurston noted,

> [Claimant] relates the onset of right shoulder pain to moving between 60 and 100 S & S brake pads from the top shelf of a shelving unit. Apparently after this in January or February he felt a pulling sensation in his right shoulder. There was no specific incident where it suddenly heard (sic). The previous right shoulder surgery was not handled through Worker's Comp.
>
> ***
>
> It is not clear to me why he is claiming this work injury now. In early August the right shoulder because abruptly more painful and that's when the surgery was scheduled for 10/5/2018. The patient was unable to explain why he is only claiming the work injury now ~6 months after he states he was injured.

Claimant denied previous workers' compensation injury and was adamant his right shoulder rotator cuff tear is work-related. Dr. Thurston noted Claimant's physical examination was "surprisingly benign." He diagnosed Claimant with a recurrent right shoulder rotator cuff tear, per patient history, but noted he wanted to review Claimant's prior medical records, including the MRI. He continued Claimant on the work restrictions assigned by Dr. Bravman, although he noted he did not see the need for the restrictions at that time.

20. Claimant was scheduled to return to Dr. Thurston for a follow-up appointment on October 19, 2018. Claimant testified he but did not return to Dr. Thurston for evaluation and instead elected to continue treating with Dr. Bravman. Dr. Thurston did not refer Claimant to Dr. Bravman.

21. Claimant completed an Incident Investigation Form on September 10, 2018. For date of incident he wrote "January – Feb" and for date reported he wrote "August 2018." Claimant reported the injury occurred when he was moving brake pads and felt pain in his right shoulder.

22. Doug Jordan worked on the inventory crew with Claimant. Mr. Jordan did not supervise Claimant. In connection with Employer's investigation of the alleged injury, Mr. Jordan completed a witness statement on September 10, 2018. He wrote, "Sometime in Jan or Feb crew was working Rayloc all in different ilses (*sic*). I don't remember date or time and I did not see anything happen. I just remember [Claimant] saying he thinks he hurt himself again. I don't remember the day he told me." Mr. Jordan testified at hearing that in January 2018 he remembered Claimant standing on a ladder and saying "I think I hurt my arm." Mr. Jordan testified he did not see any injury occur.

23. Aaron Battaglia also worked on the inventory crew with Claimant. He did not work in supervisory role. Mr. Battaglia also completed a witness statement on September 10, 2018. He wrote,

> [Claimant] came up too (*sic*) me on a day in January or February said he might of hurt his shoulder. I ask if he need help he said no about 9 week later he said he had MRI & it was tore again then he told me he was gonna (*sic*) wait until October or November to get surgery done. As far as seeing [Claimant] hurting himself I didn't see anything.

Mr. Battaglia testified at hearing Claimant complained of right shoulder pain in January or February 2018. He testified he did not personally witness any injury occur.

24. Claimant worked modified duty until the date of his surgery. Claimant underwent a right total shoulder arthroplasty on October 8, 2018 performed by Dr. Bravman. Claimant testified he returned to work for Employer in April or May 2019.

25. On December 17, 2018, Claimant filed a worker's claim for compensation for his right shoulder listing the date of injury as June 1, 2016. Claimant wrote that the injury occurred lifting or moving something that was too heavy. Claimant testified he is not claiming a work injury with a date of injury of June 1, 2016 and it is not his position he injured himself at work in 2016. However, when asked at hearing why he listed June 1, 2016 as the date of injury on the workers' compensation form, he testified he put that date because he thought work may have contributed to his shoulder symptoms.

26. On December 28, 2018, Dr. Bravman released Claimant cleared to return to light duty on January 2, 2019 with restrictions of no lifting or carrying over 15 pounds to the waist, 5 pounds to shoulder height and no weight over shoulder height. Claimant was also restricted from performing any repetitive reaching activities.

27. At the request of Respondents, Mark Failinger, M.D. performed an independent medical examination (IME) on February 21, 2019, authored a report and then a second report on April 8, 2019 after reviewing additional medical records. Dr. Failinger was offered and accepted as a medical expert in orthopedic surgery with expertise in shoulder conditions as well as being level II accredited at hearing and testified as such.

Dr. Failinger testified and concluded Claimant's condition(s) in his right shoulder were a non-traumatic rotator cuff tear. Dr. Failinger concluded that Claimant had pre-existing right shoulder pathology and symptomatology.

28. Dr. Failinger found there was no specific event that started Claimant's discomfort in his right shoulder. Dr. Failinger concluded and testified Claimant's shoulder likely had difficulty healing or never fully healed after his 2016 surgery, as evidenced by the continuing onset of symptoms shortly after the 2016 surgery. He opined that, in the alternative, Claimant had a recurring degenerative tear that was as a natural progression from Dr. Bravman's 2016 surgery and not as a direct and proximate result of claimant's work activities for Employer. Dr. Failinger opined that, within reasonable medical probability, Claimant's symptoms as well as the tear are due to ongoing degeneration rather than to a specific work event. Dr. Failinger concluded Claimant had an "on-going degeneration of his rotator cuff with waxing and waning symptomatology for at least a 6-7 year period." Dr. Failinger opined that and Claimant's need for surgery in 2018 was due to ongoing degeneration of rotator cuff disease with end stage arthritic changes. Dr. Failinger testified that the 2018 MRI report did not specifically list biceps tenodesis as an impression; however, he did acknowledge that Dr. Bravman mentioned disrupted biceps tenodesis in his report.

29. The ALJ finds the testimony of Dr. Failinger, Mr. Grooms, Ms. Middleton, Mr. Jordan and Mr. Battaglia, as supported by the medical and employment records, credible and persuasive.

30. Claimant failed to prove it is more likely than not he sustained a compensable industrial injury or occupational disease. Accordingly, Claimant also failed to prove entitlement to medical benefits and TTD.

31. Evidence and inferences contrary to these findings were not found credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment

aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); ***Atsepoyi v. Kohl's Department Stores***, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

The ALJ concludes the preponderant evidence does not establish Claimant sustained a compensable work injury on or around January 31, 2018. Claimant alleges he felt right shoulder pain while performing work duties sometime in January or February 2018. While the testimony and witness statements of Mr. Jordan and Mr. Battaglia indicate Claimant mentioned something to this effect to them in January or February 2018, no work injury was reported to Employer nor did Claimant seek any treatment. Claimant continued performing his regular job duties for several months. Claimant did not seek medical treatment for his right shoulder until approximately two months after the alleged work injury and did not report his condition to Employer as work-related until approximately eight months after the alleged work injury, on August 27, 2018. Claimant's testimony that he reported the work injury to Mr. Gross and Mr. Schninger is refuted by the credible testimony of Mr. Gross, Ms. Middleton, and the Incident Investigation Form completed by Claimant in which he stated he notified Employer in August 2018. Moreover, a mere five days before Claimant actually notified Employer of the alleged work injury, he and Dr. Bravman completed FMLA and short-term disability paperwork indicating Claimant's condition was not due to an accident or due to his employment. This sequence of events undermines Claimant's credibility.

Additionally, Dr. Failinger credibly and persuasively opined Claimant's condition and need for surgery isthe result of ongoing degeneration of his rotator cuff, unrelated to Claimant's work activities for Employer. The ALJ is persuaded that, to the extent Claimant experienced pain at work on or around January 31, 2018, such pain was the result of the natural progression of Claimant's pre-existing, significant degenerative condition. Based on the totality of the credible and persuasive evidence, Claimant failed to meet his burden to prove his employment proximately caused his symptoms, or otherwise aggravated or accelerated his pre-existing condition.

As Claimant failed to prove he sustained a compensable injury to his right shoulder, the remaining issues of medical benefits, authorized providers and TTD are moot.

ORDER

1. Claimant’s failed to prove by a preponderance of the evidence he sustained a compensable injury to his right shoulder. Claimant’s claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 17, 2019

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondent pursuant to Sections 8-43-304 and 8-43-305, C.R.S. for the respondent's alleged failure to comply with the terms of the May 9, 2018 settlement agreement and ALJ Mottram's May 8, 2019 order.

FINDINGS OF FACT

1. On October 19, 2017, the claimant suffered an injury while working for the respondent. The claimant's injuries included a traumatic brain injury (TBI). The claimant testified that he has approximately $15,000.00 in unpaid medical bills related to his injury.

2. Following the claimant's injury, the parties entered into a settlement agreement in which the respondent agreed to pay the claimant $15,000.00. The respondent also agreed to make monthly payments of $417.00 for 36 months. On May 9, 2018, the Director of the Division of Workers' Compensation (DOWC) approved the settlement agreement.

3. The records entered into evidence at hearing demonstrate that following the approval of the settlement agreement the respondent paid a total of $1,260.00. The last payment the claimant received in 2018 was in August 2018.

4. On April 11, 2019, the parties attended a hearing held by ALJ Keith Mottram. The only issue at hearing related to the claimant's request for penalties for the respondent's failure to comply with the settlement agreement.

5. On May 8, 2019, ALJ Mottram issued Findings of Fact, Conclusions of Law, and Order in which the ALJ found that penalties were appropriate. ALJ Mottram ordered respondent to pay penalties totaling $1,500.69. In addition, the respondent was provided the option to pay that amount directly to the Division of Workers' Compensation, or to post a bond.

6. On June 17, 2019, the respondent issued two checks to the claimant; one in the amount of $200.00 and the other in the amount of $100.00. It is unclear if those payments were an effort to comply with the settlement or to comply with ALJ Mottram's order. The claimant testified that no other payments have been made by the respondent.

7. On June 20, 2019, the claimant filed an Application for Hearing (AFH) endorsing the issues of penalties for the respondent's alleged violation of the May 9, 2018 settlement agreement and ALJ Mottram's May 8, 2019 order.

8. On July 10, 2019, the Office of Administrative Courts (OAC) served a Notice of Hearing on the parties. The Notice of Hearing provided that the hearing would be held on October 10, 2019, at 8:30 a.m. in Glenwood Springs, Colorado.

9. The respondent did not participate in the October 10, 2019 hearing. Therefore, there is no persuasive evidence on the record to indicate any reasons for the respondent's failure to comply with both the settlement agreement and ALJ Mottram's May 8, 2019 order.

10. The ALJ credits the claimant's testimony and the documents entered into evidence and finds that the claimant has demonstrated that it is more likely than not that the respondent has failed comply with the terms of the May 9, 2018 settlement agreement and ALJ Mottram's May 8, 2019 order.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

4. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that any employer or insurer:

> "who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel…, or fails, neglects, or refuses to

obey any lawful order…, shall be subject to … a fine of not more than one thousand dollars per day for each such offense."

This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

5. Before penalties may be assessed, the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S. *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

6. An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." *See* Section 8-40-201(15), C.R.S. The fine shall be apportioned in whole or part at the discretion of the director or administrative law judge between the aggrieved party and the workers' compensation cash fund created in Section 8-44-112, C.R.S. with the amount apportioned to the aggrieved party being a minimum of fifty percent of any penalty assessed. *See* Section 8-43-304, C.R.S. In addition, Section 8-43-305 C.R.S. provides that each day a party engages in the violation is construed as a separate offense.

7. In this case, the claimant seeks penalties for the respondent's failure to comply with the terms of the May 9, 2018 settlement agreement and ALJ Mottram's May 8, 2019 order.

8. The claimant requests that the ALJ assess penalties against the respondent beginning on the date of the Notice of Hearing (July 10, 2019) through the date of hearing (October 10, 2019). The ALJ calculates that this is a total of 93 days. In addition, the claimant has requested that the ALJ assess the maximum penalty allowed by statute, of $1,000.00 per day.

9. As found, the claimant has demonstrated by a preponderance of the evidence that the respondent has failed to comply with the terms of the May 9, 2018 settlement agreement and ALJ Mottram's May 8, 2019 order. The ALJ concludes that penalties are appropriate. As indicated above, the respondent could be subject to penalties of up to $1,000.00 per day.

10. The ALJ concludes that the respondent's ongoing failure to act in this matter is egregious. Therefore, the ALJ orders the respondent to pay the claimant penalties of $500.00 per day for the period of July 10, 2019 through and including October 10, 2019. The ALJ calculates that this is a total of $46,500.00 ($500.00 per day for 93 days).

ORDER

It is therefore ordered:

1. The respondent shall pay the claimant penalties totaling $46,500.00. No amount of this total shall be apportioned to the uninsured employer fund.

2. The amount of penalties ordered at this time is **in addition** to the amounts due and owing pursuant to the settlement agreement and ALJ Mottram's May 8, 2019 order.

3. The respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. In lieu of payment of the above to the claimant, the respondent shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $46,500.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee; **OR**

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $46,500.00 with the Division of Workers' Compensation within ten (10) days of the date of this order:

i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

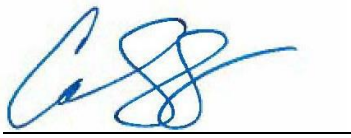
ii. Issued by a surety company authorized to do business in Colorado.

iii. The bond shall guarantee payment of the compensation and benefits awarded.

5. The respondent shall notify the Division of Workers' Compensation of payments made pursuant to this order.

6. The filing of any appeal, including a petition to review, shall not relieve the respondent of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

Dated this 21st day of October, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered whole person impairment from his June 23, 2017 right shoulder injury?

FINDINGS OF FACT

1. Claimant works for Employer as a tractor-trailer driver and delivery person. He sustained an admitted injury to his right arm and shoulder on June 23, 2017, while pulling a fifth-wheel handle to disconnect a trailer.

2. Initial medical attention focused primarily on Claimant's right biceps, and he had emergency surgery on June 26, 2017 for compartment syndrome. He was off work for a few months while rehabbing the arm. PA-C Kenneth Ginsburg at Concentra put Claimant at MMI and released him to full duty on September 12, 2017.

3. Claimant went back to work but continued having problems with his arm and shoulder. His symptoms progressively worsened and he received authorization to return to Concentra in February 2018. He saw Dr. Daniel Peterson on February 21, 2018, and reported ongoing pain and weakness in the right shoulder. He had multiple positive rotator cuff signs and reduced range of motion in all directions. Dr. Peterson commented, "in truth he should in retrospect have had an MRI of the shoulder to R/O damage to the RTC as well as the biceps tendon rupture."

4. A right shoulder MRI on March 8, 2018 showed significant rotator cuff pathology, including retracted tearing of the supraspinatus and majority of the subscapularis tendon complex, with associated muscle atrophy and fat deposition. After reviewing the MRI, Dr. Daniel Peterson at Concentra referred Claimant to Dr. Simpson, an orthopedic surgeon.

5. Claimant saw Dr. Simpson on April 2, 2018, who opined,

> [Claimant] has a significant full-thickness, increasingly atrophic right rotator cuff tear. In this 52-year-old gentleman, this is quite a difficult issue. At his young age and activity level as far as loading and unloading trailers, I think if there is any way to get an anatomic or close to anatomic reconstruction of his rotator cuff that is the best option for him.
>
> I think the best option for him initially as an arthroscopic evaluation, probable arthroscopic rotator cuff tear and possible superior capsular reconstruction. He understands that this is a very significant blade recovery and can take an extended period of time even upwards of six months or longer before he would be able to go back to driving. He understands this. If there is any way he could transition to a job where he is not loading and

unloading that probably would be in his best interest in the long-term, but at this point we will see how he functions after his reconstruction.

6. On May 3, 2018, Dr. Simpson performed a "complicated" arthroscopic rotator cuff repair and subacromial decompression. He found a "massive" full-thickness tear of the supraspinatus with retraction to the glenoid, detachment and retraction of the infraspinatus, a subscapularis tear, and a complete rupture of the long head of the biceps tendon.

7. Claimant continued to experience severe shoulder pain for several months after surgery. On June 4 and July 18, 2018, Dr. Peterson documented pain all around the shoulder, including tenderness in the bicipital groove, the anterior glenohumeral joint, the supraspinatus muscle, the trapezius, and the greater tuberosity.

8. Claimant participated in extensive post-surgical physical therapy, including numerous documented treatments to his right shoulder blade, upper trapezius, neck, and suboccipital muscles.

9. On August 17, 2018, Dr. Peterson documented weakness of the supraspinatus and subscapularis muscles.

10. Dr. Peterson put Claimant at MMI on September 7, 2018. He was working without restrictions, but Employer had changed his job so he was no longer handling freight. On examination, Dr. Peterson noted tenderness in the bicipital groove, trapezius muscle, and anterior shoulder. Claimant still had biceps and supraspinatus muscle weakness and "generalized hypertonicity." Hawkins, Neer's, and painful arc tests were positive. Dr. Peterson assigned a 12% extremity/7% whole person shoulder rating for range of motion deficits and 6% whole person for skin impairment. The overall combined rating was 12% whole person.

11. Claimant saw Dr. John Raschbacher for an IME at Respondents' request on January 4, 2019. Claimant reported aching and burning pain in his shoulder, aggravated by reaching up. Right shoulder impingement sign was positive. Dr. Raschbacher appreciated weakness with internal and external rotation of the right shoulder. Regarding neck symptoms, Dr. Raschbacher noted, "he has some neck soreness which began 1 ½ to 2 weeks ago. Before that his neck was 'fine.' However, he goes on to state that he had some pain at the right neck from his arm, he thinks. Now the entire back of the neck hurts." Dr. Raschbacher calculated a 12% extremity rating based on range of motion deficits. He "normalized" the rating by measuring the contralateral shoulder. He opined Claimant did not warrant a cervical rating, and there was no for a whole person impairment.

12. Claimant attended a DIME with Dr. Brian Beatty on March 12, 2019. He reported ongoing shoulder pain and difficulty reaching overhead. He was tolerating full-time work with no formal restrictions because "he just drives and no longer has to load and unload the freight." Claimant described pain radiating from the shoulder into his upper arm into his neck. He indicated his symptoms had not changed. Physical examination

showed tenderness over the anterior and lateral aspects of the shoulder along the AC joint, and reduced range of motion. Dr. Beatty assigned a 16% extremity/10% whole person rating based on range of motion. He did not apply normalization.

13. Claimant saw Dr. Jack Rook for an IME at his counsel's request on July 29, 2019. Claimant reported pain throughout the shoulder area, including his right trapezius and neck. Claimant also described episodic right-sided occipital headaches he believed were related to his trapezius and neck pain. Dr. Rook noted the medical records support Claimant's reported symptoms, including reports from Concentra and physical therapy. On examination, Dr. Rook found tenderness to palpation of the anterior shoulder capsule and bicipital groove, the right pectoralis minor, the right side scalenes, right levator scapulae, and supraspinatus. He appreciated "palpable spasm" of the right upper trapezius and right-sided paracervical musculature extending to the suboccipital muscles. Impingement testing was positive and Claimant had weakness with abduction and external rotation. Dr. Rook agreed with Dr. Beatty's rating methodology, although he believed "an argument can be made" for an additional rating for residual crepitation. Dr. Rook conceded the crepitation rating reflected a mere "difference of opinion" and ultimately agreed with the 16% extremity/10% whole person rating assigned by the DIME. Dr. Rook opined Claimant has whole person impairment because he has functional impairment proximal to the right arm. Dr. Rook cited several factors that led to this conclusion, including: (1) pathology affecting the supraspinatus and subscapularis muscles, (2) scapular muscle weakness documented by multiple providers, (3) ongoing reactive spasm in the muscles around the shoulder joint, including the right-sided scapular muscles, levator scapulae, upper trapezius, and paracervical muscles; (4) PT records showing treatment to the right scapular, shoulder, and paracervical musculature, (5) several notations from Dr. Peterson regarding supraspinatus and trapezius tenderness, (6) Dr. Beatty's report documenting shoulder pain radiating into Claimant's neck, and (7) Claimant's description of his ongoing symptoms and areas of his body affected by the injury.

14. Dr. Raschbacher testified via deposition on August 2, 2019 to expand on the opinions expressed in his IME report. He also authored an addendum report on August 10, 2019 disagreeing with Dr. Rook's opinions regarding whole person impairment. Dr. Raschbacher emphasized the situs of Claimant's impairment is the shoulder, and the shoulder's function is movement of the arm.

15. At hearing, Claimant described ongoing shoulder symptoms and limitations consistent with those he described to Dr. Rook. He described pain around the shoulder into his neck. He has difficulty turning his head to look over his right shoulder when driving. He described problems performing overhead activities. Claimant has difficulty sleeping because of shoulder pain, which contributes to daytime fatigue and lethargy. He has modified or stopped performing many recreational activities and tasks around his home.

16. Claimant's hearing testimony describing pain and functional limitations in his neck, trapezius, scapular area was credible and persuasive.

17. Dr. Rook's analysis is persuasive because it is supported by the medical records, his physical examination of Claimant, and Claimant's credible testimony. Dr. Rook's opinions are more persuasive than the contrary opinions offered by Dr. Raschbacher.

18. Claimant proved by a preponderance of the evidence he suffered a 10% whole person impairment because of his June 23, 2017 work injury.

CONCLUSIONS OF LAW

Whether a claimant has sustained a scheduled or whole person impairment is a question of fact for determination by the ALJ. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The term "injury" as used in the context of permanent partial disability "refers to the manifestation in part or parts of the body which have been impaired or disabled as a result of the industrial accident." *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). In resolving this question, the ALJ must determine "the situs of the functional impairment," which refers to "the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co*., 942 P.2d 1390, 1391 (Colo. App. 1997). The claimant must prove a non-scheduled impairment by a preponderance of the evidence. *Cassius v. Entegris*, W.C. No. 4-732-489 (March 26, 2010). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). Thus, Claimant must show functional impairment to part(s) of his body other than his "arm" to obtain a PPD award based on a whole person rating.

Functional impairment need not take any particular form and "pain and discomfort that interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may show functional impairment to the whole person, and referred pain and limitation in the neck, trapezius, and scapular area can cause functional impairment beyond the arm. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996) (pain in shoulders, chest, back, and neck, which restricted claimant's ability to perform overhead activities justified whole person impairment); *Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side). Similarly, pain in the low back can represent a functional impairment beyond the leg. Although medical opinions may be relevant to this determination, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

As found, Claimant proved by a preponderance of the evidence he suffered impairment not listed on the schedule. Several factors lead the ALJ to this conclusion.

First, the injury and resulting surgery objectively and permanently altered anatomical structures that extend beyond Claimant's arm. He suffered supraspinatus, infraspinatus and subscapularis tears, which are primarily part of the torso. *E.g., Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1986) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"). Additionally, Claimant had a subacromial decompression, which is performed above the glenohumeral joint, and therefore, above the "arm." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008) ("The [claimant's] subacromial decompression was done at the acromion and the coracoacromial ligament in order to relieve the impingement, which is all related to the scapular structures above the level of the glenohumeral joint"). Although the anatomical site of the injury is not dispositive, it is a valid factor to consider when determining whether a claimant has a scheduled or whole person impairment. *Id*.

Second, the medical records corroborate Claimant's testimony and reflect referred pain from the shoulder into areas such as the trapezius, paracervical muscles, and neck. For example, Dr. Peterson documented pain in the trapezius and supraspinatus muscles on multiple occasions after surgery. Claimant received therapy directed to the right scapula, upper trapezius, neck, and suboccipital muscles. Dr. Beatty noted pain radiating from Claimant's shoulder into his neck. Dr. Rook documented palpable spasm and multiple muscles around the shoulder girdle and neck. The suggestion in Dr. Raschbacher's report that Claimant's neck pain is unrelated and started approximately two weeks before the IME probably reflects a misstatement or misunderstanding because Claimant's proximal symptoms were documented shortly after surgery and continued through Dr. Rook's IME. Claimant's testimony his

Third, the symptomatology associated with Claimant's shoulder injury interferes with his ability to perform various activities, including work, household chores, and sleeping. His ability to reach overhead is compromised, and he still has rotator cuff weakness. Although he is working without formal restrictions, he can only tolerate the work because he no longer has to load and unload freight.

The totality of evidence persuades the ALJ that Claimant's shoulder injury causes functional limitations beyond his arm. Claimant proved he sustained a whole person impairment. Neither party has challenged the DIME's 10% whole person rating, which is binding under § 8-42-107(8)(c).

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD benefits based on a 10% whole person rating.

2. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 22 2019

Office of Administrative Courts

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence he is entitled to reimbursement of the costs of a bed, spa, stove, stove conversion, warranties, concrete work, and electrical work.

II. Whether Claimant proved by a preponderance of the evidence he is entitled to reimbursement of 4,775.2 miles of medical mileage for travel to and from medical appointments from January 14, 2016 through August 27, 2018.

FINDINGS OF FACT

1. Claimant has worked as a firefighter for Employer for over 25 years.

2. On January 12, 2016, Claimant sustained an admitted industrial injury when he fell partway through the second floor of a home while responding to a structural fire.

3. Claimant underwent treatment with authorized treating physician (ATP) Stephen Danahey, M.D. at Concentra. At the initial evaluation on January 14, 2016, Dr. Danahey diagnosed Claimant with a puncture wound of the left knee and a groin strain, referred Claimant for physical therapy and released him to light duty. Claimant continued to treat with Dr. Danahey who subsequently updated his assessment to a strain of right piriformis muscle and sacroiliac joint dysfunction of the right side and referred Claimant for chiropractic treatment. On March 4, 2016, Dr. Danahey ordered an MRI of Claimant's right hip and lumbar spine. Upon review of the MRIs on March 16, 2016, Dr. Danahey referred Claimant to Dr. Aschberger for evaluation of his right hip and low back. Dr. Danahey later referred Claimant to Dr. Schwappach for an orthopedic evaluation and possible hip injection.

4. Claimant first presented to Dr. Schwappach on May 6, 2016. Dr. Schwappach noted Claimant's MRIs revealed L5-S1 central disc protrusion and moderate right hip osteoarthritis. He wrote, "Various treatment options were discussed including but not limited to doing nothing, physical therapy, injections, NSAIDS and surgery. He should have a right hip steroid injection and the same ordered. Depending on the results he may need a right hip arthroscopy."

5. Dr. Danahey reevaluated Claimant on May 9, 2016, noting Claimant saw Dr. Schwappach, who recommended a hip injection. He also noted there was some consideration for right hip arthroscopy. Claimant attended follow-up appointments with Dr. Danahey on May 12, May 27, June 15, June 22, July 20, and August 24, 2016.

6. Claimant also saw Dr. Schwappach on June 22, 2016. Dr. Schwappach noted Claimant underwent a right hip cortisone injection on or about June 13, 2016, which

caused Claimant discomfort. Dr. Schwappach's impression was right hip osteoarthritis and right hip synovitis. He again noted various treatment options were discussed with Claimant, "…including but not limited to the idea of physical therapy and nonsteroidal treatment…compared to right hip arthroscopy with debridement of the hip joint and possible removal of the loose bodies." The final option of total hip arthroplasty was also discussed but was not yet indicated.

7. On August 15, 2016, Dr. Schwappach noted that when he last saw Claimant on August 1, 2016, he requested authorization of a right total hip arthroplasty and had not heard back. The August 1, 2016 medical record referred to by Dr. Schwappach was not offered as evidence at hearing. Dr. Schwappach noted Claimant failed nonoperative management and again recommended a total hip arthroplasty.

8. Claimant returned to Dr. Danahey on August 24, 2016, who noted Claimant was seeking a second opinion from his primary care physician at Kaiser regarding the recommended hip surgery.

9. On August 30, 2016, Jorge O. Klajnbart, D.O. performed an Independent Medical Examination (IME) at the request of Respondent. Dr. Klajnbart diagnosed Claimant with moderate right hip osteoarthrosis with a cam defect with femoroacetabular impingement, documented synovitis with debris. He opined there was no indication for a right total hip arthroplasty.

10. Claimant attended follow-up appointments with Dr. Danahey on September 15, October 13, and November 3, 2016. On October 13, 2016, Dr. Danahey noted the surgery had been denied by Respondent. On November 3, 2016, Dr. Danahey noted Claimant had obtained a second opinion from his primary care physician at Kaiser, who also recommended surgery.

11. Dr. Schwappach reexamined Claimant on November 7, 2016. He continued his recommendation for a right hip arthroplasty. Dr. Schwappach specifically noted he discussed the importance of regular exercise with Claimant and recommended starting or continuing a regular exercise program for good health.

12. On November 19, 2016, Dr. Klajnbart issued an IME addendum after reviewing additional records. Dr. Klajnbart now opined Claimant had severe end-state osteoarthritis and was a candidate for total hip arthroplasty. Respondent subsequently authorized a right total hip replacement with Dr. Schwappach.

13. Claimant saw Dr. Danahey on January 4, 2017 and Dr. Schwappach on January 5, 2017 in anticipation of surgery.

14. Claimant underwent a right total hip arthroplasty on January 9, 2017. Post-operative care included pain management, physical therapy and modified duty. Dr. Danahey kept Claimant off of work through February 7, 2017.

15. Dr. Schwappach performed a post-surgical evaluation of Claimant on January 23, 2017. He noted Claimant was taking tramadol and dilaudid sparingly for pain and continued to take xarleto. Claimant was walking with a cane. Dr. Schwappach further noted he discussed proper wound care with Claimant and instructed Claimant to not use a pool, hot tub or bath for six weeks.

16. Dr. Danahey reevaluated Claimant on February 8, 2017. He noted Claimant continued to see Dr. Schwappach and was undergoing physical therapy. Dr. Danahey also authored a prescription pad note dated February 8, 2017 stating, "A medical bed or spa would be of benefit to his current medical condition." The medical record from the February 8, 2017 evaluation contains no mention of a medical bed or spa.

17. Dr. Schwappach reexamined Claimant on February 23, 2017. He noted Claimant was back to modified duty, walking without assistance and taking Aleve occasionally. He further noted Claimant was completing physical therapy twice per week with significant improvements in range of motion, and swimming several times per week for cardio. Claimant was reaching near resolution of his preoperative symptoms.

18. Claimant continued to see Dr. Danahey on March 8, April 7, May 10, June 7, and July 12, 2017.

19. On April 13, 2017, Dr. Schwappach noted Claimant was doing physical therapy twice a week, dry needling and massages. Dr. Schwappach recommended Claimant continue with physical therapy for six more weeks.

20. Claimant again saw Dr. Schwappach on June 15 and August 17, 2017. On August 17, 2017, Dr. Schwappach noted, "He is exercising 3x a week and completing PT 2x a week with improvement after receiving dry needling treatments. He also uses his tens unit. However, he would like to discuss other options to improve the weakness and pain he is experiencing." He noted Claimant reached maximum medical improvement (MMI) with respect to his right total hip replacement.

21. Claimant attended follow-up evaluations with Dr. Danahey on August 23, November 8, December 1, and December 18, 2017. Dr. Danahey noted Claimant continued physical therapy, was taking Aleve occasionally, getting some dry needling, and using the H-wave. He released Claimant to full duty work on December 18, 2017.

22. On December 27, 2017, Dr. Danahey placed Claimant at MMI with a 34% scheduled impairment rating for his right lower extremity. Dr. Danahey opined no maintenance care was indicated.

23. Respondent filed a Final Admission of Liability on January 8, 2018 admitting for 34% scheduled impairment of the right lower extremity and reasonable, necessary and related medical maintenance benefits.

24. On September 25, 2018, a hearing was held before ALJ Michelle Jones on the issues of conversion, maintenance medical care and disfigurement. ALJ Jones found Claimant was entitled to maintenance medical care and disfigurement for his surgical scar. ALJ Jones further found claimant failed to carry his burden of proof with respect to conversion. She reasoned that Claimant completed and passed a rigorous Fit for Duty Evaluation, demonstrating the ability to complete the essentials functions of a firefighter and exhibiting a lack of overall functional impairment.

25. On February 19, 2019 Claimant, through his attorney, sent a request to respondent for reimbursement for bills from: R&T Concrete, Mile High Spas, Home Depot, Gaston Renovation, and American Furniture Warehouse. In the request for reimbursement, Claimant indicated he purchased the spa and bed at the direction of Dr. Danahey and referenced Dr. Danahey's February 8, 2017 prescription pad note. Respondent challenged Claimant's request for reimbursement via an Application for Hearing.

26. Between August 10, 2016 and December 31, 2016, Claimant made multiple purchases he alleges are related to his recovery from hip surgery and for which he seeks reimbursement. On August 10, 2016 Claimant contracted to have sections of concrete poured at his residence. The concrete work totaled $3,770.00, of which $1,520.00 was for a 10 x 16 section of concrete and materials laid for installation of a hot tub. On August 29, 2016 Claimant purchased an H-wave multifunctional stimulator for $169.84. On September 22, 2016 Claimant purchased a pre-owned 4-person red acrylic cal spa and extended warranty for $4,500.00. On November 2, 2016 Claimant purchased a professional gas range stove and three-year protection plan, totaling $3,255.73. On November 20, 2016 Claimant contracted for services for conversion of his electric stove to a gas stove to accommodate the hot tub. The total cost for service and parts was $2,150.00. On December 31, 2016 Claimant purchased a king-size Gelcare Discovery adjustable mattress with frame and 7-piece sectional leather sofa from American Furniture Warehouse, totaling $3,973.00. Claimant did not seek prior authorization from Respondent for any of the aforementioned purchases.

27. Claimant testified at length at hearing regarding his injuries, course of recovery and interactions with treating physicians. Claimant testified that after Dr. Schwappach recommended surgery, Claimant was in communication with the adjuster on his claim and he was under the impression the surgery would likely be denied. Claimant testified that, due to this belief, he began to make financial arrangements to proceed with the surgery on his own and to purchase items that would aid in his recovery.

28. Claimant testified that, leading up to the surgery, both Dr. Danahey and Dr. Schwappach were aware that he was using a spa at a health club to alleviate his right hip pain. Claimant testified that he first discussed recovery from a total hip replacement with Dr. Schwappach at the June 22, 2016 evaluation. Claimant testified that during his August 15, 2016 evaluation with Dr. Schwappach, "I also talked to him about, you know, the spa is doing great for me. He was like, if it works, just keep doing it." Hrg. Tr. p. 37:15.

29. Claimant testified neither Dr. Danahey nor Dr. Schwappach specifically instructed him to purchase a medical spa or bed. Claimant did not offer testimony of any referral outside the medical records for either a medical spa or bed. When specifically asked if there was a recommendation, Claimant stated, "I was told by two hip specialists, slash, surgeons that these are the recommendations and these are the things that you need to get done," listing only dry needling, TENS unit and H wave. Hrg. Tr. p. 44:14. Instead, Claimant repeatedly testified that the authorized providers, Drs. Danahey and Schwappach, were aware of his treatment regimen and encouraged Claimant to continue doing whatever was working for him. Claimant testified he believed Dr. Danahey supported the use of a medical bed and medical spa in his recovery.

30. Claimant further testified that, based on his conversations with Drs. Danahey and Schwappach, it was his understanding he would not want to be in a flat position during his recovery from surgery. Claimant testified he purchased the bed (with an adjustable base) and the 7-piece leather sectional, which included recliner chairs, so he would not be in a flat position. Claimant further testified that his recovery was only made possible because of his commitment to his recovery as well as his access to the medical bed and spa. Claimant testified that after surgery he spent two weeks on the sofa sectional in the recliners. Following the weeks of rest, Claimant began a rigorous exercise program and included a combination of home exercise and therapeutic medical appointments. Regarding Dr. Danahey's February 8, 2017 prescription pad note, Claimant testified he requested that Dr. Danahey provide a prescription for the bed so he would have documentation to show it was needed to help with his recovery.

31. At hearing, Claimant reviewed several bills submitted into evidence for which he is requesting reimbursement. When asked about the R&T Concrete bill, Claimant initially testified that the bill was entirely related to a concrete pad required prior to installing the spa. He later clarified that only $1,520.00 of the $3,770.00 bill was related to concrete work for the hot tub, while other items listed were for other home improvements.

32. The ALJ specifically finds that the pre-surgery medical records of Dr. Danahey and Dr. Schwappach contain no documentation of Claimant reporting his use of a spa, nor any mention of potential surgical recovery modalities or any reference to a medical spa, medical bed or recliner. With the exception of Dr. Danahey's February 8, 2017 prescription pad note, the post-surgery medical records also contain no mention of a medical bed, spa or recliner.

33. Dr. Klajnbart performed a medical record review and issued a report dated On June 2, 2019. He noted that, based on his review of the medical records, a medical spa and medical bed were not referenced as potential treatment modalities. He opined that a medical spa and a medical bed are not medically reasonable, necessary or related to Claimant's condition. He explained that the Medical Treatment Guidelines include no recommendation for a medical spa or medical bed to aid in recovery from a hip injury or hip surgery. Dr. Klajnbart further noted that there is a difference between a medical spa

and a Hubbard tank, the latter of which is a form of treatment that is only used on a temporary basis for approximately two months by Rule 17, Exhibit 6 of the Medical Treatment Guidelines.

34. Dr. Danahey testified on behalf of Respondent at a prehearing deposition on July 3, 2019. With respect to the February 8, 2017 prescription pad note, Dr. Danahey testified:

> I am remiss in not including that discussion in the note. My memory of how this came about is that he asked me this at the end of the visit and indicated to me that he had some money in which he wanted to purchase either a bed or a spa and that if wrote this note for him, that would assist him in using the money for that particular purpose. I inferred but didn't clarify that this sounded as if it was flexible spending money or something similar.

Hrg. Tr. p.15: 8-18.

35. Dr. Danahey clarified the note was not intended as a prescription, but rather a "note on letterhead," which was not medically necessary, and was not intended "at all" to be covered by the workers' compensation carrier. Dr. Danahey testified he did not recommend Claimant obtain a medical spa or bed as part of his recovery, and did not recall Claimant previously informing him of his use of a hot tub and bed in his recovery.

36. Dr. Danahey further testified he continues to see Claimant for maintenance care. He testified that a medical bed and medical spa are not medically necessary in Claimant's case, explaining that the use of a medical bed or a spa is not accepted as recommended treatment with any demonstrated efficacy regarding hip replacements. He went on to address some of the other specific purchases made by Claimant, including the stove and sectional sofa, stating these were also not medically necessary or reasonable.

37. Dr. Klajnbart testified on behalf of Respondent at a post-hearing deposition on August 20, 2019. Dr. Klajnbart testified consistent with his June 2, 2019 report. He explained that a medical spa is a single-person-use device with jet streams and propulsion devices "keenly intact" with the affected area. He described a medical bed as a twin size bed with handrails and attachments for medical devices. Dr. Klajnbart testified that the hot tub and bed purchased by Claimant were not reasonably necessary to recover from his total hip replacement. Dr. Klajnbart further testified that the 7-piece leather sectional purchased by Claimant was not medical equipment, and was therefore not reasonable and necessary for recovery from his total hip replacement.

38. Claimant is requesting reimbursement for 4,775.2 miles he alleges he incurred driving to and from doctor and physical therapy appointments from January 14, 2016 to August 27, 2018. Claimant testified Exhibit 18 is an accurate summary of the mileage

he incurred. Respondent contests 2,133 of the 4,775.2 requested miles on multiple bases, as detailed in Exhibit I and further discussed below.

39. Respondent contends that, for the following dates, the actual mileage incurred each day is 44.8 miles instead of 60.8 miles, as the appointment times included in the medical records indicate Claimant did not have time to go home and back between his Concentra appointment and his appointment at Denver Fire PT: March 4, 2017, May 27, 2017, April 7, 2017, August 14, 2017, September 22, 2017, December 1, 2017 and December 18, 2017. The ALJ specifically finds March 4, 2017 and May 27, 2017 were not dates included in Claimant's reimbursement request. With respect to December 1, 2017, Claimant requested 20.2 miles for travel from home to Concentra, not the 60.8 miles alleged by Respondent. There is no appointment time to cross-reference for April 7, 2017. On December 18, 2017, the record indicates Claimant's Concentra appointment ended at 8:53 a.m. and his physical therapy appointment began at 10:45 a.m., allowing Claimant enough time to return home in between appointments. Accordingly, Claimant is entitled to the requested mileage for the aforementioned contested dates. With respect to August 14, 2017 and September 22, 2017, Claimant is entitled to 44.8 miles instead of the requested 60.8 miles as the record reflects the only a seven-minute and 30-minute period of time between Claimant's Concentra appointment and physical therapy appointment, which would not allow time to return home and back.

40. The ALJ specifically finds Claimant requested reimbursement for travel to and from physical therapy on dates where the appointments were cancelled or Claimant was a no-show, per the Denver Fire PT appointment list on which Claimant relies. Accordingly, Claimant is not entitled to reimbursement of mileage requested for the following dates: June 1, 2017, June 16, 2017, August 24, 2017, October 2, 2017 and October 16, 2017 (46.6 miles each day, totaling of 233 miles).

41. The ALJ specifically finds Claimant requested reimbursement for travel to and from physical therapy on certain dates that do not correlate with the Denver Fire PT appointment sheet. Accordingly, Claimant is not entitled to reimbursement of the 46.6 miles requested for each of June 22, 2017, July 7, 2017, July 10, 2017 and July 18, 2017 (a total of 233 miles).

42. Respondent contends there are there are no matching Concentra records for the following requested dates: February 2, 2016, May 12, 2016, August 1, 2016, August 18, 2016, October 17, 2017, December 1, 2016, August 14, 2017, September 22, 2017, December 18, 2017. The ALJ specifically finds that, with the exception of February 2, 2016 (20.2 miles), Claimant is entitled to the mileage requested for these dates. Dr. Danahey's May 27, 2016 medical record includes a recheck note for a follow-up that occurred on May 12, 2016. Dr. Schwappach specifically refers to Claimant's August 1, 2016 visit in his August 15, 2016 medical note. The medical records t reference appointments scheduled to take place on August 1, 2016, December 1, 2016, August 14, 2017, September 22, 2017 and December 18, 2017. The medical record from the December 18, 2017 is included in the record.

43. Respondent contends there are 10 dates for which Claimant requests reimbursement for travel to and from physical therapy appointments that do not have corresponding physical therapy records: May 19, 2017, June 9, 2017, June 22, 2017, July 7, 2017, July 10, 2017, July 17, 2017, July 28, 2017, August 14, 2017, August 18, 2017, and September 14, 2017. Five of these dates (June 1, 2017, June 16, 2017, August 24, 2017, October 2, 2017 and October 16, 2017) are listed on the Denver Fire PT appointment sheet as cancellations or no-shows. The other dates are reflected on the Denver Fire PT sheet as appointments with no indication Claimant did not attend as scheduled. Neither party offered physical therapy records into evidence. Accordingly, the ALJ specifically finds Claimant is entitled to the requested mileage for May 19, 2017, June 9, 2017, August 14, 2017, August 18, 2017, and September 14, 2017. As found in Finding of Fact 40, Claimant is not entitled to the requested mileage for June 1, 2017, June 16, 2017, August 24, 2017, October 2, 2017 and October 16, 2017 as the record indicates Claimant did not attend those appointments.

44. Respondent further contends there are 29 dates for which Claimant requests reimbursement where Respondent's pay records indicate Claimant was paid for work that same day. Per a partial transcript from a separate previous hearing, Claimant testified he did not attend appointments during his shifts. Respondents argue Claimant did not attend appointments on these dates, or alternatively, the travel distances would be substantially decreased as Claimant would travel from work locations in Denver to the appointments and back. The specific dates contested by Respondent are: January 27, 2016, February 5, 2016, April 8, 2016, April 29, 2016, May 20, 2016, June 10, 2016, June 22, 2016, July 15, 2016, July 22, 2016, August 1, 2016, August 12, 2016, August 15, 2016, August 24, 2016, September 2, 2016, September 23, 2016, October 14, 2016, November 4, 2016, November 22, 2016, December 1, 2016, December 19, 2016, March 10, 2017, March 17, 2017, April 21, 2017, April 27, 2017, August 10, 2017, October 9, 2017, November 8, 2017, November 17, 2017, November 29, 2017 (total of 1140.2 miles). The ALJ specifically finds Claimant is entitled to the requested mileage for these dates. No evidence was offered as to Claimant's actual work schedule or work locations.

45. The ALJ finds that, of the 4,775.2 miles requested to be reimbursed Claimant has proven by a preponderance of the evidence he is entitled to 4,257 miles.

46. The ALJ finds the testimony and opinions of Drs. Danahey and Klajnbart, as supported by the medical records, more credible and persuasive than Claimant's testimony.

47. Claimant failed to prove by a preponderance of the evidence the items for which he seeks reimbursement were for authorized, reasonable and necessary treatment or incidental to such treatment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs.

Bellone v. Industrial Claim Appeals Office, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006).

Section 8-43-404(7)(a), C.R.S. provides that "an employer or insurer shall not be liable for treatment provided pursuant to article 41 of Title 12, C.R.S. unless such treatment has been prescribed by an authorized treating physician." If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAO, June 18, 2010); see *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999).

As found, Claimant failed to prove by a preponderance of the evidence he is entitled to reimbursement of costs of the hot tub, concrete work, gas stove, electrical work, bed, sofa and associated costs for labor and warranties and utilities. The preponderant evidence does not establish such costs were for authorized, medically reasonable and necessary treatment related to Claimant's industrial injury. Claimant acknowledges his providers did not instruct him to purchase the items for which he seeks reimbursement. Claimant instead purports that Drs. Danahey and Schwappach were aware of his use of a spa and his intention to purchase a bed and encouraged him to simply continue doing what he was doing. Claimant's testimony does not comport with the medical records or with Dr. Danahey's testimony. Claimant saw Drs. Danahey and Schwappach on several occasions. The sole medical record referencing the use of a bed or spa is Dr. Danahey's February 8, 2017 prescription pad note, which was specifically requested by Claimant only a few weeks before submitting his reimbursement request. The ALJ is not persuaded Drs. Danahey and Schwappach simply omitted references to a spa and bed over the course of multiple evaluations when their records include references to various other treatment and recovery modalities. Dr. Danahey credibly and persuasively testified the prescription pad note did not constitute a referral for medical benefits. Dr. Danahey credibly and persuasively testified he did not recommend that Claimant obtain a spa or bed and did not recall Claimant informing him of the use of a hot tub and bed in his recovery.

Furthermore, Drs. Danahey and Klajnbart credibly and persuasively testified that the items for which Claimant seeks reimbursement are not medically reasonable or necessary. Dr. Klajnbart credibly and persuasively explained that the spa and bed purchased by Claimant do not qualify as a medical spa and a medical bed. Moreover, Dr. Klajnbart testified a medical spa and medical bed are not indicated to aid in the recovery of a hip injury or hip surgery. As the spa is not medically necessary, it follows that the associated costs of a gas stove, stove conversion, utilities, and concrete work are not medically necessary or reasonable. With respect to the sofa, even assuming, *arguendo*, a recliner or sofa was medically necessary in Claimant's case, the argument

that a seven-piece leather sectional is reasonable and necessary is tenuous and unpersuasive to the ALJ. Based on the totality of the credible and persuasive evidence, Claimant failed to meet his burden to prove he is entitled to reimbursement for the requested items.

Mileage

Mileage expenses for travel to attend medical appointments are recoverable as incidental to medical treatment under the Workers' Compensation Act. *Sigman Meat Co. v. Indus. Claim Appeals Office*, 761 P.2d 265 (Colo. App. 1988). "Incidental mileage expenses are those that "would not have been incurred but for the industrial injury." *Daughty v. King Soopers, Inc.,* W.C. No. 3-837-001 (ICAP, Jan. 17, 1996); *see Anderson v. United Airlines,* W.C. No. 4-445-052 (ICAP, Jan. 9, 2004). However, whether particular mileage expenses are reasonable, necessary and incidental to medical treatment is a question of fact for determination by the ALJ. *Krupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Anderson v. United Airlines,* W.C. No. 4-445-052 (ICAP, Jan. 9, 2004).

WCRP Rule 18-6 (E) provides that respondents shall reimburse an injured worker for reasonable and necessary mileage expenses for travel to and from medical appointments at a rate of 53 cents per mile.

As found, Claimant has established by a preponderance of the evidence that mileage expenses for 4,257 miles for which he is seeking reimbursement are reasonable, necessary and incidental to medical treatment. The ALJ is persuaded 4,257 miles were incurred traveling to and from medical appointments with authorized treating providers.

ORDER

1. Claimant's claim for reimbursement of the costs of a bed, spa, stove, stove conversion, warranties, concrete work, and electrical work is denied and dismissed.

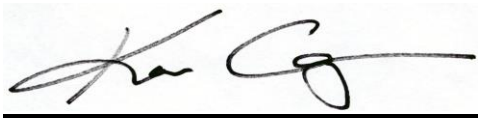
2. Respondent shall reimburse Claimant for 4,257 miles of travel to and from medical appointments at $0.53 cents per mile.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 23, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that his *Scheduled* Permanent Partial impairment rating for partial hearing loss should be converted to the *Whole Person* equivalent?

STIPULATIONS

The DIME results are accepted by the parties on the issues of Maximum Medical Improvement and Permanent Partial Disability.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background

1. Claimant is employed by Respondent, Colorado Springs Utilities, where he has worked since 2001. Over time, he developed hearing loss resulting of his exposure to loud noise in the work place. Claimant completed an "Employee's Statement of Injury" on June 6, 2018 in which he noted, "…My hearing has deteriorated slowly since I hired on despite using my earplugs, custom molded hearing protection and ear muffs." (Ex. 7, p. 44). In an "Employee Interview" of the same date it was noted that; "…Claimant advised his hearing has deteriorated over the years due to loud noise at work. Claimant advised he does wear earplugs, has custom molded hearing protection and earmuffs when needed. Has worked for CSU [Colorado Springs Utilities] since 2003, Vac truck operator for years which is very loud, exposure to loud noise as Gas Inspector." (Ex. 7, P. 45).

2. Respondent initially denied liability for Claimant's injury on June 13, 2018. (Ex. 7, p. 42).

Stacey Longoria, Au.D.

3. Claimant was seen by audiologist Stacey Longoria, Au.D. on June 27, 2018. She reported, "…Mr. Ferguson is in today for a comprehensive hearing evaluation as part of his Workman's Comp appeal. He reports a bilateral, gradual hearing loss and intermittent tinnitus described as a high frequency buzz. His tinnitus has been present for at least 10 years. He has difficulty hearing and understanding especially in the presence of background noise. He also has difficulty hearing in meetings, hearing on the phone and even stating one-on-one conversations can be

difficult. His hearing loss causes him to be embarrassed and frustrated, withdrawing from social engagements…" (Ex. 6, p. 35).

4. Ms. Longoria noted, "…Mr. Ferguson began working with Colorado Springs Utilities in 2001 as a part time employee working with a VAC truck. He explains the Vac truck as a loud, high-pitched machine. During that time, he wore molded, custom earplugs as well as muffs. He did not have a hearing exam upon being hired. In 2003, he became a full-time employee as an inspector. When he began working as a full-time, permanent employee, his hearing was monitored every year…" *Id.*

5. Ms. Longoria reported the hearing testing results "…are consistent with a sensory hearing loss," and she noted Claimant "…is a candidate for binaural amplification." (Ex. 6, p. 36).

Seth Reiner, M.D. (Respondent's IME)

6. Respondent arranged for Claimant to undergo an IME with ear, nose and throat specialist Seth Reiner, M.D., on August 27, 2018. In the questionnaire paperwork, Claimant listed his current complaints/symptoms as "My hearing loss makes it very hard to communicate with others." (Ex. 4, p. 22). Dr. Reiner reported,

> Mr. Michael Ferguson is a 37 year old male who works for the City of Colorado Springs working on gas lines and pipes. He has a history of progressive hearing loss in both ears with tinnitus. He thinks his hearing loss has progressed over the last 10 years making it difficult to carry on conversations. He says he is very diligent at wearing hearing protection around loud noises at work, which include heavy machinery such as jack hammers, 'Lollipop' machines and the Vacuum truck. He says he loves his job and has been in the same work for over the last 16 years. He tells me that some sounds such as an ambulance or fire truck going by with sirens on usually is very uncomfortable to his ears…" (Ex. 4, p. 18).

7. Dr. Reiner concluded, "…It is my professional opinion that the noise exposure Mr. Michael Ferguson has been exposed to over the last 14 years has contributed to his hearing loss and he would benefit from hearing aids and needs annual audiometric evaluations…" (Ex. 4, p. 21). Dr. Reiner calculated a 30% "percentage of disability" for the right ear, and 41% for left, which combined for 32% "overall hearing handicap." *Id.* Dr. Reiner mentioned that "organic causes" had not been ruled out, and therefore recommended a MRI of the head and temporal bones. *Id at 20.*

8. Claimant underwent "computed tomography of the orbits to rule out foreign body" on September 8, 2018. A small piece of metal was noted in Claimant's left eye. The radiologist reported, "…MRI is contraindicated at this time pending further

evaluation and discussion with ophthalmology. It is my opinion that the small metallic fragment will likely be affected by the 1.5 Tesla MRI magnet." (Ex. 5, p. 31).

9. Dr. Reiner issued an addendum on September 13, 2018. He noted Claimant could not undergo the MRI, but that a CT scan might be useful. He added that; "…After review of the audiograms and calculating the degree of hearing disability, I believe that Mr. Ferguson will benefit from the use of bilateral hearing aids. It is my professional opinion that he may need his hearing aids evaluated every 7-10 years and changed to different models or technologies based on any significant changes to his hearing that are documented with professional audiometric evaluations…" (Ex. 4, p. 21)

10. Per Dr. Reiner's recommendation, Claimant underwent computed tomography of the brain and temporal bones on October 6, 2018. The testing was described as "normal." (Ex. 4, pp. 27, 28).

11. Respondent then filed a General Admission of Liability on October 16, 2018. (Ex. 7, p. 41). That same day, Respondent's designated physician, Dr. Kyle Akers, referred Claimant to audiologist Gene McHugh, EdD. (Ex. 2, p. 13).

Gene McHugh, EdD

12. Dr. McHugh met with Claimant on October 31, 2018. He reported Claimant was being seen for an audiology consultation, with a chief complaint of "hearing difficulty." He reported:

> In 2003, a baseline audiogram was completed which showed high frequency hearing loss in both ears. The hearing loss progressed faster than what is normally expected and [he] is now experiencing communication problems at work and at home…Etiology of the hearing loss is speculative. While noise exposure cannot be ruled out as a contributing factor, it is likely Mr. Ferguson has a genetic predisposition for developing early adult onset sensorineural hearing loss. This opinion is based upon the presence of hearing loss when he began working in 2003." (Ex. 3, p. 16).

13. Dr. McHugh went on to recommend hearing aids, but noted, "…However, based upon the precipitous audiometric scope with clinical deafness at 4000 Hz and above, prognosis with amplification is guarded…" (Ex. 3, p. 16).

14. Dr. McHugh fitted and issued the hearing aids on November 14, 2018. He noted, "These are appropriate hearing aids for the patient's hearing loss. However, it is unlikely the hearing aids will provide a significant improvement in hearing due to the precipitous nature of his hearing loss…" (Ex. 3, p. 15).

15. On November 26, 2018 Dr. McHugh reported, *"2 weeks post-fitting shows patient is doing quite well. Much better than expected. Hearing sounds he has not heard for a long time…Progressing very nicely with present settings. He has already changed the battery twice. No problems. Appears quite satisfied with the results…" Id. at 15.* (emphasis added).

Kyle Akers, M.D. (ATP)

16. On November 28, 2018 the ATP, Dr. Akers placed Claimant at MMI with no impairment and no need for maintenance care. He stated, "Non-work related gradual life-long hearing loss," and, "MMI – Specialist could not establish work relatedness." (Ex. 2, p. 12). Respondent filed a FAL on the same day, denying liability for maintenance care. (Ex. 7, p. 40)

17. Claimant's attorney wrote to Dr. Akers on December 12, 2018 and provided him with a copy of Dr. Reiner's IME report. Counsel pointed out that Respondent had admitted liability for Claimant's hearing loss, and asked the doctor to address Dr. Reiner's opinions about permanent impairment and the need for post-MMI maintenance care. Instead of doing so, Dr. Akers wrote a note on December 17, 2018 that appears to read, "My report, in consultation [with] our [unreadable] is what it is. Do as you like with it." (Ex. 2, pg. 9).

Douglas Scott, M.D. (DIME)

18. Claimant requested a DIME, which was performed by Dr. Douglas Scott on April 18, 2019. Dr. Scott noted Claimant began working for Respondent on October 9, 2001, and "…has binaural hearing loss which has been documented since 2003." (Ex. 1, p. 3). Dr. Scott reported, "Mr. Ferguson told me that he has hearing aids and with hearing aids, his hearing is now fair to good, and he has no ringing (tinnitus) in his ears" (Id. at 3, Ex. H, p. 15). Claimant acknowledged this at hearing.

19. On examination Dr. Scott reported, "With his hearing aids removed, he was able to hear my question in conversational tone of what were his children's ages." *Id.* Dr. Scott diagnosed "sensorineural hearing loss in both ears with a standard threshold shift." *Id. at 4.* He reported Claimant reached MMI on December 10, 2018 "…when Dr. McHugh noted that Mr. Ferguson was doing much better than expected with his hearing aids."

20. Dr. Scott issued a total 23.1% impairment rating for Claimant's binaural hearing loss. He noted this would convert to a total of 8% whole-person impairment. *Id at 6.* He noted no apportionment was appropriate: "Documented hearing loss occurs after he started working for the City of Colorado Springs." *Id. at 5.* Dr. Scott recommended post-MMI maintenance care, including follow-ups with Dr. McHugh, hearing aid maintenance and batteries, and annual audiometric testing.

21. Respondent then filed a FAL on May 8, 2019, admitting to a 23.1% scheduled impairment rating, and to post-MMI treatment. (Ex. 7, p. 39). Respondent then filed a FAL admitting to a "rounded-up" rating of 24% on June 12, 2019. This rating yielded PPD of $9,926.60. *Id. at 38.* Respondent calculated the value of the 24% rating as follows: 24% x 139 weeks = 33.36 weeks x $297.56 = $9,926.60. This is consistent with C.R.S. §8-42-107(2)(hh) and §8-42-107(6)(a) and (b). The former statutory provision provides 139 weeks for "total deafness" and the latter provisions reflect the fact that the weekly compensation rate given Claimant's date of injury (June 6, 2018) is $297.56. Here, Claimant does not suffer from "total deafness," in which case his rating would have been 100%, not 24%. The 24% rating accounts for his partial deafness and Respondent compensated him on that basis.

Testimony of Claimant

22. Claimant testified at hearing that after he received his hearing aids they "definitely made an improvement." He testified he is able to have "reasonable conversations" with other people if they are "loud and direct" and the conversation occurs "in close quarters." He wears the aids from the time he wakes until he goes to bed at night. On two occasions Claimant has forgotten to wear his hearing aids to work. The most recent occurrence about approximately two weeks prior to the hearing date and was on a day that an "all employee meeting" was scheduled at work. The meeting occurred in a large room with 70-80 people in it. Unless the person speaking was directly in front of Claimant, or was using a microphone, he had difficulty hearing and understanding them. Claimant could not hear people speaking on the other side of the room. After the meeting, Claimant asked his wife to bring him his hearing aids and she did so.

23. Claimant explained that in order to have effective conversations with others, he needs to be "face to face" with them. He then can observe the other person's body language and demeanor, and he reads their lips as they speak. If those conditions cannot be met, he has difficulty understanding what is being said. If Claimant goes with his family to a restaurant where there are many people and a lot of background noise, he cannot participate in conversations and explained he "might as well just sit there by myself." He used to visit such establishments (Claimant offered the examples of Red Robin and Texas Road House) with his family more frequently but does not do so anymore due to his difficulty hearing and understanding others.

24. Claimant has curtailed socialization with friends. He used to enjoy going to "sports bars," or to dinner or comedy shows with them but does not do so anymore, giving the example that, "it's kind of pointless when you're waiting for a punch line and you completely miss it and everybody's already laughed and I have to ask my wife what they said." Claimant testified that years ago he enjoyed going to movies with his family, but does not anymore, because it is too difficult to understand what the actors are saying. Now his wife may take his kids to movie while Claimant is at work. Claimant no

longer watches much television at home for the same reason. He does watch some sporting events on television because he is able to "watch the action versus listen to the words" and "if somebody scores a touchdown that's pretty obvious."

25. Claimant is required to participate in meetings at work. He explained that his ability to participate in a meaningful manner "depends on what kind of setting we are in." He gave the example of a meeting he participated in the morning of the hearing. He was able to effectively participate because it was in a closed room, with one person speaking at a time. However, if there are multiple conversations going on, he "loses all of it."

26. Claimant describes living in a rural environment between Colorado Springs and Ellicott. In his spare time, he fishes, rides ATV's, and hikes. He used to enjoy going into the field in the spring or summer with his children to find "antler sheds;" (antlers that have been shed by deer). He would collect and display them at his house. However, there are rattlesnakes in the area, and he can no longer hear their warning "rattle" when he approaches, so he no longer participates in this activity.

27. Claimant testified about communicating with others on the telephone; he has little difficulty if the other person has a "loud, pronounced voice," but has trouble understanding if the person speaks quietly or has a soft voice. He also has difficulty hearing and understanding voice mail messages, and often will have to ask someone else to listen to the message and tell him what it said.

28. Claimant also indicated that no physician has indicated that his hearing impairment affects his speech, or any other body part, and that he has no issues speaking [which the ALJ duly notes from Claimant's demeanor while testifying]. Claimant notes no other physical problems from his hearing loss.

29. In August, 2019 Claimant was promoted to Gas Pipeline Inspector Supervisor, but for now continues to perform duties associated with his "old job" of Gas Pipeline Inspector, which involves primarily outdoor work. He inspects the work of contract crews that install gas and electric products. Such work sites are commonly in areas frequented by automobile traffic. He described a recently completed job in "Skyway," where the street was closed to the public, but open to local traffic. Claimant and his supervisor were walking down the street. The supervisor could hear cars approaching, Claimant could not, and the supervisor had to warn Claimant to get out of the way of the approaching traffic.

30. Claimant has children aged 12, 10 and 4 years. His two oldest children participate in 4H. He no longer attends the 4H meetings with them unless his wife goes along, since he cannot hear the 4H representative speak during the meetings.

31. Claimant participated in interviews of potential candidates to fill his former position. People participating in the interviews were Claimant, three co-workers, plus the job candidate. Nine interviews took place over two days. Claimant did not have trouble communicating during the interviews, but stated that they took place in a small, closed office space with no background noise, and only one person was talking at a time.

32. Claimant has meetings with members of his "team" which consists of seven other employees he supervises. They meet in Claimant's office, twice per week on the average. Claimant has little difficulty communicating if only one person at a time is speaking. He does report difficulty if more than one person is speaking at a time.

Testimony of Bob Greene

33. Bob Greene works for Respondent. He is an Operations Supervisor II. He supervises gas construction crews and pipeline inspectors. He also supervises Claimant, and has known him approximately 17 years. He testified he has had no difficulty communicating with Claimant at work, and opined Claimant has no trouble communicating with the employees he supervises. Mr. Green did not notice Claimant having any problems with communication during the interview process for his replacement on September 23 and 24, 2019; on September 26, 2019, when they discussed by telephone making the job offer to the candidate selected; or on September 27, 2019, when they called the 8 unsuccessful candidates.

34. Mr. Greene later conceded he has noticed Claimant having trouble with communication during various meetings. Until Claimant forgot to wear his hearing aids the day of the "all employee meeting" noted above, Mr. Greene was unaware Claimant even wore hearing aids. Claimant was recently promoted, and his hearing loss has not had any effect on his ability to perform his new job duties. Mr. Greene does not interact with Claimant outside of the work place.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ

has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co*., 503 P.2d 1025 (Colo. 1972).

Credibility of Witnesses at Hearing

D. Assessing weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

E. In this instance, the ALJ finds both Claimant, and Bob Greene, to be sincere and credible in their respective testimony, free of undue exaggeration or bias.

Conversion, Generally

F. Whether the Claimant sustained a loss that is compensable under the schedule of disabilities in C.R.S. §8-42-107(2), or has sustained whole-person medical impairment compensable under §8-42-10 (8), is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the claimant's "functional impairment," and the situs of the functional impairment is not necessarily the location of the injury itself. *Langton v. Rocky Mountain Health Care Corp., supra; Strauch v. PSL Swedish Healthcare System, supra.* Such authority is enumerated in C.R.S. §8-43-207(1). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (ICAO, September 12, 2000).

G. There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the Claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008). "Functional impairment is not merely assessed by medical means but rather can involve an overall assessment of the effect the injury has had on the Claimant's ability to function in terms of movement and in the performance of activities at work and daily living." *Martinez v. Pueblo County Sheriff's Office*, W.C. No. 4-806-129 (ICAO, December 7, 2011).

Conversion, as Applied

H. The situs of Claimant's functional hearing loss is his ears. No physician has indicated his hearing loss affects his speech or any other body part. Claimant has no issues speaking. His movement is unaffected. Claimant did not testify to any other physical problems. The test used to determine whether conversion is appropriate, "situs of functional impairment," presumes a *physical* location of the impairment. *See Black's Law Dictionary* (spec. abridged 8th ed. 2005) (defining situs as "location or position (of something) for legal purposes"). Other than the loss of hearing, all of the other issues about which Claimant testified, both before and since he was fitted with hearing aids, were issues his attorney described as "capacity to meet personal, social, *or* occupational demands." No other *physical impairment* has been shown, nor alleged.

I. As noted by Respondent, if Claimant's capacity to meet personal, social, or occupational demands were sufficient to remove an injury from the schedule, as argued by Claimant here, virtually *any injury* could be removed from the schedule. *Total deafness* of both ears, C.R.S. § 8-42-107(2)(hh), would likely affect most persons' capacity to meet personal, social, or occupational demands, but the General Assembly included it *on the schedule.* In this instance, Claimant lost just under one fourth of his hearing.

J. In *McKinley v. Bronco Billy's*, 903 P.2d 1239 (Colo. App. 1995), the Court of Appeals affirmed the ICAO panel's conclusion that "loss of visual acuity" was encompassed in "blindness." Claimant was therefore limited to an award of benefits pursuant to the schedule of injuries set forth in § 8-42-107(2). The court noted that the Claimant's contrary interpretation would result, in many instances, in a Claimant recovering greater benefits pursuant to § 8-42-107(8)(c.5) with a minor loss of use of an eye resulting from "loss of visual acuity" than could a Claimant with a substantial loss of use from "blindness." *McKinley*, 903 P. 2d at 1242.

K. Claimant's argument here, if accepted, would result in his recovering greater benefits pursuant to § 8-42-107(8) than a claimant who suffered from total deafness of both ears. The ALJ herein cannot presume the General Assembly intended, or even allowed, such anomalous results. As a legal matter, the ALJ finds there is no basis to apply the conversion statute to a partial hearing loss as occurred herein.

L. Assuming arguendo, that Legal Conclusion K, supra, is in error, the ALJ draws this alternative conclusion: The ALJ does not find, by a preponderance of the evidence, that Claimant has even shown that his partial hearing loss has significantly affected his ability to function in activities of daily living. He was promoted at work, despite being fitted for hearing aids. By all medically documented accounts, he got a good result from his fitting. He was able to sit on the hiring committee, with no issues. He even left home on a couple of occasions, driving into work from his rural home east of Colorado Springs, before even realizing he had forgotten to put his hearing aids on. He can participate in meetings with co-workers. The ALJ notes, as does Claimant himself, that his speech is unaffected by this partial hearing loss. The only diminution alleged is that certain aspects of his social and family life are affected by his less- than-perfect hearing. This puts Claimant on similar footing as someone who suffers from arm or leg pain, and who opts out of certain social functions because he prefers to stay home.

M. This is not to trivialize Claimant's loss; it merely has not been shown that, even adopting Claimant's standard of conversion, such standard has been met. Claimant's request to convert his partial hearing loss to the whole person must therefore be denied.

ORDER

It is therefore Ordered that:

1. Claimant's request to convert his scheduled PPD impairment rating for his partial hearing loss to the whole person equivalent is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has overcome by clear and convincing evidence the permanent impairment rating provided by Division Independent Medical Examination (DIME) physician John Burris, M.D.

FINDINGS OF FACT

1. Claimant is a 26-year-old male employed by Employer as a detention deputy.

2. On October 30, 2017, Claimant sustained an admitted compensable injury to his low back and right hip. On that date, Claimant was involved in defensive tactics training. Claimant was on his knees on a mat and was slammed into the mat and landed on by a colleague.

3. Claimant reported the injury to Employer and underwent treatment.

4. On November 1, 2017, Jamie Faught, M.D. evaluated Claimant. Claimant reported right hip and low back pain after being slammed down onto a mat during training. Claimant reported that the person who landed on him was approximately 250 pounds. Claimant reported numbness and tingling on the bottom of his foot. On examination, Claimant had mild right lumbar paraspinous muscle pain and spasm and positive bilateral straight leg raise tests. Claimant had pain with heel walking greater than pain with toe walking on his right side. Claimant underwent x-rays of his right hip and his lumbar spine that were unremarkable except for mild leftward convex curvature of the lumbar spine. Claimant was assessed with lumbago with sciatica right side, and with right hip pain. Physical therapy was recommended. *See* Exhibit 5.

5. On November 30, 2017, Dr. Faught evaluated Claimant. Claimant reported pain in his low back at a 7/10. On examination, Claimant had tenderness to palpation in the lumbar spine at L5 and had a negative straight leg raise. Dr. Faught assessed lumbago with right sided radiculopathy- suspected muscular strain. *See* Exhibit 5.

6. On January 16, 2018, Dr. Faught evaluated Claimant. Claimant reported ongoing low back pain and that he had a pinching sensation with lifting or certain movements. Claimant reported his pain had not worsened, but had not improved. Claimant reported that he planned to start physical therapy that week. On examination, Claimant had tenderness to palpation at the L5 and a negative straight leg raise. *See* Exhibit 5.

7. On January 18, 2018, Claimant underwent physical therapy. Claimant reported his pain was at a 4/10 with his best pain since the injury at a 2/10 and his worst at an 8/10. Claimant reported that Flexeril helped reduce his pain. On palpation, Claimant was found to be most tender at the right L4-L5 facet joint. Claimant's sensation was found equal to light touch but slightly decreased on the right L5. On straight leg raise, Claimant had pain at 45 degrees on the left and at 35 degrees on the right. Claimant had treatment to help decrease pain and muscle spasms. *See* Exhibits 5, 6.

8. On January 23, 2018, January 25, 2018, February 1, 2018, and February 6, 2018, Claimant underwent physical therapy. The assessments noted less pain but right L4-L5 localized lower back pain appearing to be disc related without radiculopathy and right facet versus disc. *See* Exhibit 5.

9. On February 6, 2018, Dr. Faught evaluated Claimant. Claimant reported that physical therapy helped with some improvement for a few hours, but that then the pain returned. Claimant reported that he felt like the pain was moving up the back with some neck pain and headaches. *See* Exhibits 5, 7.

10. On February 28, 2018, Claimant underwent an MRI of his lumbar spine. The findings included mild curvature or scoliosis of the thoracolumbar spine with the convexity to the left, a minimal broad bulge with contact upon the thecal sac at L4-5, and a mild broad bulge without contact upon the thecal sac or nerve roots at L5-S1. The impression provided was minimal broad bulge at the L4-5 and L5-S1 levels. *See* Exhibits 5, D.

11. On March 1, 2018, Dr. Faught evaluated Claimant. Claimant reported ongoing back pain with no change or improvement. Dr. Faught noted the MRI had revealed a mild bulge at L4-5 contacting the thecal sac. Dr. Faught referred Claimant for possible injection. *See* Exhibit 5.

12. On March 30, 2018, Giora Hahn, M.D. evaluated Claimant. Claimant reported an injury five months prior with low back pain since, right greater than left radiating more into this right leg. Claimant reported his pain was at a 3/10 but increased with activity, twisting, bending, or lifting. Dr. Hahn reviewed the February 28 MRI. She opined that it showed only mild degenerative changes with a minimal disc bulge at L4-5 and L5-S1 and opined that there was no noticeable contact on the nerve roots. Dr. Hahn found Claimant to be overweight. Dr. Hahn found significant pain with palpation to the right side of the lower back and opined that was consistent with facet arthropathy. Dr. Hahn also found positive straight leg raising on the right at 20 degrees and that lifting the left leg at about 20 degrees brought about right sided lower back pain consistent with radiculopathy. Dr. Hahn provided the impression that Claimant most likely had a combination of mild radiculopathy perhaps due to the injury itself with pain radiating into the posterior thigh suggestive of the L5 nerve root, possibly also facet arthropathy. She suggested a two level transforaminal epidural injection on the right side at L4-5 and at L5-S1 for both diagnostic and therapeutic purposes. *See* Exhibit 5.

13. On April 23, 2018, Dr. Faught evaluated Claimant. Claimant reported ongoing low back pain and right lower extremity symptoms. Claimant reported that he did not want to do the injections recommended by Dr. Hahn. Dr. Faught recommended nerve conduction testing. *See* Exhibit 5.

14. On June 12, 2018, Jeffrey Siegel, M.D. evaluated Claimant. Claimant reported back pain with vague radiation down the anterior thighs and legs. Dr. Siegel opined that MRI imaging of Claimant's lumbar spine demonstrated some modest bulging disk disease at L4-5 and L5-S1 without any obvious contact upon the exiting neural elements. Dr. Siegel performed motor nerve conduction studies and opined that they were within normal limits. Dr. Siegel noted one exception was a modestly delayed distal latency involving the right tibial CMAP, which was an incident finding and did not correlate with any signs or symptoms. Dr. Siegel opined that there was no evidence of lumbar radiculopathy from testing and that there was no attestation of an L5 or S1 radiculopathy. *See* Exhibits 5, 7, C.

15. On July 6, 2018, Claimant returned to physical therapy. The records note that Claimant had initially received 6 physical therapy treatment sessions with occasional temporary improvement and less pain but that Claimant continued to demonstrate poor sitting posture, had a few no shows, and stopped therapy in February. The therapist noted that since then, Claimant had notably gained weight and continued to demonstrate poor sitting posture into increased lumbar lordosis. Claimant reported pain in his central low back and at the right L5 and SI joints. Claimant reported his pain was at a 4/10 but got up to an 8/10. Claimant reported he was unable to pick up his young daughter, was unable to push a shopping cart for more than 30 minutes, was unable to walk longer than 20 minutes, and was unable to sit in a car to drive more than one hour. On evaluation, Claimant had lumbar flexion and extension within normal limits with limited increased back and leg pain. On lateral flexion, the right was within normal limits and the left was limited due to increased pain. On straight leg raise, the right side was positive at 40 degrees and the left was positive at 60 degrees. *See* Exhibit 6.

16. On July 9, 2018, David Lorah, M.D. evaluated Claimant. Dr. Lorah opined that Claimant's MRI was very benign looking, Claimant's EMG testing was negative, and that Claimant's case looked to be musculoskeletal in nature. Dr. Lorah noted that Claimant had been back to physical therapy for the past month but was seeing some improvement. Therefore, Dr. Lorah did not find Claimant at maximum medical improvement but recommended another 4-6 weeks of physical therapy. On examination, Dr. Lorah found tenderness to palpation in the paraspinous muscles bilaterally and pain with forward flexion greater than extension. Dr. Lorah found a negative straight leg test. *See* Exhibit 5.

17. On July 12, 2018, Claimant underwent physical therapy. Claimant reported he was walking a little better but still having a lot of low back pain. The therapist found Claimant to be extremely tight in the right gluteal and piriformis. *See* Exhibit 6.

18. On July 31, 2018, Claimant underwent physical therapy. Claimant reported his pain was about the same. He was assessed as not responding to therapy and it was noted that he continued to move about slowly with some apparent difficulty. The therapist recommended holding physical therapy until Claimant saw a doctor. *See* Exhibit 6.

19. On August 7, 2018, Dr. Lorah evaluated Claimant. Claimant reported low back pain, which Dr. Lorah opined was primarily axial. Claimant reported tenderness on palpation in the paraspinous muscles bilaterally and reported pain with forward flexion greater than extension. Dr. Lorah found the straight leg raise test to be negative. Dr. Lorah noted that there no plans for additional imaging, injections, or surgeries and that Claimant had plateaued with conservative measures and agreed that his symptoms were stable. Dr. Lorah opined that Claimant was at maximum medical improvement and opined that Claimant would have a permanent impairment. Dr. Lorah sent Claimant for a range of motion and functional capacity evaluation. *See* Exhibit 5.

20. On August 17, 2018, Claimant underwent a functional capacity evaluation and lumbar range of motion testing performed at Peak Performance. Under range of motion measurements, the therapist noted that all results were subject to interpretation by a Level II accredited physician. Under consistency of effort, the therapist noted that it was strongly recommended that the findings from the evaluation be correlated with other objective clinical findings and be subjected to further interpretation and determination of validity by the treating physician. The therapist also indicated that all results indicated that maximum voluntary effort was obtained, and opined that the results were an accurate reflection of Claimant's current functional tolerances. *See* Exhibits 5, 8.

21. On August 31, 2018, Dr. Lorah evaluated Claimant. Dr. Lorah assessed lower back sprain and disc bulging at L4-5 and L5-S1 without impingement. Dr. Lorah opined that Claimant reached maximum medical improvement on August 7, 2018 and that Claimant could return to work in the light work classification category with a maximum lifting of 25 pounds. Dr. Lorah opined that Claimant had a Table 53(II)(b) impairment of 5% and that Claimant had a 7% impairment based on Claimant's limited range of motion around the lumbar spine. Dr. Lorah opined that Claimant's whole person permanent impairment was 12%. Dr. Lorah noted that the formal range of motion measurements were taken at Peak Performance. *See* Exhibit 5.

22. On November 26, 2018, Nicholas Olsen, D.O performed an independent medical evaluation. Claimant reported being injured on October 30, 2017 during a training exercise when he was slammed onto the ground with his partner landing on him. Claimant reported that he had immediate pain in his right hip and lower back on the right side. Claimant reported persistent pain rating at a 7/10 and that lifting anything of significant weight increased his pain. Claimant reported driving aggravates his pain as does lifting his daughter and bending quickly in any direction. Dr. Olsen reviewed medical records and performed a physical examination. Dr. Olsen found significant deconditioning in the lumbar paraspinals with diffuse axial back pain, right greater than left demonstrated on palpatory examination. Dr. Olsen used dual inclinometry to measure range of motion of the lumbar spine. Dr. Olsen found seated and supine straight leg raise

to be markedly limited. Dr. Olsen assessed: lumbar sprain/strain occurring on October 30, 2017 while performing training exercises; status post MRI of the lumbar spine demonstrating a minimal broad based disc bulge at L4-5 and mild broad based disc bulge at L5-S1 without significant central or foraminal stenosis; status post normal EMG study with no evidence of lumbar radiculopathy; unremarkable right hip x-rays; and MMI on August 31, 2018 with a 12% impairment per Dr. Lorah. *See* Exhibit A.

23. Dr. Olsen opined that Claimant had very minimal disc bulges with no evidence of nerve root impingement and he agreed that the MRI was unremarkable. Dr. Olsen found no objective clinical findings on his examination and noted Claimant's inconsistency in range of motion testing. Dr. Olsen opined that Claimant's range of motion did not fit the criteria of plus or minus 10% required for consistent range of motion. Dr. Olsen opined that the results of the straight leg raise and Claimant's effort was non-physiologic given the minimal findings on MRI. Dr. Olsen opined that Claimant had a lumbar sprain/strain with no explanation for the persistent symptoms and opined that you would expect the sprain/strain Claimant had experienced to resolve within weeks of the injury. Dr. Olsen was concerned that Claimant's reports of symptoms were far out of proportion with the minimal findings documented on MRI and opined again that a musculoskeletal strain of this nature would resolve without any permanent impairment. *See* Exhibit A.

24. Dr. Olsen opined that Claimant did not have a Table 53 rating, and that even if you gave Claimant the benefit of the doubt and a Table 53 II-b rating, there were significant inconsistencies in range of motion. Dr. Olsen opined that the range of motion measurements he completed would not be considered valid and that Dr. Lorah's range of motion also would not be valid and included a negative sacral range of motion. *See* Exhibit A.

25. On January 29, 2019, Claimant underwent a Division Independent Medical Evaluation (DIME) performed by John Burris, M.D. Claimant reported low back pain and that at training while engaged in defense tactics, he was thrown onto his right side and a colleague landed on top of him. Claimant reported that he had right hip pain and low back pain but that his hip pain had resolved. Claimant reported he underwent physical therapy that didn't help. Claimant reported that he declined injections. Claimant reported that he was currently working at a restaurant owned by his family and was unable to continue working for Employer due to his injury and permanent work restrictions. Claimant reported 6-7/10 low back pain and indicated that his pain was higher at the evaluation because he drove 4 hours from Parachute to Denver. Claimant reported the pain was aching with episodic sharp/shooting pain down his right leg 5-6 times per day. Claimant reported the pain was improved a little when using a TENS machine and was worse with physical activity of any kind. Dr. Burris reviewed Claimant's medical records following this injury and performed a physical examination. *See* Exhibits 9, B.

26. Dr. Burris opined that Claimant was an obese male with a normal gait and that Claimant was able to complete transfers without hesitation. Dr. Burris opined that there were marked pain behaviors that obscured the examination. Dr. Burris opined that

in the lumbar spine, Claimant had diffuse superficial tenderness with no localized tenderness, no muscle spasm, and no trigger points on palpation. Dr. Burris also opined that the range of motion testing was inconsistent and non-physiologic. Dr. Burris noted that during casual observation, Claimant moved freely and sat on the examination table without any sign of distress but that Claimant self-limited on flexion to 30 degrees and in extension at 10 degrees. Dr. Burris also opined that the side bend bilaterally was done with no pelvic motion. Dr. Burris noted that Claimant had a negative seated straight leg raise, where Claimant raised to 90 degrees bilaterally. Dr. Burris opined that the seated straight leg raise maneuver causes low back pain, but that Claimant reported no leg symptoms. Dr. Burris noted, however, that when Claimant was asked to do the supine straight leg raise, Claimant self-limited to approximately 10 degrees on the left and 0 degrees on the right. *See* Exhibits 9, B.

27. DIME physician Dr. Burris opined that Claimant's current subjective complaints were out of proportion to the nature of the original workplace event, and were out or proportion to Claimant's normal diagnostic testing. Dr. Burris opined that the examination was benign with no objective findings and included a non-physiologic presentation. Dr. Burris opined that based on the negative diagnostic testing and the lack of objective findings on physical examination, he could not establish a Table 53 disorder for Claimant's subjective complaints. Dr. Burris opined that because a Table 53 diagnosis could not be assigned, range of motion testing did not need to be repeated. Dr. Burris opined that the range of motion documented by Dr. Olsen represented findings consistent with what he found on his examination that were inconsistent and invalid. Dr. Burris opined that the range of motion was non-physiologic. Dr. Burris opined that Claimant reached maximum medical improvement on August 7, 2018 when Claimant completed reasonable conservative treatment for his subjective complaints. Dr. Burris opined that diagnostic testing and repeated examinations by Claimant's providers did not identify any objective findings or indications for interventional treatment. Dr. Burris opined that there was no objective basis for an impairment rating or permanent work restrictions. *See* Exhibits 9, B.

28. On June 26, 2019, William Miller, M.D. performed an independent medical evaluation. Claimant reported that he was injured in training when a colleague grabbed him in a bear hug, lifting him up and twisted him, and brought him to the training mat with force onto his right side and hip while simultaneously landing on top of him, causing his duty belt and equipment to jam into his back. Claimant reported that he had immediate pain in the right hip and low back. Dr. William noted that when examined the next day, Claimant had mild right sided lumbar paraspinous muscle pain and spasm upon palpation as well as a positive straight leg raise bilaterally. Dr. Miller reviewed medical records covering the course of Claimant's care in this case. Claimant reported ongoing right sided low back pain, pain in his right buttocks, and occasional pain radiating into the right posterior thigh. Claimant reported that his symptoms were increased with prolonged standing or sitting, especially with driving. Claimant reported that his wife drove him to the evaluation and that they took frequent breaks, trying to stop every 30-60 minutes. Claimant reported a recent 20-pound weight loss with diet and walking. Claimant reported that he did not pursue injections because he had heard bad things and was he could

become worse but reported that he would like more information and maybe return to Dr. Hahn. *See* Exhibit 10.

29. On examination, Dr. Miller found claimant to have a slightly left convex scoliosis of the thoracolumbar spine on general inspection. Claimant was focally tender along the right lumbar segment and overlying the right SI joint. Claimant was less tender overlying the left lumbar segment. Claimant had guarded motion with extension, flexion, and left side bending. Claimant was found to have an equivocal right sided seated leg raise with pain in the back and was able to extend his legs with an approximate 10-degree extension lag. Claimant had no palpable spasm, but had generalized hypertonicity in the gluteal group on the right. Dr. Miller found reviewed the imaging and nerve testing. *See* Exhibit 10.

30. Dr. Miller assessed: lumbar strain, rule out facetogenic pain admixed with discogenic pain; lumbar strain with L4-5 and L5-S1 broad based disc bulges in a 24 year old (at time of injury); paresthesias in the right lower extremity without corroborating findings on MRI/EMG; interrupted sleep secondary to pain; and depression, moderate, situational, occupational, and secondary to chronic pain. Dr. Miller opined that all of his assessments were causally due to the reported work related trauma to the spine that occurred on October 30, 2017. Dr. Miller opined that Claimant had a 9% whole person impairment for loss of lumbar motion. Dr. Miller also opined that Claimant had a Table 53(II)(b) condition and met the criteria for an additional 5% whole person impairment for the lumbar spine. Thus, Dr. Miller opined that Claimant had a 14% whole person impairment. *See* Exhibit 10.

31. Dr. Miller opined that Claimant had consistent objective findings on physical examination documented in the medical records (tenderness, loss of motion, spasm), had objective testing with multilevel disc bulges, quite precocious in a 24 year old, and had prescriptions, evaluation and treatment plans consistent with a lumbar injury. Dr. Miller noted that lumbar injections had been recommended five months post injury and that formal functional capacity evaluation testing showed maximum patient effort with significant physical limitations. Dr. Miller opined that DIME physician Dr. Burris did not follow AMA/DOWC guidelines. *See* Exhibit 10.

32. Dr. Miller opined that Claimant had a Table 53 diagnosis. Dr. Miller opined that Claimant had objective findings with two bulging discs shown on MRI performed when Claimant was a 24 year old. Dr. Miller acknowledged that it would be impossible to know for certain if those bulges were present prior, but that the clinical team evaluating Claimant was impressed enough to provide a Medrol dosepack, prescribe gabapentin, provide work restrictions, and recommend lumbar injections. Dr. Miller opined that Claimant had consistent physical exam findings supporting a Table 53 diagnosis with pain and rigidity. Dr. Miller opined that reproducibility required multiple measurements and more than the three taken by Drs. Olsen and Burris and noted that Dr. Burris did not offer repeat measurements for Claimant which violates the AMA Guides and the DOWC Level II Curriculum and impairment rating tips. Dr. Miller noted that pain, fear of injury, or neuromuscular inhibition may limit mobility by diminishing effort and opined that is what

happened with Claimant. Dr. Miller opined that Claimant should have been afforded the opportunity for additional measurements that day or on subsequent days. Dr. Miller opined that repeated measurements prior to disqualifying range of motion measurements is repeatedly reinforced in the AMA Guides, Level II accreditation curriculum, and impairment rating tips. Dr. Miller quoted the guides and recommendations for multiple sets of measurements being taken before an examiner declares the range of motion results invalid, including providing another visit to repeat. Dr. Miller opined that Dr. Burris and Dr. Olsen each performed three measurements, when the Guidelines mandate a total of 24 measurements (12 each) prior to invalidating lumbar motion. *See* Exhibit 10.

33. Dr. Miller noted that IME providers occasionally reverse impairment ratings by concluding that there is no Table 53 diagnosis. Dr. Miller opined that when they do so they must adequately justify how they have come to conclude that all prior associated diagnoses, evaluations, and treatments from the entire treatment team prior to the IME exam were undertaken in error. Dr. Miller noted that whenever 6 months of treatment of the spine has occurred and a Table 53 zero impairment is assigned, the physician must provide justification for the zero percent rating and that the physician shall be aware that a zero percent rating implied that the treatment was performed in the absence of medically documented pain and rigidity. Dr. Miller opined that it was either ignorance or hubris to dismiss nearly a year of evaluations and treatments from a team of skilled and dedicated providers while negating an injured workers impairment without following the basic tenants of the Guidelines and standards. *See* Exhibit 10.

34. Claimant testified at hearing that after his injury, his right hip pain resolved, but his low back pain still exists. Claimant testified that he has pain and stiffness that has never gone away.

35. Dr. Olsen testified at hearing consistent with his IME report. Dr. Olsen testified that he has no explanation for Claimant's subjective reports since the findings on MRI and EMG do not match. Dr. Olsen opined that the objective tests show that any disc bulges at L4-5 and L5-S1 are not pain generators. Dr. Olsen opined that the range of motion findings were non-physiologic and pointed out that with Dr. Burris, Claimant had a normal seated leg raise at 90 degrees bilaterally but a severely restricted supine leg raise where he indicated 0 degrees of movement on the right and only 10 degrees on the left. Dr. Olsen opined that even if someone had a huge herniated disc, you would expect at least 20 degrees of motion during that maneuver. Dr. Olsen noted that during his examination, Claimant had a seated leg raise of 8 degrees on the right and 10 degrees on the left and opined that there was no explanation for how a few months later with Dr. Burris, Claimant was able to do a 90-degree bilateral seated leg raise. Dr. Olsen opined that Dr. Burris' opinions were consistent with the impairment rating tips and noted that Dr. Burris first decided there was no Table 53 diagnosis.

36. Dr. Olsen testified that Claimant's reports were consistent with a lumbar sprain/strain and agreed that Claimant reported six months of pain. Dr. Olsen testified, however, that Claimant did not have six months of rigidity. Dr. Olsen opined that Dr. Burris provided justification for the 0% impairment rating as required.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME on impairment rating

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo.

App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *See Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO, April 3, 2009); *Linda Vuksic v. Lockheed Martin Corporation* W.C. No. 4-956-741-02 (ICAO, Aug. 4, 2016). Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

Claimant's February 28, 2018 MRI demonstrated a minimal broad bulge at L4-5 and a mild broad bulge at L5-S1. Dr. Hahn opined that there was no noticeable contact

on the nerve root. Claimant's subsequent EMG confirmed that there was no nerve involvement and that the discs at L4-5 and L5-S1 were not pain generators. The MRI was opined to be "very benign" by Dr. Lorah, "unremarkable" by Dr. Olsen, and "normal" by Dr. Burris. The objective MRI and EMG findings are not consistent with Claimant's subjective complaints.

Claimant did not give his best effort during range of motion testing. Claimant was observed casually with Dr. Burris moving freely and sitting on the examination table without any signs of distress, but then greatly limited his motion during flexion, extension and side bending bilaterally. During side bending, Claimant moved with no pelvic motion and was self-limiting. His results of seated versus supine leg raise do not make sense and are non-physiologic. Claimant had similar non-physiologic findings when examined by Dr. Olsen. Claimant's subjective reports thus cannot be relied upon to any degree of certainty, as Claimant does not report accurately and self-limits, producing inconsistent results.

Since Claimant's subjective reports cannot be relied upon, the objective evidence must be examined to determine whether or not Dr. Burris erred in failing to find or assign a permanent impairment rating. Here, there is no objective pathology by MRI or EMG to support Claimant's complaints. As found above, and found persuasive, multiple providers note no nerve root impingement or cause for Claimant's subjective complaints. Treatment continued based on Claimant's subjective reports to providers, but no objective basis for his complaints was established. Range of motion is only necessary and must be completed and applied to an impairment rating only when a corresponding Table 53 diagnosis has been established. Dr. Burris opined that there was no Table 53 diagnosis and therefore, range of motion was not necessary. By rating a zero percent permanent impairment, Dr. Burris implied that the treatment Claimant had received was performed without objective basis and was done based on Claimant's subjective reports. The authorized providers were responding to and attempting to identify and treat Claimant's unreliable subjective reports and his self-limited range of motion.

Claimant has failed to prove by clear and convincing evidence that the zero percent impairment rating given by Dr. Burris is incorrect. All diagnostic testing performed on Claimant to objectively establish the basis for Claimant's low back pain came back as normal. Dr. Burris correctly found no objective indications on his physical examination to support a permanent impairment or to support Claimant's subjective complaints or limited range of motion Claimant showed over the course of his treatment. Dr. Burris opined that there was no Table 53 rating. Dr. Olsen came to a similar conclusion as the DIME physician. Dr. Miller placed a large emphasis on Claimant's subjective reports and the fact that Claimant was treated by multiple providers for almost a year. Although true, the lengthy treatment was based on Claimant's subjective reports to providers who were attempting to figure out what was causing Claimant's pain complaints. Claimant's subjective reports cannot be relied upon to any degree of certainty as Claimant has shown inconsistencies and that he fails to give full or consistent effort. Although his treating providers attempted, over the course of his treatment, to find out what was causing his subjective reported pain, and his self-limited motion, they were unable to objectively

identify a pain generator. The great weight of the evidence shows that Claimant's subjective reports are unreliable at best.

Without Claimant's subjective reports of pain and/or rigidity, the objective indications of a permanent impairment are insufficient to support a Table 53 diagnosis and the evidence in insufficient to show that Dr. Burris erred by failing to provide a Table 53 diagnosis. Impairment ratings are meant for permanent impairment with specific diagnoses and objective pathology. As argued by Respondents, anyone who complained of pain and stiffness of their back for six months would somehow be entitled to a rating if Claimant's unreliable subjective reports and self-limiting were enough. Here, Claimant has failed to overcome the DIME physician's determination that he has no Table 53 diagnosis and has no permanent impairment as a result of his October 30, 2017 injury.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by clear and convincing evidence that DIME physician Dr. Burris erred in providing a zero percent permanent impairment rating.

2. Claimant has no permanent partial disability as a result of his October 30, 2017 work injury. His request to overcome the DIME physician's opinion of zero percent impairment is denied and dismissed.

3. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-588-918-004

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the total right shoulder arthroplasty requested by Authorized Treating Physician (ATP) David J. Schneider, M.D. is causally related to his July 22, 2003 admitted industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Network Technician. On July 22, 2003 Claimant suffered an admitted industrial injury to his left ankle during the course and scope of his employment with Employer. He rolled his left ankle when he attempted to stop his service vehicle from moving in reverse. Claimant specifically injured his peroneal sheath and tendon.

2, Claimant underwent at least 12 surgeries and other treatment modalities following his admitted industrial injury. However, Claimant developed complications from infections and eventually underwent an amputation below his left knee on May 2, 2012.

3. After the amputation Claimant began using crutches more often. On a February 7, 2013 visit with Authorized Treating Physician ATP Jared Foran, M.D. Claimant reported bilateral shoulder pain since he had been using crutches. On March 18, 2013 Claimant noted to ATP David Linn, M.D. that he was suffering pain in both shoulders from using crutches.

4. On June 18, 2018 Claimant visited ATP David J. Schneider, M.D. at Panorama Orthopedics and Spine Center for a left shoulder evaluation. Dr. Schneider noted that Claimant suffered from pain in the left shoulder and primary osteoarthritis in both shoulders. He explained that Claimant "has known cuff tear arthropathy" and is scheduled for left shoulder surgery in a few weeks. Claimant also underwent x-rays of the left shoulder that revealed "degenerative changes with high riding humeral head."

5. On July 13, 2018 Dr. Schneider performed a left shoulder reverse arthroplasty. The procedure was successful and reduced Claimant's pain by about 60%.

6. On March 25, 2019 Claimant contacted Panorama by telephone. He sought additional physical therapy for his left shoulder. Claimant also requested cortisone injections for his right shoulder. Claimant remarked that "he will need to get surgery soon but needs the injection for now." Dr. Schneider approved the procedure and Claimant underwent an ultrasound guided cortisone injection into his right shoulder.

7. On April 10, 2019 Claimant underwent right shoulder x-rays. On April 11, 2019 Dr. Schneider remarked that the x-rays revealed "severe osteoarthritis of the glenohumeral joint." Dr. Schneider diagnosed Claimant with "primary osteoarthritis of the right shoulder." He recommended continued aggressive therapy of the left shoulder and directed Claimant to return in three months for re-evaluation of his right shoulder.

8. On April 22, 2019 Dr. Schneider completed a surgery-scheduling document. The document specified that Claimant suffered from "primary osteoarthritis of both shoulders" and classified the procedure as elective. The document delineated the procedure as a total arthroplasty of the right shoulder.

9. On June 19, 2019 Claimant underwent an independent medical examination with Nicholas K. Olsen, D.O. Dr. Olsen noted that he had initially performed an independent medical examination of Claimant on February 13, 2013. He also conducted additional evaluations. Claimant reported increasing right shoulder pain and that Dr. Schneider had recommended a right shoulder reverse arthroplasty. Dr. Olsen inquired about when Claimant began developing right shoulder symptoms. Claimant responded that he may have injured his right shoulder when he suffered his industrial injury on July 22, 2003. He also noted pain in both shoulders when using crutches after his January 6, 2014 surgery. Claimant recounted various falls, but denied any right shoulder trauma.

10. After reviewing Claimant's medical records and conducting a physical examination Dr. Olsen concluded that the requested total right shoulder arthroplasty was not causally related to Claimant's July 22, 2003 industrial injury. Initially, Claimant was unable to recall a specific date for the onset of his right shoulder symptoms and the medical records did not reflect a right shoulder injury associated with the July 22, 2003 industrial injury. Moreover, the records did not document any direct trauma to the right shoulder during any of Claimant's falls. Although Dr. Olsen acknowledged that Claimant reported some right shoulder symptoms while ambulating on crutches in 2013, the use of crutches "did not contribute or lead to the development of arthritis or the need for surgery." Dr. Olsen explained that, after Claimant's temporary right shoulder aggravation while using crutches in 2013, there was little mention of symptoms in the record until he began to suffer the results of end-stage osteoarthritis in 2019. In fact, imaging of the right shoulder on April 10, 2019 revealed severe osteoarthritis of the glenohumeral joint. Dr. Olsen reasoned that a reverse right shoulder total arthroplasty would be a consideration for treating Claimant's end-stage arthritis but would be covered under commercial insurance. The temporary aggravation of Claimant's right shoulder while using crutches in 2013 did not contribute to his need for surgery. Dr. Olsen explained that Claimant's end-stage osteoarthritis was familial and consistent with age-related degenerative arthritis. Accordingly, Claimant's need for a right shoulder reverse arthroplasty was not causally related to his July 22, 2003 industrial injury.

11. Claimant testified at the hearing in this matter. He acknowledged that he suffers severe osteoarthritis in both shoulders. He maintained that his right shoulder

symptoms have continued to worsen since his July 22, 2003 industrial injury. Claimant detailed his typical activities of daily living from 2009 through the present. He noted that he spends most of the day in a seated position watching television. During a typical day between 2009 and 2019 he sits or lies down approximately 80% of the time. Claimant estimated that from the date of his industrial injury until 2009 he spent about 50% of each day sitting or lying down. When Claimant was not sitting or lying down he alternately used crutches or a wheelchair for mobility.

12. Dr. Olsen testified at the hearing in this matter. He maintained that the proposed total right shoulder replacement surgery was not causally related to Claimant's July 22, 2003 industrial injury. He reiterated that Claimant suffers from degenerative end-stage osteoarthritis. Dr. Olsen remarked that Claimant's degenerative condition can progress in the absence of any trauma. He summarized that Claimant suffers from the natural progression of his pre-existing degenerative osteoarthritis. Dr. Olsen attributed Claimant's condition to genetics and age.

13. Dr. Olsen specifically addressed Claimant's use of crutches. He explained that Claimant alternately used crutches and a wheelchair for ambulation. However, there was simply insufficient "documented time" to cause a permanent change in the natural progression of Claimant's "familial age-related osteoarthritis." Dr. Olsen noted that the crutches may have caused a "temporary increase in his symptoms as it did in 2013 for a period of months." Nevertheless, any temporary increase in symptoms "was not great enough to affect the underlying progression of his osteoarthritis." Accordingly, Dr. Olsen concluded that the total right shoulder arthroplasty requested by Dr. Schneider is not causally related to his July 22, 2003 admitted industrial injury.

14. Claimant has failed to demonstrate that it is more probably true than not that the total right shoulder arthroplasty requested by ATP Dr. Schneider is causally related to his July 22, 2003 admitted industrial injury. Initially, on July 22, 2003 Claimant suffered an admitted industrial injury to his left ankle during the course and scope of his employment with Employer. He specifically rolled his left ankle and injured his peroneal sheath and tendon. After numerous surgeries Claimant developed complications from infections and eventually underwent an amputation below his left knee on May 2, 2012. During 2013 Claimant reported bilateral shoulder pain since he had been using crutches. On July 13, 2018 Claimant underwent a left shoulder reverse arthroplasty.

15. Claimant asserts that Dr. Schneider's request for a total right shoulder arthroplasty is causally related to his July 22, 2003 industrial injury because the use of crutches aggravated his condition. However, the evidence does not support Claimant's contention. Initially, the record is replete with evidence that Claimant suffers from degenerative osteoarthritis in both shoulders. Furthermore, Dr. Olsen persuasively explained that Claimant was unable to recall a specific date for the onset of his right shoulder symptoms and the medical records did not reflect a right shoulder injury associated with the July 22, 2003 industrial injury. Moreover, the records did not document any direct trauma to the right shoulder during any of Claimant's falls. Although

Dr. Olsen acknowledged that Claimant reported some right shoulder symptoms while ambulating on crutches in 2013, the use of crutches "did not contribute or lead to the development of arthritis or the need for surgery." Dr. Olsen explained that, after Claimant's temporary right shoulder aggravation while using crutches in 2013, there was little mention of symptoms in the record until he began to suffer the results of end-stage osteoarthritis in 2019. In fact, imaging of the right shoulder on April 10, 2019 revealed severe osteoarthritis of the glenohumeral joint. The temporary aggravation of Claimant's right shoulder while using crutches in 2013 did not contribute to his need for surgery. Dr. Olsen explained that Claimant's end-stage osteoarthritis was familial and consistent with age-related degenerative arthritis. Dr. Olsen testified that any temporary increase in symptoms "was not great enough to affect the underlying progression of his osteoarthritis." He thus concluded that the total right shoulder arthroplasty requested by Dr. Schneider is not causally related to Claimant's July 22, 2003 admitted industrial injury. Based on the medical records and persuasive opinion of Dr. Olsen, Claimant's current right shoulder condition constitutes the natural progression of his preexisting degenerative osteoarthritis. Claimant's request for a total right shoulder arthroplasty with ATP Dr. Schneider is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §840-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). Although medical evidence is not dispositive of causation, the ALJ may consider and even rely on expert medical opinion in resolving the issue of whether a causal connection exists between the claimant's work and and physical condition. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Davis v. Needles Homeowner's Association*, Inc. W.C. 4-702-329 (ICAO, Apr. 2, 2008). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the total right shoulder arthroplasty requested by ATP Dr. Schneider is causally related to his July 22, 2003 admitted industrial injury. Initially, on July 22, 2003 Claimant suffered an admitted industrial injury to his left ankle during the course and scope of his employment with Employer. He specifically rolled his left ankle and injured his peroneal sheath and tendon. After numerous surgeries Claimant developed complications from infections and eventually underwent an amputation below his left knee on May 2, 2012. During 2013 Claimant reported bilateral shoulder pain since he had been using crutches. On July 13, 2018 Claimant underwent a left shoulder reverse arthroplasty.

6. As found, Claimant asserts that Dr. Schneider's request for a total right shoulder arthroplasty is causally related to his July 22, 2003 industrial injury because the use of crutches aggravated his condition. However, the evidence does not support Claimant's contention. Initially, the record is replete with evidence that Claimant suffers from degenerative osteoarthritis in both shoulders. Furthermore, Dr. Olsen persuasively explained that Claimant was unable to recall a specific date for the onset of his right shoulder symptoms and the medical records did not reflect a right shoulder injury associated with the July 22, 2003 industrial injury. Moreover, the records did not document any direct trauma to the right shoulder during any of Claimant's falls. Although Dr. Olsen acknowledged that Claimant reported some right shoulder symptoms while ambulating on crutches in 2013, the use of crutches "did not contribute or lead to the development of arthritis or the need for surgery." Dr. Olsen explained that, after Claimant's temporary right shoulder aggravation while using crutches in 2013, there was little mention of symptoms in the record until he began to suffer the results of end-stage osteoarthritis in 2019. In fact, imaging of the right shoulder on April 10, 2019 revealed severe osteoarthritis of the glenohumeral joint. The temporary aggravation of Claimant's right shoulder while using crutches in 2013 did not contribute to his need for surgery. Dr. Olsen explained that Claimant's end-stage osteoarthritis was familial and consistent with

age-related degenerative arthritis. Dr. Olsen testified that any temporary increase in symptoms "was not great enough to affect the underlying progression of his osteoarthritis." He thus concluded that the total right shoulder arthroplasty requested by Dr. Schneider is not causally related to Claimant's July 22, 2003 admitted industrial injury. Based on the medical records and persuasive opinion of Dr. Olsen, Claimant's current right shoulder condition constitutes the natural progression of his preexisting degenerative osteoarthritis. Claimant's request for a total right shoulder arthroplasty with ATP Dr. Schneider is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a total right shoulder arthroplasty proposed by Dr. Schneider is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether the respondent hospital was properly joined as a party to this proceeding.

- Whether the language included in the claimant's Application for Hearing pled the issue of penalties with sufficient specificity.

- Whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondent hospital pursuant to Sections 8-43-304 and 8-43-305, C.R.S., for the respondent hospital's alleged violation of Section 8-42-101(4), C.R.S. The claimant has requested penalties for the period of June 13, 2019 up to and including October 9, 2019.

FINDINGS OF FACT

1. On July 22, 2017, the claimant suffered an injury while working as a tow truck driver. The injury occurred while the claimant was loading an F250 pickup truck onto her assigned tow truck. To do so, the claimant was lying on the ground attaching the safety chains. At that time, the winch on the tow truck released and caused the truck to roll back. The claimant was underneath the truck when this occurred and one of the tires of the pickup truck rolled onto the claimant's right arm. The claimant was able to remove her arm from under the tire. However, the truck rolled a second time and the tire rolled onto the claimant's chest. The claimant was able to extract herself from out from under the truck and called for help. Bystanders assisted the claimant in calling the respondent employer and emergency services.

2. The claimant initially received medical treatment at Valley View Hospital (VVH) in Glenwood Springs, Colorado. That initial treatment included six days in ICU at VVH. At the time of the accident, the claimant lived in New Castle, Colorado. Subsequently, the claimant moved to Hotchkiss, Colorado. After her move, the claimant transferred medical treatment for her injury to Delta County Memorial Hospital, the respondent hospital in the current case.

3. On September 11, 2018, the undersigned ALJ held a hearing on the issues of: 1) whether the claimant was an employee of the respondent employer; 2) whether she suffered a compensable injury; 3) whether the claimant's medical treatment was reasonable, necessary, and related to that injury; 4) whether the claimant's medical treatment was authorized; 5) whether the claimant was entitled to temporary total disability (TTD) benefits; and 6) whether penalties were to be assessed for the respondent employer's failure to obtain and maintain workers' compensation insurance.

4. On October 11, 2018, the ALJ entered Findings of Fact, Conclusions of Law, and Order (FFCLO) in which the respondent employer was found to have been the employer of the claimant at the time of the July 22, 2017 injury. In addition, the ALJ ordered that the employer was responsible for the payment of medical treatment related to the claimant's work injury. That treatment included treatment the claimant received from Delta County Memorial Hospital.

5. At hearing, the claimant testified that she provided the respondent hospital a copy of the ALJ's FFCLO. The claimant has also provided copies of the FFCLO to collection agencies attempting to collect on behalf of the hospital. However, the claimant has continued to receive bills from the hospital for medical treatment related to her work injury.

6. The claimant also testified that the respondent employer has not paid any amount related to her work injury, as ordered by the ALJ. The claimant testified that to her knowledge the respondent employer has not made any payment to any of her medical providers.

7. On April 10, 2019, the claimant's attorney authored a letter in which he informed the hospital that they were to collect from the respondent employer. In that letter counsel referenced Section 8-42-101(4), C.R.S. which states:

> Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee.

8. In addition, the April 10, 2019 letter notified the hospital that they could be subject to penalties pursuant to Sections 8-43-304 and 8-43-305, C.R.S.

9. Ms. B_____ is the hospital's Billing Manager for physician billing. Ms. B_____ explained that the hospital has two billing departments. Those departments are physician billing and facility billing. Ms. B_____ testified that she first became aware of issues surrounding the claimant's bills on May 7, 2019. At that time, Ms. B_____ received the April 10, 2019 letter from the claimant's counsel and a copy of the FFCLO. Based upon her understanding of the FFCLO, Ms. B_____ instructed her staff to send the claimant's bills to the Division of Workers' Compensation (DOWC).

10. At hearing, the hospital provided a copy of a communication from the DOWC in response the hospital's attempts to bill the DOWC. In that communication the DOWC confirmed that the employer did not send any payment to the DOWC; nor did the employer post a bond. In a later communication from the DOWC, it was clarified that even if monies had been paid by the employer to the DOWC, those funds would ultimately be distributed to the claimant and not to any specific medical provider.

11. On June 13, 2019, counsel for the hospital responded to the April 10, 2019 letter from the claimant's counsel. In that reply, the hospital reiterated the information obtained from the DOWC. In that same response, the hospital took the positon that "[the hospital's] only recourse is to resume collection from [the claimant]."

12. Ms. B_____ testified that physician billing has not sent a bill to the claimant since May 7, 2019. A bill was sent to the claimant on that date, which was the same date Ms. B_____ learned of the ALJ's FFCLO. Ms. B_____ credibly testified that the May 7, 2019 bill was generated automatically within the billing system. Records entered into evidence at hearing indicate that the physician billing department has not billed the claimant since May 7, 2019.

13. Ms. B_____ also testified that amounts are owed the claimant's medical treatment. However, Ms. B_____ is "holding" those bills as it is unclear to her where to send the billing. Based upon the information submitted via testimony and evidence, it does not appear to the ALJ that the hospital has sent any billing directly to the employer.

14. Ms. A_____ is the hospital's Business Office Manager. She and her staff handle facility billing. Ms. A_____ testified that she first learned that the claimant has an order regarding her medical bills in July 2019. Ms. A_____ testified that bills are sent to collections through an automated system. Records entered into evidence indicate that some of the claimant's bills from the facility billing department have been turned over to collections.

15. On June 18, 2019, the claimant filed an Application for Hearing (AFH) for penalties for the hospital's alleged violation of Section 8-42-101(4), C.R.S. That application was rejected by the Office of Administrative Courts (OAC) because the case caption listed the hospital as the employer and did not correctly identify the respondent employer.

16. On June 19, 2019, the claimant filed a second AFH endorsing the same penalty issues. This AFH was also rejected by the OAC because the hospital and the respondent employer were identified together as "employer". The staff with the OAC instructed the claimant's counsel to caption the case as identified by the DOWC (ie. the claimant vs. the uninsured respondent employer).

17. On June 20, 2019, the claimant filed a third AFH for penalties for the respondent hospital's alleged violation of Section 8-42-101(4), C.R.S. This application was processed by the OAC as the claimant and employer were properly identified on the case caption. In the June 20, 2019 AFH, "Penalties" was marked as an endorsed issue. In addition, the AFH included the following:

> 8-42-101(4) DELTA MEMORIAL HOSPTIAL; No Recovery from Employee, Once there had been Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a

medical provider shall under no circumstances seek to recover such costs or fees from the employee.

18. All of the AFHs filed by the claimant were provided to the respondent hospital. In addition, the hospital was provided notice of the October 9, 2019 hearing.

19. The respondent hospital argues that the claimant has received other medical treatment from their facilities that is unrelated to the claimant's work injury. However, neither party presented evidence clarifying this "other" and allegedly unrelated treatment.

20. The respondent hospital further argues that if they are unable to collect from the claimant and are unable to collect from the DOWC, they are left without recourse. The ALJ is not persuaded by this assertion. The ALJ finds no impediment to the respondent hospital simply collecting from the respondent employer. As indicated by communications entered into evidence, the employer has apparently attempted to file for bankruptcy and the claimant is a creditor.

21. The ALJ credits the claimant's testimony and the evidence entered into evidence and finds that the claimant has demonstrated that the respondent hospital has continued to bill the claimant after receiving notice of the FFCLO. Therefore, the ALJ also finds that the claimant has demonstrated that it is more likely than not that the respondent employer violated the language of Section 8-42-101(4), C.R.S.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (the Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

4. The respondent hospital first argues that they were not properly joined in this case, and therefore a claim for penalties cannot be asserted against them. The ALJ disagrees. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that:

> Any employer or insurer, or any officer or agent of either, or any employee, **or any other person** who violates articles 40 to 47 of this title 8, or does any act prohibited thereby, or fails or refuses to perform any duty. . . or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by the articles . . . shall also be punished by a fine of not more than one thousand dollars per day for each offense, to be apportioned, in whole or part, at the discretion of the director or administrative law judge. . .(*emphasis added*).

This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

5. As one of the claimant's authorized medical providers, the ALJ concludes that the respondent hospital is a subject to the provisions of the Act. Therefore, the hospital can be found to be in violation or in compliance with the Act.

6. The ALJ concludes that the claimant correctly captioned this case as the claimant vs the respondent employer and regarding the respondent hospital. The language of Section 8-43-304, C.R.S. does not require that penalties be asserted against a "party" to the claim. Furthermore, the hospital's reliance on two Industrial Claim Appeals Office (ICAO) orders[1] is unfounded. Neither of those cases are determined on the issue of "joining" a party to a claim. Nor do those cases speak to the procedural process for assessing penalties against a non-party medical provider. The ALJ concludes that the respondent hospital was properly notified of their involvement in the claimant's claim as a medical provider and the claimant's allegations of a statutory violation.

7. The respondent hospital has also argued that the claimant did not meet the specificity requirement in filing the Application for Hearing (AFH) requesting penalties. Section 8-43-304(4), C.R.S., provides that in "any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." The failure to state the grounds for penalties with specificity may result in dismissal of the penalty claims. *In re Tidwell*, W.C. No. 4-917-514-03 (ICAO, Mar. 2, 2015).

[1] *Davis v. Cub Foods*, (WC 3-990-098; ICAO 11/20/93) and *Gutierrez v. Startek USA*, (WC 4-842-550-05; ICAO 8/29/14).

8. The purposes of the specificity requirement are to provide notice of the basis of the alleged violation so as to afford the putative violator an opportunity to cure the violation, and to provide notice of the legal and factual bases of the claim for penalties so that the violator can prepare its defense. *See Major Medical Insurance Fund v. Industrial Claim Appeals Office*, 77 P.3d 867 (Colo. App. 2003); *Davis v. K Mart,* W.C. No. 4-493-641 (ICAO, Apr. 28, 2004); *Gonzales v. Denver Public School District Number 1,* W.C. No. 4-437-328 (ICAP, Dec. 27, 2001). In essence, the notice aspect of the specificity requirement is designed to protect the fundamental due process rights of the alleged violator to be "apprised of the evidence to be considered, and afforded a reasonable opportunity to present evidence and argument in support of" its position. *In re Tidwell*, W.C. No. 4-917-514-03 (ICAO, Mar. 2, 2015). *Matthys v. City of Colorado Springs,* W.C. No. 4-662-890 (ICAO, Apr. 2, 2007). Of course, the statute does not prescribe a precise form for pleading penalties, and an ALJ may consider the circumstances of the individual case to determine whether the application for hearing was sufficiently precise to satisfy the statute. *See Davis v. K Mart*, W.C. No. 4-493-641 (ICAO Apr. 28, 2004).

9. As found, the claimant's AFH marked "Penalties" as an endorsed issue. In addition, the AFH included the following:

> 8-42-101(4) DELTA MEMORIAL HOSPTIAL; No Recovery from Employee, Once there had been Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee.

10. The ALJ has considered the specific facts of this case and finds that the claimant has met the specificity requirement in the inclusion of the above language in her AFH. The claimant identified that that penalties were sought against the respondent hospital. The claimant also quoted the section of the Act that the hospital is alleged to have violated. The ALJ finds that the hospital was sufficiently notified of the issues to be addressed at hearing.

11. With regard to the issue before the ALJ, the ALJ notes that prior to the assessment of any penalties, the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S*. City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995). Section 8-43-305,

C.R.S. provides that each day is a separate offense. Therefore, penalties may be assessed of up to $1,000.00 per day.

12. Section 8-42-101(4), C.R.S. provides: “Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider **shall under no circumstances** seek to recover such costs or fees from the employee (*emphasis added*).” The ALJ reads the legislature’s use of the language “shall” and “under no circumstances” to clearly state the intent that a medical provider shall cease all collection against a claimant once there has been an admission of liability or a final order.

13. In this case, the claimant seeks penalties for the hospital’s alleged violation of Section 8-42-101(4), C.R.S. for continuing to seek payment from the claimant for medical treatment. The claimant has requested penalties from June 13, 2019 up to and including the date of hearing, October 9, 2019. The ALJ calculates that this to be a total of 119 days.

14. The respondent hospital points to language found in Section 8-43-304(4), C.R.S. and argues that the claimant’s burden of proof is clear and convincing evidence. The ALJ disagrees with this assertion. Section 8-43-304(4), C.R.S. addresses what is to occur if penalties are alleged, but the violation has been cured. Then, and only then, does the burden of proof increase from a preponderance of the evidence to clear and convincing evidence. Here, there has been no cure of the hospital’s violation as they continue to seek payment from the claimant. Therefore, Section 8-43-304(4), C.R.S. is not applicable in the current case.

15. As found, the respondent hospital has continued to bill the claimant for medical treatment related to her work injury. In addition, the hospital’s facility billing department has turned the claimant’s balances over to collections. As found, these continued attempts to collect from the claimant constitute a violation of the clear language of Section 8-42-101(4), C.R.S. The respondent hospital was notified that they were to no longer pursue collection against the claimant. Nevertheless, they continue to seek payment from the claimant, despite the notification that the respondent employer is responsible for payment of the claimant’s work related medical expenses.

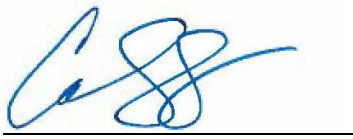
16. The hospital has argued that there are certain bills at their facilities that may not be part of the treatment of the claimant’s work related injury. While that may be the case, the ALJ finds no persuasive evidence on the record to indicate that the hospital has attempted to clarify any non-work related treatment. It is the position of this ALJ that is the responsibility of the medical provider to correctly categorize the claimant’s medical treatment as work related and non-work related. The hospital’s practice of billing the claimant for any and all treatment, despite the clear language of Section 8-42-101(4), C.R.S., further demonstrates the hospital’s clear disregard of the Act.

17. Based upon all of the foregoing, the ALJ concludes that penalties are appropriate in this matter. Given the continued statutory violation, the ALJ orders the respondent hospital to pay to the claimant penalties of $750.00 per day for the period of June 13, 2019 through and including October 9, 2019. This results in total penalties of $89,250.00 ($750.00 per day for 119 days). No portion of this total shall be apportioned to the uninsured employer fund.

ORDER

It is therefore ordered that the respondent hospital shall pay the claimant penalties of $89,250.00.

Dated this 30th day of October 2019.



Cassandra M. Sidanycz
Administrative Law Judge

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove entitlement to temporary disability benefits, and if so, in what amount?
- Did Claimant prove Respondent must reimburse his private health insurance, Cigna, for reasonably necessary and related medical treatment?
- Did Claimant prove Respondent must reimburse him for out-of-pocket medical expenses?

STIPULATIONS

1. The February 12, 2019 appointment with Dr. Sergiu Botolin, the x-ray performed on February 8, 2019, and seven physical therapy sessions at Colorado Sport and Spine Center were reasonably necessary and related to Claimant's work injury.

2. The hours Claimant missed from work on January 14 through January 18, 2019 were causally related to his work injury.

3. Respondent filed a "medical only" General Admission of Liability on September 3, 2019, the day before the hearing.

4. Claimant's average weekly wage is $1,002.25.

5. Dr. Kurz will be Claimant's authorized treating physician going forward.

FINDINGS OF FACT

1. Claimant works for Employer as an "investment recovery specialist." On January 8, 2019, he developed pain in his neck and right scapular area while replacing batteries on city transit buses. He finished his shift and went home, assuming the pain would subside.

2. Claimant awoke the next morning with severe pain in his neck and right scapula, radiating down his right arm to his fingers. Claimant went into work that day and reported the injury to his supervisor. He asked if he could see a chiropractor he had seen once before. The supervisor allowed Claimant leave work and go to the chiropractor. Claimant missed 3.5 hours from work that day (January 9) because of pain and treatment causally related to the admitted injury.

3. On January 10, Claimant told his supervisor the chiropractic and massage treatment did not help. Claimant's supervisor advised him to file an injury report. Claimant left work 1.15 hours early that day because of pain related to the admitted work injury.

4. On Friday, January 11, 2019, Claimant saw Dr. Kyle Akers, Employer's designated occupational medicine physician. Dr. Akers diagnosed right neck, upper back, and shoulder pain of "undetermined origin," and opined, "this could be a temporary aggravation of a pre-existing, underlying, non-work-related issue." Dr. Akers took claimant off work until his next appointment. Employer paid Claimant full wages on January 11.

5. Claimant missed work from January 14, 2019 through January 18, 2019.

6. Claimant had MRIs of his neck and right shoulder on January 16, 2019. The cervical MRI showed an "acute to subacute" disc herniation with osteophytes causing C6 nerve root compression and muscle spasm. The shoulder MRI showed mild tendinosis, mild osteoarthritis, and questionable mild subacromial/subdeltoid bursitis.

7. Claimant followed up with Dr. Akers on January 18, 2019 to review the MRIs. Dr. Akers thought the shoulder findings were "unremarkable" and warranted no treatment. Dr. Akers opined the cervical findings were chronic and developed over many years. He was under the mistaken impression Claimant had received significant treatment for neck pain before the work accident. Dr. Akers opined the symptoms were less than 50% likely related to Claimant's work. He did not discuss Claimant's work status.

8. Claimant missed work on January 22, 2019 because of the work injury.

9. Claimant called Dr. Akers the morning of January 23, 2019 about his work status. Dr. Akers told Claimant was released from care with no restrictions. Claimant reported to work approximately one hour after speaking with Dr. Akers.

10. Claimant missed 4 hours off work on January 23, 2019 because of the work injury.

11. Claimant typically worked eight-hour shifts, five days per week.

12. Employer did not pay Claimant wages for the time he missed on January 9, 10, 14-18, 22, and 23, 2019. Claimant missed a total of 56.65 hours during that period. He used a combination of sick leave, vacation leave, voluntary time off, and personal leave to cover the time he missed from January 9, 2019 through January 23, 2019.

13. On January 23, 2019, Respondent filed a Notice of Contest and stopped authorized treatment.

14. On February 8, 2019, Claimant had an x-ray that was reasonably necessary to evaluate the work injury. The total charges were $75. Claimant paid a $45 co-pay and Cigna applied a negotiated provider discount of $30, reducing the remainder to $0.

15. Claimant saw his PCP, Dr. Sergiu Botolin, on February 12, 2019. Dr. Botolin referred Claimant to physical therapy to treat the work injury. Dr. Botolin's office billed $423 for the appointment. Claimant's co-pay was $40. Cigna applied a negotiated provider discount of $183.10, and paid the remaining balance of $199.90.

16. Claimant attended seven physical therapy sessions at Colorado Sport and Spine Center from February 19, 2019 through April 9, 2019. The associated charges, discounts, and payments were:

Total Billed:	$2,505.01
Less negotiated provider discounts:	($2,099.01)
Less Claimant co-pays	**($175.00)**
Total paid by Cigna	**$231.00**

17. Claimant's out-of-pocket expense totaled $260 ($45 + $40 + $175 = $260).

18. Claimant attended an IME with Dr. Elizabeth Bisgard on May 20, 2019 at Respondent's request. Dr. Bisgard opined Claimant suffered a work-related injury on January 8, 2019. Dr. Bisgard opined all of Claimant's treatment for the work injury was reasonably necessary and appropriate.

19. Respondent filed a "medical only" General Admission of Liability on September 3, 2019. The GAL did not admit for temporary disability benefits.

20. Claimant's testimony was credible and persuasive.

21. Claimant proved he missed 56.65 hours from work because of his January 8, 2019 work injury before Dr. Akers released him to full duty.

22. Claimant did not miss more than two weeks of work.

23. Claimant proved the February 8, 2019 x-ray, the February 12, 2019 appointment with Dr. Botolin, and the physical therapy sessions were reasonably necessary to cure and relieve the effects of the admitted injury.

CONCLUSIONS OF LAW

A. Temporary disability benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work or restrictions that impair the claimant's ability effectively and properly to perform their regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

TTD benefits are not payable for the first three days of lost time unless the period of disability lasts longer than two weeks. Section 8-42-103(1)(a), (b). To calculate whether

an injured employee missed more than two weeks of work, the individual days missed are added rather than simply using the period over which the claimant missed sporadic days. *Mead v. Reinke Wholesale Supply*, W.C. No. 4-930-571 (October 1, 2014).

The persuasive evidence shows Claimant missed 56.65 hours of work because of his work injury. That equates to slightly more than seven days of work (56.65 ÷ 8 hours = 7.08 days). Two weeks of Claimant's regular shifts equals ten working days. Because Claimant missed less than ten days from work, he is not entitled to TTD for the first three days he missed. Thus, Claimant lost 32.65 hours of compensable time from work (56.65 hours – 24 = 32.65 hours).

The stipulated AWW of $1,002.25 equates to an average hourly wage of $25.06 ($1,002.25 ÷ 40 = $25.06). This results in a compensable wage loss of $818.21, after subtracting the three-day wait period. ($25.06 x 32.65 hours = $818.21). Respondent owes Claimant $545.47 in temporary disability benefits ($818.21 x 2/3 = $545.47).

B. Medical expense reimbursements

Section 8-42-101(6)(a) provides,

> If an employer receives notice of injury and . . . fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided.

Similarly, WCRP 16-12(F) provides,

> An injured worker shall never be required to directly pay for admitted or ordered medical benefits covered under the Workers' Compensation Act. In the event the injured worker has directly pay for medical services that are then admitted or ordered as covered under the Workers' Compensation Act, the payer shall reimburse the injured worker for the amounts actually paid for authorized expenses . . . .

Claimant and Cigna paid for reasonably necessary medical treatment related to the admitted injury. Claimant is entitled to reimbursement of his out-of-pocket costs, which total $260.

At hearing, the parties expressed uncertainty about whether Respondent's obligation to reimburse Cigna is limited by the workers' compensation fee schedule. The ALJ concludes the plain language of § 8-42-101(6)(a) requires Respondent to reimburse Cigna what it paid to the providers. The statute states, "the employer . . . shall reimburse . . . any insurer . . . that pays for related treatment." There is no mention of the fee schedule. Additionally, the ALJ believes the General Assembly intended to ensure private health insurance carriers or other non-workers' compensation payers (such as Medicaid or Medicare) be made whole if they paid for treatment that should have been covered by

the employer or its insurer. That intent could be thwarted if the employer or carrier's liability were limited to the fee schedule.

Therefore, the ALJ concludes Respondent must reimburse Claimant $260 for his co-pays, and reimburse Cigna $231 for amounts it paid the providers.

ORDER

It is therefore ordered that:

1. Respondent shall pay Claimant $545.47 in temporary disability benefits.

2. Respondent shall pay statutory interest of 8% per annum on all benefits not paid when due.

3. Respondent shall reimburse Claimant $260 for medical co-pays.

4. Respondent shall reimburse Cigna $231 for injury-related treatment.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 30, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she sustained a compensable injury to her left and right cubital tunnel and left and right carpal tunnel?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related medical treatment rendered in connection therewith?

STIPULATIONS

If the claim were found to be compensable:

1) Claimant's Average Weekly Wage is $785.65.

2) Claimant would be entitled to 5 days of Temporary Total Disability ("TTD"), plus TTD from May 24, 2019, through August 4, 2019.

The ALJ accepted these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 32-year-old, right-hand-dominant female formally employed as a claims specialist for CSAA Insurance Exchange. At hearing, Claimant testified that the onset of symptoms was sometime in December of 2018. She had only recently returned to work, after a lengthy absence, from June 2018 through October 1, 2018, for an unrelated medical issue.

2. Claimant went to her primary care provider, Melody Ronk, P.A.-C., at Dynamic Healthcare Team on February 11, 2019. She reported pain in her wrists, which was worse in the morning. She described burning in her hands, which improved after a few hours, but then she reported random pain during the day. P.A. Ronk reported that Claimant was on chronic narcotic pain medications for an unrelated medical issue, but that they were not helping with her wrist pain. (Ex. T, p. 80).

3. On March 6, 2019, Claimant returned to P.A. Ronk. She now reported that her body aches were getting worse. The muscle relaxers provided at her last visit were of no help; they just made her sick. Her symptoms included joint pain in knees, elbows, hands, and ankles with stiffness and muscle aches all the time, which had been going on for years but always dx [diagnosed] as something else. (Ex. U, p. 83).

4. On March 27, 2019, Claimant underwent EMG and nerve conduction studies. She was diagnosed with moderate-to-severe chronic bilateral carpal tunnel syndrome with no evidence of ulnar neuropathy. (Ex. V, pp. 94-95).

5. Claimant then spoke with her employer, and went to Centura Centers for Occupational Medicine, on April 1, 2019. She was evaluated by Valerie Joyce, F.N.P. N.P. Joyce took a job duties history. Physical examination reveal a positive Tinel's sign and a positive Phalen's sign bilaterally. N.P. Joyce assessed Claimant with bilateral carpal tunnel syndrome and noted: "The cause of this problem does not appear to be work-related" (W, p. 97). Claimant was referred back to her PCP at this time. (Ex. W. p. 99).

6. On April 17, 2019, Claimant presented to Dr. Jeffrey Watson for a surgical evaluation. Claimant reported having numbness and pain along the ulnar side of her hands, right worse than left. Her pain level was 8/10. On examination, Dr. Watson noted that Claimant was in no acute distress. She had a negative Tinel's test bilaterally for the carpal tunnel but she did have a "fairly positive" Tinel's over the bilateral cubital tunnels.

7. Dr. Watson also reviewed the nerve conduction studies, and requested further information, as the EMG did not correlate with the clinical examination. Despite this lack of correlation, he recommended bilateral carpal tunnel release and ulnar nerve transposition. (Ex. Y, pp. 103-04).

8. On May 24, 2019, Dr. Watson performed a right carpal tunnel release and right subcutaneous ulnar nerve transposition. (Ex. Z, p. 106). On June 28, 2019, Dr. Watson performed a left carpal tunnel release and left subcutaneous ulnar nerve transposition. (Ex. CC, p. 115). [At hearing, Claimant testified that she returned to work on August 5, 2019 following these procedures].

Claimant's and Co-workers' Hearing Testimony

9. At hearing, Claimant testified that her shift typically began at 8 a.m., and she was typically finished by 5 p.m. She worked in a call center with a headset and dual monitors (Ex. B, pp 28-29). She had an ergonomic mouse and ergonomic keyboard, with the ability to raise and lower her workstation. For the first 10 minutes in her day, Claimant prepared claims from the previous night. This required her to use the keyboard and the '10-key.'

10. The next part of her day consisted of calling the insured to discuss claims. As Claimant talked on the phone, she entered information on the keyboard and 10-key. She would type out the entire conversation as it was occurring- both the insured's, and her

responses. Both Claimant and her former coworkers (Jennifer Bustos and Earl Emery) acknowledged that they did not type constantly throughout the day; they also used their mouse to navigate pages and fill in blanks. Claimant, Bustos, and Emery all acknowledged that they were not typing at the same time they were using the mouse. Ms. Bustos could not recall there being a "slow period" during the year stating that people get into accidents all the time, which meant she was always busy.

11. Earl Emery worked for Employer from 2005 to 2018 as a claims adjuster in multiple departments. Mr. Emery testified that he would spend around seven hours of a normal shift typing. He further stated that the workload was consistent except for when he could come back from vacation or medical leave. Mr. Emery explained that Employer would not want to leave claims unattended due to an employee going on vacation or taking a leave of absence. To solve this issue, Employer would reassign all claims while the employee was away. Consequently, when the employee returned, there would be zero claims in the file. Mr. Emery testified that it would then take a few weeks for that employee to build up a file with new claims. For these reasons, Ms. Emery stated that if he were to be observed at his job soon after he returned from vacation or medical leave, that the observer would fail to obtain an accurate picture of what his job actually entailed.

12. Claimant explained that her job duties and the amount of typing performed remained consistent with each department. The only department that was different was internal underwriting where she worked for a year. This department handled internal issues, which did not require that she type out and document as much as the other departments. However, she stated that this department still required her to do lots of typing, because she would have to type out all policy changes that would arrive through email or fax.

13. On average, Claimant testified each phone call with the insured took between 30 and 40 minutes, although others were longer. Typically, when she finished, there was nothing else to do on the claim. During her day, she also had to take calls where the insured was calling regarding a total loss of the vehicle. If the claim has not been filed, she has to start it, get the information for the insured, and enter it into the computer. She has two 15-minute breaks during the day and a 1-hour unpaid lunch. Once a month there was a 1-hour team meeting, and every quarter there was a 1-hour department meeting. Jennifer Bustos and Earl Emery confirmed this workday routine. There was periodic overtime, but that was minimal, amounting to two to three hours per week when available. Claimant would often work such overtime.

14. In December of 2018, Claimant began to experience tingling and pain in her bilateral hands. She noticed that the symptoms would get worse the more she typed. The symptoms continued to progress, which led to Claimant notifying her supervisor in the beginning of 2019. Her supervisor did not mention anything about seeing a workers' compensation doctor. Eventually, as the symptoms progressed, Claimant decided to go see her primary care physician, Dr. Watson.

Expert Opinions

15. Dr. Elizabeth Bisgard, MD, performed an Independent Medical Examination on behalf of Respondents (Ex. A, C) She explained that nothing in Claimant's job duties would be a risk factor for cubital tunnel syndrome. Dr. Bisgard indicated that if Claimant's estimates of 7½ hours of typing per day could be substantiated by a jobsite analysis, then she would be borderline for meeting the repetition category for carpal tunnel syndrome. (Ex. A, p. 7). There were two types of carpal tunnel risk factors associated with computer use as outlined in W.C.R.P. 17, Ex. 5 pp. 28-29. Keyboarding is actually not a risk factor where a worker is typing 7 hours or fewer per day.

16. Jill Adams performed a job site analysis on August 15, 2019, by observing Claimant perform her job duties on site. Claimant's job description largely matched what Claimant had previously indicated to Dr. Bisgard, and was based on Ms. Adams' interview with Claimant. (Ex. B, p. 23). Claimant's workstation was the same as when she reported an onset of symptoms.

17. In her report, Ms. Adams noted the following breakdown:

Job Task	**Second per min.**	**Minutes per hour**	**Hours a day**
Keyboard Use	23-25	23-25	3.0-3.5
Mouse Use	25-27	25-27	3.0-3.5

Based on this, Ms. Adams did not find any Primary or Secondary Risk Factors associated with Claimant's job duties. (Ex. B, pp. 25-26). Ms. Adams also provided an analysis of right hand mouse use that indicated roughly 3 hours and 21 minutes per day, which was within the same range shown when she was observing the split in daily tasks between keyboard use and mouse use. (Ex. B, pp. 26-27). In her report, Ms. Adams noted that Claimant had recently returned from medical leave. At hearing, Ms. Adams stated that Claimant informed her on the date of the assessment that she would not be handling as many claims due to her recent return from leave.

18. At hearing, Ms. Adams testified that she did not observe any other employees, nor had she ever performed an assessment on somebody holding the same job as Claimant. Ms. Adams agreed that the medical treatment guidelines instruct job evaluators to consider any change in frequency in occupational or non-occupational tasks. She also agreed that she did not initially take into account that Claimant's recent return to work would affect the overall typing that she would have to do.

19. In her rebuttal testimony, Claimant testified that the job site analysis did not accurately represent her job duties because she was light on work at the time, having just returned

from leave, and before her workload could ramp back up to normal. She testified that when Ms. Adams did her job assessment, she had around ten claims. Claimants testified that she would normally have around fifty claims in her file. Claimant stated that Ms. Adams observed her make one phone call but that the person did not answer the phone. She acknowledged, however, that she did not type at the same time that she used her mouse. Further, she did not use her mouse during the times that she was on the phone entering information into the database.

20. Ms. Adams explained at hearing that the volume of work would be unlikely to alter the results in a significant way. Additionally, she stated that the results do not indicate a lack of activity because of a lack of work; rather they show an even split in the job duties between keyboard use and mouse use.

21. Dr. Bisgard testified at hearing that the medical literature, as presented at her training from Dr. Kathryn Mueller [former medical director for the Division of Workers' Compensation], indicated that patients typically perform poorly in assessing the amount of time each day they spend performing specific tasks at work. Dr. Bisgard confirmed that Claimant has carpel tunnel syndrome in both hands. She also stated that she believed the surgery performed by Dr. Watson was reasonable, necessary, and related to relieve the effects of Claimant's carpel tunnel syndrome.

22. Dr. Bisgard affirmed her opinion that none of Claimant's job duties presented a risk factor for bilateral cubital tunnel syndrome, nor did Claimant's job duties plausibly meet the threshold for bilateral carpal tunnel syndrome. She concluded that to a reasonable degree of medical probability Claimant's occupational disease claims were not cause by her work.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado ("Act"), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

D. In this instance, the ALJ finds that Claimant, along with Jennifer Bustos and Earl Emery, testified in good faith about their respective work environments to the best of their ability. They made appropriate concessions on cross-examination where appropriate. In the final analysis, however, the ALJ finds that the clinical, systematic, and objective observations of Jill Adams are more persuasive when the fact-finder must precisely apportion the workload. Ms. Adams does this as part of her profession, and no alternate objective quantitative analysis exists in the record. The ALJ is also not persuaded that the timing of her site visit materially affected the results, as Claimant worked steadily while under observation, regardless of what remained in her respective pipeline. In the final analysis, the ALJ finds that Ms. Adams' figures much more closely quantify Claimant's workload than the good-faith estimates of the lay witnesses.

Occupational Disease

E. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. ICAO*, 919 P.2d 207, 210 (Colo. 1996). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id*.

F. An occupational disease arises not from an accident, but from a prolonged exposure occasioned by the nature of the employment. *Colorado Mental Health Institute v. Austill,* 940 P.2d 1125 (Colo. App. 1997). Occupational diseases are subject to a more rigorous test than accidents or injuries before they can be found compensable. All elements of the four-part test mandated by the statute must be met to ensure the disease arises out of and in the course of employment.

> "Occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. C.R.S. § 8-40-201(14).

G. A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment duties or working conditions. *Wal-Mart Stores, Inc. v. ICAO*, 989 P.2d 251, 252 (Colo. App. 1999). This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993).

H. The ALJ takes administrative notes of W.C.R.P. 17, Ex. 5 pgs. 28-29, which reads as follows:

DIAGNOSIS-BASED RISK FACTORS

Hours are calculated by totaling the cumulative exposure time to the risk over an 8 hour day. Breaks or periods of inactivity or performing other types of work tasks are not included. Unless the hours are specifically stated below, "combination" of factors described below uses the Secondary Risk Factor Definitions from the Risk Factor Definition Table.

Diagnosis	**Evidence FOR Specific Risk Factors**			**Evidence AGAINST Specific Risk Factors**	**Non-Evidence-Based Additional Risk Factors to Consider.** These factors must be present for at least 4 hours of the work day, and may not overlap evidence risk factors.[1]
	Strong Multiple high quality studies	**Good** One high quality study or multiple adequate studies	**Some** One adequate study		
Carpal Tunnel Syndrome		Combination of force, repetition, and vibration.[2,4] Combination of repetition and force for 6 hours. Combination repetition and	Wrist bending or awkward posture for 4 hrs. ***Mouse use more than 4 hours.*** Combination cold and forceful repetition for 6	***Good evidence - Keyboarding less than or equal to 7 hrs. in good ergonomic position IS NOT RELATED.***	High repetition defined as task cycle times of less than 30 seconds or performing the same task for more than 50% of the total cycle time.[5] Tasks using a hand grip. Extreme wrist radial/ulnar positions or elbows in awkward postures.

		forceful tool use with awkward posture for 6 hours. Combination force, repetition, and awkward posture. Combination of 2-pound pinch or 10-pound hand force 3 times or more per minute for 3 hours.	hours - Frozen food handling	Good evidence- Repetition alone less than or equal to 6 hrs. IS NOT RELATED.	

I. Claimant's own testimony, and the testimony of her witnesses, does not establish any of the primary or secondary risk factors in the Guidelines. Claimant did not type continuously throughout the day, nor did she type and use the mouse simultaneously. Although Claimant disagreed with Ms. Adams' job site analysis, her disagreement was based on the volume of work she performed during the analysis. However, Ms. Adams analysis does not show a lack of activity, but rather a relatively even distribution of activity (between keyboarding and mousing) during the period of observation, with minimal down time between each task. Claimant did not testify that she used her mouse more often during the period of observation than she had in the past, but only that that she did not have a normal volume of work that day. There is no evidence in the record that Claimant used her mouse for over 4 hours in a workday. Further, there is no evidence in the record to suggest that Claimant's workstation was not in an ergonomic position.

J. Similarly, Claimant's symptoms do not account for her long history of joint pain throughout her body as a more likely cause of her issues. Nor does it account for the bilateral nature of her conditions. If her symptoms were from excessive use of the mouse (as opposed to excessive typing), one might expect her symptoms to be to her right hand only.

K. The results of the jobsite analysis, combined with the expert testimony of Dr. Bisgard, persuade the ALJ that an occupational disease has not been shown by Claimant by a preponderance of the evidence.

Medical Benefits

L. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant

bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

M. Claimant did not meet her burden of proof to establish a right to the requested medical benefits. Concerning the bilateral carpal tunnel surgeries, Claimant did not establish that she performs such tasks frequently enough per day to meet any of the risk factors outlined in the Guidelines. Concerning the bilateral cubital tunnel surgeries, Claimant did not establish that any of her job duties would have caused these conditions. While Claimant's surgeries as performed by Dr. Watson were reasonable and necessary, the evidence does not show that such surgeries were related to Claimant's work. Her claim for medical benefits must therefore be denied.

ORDER

It is therefore Ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 30, 2019

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained compensable industrial injuries on September 17, 2018 (W.C. No. 5-097-097) and October 19, 2018 (W.C. No. 5-091-029).

II. If Claimant proved he sustained compensable injuries whether Claimant proved by a preponderance of the evidence the medical treatment he received was reasonable, necessary and related.

III. If Claimant proved he sustained compensable injuries, determination of Claimant's authorized treating physician (ATP).

IV. If Claimant proved he sustained compensable injuries, whether Claimant proved by a preponderance of the evidence he is entitled to temporary indemnity benefits.

STIPULATIONS

The parties stipulated to an average weekly wage (AWW) of $1,515.05.

FINDINGS OF FACT

1. Claimant is a 31-year-old male who has worked for Employer for 12 years. The last six years Claimant has worked as a forklift operator, driving large pieces of equipment. He testified the equipment vibrated when driven and he experienced variable road conditions, including potholes.

2. Claimant has suffered from low back symptoms since 2008. In June 24, 2008, Claimant's primary care physician diagnosed him with a low back strain after Claimant lifted a pallet at work. Claimant testified he did not receive additional medical treatment or work restrictions and did not miss any time from work due to the incident. Claimant further testified that, between 2008 and 2016, he experienced occasional back pain that he treated with over-the-counter pain medication, but did not seek medical attention or miss any time from work due to his low back condition.

3. On June 14, 2016, Claimant presented to Julie Parsons, M.D. at Employer's authorized provider Advanced Urgent Care with complaints of low back pain after bending over and tying his shoe while at work. Dr. Parsons opined that the act of bending over to tie a shoe is an activity of daily living and is not work-related. She released Claimant to work without any restrictions. Claimant testified he did not miss any time from work due to this incident.

4. On August 9, 2016, Claimant returned to Dr. Parsons with complaints of low back pain and right leg pain and numbness after lifting a block of cement at work. Dr. Parsons diagnosed Claimant with a low back strain, prescribed Claimant medication, and released Claimant to full duty. Claimant continued to treat with medication and physical therapy. Dr. Parsons placed Claimant at maximum medical improvement (MMI) on October 3, 2016 with no permanent impairment or restrictions. Claimant was instructed to finish his remaining physical therapy sessions. Claimant testified he was advised to continue with a home exercise program and stretching. He further testified he may have missed a few days of work due to this incident but not many.

5. Claimant initially testified that, between 2016 and 2018, he experienced back pain two to three times per week, but later testified he only experienced back pain "once in a while" with sitting and vibration after working many hours. Claimant testified he was able to perform his regular duties as a forklift operator between October 2016 and September 2018.

6. Claimant testified that on September 17, 2018 he felt an increase in back pain when the forklift he was driving fell into a pothole in the work yard.

7. On September 17, 2018, Claimant presented to his primary care physician, Salud Family Health Centers (Salud), with complaints of low back pain over the last week. Deanna Romero, P.A. documented,

> 30 yr old male in for c/o back injury, 1 yr ago. Has balls in back that flair (*sic*). Did not have any studies done, was told he had problems with nerve and was sent to PT. Now was feeling back starting and so he started stretching and running, now pain is worse.

The medical record for this evaluation contains no mention of an alleged work incident or work-related etiology. On exam, P.A. Romero noted tenderness to palpation over the lumbar spine and decreased range of motion. Straight leg raise was positive on the left. X-rays taken that day revealed scoliosis and loss of lordosis but were otherwise negative. P.A. Romero gave an assessment of acute right-sided low back pain without sciatica. She prescribed Claimant prednisone and Flexeril.

8. Claimant testified he had been experiencing back pain the week prior to going to the doctor on September 17, 2018. Claimant testified he did home exercises, including stretching and some running, but this did not help the back pain. Claimant testified he did not injure or worsen his back pain while doing his exercises or running. Claimant denied having a back injury one year prior to September 17, 2018 as indicated in the note including any injury lifting something heavy at work.

9. Brian McCarthy, Operations Manager, testified on behalf of Respondents. He testified that on September 18, 2018 he became aware Claimant was asking to go to the doctor for his back. Mr. McCarthy spoke to Claimant, who informed Mr. McCarthy that he was running at home and felt pain in his low back. Mr. McCarthy then took

Claimant to Rachelle Grieve's office and again clarified with Claimant he felt pain at home while running with his children.

10. Mr. McCarthy testified he has worked with Claimant for eight years and has communicated with Claimant in English all the time, discussing many issues. Mr. McCarthy testified he has never had an issue communicating in English with Claimant. Mr. McCarthy further testified he had no doubt or misunderstanding as to Claimant's reported mechanism of injury and that it was not work-related.

11. Rachelle Grieve, Human Resources Manager, testified at hearing on behalf of Respondents. Ms. Grieve testified she met with Claimant and Mr. McCarthy on September 18, 2018 and asked Claimant what caused his back symptoms. Claimant stated he was running with his kids and felt pain in his low back. Ms. Grieve questioned Claimant if anything happened at work and Claimant said no. As Claimant confirmed his condition was not work-related, Ms. Grieve proceeded to provide Claimant information regarding short-term disability. Ms. Grieve testified that the interaction took place in English and there was no possibility Claimant miscommunicated what happened. Ms. Grieve testified she has had numerous conversations with Claimant in English and never had an interpreter present.

12. Claimant testified he did not hurt his back running or playing with his children and denied telling Mr. McCarthy and Ms. Grieve this. He testified his primary language is Spanish and he speaks some English.

13. On September 24, 2018, Claimant attended at follow-up appointment with Lisa Ruschak, M.D. at Salud. Dr. Ruschak noted an initial injury one year prior from lifting something heavy at work with pain returning recently. The medical record contains no mention of a specific incident or cause of Claimant's recent pain. Dr. Ruschak ordered a lumbar spine MRI, which was performed on September 26, 2018. Gregory Broering, M.D. interpreted the MRI results and noted: (1) small right paracentral disc extrusion at L3-4 resulting in mild right lateral recess stenosis without visualized nerve root contact and (2) small midline disc protrusions at L4-5 and L5-S1, mild bilateral lateral recess stenosis at L4-5. Dr. Ruschak subsequently referred Claimant for evaluation at Boulder Neurological Spine and Associates and physical therapy.

14. Claimant returned to work performing his regular job duties on October 15, 2018. Claimant testified when he returned to work he was still experiencing back pain.

15. Claimant saw Allan Nanney, M.D. at Boulder Neurological and Spine Associates on October 15, 2018. Dr. Nanney noted Claimant preferred to communicate in Spanish but spoke "very good" English. Claimant reported a two-year history of low back pain that worsened in the last four weeks. Dr. Nanney noted the lumbar MRI showed L3-4, L4-5 and L5-S1 degenerative disc disease that was moderate for Claimant's age with some mild stenosis at each level. Dr. Nanney diagnosed Claimant with spondylosis with radiculopathy. He agreed with Dr. Ruschak's recommendation for

physical therapy and emphasized core strengthening. He noted that further treatment could include injections, but lumbar fusion was "absolutely not" indicated.

16. Claimant underwent initial evaluation for physical therapy on October 16, 2018. The physical therapist noted the original onset of pain occurred in June 2016 while performing heavy lifting at work, with a subsequent decrease in symptoms until a "recent exacerbation" approximately 4.5 weeks ago. The physical therapist further noted, "Patient reports most recent onset was due to driving forklift for up to 12 hours/day over bumpy/uneven surfaces with lots of potholes." This statement is the first reference in the medical records to alleged work-related etiology of Claimant's recent symptoms. The medical record for this evaluation contains no mention of the specific incident in which Claimant allegedly hit a pothole on September 17, 2018 and jarred his back.

17. Claimant testified that on October 19, 2018 he was driving the "650" forklift moving pipes when he hit a large hole and felt pain in his back and right hip. Claimant testified the pain was worse than the pain he experienced on September 17, 2018. Claimant reported the alleged injury to Employer and was sent for medical evaluation.

18. Mr. McCarthy testified Claimant spoke with him twice after returning to work in October 2018. He testified Claimant asked for financial help to pay for his out-of-pocket expenses for his medical treatment. Claimant informed Mr. McCarthy that he had not yet received short-term disability and that his physical therapy treatment was going to cost him $70.00 per visit. Mr. McCarthy informed Claimant that his medical bills would not be paid for by the company and that everyone pays their own bills. Claimant asked if there was something the company could do to pay for his doctor's bills. Claimant stated he had used his HSA card on his wife's braces and did not think there was anything left on the card. Claimant again expressed that he hoped the company would help him. He indicated he had spoken with other employees and he indicated he would get a lawyer. Mr. McCarthy informed Claimant he would let Ms. Grieve know there was an issue with his short-term disability.

19. Claimant subsequently spoke with Mr. McCarthy on the afternoon of October 19, 2018. Claimant again asked if the company was going to help him. Mr. McCarthy indicated that if Claimant already used his HSA card, then he would have to use his health insurance. Claimant informed Mr. McCarthy that he would have to pay out of pocket for the bills and wanted help. Mr. McCarthy informed Claimant that he paid the same deductible as Claimant and personal insurance was not paid for by the company.

20. At the end of the work day on October 19, 2018, Mr. McCarthy was informed that Claimant had felt pain in his hip while at work and he filed a workers' compensation claim.

21. Claimant saw Alice Nguyen, P.A. at authorized provider Advanced Urgent Care on October 19, 2018 with complaints of bilateral hip leg and groin pain, mostly right-sided. Claimant reported he was driving a forklift backwards and hit uneven ground and

the forklift began to shake back and forth while Claimant was wearing a seatbelt. P.A. Nguyen noted Claimant was still having back pain from a prior work injury and could have exacerbated this. On exam, P.A. Nguyen noted tenderness along the right anterior hip and groin, full range of motion of both hip with minimal pain, and no bruising or inguinal hernias. X-rays of the right hip and pelvis demonstrated no evidence of acute abnormalities. P.A. Nguyen diagnosed Claimant with hip pain and a right hip strain and prescribed gabapentin.

22. On October 31, 2018, Dr. Parsons diagnosed Claimant with a low back strain and referred Claimant for physical therapy.

23. For the work period 9/10/18 to 9/16/18, Claimant worked 40 regular hours and 15.2 hours of overtime. For the work period 9/17/18 to 9/23/18, Claimant worked 3 regular hours and was paid 24 hours in paid time off and 8 hours of vacation time. For the work period 9/24/18 to 9/30/18, Claimant worked 12.3 regular hours. For the two work periods from 10/1/18 to 10/14/18, Claimant did not work any hours. Claimant testified he was unable to work due to his back pain. Claimant denied ever missing 3-4 weeks of work for a low back injury prior to September 17, 2018.

24. On November 14, 2018, Dr. Parsons released Claimant from her care, noting Claimant's claim had been denied.

25. In February 2019 Claimant was working and reported low back pain to a supervisor. Claimant completed an incident report on February 5, 2019. The incident report indicated a date of injury of September 19, 2018 and a mechanism of injury of bouncing around while wearing a seatbelt while driving a forklift on a rough road. The incident report also noted Claimant had a prior injury in 2008 and continued to have pain and then aggravated his injury in 2016.

26. Claimant was sent to authorized provider Concentra Medical Center and saw Darla Draper, M.D. on February 15, 2019. Claimant reported having right hip pain since October 19, 2018. Claimant reported driving a forklift, hitting a bump and the forklift shaking and seatbelt locking, causing right hip pain. Dr. Draper gave an assessment of right groin strain, referred Claimant for physical therapy, and released Claimant to modified duty.

27. On February 20, 2019, Claimant saw John Sacha, M.D. at Concentra. He reported that, on September 19, 2018, he was driving a forklift, hit some bumps and felt an acute onset of low back pain with some right leg numbness and tingling. Dr. Sacha noted a workers' compensation injury in 2008 with chronic low back pain on and off and a workers' compensation injury in 2016 with low back pain and leg pain in the same distribution as Claimant's current symptoms. Dr. Sacha opined Claimant had an exacerbation of his preexisting lumbar radiculopathy and recommended physical therapy and an epidural steroid injection.

28. On May 8, 2019, Lawrence Lesnak, D.O. performed an independent medical examination (IME) at the request of Respondents. Dr. Lesnak reviewed medical records dating back to June 2008 as well as a written statement of Mr. McCarthy, and conducted a physical examination and interview of Claimant. Claimant reported that he experienced acute back pain after driving over a pothole at work on September 18, 2018, and pain in his right groin and low back pain after the forklift he was driving shifted over an uneven surface on October 19, 2018. Dr. Lesnak noted Claimant completed a psychosocial screening examination and reported a very extremely high level of depressive symptoms as well as an extremely high level of somatic pain complaints, indicating Claimant's reported subjective complaints may be exaggerated and unreliable. Dr. Lesnak documented that on physical examination Claimant demonstrated numerous pain behaviors and non-physiologic findings, with absolutely no reproducible clinical exam findings to suggest any type of symptomatic lumbar or sacral radiculitis, radiculopathies or myelopathies whatsoever. Dr. Lesnak concluded there was no evidence of any compensable injury as a result of the alleged September 2018 or October 2018 incidents. He opined that Claimant had a fairly trivial incident on October 19, 2018 that reproduced significant subjective pain complaints. Dr. Lesnak opined that the mechanism of operating a forklift over uneven terrain while wearing a lap belt is not a mechanism of injury that would cause lumbar spine pathology or aggravated pre-existing lumbar spine pathology. Dr. Lesnak further opined that regardless of causality, no further medical treatments, diagnostic testing or interventions would be appropriate as Claimant did not demonstrate any reproducible findings.

29. Claimant underwent physical therapy and, in June 2019, an intraarticular injection, lumbar epidural steroid injection, and transpiriformis sciatic nerve block, none of which provided significant improvement.

30. On August 8, 2019 Caroline Gellrick, M.D. performed an IME at the request of Claimant. Dr. Gellrick reviewed records dating back to June 24, 2008, including Dr. Lesnak's IME report, and physically examined Claimant. She also reviewed photographs Claimant took depicting the terrain at the worksite and a seat of one of the forklifts. Dr. Gellrick noted no interpreters were present at the evaluations by Claimant's providers. Claimant reported to Dr. Gellrick that on September 18, 2018 the forklift hit a big hole causing the forklift to jar and jump, causing compression in his back and neck. Claimant denied reporting to anyone he was running with his daughters and did not know why the provider at Salud said he started stretching and running with worsening back pain for a week. Dr. Gellrick opined that the September 17, 2018 incident aggravated Claimant's lumbar disc degenerative disease and the October 19, 2017 incident further aggravated his back condition with possible development of a hernia. Dr. Gellrick disagreed with Dr. Lesnak's opinion that the reported mechanism of injury would not be expected to cause lumbar spine pathology or aggravation, citing medical literature indicating heavy equipment operation can produce ongoing low back symptoms and increased aggravation of underlying degenerative disc disease. Dr. Gellrick further opined that work-restrictions were appropriate commencing September 17, 2018 and continuing and that Claimant's medical treatment to date was reasonable, necessary and related to Claimant's compensable injuries.

31. Exhibit 15 consists of two photographs taken by Claimant on October 25, 2018. The photographs depict a forklift seat cushion that is torn and partially eroded. Claimant acknowledged the photographs are not of the seat in the forklift he was driving on September 17, 2018 or October 19, 2018. Claimant did not take photographs of the forklift he was driving on those specific dates. Claimant testified he drove the forklift photographed in the pictures approximately three times per week for up to 12 hours per day. Claimant testified the seat pictured in the photographs had been in this condition for a year prior to the picture in October 2018. Claimant testified that the seats and suspension for the forklifts he was driving on September 17, 2018 and October 19, 2018 were also not in good condition.

32. Regarding the work yard terrain, Claimant initially testified it was uncommon for the yard to have potholes and an uneven surface. Claimant first testified that, prior to September 2018, he never had low back pain from hitting potholes. Claimant then testified he had hit some potholes prior to September 2018, but they weren't "that hard." When asked how often he hit potholes prior to September 2018, Claimant testified he tried to avoid the potholes because "they weren't fixing potholes." Claimant then testified there were potholes prior to September 2018 but "not so bad ones," and the potholes were getting worse in September 2018 and October 2018.

33. Dr. Lesnak testified at hearing on behalf of Respondents as an expert in pain management and rehabilitation. Dr. Lesnak testified consistent with his IME report and continued to opine Claimant did not sustain a work-related injury. He explained Claimant had longstanding chronic pain, noting that Claimant could have a flare up of back pain anytime, anyplace, and for any reason, as evidenced by the incident in which Claimant experienced low back pain and numbness and tingling from bending over and tying his shoe. Dr. Lesnak testified that Claimant's MRI showed typical age-related changes throughout the lumbar spine without any acute injury. Dr. Lesnak testified such degenerative findings can cause pain and insidious onset of back pain is very common.

34. The ALJ finds Dr. Lesnak's testimony and opinion, as well as the testimony of Mr. McCarthy and Ms. Grieve, more credible and persuasive than the opinion of Dr. Gellrick and testimony of Claimant.

35. Claimant failed to prove by a preponderance of the evidence the alleged work incidents on September 17, 2018 and October 19, 2018 proximately caused an injury or otherwise aggravated or accelerated a pre-existing condition.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of

proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or

infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); ***Atsepoyi v. Kohl's Department Stores***, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

As found, Claimant failed to prove by a preponderance of the evidence he sustained compensable injuries on September 17, 2018 and October 19, 2018. There are multiples inconsistencies in Claimant's testimony and his reports regarding the mechanisms of injury. Claimant initially testified that, between 2016 and 2018, he experienced back pain two to three times per week. Claimant then changed his testimony and stated he only experienced back during this time period once in a while, attributing those instances to experiencing the vibration of the forklift several hours a day. Claimant subsequently testified potholes in the work yard were uncommon, then changed his testimony to state that there were potholes in the yard before September 2018, but they were not bad and he did not experience back pain from them, contradicting his earlier testimony. Claimant then alleged that the potholes worsened in September and October 2018. Claimant's contradictory testimony undermines his credibility.

Additionally, the medical records and testimony of Mr. McCarthy and Ms. Grieve contradict Claimant's contention that he experienced an acute onset of pain on September 17, 2018 as a result of his forklift falling into a pothole. The September 17, 2018 Salud medical record contains no mention of any work-related cause of Claimant's current symptoms, but instead specifically notes Claimant reporting experiencing back flare-ups and worsening back pain after stretching and running. This corroborates the testimony of Mr. McCarthy and Ms. Grieve, who both credibly and persuasively testified Claimant informed them he felt back pain while running at home with his kids and denied any work injury. Between September 17, 2018 and October 15, 2018, Claimant saw P.A. Romero, Dr. Ruschak and Dr. Nanney, none of whom noted any reported work-related incident or cause of Claimant's current symptoms. The first reference in the medical records to Claimant's purported work-related mechanism of injury is the October 16, 2018 physical therapy record, which took place after Claimant returned to work. Additionally, as Claimant had twice before reported alleged work injuries (the shoe tying incident and the concrete lifting incident), Claimant was aware of how to report a work injury and of the process. The ALJ is persuaded that if Claimant had, in

fact, alleged a work-related injury to Employer on September 18, 2018, Employer would have sent Claimant for medical evaluation.

The ALJ is not persuaded there was an issue of miscommunication with the providers or Employer regarding the alleged mechanism of injury. Although Claimant's first language is Spanish, Mr. McCarthy and Ms. Grieve credibly and persuasively testified they always communicated with Claimant in English, and Dr. Nanney noted Claimant spoke "very good" English. Dr. Gellrick noted an interpreter was not present at the evaluations with Claimant's providers. Assuming, *arguendo*, this resulted in some miscommunication regarding the reported mechanism of injury, it does not explain how Claimant was subsequently able to clearly communicate his pothole allegations to providers without an interpreter present at multiple evaluations after October 16, 2018. Mr. McCarthy credibly and persuasively testified that, upon Claimant's return to work in October 2018, Claimant twice approached him requesting Employer's financial assistance for his medical treatment. After Mr. McCarthy informed Claimant his non-work-related medical expenses would not be paid by Employer, Claimant alleged a new work injury. The timing of such allegation is a coincidence at best and suspicious at worst.

Although Dr. Gellrick opined Claimant sustained work injuries on both September 17, 2018 and October 19, 2018, Dr. Gellrick's opinion is premised on Claimant's reports regarding the mechanism of injury which the ALJ does not find credible. Dr. Lesnak credibly and persuasively opined Claimant did not sustain any work injuries and the MRI demonstrated typical age-related degenerative findings. The preponderant evidence does not establish Claimant's employment caused, aggravated or accelerated his condition. Based on the totality of the credible and persuasive evidence, Claimant failed to meet his burden to prove he sustained compensable injuries on September 17, 2018 or October 19, 2018.

As Claimant failed to prove he sustained a compensable injury, the remaining issues of medical benefits, authorized treating physician and temporary disability benefits are moot.

ORDER

1. Claimant failed to prove by a preponderance of the evidence he sustained compensable injuries on September 17, 2018 and October 19, 2018. Claimant's claims for benefits are denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 1, 2019

Office of Administrative Courts

ISSUES

- What is Claimant's average weekly wage (AWW)?
- Did Claimant prove entitlement to TTD from October 15, 2018 ongoing?

FINDINGS OF FACT

1. Claimant works part-time for Employer in the "nursing relief pool." Her duties include transporting patients to medical facilities in Colorado Springs or Denver. She occasionally stays with the patients overnight, resulting in fluctuating overtime.

2. Claimant suffered an admitted injury to her neck, upper back, and right shoulder on September 13, 2018 while transporting a combative patient to Parkview Hospital.

3. Claimant saw Employer's designated provider at Southern Colorado Clinic on September 14, 2018. She reported pain in her neck, upper back, right shoulder, and low back. PA-C Schwartz diagnosed cervical, thoracic, lumbar, and right shoulder "sprains" and "strains." He prescribed cyclobenzaprine and ibuprofen and referred Claimant for massage therapy. He released Claimant to work with no restrictions.

4. Claimant followed up with Dr. Terrence Lakin at Southern Colorado Clinic on September 27, 2018. She reported a 6/10 pain level. She said she was "working without restrictions but feels due to increased pain and working on the men's unit during one-on-one she may benefit from some restrictions." Examination showed spasm and trigger points in the paracervical muscles, pain to palpation of the upper and lower back muscles, and painful shoulder range of motion. Dr. Lakin administered multiple trigger point injections and imposed work restrictions of "please keep off forensic units/high-risk patient contact."

5. Employer offered Claimant modified work answering the phone in the staffing office. Her duties were entirely sedentary and primarily involved picking up the telephone receiver, transferring callers, and writing phone messages by hand.

6. Claimant returned to PA-C Schwartz on October 11, 2018. She reported similar symptoms and pain levels, except her low back was improved. Claimant requested more trigger point injections "because this really helped her." She was working within her restrictions, but told PA-C Schwartz "she wants to get back to her normal duties, as float, feeling intimidated in Staffing office on limited duty." PA-C Schwartz noted, "all I can do is try to get her back into client care, but indicate she should not be primary, i.e., frontline for management of out of control clients, but able to take care of routine care patients."

7. Claimant's supervisor, Frankie M[Redacted], observed Claimant occasionally while she was working modified duty in the staffing office. Claimant never mentioned having any difficulty doing the work and exhibited no signs of pain or discomfort. Ms. M[Redacted] credibly testified she would have changed Claimant's duties if Claimant had indicated the work was bothering her.

8. Claimant was approved for intermittent FMLA leave several months before her work accident. On March 15, 2018, her PCP completed an FMLA form opining Claimant's uncontrolled diabetes, diabetic neuropathy, and chronic foot pain caused flare-ups that prevent her from working 1-4 days per month, 1-4 days per episode. Based on the documentation from Claimant's PCP, Employer approved intermittent FMLA, from February 23, 2018 through February 22, 2019.

9. Claimant stopped working on October 15, 2018 and went out on FMLA leave.

10. Employer's benefits coordinator, Nancy S[Redacted], processed Claimant's FMLA request in October 2018. Ms. S[Redacted] was familiar with Claimant's longstanding need for intermittent FMLA leave because she previously processed FMLA requests for both Claimant's personal medical issues and issues related to Claimant's son. In October 2018, Claimant requested a "block of time" off under FMLA. Claimant gave no indication the FMLA leave was related to the work-related injury, and Ms. S[Redacted] reasonably concluded it was a continuation of Claimant's personal or family medical issues.

11. Ms. S[Redacted] gave Claimant a new FMLA form to take to her doctor but approved FMLA leave effective October 16, 2018 because Claimant had already been approved for intermittent leave through February 22, 2019. Claimant never returned the new FMLA paperwork, so Employer continued to operate under the previously-approved leave.

12. Ms. S[Redacted] spoke with Claimant by telephone on at least one occasion over the next few months regarding her work status. At some point, Claimant asked why she was not being paid workers' compensation benefits. Ms. S[Redacted] said she thought Claimant was out on FMLA for a personal condition, to which Claimant replied, "Oh, that's right." Ms. S[Redacted] encouraged Claimant to apply for short-term disability and left STD application packets for her at the front desk at least twice.

13. Claimant continued treating for the work-related injury over the next several months after taking FMLA leave. No medical report indicates she had stopped working because of the injury, and instead her off-work status was repeatedly attributed to her personal medical condition. For instance, a November 5, 2018 report noted she was "currently not working not due to this injury." The same report stated Claimant had "multiple life stressors, going to court regarding 16 yo son that is truant. On FMLA for son care." On November 27, 2018, PA-C Schwartz noted, "she is currently not working due to being on FMLA from her PCP." Dr. Lakin's December 26, 2018 report stated, "her

company put her on FMLA . . . she has feet peripheral neuropathy and other family stressors with truant son and deaths in family recently."

14. PA-C Schwartz increased Claimant's work restrictions on November 27, 2018 to no lifting over 30 pounds and no repetitive lifting over 10 pounds. The increased restrictions caued no greater impact on her earning capacity because she was already off work on family medical leave. Employer's FMLA approval paperwork advised Claimant she would need "a completed fitness-to-return certification" from her PCP clearing her to perform the essential functions of her job before she could return to work. Because Claimant had voluntarily gone out on FMLA leave rather than injury-related leave, Employer did not offer modified work in response to changing work restrictions.[1]

15. Claimant had an MRI of the right shoulder on January 30, 2019. It showed supraspinatus and infraspinatus tendinopathy with an apparent low grade 8mm x 8mm partial supraspinatus and infraspinatus tendon tear.

16. Dr. Lakin reviewed the MRI report on February 6, 2019, and disussed Claimant's work status with her. He noted,

> She is currently not working. When questioned about this she states her primary care provider does not want her to work as the work environment is too dangerous and she risks reinjury. Questioned whether work could not accommodate restrictions she stated she has not spoken to them. They have just not scheduled her. She states she is off on FMLA.

Dr. Lakin changed Claimant's work restrictions to no lifting over one pound with the right arm. He referred Claimant to Dr. David Weinstein for a surgical evaluation. Dr. Lakin thought Claimant probably did not need surgery, but she had failed conservative care and should have the opportunity to consult with a surgeon. He changed Claimant's work restrictions to no lifting over one pound, pending the evaluation with Dr. Weinstein.

17. Dr. Weinstein ultimately determined Claimant was not a surgical candidate. He recommended she try more PT with dry needling.

18. On March 7, 2019, Claimant's PCP completed a "Fitness-to-Return Certification" form releasing Claimant "to work a full, regularly scheduled day with no restrictions" beginning March 11, 2019.

19. Claimant followed up with Dr. Lakin on March 11, and he liberalized her restrictions to occasionally lifting 5-10 pounds, no over shoulder work, and no excessive use of the uninjured left arm to compensate. Ms. M[Redacted] offered to accommodate the injury-related restrictions from Dr. Lakin and return Claimant to work answering phones in the staffing office. Claimant accepted the modified duty offer and returned to work on March 14, 2019.

[1] Even if Claimant had still been working, no change would have been necessary because the modified duty answering telephones in the staffing office was well within the November 27, 2018 restrictions.

20. Ms. M[Redacted] credibly testified that she took Claimant off the schedule in October 2018 because she went on FMLA leave. Had Claimant not gone out on FMLA, Employer would have accommodated the injury-related work restrictions provided by her ATPs from October 2018 through March 2019.

21. On May 14, and June 10, 2019, Claimant's ATP noted she was working with restrictions and having no issues.

22. Claimant's PCP completed a new FMLA certification form on May 20, 2019. She reiterated the same issues as on the March 2018 form, *i.e*., flare-ups that would prevent Claimant from working 1-4 times per month, 1-4 days per episode. She attributed Claimant's need to miss work to uncontrolled diabetes, diabetic neuropathy, chronic foot pain, and "care for son who needs close supervision – behavior issues." The PCP also cited chronic knee pain and frequent falls. There was no mention of any work-related condition limiting Claimant's ability to work.

23. On June 27, 2019, Claimant told PA-C Schwartz computer work was aggravating her neck pain. He encouraged her to raise her screened eye level so she is not looking down and use good posture and ergonomic technique that her workstation. That report is the first mention in the medical records of Claimant having any difficulty tolerating modified duty.

24. Ms. M[Redacted] was not aware of Claimant's purported difficulty working on a computer, because Claimant never mentioned it. Had she known of the issue, she would have made other arrangements so Claimant did not have to work on the computer. Ms. M[Redacted] reiterated Claimant was predominantly answering phones on modified duty.

25. Claimant again took FMLA leave starting July 7, 2019. She did not ascribe her leave request to any injury-related cause.

26. Employer made another modified job offer on July 16, 2019.

27. On August 5, 2019, Dr. Lakin discharged Claimant for noncompliance, including excessive "no-shows" and rescheduling appointments. He continued Claimant's restrictions until modified by the new ATP.

28. Claimant's new ATP is Dr. Bradley at Emergicare. Claimant saw Dr. Bradley on September 11, 2019, at which time he prescribed gabapentin and cyclobenzaprine. He continued largely the same work restrictions imposed by Dr. Lakin's office.

29. Ms. S[Redacted] and Ms. M[Redacted]'s testimony was credible and persuasive.

30. Claimant failed to prove her missed time and resulting wage loss at any time on or after October 15, 2018 was proximately caused by her industrial injury.

31. Claimant's AWW is $553.83, based on the six pay periods (i.e., 12 weeks) from June 23, 2018 through September 14, 2018. Claimant earned gross wages of $6,645.96 during that period. ($6,645.96 ÷ 12 = $553.83).

CONCLUSIONS OF LAW

A. Claimant's AWW is $553.83

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

The ALJ is not persuaded by either party's AWW calculation. Claimant's proposed AWW of $800 per week substantially overstates her typical earnings. Her weekly earnings in 2018 topped $800 only once, and the rest of her paychecks were much lower. But Respondent's proposed AWW of $498.84 is not persuasive either, because it excludes the pay period ending September 14, 2018, which was Claimant's second-highest pay period of the year. There is no persuasive evidence the industrial injury distorted Claimant's earnings in the period ending September 14, 2018, and therefore no reason to exclude it from consideration.

This ALJ is generally inclined to average the 12-weeks immediately preceding the injury unless there is a persuasive reason to use a longer or shorter period. Here, the ALJ sees no compelling reason to look back further than 12 weeks in calculating Claimant's AWW. Claimant earned $6,645.96 in the six pay periods (i.e., 12 weeks) from June 23, 2018 through September 14, 2018. As found, Claimant's AWW is $553.83.

B. Claimant did not prove entitlement to TTD benefits

A claimant is entitled to TTD benefits if the injury caused a disability, the disability caused the claimant to leave work, the claimant missed more than three regular working days, and suffered an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the wage loss to obtain TTD benefits. *Id*.

As found, Claimant failed to prove her work injury proximately caused a wage loss on or after October 15, 2018. The persuasive evidence shows the missed time and resulting wage loss were due to personal issues and not the work injury. Claimant did not mention the work injury when she took FMLA leave in October 2018 or in July 2019. Medical records around October 2018 show no injury-related reason for leaving work. Claimant repeatedly told her ATPs she was on FMLA for non-work-related reasons. When Claimant stopped working in October 2018, Employer was accommodating her injury in a sedentary position far more restrictive than necessitated by her minimal restrictions.

The ALJ is not persuaded Claimant could not tolerate modified duty, particularly since she was simultaneously telling her ATPs she wanted to return to the nursing pool. There is no contemporaneous medical documentation of any injury-related problem working in the staffing office, and the only issue she mentioned was feeling "intimidated." Claimant told no one the job tasks were flaring her symptoms, and Ms. M[Redacted] observed no outward signs of pain or limitation. Claimant's injury-related medical condition would not reasonably have precluded answering phones and taking messages. Moreover, the ALJ is persuaded Mr. M[Redacted] would have immediately changed Claimant's job tasks had she received any indication Claimant could not tolerate answering the phone and taking messages.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage is $553.83.

2. Claimant's request for TTD benefits commencing October 15, 2018 is denied and dismissed.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 1, 2019

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she is entitled to post-MMI medical maintenance medical care as recommended by Dr. Sparr?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant has been employed over 27 years with the City of Colorado Springs as a Senior Maintenance Tech. This work involves trash removal, cleaning bathrooms, hedge trimming, irrigation repair and maintenance, playground monitoring and "anything having to do with maintenance of a park." This is a physically demanding job involving digging, hauling and lifting.

2. Claimant testified that she had changed multiple basketball rims on prior occasions. On May 25, 2016, Claimant was replacing another basketball rim. Claimant removed the last bolt and the entire backboard began unexpectedly falling towards her. While holding the rim, the Claimant jumped off the back of her truck where she had been standing. The Claimant landed on her feet at an awkward angle on concrete and sustained injury to both knees and her lower back.

3. The Claimant was referred for medical treatment to the Occupational Health Clinic for the City of Colorado Springs ("City Clinic"). The majority of her treatment was with Paula Homberger, PA-C for 2016, 2017, and into 2018, according to the DIME report. She had also been referred to an orthopedist, Dr. Walden for conservative treatment during this time. (Ex. B, pp. 7-20).

4. Claimant was later referred to orthopedist Dr. Derek Purcell, MD for further evaluation of her bilateral knee injury. On April 19, 2018, Dr. Purcell recommended conservative treatment only, but indicated, "We discussed at length that this can be a very burdensome problem. She may have a period of time where she improves and then worsens again" (Ex. 4, pp. 31-33).

5. Claimant was also referred to Accelerated Recovery Specialists, Michael Sparr, MD., for further evaluation and treatment. (Ex. 2, p. 3). On July 23, 2018, Dr. Sparr's diagnosis included contusion of left and right knee, degenerative joint disease of the knee, trochanteric bursitis, left hip, sacroiliitis, lumbar facet joint arthropathy and piriformis syndrome. *Id* at 5. Dr. Sparr recommended a combination stem cell platelet rich plasma (PRP) injection, and suggested that a repeat MRI of the left knee may be appropriate at a future date, since "the left knee MRI showed findings suggestive of a small area of stress fracture of the posterior aspect of the lateral tibial plateau". *Id* at 3.

6. Claimant returned to Dr. Sparr on August 21, 2018 for a follow up evaluation. Dr. Sparr again referenced his prior request for PRP and stem cell injections for the left knee, along with deep tissue massage in the hip and buttock, in conjunction with the trochanteric bursa injection. Dr. Sparr performed that injection at the appointment on August 21, 2018. (Ex. 2, pp. 8-10).

7. Claimant's final visit with Paula Homberger, PA-C, was on September 13, 2018 (Ex. A, p. 3). At that time, Claimant demonstrated full range of motion in the lumbar spine without guarding. She also showed good range of motion of both of her knees with very mild crepitus. Claimant continued however, to report achiness in her back and right knee, with constant pain in her left knee and left hip. MMI was anticipated within one or two visits. Claimant was to follow up with Dr. Kurz.

8. The Claimant followed up with Dr. Sparr on October 11, 2018. She indicated to Dr. Sparr that she received beneficial results from the PRP injection and the deep tissue massage. Dr. Sparr anticipated continuing improvement. (Ex. 2, pp. 11-12). As a result, Dr. Sparr ordered a short course of chiropractic treatment, combined with trigger point injections throughout the back, buttock, hip and thigh. In addition, Dr. Sparr recommended continuing physical therapy at the City Clinic, with aggressive deep tissue work. This medical provider again suggested a repeat MRI of the left knee should the left knee pain persist. (Ex. 2, p. 12).

9. Five days later, on October 16, 2018 Claimant was evaluated by Dr. Nicholas Kurz with the City Clinic. In her intake form (Ex. 3, p. 30), Claimant noted that Dr. Sparr had recommended 'pain shot's and chiropractic for back, pelvis, and knees. She stated that she is attending physical therapy once per week, and that it is helping. *Id.* She indicated that she still feels pain in her left knee (3 to 4), right knee (2 to 3), hip (4), and back (2 to 3). Claimant marked her pain diagram consistent with those complaints. *Id.*

10. Despite this, Dr. Kurz placed the Claimant at maximum medical improvement and concluded that all injuries had "resolved". He stated no medical maintenance or impairment rating was appropriate. Dr. Kurz stated in his report that Claimant "was able to complete a full squat w/o c/o" [without complaint]. (Ex. 3, p. 28). Dr. Kurz has evaluated the Claimant on this occasion only. In his narrative, Dr. Kurz notes that Claimant's appointment began at 8:19 a.m., and his notes were electronically signed at 9:07 a.m. [It is unclear from this record if Claimant's *appointment* began at this time, or if this signified the onset of *personal contact* with her, or if this is when he first *reviewed her file*].

11. At hearing, Claimant testified that she was upset and angry after reviewing Dr. Kurz's report "…because everything that was written on that report was false." Claimant stated that she completed a pain diagram at every appointment with the Occupational Health Clinic, including the date of her

appointment with Dr. Kurz. Claimant testified she did not advise Dr. Kurz that her symptoms had 'resolved'. Claimant indicated that when the appointment began, she told Dr. Kurz how she got hurt, and described her symptoms. Then he 'went out of the office and came back in and released me." She thought the appointment lasted "less than ten minutes."

12. Regarding Dr. Kurz' observation that she could perform a full squat, the following exchange took place:

Q In his report, Dr. Kurz says…."Able to do a complete squat without complaint" Agree with that?
A I do not.
…..
Q Describe the squat you did in his office.
A When he was in the office, and he asked me to do a squat, I looked directly at him, and I told him I could not do a squat. And he's like – he tells me to – to at least try. So I ask him is it okay if I hold on to the table that was in the room. And he said, " Do what you have to do ." So as I started to squat down, I actually reached for his hand, to help me back up.

Q All right. And you – are—can you squat by yourself, unassisted?
A No, I can't. (Hearing transcript, p. 18).

13. Claimant further testified that she already had a physical therapy appointment scheduled at the City Clinic for later that same day, but Dr. Kurz cancelled it, and told her she could not go.

14. Respondents filed a Final Admission of Liability consistent with Dr. Kurz' October 16, 2018 report, denying any medical impairment and medical care post-MMI. The Claimant timely appealed by requesting a DIME. Dr. Sharma was selected as the DIME physician and the evaluation occurred on April 5, 2019. (Ex. 5, p. 34).

15. Dr. Sharma, upon providing a detailed review of medical records along with an evaluation of the Claimant, concluded that the Claimant did qualify for impairment ratings. Dr. Sharma assigned a four percent (4%) extremity rating to the right knee, four percent (4%) extremity rating to the left knee and eight percent (8%) whole person impairment for the lumbar spine. (Ex. 5, pp. 55-57; 60-63). Dr. Sharma recommended maintenance medical care in the form of massage therapy and acupuncture, not to exceed twelve visits. (Cl. Ex. 5, pg. 58). Respondents admitted to the impairment ratings provided by Dr. Sharma, but continued to deny maintenance medical care. (Ex. 1, pp. 1-2).

16. Claimant testified that she continues to experience constant pain down the left side as well as low back pain. She has periodic leg numbness and difficulty

sleeping at night. The Claimant testified that her condition has worsened since her medical care was terminated. She is still able to perform her job duties, "but I do them in a very different way." She reports having to intermediate breaks, relax, stretch, and try to "get myself situated." After relaxing, however, she finds it difficult to get up to walk.

17. Claimant, through counsel, indicated that she was not interested in the post-MMI treatment recommended by the DIME, but instead requested the ALJ to order the post-MMI treatment as recommended by Dr. Sparr.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201, C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979).*

B. In determining credibility, the Administrative Law Judge should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil 3:16.* The Administrative Law Judge, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Trumbull, 802 P.2d 1182, 1183 (Colo. App. 1990).* In this instance, the Administrative Law Judge finds Claimant to be forthright and credible, both to her medical providers, and in her testimony.

C. In accordance with *Section 8-43-215, C.R.S.*, this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the Administrative Law Judge has made credibility determinations, drawn plausible inferences from the record and resolved essential conflicts in the evidence. *See Davidson v. Industrial Claim Appeals Office, 84 P.3d 1023 (Colo. 2004).* This decision does not address every item contained in the record, instead, incredible or implausible testimony or unpersuasive arguable inferences have been

implicitly rejected. *Magnetic Engineering, Inc., v. Industrial Claims Appeals Office, 5 P.3d 385, (Colo. App. 2000).*

Medical Treatment, Generally

D. Respondents are liable for medical treatment reasonably necessary to cure or relieve the effects of an industrial injury. *Section 8-42-101*. Even if the Respondents admit liability, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the Administrative Law Judge to approve all requested treatment. *Snyder v. City of Aurora, 942 P.2d 1337 (Colo. App. 199)7; McIntyre v. KI, LLC., W.C. No. 4-805-040 (July 2, 2010).* The Claimant must prove that an injury directly and proximately caused the condition for which she seeks treatment, and that the treatment is reasonably necessary. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office, 989 P.2d 251 (Colo. App. 1999); Snyder v. Industrial Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997).*

Post MMI-Maintenance Medical Care, Generally

E. The Claimant has the burden to establish by a preponderance of the evidence that her request for maintenance medical benefits is reasonable, necessary and related to relieve the effect of the industrial injury or to prevent further deterioration of the Claimant's condition. *Grover v. Industrial Commission, 759 P.2d 705 (Colo. 1988), Van Meter v. City Market, Industrial Claims Appeals Office 4-781-504-02-2012).* The question of whether a need for treatment is causally connected to an industrial injury is a question of fact for the Administrative Law Judge.

Post-MMI Maintenance Medical Care, as Applied

F The Claimant has received extensive care since the date of injury. She treated with PA-C Homberger for over two years, and received referrals to two separate orthopedists, along with treatment with Dr. Sparr. She undertook physical therapy, and reported that it was beneficial. Dr. Purcell indicated that Claimant has a "very burdensome problem", and could improve, but then worsen with time. This appears to have been the case with Claimant. A stress fracture of Claimant's left tibial plateau has never been ruled out, nor has an alternative, non-work-related theory been posited for its possible existence.

G. Claimant was actively participating in physical therapy, and was referred by Dr. Sparr for trigger point injections followed by aggressive myofascial release under the direction of Dr. Abercrombie. This referral by Dr. Sparr occurred on October 11, 2018. Five days later, on October 16, 2018, the Claimant was evaluated by Dr. Kurz. This is the only evaluation Dr. Kurz ever performed of the Claimant.

H. On the date of appointment with Dr. Kurz, the Claimant completed a pain questionnaire identifying ongoing pain to the left and right knee, hip and back. On that pain questionnaire, the Claimant noted the recommended treatment by Dr. Sparr involving injections and follow up chiropractic care. The Claimant described this as a ten minute evaluation which resulted in Dr. Kurz placing the Claimant at MMI with no impairment and terminating all maintenance medical care.

I. From the evidence, the ALJ notes that from the beginning of Claimant's appointment, until her notes were electronically signed by Dr. Kurz, took a total of 48 minutes. This would include, ostensibly, a review of over two years of records from PA Homberger, two orthopedists, an MRI, and Dr. Sparr's reports. Then a history from Claimant, a physical examination (the ALJ notes that Claimant's range of motion was noted by Dr. Kurz to be normal-the DIME disagreed), and dictation and review of the physician's narrative. With all due recognition to the workload at the City Clinic, and while Claimant's 10-minute estimate of the appointment might or might not be accurate, the ALJ concludes that inadequate time was spent in evaluating Claimant's post-MMI medical care needs. Her medical issues have *not* resolved.

J. The Claimant credibly testified that her condition has worsened since her medical care was terminated. She detailed how she performs her job differently now as a result of her injuries. She wanted to follow up on Dr. Sparr's and PA-C Homberger's recommendations, but all her post-MMI medical care was summarily terminated after one appointment with Dr. Kurz.

Conclusion

K. Dr. Kurz' termination of the Claimant's medical benefits is not supported by the medical evidence, and his opinion is not persuasive. The ALJ finds that all post-MMI care as recommended by Dr. Sparr to date is reasonable, necessary, and related to cure Claimant of her work injuries. Upon resumption of care with Dr. Sparr, at his option, this would include a follow-up MRI on Claimant's left knee. The Claimant indicates that she is not interested in pursuing the massage and/or acupuncture treatment suggested by Dr. Sharma; therefore the ALJ declines to order that treatment.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for post-MMI medical maintenance care as recommended by Dr. Sparr, to include a 2nd left knee MRI if so recommended.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3 All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 4, 2019

Colorado Springs, Colorado 80906

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the right total knee arthroplasty recommended by Dr. Christopher George is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted February 15, 2019 work injury.

FINDINGS OF FACT

1. The claimant suffered an injury while working for the employer on February 15, 2019. The claimant testified that he was in front of the employer's store when he slipped on some ice and fell. The claimant fell onto his right knee and felt a pop. The claimant reported the injury to the employer. At that time, the claimant was directed to the emergency room (ER) for medical treatment. The claimant testified that at the ER, x-rays were taken of his right knee and he was given crutches.

2. The claimant testified that he had a prior injury to his right knee in the 1970's that resulted in a surgery. The claimant also testified that he did not have any right knee pain between his 1970's injury and the slip and fall on February 15, 2019. Additionally, the claimant testified that although he currently takes the medication Tramadol, (and has taken Tramadol for some time), he does so to treat only his left knee pain because he has had a total left knee replacement.

3. Medical records entered into evidence demonstrate that the claimant sought treatment for bilateral knee pain in 2015 with his primary care provider, Dr. Bruce D. Lippman. On September 17, 2015, the claimant saw Dr. Lippman because of right knee pain. The medical record of that date indicates that the claimant had a total left knee replacement. Dr. Lippman also noted that the claimant had bad arthritis in the right knee, necessitating taking four to six Tramadol per day. In addition, Dr. Lippman noted that the claimant "thinks he eventually will need his right knee replaced as well." Thereafter, the claimant was seen by Dr. Lippman on an ongoing basis to treat osteoarthritis of the knee. On March 17, 2017, Dr. Lippman noted that the claimant's "knee continues to give him some pain. Eventually plans on getting a knee replacement."

4. Following the fall on February 15, 2019, on February 16, 2019, the claimant sought treatment with Dr. Lippman. Although Dr. Lippman is the claimant's personal physician as described above, he is also the claimant's authorized treating physician (ATP) for this claim. On February 16, 2019, the claimant reported that he had pain, swelling, and stiffness in his right knee. He also noted that his knee was unstable. At that time, Dr. Lippman diagnosed a right knee sprain and ordered an x-ray.

5. Following the injury On February 16, 2019, an x-ray of the claimant's right knee showed no acute fracture. Subsequently, Dr. Lippman ordered a magnetic resonance image (MRI) of the claimant's right knee and referred the claimant for an orthopedic consultation.

6. On February 22, 2019, an MRI of the claimant's right knee showed the lateral meniscus was absent (likely from surgical resection); complete tear of the mid anterior cruciate ligament (ACL); partial tear or strain of the proximal posterior cruciate ligament; Grade 1 strain of the medial collateral ligament; strain or partial tear of proximal popliteus tendon; probable old fracture of the lateral tibial plateau; severe osteoarthritis of the patellofemoral joint and lateral compartment; mild osteoarthritis of the medical compartment; moderate joint effusion and probably small intraarticular loose bodies; and a Bakers' Cyst.

7. On February 27, 2019, the claimant was seen by surgeon Dr. Christopher George for consultation. At that time, the claimant described his symptoms as increased pain, swelling, and instability. Dr. George reviewed the claimant's x-rays and MRI and opined that the torn ACL was caused by the claimant's fall at work. In support of this opinion, Dr. George noted that the claimant reported no instability prior to the fall, but experienced the onset of instability with the fall. Dr. George administered a cortisone injection to the claimant's right knee. In addition, he recommended a right total knee arthroplasty.

8. On March 7, 2019, the respondents filed a General Admission of Liabilty (GAL) for the claimant's February 15, 2019 injury. However, the respondents have denied authorization for the recommended right knee surgery.

9. On April 16, 2019, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Lesnak opined that the claimant possibly suffered a right knee sprain when he fell on February 15, 2019. In addition, Dr. Lesnak opined that the claimant's current right knee symptoms are not related to the fall at work. In support of this opinion, Dr. Lesnak noted that the x-rays of the claimant's right knee showed no acute abnormality and the MRI showed no acute trauma or injury related pathology. Dr. Lesnak opined that the findings on the MRI are evidence of severe chronic osteoarthritis. In addition, Dr. Lesnak noted that while a right total knee arthroplasty would be reasonable treatment of the claimant's condition, it is unrelated to the February 15, 2019 work injury.

10. On August 13, 2019, the claimant attended an IME with Dr. James Lindberg an orthopedic surgeon with a specialty in knees. Dr. Lindberg also reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Lindberg opined that the claimant did not suffer an acute injury to his right knee when he fell on February 15, 2019. In support of this opinion, Dr. Lindberg noted that the findings on the claimant's x-ray and MRI are of chronic degenerative changes. Dr. Lindberg agrees with Dr. Lesnak that a total knee

replacement is reasonable treatment for the claimant. However, it is Dr. Lindberg's opinion that the claimant's need for surgery is unrelated to the work injury. In addition, Dr. Lindberg opined that the slip and fall on February 15, 2019 did not aggravate or accelerate the claimant's need for a knee replacement.

11. Dr. Lindberg's testimony at hearing was consistent with his written report. Dr. Lindberg testified that the claimant has longstanding instability in his right knee and longstanding osteoarthritis. Dr. Lindberg also testified that there is no evidence to support the finding of an acute ACL tear at the time of the work injury. Nor did the fall aggravate or accelerate the condition of the claimant's right knee to necessitate surgery.

12. The ALJ credits the medical records and the opinions of Drs. Lesnak and Lindberg over the contrary opinion of Dr. George and finds that the claimant has failed to demonstrate that the recommended right total knee arthroplasty is related to the work injury. While it is clear from the medical records that the claimant needs to undergo a right total knee arthroplasty, that need is not related his slip and fall on February 15, 2019. The ALJ also credits the opinions of Drs. Lesnak and Lindberg that the claimant's fall on February 15, 2019 did not aggravate, accelerate, or combine with the claimant's preexisting right knee condition to necessitate surgery.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

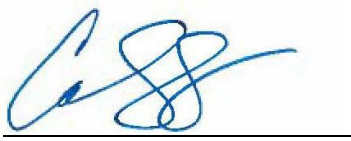
4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the claimant's need for total right knee arthroscopy is causally related to the February 15, 2019 work injury. As found, the medical records and the opinions of Drs. Lesnak and Lindberg are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for a right total knee arthroplasty is denied and dismissed.

Dated this 5th day of November, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-979-504-001

ISSUE

I. Whether Respondent proved by a preponderance of the evidence that Claimant no longer needs maintenance medical treatment for her work-related injury of December 30, 2014.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant has a history involving the idiopathic and abrupt onset of severe and disabling neck pain. Based upon the medical records submitted at hearing, this started in 2003. *Ex. B, p. 14*. As time went on, Claimant also developed chronic headaches and/or migraines.

2. In approximately 2003, Claimant had the idiopathic and abrupt onset of burning pain in her neck. Merely turning her head or sitting for long periods increased her symptoms. These symptoms also affected her ability to work. *Ex. B, p. 14*.

3. On September 5, 2005, Claimant again had the idiopathic and abrupt onset of neck pain, pain in her shoulders, as well as tingling and numbness in her upper extremities. These symptoms developed when she woke up in bed. The medical report indicates:

> [Claimant] is a 34-year-old… who is here for neck pain that started on 9-5-05. She was sleeping and stretched and felt immediate pain in her neck that she describes as a burning pain in her neck and shoulders. *Ex. B, p. 14*.

4. On September 6, 2005, Claimant presented to the emergency room due to continuing neck pain and associated symptoms. Due to her symptoms, she was prescribed cyclobenzaprine and Percocet. Based on the extent of her neck pain and associated symptoms, Claimant was scheduled to see a spinal surgeon. *Ex. B, p. 14*.

5. On September 8, 2005, Claimant was evaluated by Dr. Amit Agarwala, a spinal surgeon. Claimant complained of neck pain, bilateral trapezius pain, as well as tingling and numbness in her upper extremities. At that time, Claimant's symptoms were aggravated by engaging in any physical activities. And, consistent with the cause of her symptoms in 2003, Claimant's neck pain and upper extremity problems, for which she was seeing a spinal surgeon, emerged idiopathically and abruptly. Claimant's symptoms were not caused by a specific accident or injury. Based on his evaluation, Dr. Agarwala took Claimant off work

for 4 days and indicated that if her upper extremity symptoms worsened, he would request an MRI. *Ex. B, p. 14.*

6. After her surgical evaluation, there are no medical records documenting Claimant had ongoing neck problems until her motor vehicle accident in 2008. But, the records do document she suffered from migraines before her 2008 auto accident. *Ex. E, p. 266*.

7. On August 25, 2008, Claimant was involved in a motor vehicle accident in which she was rear-ended and "whipped around" in her vehicle. She injured her cervical spine and upper extremities in the accident, and she aggravated her preexisting headaches. She was diagnosed with a whiplash cervical injury. *Ex. E, p. 266.*

8. On September 10, 2008, Claimant was evaluated by Dr. Kawasaki. At that time, Claimant's focal area of cervical tenderness was in the C5-6 and C6-7 areas. She was diagnosed with cervical facet dysfunction at C5-6 and C6-7 with radiation into the shoulder girdle. Dr. Kawasaki prescribed Claimant chiropractic treatment, acupuncture, and physical therapy. *Ex. E, pp. 267-268.*

9. On October 8, 2008, Claimant returned to Dr. Kawasaki. Although she was feeling better, she still had some left-sided cervical pain and a constant headache. Dr. Kawasaki concluded Claimant continued to have cervical facetogenic pain generation with inflammation to the shoulder girdles and cervicogenic headaches with occipital neuralgia. He also noted Claimant had a history of migraine headaches. *Ex. E, p. 264*.

10. On December 10, 2008, Claimant returned to Dr. Kawasaki. At this appointment, Claimant reported she was doing much better and had almost no symptoms. Therefore, Dr. Kawasaki released her from care, but indicated she should be allowed maintenance care in the form of up to 6 acupuncture and chiropractic treatments, as well as massage therapy, during the next 12 months, for any flairs and to maintain her condition. *Ex. E, pp. 260-261*.

11. On January 21, 2009, the Claimant returned to Dr. Kawasaki for additional treatment because both her cervical pain and headaches had returned and worsened. There is no indication Claimant was involved in a specific incident or accident that caused the onset and reemergence of her neck pain and headaches. However, before returning to Dr. Kawasaki, Claimant had seen her chiropractor, Dr. Gridley, for her increase in symptoms, and based on her complaints, Dr. Gridley ordered and MRI. According to Dr. Kawasaki, the MRI showed multilevel degenerative disc changes, which included broad-based disc protrusions and early disc osteophyte complexes at the C3-C4, C4-C5, and C5-C6. It also demonstrated that at the C4-C5 level, there was a central disc protrusion, which appeared to contact the anterior aspect of her spinal cord but did not displace the cord. During this appointment, she was provided an occipital nerve block for her headaches and was advised to continue chiropractic treatment. *Ex. E, pp. 258-259.*

12. On January 29, 2009, Claimant reported to Dr. Kawasaki that she had temporary relief of her headaches from the occipital nerve blocks, but increased cervical pain after recent chiropractic and acupuncture treatments. Therefore, she was referred to Dr. John Sacha for facet injections. *Ex. E, pp. 256-257*.

13. On February 24, 2009, Dr. Sacha began treating Claimant for the cervical injuries she sustained in the motor vehicle accident and her cervicogenic headaches. At this appointment, Dr. Sacha administered facet injections, medial branch blocks, and occipital nerve blocks. These procedures did not provide any lasting relief, a result that caused Dr. Sacha to recommend against a radiofrequency procedure. *Ex. C, pp. 202-205; Ex. E, p. 254.*

14. On April 17, 2009, Claimant underwent a medial branch block procedure at the C2-3 and C3-4 level that caused her quite a bit of pain but yielded mild improvement of her neck pain and headaches. The pain improvement was not enough to justify a radiofrequency procedure, but she was instructed to continue with her chiropractic and acupuncture treatment, as well as medications for her headaches. *Ex. E, p. 252*.

15. On July 10, 2009, Claimant returned to Dr. Kawasaki after having another cervical MRI, which focused on her upper cervical region. He noted that:

> The patient had a special MRI of her upper cervical region, which showed evidence of grade 3 alar ligament tear and transverse ligament tears at the CI-2 junction. I had discussions with several surgeons in regards to putting the patient on any other treatment options. I spoke with Scott Stanley, MD, who recommended that the patient undergo a cervical flexion/extension CT scan to rule out instability at the atlanto-occipital and atlantoaxial junctions. CT scan was done with flexion/extension views. The films were reviewed today which show no evidence of instability. *Ex. E, p. 249.*

16. Following the evaluation, Dr. Kawasaki noted that he discussed the case with Dr. Sacha, who apparently suggested that the patient undergo atlanto-occipital and C1-C2 facet joint injections. Dr. Kawasaki concluded:

> If she decides to undergo this procedure, it will be set up with Dr. Sacha. There really is no guarantee that this will be helpful to her, although short of this, I do not believe there is much more to offer [Claimant] other than chronic pain medication relief. *Ex. E, p. 250*.

17. On November 4, 2009, Claimant reported continued cervical pain of 4/10 and ongoing weekly headaches, which she rated at 7/10, and stated that sometimes they become so severe she is in tears. Since nothing had provided any long-term relief, Claimant expressed a desire to discontinue treatment and "just learn to live with the headaches and neck pain." *Ex. E, pp. 246-247*.

18. On January 29, 2010, almost three months since her last appointment with Dr. Kawasaki, Claimant had the abrupt onset of severe headaches and ongoing neck

pain. The report from that visit notes Claimant reported "severe, unrelenting" headaches mostly on the right side, along with continued – and increasing cervical pain. She was given additional occipital nerve blocks and prescribed medications for her headaches. There is no indication that any incident caused Claimant's symptoms to increase and resulted in her seeking additional medical treatment. There were no future appointments scheduled. Claimant was merely advised to return on an as needed basis. *Ex. E, pp. 244-245*.

19. On March March 6, 2010, Claimant returned to Dr. Kawasaki. She again had an abrupt increase in her headaches and cervical spine pain. The report from that date indicated Claimant was reporting "severe, unrelenting" headaches that caused her to go to the emergency room. At this visit, Dr. Kawaski noted Claimant appeared very uncomfortable, was stiff throughout the cervical spine, and appeared to be in moderate to severe pain. She was given additional occipital nerve blocks on this date. She was also given a trial of Amerge, a triptan medication, for her headaches. *Ex. E, pp. 242-243*.

20. On April 22, 2010, Claimant returned to Dr. Sacha. He noted Claimant had segmental dysfunction throughout the entire cervical spine, but more so in her upper cervical spine. Based on his assessment, he decided to administer additional injections. *Ex. C, p. 202.* Therefore, on April 29, 2010, Dr. Sacha administered joint injections for the Claimant's cervical facet syndrome and headaches. *Ex. C, p. 200*.

21. On January 10, 2011, Claimant returned to Dr. Kawasaki and complained of a worsening of her cervical pain and headaches. She was given additional occipital nerve blocks, referred for additional cervical injections, and was continued on her Amerge headache medication. *Ex. E, pp. 237-238.*

22. On January 27, 2011, Dr. Sacha administered additional joint injections for the Claimant's cervical facet syndrome and cervicogenic headaches. *Ex. C, p. 198*.

23. On February 4, 2011, the Claimant reported that her cervical pain was 5/10. She was continued on her Amerge headache medication. *Ex. E, pp. 235-236*.

24. On August 3, 2011, Dr. Sacha added cervical traction to Claimant's treatment regimen and continued her chiropractic and acupuncture treatment. *Ex. C, p. 197*.

25. On August 10, 2011, Dr. Sacha reviewed the results of Claimant's new MRI of her cervical spine. The new MRI showed markedly progressed disc bulging at C5-6 as when compared with previous MRI studies, as well as new foraminal and canal narrowing. The MRI also showed significant straightening of the cervical lordosis, disc bulging at C4-5 and C6-7, and facet spondylosis, which were unchanged from the previous MRI study. At that appointment, Dr. Sacha added the additional impression, or diagnosis of "Cervical radiculopathy with new onset/worsening of disc protrusion at C5-6. Therefore, despite there not being any new accidents or incidents, Claimant's cervical spine condition was worsening and now included a disc protrusion at the C5-6 level as well as foraminal and spinal canal narrowing at that level. *Ex. C, p. 194*.

26. On September 16, 2011, Claimant complained of ongoing headaches, and she was referred back to Dr. Sacha for contemplation of additional procedures to address her headaches. *Ex. E, pp. 229-230*.

27. On September 29, 2011, Dr. Sacha performed medial branch neurotomies. *Ex. E, p. 224.*

28. On October 17, 2011, Claimant reported increased pain from the recent medial branch neurotomies performed by Dr. Sacha. She reported a pain level of 6/10. She reported continued use of Amerge. *Ex. E, pp. 227-228*.

29. On December 9, 2011, Claimant reported the onset of additional cervical pain that did not exist prior to the last medial branch neurotomies performed by Dr. Sacha. At this time, Claimant was complaining of pain throughout her entire cervical spine and hypersensitivity. She reported her pain as 5/10. She also reported continued use of Amerge for headaches. *Ex. E, pp. 224-225*.

30. On December 27, 2011, Dr. Kawasaki opined that a cervical fusion surgery was the last resort for resolution of the Claimant's symptoms, and though contra-indicated for a number of reasons, may have to be pursued if Claimant is unable to otherwise control her progressive symptoms. *Ex. E, pp. 222-223*.

31. On February 13, 2012, the Claimant reported "doing somewhat better" with pain 4/10. She continued to have headaches, some of which were severe. She continued to take diclofenac for her neck pain as well as Amerge for her headaches. *Ex. E, p. 218; Ex B, p. 20*.

32. On May 16, 2014, the Claimant returned to Dr. Kawasaki for evaluation and treatment of her ongoing cervical pain and headaches. During his physical examination, Claimant still had symptoms associated with her neck. He continued her use of Amerge for her headaches, and considered using another medication, instead of diclofenac that was being used for her neck pain, since the new medication can also help with migraines. He scheduled her to return as needed for a follow-up examination, or within the next year at the latest. *Ex. E, pp. 216-217*.

33. As of November 25, 2014, the Claimant was taking Amerge on a daily basis for her headaches and diclofenac for her neck pain. *Ex. F, p. 291*.

34. On December 30, 2014, Claimant suffered an admitted work injury, which is the subject of this claim, when she slipped on some snowy steps at work and slid down the stairs. She landed primarily on her bottom and left side. She did not strike her head and she did not tumble down the stairs. *Ex. F, p. 285*.

35. On December 31, 2014, Claimant presented to Dr. Ricky Artist and reported having preexisting chronic neck pain and being on a regimen to control her chronic neck pain that included regular exercise, stretches and taking the anti-inflammatory medication diclofenac nightly in order to sleep. *Ex. A, p.1; Ex. F, p. 286*. The report from Dr. Artist notes that Claimant said she had an acute neck strain on top of her preexisting chronic neck pain. Dr. Artist expected that within a week the aggravation of her chronic neck symptoms would resolve and return to baseline and Claimant would be able to return to her "normal care program for

her neck." At this appointment, Claimant also complained of back pain. *Ex. F, p. 285*.

36. On January 5, 2015, Claimant followed with Dr. Susan Morrison for her work injury. Claimant reported to Dr. Morrison that her neck pain was largely resolved. However, Claimant was having bilateral low back pain. *Ex. F, p. 283*.

37. On January 13, 2015, Claimant returned to Dr. Morrison and reported having ongoing back pain and the recurrence of her neck pain. She was referred for chiropractic and acupuncture treatment. *Ex. F, pp. 278-29; Ex. C, p. 187*.

38. On February 26, 2015, Claimant was referred to Dr. Sacha to take over treatment of her recent work injury. Dr. Sacha opened his report of this date by stating that the Claimant "has a long, complex history of previous neck pain from a motor vehicle accident…" He also confirmed the presence of residual symptoms from that injury. Dr. Sacha concluded that the recent work injury had "flared" both the cervical and lumbar injuries from her motor vehicle accident. He recommended only acupuncture treatment for the cervical spine, and physical therapy and an MRI for her lumbar spine. *Ex. C, pp. 187-188*.

39. On March 12, 2015, Claimant returned to Dr. Sacha. At this appointment, he primarily focused on Claimant's low back, and the only additional treatment he opined on providing Claimant was an epidural injection for her lumbar spine. *Ex. C, pp. 185, 186.*

40. On April 2, 2015, Claimant returned to Dr. Sacha. At this appointment, it appears that the primary condition for which Claimant was evaluated - due to ongoing complaints of low back pain - was her low back. In discussing her low back, he noted Claimant had no significant improvement after 8 sessions of acupuncture and chiropractic treatment. He then prescribed a right L5 and S1 transforaminal epidural steroid injection/spinal nerve root block for diagnostic and therapeutic purposes of her back complaints and physical therapy directed towards her low back and neck. *Ex. C, pp. 183-184*.

41. On May 5, 2015, Claimant returned to Dr. Sacha. In his report, he notes that her workers' compensation claim was denied, but that Claimant wanted to continue with treatment under her private insurance. The report from this appointment does not indicate whether Claimant was still complaining of any cervical problems, even though he did examine her cervical spine and noted his findings. Based on Claimant's decision to treat under her personal insurance, Dr. Sacha continued treating Claimant based on Claimant's symptoms and his findings. At this appointment, he set forth a treatment plan for only her lumbar spine, and not her cervical spine. His treatment plan for her lumbar spine included a right L5 and S1 transforaminal epidural steroid injection/spinal nerve root block for diagnostic and therapeutic purposes. *Ex. C, pp. 181-182*.

42. On May 14, 2015, Dr. Sacha performed the lumbar injections. The report from this date does not note any cervical problems. *Ex. C, pp. 179-180*.

43. On May 27, 2015, Dr. Sacha evaluated Claimant. At this visit, the only issue addressed was Claimant's low back and her associated radicular symptoms in

her lower extremities. At this appointment, Dr. Sacha neither examined her neck nor prescribed any treatment for her neck. He did, however, order an EMG due to her back injury and radicular complaints. *Ex C, pp. 177-178*.

44. On June 11, 2015, Claimant returned to Dr. Sacha. The notes from this appointment indicate he only addressed Claimant's back problems because Claimant was not complaining of any cervical symptoms from her December 30, 2014, work accident. Again, at this appointment, he only assessed Claimant's low back and her associated radicular symptoms in her lower extremities. Based on his examination, he recommended a consultation with an orthopedic surgeon, Dr. Castro, for Claimant's lumbar complaints. He also prescribed additional lumbar injections for diagnostic and therapeutic purposes. And, at this appointment, he again neither examined her neck nor prescribed any treatment for her neck. *Ex. C, pp. 175-176*.

45. On July 8, 2015, Dr. Sacha saw the Claimant and addressed her cervical spine for the first time since his initial appointment in February. He referred to Claimant's cervical issues as an aggravation of her preexisting injury. He recommended chiropractic and acupuncture care for the cervical spine, and discussed the possibility of medial branch blocks and a radiofrequency neurotomy (RF) procedure. *Ex. C, pp. 171-172*.

46. On August 6, 2015, Claimant returned to Dr. Sacha. Due to ongoing cervical symptoms, he recommended a medial branch block with consideration of subsequent RF procedure. He continued her with chiropractic and acupuncture care for the neck in the meantime. *Ex. C, pp. 165-166*.

47. On September 17, 2015, Dr. Sacha performed the RF procedure. *Ex. C, p. 152*.

48. On October 22, 2015, Claimant returned to Dr. Sacha and reported continued pain even after the RF procedure, attendant physical therapy, and addition of topical pain cream to her regimen. *Ex. C, pp. 147-148*.

49. On December 3, 2015, Dr. Sacha reported about 60% improvement in her neck symptoms from the RF procedure. *Ex. C, pp. 143-144*.

50. On January 5, 2016, however, the Claimant reported to her physical therapist that her neck pain remained at 4/10. *Ex. B, p. 24*.

51. On April 13, 2016, Dr. Sacha placed the Claimant at MMI. On this date, Dr. Sacha recommended maintenance treatment in the form of medications, a possible lumbar epidural injection, a gym and pool pass and one possible repeat radiofrequency procedure for the spine. Dr. Sacha anticipated this maintenance treatment period lasting between six months and two years. *Ex. A, pp. 7-8*.

52. On May 12, 2016, the Claimant returned to Dr. Sacha for a maintenance appointment but there was no discussion of any new or worsening cervical symptoms nor any additional cervical treatment recommended. *Ex. C, pp. 118-119*.

53. On July 5, 2016, Dr. Sacha stated that continued maintenance treatment would consist of medications and follow-up appointments for 6 to 12 more months, as

well as a gym/pool pass for 12 months. He did not, however, indicate whether that was for the back, cervical spine, or both. *Ex. C, p. 112*.

54. On August 11, 2016, the Claimant returned to Dr. Sacha and reported less cervical pain and less headaches. She also reported that she had restarted her home exercise program. No treatment for the cervical spine was recommended. *Ex. C, pp. 107-108*.

55. On September 6, 2016, Respondents filed a Final Admission of Liability that admitted for post-MMI medical benefits. *Ex. A, p. 2*.

56. On September 14, 2016, Claimant returned to Dr. Sacha and reported ongoing cervical spine symptoms and headaches. No treatment for the cervical spine was recommended. *Ex. C, pp. 102-103*.

57. On December 1, 2016, the Claimant returned to Dr. Sacha and reported increased headaches with no new trauma or inciting event. In prescribing ongoing use of Amerge for headaches, Dr. Sacha mistakenly stated that she had no previous history of cervical related headaches. *Ex. C, pp. 97-98*.

58. On January 4, 2017, Claimant reported to Dr. Sacha another "intolerable" flare of cervical symptoms, which her physical therapist attributed to a new aggravation, but did not note any particular event that caused the aggravation of her symptoms. More physical therapy appointments were recommended under the workers' compensation claim. *Ex. C, p. 95*.

59. On February 23, 2017, Dr. Sacha performed a repeat RF procedure on Claimant's cervical spine. *Ex. C, p. 87*.

60. On June 15, 2017, Claimant returned to Dr. Sacha, who noted, "She is still having the same neck pain that is unchanged." No further specific treatment was recommended for the cervical spine. *Ex. C, pp. 81-82*.

61. On November 30, 2017, the Claimant returned to Dr. Sacha and noted an increase in her cervical symptoms without any known cause. He recommended acupuncture treatment. *Ex. C, p. 70*.

62. On March 22, 2018, Dr. Sacha performed a third RF procedure on the cervical spine. *Ex. C, p. 61*.

63. On March 30, 2018, Dr. Sacha reported Claimant indicated a 50% to 60% improvement in symptoms from the RF procedure. *Ex. C, p. 59*.

64. On April 5, 2018, however, Claimant reported to her physical therapist that her cervical pain remained at 4/10. *Ex. B, p. 30*.

65. On April 20, 2018, the Claimant told her physical therapist that her cervical pain was "about the same." *Ex. B, p. 30*.

66. On April 26, 2018, however, Dr. Sacha reported 70% improvement on neck pain and 90% with headaches. Additionally, he noted that the Claimant was no longer having any lower back pain. *Ex. C, p. 56*.

67. On May 14, 2018, and without any analysis as to how he concluded such, Dr. Sacha stated that the Claimant's Amerge medication for her headaches should only be covered under her workers' compensation claim through May 2019. *Ex. C, p. 54*.

68. On October 11, 2018, the Claimant returned to Dr. Sacha complaining of increased cervical pain and symptoms. Dr. Sacha referred her for more chiropractic and acupuncture treatment. *Ex. C, p. 50*.

69. On January 10, 2019, the Claimant returned to Dr. Sacha complaining of increased cervical pain and headaches since her last visit despite the resumption of chiropractic and acupuncture treatment. Regardless, Dr. Sacha renewed her prescription for chiropractic and acupuncture treatment. *Ex. C, pp. 48-49*.

70. On January 25, 2019, the Claimant reported to her primary care provider that she was not having any neck pain. *Ex. F, pp. 269-270*.

71. On February 7, 2019, Dr. Sacha administered a trigger point injection for the Claimant's ongoing cervical symptoms. *Ex. C, p. 46*.

72. On February 11, 2019, the Claimant received chiropractic and acupuncture treatment. She reported pain of 4/10 at this time. *Ex. D, pp. 214-215*.

73. On February 14, 2019, the Claimant received chiropractic and acupuncture treatment. She reported pain of 4/10 at this time. *Ex. D, pp. 212-213*.

74. On February 21, 2019, the Claimant received chiropractic and acupuncture treatment. She reported pain of 4/10 at this time. *Ex. D, pp. 210-211*.

75. On February 25, 2019, the Claimant received chiropractic and acupuncture treatment. She reported pain of 4/10 at this time. *Ex. D, pp. 208-209*.

76. On February 28, 2019, the Claimant received the last of her recommended chiropractic and acupuncture treatments. She reported pain of 4/10 at this time. *Ex. D, pp. 206-207*.

77. On March 21, 2019, the Claimant returned to Dr. Sacha and reported no change in her ongoing cervical symptoms despite the recent trigger point injection and completion of her chiropractic and acupuncture treatment. Dr. Sacha recommended use of an inferential unit to control her symptoms. *Ex. C, p. 43*.

78. On July 2, 2019, the Claimant underwent an independent medical examination with Dr. Lesnack. Dr. Lesnack is a board-certified physiatrist. At least 90% of his practice is committed to treating patients for pain disorders. He approximates that 95% to 98% of his patients are treated for work injuries, and he has extensive experience treating cervical injuries. Treatment he administers for neck injuries include chiropractic treatment, massage therapy, acupuncture, facet injections, medial branch blocks and RF procedures. He also regularly treats cervical-related headaches. Dr. Lesnack has been Level II accredited with the Division of Workers' Compensation since 1996. The Claimant agreed that Dr. Lesnack is an expert in physical medicine and rehabilitation medicine. *Lesnack Deposition, pp. 5 – 11; Ex. B*.

79. Dr. Lesnack took a history from Claimant, examined Claimant, and then reviewed her extensive medical records. On physical examination, Dr. Lesnack was unable to reproduce any objective findings to correlate with cervical facet syndrome. Dr. Lesnack concluded that the Claimant's subjective complaints following her work-related injury mirrored those she was making beforehand as related to her 2008 motor vehicle accident. He concluded that the Claimant has had non-therapeutic responses to all three of the RF procedures performed by Dr. Sacha. Furthermore, he concluded that she gained no significant long-term relief of her cervical symptoms or headaches from any of the extensive treatment modalities used in treating her work-related injury. He also documented that she is no longer suffering from low back or leg symptoms. Dr. Lesnack ultimately concluded that "to a reasonable degree of medical probability, none of her current symptomology appears to be related to the occupational incident that occurred on December 30, 2014, relating to her neck, headaches or upper extremity complaints." *Ex. B, pp. 33, 36*.

80. Accordingly, Dr. Lesnack opined that "there is absolutely no medical evidence to suggest that the patient requires any further post MMI medical maintenance treatments whatsoever that would pertain to the 12/30/2014 occupational incident." *Ex. B, p. 36*.

81. On July 18, 2019, the Claimant returned to Dr. Sacha complaining of a "marked increase" in her cervical pain despite the recent use of the inferential unit. Dr. Sacha made plans for a fourth RF procedure. *Ex. C, pp. 40-41*.

82. On August 22, 2019, Dr. Sacha recounted that his request for a fourth RF procedure was denied. He commented that the procedure was aimed at different cervical areas than those he treated in relation to the 2008 motor vehicle accident. *Ex. C, p. 38*.

83. On September 10, 2019, the parties took the evidentiary deposition of Dr. Lesnack. Primarily, Dr. Lesnack had the opportunity to review additional reports from Dr. Sacha dated May 16, 2019, July 18, 2019 and August 22, 2019. He testified that these reports did not change any opinions from his previously issued report. *Lesnack Deposition, pp. 12-13*.

84. Dr. Lesnack testified that the Claimant's motor vehicle accident of 2008 had a greater impact on her neck than the work-related accident. *Deposition, pp. 43-44.*

85. Dr. Lesnack testified that despite what Dr. Sacha's recent report says, Dr. Sacha did treat the lower portions of the cervical spine that are now at issue prior to the Claimant's work-related accident in 2014. *Lesnack Deposition, pp. 14-15*.

86. Dr. Lesnack testified that Dr. Sacha is currently attempting to treat the same primary areas of the cervical spine that showed bulging discs on the 2011 MRI study. *Lesnack Deposition, pp. 16-17*.

87. Dr. Lesnack testified that Dr. Sacha's most recent examination of the Claimant did not reveal any objective evidence of ongoing cervical facet syndrome. He

also testified that any diagnosis of "whiplash" disorder is unrelated to the Claimant's work-related injury. *Lesnack Deposition, pp. 17-19*.

88. Dr. Lesnack testified that use of inferential units for cervical symptoms is unlikely to produce any improvement beyond the first several months of an acute injury, and he would not expect it to have recently provided any relief to the Claimant. *Lesnack Deposition, pp. 20-21.*

89. Dr. Lesnack testified that the trigger point injection administered by Dr. Sacha in February 2019 had no therapeutic impact, largely because the combination of medication administered by Dr. Sacha is not known to be effective. *Deposition, pp. 22-25*.

90. Dr. Lesnack testified that the Claimant gained nothing significant from the most recent trial of chiropractic and acupuncture treatment, and he was not surprised to see a lack of efficacy with these passive modalities this far into treatment. *Deposition, pp. 25-26*.

91. Dr. Lesnack testified that the DOWC Medical Treatment Guidelines require an 80% improvement in symptoms from a RF procedure before consideration of repeating such a procedure, a mark that was not met by Claimant. He testified that the records indicate no significant improvement from the previous RF procedures. He testified that even absent any causation questions; another RF procedure would not be indicated. *Deposition, pp. 27-29*.

92. Dr. Lesnack testified that the effectiveness of RF procedures reduces dramatically with each repeat procedure. Moreover, he has found that in his practice, and after performing these procedures on his patients for approximately 17 years, he only has a 1.7 percent repeat rate for these procedures as a treating physician. He went on to testify that if the procedure is done the right way, on the right patient, and for the right reason, the nerves should not grow back and the pain should not come back. He concluded by stating:

> Now, the more the symptoms come back after that, then you really need to start thinking: Are those symptoms coming from those joints?"
>
> *Deposition, pp. 31-33*.

93. Dr. Lesnak also testified that his review of Dr. Sacha's records, which Dr. Sacha contends demonstrates Claimant has had diagnostic and therapeutic responses to the prior RF procedures, do not make sense, physiologically. For example, Dr. Lesnak testified that Dr. Sacha performed a RF procedure March 22, 2018, and when he evaluated Claimant on March 30, 2018, 8 days after the procedure, she reported a 50-60 percent reduction of her symptoms. On its face, it would appear the RF was the right procedure, at the right level, and for the right condition. However, Dr. Lesnak credibly and persuasively testified that it takes at least three weeks for the nerves to die off and stop working. Therefore, Claimant's reported response, 8 days later, is neither diagnostic nor therapeutic. As Dr. Lesnak explained, Claimant's report of decreased symptoms could be a residual from the anesthetic or it could be a placebo effect. *Deposition, p. 32.*

94. Moreover, on April 26, 2018, Claimant saw Dr. Sacha and he noted her neck pain was 70% better and her headaches were 90% better. But, on May 16, 2018 and May 30, 2018, the physical therapy reports indicate she's having fairly intense headaches and neck pain. *Deposition p. 33.*

95. Dr. Lesnack testified that Dr. Sacha has not undertaken the appropriate diagnostic measures to ensure that a RF procedure is likely to give relief. These diagnostic procedures are done to see if the cervical pain is coming from the joints instead of nerve issues. *Deposition, pp. 31-32.*

96. Dr. Lesnack testified that if he were treating the Claimant he would discontinue all treatment modalities and instead have her focus upon home exercises and strengthening. This recommendation would be borne of the fact that she has had extensive treatment for her condition for over a decade without any sustained relief. *Deposition, pp. 34-37*.

97. Dr. Lesnack testified that the Claimant's chronic neck pain resulting from her 2008 motor vehicle accident is never going to go away. Her cervical condition was not going to resolve even if she had not suffered a work-related accident that temporarily aggravated it. *Deposition, pp. 34, 36-37*.

98. The ALJ finds Dr. Lesnak's opinions as set forth in his report and testimony to be credible and persuasive for a number of reasons. First, Dr. Lesnak's opinions are consistent with the majority of the medical record. Claimant began having significant neck pain as early as 2003. And, by 2005, her neck pain was so severe, she was evaluated by a spinal surgeon. Claimant ultimately went on to develop chronic headaches as well. Claimant's neck pain and headaches initially emerged without any inciting events. Then, in 2008, Claimant was involved in a motor vehicle accident that caused an increase in Claimant's chronic and severe neck pain and headaches. Between the motor vehicle accident and just before the December 30, 2014, work accident, Claimant's neck symptoms and headaches waxed and waned. A review of the medical records does not strongly suggest that the treatment provided during that time was effective in altering and reducing her symptoms. And, although there was a slight decrease in her reported symptoms shortly before the incident at work, and Claimant complained of an increase immediately after the incident at work, her symptoms continued to wax and wane as before. Moreover, Claimant treated with Dr. Sacha from approximately March of 2015 to July of 2015, (almost 4 months) without the need for Dr. Sacha to address and direct much, if any, treatment towards her neck. In essence, it appeared that by February of 2015, her neck symptoms had returned to baseline and were no worse than before the work accident and that continued until her complaints to Dr. Sacha involving her neck and headaches increased – without an inciting incident - in July of 2015.

99. The ALJ does not find Dr. Sacha's opinion that Claimant needs ongoing treatment due to her December 30, 2014, work accident to be persuasive for a number of reasons. For example, on August 22, 2019, Dr. Sacha issued another report indicating he was aware Dr. Lesnak performed an IME and determined the

RF procedure was not indicated, but that he had yet to receive and review the IME. Dr. Sacha, concluded his report by stating:

> We will obtain it, and there will be an addendum to this dictation going over all of the specifics of it. In the meantime, the patient has pending litigation on this case with a hearing set for September. *Ex. C, p. 38*.

Despite Dr. Sacha stating that he would obtain Dr. Lesnak's IME, review the IME, and issue an addendum "going over all of the specifics of it" – he failed to issue an addendum addressing any of the issues raised by Dr. Lesnak.

100. In addition, as credibly testified to by Dr. Lesnak, Dr. Sacha indicated Claimant had a diagnostic and therapeutic response to the prior RF procedures. However, Dr. Lesnak credibly testified that Claimant's response, based on its timing, and recurrence of symptoms, was far from being a diagnostic and therapeutic response.

101. Moreover, Dr. Sacha's primary contention for treating Claimant's chronic neck pain under this claim is that he previously treated the upper portion of Claimant's cervical spine and now he is treating the lower portion of her cervical spine. But, even if that is true, the mere provision of treatment to a different portion of her cervical spine presumes the work accident caused the need for the treatment he is providing. As credibly testified to by Dr. Lesnak, Claimant has neither had a diagnostic nor therapeutic response to the majority of the injection and RF treatment provided by Dr. Sacha. Therefore, the mere location he is treating, based on Claimant's continued complaints, is not persuasive in establishing that Claimant actually injured that portion of her spine on December 30, 2014 and that her current symptoms are causally related to her work accident. As noted earlier, after her auto accident, Claimant underwent a new cervical MRI in 2011. The new MRI demonstrated the progression of cervical findings, which included a new disc protrusion at the C5-6 level as well as foraminal and spinal canal narrowing at that level, without any inciting event. In essence, Claimant's cervical spine condition, as demonstrated on the MRI, was getting progressively worse on its own, without any external incidents or accidents. See *Ex. C, p. 194*.

102. Claimant did not provide any testimony at the hearing. Therefore, Claimant did not provide any testimonial evidence to mitigate or negate the underlying facts and information relied upon by Dr. Lesnak in rendering his opinions.

103. The ALJ credits Dr. Lesnak's opinions and finds them credible and persuasive. Therefore, based on the totality of the evidence, and the credible opinions of Dr. Lesnak, the ALJ finds that none of Claimant's current symptomology is related to the occupational incident that occurred on December 30, 2014, relating to her neck, headaches or upper extremity complaints.

104. The ALJ finds Respondent has established, by a preponderance of the evidence, Claimant does not need any additional medical treatment to relieve her from the effects of her December 30, 2014, work accident.

105. The ALJ finds Respondent has established, by a preponderance of the evidence, Claimant does not need any additional medical treatment, due to her December 30, 2014, work accident, to maintain her status or prevent a deterioration of her condition.

106. The ALJ finds Respondent has established by a preponderance of the evidence, Claimant is not entitled to maintenance medical treatment due to her December 30, 2014, work accident.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

This ALJ's factual findings may concern only evidence and inferences found to be dispositive of the issues involved. This ALJ is not bound to address every piece of evidence or every inference that might lead to conflicting conclusions, and is found to have rejected evidence contrary to his findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Furthermore, the relative weight and credibility to be assigned expert opinions is the ALJ's province as fact-finder. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d186 (Colo. App. 2002). To the extent expert opinions are subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the opinions. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

Maintenance Medical Benefits

The Respondent is liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the industrial injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

The Respondent's obligation to provide medical benefits to cure the industrial injury, however, terminates at MMI. Thereafter, the Respondent is only responsible for medical benefits to relieve Claimant from the effects of her industrial injury, or maintain or prevent a deterioration of Claimant's condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

Where a respondent attempts to modify an issue that previously has been determined by an admission, it bears the burden of proof for such modification. *See* Section 8-43-201(1), C.R.S.; *see also Barker v. Poudre School District*, W.C. No. 4-750-735 (March 7, 2012). Here, because the Respondent has previously filed an FAL admitting for maintenance medical benefits, under § 8-43-201, C.R.S., Respondent has the burden to show by a preponderance of the evidence why it is no longer responsible for maintenance medical benefits in general.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimants or respondents. § 8-43-201, C.R.S.

In this case, Respondent has met its burden. Based on the totality of the evidence, Respondent established that it is probably true that no further medical treatment is reasonably necessary to maintain or prevent deterioration of Claimant's work-related injury or relieve her from the effects of her work-related injury. The chiropractic and acupuncture treatment most recently prescribed and completed did not seem to alter her symptoms in any meaningful way. The trigger point injection most recently administered by Dr. Sacha did not seem to alter Claimant's symptoms in any meaningful way. In addition, the inferential unit recently prescribed to Claimant did not seem to alter her symptoms in any meaningful way. As credibly and persuasively opined by Dr. Lesnak, Dr. Sacha's current request for a fourth RF procedure is contraindicated for several reasons, including a lack of therapeutic response from the previous three procedures. The likelihood of success from a fourth RF procedure is very low as per the credible and persuasive testimony of Dr. Lesnack.

The inability of this most recent regimen of treatment to relieve Claimant's neck pain and headaches is generally consistent with the course of treatment provided to Claimant since she first developed neck pain and headaches in 2003 and 2005. As testified to by Dr. Lesnak, her chronic cervical condition and chronic headaches are more likely than not going to continue to progress, and nothing is going to halt the deterioration of these conditions.

Dr. Sacha originally contemplated maintenance treatment lasting as little as six months but no more than two years. Even his most recent extension of the need for the Amerge headache medication expired in May 2019. These opinions coalesce with those of Dr. Lesnack in demonstrating that the Claimant is best served at this point in time, over three years after being placed at MMI, by discontinuing medical treatment and focusing instead on home exercises and strengthening.

Furthermore, even if Claimant needs continued treatment for her cervical symptoms and headaches, it is probably true that the need for that treatment is no longer related to her work injury. Dr. Sacha recently attempted to differentiate his current treatment recommendations from the cervical areas treated prior to the work injury. But, Claimant was diagnosed with cervical dysfunction throughout C5-7 approximately one month after her 2008 motor vehicle accident. Moreover, when Claimant underwent a repeat MRI in 2011, the new MRI demonstrated the progression of cervical findings, which included a new disc protrusion at the C5-6 level as well as foraminal and spinal canal narrowing at that level. Furthermore, this progression of her chronic cervical spine condition occurred without any inciting event. And, these are the same cervical areas that Dr. Sacha now seeks to treat.

Moreover, the maintenance regimen that Claimant has followed since being placed at MMI for her work injury mirrors the maintenance regimen she was given in December 2008 to maintain her motor vehicle accident injuries.

After three years of maintenance treatment for her motor vehicle injuries, Dr. Kawasaki indicated that the Claimant had exhausted all treatment modalities for the cervical spine without lasting success, leaving only the option of a very complicated fusion surgery to relieve her progressing symptoms. The Claimant was treating with Dr. Kawasaki for her motor vehicle injuries as of May 2014, and the evidence demonstrates that her cervical symptoms and headaches were chronic and had not abated at the time of her work injury.

When Claimant was treated the day after her work injury, her physician estimated that the aggravation of her cervical symptoms would resolve within a week and she would return to her cervical baseline at that point. Claimant reported such a resolution approximately one week later. Other than eight acupuncture appointments, there was no treatment of the cervical spine for the first six months following the work injury.

There is no appreciable difference between the Claimant's cervical condition and headaches before her work injury and after her work injury. It was appropriate to treat the Claimant for a temporary aggravation of her motor vehicle injuries, and the Claimant has received ample medical treatment in that regard. The totality of the evidence makes it more probable than not, however, that the treatment provided by Respondent returned Claimant to her prior baseline long ago and that the treatment being recommended at this time is not causally related to treat the effects of her work injury.

Moreover, Claimant did not appear at hearing or otherwise offer any testimony to contradict this conclusion.

Respondent established by a preponderance of the evidence that no further medical treatment is reasonably necessary to maintain or prevent deterioration of Claimant's work-related injury or relieve her from the effects of her work-related injury. Therefore, the ALJ finds and concludes Respondent established by a preponderance of the evidence that Claimant is no longer entitled to a general award of maintenance medical treatment.

ORDER

It is therefore ordered that:

1. Respondent has proven by a preponderance of the evidence that medical treatment is no longer reasonably necessary and causally related to the Claimant's work-related injury of December 30, 2014.

2. Respondent's admission for post-MMI medical benefits of September 6, 2016 is withdrawn, and Respondent is no longer responsible for medical treatment for Claimant's work-related injury of December 30, 2014, absent a statutory reopening.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 5, 2019

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have established by a preponderance of the evidence that Claimant's temporary total disability (TTD) benefits should be suspended from May 28, 2019 through July 19, 2019.

FINDINGS OF FACT

1. Claimant is a 57-year-old female employed by Employer as an airline pilot. Claimant has worked for Employer in that position for approximately 19 years.

2. On or about March 11, 2019, Claimant piloted an airplane with older style seats for an extended period of time. Claimant testified that over a three day period she had 22 total hours of seat time, including 14.5 hours of flying time. Throughout the flights, Claimant was repeatedly struck in the back by a square metal bar lumbar support during periods of turbulence. Claimant testified that when she returned to Denver she had extreme low back pain.

3. Claimant reported the injury to Employer and began treatment at Concentra. *See* Exhibit 7.

4. On March 15, 2019, Claimant was evaluated and was given work restrictions of no lifting over 5 pounds, pushing and pulling up to 5 pounds, no reaching above shoulders with the affected extremities, occasional bending standing and walking. Additional restrictions stated that Claimant was unable to fly an airplane. *See* Exhibit 5.

5. On April 18, 2019, Jay Reinsma, M.D. evaluated Claimant. Claimant's work restrictions were lifting up to 15 pounds occasionally, up to 3 hours/day; pushing/pulling up to 20 pounds occasionally; no reaching above shoulders with affected extremity; and no reaching behind with affected arm. *See* Exhibit 5.

6. Respondents were unable to accommodate Claimant's work restrictions and she has not returned to work for Employer since March 11, 2019.

7. On March 25, 2019, Respondents filed a General Admission of Liability admitting to TTD benefits from March 12, 2019 and ongoing. *See* Exhibits 1, A.

8. On May 20, 2019, F. Mark Paz, M.D. performed an Independent Medical Examination. Dr. Paz reviewed Claimant's reported history, reviewed medical records, and performed a physical examination. Dr. Paz opined that Claimant was intolerant of sitting for an extended period and that the subjective physical limitation she reported

would be inconsistent with performing usual duties as a pilot. Dr. Paz opined that based on Claimant's reported subjective physical limitations, Claimant would be intolerant of sitting for longer than 30 minutes. Dr. Paz opined that the mechanism of injury in this case was inconsistent with the diagnoses and that it was not medically probable that Claimant's conditions were aggravated or accelerated as a result of the March 11, 2019 referenced date of injury. Dr. Paz recommended review of prior records including a 2018 motor vehicle accident and a 2011 work related cervical injury. *See* Exhibits 6, M.

9. Claimant is the co-owner of EES, a business that takes people on safaris in South Africa. Claimant is also a photographer and she teaches customers how to take photographs with their own cameras while out on safari. Claimant reported that she completed five safari trips in 2018 and that seven were scheduled for 2019. Claimant reported that the physical activities during the safaris are limited to walking, standing, sitting, and teaching others what to do with their cameras.

10. Prior to her March 11, 2019 admitted work injury, Claimant was scheduled to travel to South Africa for safari trips. Claimant had requested time off work to travel in order to attend two of the 2019 trips her company had scheduled. After her admitted March 11, 2019 injury, Claimant discussed the trip with her medical providers. Claimant testified that they were okay with her going as long as she stayed within her restrictions and continued with her home exercise program.

11. On May 23, 2019, Mark Winslow, D.O. evaluated Claimant. Claimant reported being upset and angry that she was injured and was missing out on life events and had sustained a ridiculous loss of income as well as faced delays in referrals. Claimant reported her upcoming trip to South Africa that had been planned for over a year. Dr. Winslow opined that the trip may do Claimant some good and certainly was not likely to cause harm. Claimant had previously reported that when on safari she was quite relaxed and comfortable and did not carry a backpack, hike, or travel in a way that would put stress son her back. *See* Exhibit 8.

12. On May 24, 2019, Dr. Reinsma responded to questions asked by Insurer on a case manager update form. Dr. Reinsma opined that Claimant was stable enough with her injury to make the long journey to South Africa. Dr. Reinsma opined that as long as Claimant continued to use appropriate body mechanics as she had been instructed, the travel should not result in further injury. Dr. Reinsma opined that the travel and activities while in Africa should not cause exacerbation of Claimant's symptoms if Claimant continued to use appropriate body mechanics. Dr. Reinsma noted that Claimant would be working as a photography instructor and would not be carrying any equipment, would be in a motor vehicle, and would not be hiking. Dr. Reinsma opined that it was acceptable that Claimant would not be treating with a provider for an extended period of time and he opined that Claimant should do well if she continued to perform her home exercise program. Dr. Reinsma opined that although she was physically capable to travel to Africa with her personal photography business on safari, Claimant was not physically able to return to work full duty. He opined that the physical demands of Claimant's occupation required her to be in certain positions and to apply a significant amount of

force in those positions, which Claimant would not encounter during her trip. Dr. Reinsma restricted Claimant to no lifting or carrying over 15 pounds; limited use of her upper extremities; no pushing or pulling over 30 pounds; frequent standing and walking; and no bending or squatting. *See* Exhibit 4.

13. Claimant traveled to South Africa on May 28, 2019 and returned to the United States on July 19, 2019. During that time, Claimant was able to complete and help show photography to clients on all seven scheduled safaris for the business she co-owns.

14. Claimant testified that EES was formed in 2016 and completed its first safaris in 2017. In 2018, the company completed five safaris. In 2019, the company completed seven safaris and the goal and schedule is to have 20 safaris in 2020.

15. On May 28, 2019, Claimant left Denver and took a 9-hour flight to Frankfurt, Germany, followed by a 12-hour layover and a 10-hour flight to Johannesburg, South Africa. Claimant testified that while flying, she would sit for 2-3 hours before getting up to stretch in the galley. Claimant testified that during her layover, she walked the airport, did her home exercise program, and slept in the sky lounge. Claimant testified that her luggage was light because she had a room in South Africa where she kept most of her clothing and that her camera bag she carried weighed approximately 12 pounds. Claimant testified that she asked for assistance lifting her luggage into the overhead bins and did no lifting.

16. Claimant testified that prior to her admitted March 11, 2019 injury, she planned to attend two safaris in 2019. She testified that since she could not return to work as a pilot, she decided to stay in South Africa and attend all seven safaris. Claimant returned to the United States on July 19, 2019.

17. The safaris took place in open air Toyota Land Cruisers with ten passenger bucket-style seats. Claimant testified that they would go out three hours in the morning and then three hours in the evening. Halfway through each three hour outing, they took a 20-30 minute coffee/bathroom break. Claimant testified that they traveled on well-maintained dirt roads and periodically went off road to get closer to wildlife.

18. As the co-owner of the company, Claimant also performed marketing tasks, made sales/information calls to prospective clients, and taught photography to clients while they were out on safari.

19. Claimant testified that she did not receive wages or earn income from her company. She testified that although the company paid for her flight and lodging, the company decided to reinvest their small profit margin back into the company to help it grow in its first few years of formation. Claimant testified that she therefore did not earn any wages. Claimant also testified that in prior years, she paid for her own flight and used personal money to pay for various equipment for the company.

20. On June 12, 2019, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation and requested permission to terminate TTD benefits from June 1, 2019. Respondents listed that Claimant was working through her business that operates safaris in Africa as the basis for filing the petition. *See* Exhibits 2, B.

21. On June 18, 2019, Claimant objected to the petition. On June 21, 2019, Respondents applied for hearing on the issue. See Exhibits 3, C, D.

22. The sole issue for determination is whether Respondent can suspend TTD benefits during the time Claimant was in South Africa on safari from May 28, 2019 through July 19, 2019.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Temporary Total Disability

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Whether an injured worker is disabled is a factual question for the Administrative Law Judge. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Respondents argue that this case is similar to the case *In the Matter of the Claim of David M. Matus*, that denied and dismissed the claimant's request for TTD benefits. W.C. No. 4-740-062, (ICAO July 13, 2010). In that case, the ALJ determined that the claimant did not suffer a disability or actual wage loss due to the claimant's business records which revealed business earnings and expenses throughout the period of alleged disability. *Id.* ICAO held that the ALJ was free to consider the business income as suggesting employment because the business profits were attributable in part to the claimant's efforts. *Id.* In that case, however, the Claimant was initially injured while working in construction. After the injury, the Claimant continued to perform work activities related to construction projects. The ALJ concluded that the Claimant had not suffered a disability as Claimant was not only able to, but actually did resume his prior work (although with different employers). The ALJ found that Claimant's business records, including earnings and expenses, established that Claimant was not disabled or medically incapacitated and was able to perform his regular pre-injury employment.

Here, Claimant's regular pre-injury employment was as an airplane pilot. Claimant, during the period of time at issue, was under medical restrictions and she had loss and restriction of her normal bodily function. There is no question that she was unable to

perform her normal duties piloting airplanes during the period of time at issue. Since she was unable to perform her normal work duties her wage earning capacity was greatly impaired. Claimant did not earn any wages during the period of time at issue. Unlike the claimant in the Matus case, Claimant has been unable to return to her regular pre-injury employment. Claimant has not been able to resume her prior work activities.

Respondents' argument seems to place emphasis on whether or not Claimant was totally disabled. Even assuming she was only partially disabled (as Respondents seem to implicate) and was able to work her "other job" while on safari since it fell within her work restrictions, Claimant was still unable to perform her primary job. Her primary job was outside her work restrictions. Assuming Respondents' argument is persuasive, Claimant would be considered partially disabled and her injury would still be the cause of her disability, medical restrictions, and partial wage loss since it prevented her from performing her primary job. Thus, if Respondents' argument were persuasive, Claimant would be still entitled to an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. Here, there were no earnings to subtract out as Claimant made a business decision to reinvest any profits from her company. There is no evidence there is a surplus of profits to make that an unreasonable decision and Claimant is credible as to why she earned no wages. Therefore, even if Respondents' arguments were accepted and Claimant were found to be only partially disabled and not totally disabled from employment, the result would be the same.

Respondents' arguments overall are not persuasive. Claimant in this case is entitled to TTD benefits during the period of time at issue. Claimant is medically incapacitated which has impaired her wage earning capacity as demonstrated by her inability to resume her airline pilot work. Claimant's work restrictions impair her ability to effectively and properly pilot an aircraft. Claimant has not returned to regular or modified employment. Respondents have failed establish that TTD benefits should be terminated between May 28, 2019 and July 19, 2019.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish by a preponderance of the evidence that Claimant's temporary total disability (TTD) benefits should be suspended from May 28, 2019 through July 19, 2019.

2. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 7, 2019 /s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable right elbow injury during the course and scope of her employment with Employer on April 25, 2018.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive authorized, reasonable and necessary medical treatment for her right elbow injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Bus Monitor. On April 25, 2018 Claimant was riding on a school bus while performing her job duties. While attempting to prevent a fall after the driver suddenly applied the brakes, Claimant steadied herself against the driver's seat with her right hand. Claimant experienced right hand pain as a result of the incident.

2. Claimant first sought medical treatment for her injuries on May 10, 2018. Claimant reported that about two weeks earlier she had been working as an assistant on a bus when the driver "push[ed] on the brakes very suddenly." To prevent a fall she "steadied herself against the back of his seat with her right hand." She suffered right hand pain. A physical examination by Authorized Treating Physician (ATP) Robert Broghammer, M.D. revealed decreased range of motion of the right hand and wrist because of pain. X-rays of the right wrist were negative. Dr. Broghammer diagnosed Claimant with a contusion and pain in the right hand. He determined that the April 25, 2018 work incident caused Claimant's right wrist symptoms.

3. On May 15, 2018 Claimant returned to Dr. Broghammer for an examination. In addition to right wrist pain, Claimant reported right elbow symptoms. She noted that her wrist and elbow pain began after the April 25, 2018 work accident. Dr. Broghammer diagnosed Claimant with a contusion and pain in the right hand. He determined that the "cause of this problem is related to work activities."

4. On July 30, 2018 Claimant visited Colorado Orthopedic Consultants based on a referral from ATP Dr. Broghammer. Claimant specifically received treatment from Timothy Abbott PA-C for Craig A Davis, M.D. PA-C Abbott recounted that Claimant injured her right wrist and elbow when she was at work helping a student on a bus. The bus suddenly stopped, Claimant reached in front with her right hand and suffered a sudden forceful extension of the wrist. She subsequently underwent physical therapy that only provided slight relief. PA-C Abbott diagnosed Claimant with right carpal tunnel syndrome, a scapholunate sprain/strain, lateral epicondylitis of the right elbow and numbness/tingling. He administered a right elbow injection and scheduled an EMG.

5. On August 9, 2018 Claimant underwent an independent medical examination with Jonathan Sollender, M.D. Claimant reported that she injured her right wrist and elbow while working as a transportation educational assistant. When the bus suddenly stopped Claimant "was unprepared and ran her right hand into the seat ahead of her." After reviewing Claimant's medical records and performing a physical examination Dr. Sollender diagnosed Claimant with DeQuervain's tenosynovitis of the right radial wrist and non-work-related bilateral carpal tunnel syndrome. He explained that Claimant suffers from DeQuervain's tenosynovitis as a result of striking or extending her right wrist when the bus suddenly stopped. However, Claimant did not exhibit any physical examination findings to support a diagnosis of right elbow lateral epiconbdylitis "beyond tenderness to pressure." Claimant did not have any of the "typical exam features to support that diagnosis."

6. On March 4, 2019 Claimant returned to Dr. Davis for an evaluation. He diagnosed Claimant with right DeQuervain's syndrome and right lateral epicondylitis. Dr. Davis explained that both of the diagnoses were causally related to Claimant's April 25, 2018 bus incident. He specified that the diagnoses "were a direct result of her work-related accident when she was on a bus and it stopped suddenly causing her to reach out and catching herself with her right hand. She has had pain at the wrist and elbow ever since." Dr. Davis recommended surgical treatment including a right wrist DeQuervain's release and lateral epicondyle release at the right elbow.

7. On March 15, 2019 Claimant returned to Dr. Broghammer for an evaluation. Dr. Broghammer noted that Claimant continued to experience right wrist pain. He also remarked that Claimant's right elbow condition was causally related to her April 25, 2018 industrial injury. Dr. Broghammer commented that Dr. Davis had also determined Claimant's right elbow condition was related to her work accident. He explained that he "could see that a hyperextension of the wrist could also strain the common extensor tendon and resulting epicondylitis." After reviewing Claimant's medical records, Dr. Broghammer determined that Claimant first reported her elbow symptoms on May 15, 2018 or shortly after her industrial injury. He reasoned that Claimant's right elbow condition was "more likely than not related to the original injury."

8. On March 26, 2019 Dr. Davis authored a letter regarding Workers' Compensation coverage for Claimant's lateral epicondylitis. He explained that he had been treating Claimant since July 30, 2018 for her April 25, 2018 industrial injuries. Dr. Davis recounted that, while Claimant was helping a student on a bus as part of her job duties, she reached out with her right arm to catch herself after the bus suddenly stopped. Claimant injured her wrist and elbow. Dr. Davis remarked that Claimant has experienced right wrist and elbow symptoms since the accident, but the "wrist symptoms have overshadowed the elbow to some extent." He explained that Claimant has had excellent responses to steroid injections in both her wrist and elbow. Dr. Davis commented that "the diagnosis of lateral epicondylitis is quite clear based on the location of her pain and her response to injections." Additionally, her mechanism of injury is entirely consistent with injury at the lateral epicondyle given that she caught her entire body weight with her right hand." He remarked that Claimant has been approved for surgery for her

DeQuervain's syndrome and recommended surgical treatment of the lateral epicondyle at the same time.

9. On August 22, 2019 Respondents filed a General Admission of Liability (GAL) recognizing that Claimant suffered a right wrist injury on April 25, 2018. The GAL did not acknowledge that Claimant suffered a right elbow injury on the day of the work accident.

10. On September 13, 2019 the parties conducted the evidentiary deposition of Dr. Sollender. Dr. Sollender maintained that Claimant's lateral epicondylitis was not causally related to her April 25, 2018 work accident. He explained that Claimant's mechanism of injury would not likely have caused any right elbow problems. Dr. Sollender also emphasized that Claimant did not report any right elbow symptoms until approximately three weeks after the work accident. Moreover, when Dr. Sollender first saw Claimant on August 9, 2018 she exhibited tenderness over the right elbow, but provocative maneuvers were negative for lateral epicondylitis. His examination thus did not support a diagnosis of lateral epicondylitis.

11. Dr. Sollender detailed that Claimant's description of the April 25, 2018 bus incident did not support a diagnosis of lateral epicondylitis. He explained:

> I can't come up with a reasonable biomechanical reason why she would have elbow pain after a wrist injury, especially with one that her wrist is put in a posture of extension which would normally cause those tendons and muscles that extend the elbow to be in a relaxed position and not stressed by an injury.

He summarized that he did not believe Claimant's "right elbow condition can be brought up as a reasonable occupational injury from this date." Dr. Sollender further remarked that extending the wrist upon a fixed object supporting the arm relaxes the muscles and tendons in the elbow. He summarized that a forced wrist extension would not cause elbow trauma because the elbow would be in a relaxed position and not tear or inflame tendons.

12. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable right elbow injury during the course and scope of her employment with Employer on April 25, 2018. Initially, Claimant explained that, while assisting a student on a bus, the driver suddenly stopped. To prevent a fall she steadied herself against the back of the driver's seat with her right hand. Claimant initially reported only right wrist symptoms as a result of the accident. However, by May 15, 2018 she also mentioned right elbow pain and was diagnosed with lateral epicondylitis. ATP Dr. Broghammer subsequently concluded that Claimant's right elbow symptoms were causally related to the April 25, 2018 bus incident. Furthermore, Dr. Davis commented that the diagnosis of lateral epicondylitis was clear based on the location of Claimant's pain and her response to injections. He additionally noted that Claimant's mechanism of injury was consistent with damage to "the lateral epicondyle given that she caught her entire body weight with her right hand."

13. In contrast, Dr. Sollender persuasively concluded that Claimant's lateral epicondylitis was not causally related to the April 25, 2018 bus incident. He explained that Claimant's mechanism of injury would not likely have caused any right elbow problems. Dr. Sollender emphasized that Claimant did not report any right elbow symptoms until approximately three weeks after the work accident. Moreover, when Dr. Sollender first saw Claimant on August 9, 2018 she exhibited tenderness over the right elbow, but provocative maneuvers were negative for lateral epicondylitis. Dr. Sollender further remarked that extending the wrist upon a fixed object supporting the arm relaxes the muscles and tendons in the elbow. He summarized that a forced wrist extension would not cause elbow trauma because the elbow would be in a relaxed position and not tear or inflame tendons. Dr. Sollender simply could not determine how Claimant suffered an injury to her right elbow based on her description of the work accident. Based on the medical records involving the delayed reporting of elbow symptoms and the persuasive opinion of Dr. Sollender regarding the mechanism of injury, Claimant has failed to demonstrate that her work activities on April 25, 2018 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re*

Swanson, W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable right elbow injury during the course and scope of her employment with Employer on April 25, 2018. Initially, Claimant explained that, while assisting a student on a bus, the driver suddenly stopped. To prevent a fall she steadied herself against the back of the driver's seat with her right hand. Claimant initially reported only right wrist symptoms as a result of the accident. However, by May 15, 2018 she also mentioned right elbow pain and was diagnosed with lateral epicondylitis. ATP Dr. Broghammer subsequently concluded that Claimant's right elbow symptoms were causally related to the April 25, 2018 bus incident. Furthermore, Dr. Davis commented that the diagnosis of lateral epicondylitis was clear based on the location of Claimant's pain and her response to injections. He additionally noted that Claimant's mechanism of injury was consistent with damage to "the lateral epicondyle given that she caught her entire body weight with her right hand."

8. As found, in contrast, Dr. Sollender persuasively concluded that Claimant's lateral epicondylitis was not causally related to the April 25, 2018 bus incident. He explained that Claimant's mechanism of injury would not likely have caused any right elbow problems. Dr. Sollender emphasized that Claimant did not report any right elbow

symptoms until approximately three weeks after the work accident. Moreover, when Dr. Sollender first saw Claimant on August 9, 2018 she exhibited tenderness over the right elbow, but provocative maneuvers were negative for lateral epicondylitis. Dr. Sollender further remarked that extending the wrist upon a fixed object supporting the arm relaxes the muscles and tendons in the elbow. He summarized that a forced wrist extension would not cause elbow trauma because the elbow would be in a relaxed position and not tear or inflame tendons. Dr. Sollender simply could not determine how Claimant suffered an injury to her right elbow based on her description of the work accident. Based on the medical records involving the delayed reporting of elbow symptoms and the persuasive opinion of Dr. Sollender regarding the mechanism of injury, Claimant has failed to demonstrate that her work activities on April 25, 2018 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 7, 2019.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that her Average Weekly Wage ("AWW") should be increased, based upon completion of her training as a Medical Assistant, said training having been completed prior to reaching Maximum Medical Improvement?

II. Has Claimant shown, by a preponderance of the evidence, that Respondents should pay penalties for violation of W.C.R.P 6-1(A)(1)? If so, what is an appropriate penalty?

STIPULATIONS

Two stipulations were announced by the parties at hearing:

I. If a penalty is imposed, the penalty period would run from April 29, 2019 through May 28, 2019.

II. Respondents will amend the language in the Final Admission of Liability to provide for a general award of Post-MMI medical maintenance benefits.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. On May 5, 2018, Claimant sustained an admitted low back injury while assisting with a patient lift. She went to the emergency room that day. X-rays and a CT scan were negative. (Ex. A, pp. 1-2).

2. On May 9, 2018, Claimant presented at CCOM-Pueblo complaining of low back pain and left leg pain. She was prescribed ibuprofen and Flexeril. Physical therapy was recommended, and she was placed on two-pound push/pull, lift/carry restrictions. (Ex. A, pp. 4-6).

3. Over the next several months, Claimant received conservative treatment including physical therapy, chiropractic care, medications, and acupuncture. MRIs of her low back and left hip were negative.

4. On September 10, 2018, Respondents filed a General Admission for Liability ("GAL") admitting to a stipulated average weekly wage ("AWW") of $236.52 with a corresponding temporary total disability ("TTD") rate of $157.68. TTD payments were backdated effective to 5/6/18. (Ex. O, p. 71). The adjuster who processed this GAL

was Connie Cridlebaugh. This resolved the issues that Claimant had endorsed for hearing on a prior hearing application. (Ex. O, p. 74).

5. The ATP, Dr. Daniel Olson, noted on February 5, 2019 that the SI-Joint injections provided by Dr. Dwight Leggett were inconclusive in identifying a pain generator. Dr. Leggett recommended against surgery, instead opting for medial branch blocks to identify facet-mediated pain, if any. (Ex. C, pp. 18-19).

6. On April 15, 2019, Claimant underwent a Functional Capacity Evaluation ("FCE"), which placed Claimant in the light duty category. (Ex. G. pp. 31-35). In the narrative for this FCE, it was noted: "She has just *completed training* for Medical Assistant" *Id.*

7. On April 24, 2019, Dr. Leggett noted 0% improvement following the medial branch blocks. (Ex. H, p. 36). Dr. Leggett noted no functional improvement with aggressive treatment. He opined that Claimant was not a good candidate for a radiofrequency ablation or SI-joint fusion. (Ex. H, pp. 37-38).

8. Based on Claimant's lack of response to treatment, Dr. Olson placed Claimant at MMI on April 26, 2019. (Ex. I, pp. 39-40). Under TREATMENT PLAN, he noted:

> 1. Dr. Leggett had no further suggestions.
> 2. She is at maximum medical improvement.
> 3. *Impairment report will be dictated separately.*
> 4. She will require the tramadol for the next 12 months. *Id at 40* (emphasis added).

9. On April 29, 2019, the newly assigned claims adjuster, Melissa Casady, filed a General Admission of Liability. (Ex. P, p. 75). TTD was to end 4/25/19. This GAL noted: "Claimant found to be at MMI 4/26/19. GA filed to terminate TTD *pending receipt* of PPD narrative." *Id* (Emphasis added).

10. In a subsequent report dated May 22, 2019, Dr. Olson prepared his impairment rating. He assigned a 15% whole person rating for Claimant's lumbar spine. (Ex. J, pp. 45-49). He assigned permanent work restrictions of lifting up to 20 pounds, overhead lifting up to 20 pounds, carrying 25 pounds, pushing and pulling 35 pounds and allow for frequent position changes. *Id at 45.* He recommended maintenance medical benefits of tramadol for 12 months.

11. On May 28, 2019, Claimant filed an Application for Hearing endorsing a general penalty for violation of W.C.R.P. 6-1(A)(1).

12. That same day the adjuster, Melissa Casady, filed a Final Admission of Liability ("FAL"), admitting to both the maintenance medical care recommended by Dr. Olson and to the 15% whole person impairment rating assigned by him. TTD remained admitted for the period ending 4/26/19. (Ex. Q, p. 81).

Testimony on Average Weekly Wage

13. Katy Frazier testified on Claimant's behalf at the hearing. She is the Director of Employment Services for Parkview Medical Center in Pueblo ("Parkview"). This position involves management of all hiring and recruiting at Parkview. Ms. Frazier testified that a contingent job offer was made to Claimant for a Medical Assistant ("MA") position. The position would have paid $15.73 per hour for 40 hours per week [Equating to an AWW of $629.20 and a TTD rate of $419.47]. Ms. Frazier testified that an MA license was mandatory for this position.

14. This MA position was contingent on completion of Parkview's Work Steps Physical Capacity Test. When an applicant has permanent work restrictions, Parkview reaches out to the authorized treating physician to determine whether a candidate is physically safe to perform the testing. Ms. Frazier testified that Dr. Olson notified Parkview, upon request, that Claimant was not safe to perform the Work Steps Physical Capacity Test.

15. Ms. Frazier explained that the Medical Assistant position was categorized as a heavy lifting position. Physical capacity testing, therefore, required the applicant to lift at least 60 lbs. of a 110 lbs. test dummy.

16. Ms. Frazier testified that a second position was offered to Claimant of medical scheduler. This position would pay $14.48 per hour for 40 hours per week [Equating to an AWW of $579.20, and a TTD rate of $386.13]. It did not have any physical requirements. An applicant does not have to have an MA license to qualify for the scheduler position, but preference is given to applicants with some post-secondary education.

17. Claimant testified that prior to the injury she typically worked 20 to 24 hours per week as a CNA at St. Mary Corwin Hospital. Claimant completed her ten-and-half months of training to be an MA, and was training while on leave due to her workers' compensation injury.

18. Claimant disagreed with Ms. Frazier concerning the physical requirements of the MA position. She testified that she would not have gone through the ten months of MA training while she was out on leave, if the future position was as physically demanding as the CNA position had been. Claimant testified that she was currently working at Pueblo Community Health Center as an MA. She was now making $13.43 per hour for 40 hours per week, which equated to an AWW of $537.20 and a TTD rate of $358.14. She would be starting her position as a scheduler on October 21, 2019 with yet a different rate of pay.

Testimony on Temporary Total Disability/Penalties

19. Claimant testified that when her TTD stopped, she fell behind on her rent and was late on her electric and gas bills. She testified that she had to take out an $800.00 loan to cover rent. She testified that she was now only behind on her electric bill, but that she

had a repayment plan in place with the power company. She never requested a lump-sum payout from the $15,137.28 in PPD that Respondents admitted to.

20. Claimant also testified that she began to fall behind on her bills once she was out on leave in May of 2018. During this time, she had help from her Aunt, Grandmother, and the father of her kids. Even after she began receiving PPD payments, she continued to need help including family members to watch her kids while she looked for work.

21. Melissa Casady testified that she was the claims adjuster assigned to this case. She had taken over for a prior claims adjuster in the beginning of 2019. She testified that she paid TTD up through Claimant's MMI date. She mistakenly filed the GAL stopping temporary benefits based on the MMI date. She explained that she had been a claims adjuster for over 10 years, but she had only been working in Colorado for two months at the time. She did not realize that temporary benefits could not be stopped where a claimant reached MMI, but had permanent work restrictions. At the time of filing the GAL, she only had the statement of MMI from Dr. Olson, but no impairment narrative or impairment worksheets. She tried to remedy her error as soon as it was brought to her attention.

22. On cross-examination, Ms. Casady apologized to Claimant for the error, and she apologized to Mr. Saunders for her mistake. She acknowledged that she did not reach out to apologize to Claimant at any time prior, as the case was then in litigation, and she did not wish to contact a represented party. When asked if she reached out to Claimant's attorney to ask permission to apologize, she acknowledged that she had not done so.

23. Ms. Casady also explained that at the time of the work injury Claimant's AWW was $129.60 because of her part-time status. The parties subsequently agreed to a higher AWW of $236.52, and Respondents had filed a corresponding GAL on September 10, 2018.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

a. The purpose of the Workers' Compensation Act of Colorado ("Act"), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

b. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

c. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

d. In this instance, the ALJ finds each of the three witnesses who testified to be sincere and credible in their testimony. Katy Frazier accurately outlined the history of the MA position initially offered to Claimant, and her perception of the demands of that job. While differing with Katy Frazier on the comparative demands of the MA position, Claimant accurately outlined the completion and her reasoning for finishing her MA training, her attempts to upgrade her position, and the losses she incurred as a result of the untimely discontinuation of her TTD payments. Melissa Casady made a mistake in processing this claim, but the ALJ finds her explanation to be forthright in explaining how it occurred, her attempts to rectify the error, and finds her apology in court to be sincere (and not untimely, under the circumstances).

Average Weekly Wage

e. C.R.S. § 8-42-102(3), grants an ALJ discretionary authority to recalculate the AWW in some other manner if the prescribed methods will not fairly calculate the wage in view of the particular circumstances. *Pizza Hut v. ICAO*, 18 P.3d 867 (Colo. App. 2001) allowed the ALJ to calculate AWW based on the higher wage earned at the time of MMI to more fairly compensate the claimant for his future loss of earnings. The Pizza Hut panel noted that

> Moreover, a significant wage increase that occurs post-injury does not establish a lack of impairment, nor does it mean that the claimant has not

> suffered a future wage loss related to the impairment….Additionally, contrary to employer's argument, the potential impact that claimant's impairment and his physical restrictions may have on his future nursing career represents a reasonable and appropriate circumstance to be considered by the ALJ in assessing the fairness of the calculation of the average weekly wage. This is particularly so given claimant's testimony as to the possible limitations he may face. Id at 870.

f. The courts have recognized that while the ALJ may exercise his or her discretion under C.R.S. § 8-42-102(3) that discretion must be premised on relevant evidence in the record. For example, in *Avalanche Indus. v. Clark*, 198 P.3d 589 (Colo. 2008) and in *Pizza Hut*, each claimant was earning a higher wage during the period that he or she would have been eligible for receiving temporary benefits. The evidence of an increased earning capacity and the consequent greater impact on permanent wage loss was therefore *tangible and measureable* prior to MMI.

g. In this case, the ALJ finds that Claimant's potential earning capacity has been shown to be sufficiently *tangible and measurable* to adjust her AWW accordingly. Claimant had completed her training prior to reaching MMI, with a clear eye towards taking on a higher-paying, less physically demanding role. While Claimant argues, interestingly, that an MA position does not involve the same physicality as that of a CNA, her inability to perform the MA role at Parkview (as a direct result of her work injury) is what *best establishes her potential earning capacity, absent her work injury.* ***The Parkview MA job was hers, until it wasn't.*** While still physical, the MA job at Parkview recognized the additional skills and knowledge Claimant had acquired, all prior to reaching MMI. The Pueblo job market, at least vis-à-vis Parkview, paid an hourly wage of $15.73 for a 40-hour week for a newly minted MA- who could pass the pre-employment physical.

h. Had Claimant not actually been preliminarily *offered* this Parkview MA job, the ALJ would have found the medical scheduler position to be a sufficiently *tangible and measurable representation* of her AWW, based upon Claimant's additional skill acquisition. In this case, however, the ALJ concludes that Claimant's AWW is $15.73 x 40 = $629.20.

Penalties, Generally

i. C.R.S. § 8-43-304(1) provides for penalties against an employee, employer or insurance carrier who does any of the following: "(1) violates any provision of the . . . Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or the Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or the Panel." *Pena v. ICAO*, 117 P.3d 84 (Colo. App. 2004).

j. Whether statutory penalties may be imposed under § 8-43-304(1) C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined

within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…"

k. Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (ICAO,. Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

l. The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see also Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*. If the claimant makes such a prima facie showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra, Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

Penalties, as Applied

m. In this case, Respondent-Insurer has not even attempted to show that its conduct, vis-à-vis its adjuster, was objectively reasonable. Termination of Claimant's TTD benefits, in violation of W.C.R.P 6-1(A)(1), was objectively unreasonable, and the ALJ so finds. Penalties must be assessed in this case. The parties have stipulated that the penalty period runs from April 29, 2019 through May 28, 2019, for a period of 30 days. After reviewing the evidence, the ALJ finds such stipulation to be reasonable and justified.

Unpersuasive Argument-Apologies

n. The ALJ is not persuaded by Claimant's assertion that the adjuster failed to timely and sincerely apologize for her mistake. The ALJ finds that Ms. Casady is sincere in her apology conveyed during the hearing, and wishes this episode had not occurred. Further, (assuming an oral apology is even relevant at any point), the ALJ is not persuaded that the timing of said apology was somehow too late. Had Ms. Casady reached out to Claimant to apologize, this would have created its own set of issues of ex parte contact-and could have then been argued as an aggravator. Had Ms. Casady taken the highly irregular step of calling Claimant's attorney to convey her regrets, nothing would have changed. As noted in Claimant's own brief "….Not to mention that the adjuster being sorry does not help Ms. Ortiz in any way." The ALJ finds this apology argument in aggravation to be highly unpersuasive and of marginal relevance, at best.

Unpersuasive Argument-Failure to Mitigate

o. Respondents imply that Claimant could/should have mitigated her damages by simply accepting a lump sum payment in order to pay her bills. The ALJ is unmoved. As noted in Claimant's brief, Claimant should not have had to choose between paying bills and taking a discounted lump sum, which she otherwise did not wish to do. Moreover, as noted, Claimant should certainly not have to accept a lump sum and thereby forfeit her ability to litigate her AWW issue (and in this case, successfully). The ALJ finds this argument in mitigation to be impertinent to the penalty issue.

Relevant Factors in Aggravation

p. As a result of Respondent-Insurer's error, Claimant suffered actual harm, to wit: she was denied TTD benefits for approximately one month for which she was otherwise entitled. This caused a ripple effect in her personal finances, causing late payments, and the need to borrow money to make up the shortfall.

Relevant Factors in Mitigation

q. While it has been found that actual harm resulted from Insurer's conduct, the ALJ finds that the adjuster *did not act willfully,* or in bad faith in terminating TTD benefits as she did. Indeed, while Claimant was "not ready" for TTD to end when it did, had the ATP's Impairment ratings accompanied his MMI report, TTD payments would have properly ended right when they did. There is never a good time for TTD payments to end, but end they must, sometimes abruptly, assuming the legal requirements are met. The adjuster's conduct in this case was **negligent**. She failed to spot the red flag, due to her inexperience with Colorado. She had the option of seeking out advice from someone versed in Colorado Workers Compensation law (internally or externally), but did not. It appears she relied upon her experience with other states, which apparently do not have a corresponding Rule 6-1(A)(1).

r. There is no evidence in the record that the adjuster acted in accordance with anything other than an *attempt* to follow the Rules *as she understood them,* and in accordance with practices set forth by Insurer. She did not "go rogue", nor did Insurer as an entity. Once her error was caught, it was *remedied forthwith.* There is *no evidence* of a *pattern* of misconduct here, nor any fraudulent or defiant behavior. It was a mistake of law. Based upon the testimony elicited, this incident has served as a learning experience for Insurer, and a similar mistake is not likely to repeat itself in the future. This litigation, and resultant Order should suffice to deter similar conduct in the future by Insurer.

s. A similar occurrence occurred in *Maria Adakai v. St. Mary Corwin Hospital, W.C. 4-619-954 (ICAO 2006).* TTD was prematurely terminated by the Insurer, in violation of the predecessor of Rule 6-1(A)(1). In *Adakai,* however, the adjuster terminated TTD based upon a verbal, hearsay, MMI report. Here Ms. Casady had *written confirmation of MMI.* There was no assertion of fraud in either instance. Further, the *Adakai* panel felt that the ALJ could have inferred that Insurer in that case had a pattern of terminating TTD

upon receiving verbal notice of MMI- the ALJ makes no such inference in this case. Further, the *Adakai* panel inferred that that the ALJ found a high degree of *reprehensibility* in that Insurer's conduct. The ALJ makes no similar finding here.

t. The *Adakai* panel emphasized that the ALJ should examine (1) the reprehensibility of the conduct, (2) the disparity between the harm to the claimant and the penalty, and (3) the difference between the penalty and civil damages that could be imposed in comparable cases. In this instance, the ALJ finds that the reprehensibility of Insurer was low in comparison with *Adakai.* Further, while Claimant suffered some harm as a result, said harm was quickly mitigated upon discovery of the error. As in Adakai, there is no civil penalty with which to compare the penalty to be imposed. Taking all the foregoing into account, the ALJ finds that a penalty of $150 per day is proportionate and adequate to address the conduct of Insurer in this case.

Gross Disproportionality Test

u. The Colorado Supreme Court has adopted the "gross disproportionality" test for determining whether a regulatory fine violates the Excessive Fines Clause. *Colorado Dept. of Labor & Empl. v. Dami Hospitality, LLC*, *supra* (hereinafter *Dami Hospitality*). In Concluding that corporations were protected from the imposition of excessive fines pursuant to the Eighth Amendment, the Court provided:

> In sum, we hold that the Eighth Amendment does protect corporations from punitive fines that are excessive. The appropriate test to apply in assessing whether a regulatory fine violates the Excessive Fines Clause is the "gross disproportionality" test. In assessing proportionality, a court should consider whether the gravity of the offense is proportional to the severity of the penalty, considering whether the fine is harsher than fines for comparable offenses in this jurisdiction or than fines for the same offense in other jurisdictions. In considering the severity of the penalty, the ability of the regulated individual or entity to pay is a relevant consideration. And the proportionality analysis should be conducted in reference to the amount of the fine imposed for each offense, not the aggregated total of fines for many offenses. *Dami Hospitality*, *Id.* at 103.

v. The "excessive fine" at issue in *Dami Hospitality* was an $841,200 penalty imposed by the Division of Workers' Compensation for failure to carry workers' compensation insurance. This fine was levied against a limited liability company that owned and operated a motel; however, the *Dami Hospitality* Court made it clear the proportionality analysis must consider each individual daily offense, not the aggregate of the multiple daily, singular offenses. *Id.* at 102. In assessing proportionality, the Court also noted that the ALJ should "consider whether the gravity of the offense is proportional to the severity of the penalty, considering whether the fine is harsher than fines for comparable offenses in this jurisdiction or than fines for the same offense in other jurisdictions." *Dami Hospitality*, *at 38.*

w. In this instance, the ALJ finds that the penalty of $150 per day is not grossly disproportionate to the infraction committed. Insurer can easily absorb said penalty, which totals $4,500. Further, Claimant can easily be made whole by the imposition of this penalty.

ORDER

It is therefore Ordered that:

1. Claimant's Average Weekly Wage is $629.20.

2. Respondents shall amend their FAL to include an award of medical maintenance benefits.

3. Respondents will pay penalties at the rate of $150 per day, for a cumulative amount of $4,500.

4. Pursuant to § 8-43-304(1) the penalty assessed is apportioned between Claimant and the Colorado uninsured employer fund created in § 8-67-105. Fifty percent (50%) of the penalty assessed shall be paid to Claimant and the remaining fifty percent of the penalty assessed shall be paid to the Colorado uninsured employers fund.

5. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 8, 2019

Colorado Springs, Colorado 80906

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the right knee surgery recommended by Dr. Richard Cunningham is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 8, 2018 work injury.

FINDINGS OF FACT

1. The claimant is employed with the employer as a housekeeper. The claimant's job duties include all aspects of cleaning condominiums at her assigned work location. The claimant testified that in her role as a housekeeper she changes and makes up beds, cleans bathrooms, vacuums, sweeps, and mops.

2. On September 8, 2018, the claimant was performing her normal job duties, including changing linens in bedrooms. The claimant testified that she was carrying a stack of linens in her arms while walking up carpeted stairs to make the beds. While walking up the stairs the claimant felt a pop and heat in her right knee. The claimant reported this incident to the employer.

3. Subsequently the claimant received medical treatment with Colorado Mountain Medical, the authorized treating provider (ATP) for this claim. The claimant was first seen at Colorado Mountain Medical on September 10, 2018. At that time, the claimant was seen and reported that she had pain around her right kneecap and felt that her knee was unstable. Dr. Eric Olson noted that the claimant reported that the pop was in the anterior of her right knee. Dr. Olson opined that the claimant had a possible meniscus injury and referred the claimant to physical therapy. In addition, Dr. Olson determined that the claimant could work, but with restrictions.

4. On September 28, 2019, the claimant returned to Dr. Olson and reported that physical therapy was helping her symptoms. However, the claimant reported that she had swelling and discomfort along the medial joint line. At that time, Dr. Olson ordered a magnetic resonance image (MRI) of the claimant's right knee. In addition, he referred to the claimant to Vail Summit Orthopaedics and Neurosurgery.

5. On October 2, 2018, an MRI of the claimant's right knee showed diffuse degeneration of the medial meniscus with focal oblique horizontal tear of the body segment and possible free edge tearing of the inner posterior horn.

6. On October 4, 2018, the claimant was seen by Dr. Richard Cunningham with Vail Summit Orthopaedics and Neurosurgery. The claimant reported that she felt a pop and immediate heat in her right knee at the time of her injury. On exam, Dr. Cunningham noted that the claimant walked with a normal gait, had mild knee effusion, and tenderness along the medial joint line. Dr. Cunningham noted that the claimant's

MRI and his exam indicated a right medial meniscus tear. In addition, Dr. Cunningham also noted that as the claimant had no prior right knee issues, it was his opinion that the claimant's right knee pain was coming primarily from the medial meniscus. He recommended the claimant undergo surgical intervention of a right knee arthroscopy with partial medical meniscectomy, lysis of adhesions, and chondroplasty.

7. The respondents asked physician advisor, Dr. Jon Erickson, to review the surgical request. In a review dated October 12, 2018, Dr. Erickson recommended denial of the surgery. In support of his position, Dr. Erickson noted that the MRI showed no evidence of an acute injury, but did show preexisting abnormalities. In addition, Dr. Erickson noted that the claimant's mechanism of injury of walking up stairs would not result in an injury. Based upon the opinion of Dr. Erickson, the respondents denied authorization for the right knee surgery.

8. On October 15, 2019, Dr. Cunningham requested that the respondents reconsider the denial. In a letter of that date, Dr. Cunningham asserted that the claimant's description of the September 8, 2018 incident was an acute injury. In addition, Dr. Cunningham pointed to the MRI results of a focal oblique horizontal tear of the body segment of the medial meniscus and his findings on exam.

9. In response to Dr. Cunningham's letter, on October 19, 2018 Dr. Erickson again reviewed the surgical request. Dr. Erickson reiterated his opinion that the meniscus tear seen on the MRI was not acute. He again recommended denial of the surgery and the respondents continued to deny authorization.

10. Dr. Erickson reviewed the surgical request for a third time on February 8, 2019. At that time, Dr. Erickson continued to recommend denial of the surgery. However, he recommended that an expert in musculoskeletal radiology review the MRI.

11. On June 11, 2019, the claimant attended an independent medical examination (IME) with Dr. James Lindberg. In connection with the IME, Dr. Lindberg reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Lindberg opined that the claimant's right knee condition is preexisting. He agreed with Dr. Erickson that walking up stairs would not cause a meniscus tear. In Dr. Lindberg's opinion, the claimant's symptoms are caused by the underlying and preexisting arthritis and degenerative tear in the claimant's right knee. Dr. Lindberg also noted in his IME report that he did not have the MRI images to review.

12. On July 18, 2019, Dr. Lindberg was provided the MRI imaging for review. Upon his review, Dr. Lindberg noted that there were degenerative changes in the posterior medical meniscus of the claimant's right knee, but no tear. Dr. Lindberg again agreed with Dr. Erickson that the claimant's right knee condition is chronic. Dr. Lindberg also recommended that another physician review the MRI. Dr. Lindberg's testimony by deposition was consistent with his written reports.

13. In his testimony, Dr. Lindberg testified that he reviewed the MRI and did not find evidence of a meniscal tear. Dr. Lindberg also noted that the claimant has

arthritis in her knee that is chronic and preexisting. Dr. Lindberg testified that the condition of the claimant's right knee was not caused by an acute injury. With regard to the recommended surgery, Dr. Lindberg testified that it would not be successful in addressing the claimant's arthritis. Dr. Lindberg also testified that the claimant has be taking the medication Celebrex, which is nonsteroidal anti-inflammatory medication that is used to treat arthritis. In addition, the claimant is taking glucosamine chondroitin which treats arthritis and joint pain.

14. Based upon the recommendation of Drs. Erickson and Lindberg, the respondents asked musculoskeletal radiologist, Dr. Elizabeth Carpenter, to review the MRI of the claimant's right knee. On August 5, 2019, Dr. Carpenter noted that there were degenerative changes in the medial meniscus, but no definitive meniscal tear. Dr. Carpenter also found no findings of an acute injury. The respondents continue to deny authorization for the recommended right knee surgery.

15. The ALJ credits the medical records and the opinions of Drs. Erickson, Lindberg, and Carpenter and finds that the claimant did not suffer a meniscus tear. The ALJ further credits the opinions of Dr. Lindberg over the contrary opinions of Dr. Cunningham and finds that it is more likely than not that the current condition of the claimant's right knee was not caused by an acute injury on September 8, 2018. The ALJ also finds that it is more likely than not that the action of stepping on the stairs on September 8, 2018 did not aggravate or accelerate the preexisting condition of the claimant's right knee so as to necessitate surgery.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

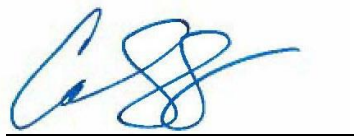
4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the recommended right knee surgery is causally related to the September 8, 2018 work injury. As found, the claimant has failed to demonstrate, by a preponderance of the evidence that the act of walking up stairs on September 8, 2018 aggravated or accelerated the preexisting condition of the claimant's right knee to necessitate surgery. As found, the medical records and the opinions of Drs. Erickson, Lindberg, and Carpenter are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for right knee surgery is denied and dismissed.

Dated this 13th day of November 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-074-789 & 5-091-579

ISSUES

- Whether Claimant's admitted and closed April 6, 2018 claim should be reopened based on a change of condition in accordance with § 8-43-303(1), C.R.S.

- Whether Claimant sustained a compensable injury to her lower back and left leg in the course and scope of her employment on October 02, 2018.

- Whether Respondents unilateral termination of medical benefits for non-medical reasons passes the right of selection of physician to the Claimant.

STIPULATIONS

- If W.C. No. 5-091-579 is reopened, or if W.C. No. 5-074-789 is found to be compensable, Claimant's average weekly wage is $388.23.

- If temporary total disability is awarded under either claim, Claimant was off work from October 3, 2018 to March 4, 2019.

- If Claimant worked any partial shifts during this time period Respondents may take credit for the time worked.

- The parties agreed to resolve temporary partial disability owed, if any.

FINDINGS OF FACT

1. Claimant worked for Employer in the kitchen at Swanson Elementary School. She testified that on April 6, 2018 she injured her low back and experienced pain down her left leg while lifting boxes of apples. Claimant had no difficulty performing her job duties during the 2016-17 school year and the 2017-18 school year until the April 6, 2018 incident.

2. Respondents provided Claimant medical treatment at Midtown Occupational, with Dr. Steinmetz and his referral Dr. Lesnak. Claimant was by Drs. Steinmetz and Lesnak diagnosed Claimant with a lumbar sprain. Claimant underwent massage and physical therapy and saw Dr. Jason Gridley for limited chiropractic treatment.

3. On April 23, 2018 Respondents filed a General Admission of Liability for this injury (W.C. No. 5-074-789), and began paying temporary disability benefits. On June 1, 2018 Respondents filed a second General Admission of Liability indicating that Claimant has returned to work on May 22, 2018 at full duty and full wages.

4. On July 16, 2018, Dr. Steinmetz found Claimant to be at MMI by without impairment. Respondents filed a Final Admission of Liability dated July 17, 2018 consistent with Dr. Steinmetz's opinion. Claimant did not object to the Final Admission (W. C. No.: 5-074-789).

5. Claimant returned to work the following school year without restrictions. She testified that she was able to perform all of her job duties after having the summer months off to rest. Claimant said that she was off for the summer but did return to work when the new school year started in August, 2018.

6. Claimant was able to return to her previous position and to do everything required of her until she sustained a new injury on October 2, 2018, while lifting boxes containing cartons of milk. Claimant testified that she was responsible for preparing breakfasts for the classrooms. This included taking the cartons of milk to the classrooms. She picked up the box and turned to place it in the refrigerator when she felt a sharp pain in her back. She reported the injury and Employer sent her to Midtown Occupational for treatment. Dr. David Orgel treated Claimant, noting that she indicated pain into her left thigh and buttock. The doctor placed Claimant on a 5 pound lifting restriction and referred her for physical therapy. Dr. Orgel observed that Claimant had consistent objective findings at that first appointment.

7. Employer was not able to meet Claimant's restrictions and, per the parties' stipulation, Claimant did not return to work until March 4, 2018.

8. Claimant testified that symptoms from her October 2 injury were worse than that those from her earlier injury. With the October 2 injury she has experienced pain down her left leg and numbness in three of her left toes. These left sided radicular symptoms represent a new and different problem than what she had experienced previously.

9. Dr. Orgel referred her to Dr Chan for EMG testing, and ordered a current MRI. Dr. Orgel noted that the MRI confirmed "a bilateral S1 radiculopathy described as a left central disc protrusion with annular tearing impinging the left greater than right S1 nerve root at L5-S1."

10. Dr. Orgel then referred Claimant to Dr. Brian Castro for a surgical consultation. Dr. Castro did not recommend surgery at that time, but Dr. Chan recommended an epidural steroid injection at the S1 level for diagnostic and therapeutic purposes.

11. Respondent scheduled Claimant to see Dr. Mark Failinger through Contigrity Group for a Respondent's IME. Dr. Failinger authored a report dated February 7, 2019. He opined that Claimant was still symptomatic from her first injury in July of 2018 when Dr. Steinmetz and put at MMI and released her to unrestricted duties. Dr. Failinger opined that Claimant had no new symptoms or pathology related to the October 2, 2018 injury. Rather, "this appears to be ongoing symptomatology from a previous work incident of April 2018." He placed Claimant at MMI as of her prior appointment with Dr. Chan on January 2, 2019.

12. Claimant continued therapy and treatment with Drs. Chan and Dr. Orgel until March, 2019. Neither of her authorized treating physicians opined that she was at MMI. In fact, Dr. Orgel's last report dated March 6, 2019 provides that he did not believe Claimant would not be at MMI for "2 months."

13. Claimant testified that Respondent cancelled her February 20, 2019 therapy appointment. Dr. Orgel's February 20, 2019 report notes that he was continuing to prescribe physical therapy two times per week and massage therapy one time each week. He also recommended a follow up surgical consultation with Dr. Castro. Dr. Orgel's last appointment note is dated March 6, 2019.

14. Dr. Castro saw Claimant for follow up and recommended a new MRI to check for worsening of Claimant's neural impingement.

15. No persuasive evidence supports a finding that Claimant was provided the treatment Dr. Orgel recommended or the MRI Dr. Castro recommended.

16. Claimant testified that when Respondent stopped her treatment, she was still in pain and unable to perform her regular work duties. She worked until May 31, 2019, and has been off since that time. Claimant remains on restrictions from her authorized treating physician.

17. Claimant testified that she had a previous car accident in 2014 that involved treatment to her neck and right shoulder. She received treatment into 2015. Denver Health medical records dated August 17, 2016 indicate Claimant had no musculoskeletal complaints at that time. Subsequent Denver Health notes show some complaints of lower back pain but Claimant's primary treatment involved her cervical region. Claimant testified that she treated for pain in her feet related to diabetes, and for her neck from her 2014 whiplash injury. She did not recall receiving significant treatment for her lower back, and that she had been able to work full duty the four years prior to her work injuries without complaint. While Claimant reported some low back soreness, her Denver General records show that her treatment focused predominantly on her neck.

18. Claimant's 2016 MRI showed "mild lumbar disc disease without neurologic compression." By April 4, 2017 the Denver Health records reflect Claimant only complained of cervical pain from the 2014 accident.

19. Claimant testified that she felt better in July 2018 when she was released from the first injury, and the summer of 2019 after the second injury. After her first work injury, she was able to take some time off in the summer of 2018 and felt good enough to go back to work full duty, which she dis until her second injury. After her second injury, Claimant has continued to have pain into her leg and does not feel that she could return to full duty work.

20. Claimant continues to have significant pain in her low back and down her leg, with numbness of three toes.

21. Respondents stopped treatment unilaterally prior to any of her authorized treating physicians placing her at maximum medical improvement.

22. The ALJ is not persuaded by Dr. Failinger's MMI date, or his ultimate opinion that Claimant's problems are pre-existing, or flow from her prior admitted work related injury.

23. Because Respondents terminated Claimant's medical treatment for non-medical reasons prior to her being placed at MMI, Claimant may choose a physician to continue her care. Respondents are liable for continuing medical care with the provider of Claimants choice until she is placed at MMI by her new authorized treating physician.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits, § 8-43-201, C.R.S. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. Indus. Claim Apps. Office*, 5 P.3d 385, 389 (Colo. App. 2000).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). Here Claimant has shown by a preponderance of the evidence that the injury she suffered October 2, 2018 aggravated or accelerated the pre-existing admitted lower back injury that she suffered April 6, 2018.

Reopening

Section 8-43-303(1), C.R.S. authorizes an ALJ to reopen any award within six years after the date of injury on a number of grounds, including error, mistake, or a

change in condition. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 2209 (Colo. App. 2008); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). A change in condition refers either "to a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury". *Chavez v. Industrial Comm'n*, 714 P.2d 1328, 1330 (Colo. App. 1985). The reopening authority granted ALJs by section 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ". *Cordova v. Industrial Claim Appeals Office*, supra, 55 P.3d at 189. The party seeking reopening bears "the burden of proof as to any issue sought to be reopened". § 8-43-303(4), C.R.S. As the *Heinicke* Court noted, reopening is proper where a showing can be made that "Claimant's physical or mental condition is causally connected to the original compensable injury". *Heinicke v. Industrial Claim Appeals Office*, supra, 197 P.3d at 223. Here Claimant suffered a new injury or aggravation of the underlying condition October 2, 2018. She had been placed at MMI with no restrictions and no impairment by her authorized treating physician. She was able to return to work in the kitchen and do everything asked on her by the employer prior to the October 2, 2018 injury, therefore the ALJ finds that Claimant has proven a new compensable injury, rather than a worsening of condition, related to the prior injury.

Refusal to treat for non-medical reasons

CRS 8-43-404(10) (a) states:

> If an authorized physician refuses to provide medical treatment to an injured employee or discharges an injured employee from medical care for nonmedical reasons when the injured employee requires medical treatment to cure or relieve the effects of the work injury, then the physician shall, within three business days from the refusal or discharge, provide written notice of the refusal or discharge by certified mail, return receipt requested, to the injured employee and the insurer or self-insured employer. The notice must explain the reasons for the refusal or discharge and must offer to transfer the injured employee's medical records to any new authorized physician upon receipt of a signed authorization to do so from the injured employee. The director or any administrative law judge of the office of administrative courts has jurisdiction to resolve disputes regarding whether a refusal to provide medical treatment or a discharge from medical care was for medical or nonmedical reasons.

Claimant testified that her therapy was stopped, and then she was not allowed to continue treatment with Employers designated physicians. No persuasive evidence establishes Claimant was at MMI. Rather, persuasive evidence in Dr. Orgel's records indicates that he did not anticipate Claimant would reach MMI for another two months. Further, the ALJ finds no indication that the physicians who refused to treat were doing so for medical reasons. The ALJ finds that Claimant's ATPs failed to continue to treat Claimant for non-medical reasons. The ALJ further finds and concludes that Respondents have not established by a preponderance of the evidence that they complied

with the statutory requirement that they provide written notice of refusal or discharge. Therefore, the ALJ finds and concludes that the right to select a physician for continued treatment passed to Claimant.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that she injured her lower back and left leg in the course and scope of her employment with the Respondent on October 2, 2018. Because the ALJ has specifically found that Claimant sustained a new injury or aggravation of the underlying condition on that date, Claimant's petition to reopen is denied.

2. Claimant has not been placed at maximum medical improvement but she did return to work, with restrictions, March 4, 2019. Respondents shall pay to the Claimant temporary total disability at the rate of $258.82 from October 3, 2018 to March 3, 2019.

3. Respondents shall provide medical benefits to Claimant under the Colorado Workers' Compensation Act.

4. All issues not determined herein are reserved for future determination.

DATED: November 13, 2019

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section §8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm .

ISSUES

1. Whether Respondents have proven by a preponderance of the evidence that Claimant committed a volitional act that led to her termination of employment so that she is not entitled to receive TTD benefits?

2. Whether Claimant is entitled to reinstatement of her TTD benefits?

FINDINGS OF FACT

1. Claimant began her employment with employer as a Certified Nursing Assistant (CNA) in October, 2016. Shortly thereafter, Claimant began to violate Employer's attendance and call-off policies. Employer issued an Education Acknowledgment on March 7, 2017. Employer retrained Claimant on its call-off procedures.

2. Claimant continued to have issues adhering to Employer's attendance and call-off policies. Again on November 29, 2017, Employer issued an Education Acknowledgment. As part of Claimant's retraining, Employer's attendance policy and call-off procedures were reviewed with Claimant. Claimed signed a copy of the policy on November 29, 2017. Her signature indicated she understood the policy including the consequences for a no call/no show. Specifically, that a single no call/no show would be grounds for termination.

3. On February 24, 2018, Claimant violated the no call/no show policy. Claimant's supervisor, Crystal R_____, testified at hearing that Employer decided to terminate Claimant's employment. Ms. R_____ met with Claimant on February 28, 2018 to advise Claimant of her termination. However, Claimant pleaded for her job and Employer gave her another chance. Employer placed Claimant on a 30 day action plan during which she was to have no attendance violations and was advised that any further no call/no shows would result in termination. Ms. R_____ testified that Claimant understood any further no call/no shows would result in termination.

4. On April 27, 2018, Claimant sustained an admitted work injury to her left wrist. She presented to Concentra for treatment and her provider assigned temporary work restrictions. Ms. R_____ testified Claimant accepted modified duty within her work restrictions.

5. Ms. R_____ testified that in addition to being one of Claimant's supervisors, she was also Employer's workers compensation coordinator. In that role, she would monitor injured workers' work restrictions and modified duty. Ms. R_____ testified that she would meet with Claimant following her visits with her workers' compensation providers to discuss her work restrictions and modified duty. Ms.

R_____ routinely asked Claimant if she was having difficulty performing her modified duty and Claimant advised she was fine and could continue working the modified duty.

6. Claimant continued to work modified duty until August 3, 2018, when she again violated Employer's no call/no show policy. Ms. R_____ testified she tried to reach Claimant on her telephone regarding the no call/no show, and Claimant did not answer or return her messages. Ms. R_____ testified that due to Claimant's August 3, 2018 no call/no show, and the fact she had previously been warned another no call/no show would result in termination, Employer decided to terminate Claimant effective August 3, 2018.

7. Claimant acknowledged at hearing that she decided to no call/no show on August 3, 2018 and that she knew Employer would terminated her as a result. Claimant testified she no call/no showed because she no longer wanted to work for Employer.

8. At the time of Claimant's termination, her work restrictions were maximum lifting 5 lbs with left arm, maximum lifting right arm 10 lbs, and total push/pull maximum of 20 lbs.

9. Claimant underwent surgery with Dr. Tracy Wolf on August 29, 2018 and was placed on "no work" status. Respondents initiated TTD benefits as of August 29, 2018 due to the surgery and Claimant's status.

10. On September 10, 2018, Claimant's provider returned her to her pre-termination restrictions of maximum lifting 5 lbs with left arm, maximum lifting right arm 10 lbs, and total push/pull maximum of 20 lbs.

11. Claimant underwent a second surgery with Dr. Wolf on April 11, 2019, and was again taken off work.

12. On July 10, 2019, Claimant's provider returned her to her pre-termination restrictions of maximum lifting 5 lbs with left arm, maximum lifting right arm 10 lbs, and total push/pull maximum of 20 lbs.

13. Ms. R_____ testified at hearing that Employer was able to accommodate Claimant's restrictions at the time of her termination. Ms. R_____ further testified that, but for Claimant's attendance policy violation on August 3, 2018, Employer would have been able to provide her with modified duty within her restrictions on September 10, 2018 and July 10, 2019.

14. The ALJ finds Ms. R_____'s testimony of to be credible and persuasive. Employer trained Claimant multiple times regarding appropriate attendance and call-off procedures. Employer also advised Claimant that any further violations would result in termination. The ALJ finds credible and persuasive Ms. R_____'s testimony that Employer would have been able to accommodate claimant's work restrictions on September 10, 2018 and July 10, 2019, but for her termination.

15. The ALJ finds persuasive Claimant's testimony that she decided to no call/no show on August 3, 2018, knowing it would lead to her termination, because she no longer wanted to work for employer.

16. The ALJ finds Claimant committed a volitional act which led to her termination and loss in wages.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

General Legal Principles

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. §8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Claimant Was Responsible For Her Termination

The termination statutes provide that in cases where a temporarily disabled employee is "responsible for termination of employment, the resulting wage loss shall not be attributed to the on-the-job injury." The concept of responsibility reintroduces the concept of "fault" as it was used in termination cases prior to *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Hence, the issue is whether the claimant

engaged in volitional conduct which was the cause of the termination. Conduct is volitional if the claimant exercised some degree of control over the circumstances leading to the termination in light of the totality of the circumstances. See *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994); *Aguilar v. Matrix Logistic, Inc.*, W.C. No. 4-473-075 (December 5, 2002).

Under the circumstances, there is persuasive evidence that Claimant was responsible for her own termination from employment due to her volitional decision to no call/no show on August 3, 2018. As found, Claimant committed a volitional act when she decided to no call/no show because she no longer wanted to work for employer. Accordingly, Claimant is not entitled to TTD benefits following her termination.

Reinstatement of Temporary Total Disability Benefits

The claimant may only be entitled to a reinstatement or continuation of temporary disability benefits after being terminated for cause if it is determined that the ensuing wage loss is attributable to a worsened condition causally related to the work injury and not to the termination. See *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323, 326 (Colo. 2004) ("We hold that section 8-42-105(4) bars TTD wage loss claims when the voluntary or for-cause termination of the modified employment causes the wage loss, but not when the worsening of a prior work-related injury incurred during that employment causes the wage loss."). Whether a worsened condition caused a claimant's wage loss is a factual question to be determined by the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002).

Claimant was taken off work on August 29, 2018, due to surgery with Dr. Wolf, and Respondents appropriately initiated TTD benefits. Claimant was returned to her pre-termination restrictions of maximum lifting 5 lbs with left arm, maximum lifting right arm 10 lbs, and total push/pull maximum of 20 lbs. on September 10, 2018. These restrictions remained in place until Claimant was again taken off work for surgery with Dr. Wolf on April 11, 2019. Claimant remained off work until July 10, 2019, when she was again returned to her pre-termination restrictions of maximum lifting 5 lbs with left arm, maximum lifting right arm 10 lbs, and total push/pull maximum of 20 lbs.

Claimant's wage loss from August 29, 2018 to September 9, 2018 and from April 11, 2019 to July 9, 2019, was attributable to a worsening of her work related condition. However, Claimant's wage loss following her termination on August 3, 2018 to August 28, 2018 was due to her termination for a no call/no show. Employer had modified duty available that was within Claimant's restrictions on September 10, 2018. Claimant's no call/no show, and subsequent termination, prevented Employer from accommodating Claimant's restrictions and paying her wages. Thus, it was Claimant's volitional act of the no call/no show which led to the wage loss from September 10, 2018 to April 10, 2019. Likewise, Employer had modified duty available that was within Claimant's restrictions on July 10, 2019 but was unable to offer Claimant this modified duty and pay her wages due to her termination. Claimant's volitional act of the no call/no show led to her wage loss from July 10, 2019 and ongoing.

Claimant is entitled to TTD benefits from August 29, 2018 to September 9, 2018 and from April 11, 2019 to July 10, 2019. Claimant is not entitled to TTD benefits from August 3, 2018 to August 28, 2018, September 10, 2018 to April 10, 2019, and July 10, 2019 and ongoing, because she violated Employer's attendance policies which led to her termination and the resulting wage loss.

When Employer was able to offer Claimant modified duty within her restrictions, but was unable to do so due to Claimant's termination, it was no longer Claimant's work injury which caused her wage loss and instead was due to Claimant's volitional act which led to her termination.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. Respondents have proven by a preponderance of evidence that Claimant is responsible for her termination on August 3, 2018.

2. Claimant is entitled to TTD benefits from August 29, 2018 to September 9, 2018 and from April 11, 2019 to July 9, 2019.

3. Claimant is not entitled to TTD benefits from August 3, 2018 to August 28, 2018, September 10, 2018 to April 10, 2019, and July 10, 2019 and ongoing because she was responsible for her termination and the resulting wage loss.

DATED this 13th day of November, 2019.

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: , Claimant, vs. , Employer, and , Insurer, Respondents.	▲ COURT USE ONLY ▲ **CASE NUMBER:** **WC 5-050-347-01**

ORDER FOLLOWING REMAND
FINDING OF FACT, CONCLUSION OF LAW AND ORDER

Following a February 1, 2018, hearing, the Administrative Law Judge entered a Corrected Order on May 3, 2018, which denied Claimant the right to request a division-sponsored independent medical examination (DIME). Claimant appealed the ALJ's Corrected Order to the Industrial Claims Appeal Office (ICAO) and, on June 14, 2019, a panel of the ICAO reversed the ALJ's denial and remanded the claim to the ALJ to enter an order reinstating the Claimant's Notice and Proposal to Select a DIME and the Application for a DIME. This Order Following Remand is entered pursuant to the ICAO remand order.

Claimant appeared at hearing and was represented by Mark Simon, Esq. Respondents appeared through Bradley J. Hansen, Esq. Respondents' exhibits A through H were admitted into evidence.

In this order, Charlotte S_____ will be referred to as "Claimant," X_____ will be referred to as "Employer," G_____ will be referred to as "Insurer" and the Insurer and Employer collectively will be referred to as "Respondents."

ISSUE

Whether Claimant is permitted to move forward with a DIME despite the ruling and order from PALJ Barbo denying her request.

FINDINGS OF FACT

1. Claimant sustained a work-related injury on March 10, 2017, but did not have any compensable lost time from work. Claimant treated conservatively for the injury and was eventually placed at maximum medical improvement (MMI) on June 7, 2017 by Dr. John Burris with no impairment.

2. A final admission of liability (FAL) was filed on July 13, 2017, by the claims adjuster based on the findings of Dr. Burris of MMI and no impairment. Temporary disability benefits were denied as claimant did not have any compensable lost time. Respondents admitted to medical maintenance benefits per the opinion of Dr. Burris.

3. On July 26, 2017, claimant filed an objection to the FAL along with a notice and proposal to select an independent medical examiner.

4. On August 18, 2017, respondents filed a motion to strike claimant's DIME process. Prehearing Administrative Law Judge (PALJ) Michael Barbo granted Respondents' motion to strike the DIME. The motion was granted without prejudice

5. Claimant subsequently filed an Application for Hearing on October 13, 2017, to appeal the order of PALJ Barbo before this Administrative Law Judge. On May 3, 2018, the undersigned ALJ served on the parties a Corrected Order affirming the Prehearing ALJ's order granting the motion to strike. An appeal to ICAO followed.

6. On June 14, 2019, ICAO reversed the ALJ's order of May 3, 2018, and remanded the claim to the ALJ for entry of an order reinstating the claimant's Notice and Proposal to Select a DIME and the Application for a DIME.

7. Consistent with the ICAO order of June 14, 2019, it is found that claimant's Notice and Proposal to Select a DIME and the Application for a DIME are reinstated.

CONCLUSIONS OF LAW

1. As the ICAO has reversed the May 3, 2018, Corrected Order of the ALJ and remanded the matter to the ALJ for entry of an order reinstating the

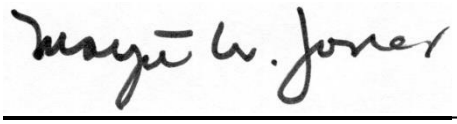
claimant's Notice and Proposal to Select a DIME and the Application for a DIME, it is concluded that the Notice and Proposal to Select a DIME and the Application for a DIME are hereby reinstated.

ORDER

IT IS ORDERED:

1. Claimant's Notice and Proposal to Select a DIME and the Application for a DIME is hereby reinstated.

DATED: November 14, 2019



MARGOT W. JONES
ADMINISTRATIVE LAW JUDGE

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that he sustained an injury arising out of and in the course and scope of his employment with the employer on March 22, 2019.

STIPULATIONS

- If the claim if found compensable, the parties stipulated that the respondents are liable for reasonable medical treatment that is necessary to cure and relieve the claimant from the effects of the work injury.

- If the claim if found compensable, the parties stipulated that the claimant's average weekly wage (AWW) would be $2,404.70.

- If the claim if found compensable, the parties stipulated that the claimant would also be entitled to temporary total disability (TTD) benefits for the period of March 23, 2019 through May 26, 2019.

FINDINGS OF FACT

1. The employer operates a coal fire electrical plant. The claimant has worked for the employer for more than 28 years. His primary position is that of a mechanic and welder in the operations department. The claimant's job duties include maintaining equipment at the power plant.

2. The claimant testified that while he was at work on March 21, 2019, he was moving large sheets of plywood across the floor. The claimant testified that although this was normally a two-person task, on that date he moved a number of plywood sheets by himself. In addition, the claimant was also assigned to clean "studs" in the plant. This task involves using a wheel grinder or a wire brush while on one's knees. The claimant testified that during his shift on March 21, 2019, his hips did not "feel right".

3. The claimant also testified that at approximately noon on March 21, 2019 he informed the mechanic supervisor, Dwayne Z_____, that moving the plywood had hurt him and he asked to no longer work on his knees. However, the claimant returned to his job duties and worked the remainder of his shift on March 21, 2019.

4. The claimant returned to work on March 22, 2019 and worked until approximately 5:30 p.m. The claimant testified that he worked slower on that date and it was a "struggle" to perform his job duties. The claimant testified that over the course of

his shifts on March 21 and March 22, 2019 he spent approximately 12 hours working on his knees.

5. At approximately 5:30 p.m. on March 22, 2019, the claimant informed Mr. Z_____ that he needed to leave. The claimant testified that he was in so much pain that he was unable to fully change out of his work clothes and needed assistance to walk. The claimant's spouse arrived at the employer's location to take the claimant home. However, the claimant sought medical treatment at emergency department at The Memorial Hospital at Craig.

6. The March 22, 2019 emergency department medical record indicates that the claimant reported his symptoms as pain in his right buttock that radiated into his bilateral thighs. In addition, the claimant reported that the onset of his symptoms had been gradual over the last two hours. Dr. Tinh Huyn ordered a magnetic resonance image (MRI) of the claimant's lumbar spine. The MRI showed diffuse degenerative changes without spinal compression. Dr. Huyn opined that the claimant had a possible musculoskeletal strain and diagnosed right sided sciatica. Dr. Huyn prescribed flexeril and prednisone.

7. On March 26, 2019, the claimant sought treatment with his primary care provider, Dr. Jonathan Hamilton. The claimant reported to Dr. Hamilton that his symptoms had developed gradually after working on his knees for several hours. The claimant described his symptoms as pain in his hips and his low back. At that appointment, the claimant was using crutches to ambulate. Dr. Hamilton prescribed diazepam and hydrocodone-acetaminophen. In addition, Dr. Hamilton referred the claimant to a specialist and physical therapy.

8. On March 28, 2019, the claimant was seen by Jessica Nyquist, NP with the spine department of Memorial Regional Health. The claimant reported to Ms. Nyquist that his pain started following long hours of kneeling. The claimant arrived at his appointment using crutches. At that time, the claimant's symptoms were pain in his legs (right greater than left) with numbness, tingling, and weakness in his lower extremities. Ms. Nyquist diagnosed lumbar spondylosis with myelopathy and recommended an MRI of the claimant's lumbar spine.

9. At the direction of the employer, the claimant was seen at UC Health on March 28, 2019. At that time, the claimant was seen by Greg Holm, PhD/Nurse Practitioner. The claimant reported to Dr. Holm that he worked on his knees for 10 hours on March 22, 2019 and experienced gradually worsening burning pain in his lower back into his buttocks and hips. Dr. Holm noted that the recent MRI of the claimant's lumbar spine was normal. Dr. Holm also noted some concern regarding the possible diagnosis of piriformis syndrome and referred the claimant to Dr. Alexis Tracy.

10. The claimant was first seen by Dr. Tracy on April 1, 2019. At that time, the claimant described his mechanism of injury as experiencing severe hip, low back, and leg pain after working on his knees for 12 to 14 hours. On April 1, 2019, the claimant reported his pain as 10 out of 10. Dr. Tracy noted that the claimant's x-rays and MRI results were normal. Dr. Tracy recommended a computed tomography angiogram (CT angiogram) of the claimant's abdomen and pelvis.

11. The claimant returned to Dr. Hamilton on April 2, 2019 and reported continuing symptoms. These symptoms included numbness into his entire foot from his right buttock region. In the medical record of that date, Dr. Hamilton noted that the MRI did not identify the claimant's pain generator. Dr. Hamilton also noted that the claimant reported right leg numbness when Dr. Hamilton palpated the claimant's left lower lumbar region. Dr. Hamilton also noted that such a reaction "was not possible."

12. On April 2, 2019, the claimant returned to Dr. Holm and reported some improvement in his symptoms. However, the claimant also reported fasciculation (muscle twitching) in the right proximal anterior thigh, which Dr. Holm noted was a new symptom. Dr. Holm also noted that he had spoken with Dr. Tracy who conveyed that the claimant did not have piriformis syndrome. Dr. Holm agreed with the recommendation that the claimant undergo a CT angiogram. Dr. Holm opined that the claimant's symptoms could be work related.

13. On April 12, 2019, the recommended CT angiogram of the claimant's abdomen, pelvis, and bilateral lower extremities was performed. The findings were normal.

14. On April 15, 2019, Dr. Tracy discussed the normal results of the CT angiogram with the claimant. At that time, the claimant informed Dr. Tracy that he was "doing better everyday [*sic*]" and could stand and walk for longer periods. Dr. Tracy recommended that the claimant pursue physical therapy.

15. On April 18, 2018, the claimant returned to Dr. Hamilton. On that date, the claimant reported that he had intended to ask for a "light duty release" because he had been feeling better. However, the claimant also reported that his back pain had worsened after he stood on concrete to grill the previous night. Dr. Hamilton referred the claimant to physical therapy. Dr. Hamilton also noted that the claimant's condition was "confusing".

16. On April 22, 2019, the claimant started physical therapy at Pearson Physiotherapy. On that date, the claimant reported to John Pearson, PT that he his symptoms were "[m]uch better with prescription of medicine for anxiety, and spasms."

17. On May 2, 2019, the claimant was again seen by Dr. Hamilton who opined that there could be an anxiety component to the claimant's symptoms. In the medical record of that date, Dr. Hamilton noted that the claimant seemed better. On May 22, 2019, the claimant returned to Dr. Hamilton and reported that he was doing much better

and had completed physical therapy. On that date, Dr. Hamilton released the claimant to return to full duty.

18. On May 24, 2019, the claimant returned to Dr. Holm and reported that it was his belief that he was injured from moving plywood sheets. However, Dr. Holm noted that the mechanism of injury reported at their first appointment related to a long period of working on his knees. In that same medical record, Dr. Holm noted that Dr. Frederick Scherr had recommended a "fit for duty exam". In the medical record of that date, Dr. Holm noted that the claimant's various providers could not find any objective pathology to explain the claimant's symptoms. Dr. Holm also noted that there was some indication of "anxiety and functional overlay". The claimant testified that he did not see Dr. Holm between April 2, 2019 and May 24, 2019 because his workers' compensation claim had been denied.

19. On August 15, 2019, an Essential Function Test was performed and suggested that the claimant could fulfill his normal job duties.

20. Also on August 15, 2019, the claimant was seen by Dr. Scherr. At that time, the claimant reported that he was not experiencing any lumbar back pain. Dr. Scherr diagnosed the claimant's condition as "[l]umbar strain work related now resolved". In addition, Dr. Scherr placed the claimant at maximum medical improvement (MMI) with no permanent impairment and no permanent work restrictions.

21. The claimant testified regarding injuries he sustained in 2014 and 2015 while employed with the employer. With regard to the 2014 injury, the claimant testified that he was lifting a ladder and injured his low back. The claimant also testified that after that injury, he had work restrictions and was assigned to work in the employer's training center. It was while he was working at the training center that the claimant had severe hip and back pain that caused him to collapse and he was transported to the emergency room. The claimant also testified that he experienced another low back injury when he was showing a new employee around. The claimant testified that he fully recovered from the 2014 and 2015 injuries and was able to perform all of his normal job duties.

22. The medical records entered into evidence provide further information about the claimant's prior work injuries. On June 24, 2014, the claimant was seen by Dr. Holm because he suffered an injury while moving a ladder at work. Dr. Holm noted that the claimant had sharp pain "at the mid/left side of his lower back" that radiated into the claimant's buttock and hip. At that time, Dr. Holm diagnosed the claimant with left sacroiliitis. The claimant continued to see Dr. Holm for treatment related to the 2014 incident.

23. On August 28, 2014, the claimant reported to Dr. Holm that he could not walk or use stairs. At that time, Dr. Holm noted that the claimant's "discomfort is more at the bilateral ASIS [anterior superior iliac spine] toward the inguinal ligaments." Thereafter, on September 11, 2014, the claimant reported numbness and tingling down both legs, front and back. In the medical record of that date, Dr. Holm noted that the

claimant was describing “a nondermatomal stocking and glove pattern”. On September 25, 2014, Dr. Holm noted that an MRI of the claimant’s lumbar spine was “essentially normal with only some degenerative changes”. Dr. Holm further noted that there was no explanation for the claimant’s complaints of numbness.

24. On October 8, 2014, the claimant treated with Dr. Scherr for his continuing low back pain. At that time, Dr. Scherr diagnosed persistent low back pain, with an unknown pain generator. On January 28, 2015, Dr. Scherr noted that the claimant’s symptoms had resolved and released him to full duty without restrictions.

25. With regard to the current case, on June 18, 2019, the claimant attended an independent medical examination (IME) with Dr. John Raschbacher. In connection with the IME, Dr. Raschbacher reviewed the claimant’s medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Raschbacher opined that the claimant was not injured at work. In support of this opinion, Dr. Raschbacher noted that there is no objective evidence to support that an injury occurred. Dr. Raschbacher’s testimony at hearing was consistent with this written report.

26. Mr. G_____ is a shift supervisor for the employer. Mr. G_____ testified that he notified the claimant that he would be working “straight days” during a scheduled outage. This outage was scheduled to last three weeks. The claimant was given the option of reporting to work on March 21, 2019 or on March 22, 2019. The claimant reported to work on March 21, 2019.

27. With regard to his work schedule in late March 2019, the claimant testified that he normally worked “shift”, but was asked to work “days”. The claimant explained that “shift” involves working seven nights and then seven days of 12-hour shifts. This was the claimant’s normal schedule for work. In March 2019, the claimant was notified that he would be moved to days during a scheduled plant outage. The claimant also testified that during an outage employees earn overtime. As a result, the claimant believes that he ultimately lost money when he did not return to work after March 22, 2019 because he would have earned overtime during the outage. The respondents argue that the claimant alleged a work injury on March 22, 2019 because he was displeased with the unexpected change to his work schedule. The ALJ is not persuaded by this assertion.

28. The ALJ credits the medical records and the opinions of Dr. Raschbacher and finds that the claimant has failed to demonstrate that it is more likely than not that he suffered an injury at work on March 22, 2019. The ALJ specifically credits Dr. Raschbacher’s opinion that there is no objective evidence to support that an injury occurred.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (the Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

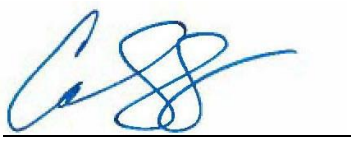
4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an injury that arose out of an in the course and scope of his employment for the employer. The ALJ finds no persuasive evidence on the record that the claimant suffered an aggravation or acceleration of a preexisting condition. As found, the medical records and the opinions of Dr. Raschbacher are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated this 14th day of November 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Respondents overcome the DIME's whole person impairment rating by clear and convincing evidence?

FINDINGS OF FACT

1. Claimant suffered an admitted injury on September 6, 2013 when a flatbed tow truck ran over his right leg. He underwent extensive treatment including right knee surgery in January 2016 for peroneal nerve entrapment and a lateral meniscus tear. He continued to experience unrelenting neuropathic pain affecting his right leg, and was ultimately diagnosed with complex regional pain syndrome (CRPS). He received minimal sustained benefit from sympathetic blocks and underwent an unsuccessful spinal cord stimulator (SCS) trial in late 2016.

2. Dr. John Raschbacher conducted a 24-month DIME on March 29, 2019. He determined Claimant reached MMI on May 25, 2018. Dr. Raschbacher noted Claimant's severe CRPS "involves, in essence, the entire right lower extremity." Physical examination showed obvious vasomotor and trophic changes throughout the leg to the mid-thigh. Claimant has severe allodynia and can barely tolerate even light touch on the leg. His right knee is permanently fixed in a 90-degree contracture because of CRPS-related dystonia. Claimant retains no useful function of his right leg. He cannot bear weight on the right leg and uses two axillary (underarm) crutches to ambulate. Claimant considered using a wheelchair, but is reluctant because "he feels every little bump."

3. Dr. Raschbacher assigned a 60% whole person impairment rating for CRPS. He calculated the rating based on the "Station and gait" section of Table 1 on page 109 of the *AMA Guides*. That section contains several categories corresponding to different ratings, broken down as follows:

Can stand but walks with difficulty	5-20%
Can stand but walks only on the level	25-35%
Can stand but cannot walk	40-60%
Can neither stand nor walk	65%

Dr. Raschbacher noted, "there is no absolutely clear correlate to [Claimant's] condition" within those categories. He ultimately concluded,

> [Claimant] is able to stand and can certainly move about with crutches. One could argue that he is able to stand, but walk on the level with use of crutches. However, use of these assistive devices is actually not covered as far as I am able to tell in the permanent sections under station and gait.

> My medical opinion is that an appropriate level for him is that he is able to stand but cannot walk, producing a range of 40 to 60%. While he is able to ambulate with the use of crutches, he is nonweightbearing on the right lower extremity. One could certainly make an argument for using the lesser value of 25 to 35%, but given the severity of his CRPS I think it reasonable to use the 60% value from this particular classification. Based on the above reasoning, my medical opinion is that he has a 60% whole person rating.

4. Dr. Allison Fall performed an IME and several Rule 16 peer reviews for Respondents during the pendency of the claim. On August 15, 2019, Dr. Fall reviewed Dr. Raschbacher's DIME and issued a report critiquing the rating. She also testified at the hearing to elaborate on the opinions expressed in her report. Dr. Fall agreed it was appropriate to use the "station and gait" table, but disagreed with Dr. Raschbacher's choice of the 40-60% rating category. Dr. Fall opined Dr. Raschbacher should have used the category denominated "can stand but walks only on the level," which corresponds to a rating of 25-35%. She noted amputation of the leg at the hip equates to a 40% whole person rating, and "it would not make sense" to give Claimant a higher rating than would apply to a complete amputation. Dr. Fall disagreed with Dr. Raschbacher's decision to disregard Claimant's use of crutches when grading the extent to which his ability to walk is impaired. Dr. Fall opined ratings must account for treatment that lessens the effects of the injury, such as medications. Specifically, she stated,

> [W]hen we rate somebody at MMI, we rate them at their best. So if they come in and have a spasm in their back and they can't move, we don't rate them. If they come in and they haven't taken their pain meds that thereon, regular pain meds, that's not the appropriate time to rate them initially. We take them as they are at their best with treatment. So we wouldn't take somebody's crutches away and say okay, were going to rate you. So the crutches are part of the treatment that he has received it to get him to this level where he is ambulatory.

5. Dr. Fall opined the 40-60% category is intended for someone who is "wheelchair bound." Because Claimant can ambulate with the assistance of crutches, she believes Dr. Raschbacher clearly erred in his rating.

6. Respondents failed to overcome Dr. Raschbacher's rating by clear and convincing evidence. As Dr. Raschbacher pointed out, there is no "absolute" clear-cut rating methodology applicable to Claimant's situation. Both physicians presented cogent, reasonable arguments in support of their respective positions. Dr. Fall did not point to any definitive authority for her position that Claimant's rating must be based on his ability to ambulate with crutches. Dr. Raschbacher has a contrary interpretation of the *AMA Guides*. The ALJ sees this as an issue about which reasonable physicians can disagree. Accordingly, Dr. Fall's opinions represent "mere differences of opinion" and do not rise to the level of clear and convincing evidence.

CONCLUSIONS OF LAW

A DIME's determination regarding whole person impairment is binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(C). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Respondents failed to overcome Dr. Raschbacher's rating by clear and convincing evidence. There is no dispute Claimant lacks any useful function of his right leg. The primary disagreement is how to account for the fact he can move about with the assistance of crutches. The ALJ knows of no specific authority on this question, and the parties have cited none. Dr. Fall's opinion is based on reasonable logic, but the ALJ is inclined to agree with Dr. Raschbacher's analysis, for two reasons. First, PPD benefits are based on medical impairment, not disability. Claimants can – and often do – experience disability because of their injuries, but the primary issue when computing the rating is the extent to which their body has been impaired. Claimant's leg is essentially useless because of the permanent contracture; it has no remaining useful function on its own and prevents him from walking. The fact that Claimant can use assistive devices to mitigate some of the disabling effects of his impairment does not lessen the extent to which his leg is impaired from a medical standpoint.

Second, in a definitional sense, Claimant cannot "walk." The *American Heritage Steadman's Medical Dictionary* (1995) defines the verb "walk" as, "To move over a surface *by taking steps* with the feet . . . ." (Emphasis added). Similarly, the noun form of "walk" is defined as, "The gait of a human in which *the feet are lifted alternately* with one part of a foot always on the ground." (Emphasis added). Therefore, from a strictly linguistic perspective, Claimant does not "walk," even with his crutches. It is more accurate to say he "moves about." That supports Dr. Raschbacher's decision to use the 40-60% category.

Finally, the heightened standard of proof is a critical factor here. A dispute over a DIME rating is not a level playing field on which all opinions receive equal weight. Rather, the field is tilted in favor of the DIME, whose opinion receives presumptive weight and can only be overcome by clear and convincing evidence. Here, two experienced Level II physicians disagree on whether to rate Claimant's impairment before or after the benefit of assistive devices is considered. When there are two or more reasonable paths to a rating, the choice between competing options falls within the DIME's zone of discretion, and contrary opinions by other physicians represent "mere differences of opinion." Absent a hard and fast rule, the ALJ sees this as an issue about which reasonable physicians can disagree. Thus, Dr. Fall's opinion does not constitute clear and convincing evidence.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD benefits based on a 60% whole person rating.

2. Insurer shall pay Claimant's statutory interest of 8% per annum on all benefits not paid when due. The

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 14, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-088-516-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

,

Employer,

and

,

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 11, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 9/11/19, Courtroom 1, beginning at 1:30 PM, and ending at 2:30 PM).

The Claimant was present in person and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted], shall be referred to as the "Claimant." [Redacted], shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection. Respondents' Exhibits A through H were admitted into evidence, without objection. During the presentation of evidence, the Claimant submitted Claimant's Exhibit 9, which was sound recordings from Claimant's work station occurring on February 20, 2019 at 5:16 PM, February 7, 2019 at 7:20 PM, and February 28, 2019 at 6:29 PM. The recordings were provided to opposing counsel and were attached to the

Opening Brief on a flash drive, contained in the official file. There was no objection to the recordings.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief was filed on October 25, 2019. Respondents' answer brief was filed on October 30, 2019. No timely reply brief was filed, and the matter was deemed submitted for decision on November 5, 2019.

ISSUES

The issue to be determined by this decision concerns whether the Claimant sustained a compensable occupational disease to wit, a job-related hearing loss; and, if so, whether he is entitled to medical treatment, including hearing aids, for such occupational disease.

The Claimant bears the burden of proof, by a preponderance of the evidence, on the designated issue and on the collateral issues relative thereto.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated and the ALJ finds that the Claimant has not lost time from work due to his hearing loss allegations and that, if the claim is found compensable, the Claimant is entitled to an average weekly wage (AWW) of $1,085.

2. Respondents filed a "Workers' Compensation – First Report of Injury or Illness" dated September 27, 2018, wherein they allege that [Claimant], a journeyman pressman for the Employer, "says he has hearing loss likely stemming from being around loud printing press hearing protections provided" (Claimant's Exhibit 3, Bate Stamp (BS) 6).

3. On October 4, 2018, the Respondents filed a "Notice of Contest" alleging that there was "further investigation for scheduling independent medical evaluation" (Claimant's Exhibit 5, BS 13).

4. On October 9, 2018, the Claimant filed a "Worker's Claim for Compensation" alleging that 29 years of loud noise in the press room had resulted in hearing loss and he attached a report of a hearing test which occurred on September 19, 2018, reflecting that the his condition had deteriorated since his "first test/baseline" on August 23, 1995 (Claimant's Exhibit 4, BS 7-8).

5. On October 21, 2018, the Claimant filed an "Application for Hearing" requesting medical benefits for "hearing loss from a very loud work environment."

6. On November 12, 2018, Respondents filed a "Response to Application for Hearing" alleging lack of causality.

Background

7. The Claimant is a 64-year-old male. He has worked, and continues to work, for the Employer as a pressman for approximately 30 years, having commenced employment in October of 1989.

8. The Claimant testified that in his work as a pressman the Employer has had two locations, the first occurring at 38th and Fox, which location transferred to 58th and Washington in 2007. The Claimant testified that the location at 58th and Washington, when it first started, had 5 press machines and is now down to 4. The Claimant testified that the press machines create the newspaper which is distributed to residents in the State of Colorado. The Claimant indicated that his job as a pressman was to work in the "reel room," working on the machines and loading the machines with paper which appeared in rolls, which rolls could weigh up to 2 tons.

9. The Claimant credibly testified over his 30 years of employment with the Employer he has been provided with foam ear plugs to place in his ears, but that often times those plugs would need to be removed to communicate with co-workers.

10. The Claimant credibly testified that when the ear plugs were removed, they could not be immediately placed back in the ear because the Claimant would need to wash his hands before inserting new ear plugs into the ear because if he did not wash his hands first, ink would get on the ear plugs and then the ink would be placed into his ear.

11. Over the years the Claimant has requested hearing muffs, which would be easier to remove and then place back on, but none were ever provided. The Claimant played three audio recordings of sound from the reel room. The first that was played occurred on February 20, 2019 at 5:16 PM; the second occurred on February 7, 2019 at 7:20 PM; and, the third occurred on February 20, 2019 at 6:29 PM. The first recording was of a three-quarter ton reel of paper being placed into the press machine. The second recording was of a full reel being placed in the press machine and the third was of an alarm that starts once a press machine begins production. While playing the sounds for the ALJ, the Claimant visibly showed discomfort with the sounds.

12. Over the Claimant's working life, he has had comprehensive hearing tests provided at the Employer's request. The Claimant's first hearing test occurred on August 23, 1995 (Claimant's Exhibit 6, BS 17) and his last test occurred on September 19, 2018 (Claimant's Exhibit 4, BS 8).

Claimant's Testimony

13. The Claimant testified that after receiving his most current test and having people "yell at him all the time," he submitted a hearing loss claim to the Employer.

14. The Claimant's hearing tests reflect that his hearing loss is worse in the right ear than the left ear. The Claimant credibly testified that he removed the right earplug more than the left ear plug, because he is right-handed. The hearing test from September 19, 2018, found at Exhibit 4, BS 20, reflected that the Claimant's hearing loss was in the range of 85, whereas the hearing loss in the left is only at 75 (Claimant's Exhibit 4, BS 20).

15. During cross-examination, Respondents discussed with the Claimant medical records from his private physician in August of 2016, reflecting that the Claimant had been diagnosed with severe hearing loss from an ENT doctor (Respondents' Exhibit H, BS 34). The Claimant stated that he had no memory of that diagnosis, but did not seek hearing aids in 2016. According to the Claimant, his hearing loss has progressed over the years.

Respondents' Requested Audiological Independent Examination by Theresa Small, Au.D.

16. The Claimant's testimony is consistent with the findings of the Respondents' retained expert Theresa H. Small, Au.D., who indicates that the majority of changes in the Claimant's hearing in both ears has occurred since 2015 to 2016 (Claimant's Exhibit 8, BS 25). Respondents' expert, Dr.Small, correctly sets forth that the Claimant was required to use push-in hearing protection, and the Claimant was required to remove the earplugs at times, while in hazardous noise, for communication.

17. Nonetheless, it was Dr. Small's opinion that the Claimant's hearing loss was "not likely related to occupational noise exposure," but "due to his personal medical condition and age-related hearing loss." It was her recommendation that the Claimant "not remove the hearing protection for communication while in hazardous noise," and that the Claimant was to consult with his personal physician to get hearing aids (Claimant's Exhibit 8, BS 26).

18. The deposition of Dr. Small occurred on October 10, 2019, and in that deposition, Dr. Small stated that she was not retained to perform environmental noise assessment, but took the Employer's representation that the press machines operate at a decibel level of 85 to 86 decibels, at face value.

19. It was Dr. Small's testimony that six and one-half to eight hours of exposure to 85 to 86 decibel levels would cause a hearing loss and that the exposure did not need to be on a consistent basis. Nonetheless, it was her opinion that, although the Claimant had worked for the Employer for over 30 years and had been exposed to those decibel levels when required to remove his foam hearing plugs, the Claimant's hearing loss was more indicative of age-related hearing loss and not that caused by loud noise.

20. It was also Dr. Small's opinion that on a conservative basis, the foam ear plugs properly inserted would only reduce the decibel level by 10 decibels.

21. Finally, it was Dr. Small's opinion that a flat-line hearing loss is generally more indicative of age and not noise exposure, but could be indicative of noise exposure in some situations. Dr. Small testified her opinion would not be changed if she listened to loud noises which the Claimant had recorded in the press room.

Respondents' Arguments

22. Respondents' arguments attempt to paint a circumstantial picture, based primarily on conjecture. For instance, Respondents' argue that because the Claimant waited at least ten years, from May 2008 to September 2018, to file a worker's compensation claim stating that his hearing loss was due to being around loud presses, despite his annual hearing tests showing hearing loss as far back as May 2008. As found herein above, the Claimant stated a credible and compelling reason for not filing a workers' compensation claim for ten years. In his 2017 hearing test, the findings were moderate loss in both ears for speech frequencies and moderate severe loss in both ears for high pitch sounds. This test remained unchanged from the 2016 test.

23. Without the benefit of expert genetic opinion, Respondents' argue that the Claimant's twin brother has hearing loss and wears hearing aids. The Claimant's twin brother, however, fired rifles in the military and was an avid hunter, which the Claimant was not. This argument pushes the circumstantial envelope beyond the bounds of credulity.

25. Claimant's testimony that he finally decided to report his hearing loss as work-related in September 2018 because he was tired of people yelling at him is in fact credible, contrary to Respondents' argument. Respondents argue that the Claimant's claim is not credible and it is unfair to the Employer, who provided foam ear plugs, however, the Claimant's request for ear muffs apparently fell on "deaf ears."

Ultimate Findings

26. The Claimant's credible and undisputed lay testimony plays a significant role in determining the proximate cause and relatedness of the Claimant's need for hearing aids and of the Claimant's hearing loss.

27. The ALJ finds, based in part on the opinion in *Lymburn v. Symbios Logic* 952 P.2 831(Colo. App. 1997), that the opinion of a treating physician/provider on the cause of a claimant's industrial injury is not a requirement for establishing a workplace injury. The Claimant's testimony and production of the sounds on the work floor, in combination with the fact that the Claimant credibly testified he has never hunted, used a lawn mower, or been exposed to loud noises outside of the workplace, leads to the inescapable conclusion that the Claimant's hearing loss is from the loud noises that the Claimant has been exposed to over 30 years of working for the Employer. The sound recordings and the Claimant's testimony create a compelling circumstantial picture and is sufficient, by itself, despite Audiologist Small's causality opinion to the contrary. The Claimant has proven by a preponderance of the evidence that his hearing loss was caused by his exposure at work.

28. Although Dr. Small concedes the Claimant's hearing loss, she also conceded that she was not engaged to deal with environmental noise exposure, which renders her ultimate opinion on lack of causality inadequately based and supported. Therefore, the ALJ finds Audiologist Dr. Small's ultimate causality opinion lacking in credibility.

29. Between the conflicting opinion of Audiologist Dr. Small and the Claimant, the ALJ makes a rational choice to accept the Claimant's history and opinion, based on substantial evidence, and to reject Dr. Small's ultimate causality opinion.

30. According to Audiologist Sr. Small, ordinary people are not exposed to the levels of noise that the Claimant experiences in the work place. The ALJ concludes that the hazard of high decibel noise exposure is more prevalent in the Claimant's work place than in everyday life or in most other occupations. Dr. Small also persuasively explained that hearing loss is frequently due to prolonged noise exposure and that the other risk factors for hearing loss applicable to the Claimant probably do not apply in this case, thus, calling Dr. Small's ultimate causality opinion into question. The Claimant's hearing loss was due to exposure to noise at work.

31. The Claimant had no hearing loss prior to his employment with the Employer and it has significantly worsened over the years as compared to his baseline levels. The ALJ is not persuaded by Dr. Small's opinions that the Claimant's employment was irrelevant to his development or progression of hearing loss. Dr. Small's opinion failed to consider whether the Claimant had been exposed to noise levels above 85 db in the work place in the past. The Claimant has worked for the Employer for 30 years. Further, the ALJ finds that the Claimant has never used firearms. The ALJ is also not persuaded that the Claimant's loss is due to a propensity to develop diabetes or to aging. There is no persuasive, underlying proof that Claimant's hearing loss isc due to a propensity for diabetes or aging. Rather, the Claimant's hearing loss was caused by his exposure to noise in the work place.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558

(Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, based in part on the opinion in *Lymburn v. Symbios Logic* 952 P.2 831(Colo. App. 1997), the ultimate opinion of a treating physician/provider on the cause of a claimant's industrial injury is not a requirement for establishing a workplace injury. The Claimant's testimony and production of the sounds on the work floor, in combination with the fact that the Claimant credibly testified he has never hunted, used a lawn mower, or been exposed to loud noises outside of the workplace, led to the inescapable conclusion that the Claimant's hearing loss is from the loud noises that the Claimant has been exposed to over 30 years of working for the Employer. The sound recordings and the Claimant's testimony created a compelling circumstantial picture and was sufficient to establish a work-related hearing loss, by itself, despite Audiologist Small's causality opinion to the contrary. Although Dr. Small conceded the Claimant's hearing loss, she also conceded that she was not engaged to deal with environmental noise exposure, which renders her ultimate opinion on lack of causality inadequately based and supported. As found, her ultimate causality opinion lacked credibility, whereas the Claimant's testimony was highly credible, compelling and corroborated, in part, by the sound recordings illustrated in Claimant's Exhibit 9.

b. In *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), Ultimately, the Court of Appeals concluded that a medical opinion was not necessary to prove causation because imposing such a requirement would be reading something into the statute that was not there. *See Jacoby v. Metro Taxi, Inc.,* 851 P.2d 245 (Colo. App. 1993). § 8-41-301, C.R.S., which specifies the conditions necessary for a compensability determination (this would include the compensability of a medical procedure or diagnostic tests) does not provide that a medical opinion is necessary to make such a determination. As observed in *Lymburn,* to require a medical opinion to support a causality determination would be to read something into the statute that does not exist. Consequently, *Lymburn* remains good law today. As found, although the Claimant's undisputed testimony was corroborated by sound recordings of his work environment and the test results from his annual hearing test, which is required by the

Employer, the Claimant's lay testimony alone painted a compelling circumstantial picture that the need for the presently recommended hearing aids is attributable to an aggravation/acceleration of his hearing condition.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the Claimant's undisputed testimony outweighed Audiologist Dr. Small's ultimate opinion concerning causality. Therefore, between the conflicting causality opinion of Audiologist Dr. Small and the Claimant, the ALJ made a rational choice to accept the Claimant's history and opinion, based on substantial evidence, and to reject Dr. Small's ultimate causality opinion.

Compensability of Occupational Disease/Hearing Loss/Aggravation/Acceleration

d. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. § 8-41-301 (l)(b), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

e. "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

f. The above section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id*. Once a claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

g. As found, the Claimant established that he sustained a compensable occupational disease, which consists of bilateral sensorineural hearing loss. At least two physicians have recommended that the Claimant use hearing aids. As Dr. Small pointed out, ordinary people are not exposed to the levels of noise that the Claimant experiences in the work place. The ALJ concludes that the hazard of high decibel noise exposure is more prevalent in the Claimant's work place than in everyday life or in most other occupations. Dr. Small also persuasively explained that hearing loss is frequently due to prolonged noise exposure and that the other risk factors for hearing loss applicable to the Claimant probably do not apply in this case. The Claimant's hearing loss was due to exposure to noise at work.

h. The Claimant had no hearing loss prior to his employment with the Employer and it has significantly worsened over the years as compared to his baseline levels. The Judge is not persuaded by Dr. Small’s opinions that the Claimant's employment was irrelevant to his development or progression of hearing loss. Dr. Small’s opinion also failed to consider whether the Claimant had been exposed to noise levels above 85 db in the work place in the past. The Claimant has worked for the Employer for 30 years. Further, the Judge acknowledges that the Claimant has never used firearms. The Judge is also not persuaded that the Claimant's loss is due to a propensity to develop diabetes or to aging. Rather, the Claimant's hearing loss was caused by his exposure to noise in the work place.

Causal Relatedness/Reasonable Necessity of Medical Treatment

i. An employer must provide an injured employee with reasonably necessary medical treatment to "cure and relieve the employee from the effects of the injury." § 8-42-101(1) (a), C.R.S. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office,* 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury.

Singleton v. Kenya Corp., 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio,* 806 P.2d 1258 (Colo. 1985). The chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, the aggravation/acceleration of the Claimant's hearing loss is in the direct, proximate chain of causation from the Claimant's workplace exposure, thus, the Claimant's need for the hearing aids is causally related.

j. Medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the recommendation for bilateral hearing aids is reasonably necessary to cure and relieve the effects of the September 2018 hearing loss claim.

Burden of Proof

k. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on compensability and medical benefits.

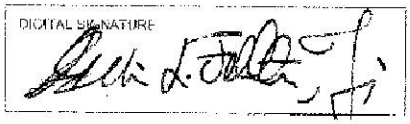
ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all the costs of medical and audiological care and treatment for the Claimant's bilateral hearing loss, including the costs of hearing aids, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this 15th day of November 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUE

Whether Claimant has established by a preponderance of the evidence that his scheduled 15% right upper extremity impairment should be converted to a 9% whole person rating.

FINDINGS OF FACT

1. Claimant is a 46-year old male who sustained an admitted industrial injury to his right shoulder on January 13, 2018. While setting up banquet tables during the course and scope of his employment with Employer, three of the tables tipped over and struck him on the right shoulder.

2. Claimant subsequently received conservative care and physicians performed diagnostic testing. On April 25, 2018 Claimant underwent a right shoulder arthroscopy with Michael Hewitt, M.D. The surgical notes revealed a "full-thickness anterior supraspinatus tear with minimal retraction, subacromial impingement, acromioclavicular arthroplathy, and advanced long head tendinopathy with superior labral tear."

3. After surgery Claimant underwent physical therapy and received pain medications. However, Claimant failed to respond and experienced problems with pain management.

4. On May 29, 2018 Claimant underwent a psychological evaluation with Joel Cohen, Ph.D. Dr. Cohen noted that Claimant exhibited poor pain tolerance, "heightened pain sensitivity" and his pain behaviors were "at least moderate, if not moderate-to-severe at times." He summarized that "[d]iagnostically, [Claimant's] presentation is most consistent with an injury-related diagnosis of minimum adjustment reaction with anxious mood and I would suggest very clearly that there is a somatoform element to his pain."

5. On June 25, 2018 Claimant returned to Dr. Cohen for an evaluation. Dr. Cohen commented that Claimant "engages in a significant level of guarding, bracing in particular, and fear-based avoidant pain behavior. He is so threatened at the prospect of pain, that it is very obvious that he is totally neglecting the right upper extremity."

6. On September 11, 2018 Claimant visited Authorized Treating Physician (ATP) Fredric Zimmerman, D.O. for an examination. Dr. Zimmerman remarked that Claimant had received trigger point injections to the right upper quadrant without significant benefit. He explained that Claimant demonstrated a "very slow recovery and minimal if any improvement functionally after his right shoulder surgery."

7. On September 17, 2018 Claimant again visited Dr. Cohen for an examination. Dr. Cohen explained that Claimant "remains somatically preoccupied, guarded and braced relative to the right shoulder, and in light of the fact that he would not move his arm, I am not at all clear that doing anything is going to appreciably alter his condition."

8. Claimant did not subsequently respond to physical therapy, counseling or trigger point injections. On November 27, 2018 he returned to ATP Dr. Zimmerman for an examination. Dr. Zimmerman noted that Claimant exhibited "pain out of proportion with general myofascial pain, positive fibromyalgia screen and anxiety complicated with depression interfering with the rehabilitation process." He determined that Claimant had reached Maximum Medical Improvement (MMI). Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*) Dr. Zimmerman assigned an 18% right upper extremity impairment rating based on range of motion deficits. The impairment converted to an 11% whole person rating.

9. On November 29, 2018 Claimant visited Stephen Danahey, M.D. Claimant reported worsening right shoulder pain. Dr. Danahey agreed with Dr. Zimmerman's MMI and impairment determinations.

10. On January 16, 2019 Claimant underwent an independent psychiatric examination with Gary S. Gutterman, M.D. After reviewing Claimant's medical and psychological history, Dr. Gutterman concluded "i]t appears that [Claimant] probably is experiencing a Somatic Symptom Disorder based on his pain complaints and limited mobility which does not appear to have anatomical corroboration… I did not schedule a follow-up with [Claimant] given what appears to be somatic preoccupation and his lack of response to treatment with Dr. Cohen as well as any psychotropics prescribed to date."

11. Respondents' challenged Dr. Zimmerman's impairment determination and sought a Division Independent Medical Examination (DIME). On April 14, 2019 Claimant underwent a DIME with Charles Wenzel, D.O. Claimant reported he had been working modified duty and developed left shoulder pain because he avoided using his right arm. Dr. Wenzel noted that Claimant mentioned diffuse pain with light palpation throughout his spine and bilateral shoulders. After reviewing Claimant's medical records and performing a physical examination, Dr. Wenzel remarked that Claimant exhibited "pain behaviors and/or somatoform elements" that caused him to avoid using the right shoulder. In assessing Claimant's permanent impairment, Dr. Wenzel explained that Claimant's range of motion measurements were not "physiologically credible due to significantly decreased range of motion as compared to his baseline due to Claimant's noted new onset left shoulder pain."

12. In performing range of motion measurements, the *Impairment Rating Tips* specify that the DIME physician may exercise discretion in using another physician's range of motion measurements when they are more physiologically credible. However, in using another physician's ratings, the DIME physician must clearly justify reasons for a deviation. *See Desk Aid #11, DIME Panel Physician Notes* 2. Dr. Wenzel thus used

the range of motion measurements documented in four physical examinations with Drs. Zimmerman and Danahey during September and October 2018. Relying on the *AMA Guides*, Dr. Wenzel assigned Claimant a 15% right upper extremity impairment rating for range of motion deficits that converted to a 9% whole person impairment.

13. On May 18, 2019 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Wenzel's 15% right upper extremity impairment rating. Claimant objected to the FAL and filed an Application for Hearing seeking to convert the scheduled rating to a whole person impairment.

14. On May 28, 2019 Claimant returned to Dr. Zimmerman for an evaluation. Dr. Zimmerman remarked "[h]e continues to guard his right upper extremity as usual. Shoulder range of motion remains self-limited. Left-sided range of motion is within normal limits. He continues to have pain out of proportion to mild palpation in the interscapular regions bilaterally."

15. On July 30, 2019 Claimant again visited Dr. Zimmerman for an evaluation. In examining the bilateral upper quadrants Dr. Zimmerman noted "increased muscular tone and trigger points in the left upper trapezius, cervicothoracic paraspinal and levator scapular muscle." Dr. Zimmerman administered trigger point injections in the left upper quadrant. He recommended a follow-up appointment in four to six months.

16. Claimant testified at the hearing in this matter. He explained that he suffers functional impairment and pain in areas of his body that extend beyond his right arm. He specifically remarked that he feels pain in his chest, scapula and shoulder when he uses his right arm. Moreover, when he turns his head to the left, he experiences pain on the right side of his neck, the top of his right shoulder and in the clavicle.

17. Claimant has failed to establish that it is more probably true than not that his scheduled 15% right upper extremity impairment should be converted to a 9% whole person rating. Initially, Claimant suffered an admitted industrial injury to his right shoulder on January 13, 2018. He subsequently underwent a right shoulder arthroscopy. The medical records from numerous treatment providers since Claimant's surgery are replete with somatic complaints, pain behaviors, inconsistent range of motion measurements and poor efforts to participate in medical treatment. Moreover, Claimant did not mention any pain or functional impairment beyond the right arm at the shoulder until he underwent a DIME on April 14, 2019.

18. During a psychological evaluation with Dr. Cohen on May 29, 2018 Claimant exhibited poor pain tolerance, pain behaviors and a "somatoform element to his pain." On November 27, 2018 Dr. Zimmerman noted that Claimant demonstrated "pain out of proportion with general myofascial pain, positive fibromyalgia screen and anxiety complicated with depression interfering with the rehabilitation process." In an independent psychiatric examination Dr. Gutterman determined that Claimant was "experiencing a Somatic Symptom Disorder based on his pain complaints and limited

mobility which does not appear to have anatomical corroboration." At the DIME, Dr. Wenzel noted diffuse pain with light palpation throughout Claimant's spine and bilateral shoulders. However, Dr. Wenzel could not obtain accurate range of motion measurements because of Claimant's pain behaviors.

19. Since the DIME, Claimant has only mentioned symptoms beyond the right shoulder area when Dr. Zimmerman noted diffuse out of proportion complaints in the interscapular region in May and left shoulder pain in July 2019. The medical records reveal that Claimant has repeatedly reported somatic pain symptoms that lacked an anatomical basis. Despite Claimant's hearing testimony of pain in the chest, scapula, and right side of his neck, the bulk of the persuasive medical evidence reveals that Claimant's symptoms do not extend beyond the right arm. The situs of Claimant's functional impairment is thus in his right upper extremity and not off the schedule. Therefore, Claimant has failed to establish that it is more probably true than not that he has functional impairment beyond the schedule of disabilities. Accordingly, Claimant's request for conversion of his 15% right upper extremity scheduled impairment rating to a 9% whole person rating is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998). When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

5. Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

6. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

7. As found, Claimant has failed to establish by a preponderance of the evidence that his scheduled 15% right upper extremity impairment should be converted to a 9% whole person rating. Initially, Claimant suffered an admitted industrial injury to his right shoulder on January 13, 2018. He subsequently underwent a right shoulder arthroscopy. The medical records from numerous treatment providers since Claimant's surgery are replete with somatic complaints, pain behaviors, inconsistent range of motion measurements and poor efforts to participate in medical treatment. Moreover, Claimant did not mention any pain or functional impairment beyond the right arm at the shoulder until he underwent a DIME on April 14, 2019.

8. As found, during a psychological evaluation with Dr. Cohen on May 29, 2018 Claimant exhibited poor pain tolerance, pain behaviors and a "somatoform element to his pain." On November 27, 2018 Dr. Zimmerman noted that Claimant demonstrated "pain out of proportion with general myofascial pain, positive fibromyalgia screen and anxiety complicated with depression interfering with the rehabilitation process." In an independent psychiatric examination Dr. Gutterman determined that

Claimant was "experiencing a Somatic Symptom Disorder based on his pain complaints and limited mobility which does not appear to have anatomical corroboration." At the DIME, Dr. Wenzel noted diffuse pain with light palpation throughout Claimant's spine and bilateral shoulders. However, Dr. Wenzel could not obtain accurate range of motion measurements because of Claimant's pain behaviors.

9. As found, since the DIME, Claimant has only mentioned symptoms beyond the right shoulder area when Dr. Zimmerman noted diffuse out of proportion complaints in the interscapular region in May and left shoulder pain in July 2019. The medical records reveal that Claimant has repeatedly reported somatic pain symptoms that lacked an anatomical basis. Despite Claimant's hearing testimony of pain in the chest, scapula, and right side of his neck, the bulk of the persuasive medical evidence reveals that Claimant's symptoms do not extend beyond the right arm. The situs of Claimant's functional impairment is thus in his right upper extremity and not off the schedule. Therefore, Claimant has failed to establish that it is more probably true than not that he has functional impairment beyond the schedule of disabilities. Accordingly, Claimant's request for conversion of his 15% right upper extremity scheduled impairment rating to a 9% whole person rating is denied and dismissed.

ORDER

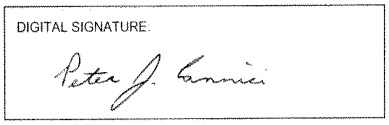
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to covert his 15% right upper extremity scheduled impairment to a 9% whole person rating is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 15, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

PROCEDURAL HISTORY

In an order dated October 2, 2019, Designee Clerk Gabriela Chavez granted the parties stipulated motion to continue hearing and consolidate claims W.C. No. 5-106-473 & W.C. No. 5-094-916, involving the same respondent but different claimants.

ISSUES

I. Whether Respondent limited maintenance care in the March 15, 2019 and May 29, 2019 Final Admissions of Liability and therefore failed to comply with Section 8-42-107(8)(f), C.R.S.

II. Whether Claimant in W.C. No. 5-094-916 is entitled to a disfigurement award.

FINDINGS OF FACT

1. The Division promulgates the standard Final Admission of Liability (FAL) form (form WC4) to be used by insurers. As indicated in the bottom left-hand corner of the form, the Division revised a version of this form effective 1/15/19. The section regarding maintenance care reads, "Admit to Maintenance Care after MMI? □ Yes □ No Pursuant to Dr. _____'s medical report dated _____."

2. The Division again revised form WC4 in March[1] 2019. The section regarding maintenance care was revised to read: "Admit to Maintenance Care after MMI? □ Yes □ No **If no,** pursuant to Dr. _____'s medical report dated _____." (emphasis added).

W.C. No. 5-094-916

3. Claimant sustained an admitted industrial injury on November 20, 2018. On February 12, 2019, Claimant's authorized treating physician (ATP), Stephen Danahey, M.D., placed Claimant at maximum medical improvement (MMI) with a 31% lower extremity impairment rating and no permanent work restrictions. Regarding maintenance treatment Dr. Danahey wrote, "For maintenance care, one or two visits over the next year with the surgeon would be appropriate, if needed. Additionally 6 visits of physical therapy, to use as needed, would also be appropriate."

4. On March 15, 2019, Respondent filed a FAL on the WC4 revised 1/15/19. In the maintenance care section, Respondent checked "Yes" to admit to post-MMI maintenance care, and completed the blank sections to read, "Pursuant to Dr. Danahey's medical report dated 2/15/2019." Under the section titled "Remarks and

[1] The form does not list the specific date of revision, only "03/19."

basis for permanent disability award" Respondent wrote, "Per Dr. Danahey's attached impairment rating report dated 2/15/19. Any and all benefits and penalties not specifically admitted in this final admission of liability are hereby specifically denied."

5. The ALJ visually observed Claimant's right knee at hearing and finds that, as a result of his November 20, 2018 work injury, Claimant has a visible disfigurement to the body consisting of a scar measuring ½ inch in length on the right knee. The scar is well-healed with minimal discoloration. Additionally, Claimant has three porthole scars on his right knee that are well-healed and only minimally perceptible.

W.C. No. 5-106-473

6. Claimant sustained an admitted industrial injury on June 21, 2018. On April 26, 2019, ATP Samuel Chan, M.D. placed Claimant at MMI with a 3% whole person impairment (after apportionment). Under "Assessment and Recommendations" Dr. Chan wrote, in relevant part, "For maintenance care, the patient may have 1 additional medial branch radiofrequency rhizotomy over the course of the next 8 months, if at all necessary. Otherwise, no further diagnostic or therapeutic interventions are necessary. The patient is at maximum medical improvement. No new medications were provided."

7. On May 29, 2019, Respondent filed a FAL on the WC4 form revised 1/15/19. In the maintenance care section, Respondent checked "Yes" to admit to post-MMI maintenance care, and completed the blank sections to read "Pursuant to Dr. Chan's medical report dated 04/26/2019." Under remarks Respondent wrote,

> Per attached report from Dr. Chan dated 4/26/19, injured worker (IW) reached MMI on 4/26/19 with an 8% whole person (WP) rating. After apportionment based upon attached documentation, Dr. Chan notes 3% WP rating. IW at full duty. Any and all benefits and penalties not specifically admitted in this final admission of liability are hereby specifically denied.

Additional Findings

8. Claimants objected to the FALs in a timely manner and filed Applications for Hearing on the issue of "Maintenance care per 8-42-107(8)(f)."

9. No evidence was offered indicating a particular medical benefit is in dispute in either claim or has been denied by Respondent.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the

necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

FAL and Maintenance Treatment

Section 8-42-107(8)(f), C.R.S. provides, "In all claims in which an authorized treating physician recommends medical benefits after maximum medical improvement, and there is no contrary medical opinion in the record, the employer shall, in a final admission of liability, admit liability for related reasonable and necessary medical benefits by an authorized treating physician." An award of award of maintenance medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services,* W. C. No. 4-543-730, (ICAO, July 14, 2006).

In cases where the respondents file a FAL admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9,

2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimants contend Respondent filed the wrong version of the FALs and should have included the language "mandated" by Section 8-42-107(8)(f), C.R.S. Claimants further contend that, by specifically denying every benefit not specifically admitted, Respondent limited a general award of maintenance care. The ALJ disagrees.

Although Respondent did not file the most recent version of the FAL form, the FALs filed were on the form promulgated by the Division and revised two months prior. The versions of the form are substantially similar other than the aforementioned change in language in the section regarding maintenance care. The ALJ is not persuaded that, in these circumstances, Respondent's filing of a prior version of the WC4 form renders the FALs void or necessitates filing new FALs.

As found, Respondent checked "Yes" on the FALs, admitting to post-MMI maintenance treatment. Although the 3/19 version of the WC4 form includes language implying an insurer should now only refer to an ATP's report if denying maintenance care, WCRP Rule 5-5(A)(1) provides that when an FAL is predicated upon medical reports, "The admission shall make specific reference to the medical report by listing the physician's name and the date of the report on the remarks section of the admission." The ALJ is not persuaded Respondent's reference to the ATP's report in each FAL limited the award of maintenance care to only the specific treatment mentioned in the ATP's report. The reference to the ATPs' reports can be reasonably interpreted as an attempt to comply with the WCRP Rule 5-5(A)(1). Further, the ALJ is not persuaded Respondent's denial of specific benefits not admitted to limits the maintenance treatment. By checking "Yes" Respondent admitted to a general award of reasonable and necessary maintenance care related to the work injury pursuant to Section 8-42-107(8)(f), C.R.S. The ALJ further notes Claimants did not allege nor provide evidence of any specific maintenance benefit that is at issue or has been denied by Respondent.

Disfigurement

Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view."

As found, Claimant in W.C. No. 5-094-916 has some scarring as a result of his compensable injury. The ALJ concludes Claimant should be awarded $250.00 for that disfigurement.

ORDER

1. The March 15, 2019 and May 29, 2019 FALs provide an open admission for maintenance care as required. Claimant's request that Respondent file new FALs specifically stating admission for related reasonable and necessary maintenance treatment is denied and dismissed.

2. Respondent shall pay Claimant in W.C. No. 5-094-916 $250.00 for his disfigurement. Respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 19, 2019

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a work related injury or occupational disease to her bilateral upper extremities.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a general award of reasonable and necessary medical benefits to treat her bilateral upper extremity condition.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from October 5, 2018 to November 7, 2018 and from May 28, 2019 to July 15, 2019.

STIPULATIONS

1. Claimant's average weekly wage at the time of the alleged injury or occupational disease was $884.39.

2. Claimant's was off work due to bilateral upper extremity surgery from October 5, 2018 to November 7, 2018 and from May 28, 2019 to July 15, 2019.

FINDINGS OF FACT

1. Claimant is a 58 year old female who is employed by Employer as a mailroom services specialist. Claimant has been employed by Employer for approximately 12 years. *See* Exhibit H.

2. Claimant's assigned job duties are varied and include sorting mail, arranging for pickup of outgoing mail, pushing mail carts, opening doors, placing mail in bins for distribution, disposing of junk mail, and driving a vehicle to deliver packages. *See* Exhibits C, H.

3. Claimant testified that on a daily basis she checks the loading dock for packages, loads and locks before couriers get there, sorts all the mail by hand from tubs brought in, and that she then loads mail tubs onto a cart that she pushes throughout the building to deliver mail to each floor.

4. Claimant testified that prior to being a mailroom services specialist, she worked for Employer as a courier and that in addition to the sorting and delivering of mail within a building, she was on the road and driving for approximately 4 hours per day.

Claimant testified that she slowly gave up her driving routes to a courier company that Employer chose to use. Claimant stopped driving for Employer in May of 2019.

5. Employer's human resources business partner, Jean I_____, testified at hearing. Ms. I_____ supports Claimant's work group. Ms. I_____ testified that Claimant performs a wide variety of tasks, has a lunch break and assigned break periods, and has ample time to socialize while moving throughout the office building. Ms. I_____ testified that Claimant is not an efficient employee, has been coached by her manager about socialization, and estimated that Claimant probably performs actual work duties 4-5 hours out of her 8 hour day. Ms. I_____ testified that when Claimant was also driving as a courier, the driving was just within the local area and estimated the time spent driving as 2.5-3 hours. Ms. I_____ disagreed with Claimant's estimate of spending 4 hours driving and noted that the distance between the building locations where Claimant would have traveled would not have taken 4 hours as Claimant testified.

6. Claimant alleges that she sustained bilateral long trigger finger as a result of her job duties. Claimant alleges the onset date of injury as July 13, 2018.

7. Prior to the July 13, 2018 alleged onset date of her claimed work injury, Claimant was evaluated once for her left upper extremity finger pain.

8. On August 3, 2017, David Bierbrauer, M.D. evaluated Claimant. Claimant reported left finger pain with popping and clicking for the last 3-4 weeks. Claimant reported a concern for possible trigger finger of her left middle finger. Dr. Bierbrauer noted that Claimant exercised daily including hiking, cycling, and swimming and that she had a moderate activity level. Dr. Bierbrauer found tenderness over the A1 pulley with popping during flexion and extension of the left long finger. Dr. Bierbrauer assessed left middle finger trigger finger. Dr. Bierbrauer performed an injection, advised Claimant to resume use of her finger, and advised Claimant to return when necessary. *See* Exhibit A.

9. Claimant testified at hearing that the first symptoms she had in 2017 including clicking in the left middle finger and included the finger getting stuck when straightened. She testified that after the injection, all symptoms went away for almost a year, and then came back in the left and right hand.

10. On July 12, 2018, Claimant was evaluated by David Conyers, M.D. Claimant reported bilateral middle finger issues. Claimant reported that she had an injection in her left middle finger one year prior, and that her symptoms had returned in the last couple of weeks. Claimant also reported that her right side started having similar symptoms. Claimant reported a moderate exercise level including swimming, biking, hiking, walking, and lifting weights. Dr. Conyers noted that Claimant had longstanding problems with her left long finger and that her prior injection gave her significant improvement until three months ago. Dr. Conyers noted that Claimant did a lot of mailroom work, some keyboard and mouse work, but mostly carrying heavy packages and doing mail delivery. Dr. Conyers also noted that Claimant did a lot of driving and

gripping the steering wheel. Claimant reported her belief that the trigger fingers may be work related. Dr. Conyers found on examination that the left long trigger finger was advanced. Dr. Conyers performed an injection on the right long flexor tendon and noted that Claimant knew what to expect post injection. Dr. Conyers recommended a left long trigger finger release surgery and he requested authorization for the procedure. *See* Exhibit B.

11. On July 13, 2018, David Orgel, M.D. issued a physician advisory report. Dr. Orgel opined that it was prudent to get a job demands analysis to determine causation. Dr. Orgel also opined that it was somewhat unusual to have long trigger fingers in the absence of other activities and he wondered if instead of the diagnosis being trigger finger, if Claimant had an early Dupuytren's. Dr.Orgel opined that if it was early Dupuytren's, it obviously would not be a work related problem. *See* Exhibit D.

12. On July 18, 2018, Felix Meza, M.D. evaluated Claimant at Concentra. Claimant reported pain in her right and left middle fingers due to overuse and she reported that she had been diagnosed elsewhere with having trigger finger. Claimant reported no known injury and denied outside causation including sports, hobbies, accidents, or external employment. Claimant reported the onset of bilateral trigger fingers of her middle fingers following repetitive activities at work including moving carts, opening metal doors, opening and sorting mail. On the Physician's Report of Worker's Compensation Injury report, Dr. Meza noted Claimant's description of injury was "over the last 12 years, grabbing metal door handles, picking up full main buckets, grabbing steering wheel (3 hr rte), holding handles on mail cart, sorting, opening high volume of letters, trigger finger." Dr. Meza recommended a work site evaluation to assist in determination of causality. *See* Exhibit C.

13. On August 3, 2018, a Job Demands Analysis/work site evaluation (hereinafter JDA) was performed by Mr. Howard Fallik at Genex. Mr. Fallik went on site to the Employer, met with the claimant and took her history, and then directly observed claimant performing her assigned job tasks. Claimant reported that various activities were likely traceable to the onset of the identified problems of bilateral trigger finger including a lot of gripping in her position. Claimant reported gripping the steering wheel of the company vehicle, handles of baskets, a cart, and stacks of mail. Mr. Fallik noted Claimant's essential functions included 20-25% of her position spent driving a company vehicle to deliver or pick up mail. He noted 20-30% of her position involved opening envelopes, sorting and collating mail, placing mail in bins and carrying or pushing with a cart to departments and individuals for distribution, disposing junk mail, and recording registered mail. Mr. Fallik documented some of her Claimant's tasks with photographs in his report. The JDA he performed also breaks down and categorizes claimant's essential functions and physical demands by frequency, weight, and duration. *See* Exhibit E.

14. The JDA did not identify any primary risk factors for causation of bilateral trigger finger present in Claimant's position. The JDA also did not identify any secondary risk factors. *See* Exhibit E.

15. On August 8, 2018, Kristyn Magulak, NP evaluated Claimant at Concentra. Claimant reported that her right hand was much improved following her recent injection. Claimant reported that she had longstanding issues with her left hand and did not receive an injection on the left as she had one done a year ago. Claimant reported working as a mail specialist with a lot of gripping/grasping. Claimant was referred to hand physical therapy. NP Magulak noted that the plan was to work on getting authorization for surgery on the left middle trigger finger. Concentra did not yet have the result of the JDA. *See* Exhibit C.

16. On August 15, 2018, Davis Hurley, M.D. issued a Physician Advisory report. Dr. Hurley opined that after a review of medical records from Dr. Conyers, the JDA, and the designated provider note, Claimant's bilateral trigger fingers did not appear to be work related. Dr. Hurley recommended denial of the claim. He opined that there was no significant risk factor identified in the JDA or the job description and opined that the work was without excessive pinch of the digits for more than three hours. Dr. Hurley agreed with the treatment provided by Dr. Conyers, but opined it was not work related. *See* Exhibit F.

17. On August 20, 2018, Claimant was evaluated by Dr. Conyers. Claimant reported longstanding problems with her left long finger and that an injection last August brought about significant improvement until about three months ago. Claimant reported having trouble now with her right long finger as well. Claimant reported that she did a lot of mailroom work as well as a lot of driving and gripping the steering wheel. Claimant felt like the long trigger fingers may well be work related and Dr. Conyers agreed with Claimant based on the job description and length of exposure. Dr. Conyers noted that Claimant would file a workers' compensation case. *See* Exhibit 1.

18. On October 5, 2018, Dr. Conyers performed a left long finger trigger release surgical procedure and provided cortisone injections to Claimant's right index and right middle fingers. *See* Exhibits1, B.

19. Three weeks following surgery, Claimant was noted to have scar tissue thickness and some signs of early Dupuytren's disease in the palm of the left hand. She was also noted to have some signs of early Dupuytren's disease on her right hand as well. *See* Exhibit B.

20. Eventually, a right long finger trigger release surgery was also recommended by Dr. Conyers. *See* Exhibit 1.

21. On December 20, 2018, Jonathan Sollender, M.D., issued an IME report on behalf of Pinnacol Assurance. Dr. Sollender examined Claimant, took a history from Claimant, and reviewed the medical records and JDA. Dr. Sollender opined that Claimant was not exposed to the type of risk factors in her daily work to have stressed her arms/hands to the point of developing her condition. Dr. Sollender opined that the left hand trigger finger dating back to 2017 and the more recent right hand trigger finger were not work related. *See* Exhibit G.

22. Dr. Sollender opined that no provider had provided causal analysis or the steps necessary for causal analysis. Dr. Sollender performed an analysis by reviewing the diagnosis, the job duties and the JDA. Dr. Sollender compared Claimant's duties to the primary and secondary risk factor tables. After analysis he concluded that Claimant's work was not responsible for her bilateral trigger finger condition. *See* Exhibit G.

23. On March 22, 2019, Dr. Sollender testified by deposition. He opined that Claimant had no primary or secondary risk factors. He also testified that it appeared that Dr. Conyers only had Claimant's subjective reports that her job was repetitive and that Dr. Conyers did not perform a causation analysis

24. On May 7, 2019 Dr. Meza at Concentra issued a report. He noted that he had last seen Claimant on July 18, 2018 when he recommended a work site evaluation. Dr. Meza noted that he did not evaluate Claimant on May 7, 2019 but was just issuing a report after being asked to review the case and evaluate the worksite evaluation that had been performed on August 3, 2018. Dr. Meza noted he had reviewed the worksite evaluation and opined that there were no primary or secondary risk factors that fit within the Colorado Division of Workers Compensation cumulative trauma guidelines, and therefore Claimant did not meet criteria for causation as a work related injury. Dr. Meza agreed with Dr. Conyers' treatment recommendations, but recommended that Claimant pursue treatment outside of Workers Compensation. He released Claimant from care and opined that she could work full duty and had no permanent impairment. *See* Exhibit C.

25. On July 18, 2019, a second JDA was performed by Mr. Fallik from Genex. He again opined that there were no primary or secondary risk factors present in Claimant's job. *See* Exhibit E.

26. On August 12, 2019, Dr. Sollender issued an addendum to his initial IME report after reviewing the second JDA. In relevant part, the addendum provides: "my opinion remains unchanged in that she meets no occupational risk factors for any cumulative trauma condition of her upper extremities from the work she does. The 2nd JDA confirms her job is neither repetitive, forceful, awkward, computer intensive, vibratory or cold exposed. I continue to recommend denial of this claim as her complaints are non-occupational in nature based on objective testing of her job position." *See* Exhibit G.

27. On September 26, 2019, Dr. Conyers testified by deposition. Dr. Conyers testified that Claimant was very specific and the he was very specific when asking what her job duties were. Dr. Conyers testified that he felt Claimant not only did repetitious hand activity but a fair bit of strenuous hand activity. Dr. Conyers testified that if you have left long trigger finger, you are at increased risk of developing right long trigger finger. Dr. Conyers testified that he was careful to ask Claimant about home activities and he noted she reported not playing softball, tennis, or riding a bike. Dr. Conyers opined that none of the off work activities seemed to be a factor and that he felt with the activities Claimant was doing at work, her conditions were directly related to her work activities. He didn't think that a JDA would be helpful or necessary.

28. Dr. Conyers testified that he eventually performed surgery on both the left and right long finger trigger fingers. Dr. Conyers testified that the medical treatment guidelines were just guidelines and that his opinion was that Claimant's trigger fingers were more likely than not occupationally related. He testified that even if Claimant did casual biking and weightlifting he did not believe that those activities would rise to the level where his opinion would change.

29. Dr. Sollender testified at hearing. He testified that it was important to look at the totality of the evidence to make a conclusion including Claimant's subjective history, the JDA, and the job description. Dr. Sollender testified that JDAs are more reliable than a claimant's recollection of job duties. He noted that claimants can overestimate their exposure to certain risk factors whereas a JDA actually measures amounts. He testified that in this case Claimant's duties were not repetitive and that she was not even close to meeting time or threshold requirements for even secondary risk factors.

30. Dr. Sollender testified that driving a car 3-4 hours per day and gripping a steering wheel did not cause bilateral trigger finger. He opined that if it did, the medical community would expect a large segment of the population that commutes long distances on a daily basis to have this condition and they do not. Dr. Sollender testified that Claimant's job was not repetitive, forceful, and/or awkward and that he agrees with dr. Meza and Dr. Hurley that Claimant's bilateral trigger finger condition was unrelated to her work. He also testified that the conditions were not aggravated and/or accelerated by her job duties for Employer. Dr. Sollender testified that trigger finger has various conditions and that some of the population simply gets the condition without a known cause.

31. Claimant testified at hearing. She testified that it was primarily her prior position as a courier and not the position as a mailroom services clerk that she believes caused her bilateral trigger finger. Claimant testified that she drove approximately 3-4 hours per day when she worked as a courier. Claimant testified that the JDA gave a basic layout of her job but didn't accurately reflect her overall job duties.

32. The opinions of Dr. Meza, Dr. Sollender, and Dr. Hurley are found credible, persuasive, and consistent with the weight of the evidence. Dr. Conyers relied heavily on Claimant's subjective reports of her job duties, which were not substantiated by the JDA or by the testimony of Ms. I_____.

33. Claimant's job is not repetitive, awkward, or forceful. Claimant has failed to establish that her bilateral trigger fingers were caused by her employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection

is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

An occupational disease is a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. *See* § 8-40-201(14), C.R.S. A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment duties or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P. 2d 251 (Colo. App. 1999); *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). In deciding whether the Claimant has met his burden of proof, the ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Claimant has failed to establish, by a preponderance of the evidence, that her bilateral upper extremity conditions are directly and proximately caused by her employment duties or her working conditions. The symptoms that claimant believes are causally related to her employment with Employer are just as or more likely the result of her outside of work activities or some other unknown cause. As found above, two JDA's were performed by observing Claimant do her actual job as a mailroom services specialist. The JDA's concluded that Claimant's position does not meet the requirements under the Medical Treatment Guidelines for any primary or secondary risk factors. The amount of time that Claimant spends performing work activities has not been shown to be significant enough to cause bilateral trigger finger. The testimony of Ms. I_____ that the JDA's and formal job description are accurate representations of claimant's job duties for the Employer is found credible and persuasive.

Claimant testified at hearing that that she believed it was her job as a courier for Employer that primarily caused her bilateral trigger finger. She argues that this makes the JDA's invalid and/or irrelevant. However, as found above, the initial JDA noted that driving was 20-25% of Claimant's position. Dr. Sollender credibly explained why driving would not be a causal factor in this case, even accepting Claimant's testimony. Further, Ms. I_____ credibly testified that the amount of time spent driving was in the local area. Further, the driving was broken up by delivery and pick up stops and did not involve not continuous gripping. Ms. I_____ was very credible in describing Claimant's typical shifts and the work volume with varied tasks and actual work time at less than 8 hours per day.

Claimant has failed to show that her employment proximately caused her bilateral trigger finger condition. It is just as likely or more likely that claimant's bilateral condition is the natural progression of an inherent non-work related condition and/or due to her outside of work activities. Claimant has failed to meet her burden to establish a causal

relationship to her employment or employment duties. Claimant was equally exposed to hazards that could have caused and. The opinions of Dr. Meza, Dr. Sollender, and Dr. Hurley that her condition is unrelated to her work are found credible and persuasive. The opinions of the doctors are consistent with the JDA, the testimony of Ms. I_____, and the Medical Treatment Guidelines. Claimant has failed to meet her burden.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a work related injury or occupational disease to her bilateral upper extremities. Her claim is denied and dismissed.

2. As she has failed to establish a work related injury or occupational disease, Claimant's request for medical benefits and temporary total disability benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 21, 2019 /s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-960-859-006

ISSUES

I. Whether Claimant established by a preponderance of the evidence that her claim should be reopened.

II. If Claimant's claim is reopened, whether she is entitled to medical and temporary total disability benefits.

III. Whether Claimant is entitled to travel and lodging expenses incurred in participating in the DIME process.

IV. Whether Claimant is entitled to be reimbursed for the cost of the deposition transcript of the DIME physician.

V. Whether Claimant is entitled to reimbursement for certain medical expenses incurred after the DIME.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On September 2, 2014, Claimant suffered a compensable injury to her right ankle. At the time of her injury, Claimant was 51 years old. Currently, Claimant is 56.

2. On September 3, 2014, Claimant presented to OnPoint Urgent Care and was seen by Dr. Rogg for right ankle pain. Claimant stated that on September 2, 2014, she was at work wearing 4-inch heels and inverted her right ankle and developed right sided ankle pain. The report indicates Claimant specifically said, "she did not actually fall." Moreover, Claimant did not report any pain or symptoms involving her right hip, upper leg, knee, or lower leg. Her symptoms were limited to her right ankle.

3. Dr. Rogg noted Claimant presented with an abnormal gait and stated she was too tender to walk on her right foot. Dr. Rogg observed minimal swelling around Claimant's foot and ankle. Dr. Rogg ordered foot and ankle x-rays, which were normal and did not show any evidence of soft tissue swelling, bony abnormalities, or fractures. Based on her evaluation of Claimant, and the x-rays, Dr. Rogg diagnosed Claimant with a right ankle sprain. She provided Claimant crutches, a CAM walking boot, and prescribed Percocet. She did not assign Claimant any work restrictions. *Respondents' Exhibit A, pages 1 – 5*.

4. On September 4, 2014, Claimant returned to OnPoint asking about a work note and restrictions. She claimed Dr. Rogg told her she could take 10 days off from work due to her sprained ankle. They reviewed her chart and there was no indication Dr. Rogg provided Claimant any work restrictions or indicated Claimant should take any time off from work. Therefore, they requested another physician

at OnPoint, Dr. Leep, to review the matter. Dr. Leep also concluded Claimant did not require any work restrictions. Dr. Leep did, however, agree to provide Claimant a work excuse for September 3rd and 4th, with Claimant returning to work on September 5, 2014. *Respondents' Exhibit A, pp. 4,5*.

5. On September 8, 2014, Claimant was seen at Concentra. Although Claimant denied falling when she first sought medical treatment on September 3, 2014, at this appointment, it is noted Claimant reported she was coming down some stairs, fell, and twisted her ankle. Moreover, although Claimant only had right ankle pain at her first appointment, Claimant's pain complaints expanded and now allegedly involved her right hip, right upper leg, right knee, right lower leg, and right ankle. Furthermore, at this appointment, Claimant was noted to be in severe distress, tearful, and reported a pain score of 8-9/10. Based on Claimant's complaints, additional X-rays were taken and were again found to be normal. A foot and ankle MRI was also ordered. *Respondents' Exhibit A, pp. 1-11*.

6. On September 10, 2014, an MRI was taken of her foot and ankle. The MRI of her foot was essentially normal with no evidence of fracture, dislocation or stress fracture. The MRI of the right ankle did show what was read as complex longitudinal tears of the distal tibial tendon in the foot noted with tenosynovitis along with longitudinal tear of the peroneus longus tendon above the malleolus. No fracture or bone marrow contusion was demonstrated. The MRI reports, however, do not indicate the clinical relevance of the findings. *Respondents' Exhibit C, pp.1 – 2.*

7. Claimant was referred to an orthopedist, Dr. Myers for her right ankle sprain. At the September 16, 2014 visit, Dr. Myers noted that her complaints on exam were mostly of pain in the arch of her foot. She had been wrapping the ankle and was wearing a boot. His examination of her right lower extremity showed diffuse tenderness, with sensation to light touch globally decreased. His assessment was enthesopathy of ankle and tarsus, unspecified. *Respondents' Exhibit D, pp.1 – 3*.

8. At the September 16, 2014, evaluation, and for reasons unknown to Dr. Myers, Claimant left his office before he could complete his examination and discuss his opinion with Claimant based on his examination and reading her MRIs. In his report, Dr. Myers noted:

> Unfortunately, Ms. Davis left the office before I was able to complete her evaluation. I stepped out to review the MRI images. We are having difficulty accessing them at Denver Integrated Imaging. Before I was able to return to the room, Ms. Davis had left. I called Dr. Bums to discuss Ms. Davis's case. My recommendation would be for continued immobilization and to begin physical therapy. I am happy to see Ms. Davis back in the office if she wishes to return for additional evaluation.

Respondents Exhibit D, p. 4.

9. On September 18, 2014, Claimant returned to Concentra and was evaluated by Dr. Burns. Dr. Burns noted that Claimant stated that she left Dr. Myer's surgical evaluation before it was completed because it "took 2 hours." Claimant also requested a note for her flight back to Atlanta "so she can be seated in an area where she can elevate her leg." Dr. Burns' assessment was right ankle sprain, foot contusion, and tear of the tendon of the right ankle. She did not, however, indicate whether the tendon tear was related to the work injury, whether it was consistent with the alleged mechanism of injury, whether the finding had any significance and was symptomatic, or whether it was consistent with a natural degenerative process and not related to the work incident. Dr. Burns concluded Claimant was to follow up for care in Atlanta where she lived. *Respondents' Exhibit B, p.13*.

10. On October 8, 2014, Claimant was evaluated by Dr. Beskin at Peachtree Orthopaedic Clinic in Georgia. The mechanism of injury was reported as Claimant was going down stairs, and another lady tried to grab her badge from her shirt and in the process she mis-stepped on the stair twisting her right foot and ankle. At this appointment, Claimant stated she did not fall, which was consistent with her initial reports, but inconsistent with a subsequent report. Her pain was localized at the lateral aspect of the ankle and in the big toe area mostly plantar and in the distal arch. Minimal, if any, pain in the medial ankle. Clinical exam showed mild swelling at the lateral aspect of the right ankle with tenderness along the peroneal tendons. ROM was guarded by pain. Dr. Beskin did not think there was any significant instability. Foot swelling was minimal. X-rays showed the ankle mortise was well maintained and appeared stable. Clinical correlation with the MRI findings showed there was not much pain referable to the posterior tibial tendon area and the reported tear may not then be clinically significant. She was tender over the peroneal tendons but the MRI study showed relatively benign findings and that then might represent a chronic tendinopathy rather than an acute injury. There was no urgency for surgical intervention and he recommended PT and increased activities out of the boot she had been wearing. *Respondents' Exhibit E, pp. 1 – 3*.

11. From Dr. Beskin's perspective, Claimant's pain was out of proportion to the x-ray and MRI findings. *Respondents' Exhibit E, p. 4*.

12. On October 22, 2014, Claimant returned to see Dr Beskin. He had ordered a DVT Doppler study and that was negative. Claimant was seven weeks post-accident and was complaining of pain involving the entire right leg; that therapy was not helping; and that as she did not have pain medications she was clenching her teeth such that she'd broken a crown in one of her molars. *Respondents' Exhibit E, p. 7.*

13. On exam, Dr. Beskin noted relatively normal appearance, temperature, and color symmetric between the right and left side. Tape measurements revealed little if any discrepancy at the ankle and calf. Claimant complained of pain with any range of motion of her toes, ankle, knee or hip. *Respondents Exhibit E, p. 7*.

14. Dr. Beskin reviewed the imaging studies and noted that as the abnormal signal in the peroneus longus was relatively mild, it was unlikely to cause the amount of pain Claimant exhibited. He also stated that Claimant was only mildly symptomatic at the posterior tibial tendon where there was abnormal signal as well. *Respondents Exhibit E, p. 7*.

15. Dr. Beskin noted that Claimant's symptom presentation did not correlate with his examination. He also noted that there was a lack of objective findings to support Claimant' presentation and pain complaints. Dr. Beskin concluded that, in his opinion, Claimant's complaints were not supported by his findings. He also noted that there was some difficulty communicating with Claimant, and he recommended she find another treater because he was not comfortable taking care of her. Therefore, he discharged her from his practice. *Respondents Exhibit E, page 7*.

16. On November 11, 2014, Claimant saw Dr. Scott at Roswell Resurgens Orthopaedics. Her complaints were swelling, pain, a sense of imbalance and numbness and tingling to the toes. She had a significant antalgic gait and avoided pressure on the affected right leg. On exam, her calves were symmetrical. Mild swelling was noted only in the right ankle. The right foot and ankle were diffusely tender. Right ankle x-ray showed maintained ankle mortise. The diagnosis was an ankle pain. She was referred to PT and a pain management consult to, in part, rule out/evaluate early RSD related to her complaints of severe ankle pain post her ankle sprain. *Respondents' Exhibit F, p. 1* – 3.

17. On December 2, 2014, Claimant again saw Dr. Scott. He (just like Dr. Beskin) stated Claimant's pain seemed out of proportion to the nature of injury. The pain started at the ankle and radiated up the leg. He reviewed the ankle MRI taken in Colorado and stated he was unsure how her current pain complaints which were more lateral at the ankle and below the tip of the fibula related to those findings. *Respondents Exhibit F, pages 5* – 6.

18. On January 2, 2015, Dr. Scott noted Claimant was scheduled to see Dr. Joel for sympathetic blocks. Dr. Joel was with the Pain Anesthesia Group across the street, and he had referred her there. *Respondents Exhibit F, page* 7.

19. On January 30, 2015, Dr. Scott noted Claimant was to continue pain management with Dr. Joel. She was more comfortable on exam and not having nearly the pain levels she had presented with before. *Respondents Exhibit F, page 9*.

20. On April 13, 2015 Dr. Scott noted Claimant presented with continued pain. He also noted Claimant indicated she has had some falling lately. Based on his examination and review of her MRI, he did not see any indications for surgery. *Respondents Exhibit F, page 10*.

21. On April 8, 2015, Claimant had an IME with Dr. Rizor. This was performed at the request of Respondents. Dr. Rizor reviewed Claimant's medical records as well

as a copy of the Colorado Treatment Guidelines (*Guidelines*) covering Complex Regional Pain Syndrome. *Respondents' Exhibit V*.

22. In his report, he noted that at the time this incident, Claimant was employed as an investigator for an auto insurance company. He further noted that Claimant was a licensed independent claim examiner and she has a master's degree in psychology and business administration. *Respondents' Exhibit V*.

23. Based on his examination, Dr. Rizor noted:

    - The skin of the lower extremity showed normal and symmetrical color.
    - There were no trophic (related to nutrition) changes in the skin or nails.
    - The hair on both legs had been shaved. There were no gross differences in skin temperatures between the two extremities.
    - There was extensive amounts of adipose (fatty) tissue in both lower extremities with the amount of adipose tissue in the right leg being greater than the left, making the right lower extremity in general appear larger than the left.
    - There was no apparent edema (swelling from water) in the lower extremities, with no pretibial pitting and no evidence of swelling in the toes. *Respondents Exhibit V*.

24. Dr. Rizor assessed Claimant for CRPS using the diagnostic criteria set forth in the Colorado Treatment *Guidelines*. While subjective findings were present, objective results were not. As such, Dr. Rizor concluded the diagnosis of CRPS was not supported. *Respondents Exhibit* V.

25. His assessment was Claimant had a tendon sprain with disuse changes secondary to immobilization and use avoidance behaviors. He recommended future treatment should focus on PT and perhaps cognitive/behavioral pain management to address fear of movement. He also concluded that pain medications were not appropriate for her condition and that she was capable of full time employment. *Respondents' Exhibit V*.

26. On July 1, 2015, a nerve conduction study/EMG ordered by Dr. Scott in May, was performed by Dr. William Lichtenfeld. The study/EMG demonstrated evidence of a right tarsal tunnel syndrome. However, there is no indication whether this finding is consistent with, or was caused by, her work injury. There was no evidence of peripheral neuropathy or lumbar radiculopathy. On exam, there was allodynia, e.g. a subjective response of pain that is out of proportion to what would be expected – such as pain from lightly touching the skin, which does not normally provoke pain. Objectively, Dr. Lichtenfeld did not find any temperature change or atrophy involving Claimant's right foot. *Respondents Exhibit H*.

27. On July 7, 2015, Claimant returned to Dr. Scott so he could reevaluate Claimant, go over the results of her EMG, and make treatment recommendations. The EMG and NCV testing showed no evidence of peripheral neuropathy or

radiculopathy but some evidence of tarsal tunnel syndrome. However, Dr. Scott indicated that based on Claimant's pain complaints, the results of the EMG and NCV, and his examination of Claimant, surgery was still not recommended due to the broad and diffuse nature of Claimant's pain complaints. *Respondents Exhibit F, pages 12 – 13*.

28. On August 12, 2015, Dr. Scott indicated Claimant was much improved post sympathetic block and tarsal tunnel injection with Dr. Joel. *Respondents Exhibit F, page 18.*

29. On September 11, 2015, Claimant was seen by Dr. Scott. He noted in his report that during that examination, Claimant indicated -she had a spasm in the arch of her foot that made her fall and that she hit her head and suffered a slight injury to her left eyebrow. *Claimant's Exhibit H***.**

30. On October 9, 2015, Dr. Scott noted Claimant continued with significant ankle pain although better than she was a few months ago. Although she already had an EMG, he noted that she needed "a neurology evaluation for EMG looking for evidence of any permanent nerve damage." After that, he noted that she would have to follow up and finish with Dr. Joel and get rated for permanent impairment. He further noted that a FCE might be helpful. He again stated that he did not think Claimant was a candidate for any surgery. Dr. Scott did, however, welcome additional opinions from orthopedic foot and ankle experts or other practitioners. As far as work restrictions, he concluded she could do a desk job where she sat and did not have to do any lifting, carrying or climbing. *Respondents Exhibit F, page 19*.

31. On December 24, 2015, Dr. Joseph Freschi, a neurologist, issued a report after reviewing Claimant's EMG studies of her right lower extremity. He concluded that:

> In summary, these electrodiagnostic studies were entirely normal and showed no evidence of peripheral nerve impairment in the right lower extremity.

Respondents Exhibit G.

32. On January 15, 2016, Dr. Scott noted Claimant went in for an FCE but she was unable to participate to the full extent of the test so it was stopped. His care was at an end. He had nothing surgical to offer. Dr. Scott noted that Claimant's MRI had showed a possible peroneal tear, but yet her symptoms were not localized to that structure. Therefore, the MRI findings were not clinically relevant. *Respondents Exhibit F, page 21*.

33. On February 12, 2016, Claimant returned to Dr. Scott. His report from that visit noted that on exam, Claimant's pain complaints were wide spread over her leg. He also noted that some of her pain complaints continued to have an element of nonphysiologic pain. *Respondents Exhibit F, pages 23 – 24.*

34. On July 29, 2016, a lower extremity venous doppler study was conducted. The test showed normal venous flow in the right lower extremity with no evidence of any abnormalities. *Respondents Exhibit I.*

35. On August 26, 2016 Dr. Scott noted that at the last visit, Claimant's pain was very specific but at this appointment she indicated that her pain had broadened out again. Dr. Scott noted that he wanted to talk to Dr. Joel about the spinal cord stimulator. He also wanted a repeat higher quality ankle MRI to determine if there were tears at the peroneal tendons. He noted that she could be a possible candidate for surgery based upon the MRI results. *Respondents Exhibit F, page 27.*

36. On September 6, 2016, Claimant underwent another right ankle MRI. The MRI demonstrated peroneal tenosynovitis without an associated tear and other mild findings without a tear. *Respondents Exhibit J.*

37. On September 13, 2016, Dr. Scott noted (again) that Claimant's pain had expanded. The new MRI was reviewed with her. He noted that Claimant found it to be contradictory in that the test results (recent right ankle MRI) pointed to "nothing is wrong with her." While the MRI was read as not showing any tears in any tendons or ligaments, Dr. Scott looked at it and he noted he could not see the peroneus longus very well and while that was distal to where her pain complaints were, he could not tell if that was damaged. He asked the radiologist to re-review the MRI and he agreed re the peroneus longus could not be seen very well. She was offered to undergo an inversion tilt laxity ankle x-ray, but she refused. Again, Dr. Scott concluded that surgery was not appropriate. *Exhibit F, pages 29 – 31.*

38. On October 11, 2016, Dr. Scott noted Claimant reported being in extreme pain and that additional treatment options were limited. He wanted to speak with Dr. Joel to see if there were any other options available. Dr. Scott reiterated again that Claimant's pain complaints were much too broad to consider surgery. *Respondents Exhibit F, page 32.*

39. On November 15, 2016, Claimant returned to Dr. Scott and was placed at MMI. Dr. Scott noted Claimant had not seen Dr. Joel since the summer when he provided her ketamine injections. Claimant indicated that the injections might have made a slight improvement, but concluded that overall they did not help much. Dr. Scott noted that he spoke with Dr. Joel who stated he had nothing else to offer and that Claimant was not a candidate for a spinal cord stimulator. During his examination, he noted that Claimant indicated that due to her ankle injury, she has fallen many times, and fell in the lobby that day, because it feels like her "leg gives way." He also noted that his exam regarding Claimant's ROM [range of motion] was very self-limited. Dr. Scott also looked for signs of CRPS, and specifically concluded that he found "no trophic changes in the leg, ankle, or foot compatible with CRPS at this time." Based on Claimant's pain complaints and falls, he ordered x-rays and personally reviewed them, and found them to be normal. He ultimately concluded that Claimant was two years post injury with pain complaints on both sides of her ankle and that no surgery or additional treatment was needed. Therefore, he placed Claimant at MMI with an impairment rating for ankle range of motion deficits. *Respondents Exhibit F, pages 34 – 35*.

40. On December 1, 2016, Dr. Roth reviewed Dr. Scott's rating data. Dr. Roth opined that based on the limited information he had, no rating was appropriate as the injury, an ankle sprain, should have healed without complications within 4 to 6 weeks, if a grade 1 sprain, and no later than 4 to 6 months, if a grade 3 sprain, post event. He concluded that there was no physiological correlation to explain Claimant's pain complaints and in the absence of such in Colorado, impairment cannot be based on pain complaints alone. *Respondents Exhibit L*.

41. On December 6, 2016, Respondents filed a Final Admission of Liability (FAL) based on Claimant being placed at MMI by Dr. Scott, and Dr. Roth, assigning an impairment rating of 0%. The FAL noted that Respondents had admitted for, and paid, $25,005.14 in medical benefits and $101,263.80 in temporary total disability benefits. The FAL also noted there was an overpayment of $1,889.25, and that maintenance medical treatment was denied. Lastly, Respondents denied liability for maintenance medical treatment. *Respondents' Exhibit P*.

42. On January 18, 2017, Claimant returned to Dr. Joel for pain management. At this appointment, Dr. Joel documented his physical exam findings and diagnosis as follows:

> Her right thigh and calf are swollen significantly. Her skin is shiny over the calf. She has allodynia and hyperpathia as well as temperature changes in the right lower extremity. I do feel that the patient does have CRPS.

Respondents' Exhibit U, page 5.

43. Claimant challenged her placement at MMI and 0% impairment rating through the Division Independent Medical Examination (DIME) process. Dr. Ginsburg was selected to perform the DIME.

44. In order to attend the March 23, 2017, DIME appointment, Claimant traveled from Georgia to Colorado. The roundtrip mileage to attend the DIME was approximately 2,763.8 miles. Claimant has requested to be reimbursed for such mileage in the amount of $0.51 per mile, which totals $1,409.54. Claimant is also asking to be reimbursed for lodging expenses in the amount of $462.93. *Claimant's Exhibits O-P.*

45. On March 23, 2017, Dr. Ginsburg performed a DIME. He noted that throughout the course of his exam, Claimant exhibited a good deal of pain behavior. Moreover, contrary to the recent findings documented by Dr. Joel, Dr. Ginsburg's examination of her "lower extremities revealed no significant differences in appearance or palpation comparing the right and left sides." He specifically noted in his report that he took a great deal of time to inspect and feel her lower extremities, inspecting them from a variety of angles, and he saw no significant differences. He did not take measurements, but he noted neither did Dr. Joel. While Dr. Joel stated Claimant presented to him with a slow and shiny right lower extremity with temperature differences, Dr. Ginsburg did not appreciate that "at all" on his examination. *Respondents Exhibit M, pages 8 – 9*.

46. He did note there was an IME that found no evidence for complex regional pain syndrome (CRPS) but he did not have that document. *Respondents' Exhibit M, page 9.*

47. Dr. Ginsburg found it interesting that Dr. Joel's reported observations of Claimant's lower extremities that included large amounts of lower extremity visual and temperature changes, which seemed to be markedly more prominent as time progressed, did not fit his observations upon exam. *Respondents' Exhibit M, page 9*.

48. Dr. Ginsburg also found it interesting that Dr. Joel applied all of the therapeutic modalities he suggested initially including sympathetic block and ketamine infusion and he stated she might have improved, but apparently, she did not improve. *Respondents' Exhibit M, page 9*.

49. Claimant also told Dr. Ginsburg during her IME that her injury has caused her to fall numerous times and resulted in various injuries and conditions that require additional treatment, such as a trigger finger in her right hand that occurred when she fell in Dr. Scott's office. *Respondents' Exhibit Q, page 2*.

50. He concluded his report by reiterating that: "Again, I am impressed with my view of the patient's appearance compared to that of Dr. Joel." *Respondents' Exhibit M, page 10.*

51. In his deposition, Dr. Ginsburg noted that Dr. Joel was the only one of Claimant's many treaters who had made and noted these observational findings. *Ginsburg Deposition, page 34, lines 20 – 25; page 35, lines 1 – 6. Respondents Exhibit Q*.

52. Dr. Ginsburg also found it interesting that there are criteria, or tests, which should be performed or at least attempted to document the presence of CRPS, when appropriate, and that those were not done. Therefore, the process for diagnosing CRPS set forth in the Medical Treatment Guidelines, Exhibit 7, Complex Regional Pain Syndrome, was not followed. *Respondents' Exhibit M, page 9-10*.

53. Despite not having a diagnosis for CRPS that was supported by the Colorado Medical Treatment Guidelines, and despite not being able to see the observational findings noted by Dr. Joel in his January 18, 2017, report, Dr. Ginsburg placed Claimant at MMI as of 1/1/17 with a 10% whole person impairment rating for CRPS, spinal cord, nervous system, station and gait. After concluding Claimant had CRPS and providing her a rating for CRPS, he then admitted in his report that his conclusion was ". . . less than satisfactory to me and it may be less than satisfactory to others reading this report." He further concluded that Claimant needed to maintain her medications for about 1 year and then she should treat with her PCP. Moreover, by placing Claimant at MMI, he rejected the notion that her alleged falls were related to her ankle injury and required additional treatment. *Respondents Exhibit M, page 9*.

54. On July 3, 2017, Claimant underwent a DEXA axial skeleton, bone density study. The findings were within normal limits. *Respondents Exhibit* K.

55. On July 6, 2017, Claimant returned to Dr. Ginsburg, the DIME physician, so he could perform repeat range of motion testing and complete the DIME. He noted that just as in his earlier report, Claimant not only did not improve with treatment, she seemed to have gone from being ambulatory to a far more restricted circumstance in her functional activity. He therefore believed there were, based on what he saw at each visit with Claimant, "significant elements of non-physiological problems." At this appointment, Claimant again stated that she expected Dr. Ginsburg to suggest additional evaluations and treatments for her upper extremity problems, which she alleges are due to falling because of her ankle and therefore part of her original injury. Despite her contention that her ankle injury has caused her to fall, and caused additional injuries, Dr. Ginsburg appears to have not thought the subsequent falls were related to her work injury and again confirmed Claimant reached MMI on January 1, 2017. *Respondents Exhibit M, pages 14 – 16*.

56. In order to attend the July 6, 2017, follow up DIME appointment, Claimant traveled from Georgia to Colorado. The roundtrip mileage to attend the follow up DIME was also approximately 2,763.8 miles. Claimant has requested to be reimbursed for such mileage in the amount of $0.51 per mile, which totals $1,409.54. Claimant is also asking to be reimbursed for lodging expenses in the amount of $154.35. *Claimant's Exhibits O-P*.

57. WCRP 17, Exhibit 7 contains the Complex Regional Pain Syndrome, Medical Treatment Guidelines (the *Guidelines*).

58. Under the general principles set forth in the *Guidelines*, "positive patient response" is defined as: "Positive results are defined primarily as functional gains that can be objectively measured. Objective functional gains include, but are not limited to: positional tolerances, range-of-motion, strength, endurance, activities of daily living, ability to function at work, cognition, psychological behavior, and efficiency/velocity measures that can be quantified. Subjective reports of pain and function should be considered and given relative weight when the pain has anatomic and physiologic correlation. Anatomic correlation must be based on objective findings." (Emphasis supplied) *Respondents Exhibit N, page 4.*

59. The *Guidelines* go on to provide the following:

- CRPS I is defined as a "syndrome that usually develops after an initiating noxious event, is not limited to the distribution of a single peripheral nerve, and appears to be disproportionate to the inciting event. It is associated at some point with evidence of edema, changes in skin, blood flow, abnormal sudomotor activity in the region of the pain, allodynia, or hyperalgesia. These conditions are defined at page 7. (Emphasis supplied) *Respondents Exhibit N, pages 6 -7*.

- A physical examination should include changes in appearance including trophic changes, changes in hair and nail growth, muscular atrophy, changes in skin turgor, swelling and color changes. *Respondents Exhibit N, page 9*.

- Temperature evaluations should be based on objective testing and while differences of 1 degree Celsius may be significant, such also commonly occur with other pain complaints. *Respondents Exhibit N, page 10*. Moreover, the temperature findings may need to be interpreted cautiously as they do not reflect a stress on the sympathetic system. *Id., at page 19*.
- Edema is an important finding in CRPS. Its presence should be described in detail by the physician and when possible verified with objective testing such as volumetric testing or bilateral circumference measurements, usually performed by therapists. *Respondents Exhibit N, page 10*.
- Sensory Evaluation: A detailed sensory examination is crucial in evaluating a patient with chronic pain complaints, including the presence of allodynia and the anatomic pattern of any associated sensory abnormalities to light touch, deep touch, pain, and thermal stimulation. Quantitative sensory testing may be useful. *Respondents Exhibit N, page 10*.
- Evaluation of Non-physiologic Findings: Determine the presence of the following: variabilities on formal exam including variable sensory exam; inconsistent tenderness, and/or swelling secondary to extrinsic sources. Inconsistencies between formal exam and observed abilities of range-of-motion, motor strength, gait, and cognitive/emotional state; and/or observation of inconsistencies between pain behaviors, affect and verbal pain rating, and physical re-examination can provide useful information. *Respondents Exhibit N, page 10*.

60. Per the diagnostic criteria and procedures section of Exhibit 7, of the *Guidelines*, the "Diagnosis of CRPS continues to be controversial."… "Clinical criteria alone are not dependable nor necessarily reliable and require objective testing." … "Based on the relatively common finding of temperature discrepancy in non-CRPS patients with chronic pain, a stress test thermogram should be used." … "In a similar manner, the QSART provides an autonomic stress that is measurable." …. "In addition, patient response testing can be problematic in a medical legal setting. Thus, more objective tests are used for confirmation of CRPS." *Respondents Exhibit N, pages 12 – 14.*

61. The *Guidelines* also note that:

- Significant harm can be done to individuals by over-diagnosing CRPS and subjecting patients to the side effects and potential morbidity of multiple sympathetic blocks, invasive procedures, or chronic medications, as well as psychological effects from the diagnosis. In order to safe guard against such harmful outcomes, patients should have objective testing to verify their diagnosis before such procedures are considered and/or are continued after the initial diagnosis. Several reviews on the subject have identified the need for more objective measurements. Therefore, individuals must have a confirmed

diagnosis of CRPS to receive these procedures. *Respondents Exhibit N, page 14*.

62. Under the Colorado *Guidelines*, in order for a practitioner to make a diagnosis of CRPS, the patient must meet certain diagnostic criteria, including a clinical diagnosis and at least two positive diagnostic tests from trophic tests – comparative x-rays of both extremities or a triple phase bone scan; or infrared stress thermography; or QSART or sympathetic blocks. *Respondents Exhibit N, page 15*.

63. In his deposition testimony Dr. Ginsburg admitted that to his knowledge, none of these tests - triple phase bone scan, QSART etc. - were performed in this matter. *Ginsburg deposition, page 36, lines 13 – 25; page 34, lines 1 – 2*.

64. He candidly admitted that his opinion about CRPS was made knowing full well that it conflicts with the mandates set forth in the treatment Guidelines. *Ginsburg deposition, pages 42 – 45*; and that Dr. Joel was the only treater who diagnosed Claimant having CRPS. *Ginsburg Deposition, page 44, lines 20 – 23*.

65. Based on Dr. Ginsburg's admission during his deposition that he diagnosed Claimant with CRPS, knowing that such diagnosis was not supported by the testing recommended in the *Guidelines,* and that his observations did not match Dr. Joel's observations of Claimant's lower extremity, which included swelling, a shiny appearance, and difference in temperature, the ALJ does not find Dr. Ginsburg's opinion that Claimant developed CRPS due to her work injury to be credible or persuasive.

66. Moreover, the ALJ does not find Dr. Joel's opinion that Claimant has CRPS and should be treated with ketamine to be credible or persuasive. It appears one of Dr. Joel's frontline treatment modalities for CRPS is the use of ketamine, via infusions. However, ketamine infusions are not recommended in Colorado as treatment for patients validly diagnosed with CRPS. The *Guidelines* provide:

> There is some evidence that in CRPS I patients, low dose daily infusions of ketamine can provide pain relief compared to placebo. The relief, however, faded within a few weeks. Studies have not shown any functional improvements in patients with CRPS treated with ketamine infusions. Because their potential harm, as described below, outweighs evidence of limited short-term benefit in patients with CRPS, NMDA receptor antagonists are not recommended. Less harmful therapies with longer term effects are available.
>
> . . .
>
> Due to the potential harm and limited short-term benefit in patients with CRPS, ketamine NMDA receptor antagonists are ***not recommended*** since less harmful therapies are available (emphasis in original).

Respondents Exhibit N, page 30.

67. Dr. Joel practices at the North Fulton Pain & Spine Center. He has completed an anesthesiology residency and a fellowship with concentrations in chronic pain management and anesthesia. *Respondents Exhibit Q, Exhibits A – D*.

68. He published an article in MDAtlanta.com about the benefits of ketamine infusion therapy. *Respondents Exhibit Q, Exhibits A – D*.

69. Despite the Colorado *Guidelines* not recommending low dose ketamine infusions due to the limited functional improvements demonstrated by the infusions, combined with the potential harm, Dr. Joel discusses the alleged success of high dose infusions allowed in other countries, which he does not name. He notes that:

> During the inpatient and outpatient infusions, a benzodiazepine is administered to avoid the negative side effects of Ketamine. The patient is continuously monitored and recovered before discharge. Outside the U.S., because it is not FDA-approved in the country, patients are placed into Ketamine comas for five to seven days. These patients are induced, intubated, ventilated and administered 500 to 700mg of Ketamine per hour. The clinical research studies have shown success rates anywhere from 80 to 100 percent. The most effective method is the coma method followed by the inpatient and outpatient methods.

70. The ALJ, however, does not find Dr. Joel's opinion that Claimant has CRPS to be credible or persuasive for a number for reasons. First, even though Dr. Joel documented Claimant's right lower extremity exhibited swelling, shiny skin, and varied in temperature when compared to her other extremity, Dr. Ginsburg was unable to confirm any of those findings during his initial examination. Second, the *Guidelines* do not recommend the use of low dose ketamine infusions for treating CRPS because of the potential harm, limited short-term benefit, and the lack of "Good Evidence" or "Strong Evidence," as defined in the *Guidelines*, supporting the use of Ketamine to treat CRPS. Despite the *Guidelines* indicating there is a lack of "Good" or "Strong" scientific evidence supporting the use of ketamine for treating CRPS, Dr. Joel contends that clinical research studies have shown success rates anywhere from 80 to 100 percent. He goes on to state that the high dose "coma method," where a person is put in a coma for 5-7 days and administered high doses of ketamine, is the most successful. *Respondents' Exhibit Q*. Thus, because Dr. Joel's contention regarding what the scientific evidence establishes regarding the effective use of ketamine to treat CRPS is inconsistent with what the Colorado *Guidelines* contend, such factor significantly discredits his opinions. In other words, the ALJ credits the Colorado *Guidelines* over Dr. Joel regarding the use of ketamine and the data necessary to support a diagnosis of CRPS.

71. On May 7 and June 4, 2018, the parties attended a Hearing before ALJ Margot Jones. The issue for determination was Respondents attempt to overcome the DIME's finding that Claimant had CRPS related to her admitted ankle sprain.

72. On May 17, 2018, between the two hearings with ALJ Jones, Claimant paid $166.00 to Stevens-Koenig Reporting for a copy of the transcript of Dr. Ginsburg's April 5, 2018, deposition testimony. *Claimant's Exhibit R*.

73. On August 22, 2018, Claimant underwent an MRI of her lumbar spine. The reason the MRI was ordered was listed as "chronic pain syndrome." The impression was:

> Multilevel facet arthropathy, up to moderate L4-LS and L5-Sl. Recommend correlation with patient's symptoms and physical exam to assess if a component of patient's presentation could be related to facetogenic pain.
>
> No disc herniation to result in high-grade spinal canal stenosis.
>
> Up to mild neural foramina! stenosis at L3-L4 and L4-L5 as described above.
>
> Partially imaged, presumed cyst in the left kidney however indeterminate by this study. Correlation with previous and/or follow-up renal ultrasound is recommended, if clinically necessary.

Claimant's Exhibit F.

74. On August 22, 2018, Claimant also underwent an MRI of her cervical spine. The reason the MRI was ordered was listed as "cervical radiculopathy." The impression of that MRI was:

> Degenerative disc disease with spondylosis at multiple levels.
>
> At CS-6, there is moderate to severe right foraminal stenosis due to uncovertebral joint and facet hypertrophy.

Claimant's Exhibit F.

75. In an Order dated August 23, 2018, ALJ Jones found Claimant's diagnosis of CRPS was not supported by the record and that Respondents had proven, by clear and convincing evidence, that Claimant's symptoms and presentation did not establish grounds on which a CRPS diagnosis could be made. Therefore, ALJ Jones determined Respondents overcame the opinion of Dr. Ginsburg. *Respondents Exhibit X.*

76. Claimant timely appealed that Order, but then voluntarily withdrew her Appeal. Therefore, Claimant reached MMI for her work related injury on November 15, 2016. In addition, Respondents did not admit for maintenance medical treatment. Thus, Respondents were not obligated to provide any type of medical treatment after November 15, 2016.

77. On August 29, 2018, Claimant paid $360.00 to Mobile Thermographic Imaging to undergo a Thermography to assist in determining whether Claimant has CRPS. *Claimant's Exhibit Q*.

78. On November 4, 2018, Claimant was evaluated by Dr. Bernard Drexinger, based upon a referral from Dr. Joel. Dr. Drexinger was providing a second opinion, for Dr. Joel, as to whether Claimant has CRPS. In his report, Dr. Drexinger indicates:

> Her thermogram reports were quite ambiguous…. These were later reviewed at the hospital on the Northside PACS system.

However, Dr. Drexinger does not indicate whether the thermogram provides any data that would support or contradict a finding of CRPS in his November 4, 2018, report.

Dr. Drexinger goes on to say:

> Upper extremity triple phase bone scan shows definite decreased uptake both at the wrist and elbow on the right in all views on delayed phase. Lower extremity is ***technically difficult*** but definitely asymmetric ***both consistent*** with CRPS/RSD. I would consider the upper extremity diagnostic (emphasis added).
>
> *Claimant's Exhibit B*.

79. Dr. Drexinger does not discuss and explain how those findings are consistent with a diagnosis of CRPS and actually establishes a diagnosis of CRPS. Moreover, he does not discuss whether the lack of any other findings is inconsistent with a diagnosis of CRPS. *Claimant's Exhibit B*.

80. On February 12, 2019, Claimant returned to Dr. Drexinger to fill out disability paperwork and review the results of her thermogram. His report from this appointment provides:

> Her thermogram report is reviewed. ***It does state consistent with CRPS/RSD***. I have reviewed the pictures and it does ***appear*** to be asymmetric (emphasis added).

He then concludes:

> I agree completely with complex regional pain syndrome [CRPS] or the older term reflex sympathetic dystrophy [RSD].

81. Dr. Drexinger then provides a diagnosis. However, the diagnosis he provides is for "Complex regional pain syndrome I of right upper limb." He does not provide such diagnosis for the right lower extremity, which is allegedly her primary concern and the extremity that Dr. Joel noted various observational findings, which could not be seen or observed by Dr. Ginsburg. *Claimant's Exhibit B.*

82. The ALJ does not find Dr. Drexinger's conclusion that Claimant has CRPS to be credible or persuasive for a number of reasons. First, Dr. Drexinger indicates Claimant's "thermogram reports were quite ambiguous." A review of the

thermogram report indicates it is anything but ambiguous. The report specifically provides:

> The right anterior ankle and dorsal feet are warm. This may be joint related or ligamentous. The distal extremities and particularly the forefeet and the digits are cool. This finding is consistent with (***but not diagnostic of***) CRPS/RSD (emphasis added).
>
> **. . .**
>
> Distal extremity findings on both sides **may** have relevance to the history of CRPS / RSD (emphasis added).

Therefore, the ALJ finds that the thermogram reports are quite clear and that findings are merely consistent with, but not diagnostic of, CRPS.

83. Second, Dr. Drexinger indicates the bone scan of Claimant's right upper extremity shows:

> [D]definite decreased uptake both at the wrist and elbow on the right in all views on delayed phase.

However, the bone scan report provided by Claimant, dated September 20, 2018, indicates that the mild decreased uptake involves the thumb, CMC, interphalangeal, and elbow joints. There are no findings around the wrist. Moreover, the impression of the radiologist who read the bone scan indicates the findings are consistent with a degenerative etiology and suggests that correlation with radiographs might be helpful. Absent from the bone scan report is any indication that the findings are indicative of CRPS. *See Claimant's Exhibit D.*

84. In addition, Dr. Drexinger indicates the bone scan of Claimant's lower extremities demonstrates that:

> Lower extremity is technically difficult but definitely asymmetric. *Claimant's Exhibit D*.

However, the ALJ's review of the September 18, 2018, bone scan shows that the radiologist who reviewed the scan found that:

i. The dynamic flow phase does not demonstrate asymmetric hyperemia or increased flow to either calf region;

ii. Delayed static imaging demonstrates mild increased activity about the right tarsometatarsal articulation likely osteoarthritic in nature; and

iii. Increased activity about the left first MTP joint osteoarthritic in nature.

The overall impression was:

i. Unremarkable dynamic and immediate blood pool phases of the exam.

ii. Mild delayed static activity centered around about the left first MTP and right tarsometatarsal aticulations likely osteoarthritic in nature.

Thus, the radiologist did not indicate the findings were consistent with CRPS. The radiologist indicated the findings were consistent with osteoarthritis.

85. Third, Dr. Drexinger failed to explain how the findings that he contends are "consistent" with a diagnosis of CRPS support his opinion that Claimant has CRPS. Even if some of the findings are "consistent" with CRPS, Dr. Drexinger failed to set forth his reasoning for ultimately concluding Claimant does have CRPS. Merely having a finding that may be consistent with a specific medical condition does not mean it is more likely than not the person has the specific medical condition.

86. Claimant then filed an Application for Hearing on January 24, 2019 seeking to reopen her case for additional medical care and disability benefits. Due to procedural issues, the Application was refiled on April 30, 2019.

87. On April 24, 2019, Claimant was seen by Dr. Amit Patel for right middle finger trigger finger and a cyst. Dr. Patel noted Claimant has noticed catching and locking of her right middle finger for the past 2 years as well as a painful cystic mass over the volar aspect of her middle finger at the palmardigital crease. There is no indication her trigger finger was caused by her original ankle injury or due to any of the falls Claimant alleges she sustained due to her work injury. *Claimant's Exhibit EE*.

88. On July 5, 2019, Claimant underwent an MRI of her right foot. The impression was: "Normal Lisfranc ligament complex. No right foot injuries identified." *Claimant's Exhibit AA*.

89. On July 18, 2019, Claimant underwent an MRI of her right ankle. The impression was:

> Predominant tendinopathy of the peroneal longus tendon at the level of the retromalleolar groove, corresponding to the level of the externally placed vitamin E marker demarcating site of most pain. No tendon tear is seen.
>
> Additional posterior tibialis navicular insertional tendinosis and flexor hallucis tenosynovitis.
>
> Isolated atrophy within the abductor digiti minimi, can be seen in setting of Baxter's neuropathy. Chronic clinically.
>
> Sequela of remote ligamentous lateral inversion ankle injury.

Claimant's Exhibit BB.

90. There is neither a medical opinion setting forth the cause of the findings noted on the July 18, 2019 MRI of her right ankle, nor the relevance of the findings noted on the ankle MRI, if any.

91. On August 9, 2019, Claimant underwent an MRI of her thoracic spine. The reason for the MRI is listed as "pain." The impression was:

> Disc herniation to the right at T10-11 with right foraminal narrowing.
>
> No fracture.

Claimant's Exhibit CC.

92. There is no credible or persuasive medical opinion that associates Claimant's thoracic disc herniation with Claimant's original work injury or any of her alleged falls, which Claimant contends are related to her work injury. In addition, there is no credible or persuasive medical opinion that indicates the thoracic disc herniation has any clinical relevance to Claimant's pain complaints and symptoms and requires any treatment.

93. The ALJ does not find Claimant to be a credible or reliable historian.

94. The ALJ does not find Claimant to be credible or reliable regarding the extent of her injury, the extent of her pain, the extent of her symptoms, and the occurrence, cause and extent of subsequent falls she alleges are due to her initial work injury.

95. Claimant is not found to be credible or reliable for a number of reasons including, but not limited to, the following:

- First, when Claimant presented for medical treatment at OnPoint on September 3, 2014, the day after the accident, she stated that she was at work and wearing 4-inch heels and inverted her right ankle and developed right sided ankle pain. At that first appointment, the records note Claimant specifically stated that she did not fall. Moreover, Claimant did not report any pain or symptoms involving her right hip, upper leg, knee, or lower leg. Her symptoms were limited to her right ankle, which would be consistent with an ankle sprain. And, Dr. Rogg did not provide Claimant any work restrictions, because none were necessary. The next day, September 4, 2014, Claimant returned to OnPoint and requested to be taken off work for 10 days. Claimant alleged the initial physician who treated her, Dr. Rogg, said she could take 10 days off from work. Since Dr. Rogg was not in that day, another medical provider reviewed her chart and noted there was no indication Dr. Rogg took Claimant off work for 10 days, or intended to take Claimant off work for 10 days. The provider then had another physician, Dr. Leep, review the matter and Dr. Leep determined Claimant did not have to be off work, but did give her an excuse from work for the day as well as the prior day. Therefore, Claimant's contention that Dr. Rogg indicated she could be off work for 10 days for a sprained ankle is not credible and her attempt to get additional time off work by misrepresenting what Dr. Rogg said is evidence of Claimant being deceitful.

- Second, Claimant returned to OnPoint for medical treatment on September 8, 2014. At this appointment, Claimant alleged she actually fell. Moreover, at

this appointment, Claimant's symptoms expanded to include her right hip, right upper leg, right knee, right lower leg, and right ankle. Furthermore, at this appointment, Claimant was noted to be in severe distress, tearful, and reported a pain score of 8-9/10. There was no explanation for why her symptoms should be expanding at this time, especially since the working diagnosis was a sprained ankle. This expansion of symptoms is inconsistent with the expected symptoms of an ankle sprain.

- Third, due to Claimant alleging she was in severe pain, and rating it at 8-9/10, an MRI was ordered and she was referred to a surgeon, Dr. Myers. On September 16, 2014, Claimant was evaluated by Dr. Myers. Dr. Myers physically examined Claimant. However, in order to complete his evaluation, Dr. Myers left the room to review Claimant's MRI findings. While Dr. Myers was reviewing Claimant's MRI films, she decided the examination was taking too long and left. Therefore, when Dr. Myers returned to the examining room to discuss the matter with Claimant, she was not in the room. Dr. Myers did, however, complete his report and noted that the MRI findings were not consistent with her complaints and that her pain complaints were out of proportion to the radiographic and MRI findings. This behavior tends to discredit the extent of Claimant's pain associated with her ankle sprain because it is not reasonable for someone to leave the office of a medical provider, especially a specialist such as a surgeon, who might be able to diagnose the problem and recommend and/or provide treatment to reduce her pain, without letting the specialist complete their examination and explain their findings.

- Fourth, Claimant moved to Georgia and began treating with Dr. Beskin. On October 8, 2014, Claimant was evaluated by Dr. Beskin. He noted that based on his examination, the MRI findings were relatively benign and might represent a chronic tendinopathy and not an acute injury. In the end, he concluded her pain complaints were out of proportion to the x-ray and MRI findings. Claimant returned to see Dr. Beskin on October 22, 2014. He again noted Claimant's symptom presentation did not correlate with his examination. He also noted that there was a lack of objective findings to support Claimant' presentation and pain complaints. Dr. Beskin concluded that, in his opinion, Claimant's complaints were not supported by his findings. He also noted that there was some difficulty communicating with Claimant, and he recommended she find another treater because he was not comfortable taking care of her. Therefore, he discharged her from his practice. The ALJ infers from that the problem Dr. Beskin had communicating with Claimant was due to Claimant's unwillingness to accept his opinion regarding the lack of findings to support her complaints of chronic pain and disability.

- Fifth, when Claimant saw Dr. Burns on September 18, 2014, Claimant requested the doctor to write a note so she could be seated in an area on the plane back to Atlanta where she would be able to elevate her leg during the flight. Such a request for this type of accommodation seems unreasonable

for an ankle sprain and based on the other medical opinions that indicate Claimant's pain complaints were not supported by the clinical findings.

96. Claimant's work injury is limited to a right ankle sprain.

97. Claimant failed to establish by a preponderance of the evidence that her work injury caused her to develop CRPS.

98. Claimant failed to establish by a preponderance of the evidence that her work injury, which is limited to a right ankle sprain, has worsened and that she is in need of additional medical treatment to cure her from the effects of her work injury.

99. Claimant failed to establish by a preponderance of the evidence that her work injury, which is limited to a right ankle sprain, has worsened and resulted in additional disability.

100. Claimant failed to establish by a preponderance of the evidence that her work injury, which is limited to a right ankle sprain, has worsened and that she is in need of additional maintenance medical treatment to relieve her from the effects of her work injury or to prevent deterioration.

101. Claimant failed to establish by a preponderance of the evidence that her work injury caused subsequent falls and necessitated the need for additional medical treatment or caused any additional disability.

102. Because the ALJ has found Claimant suffered only a right ankle sprain, the ALJ has rejected Claimant's contention that the laundry list of conditions, some of which are merely findings on various tests, are related to her work injury. Therefore, the ALJ has found that Claimant has failed to establish that these other conditions or findings are causally related to her work injury. These conditions or findings include, but are not limited to, the following:

- Systemic illness
- Lisfranc and Metatarsal injury or her right foot
- Tarsal tunnel of her right foot
- Trigger Finger and cyst
- Inter-vertebral disc degeneration – lumbar region, osteoporosis, and cervical disc degeneration
- Thoracic spine issues
- CRPS of upper and lower extremities

103. Based on the totality of the evidence, the ALJ finds Claimant has failed to establish by a preponderance of the evidence that she is in need of any additional medical treatment to cure or relieve her from the effects of her work injury, which is limited to a right ankle sprain.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Claimant shall have the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. However, Claimant is not required to present medical evidence to prove the cause of her condition or whether it has worsened. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997); *Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986). Pertinent lay testimony may support a finding of causation and the worsening of a condition despite conflicting medical evidence or testimony. See Lymburn v. Symbios Logic, 952 P.2d 831 (Colo. App. 1997); *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App.

1990). Moreover, the ALJ is under no obligation to credit medical testimony, even if such testimony is unrebutted. *Cary v. Chevron U.S.A., Inc*., 867 P.2d 117 (Colo. App. 1993).

I. Whether Claimant established by a preponderance of the evidence that her claim should be reopened.

a. Reopening based upon a change in condition.

Claimant has failed to establish by a preponderance of the evidence that her case should be opened based upon a change in her condition. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim, Claimant shoulders the burden of proving her condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). Reopening is warranted if Claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988). The determination of whether Claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO, July 19, 2004).

As set forth in the FAL, dated, December 6, 2016, Claimant was placed at MMI on November 15, 2016, provided a 0% impairment for her work related injury. Moreover, Respondents did not admit for maintenance medical treatment. And, despite going through the DIME process, Claimant was unsuccessful in challenging the closure of her case pursuant to the December 6, 2016, FAL. As found by ALJ Jones, Respondents overcame the opinion of the DIME physician, and her case remained closed.

As found, Claimant's work related injury is limited to a sprained right ankle. Claimant failed to establish by a preponderance of the evidence that her sprained right ankle has worsened and caused the need for additional medical treatment or resulted in additional disability.

Although Claimant contends that her work accident and injury caused her to develop CRPS, the ALJ finds and concludes Claimant has failed to establish by a preponderance of the evidence that she has CRPS and that such condition is causally related to her work injury.

The ALJ also finds and concludes Claimant has failed to establish by a preponderance of the evidence that her work injury caused her to fall numerous times and that those falls have resulted in additional injuries that require medical treatment or caused additional disability.

The ALJ also finds and concludes Claimant has failed to establish by a preponderance of the evidence that her work injury resulted in anything other than a right sprained ankle.

Therefore, based on the totality of the evidence, the ALJ finds and concludes Claimant has failed to establish by a preponderance of the evidence that her condition has worsened and that her claim should be reopened.

b. Reopening based upon a mistake.

The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. Further, the party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); Barker v. Poudre School Dist., W.C. No. 4-750-735 (ICAO, Mar. 7, 2012).

Reopening of a closed claim may be granted based on any mistake of fact that calls into question the propriety of a prior award. Section 8-43-303(1), C.R.S.; *See Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo. App. 1989). When a party seeks to reopen based on mistake the ALJ must determine "whether a mistake was made, and if so, whether it was the type of mistake which justifies reopening." *Travelers Insurance Co. v. Industrial Commission*, 646 P.2d 399, 400 (Colo. App. 1981).

A mistake in diagnosis has previously been held sufficient to justify reopening. *See Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo.App.1989)(under circumstances where there is a mistake in diagnosis because the medical technology available to the treating physician at the time of the initial order is limited, a petition to reopen based on a mistake of fact may properly be granted).

Moreover, at the time a final award is entered, available medical information may be inadequate, a diagnosis may be incorrect, or a worker may experience an unexpected or unforeseeable change in condition subsequent to the entry of a final award. When such circumstances occur, Section 8-43-303, C.R.S. provides recourse to both Claimant and Respondents by giving any of the parties the opportunity to file a petition to reopen the award. The reopening provision, therefore, reflects a legislative determination that in ‘worker's compensation cases the goal of achieving a just result overrides the interest of litigants in achieving a final resolution of their dispute.’ *Standard Metals Corp. v. Gallegos, supra*, 781 P.2d at 146 (quoting *Grover v. Indus.Comm'n*, 759 P.2d 70 (Colo.1988). Further, as stated in 8 A. Larson, *Larson's Workers' Compensation Law* § 131.05 [2] [b], at 131-62 (2004):

> [T]he desirability of preserving a right to reopen for genuine mistake seems too self-evident for argument. In the nature of things, there are bound to be many occasions when even

> the most thorough and [skillful] diagnosis misses some hidden compensable condition. Should the claimant then be penalized because of an erroneous disposition, either by award or settlement, when the only fault lies in the imperfections of medical science?

Berg, supra at 273 (emphasis in original).

In this case, the ALJ finds and concludes Claimant failed to establish by a preponderance of the evidence that there has been a mistake in diagnosing the injuries and conditions caused by her work accident. As found, Claimant's work injury is limited to a right ankle sprain and such condition does not require any additional medical treatment and has not become more disabling. Claimant failed to establish that she has CRPS and that the CRPS was caused by her work injury, and that there was a mistake regarding the diagnosis of CRPS. Claimant has also failed to establish by a preponderance of the evidence that there was a mistake regarding any other diagnosis.

Therefore, Claimant has failed to establish by a preponderance of the evidence that there was a mistake in diagnosis related to her work injury and that her case should be reopened.

II. If Claimant's claim is reopened, whether she is entitled to medical and temporary total disability benefits.

Claimant has failed to establish that her case should be reopened. Therefore, Claimant is not entitled to any additional medical or disability benefits.

III. Whether Claimant is entitled to travel and lodging expenses incurred in participating in the DIME process.

Claimant is seeking reimbursement for travel and lodging expenses she incurred to participate in the DIME process. Her expenses include the cost to drive to Colorado for the DIME as well as lodging expenses.

Section 8-42-101(1)(a), C.R.S. requires Respondents to pay for expenses which are incidental to obtaining reasonable and necessary medical treatment. Mileage expenses are compensable if "incidental to" obtaining medical treatment. *Country Squire Kennels v. Tarshsis*, 899 P.2d 362 (Colo. App. 1995); *Sigman Meat Co. v. Industrial Claim Appeals Office*, 761 P.2d 265 (Colo. App. 1988); *Industrial Commission v. Pacific Employers Insurance Co*., 120 Colo. 373, 209 P.2d 908 (1949). Thus, mileage expenses and lodging are treated in the nature of a medical benefit.

However, the DIME procedure is not for the purpose of treatment. Rather, it "serves an evidentiary function in the process of litigating disputes …" *Fisher v. University of Colorado Health*, W.C. No. 5-041-216-01 (December 6, 2018.) Thus, the DIME process is a litigation process and not a medical benefit. Therefore, mileage and lodging expenses incurred while pursuing a DIME is not a medical benefit or incidental

to obtaining medical treatment. Consequently, such expenses are not a compensable benefit and cannot be recovered by Claimant.

IV. Whether Claimant is entitled to be reimbursed for the cost of the deposition transcript of the DIME physician.

Claimant contends Respondents failed to provide her a copy of the transcript of Dr. Ginsburg's deposition testimony pursuant to Section 8-43-203(4), C.R.S. Claimant further contends that because Respondents failed to provide her a copy of the transcript, and she ultimately decided to pay the court reporter to obtain a copy, Respondents are responsible for reimbursing Claimant for the cost of obtaining the transcript.

Section 8-43-203(4) provides:

> Within fifteen days after the mailing of a written request for a copy of the claim file, the employer or, if insured, the employer's insurance carrier or third-party administrator shall provide to the claimant or his or her representative a complete copy of the claim file that includes all medical records, pleadings, correspondence, investigation files, investigation reports, witness statements, information addressing designation of the authorized treating physician, and wage and fringe benefit information for the twelve months leading up to the date of injury and thereafter, regardless of the format. If a privilege or other protection is claimed for any materials, the materials must be detailed in an accompanying privilege log.

Claimant's claim for reimbursement, however, fails for a number of independent reasons. First, there is a lack of credible and persuasive evidence that she mailed a written request for a copy of the claim file – and if she did, if the request was made before or after the deposition of Dr. Ginsburg was transcribed. In addition, there was no credible and persuasive evidence submitted that the deposition transcript was in the 'claim file" or whether it was in the attorney's "litigation file" when the written request, if any, was made.

Second, the section of the statute at issue discusses providing the contents of the "claim file" and identifies certain documents such as "medical records, pleadings, correspondence, investigation files, investigation reports, witness statements, information addressing designation of the authorized treating physician, and wage and fringe benefit information." Thus, the statute does not address deposition transcripts and therefore does not apply to deposition transcripts.

Third, if Claimant thought Respondents had a legal obligation to provide her a copy of the deposition transcript pursuant to this statute, Claimant could have filed a motion to compel production of the deposition transcript, but she did not.

Fourth, the general rule, established expressly by the Workers' Compensation Act and the Colorado Rules of Civil Procedure, is that a party must obtain copies of deposition transcripts directly from the court reporter upon the payment of a reasonable

charge, and not from opposing counsel. Pursuant to Section 8-43-213(2), C.R.S. a party is responsible for obtaining a transcript of a deposition, at their cost, by ordering it from the court reporter. This is consistent with the general rule, established expressly by the Colorado Rules of Civil Procedure, which provides that a party must obtain copies of deposition transcripts directly from the court reporter upon the payment of a reasonable charge, and not from opposing counsel. *See* C.R.C.P 30(f). The Colorado Rules of Civil Procedure contemplate that a deposition will be taken before a properly appointed [court reporter], who will transcribe and seal the deposition and forward it to the attorney who arranged for the transcription. *See* C.R.C.P 30(f)(1) and 30(f)(2). Moreover, the rules provided that any party may obtain a copy of any deposition transcript from the [court reporter] who conducted the deposition upon the payment of a reasonable charge. *See* C.R.C.P 30(f)(2).

Consequently, the Claimant has provided neither legal nor factual support for her request for reimbursement. Based on the foregoing, the ALJ will not address Respondents' waiver argument.

V. Whether Claimant is entitled to reimbursement for certain medical expenses incurred after the DIME.

Section 8-42-101(1), C.R.S. requires the Employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The Employer's obligation continues until the Claimant reaches MMI. MMI is defined as the point in time when the claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. However, the Claimant may receive medical benefits after MMI to maintain her status or prevent a deterioration of her condition. *See Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988).

Claimant seeks reimbursement for the $360.00 she paid to Mobile Thermographic Imaging to undergo a thermography on August 29, 2018. Claimant underwent the test, after being placed at MMI and closure of her case, to assist in determining whether she had CRPS and whether her condition had worsened.

In this case, Claimant reached MMI on November 15, 2016, and her case was closed pursuant to the December 6, 2016, FAL, in which Respondents did not admit for maintenance medical benefits. Moreover, Claimant has failed to reopen her case. Therefore, Respondents are not liable for the thermography Claimant underwent in 2018. Therefore, Claimant has failed to establish by a preponderance of the evidence that she is entitled to reimbursement for the cost of the thermography.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim remains closed.
2. Claimant's claim for additional medical and disability benefits is denied and dismissed.
3. Claimant's claim for reimbursement for travel and lodging expenses is denied and dismissed.
4. Claimant's claim for reimbursement for the cost to purchase the deposition transcript of Dr. Ginsburg is denied and dismissed.
5. Claimant's claim for reimbursement for medical expenses, which includes the thermography, incurred after being placed at MMI and closure of her claim, is denied and dismissed.
6. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 22, 2019.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that on February 12, 2018 she suffered an injury arising out of and in in the course and scope of her employment with the employer.

- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that the medical treatment the claimant has received is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

- At hearing, the parties reserved the issue of average weekly wage (AWW).

- At hearing, the parties stipulated that the left thumb surgery performed by Dr. Randall Viola on June 22, 2018, is not related to the February 12, 2018 incident and the claimant is not requesting payment for that surgery.

FINDINGS OF FACT

1. The claimant is employed with the employer as a ski instructor. On February 12, 2018, the claimant was working for the employer giving a lesson to a client. On the final run of the day, the claimant stepped off the gondola while wearing her ski boots and carrying her poles in her left hand and her skis her right hand. The claimant stepped from the gondola onto a rubber mat that was on the concrete flooring. However, the mat was in a puddle of water. When the claimant stepped onto the mat, it slipped and caused the claimant to fall. The claimant testified that she fell onto a concrete surface on her left side, striking her left hip and left hand. The claimant was able to complete her shift on that date because it was the last run of the day.

2. The claimant reported the incident to the employer the next day, February 13, 2018. The claimant was instructed to attend "safe fit" for medical treatment. Subsequently, the employer instructed the claimant to seek medical treatment with Vail Occupational Health.

3. The claimant was first seen at Vail Occupational Health on February 26, 2018 by Lucia London, CNP. At that time, the claimant reported pain in her left hand and left hip. Ms. London recorded the claimant's left hand pain as 3 out of 10, and her left hip pain as 3 out of 10. Specifically, with regard to the claimant's left hip, Ms. London noted that the claimant had no clicking, popping, instability, swelling, or bruising.

4. Ms. London diagnosed a lumbar spine strain and a left hand contusion, with possible osteoarthritis exacerbation. For the claimant's left hand issues, Ms. London referred the claimant to Dr. Randall Viola, because the claimant had previously treated with Dr. Viola related to left hand symptoms. In addition, Ms. London ordered x-rays of the claimant's left hip and lumbar spine. Ms. London released the claimant to work full duty with no restrictions. The claimant continued to work without restrictions through the remainder of the ski season.

5. On April 4, 2018, the claimant sought treatment with her primary care physician, Dr. Jonathan Feeney. The medical record of that date describes the claimant's complaint as bruising. Dr. Feeney noted that the claimant had "fairly extensive bruising down her left posterior lateral side" as well as left SI joint pain. Based on the claimant's report, Dr. Feeney seemed to opine that the bruising was related to the claimant's February 12, 2018 fall. He recommended the use of nonsteroidal anti-inflammatory medications. In addition, Dr. Feeney recommended a DEXA bone density scan.

6. On April 10, 2018, Ms. London referred the claimant to Dr. Nathan Cafferky for consultation regarding the claimant's left hip.

7. On April 20, 2018, an MRI of the claimant's left hip showed mild osteoarthrosis, an intralabral cyst in the anterior superior labrum, muscular edema in the quadratus femoris, and mild to moderate tendinosis of the left gluteus minimus and gluteus medius. The radiologist noted that there were similar findings on the claimant's right hip.

8. On May 2, 2018, Dr. Randall Viola performed a right thumb metacarpophalangeal joint fusion.

9. On May 3, 2018, the claimant was seen by Dr. Cafferky. At that time, the claimant reported aching posterior buttocks pain that occasionally radiated into her distal posterior thigh. On exam, Dr. Cafferty noted tenderness of the claimant's left sacroiliac (SI) joint. Dr. Cafferky described the claimant's left hip as "healthy appearing". In addition, he noted that the imaging of the claimant's left hip showed degenerative changes similar to those in her right hip. Dr. Cafferky opined that the claimant's symptoms were more consistent with her lumbar spine. As a result, Dr. Cafferky ordered an MRI of the claimant's lumbar spine and referred the claimant to Dr. Scott Raub.

10. On May 9, 2018, an MRI of the claimant's lumbar spine showed mild left foraminal stenosis at the L4-5 level with a mild disc bulge and mild to moderate left facet joint osteoarthritis. In addition, the radiologist noted mild right foraminal stenosis at the L5-S1 level.

11. On May 11, 2018, the claimant was seen by Dr. Alisa Koval at Vail Occupational Health. Dr. Koval noted Dr. Cafferky's referral to Dr. Raub to address the

claimant's lumbar spine. Dr. Koval recommended the claimant continue physical therapy and massage therapy.

12. At the request of the respondent, on May 14, 2018, Dr. Jonathan Sollender performed a review of the claimant's medical records. In his report, Dr. Sollender opined that surgery on the claimant's left thumb was not reasonable, necessary or related to the industrial injury. In support of this opinion, Dr. Sollender noted that prior to the claimant's injury she had treated with Dr. Viola for symptoms related to degenerative arthritis in her left thumb. In May 2017, Dr. Viola recommended the claimant undergo surgery to her left thumb. At that time, the claimant opted to postpone surgery until after the 2018-2019 ski season.

13. On May 15, 2015, the claimant was by Dr. Raub. At that time, the claimant reported that she had continuing left buttock pain with pain into her left lumbrosacral area, but no radicular pain. Dr. Raub opined that the claimant's symptoms would not be addressed with treatment of her lumbar spine. During this appointment, the claimant asked Dr. Raub about PRP[1] injections. Based upon that discussion, Dr. Raub referred the claimant to Dr. David Karli.

14. The claimant was first seen by Dr. Karli on June 13, 2018. On that date, the claimant described her left hip pain as aching, grinding, and dull. In addition, the claimant described her left hip pain as a five out of ten. Dr. Karli recommended and administered a PRP injection to the claimant's left hip.

15. On June 22, 2018, Dr. Viola performed surgery on the claimant's left thumb and left wrist. The surgery included a left thumb carpometacarpal joint fusion, left wrist volar carpal ganglion excision, and left thumb trigger release.

16. On July 6, 2018, the claimant returned to Dr. Koval and reported that she experienced an improvement in her symptoms following the PRP injection.

17. The claimant testified that Dr. Karli administered a second PRP injection in November 2018. Both of the PRP injections have been denied by the respondent. The claimant testified that she personally paid for the PRP injections because her personal insurance does not cover PRP treatment.

18. On September 25, 2018, the claimant attended an independent medical examination (IME) with Dr. John Burris. In connection with the IME, Dr. Burris reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Burris opined that the claimant did not suffer any injuries when she fell on February 12, 2018. In support of this opinion, Dr. Burris noted that the claimant has a long history of treatment of the preexisting conditions for the same body parts she asserts were injured. Dr. Burris also opined that the claimant's fall on February 12, 2018 did not aggravate or accelerate the claimant's preexisting and chronic conditions. Dr. Burris noted that the claimant continued to work full-time and without restrictions immediately following the injury and thereafter.

[1] Platelet rich plasma.

19. Dr. Burris' testimony at hearing was consistent with his written report. In his testimony, Dr. Burris reiterated his opinion that the claimant was not injured on February 12, 2018. With regard to the PRP injections, Dr. Burris noted that the Colorado Medical Treatment Guidelines (MTG) do no provide for PRP as treatment of hip symptoms.

20. The claimant testified that by December 26, 2018, her hip symptoms had resolved, and she was released by all of her doctors.

21. The ALJ credits the medical records and the opinions of Dr. Burris. The ALJ also credits the medical records of Dr. Koval over the contradictory reports of Dr. Feeney and finds that the claimant has failed to demonstrate that it is more likely than not that she suffered an injury on February 12, 2018. Although the claimant experienced an incident in which she fell, she did not suffer an injury necessitating treatment. Nor did the incident on February 12, 2018, aggravate, accelerate or combine with a preexisting condition to warrant the need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where

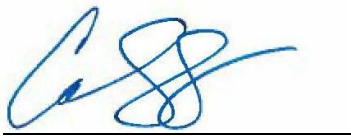
the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she suffered an injury arising out of and in the course and scope of her employment with the employer. The claimant was not injured on February 12, 2018. Furthermore, the ALJ concludes that the incident on February 12, 2018 did not aggravate, accelerate, or combine with any pre-existing condition to warrant treatment. As found, the medical records and the opinions of Drs. Burris and Koval are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits related to a date of injury of February 12, 2018, is denied and dismissed.

Dated this 26th day of November 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

The respondent has admitted that the claimant suffered a work injury on December 30, 2018, in which she injured her lumbar spine.

The issue raised by the claimant is whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment other than that of her lumbar spine (including treatment of her cervical spine, neurological symptoms, and vision) constitutes medical treatment that is reasonable, necessary, and related to the December 30, 2018 work injury.

At the hearing, the parties reserved the issue of average weekly wage (AWW).

FINDINGS OF FACT

1. The claimant is employed with the employer as a ski instructor. On December 30, 2018, the claimant was skiing with one of her students when she was hit from behind by an out-of-control skier. The claimant testified that she was hit with enough force to cause both of her skis to come off. The claimant testified that she fell backwards onto her buttocks, continued to fall, felt her neck snap, and then struck her helmet on the ground. The claimant was transported off the ski run by toboggan.

2. The claimant testified that she immediately received medical treatment at the emergency department at Vail Health. The emergency department record for December 30, 2018 indicates that the claimant complained of headache from striking the back of her head and pain "along her back from neck down to tailbone." The claimant was diagnosed with a head injury, a neck strain, and multiple contusions. On that date, x-rays of the claimant's cervical spine showed no acute injury.

3. At the emergency department, Dr. Diana Hearne initially assessed work restrictions for the claimant. However, Dr. Hearne noted "[w]hen patient saw the restrictions on workman's comp form, she became concerned and requested that these be changed. Initially, given the degree of discomfort she claims from this fall and injury, I felt that she may need to limit her activities until cleared by occupational health. . . Patient states she does not feel she is injured that bad and feels that she could return to full work." Dr. Hearne acquiesced and released the claimant to work without restrictions.

4. The claimant testified that she understood that the body parts injured on December 30, 2018 included her head, neck, back, and tailbone. The claimant also testified that she had a concussion.

5. Prior to the claimant's December 30, 2018 incident, she received treatment from Dr. Alisa Koval following a February 12, 2018 incident. At that time, Dr.

Koval was also the claimant's authorized treating physician (ATP) for the current claim. On January 11, 2019, the claimant was seen by Dr. Koval and described being struck by another skier. Dr. Koval specifically recorded "[t]he force of the impact caused her bindings to eject, and she ended up falling to her left side, landing on her buttocks and her head ([plus] helmet) hitting the ground (no [loss of consciousness])."

6. The claimant reported her symptoms to Dr. Koval as myofascial pain in her left buttock, left hip, and low back region, as well as in her upper back and neck. Dr. Koval concluded, "Lori is experiencing some generalized myofascial pain in her neck, back, and left hip/buttock region. My sense is that a short course of [physical therapy] and [massage therapy] will be helpful." Dr. Koval placed the claimant on modified duty from January 11, 2019 through January 16, 2019, and released the claimant to full duty on January 17, 2019. The claimant continued to work full duty, without restrictions, after that date.

7. On January 25, 2019, the claimant returned to Dr. Koval. In the medical record of that date, Dr. Koval opined that the claimant's fall onto her buttocks on December 30, 2019 would not cause hip symptoms.

8. On January 31, 2019, the respondent filed a General Admission of Liability (GAL) related to the December 30, 2018 injury.

9. On February 13, 2019, the claimant was seen by optometrist, Dr. Matthew James. At that time, the claimant reported that her vision was not the same following the December 30, 2019 incident. Dr. James noted that the claimant's ocular health was "normal".

10. The claimant returned to Dr. Koval on February 22, 2019 and reported vision issues. Dr. Koval noted that the claimant was seen by an optometrist and confirmed that the claimant's vision was "fine".

11. The claimant was seen by Dr. Koval on March 29, 2019. At that time, Dr. Koval opined that the claimant's ongoing neurological complaints did not relate to the December 30, 2018 injury. However, Dr. Koval also concluded that the claimant's lumbar spine symptoms were related to the work injury. Dr. Koval ordered a magnetic resonance image (MRI) of the claimant's lumbar spine.

12. On April 4, 2019, the claimant underwent an MRI of her lumbar spine which showed small disc bulges without canal stenosis at L3 through S1 levels. In addition, the MRI showed mild lower lumbar facet arthrosis with left L4-5 facet joint effusion and synovitis; mild to moderate left L4-5 and right L5-S1 foraminal stenosis, with possible nerve root contact.

13. On April 30, 2019, the claimant sought treatment with Dr. Scott Raub, who had provided her with treatment related to the February 2018 incident. In the medical record of that date, Dr. Raub noted that the claimant was seen by Dr. David Karli, who had administered a low back injection. The claimant also reported to Dr. Raub that Dr. Evans had administered injections to her neck. Neither of these injections were

recommended by Dr. Koval. Nor did Dr. Koval refer the claimant to Drs. Raub, Karli, or Evans during this claim.

14. Subsequently, the parties designated Dr. Jonathan Feeney as the claimant's ATP. The claimant was first seen by Dr. Feeney on June 27, 2019. The medical record of that date identifies the claimant's issues as "persistent concussive symptoms". At that time, the claimant reported headaches when she worked on a computer and significant neck pain. The claimant informed Dr. Feeney that she had previously seen Dr. Evans who administered injections to the claimant's neck in February and June. Dr. Feeney recommended that the claimant continue with physical therapy.

15. On July 19, 2019, the claimant returned to Dr. Feeney and reported ongoing neck pain, facial pain, and nausea. At that time, Dr. Feeney referred the claimant to Dr. Evans for further evaluation. In the medical record of that date, Dr. Feeney included a diagnosis of a closed head injury. However, he noted the date of injury as January 4, 2006.

16. On August 26, 2019, the claimant returned to Dr. Feeney who noted the claimant's date of injury as February 12, 2018. The ALJ notes that Dr. Feeney's records confusingly reference treatment related to both the February 2018 incident and the December 30, 2018 injury.

17. As referenced in the April 30, 2019 medical record with Dr. Raub, the claimant has received various neck and back injections that were administered by Dr. Evans. The claimant testified that these injections were helpful in treating her symptoms. The claimant also testified that the injections administered by Dr. Evans were paid for by her personal health insurance. The claimant testified that she would like these injections to be authorized by the respondent. She would also like Dr. Evans to be considered an authorized provider for this claim.

18. The ALJ credits the medical records and opinions of Dr. Koval and finds that that the claimant injured only her lumbar spine on December 30, 2018, as admitted by the respondent. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that treatment of her cervical spine, neurologic symptoms, and vision is reasonable, necessary or related to the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation

case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that treatment of her cervical spine, neurologic symptoms, and vision is reasonable, necessary or related to the work injury. As found, the medical records and opinions of Dr. Koval are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for medical treatment of her cervical spine, neurologic symptoms, and vision is denied and dismissed

2. All matters not determined here are reserved for future determination.

Dated this 26th day of November, 2019.

Grand Junction, Colorado 81501

ISSUES

- Did Claimant prove, by a preponderance of the evidence, that Dr. Bradley erred by "normalizing" Claimant's scheduled impairment rating by comparison to the contralateral joint?

- Did Respondent prove a basis to withdraw its admission of liability for medical benefits after MMI?

FINDINGS OF FACT

1. Claimant injured his left knee in the course and scope of his employment as a corrections officer on December 9, 2017.

2. On October 12, 2018, Dr. David Walden performed arthroscopic meniscectomies and chondroplasties.

3. Claimant's ATP, Dr. J. Douglas Bradley, put Claimant at MMI on January 9, 2019. Dr. Bradley assigned a 13% lower extremity rating. Left knee range of motion deficits equated to a 12% impairment. But Claimant also had reduced range of motion in the uninjured right knee, corresponding to a rating of 9%. Dr. Bradley "normalized" the left knee range of motion impairment to 3% by subtracting the 9% deficit from the right side (12% - 9% = 3%). Combined with 10% extremity impairment for meniscectomy, Dr. Bradley calculated a final lower extremity rating of 13%.

4. Dr. Bradley testified via deposition on October 1, 2019. Dr. Bradley typically normalizes extremity ratings by comparison to the contralateral joint unless the claimant had a prior injury or other condition that would affect motion of the joint. He opined the ROM deficits in Claimant's uninjured right knee reflect the "normal status of his knees." Dr. Bradley conceded normalization is not discussed in the *AMA Guides*, but explained the DOWC has been teaching normalization in the Level II training course for many years.

5. Respondent filed a Final Admission of Liability on May 3, 2019 based on Dr. Bradley's 13% scheduled rating. The FAL also admitted from medical benefits after MMI. Claimant timely objected to the FAL, and requested a hearing on PPD benefits. Claimant did not object to the issue of post-MMI medical benefits, so the issue closed.

6. Claimant's post-hearing brief indicates he does not contest Respondent's request to withdraw the admission for medical benefits after MMI.

7. Dr. Bradley's testimony regarding his rating methodology is credible and persuasive.

8. Claimant failed to prove he is entitled to a rating above the 13% rating calculated by Dr. Bradley.

CONCLUSIONS OF LAW

A. PPD benefits

Permanent impairment ratings for injuries on or after July 1, 1991 must be "based on" the *AMA Guides to the Evaluation of Permanent Impairment* (3d ed. rev. 1991) ("AMA Guides"). Section 8-42-101(3.7). Whether a rating physician correctly applied the *AMA Guides* is a question of fact for the ALJ. *Metro Moving and Storage v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Where, as here, the Claimant suffers a purely scheduled impairment, the claimant must prove entitlement to a rating by a preponderance of the evidence. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000).

Claimant's sole challenge to Dr. Bradley's rating relates to normalization of the range of motion component, which Claimant argues conflicts with the *AMA Guides*. Claimant concedes the Director's authority to promulgate rules regarding impairment ratings, but asserts "Desk Aid #11 – Impairment Rating Tips" operates as a *de facto* rule adopted outside the required rulemaking process.

The ICAO has considered, and rejected, similar arguments regarding the rating tips on multiple occasions. *E.g*., *Kromer v. State of Colorado*, W.C. No. 4-965-485-03 (July 6, 2017); *Wyatt v. SSC Pueblo Belmont Operating Company, LLC,* W.C. No. 4-936-417-02 (November 24, 2015); *Kurtz v. JBS Carriers*, W.C. No. 4-797-234 (December 7, 2011).

The ALJ finds the ICAO's decision in *Kurtz v. JBS Carriers*, W.C. No. 4-797-234 (December 7, 2011), *aff'd Kurtz v. Industrial Claim Appeals Office*, Colo. App. No. 11CA2561 (October 18, 2012) (NSOP) persuasive and dispositive. The Claimant in *Kurtz* suffered a right leg injury. His final impairment rating included hip range of motion deficits. The ATP and the DIME had normalized the claimant's rating by comparison to the contralateral hip, and the claimant requested the full range of motion rating without normalization. Claimant's arguments here are not appreciably different from those raised – and rejected – in *Kurtz*. The Panel noted the impairment rating tips are not part of the AMA Guides, but may be relevant to assessing the weight the ALJ gives a physician's rating. The Panel held,

> [T]he use of a contralateral measurement in assessing the claimant's permanent impairment did not violate the AMA Guides, 3rd Edition Revised, or the Workers' Compensation Act or Rules. While the AMA Guides, 3rd Edition Revised does not comment on the contralateral measurements for assessing impairment, we conclude that it is also proper to look to the director's impairment rating tips for purposes of assessing a claimant's permanent impairment rating. *See Sanco Industries v. Stefanski*, 147 P.3d 5 (Colo. 2006) (extending deference to Workers' Compensation Division's interpretation of the Act as set forth in Interpretive Bulletin).

> Pursuant to the director's impairment rating tips, the contralateral joint is a better representation of the patient's preinjury state than the AMA Guides population norms in some cases. We further note that pursuant to § 8-42-101(3.5)(b), C.R.S., the Director of the Division of Workers' Compensation shall maintain the impairment rating system. The regulatory interpretations of the Director generally are entitled to a degree of deference. *See Lenox v. United Airlines*, W.C. No. 4-616-469 (June 2, 2006) (affording "great weight" to director's interpretive bulletin on AMA Guides).

The Panel also rejected the argument that the rating tips are invalid as a matter of law because they were not promulgated through the formal rulemaking process. The Panel cited § 24-4-103(1), which states the notice and comment provisions "[do] not apply to interpretive rules or general statements of policy, which are not meant to be binding as rules . . . ." The Panel noted the Director's established practice of issuing "advisories or guidelines . . . regarding the practical applications of the Act," and held, "the impairment rating tips contained in the Desk Aid are merely guidance regarding the assessment of permanent impairment ratings. It is not binding as a rule of the Division." Accordingly, the Panel saw no legal impediment to the rating physician or an ALJ relying on the rating tips.[1]

Nor is the ALJ persuaded by Claimant's argument Dr. Bradley misinterpreted and mechanically applied the Division's guidance because he thought it is a binding rule. Admittedly, Dr. Bradley testified that, "the State actually tells us to do that," which suggests he may not fully appreciate the discretionary nature of the procedure. But he also testified he knows of no statute or rule *requiring* normalization. More important, Dr. Bradley's possible misapprehension had no practical impact on his final rating, because he believes normalization is appropriate in Claimant's case. Dr. Bradley opined,

> [T]here was mild arthritis. He was taking medicine for arthritis before he was injured. So we were determining that he had some arthritis. He's almost 60 years old, he had some arthritis, some limitations, unless he was a – you know, an avid yoga – or worked out, or really worked on all of his joints, maintaining full range of motion . . .
>
> Q. So that would be . . . a specific condition that makes the normalization procedure really appropriate, right?
>
> A. That is correct.

The persuasive evidence shows Dr. Bradley would have normalized Claimant's range of motion regardless of whether he thought doing so was mandatory or discretionary. Any potential error in Dr. Bradley's understanding of the Division's guidance was harmless.

[1] The Court of Appeals subsequently affirmed *Kurtz* in an unpublished opinion. *Kurtz v. Industrial Claim Appeals Office*, Colo. App. No. 11CA2561 (October 18, 2012) (NSOP). The court emphasized that Desk Aid #11 expressly leaves the decision whether to use contralateral range of motion testing to the rating physician's discretion.

B. Withdrawal of admission for post-MMI medical benefits

Claimant's has conceded Respondent's request to withdraw the admission for post-MMI medical benefits.

ORDER

It is therefore ordered that:

1. Claimant's request for additional PPD benefits above the 13% scheduled rating admitted by Respondent is denied and dismissed.

2. Respondent's request to withdraw prospectively its admission for medical benefits after MMI is granted. Post-MMI medical benefits are now closed, subject to statutory reopening.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 27, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that she suffered an injury or occupational disease arising out of and in the course and scope of her employment with the employer.

- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she received from Glenwood Medical Associates was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

FINDINGS OF FACT

1. The claimant was employed with the employer as a prep cook. The claimant's job duties included preparing food and serving customers.

2. The claimant testified that on April 2, 2019 she was completing her job duties for the day. This included cleaning the steamers and tortilla press. The claimant explained that the tortilla press is a heavy piece of equipment that is difficult to reach. The claimant testified that while she was reaching up to open the tortilla press, she felt a pop in her right shoulder and a hot flash up her right arm. As it was the end of her shift, the claimant completed her duties as scheduled and went home.

3. The claimant testified that she had pain in her right shoulder overnight and into the next day. The claimant also testified that when she arrived a work on April 3, 2019, she notified a manager, Brenda, that she was injured by the tortilla press. The claimant testified that Brenda moved her from the hot line to the cold line. However, this did not help reduce the claimant's right shoulder pain.

4. Due to her continuing right shoulder symptoms, the claimant sought treatment with her primary care provider, Corrine Johnson, PA, with Mountain Family Health Centers. The claimant was seen by Ms. Johnson on April 4, 2019, and reported pain in her right shoulder with an onset of two months prior. The claimant did not report an acute injury, but mentioned that she had to lift heavy items at work. The claimant also told Ms. Johnson that she was fired from her job with the employer. Ms. Johnson opined that the claimant had right shoulder tendonitis and recommended Toradol and Lidoderm patches.

5. On April 9, 2019, an x-ray of the claimant's right shoulder showed no shoulder separation, dislocation, or acute fracture.

6. On April 22, 2019, the claimant returned to Ms. Johnson and reported that her right shoulder pain was radiating into her neck. The claimant described the pain as aching, dull, and throbbing. At that time, Ms. Johnson opined that the claimant was injured at work due to repetitive lifting. In addition, Ms. Johnson administered an intraarticular joint injection to the claimant's right shoulder.

7. On May 8, 2019, the claimant submitted a Worker's Claim for Compensation form with the Division of Workers' Compensation (DOWC). On that form, the claimant described the cause of her injury as "repetitive lifting broken steams for weeks". The claimant did not report a specific incident or injury.

8. On May 21, 2019, the claimant was seen at Glenwood Medical Associates by Dr. Dennis Eicher. At that time, Dr. Eicher recorded the appointment as an initial workers' compensation "work up". The medical record of that date lists repetitive lifting as the cause the claimant's injury. Dr. Eicher opined that the claimant had a possible rotator cuff tear. He recommended physical therapy and pain medications.

9. On June 4, 2019, Dr. Eicher ordered a magnetic resonance image (MRI) of the claimant's right shoulder. The MRI was performed on June 20, 2019, and showed a questionable low grade partial thickness tear of the anterior supraspinatus; mild infraspinatus and inarticular long head biceps tendinosis; mild AC joint osteoarthritis; and mild subacromial subdeltoid bursitis.

10. Thereafter, on July 2, 2019, Dr. Eicher diagnosed the claimant with a rotator cuff tear and referred her to Glenwood Orthopedics for consultation. On August 12, 2019, the claimant was seen at Dr. Ferdinand Liotta with Glenwood Orthopaedic Center. At that time, Dr. Liotta diagnosed the claimant with arthritis of the acromioclavicular joint and tendonitis of the long head of the right biceps brachia. However, Dr. Liotta opined that the claimant did not need surgical intervention. In addition, he opined that the claimant has a "significant cervical spine issue" and ordered an x-ray and an MRI of the claimant's cervical spine.

11. On June 13, 2019, Howard Fallik, Vocational Case Manager, conducted a Job Demands Analysis of the claimant's position with the employer. In his June 14, 2019 report, Mr. Fallik noted that he found no risk factors in the claimant's job duties that would lead to an repetitive use injury of the claimant's shoulder. Mr. Fallik's testimony at hearing was consistent with his written report.

12. On July 10, 2019, the claimant's counsel submitted a Worker's Claim for Compensation form with the DOWC on the claimant's behalf. In that document, an April 2, 2019 acute injury was described as: "[o]pening the steamer, lifting the handle, and felt a crack in my shoulder. Repeated this activity several time (*sic*) and the popping and the pain became worse." The body parts identified as affected by the injury were listed as the claimant's right shoulder, neck, elbow, wrist, and hand.

13. Medical records entered into evidence demonstrate prior treatment of the claimant's shoulders, back, and neck. For example, on April 4, 2015, the claimant treated at Mountain Family Health Centers for generalized muscle and body pain. At that time, the claimant had pain in her trapezius and bilateral rhomboids. Thereafter, the claimant was taking Gabapentin and Naproxen.

14. On May 8, 2015, May 15, 2015, and June 22, 2015, the claimant reported low back pain. Ms. Johnson recommended the claimant undergo physical therapy. On June 22, 2015, the claimant continued to use Naproxen and was also prescribed Lidoderm patches. On September 15, 2015, the claimant began physical therapy treatment with Grand River Health. The medical record of that date lists the claimant's complaints as back and right shoulder pain.

15. Subsequently, the claimant began to report neck pain. On February 15, 2016, the claimant was seen by Ms. Johnson who diagnosed the claimant with cervicalgia. On February 13, 2018, the claimant was seen at Mountain Family Health Centers by Natasha Ellwood, PA-C. At that time, the claimant reported right shoulder pain that she had experienced for 17 years.

16. The ALJ credits the medical records entered into evidence and finds that the claimant has failed to demonstrate that it is more likely than not that she suffered an acute injury or an occupational disease while employed with the employer. The claimant first described her injury as a repetitive use injury that developed over time. Later, the claimant alleged a specific acute injury involving a pop in in her shoulder. The ALJ does not find the claimant's testimony to be credible or persuasive. In addition, it is clear that the claimant has long-term right shoulder and neck issues. The ALJ finds no persuasive evidence in the record to support a finding that the claimant suffered an aggravation or acceleration of those preexisting conditions while working for the employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to

a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

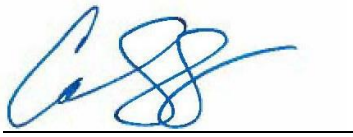
7. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. See *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, October 27, 2008).

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she suffered an injury or occupational disease arising out of and in the course and scope of her employment with the employer. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that her working conditions aggravated or accelerated preexisting conditions in the claimant's right shoulder and/or neck. As found, the medical records are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated this 2nd day of December 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the lumbar spinal fusion surgery he requests is reasonable, necessary, and related to his admitted work injury of 12/6/2016?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Work Injury of December 6, 2016

1. Claimant works as a correctional officer for the Employer. On December 6, 2016, Claimant was called to an incident in the San Carlos Gym, where an offender attacked another officer. Claimant attempted to stop the offender. Claimant ended up rolling around on the floor with the offender in his efforts to stop the attack, with other officers landing on top of the Claimant in efforts to subdue the offender. After the offender was finally restrained, Claimant attempted to stand up. He was helped to a workbench by other correctional officers. At that time, Claimant reports feeling burning on his right side all the way down to his feet. This is an admitted claim.

Claimant's Medical History, Pre-injury

2. On October 1, 2010, Claimant's primary care nurse practitioner noted an exacerbation of Claimant's low back pain with radiculopathy. Claimant characterized his pain as constant, moderate in intensity, sharp, and aching. Claimant related his symptoms to a head on motor vehicle accident in which the damage to his vehicle was extensive. Claimant was diagnosed with low back pain – exacerbation. His prescription for Percocet was refilled. (Ex. K, pp. 64-65)

3. On September 19, 2011, Claimant's primary care nurse practitioner noted chronic neck and back pain requiring a refill of Claimant's chronic pain medications, including Percocet. (Ex. K, pp. 66-67)

4. On October 18, 2011, Claimant was referred to Audubon Surgery Center for a surgical evaluation for his congenital lumbosacral spondylolysis. (Ex. K, p. 68)

5. On June 11, 2012, Claimant reported his third work-related injury to his back stemming from a take down. (Ex. K, p. 69) When Claimant obtained medical treatment for that injury on June 12, 2012, Claimant was diagnosed with a lumbar strain from fighting an offender for an extended period of time. *Id* at 70. Claimant reported significant pain at the L4-5 level of his low back with radiculopathy. In his past medical

history, Claimant noted his prior (non-work-related) discectomy; however, he stated that he had no pain until 'last night'. *Id.*

6. On July 9, 2012, Claimant had a lumbar MRI, which revealed post-surgical removal of the disc protrusion at L5-S1, but continued disc protrusion at L4-5. (Ex. K, pp. 71-72)

7. On November 24, 2013, Claimant was seen for an impairment rating for a March 4, 2013 work-related injury to his ankle. (Ex. K, p. 73) Under "Previous Injury History", it notes that Claimant had a severe motor vehicle accident in 1993 which resulted in multiple injuries. Those injuries required surgery on both hands, his back, his left knee, and his cervical spine, leaving him with residual chronic pain in his neck and his back, for which he takes 8 Percocet 10/325 mg/per day as prescribed by his primary care nurse practitioner. *Id.*

8. On September 16, 2013, Claimant was seen for right leg pain/weakness while going down stairs. Claimant also reported low back discomfort over the last several days. It was noted that Claimant has a history of "chronic severe low back pain". (Ex. K, pp. 75-76)

9. On January 3, 2014, Claimant filed an Application for a Division Independent Medical Examination in his work-related ankle claim. The DIME physician was to address the relatedness of his left knee, lower back, and hips to his March 4, 2013 work injury. (Ex. K, p. 80)

10. On May 20, 2014, Claimant was seen at Emergicare for left shoulder pain. He also reported chronic neck and back pain. Claimant reported having been on long-standing narcotic pain medicine and taking 240 Percocet a month, but being down to 90 Percocet (10/325 mg) a month at that time. Dr. Simpson was concerned about radiculitis/radiculopathy either from his prior work related injuries, or from the chronic gradual changes of his preexisting lumbar issues. (Ex. K, pp. 82-83)

11. On May 22, 2014, Claimant had an initial consultation at Colorado Rehabilitation & Occupational Medicine for his March 4, 2013 ankle injury. Claimant reported having achy, stabbing pain in his back since December 2013 (after his discectomy) despite having had no injury at that time. Claimant noted that he had been referred out for an MRI for his low back by another physician. Dr. Brunsworth issued a diagnosis of 'low back pain', along with a diagnosis for Claimant's ankle injury. (Ex. K, pp. 84-87)

12. On June 26, 2014, Claimant was seen in the emergency room for his ankle injury. It is noted in that report that Claimant has chronic back/neck pain. (Ex. K, p. 89)

13. On July 15, 2014, Dr. Douglas Bradley noted a history of chronic back pain, as well as a low back strain in June 2012 resulting in a prescription for Percocet. Physical examination revealed decreased range of motion in Claimant's lumbar spine. (Ex. K, pp. 95-97)

14. On November 4, 2015, Claimant underwent a consultation with Dr. Mark Meyer for chronic pain syndrome and lower back pain. It was noted at this time that Claimant was taking 5mg/325 mg Percocet. (Ex. K, p. 101)

15. On November 19, 2015, Claimant underwent a Psychological Evaluation to determine the appropriateness of undergoing a spinal cord stimulator trial for Claimant's ankle injury. Claimant reported pain in his left ankle, pain in his left leg, and pain in his back, for which he uses Percocet. At that time, Claimant was experiencing minimal to mild depression, mild anxiety, average somatic distress, and high functional distress. (Ex. K, pp. 103-105)

16. On January 12, 2016, Claimant was seen by Dr. Meyer for lumbar radiculopathy, left foot pain, and chronic pain. (Ex. K, p. 107)

17. On January 14, 2016, Claimant had a thoracic MRI, which continued to show disc protrusions at T6-7, T7-8, and T9-10 but also showed disc protrusions at T5-6, T8-9, T11-12, and T12-L1. (Ex. K, p. 109). There was no imaging or analysis of his lumbar spine.

18. On February 23, 2016, Claimant was seen by Dr. Olson for left ankle pain, left leg pain, and low back pain. Claimant's prescription for Percocet was refilled. (Ex. K, pp. 111-112) On March 28, 2016, Claimant was again seen by Dr. Olson for left ankle pain, left leg pain, and low back pain. *Id.*

Claimant's Treatment following his work injury of December 6, 2016

19. Claimant obtained treatment for his work related injury the same day at CCOM. (Ex. C) At that time, Claimant reported taking Percocet and having a "pain patch" prescribed by his primary care physician for chronic back pain. Claimant was diagnosed with a lumbar sprain as a result of his work injury. *Id* at 9.

20. Claimant received conservative treatment for his lumbar sprain, until July 24, 2019 when Dr. Olson discussed the possibility of a lumbar fusion surgery. (Ex. 1, p. 2) On July 24, 2017, Dr. Bess noted that Claimant had a history of prior L4-5 discectomy now with L4-5 and L5-S1 degeneration. (Ex. F, p. 16). Claimant described to Dr. Bess a history of progressively worsening low back pain since December 6, 2016. *Id.* At that time (and during his deposition), Dr. Bess stated that an "option" for Claimant would be a lumbar fusion surgery (as well as a non-work related cervical surgery). (Ex. F, p. 18) Dr. Bess noted that if Claimant wanted to pursue surgery, he recommended that Claimant undergo surgery on his neck first since the recovery time is quicker. *Id.*

Attempts at Diagnosing the Pain Generator

21. Respondent obtained a Utilization Review and an Independent Medical Examination from Dr. Rauzzino. He was denied the recommended lumbar fusion surgery. (Ex. G, H) Both the physician (Richard Lutz, DO) who performed the Utilization Review and Dr. Rauzzino opined that one of the reasons the recommended

surgery was not appropriate was because Claimant's pain generator has not been identified. (Ex. G, p. 21, Ex. H, p. 37).

22. Following Respondent's denial of the lumbar fusion surgery, Claimant has attempted to identify his pain generator. Claimant had a CT myelogram on August 23, 2018 that revealed no acute abnormality; only mild degenerative, spondylotic changes throughout the spine. (Ex. I)

23. On October 5, 2018, the ATP, Dr. Olson, noted that "[t]his will be somewhat difficult decision for the surgeon, as there is no clear-cut spinal stenosis…[t]here does not appear to be an obvious surgical lesion for the lumbar spine." (Ex. C) Dr. Rauzzino agreed, stating that there has not been an acute structural injury to Claimant's spine that would require surgery. The CT myelogram shows chronic degenerative changes and the amount of stenosis is mild to moderate and does not appear to be acute. (Ex. H, pp. 36-37).

Dr. Michael Rauzzino's IME

24. Dr. Michael Rauzzino, MD, of Front Range Spine and Neurosurgery, performed an independent medical evaluation of Claimant for Respondent on October 31, 2017. (Ex. H) As part of that evaluation, Dr. Rauzzino reviewed Claimant's current and prior medical records. Claimant denied a history of chronic low back pain to Dr. Rauzzino, stating that after his discectomy, he had no further back issues. (Ex. H, pp. 30-31). Claimant also told Dr. Rauzzino (and testified at hearing) that he takes Percocet for his foot/ankle pain. *Id*.

25. Claimant described to Dr. Rauzzino that his current complaints were of back and leg pain. *Id* at p. 31. Claimant completed a pain diagram, noting pain throughout his neck, shoulders, and arms as well as in the area of his waist and down both legs. The only area where he did not indicate pain was in the anterior and posterior chest/torso and his mid-back. Dr. Rauzzino explained that this was non-radicular, diffuse pain that would not respond well to surgery.

26. Dr. Rauzzino also opined that he did not believe a fusion surgery would decrease Claimant's pain complaints, or increase his function. He did not believe that it was realistic that Claimant would return to work as a correctional officer after a lumbar fusion surgery. *Id* at p. 37. Dr. Rauzzino explained that there is no good explanation for Claimant's diffuse, axial and bilateral, non-radicular pain. He opined that Claimant's complaints are out of proportion to what one would expect given the radiographic findings. Dr. Rauzzino noted that "[i]t is difficult to imagine what injury would have occurred that would have caused [Claimant] to go from having had none of these complaints to the extent of his current complaints, especially in the absence of acute structural injury on lumbar and cervical studies."

27. Dr. Rauzzino reviewed the Diagnostic Indications and the Pre-operative Surgical Indications outlined in the Medical Treatment Guidelines for spinal fusion. He testified at deposition that those conditions have not been met. One of the

requirements is a psychosocial evaluation. There is no psychosocial evaluation in the record since Claimant's work injury. Based on Claimant's results from the Computerized Outcomes Management Technologies testing performed by Dr. Rauzzino, Dr. Rauzzino's opinion that there may be an underlying psychological issue precluding Claimant's recovery. Due to the noticeable differences between Dr. Rauzzino's and Dr. Castrejon's examinations of Claimant, and the results of Claimant's November 19, 2015 psychological evaluation, he opined that a psychosocial evaluation should be performed prior to another invasive surgery.

28. Claimant has continued to work full duty, without restrictions, as a correctional officer since June 26, 2018. (Exhibit B) Claimant told Dr. Rauzzino that he believes he will be able to return to work as a correctional officer following the lumbar fusion surgery. (Ex. H, p. 31) Dr. Rauzzino testified at hearing that he did not think that was realistic. Dr. Rauzzino is a board certified, Level II accredited, neurosurgeon who has performed hundreds of fusion surgeries. Dr. Rauzzino testified that if Claimant were his patient, he would not recommend the surgery.

Dr. Miguel Castrejon's IME

29. Dr. Miguel Castrejon performed an Independent Medical Evaluation for Claimant on December 6, 2017. (Ex. 5). Dr. Castrejon is Level II accredited, but he is not a spinal surgeon. Dr. Castrejon did not offer an opinion on whether the surgery recommended by Dr. Bess is reasonably necessary or causally related to Claimant's December 6, 2016 work injury. Rather, he recommended additional testing. At his deposition on 12/5/2018, Dr. Castrejon testified that "there is no documentation in the medical file between 2012 and 2016 of any radicular symptoms or documentation of back pain. (Castrejon Depo. p. 9). Dr. Bess also admitted during his deposition that he did not appear to have all of Claimant's prior medical records. (Bess Depo. p. 29)

30. Dr. Castrejon testified that Claimant's back has chronic changes, but that he was asymptomatic prior to this incident. (Castrejon Depo. p. 13) Dr. Castrejon critiqued Dr. Rauzzino for not performing a causation analysis under what he describes as eight factors for determining whether an injury arose out of and in the course of employment. (Ex. 5) He also questioned Dr. Rauzzino's physical examination, noting that he questioned whether they were examining the same patient. (Ex. 5, p. 192)

31. In a follow-up IME report dated January 9, 2018, Dr. Rauzzino stood behind his examination and noted that the signs Dr. Castrejon described of increased reflexes in the lower extremity, wide-based gait, etc. are not related to the lumbar spine but are upper motor neuron signs, not lower motor neuron signs-which one would expect with a lumbar injury. (Ex. H, p. 40).

Deposition of Dr. Robert Shay Bess

32. The referred spinal surgeon, Dr. Bess testified by deposition on September 30, 2019. Dr. Bess testified that he suggested a lumbar fusion, as an option, for Claimant's "degeneration" at L4-5 and L5-S1 with back and leg pain, but noted:

Q …..Explain to me the treatment that you've recommended.

A We talked about it. *I wouldn't say I recommended it.* We talked about what some options could be and then kind of left it up to Jack.

Really, in this scenario, *it's not a medical necessity.* It's purely for quality of life. Patients will be much better without having surgery if they can avoid it. But if nothing is working, *it's an option for him.* (Bess Depo, p. 13) (emphasis added).

33. In Claimant's case, a fusion surgery would 'hopefully' reduce his pain and decrease the amount of opiates he is taking. (Bess Depo. pp. 13, 15) Dr. Bess said the surgery could increase his function but that it was mainly to reduce pain and decrease opiate intake. (Bess Depo. p. 15)

34. Dr. Bess testified that patients that are on preoperative opioids have a high risk of maintaining them postoperatively. (Bess Depo. p. 15) Claimant has been taking Percocet for his chronic neck and back pain for a minimum of 10 years, since at least 2009. (Ex. K, p. 56)

35. Dr. Bess testified (consistent with Dr. Rauzzino) that the optional surgery will not likely eliminate all of Claimant's symptoms. (Bess Depo. p. 22) Dr. Bess also testified that if a patient had pain before and the pain has been progressively getting worse, then any changes between prior MRIs and subsequent CT scans would more likely be progressive in nature. (Bess Depo. p. 23) Dr. Bess further testified that it is possible that the changes shown on Claimant's CT scan are all degenerative and that it is possible the protrusion shown prior to Claimant's work related injury progressed naturally into the herniation shown on the subsequent CT scan (which is consistent with Dr. Rauzzino's testimony). (Bess' Depo. p. 24).

36. When asked if the findings of the CAT scan taken 12/21/2016 showed findings that were acute in nature, Dr. Bess replied:

A. They [CAT scans] don't comment on the chronicity of it. And it's very difficult to comment on chronicity based on a CT scan, because CT scans don't pick up edema or swelling. So only an MRI scan can do that to my knowledge. (Bess Depo, p. 10).

37. When asked if the CAT scan (Ex. 3, pp. 121-123) was "consistent with [Claimant] getting into an altercation and rolling around on the floor with an inmate", Dr. Bess replied:

A. *I can't say that.* It's hard to put those two and two together. I could say that those findings would probably be consistent with pain, but *it's hard for me to say that that altercation would cause those findings on the imaging*. (Bess Depo, p. 9) (emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, the ALJ finds Claimant to be sincere, if not wholly persuasive, in his testimony. Further, the ALJ finds that each medical expert offering opinions has done so in good faith, and with a sincere effort to provide the ALJ valuable expert information. As such, the ALJ will determine these issues on the basis of *persuasiveness*, and not *credibility* per se. As but one example, it appears that neither Dr. Castrejon nor Dr. Bess had a complete or accurate medical history of Claimant's prior back issues – which are numerous. Such lack of information renders their opinions less persuasive.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits, Reasonable and Necessary, Generally

E. Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

Reasonable and Necessary, as Applied

F. Claimant's own IME physician, Dr. Castrejon, did not offer an opinion on whether the surgery recommended by Dr. Bess is reasonably necessary or causally related to Claimant's December 6, 2016 work injury. Rather, he recommended additional testing. Dr. Rauzzino was clear in his opinion that such surgery was not reasonable or necessary, and was not likely to address Claimant's complaints. He felt that such procedure would render it unlikely that Claimant would be able to continue (as he has to date) as a correctional officer following a lumbar fusion. The Utilization Review physician found insufficient evidence of a pain generator to move forward with a lumbar fusion. Finally, the physician referred for the procedure, Dr. Bess himself, was equivocal at best: *"I wouldn't say I recommended it."* "Really, in this scenario, *it's not a medical necessity*…it's an *option* for him" (Finding of Fact #32).

G. Based upon the expert testimony, the ALJ finds that Claimant has not shown, by a preponderance of the evidence, that the lumbar fusion he desires is reasonable and necessary to cure him of the effects of the condition he suffers from.

Medical Benefits, Related to Work Injury, Generally

H. Further, a Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

Related to Work Injury, as Applied

I. Claimant no doubt suffers (and has for quite some time) from diffuse back pain, and radicular symptoms. While a pain generator has yet to be adequately

identified to justify this procedure, the weight of the evidence also fails to show that Claimant's condition was proximately caused by his work injury. He has suffered similar symptoms for years, and this admitted work injury, while traumatic to Claimant, cannot be said to be the cause of Claimant's current symptoms. Here again, the ALJ finds Dr. Rauzzino to be more persuasive that Dr. Castrejon, especially since Dr. Castrejon apparently did not have the pertinent records for his medical history. The evidence shows that it is more likely than not that Claimant, unfortunately, suffers from degenerative conditions, perhaps years in the making. Once again, the testimony of Dr. Bess simply fails to carry the day for Claimant. Dr. Bess could not say that the CAT scan showed an acute injury. Further, while such imaging findings were probably consistent with pain, *"…it's hard for me to say that that altercation would cause those findings on the imaging"* (Finding of Fact #37).

J. Taking all the evidence into account, Claimant has not shown, by a preponderance of the evidence, that the condition he now suffers from is proximately caused by his admitted work injury of 12/6/2016.

ORDER

It is therefore Ordered that:

1. Claimant's request for the lumbar spinal fusion surgery is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

W.C. No. 5-092-665-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF RESPONDENTS.

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted]

Employer,

and

[Redacted],

Insurer/Respondents.

On or about October 1, 2019, Respondents filed their Motion for Summary Judgment. Pursuant to OACRP, Rule 17, a response to Respondents Motion was due within 20-days, or by October 22, 2019. No timely response to Respondents' Motion was filed as of October 22nd, the 20th day. Therefore, the matter was deemed submitted for Summary Judgment on October 23, 2019. The matter is set for hearing on December 3, 2019. The hearing is hereby vacated.

The Claimant is self-represented. Respondents are represented [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer." All other parties shall be referred to by name.

ISSUE FOR SUMMARY JUDGMENT

The issue before the ALJ is whether there is a genuine issue of disputed material fact concerning whether Claimant's claim is closed because he did not file a timely objection to the Final Admission (FAL), mailed to Claimant on August 16, 2019. There is a presumption of receipt because the Postal Authorities did not return the FAL as undeliverable and the ALJ finds that the Claimant received the FAL. An objection was due by September 16, 2019, and a Notice and Proposal and Application for a Division Independent Medical Examination (DIME) was due on the same date in order to challenge the date of maximum medical improvement (MMI) of July 1, 2019, specified in the FAL. Neither items were timely filed.

UNDISPUTED FACTS/FINDINGS

Based on Respondents' Motion for Summary Judgment and the attachments to that Motion, the ALJ makes the following Findings of Fact:

1. The Claimant sustained an admitted injury to his right and left arm on October 21, 2018, when he was involved in a grease fire.

2. The Claimant's authorized treating provider, (ATP), Darla Draper, M.D., placed the Claimant at MMI on July 1, 2019, and assigned a scheduled right upper extremity (RUE) impairment rating of 12%. Respondents filed a FAL consistent with Dr. Draper's rating and MMI date on August 16, 2019 (Exhibit A, attached to Motion).

3. Claimant did not file a timely objection to Respondents' August 16, 2019, FAL, and did not file a timely Notice and Proposal or an Application for a DIME in order to challenge the admitted MMI date, which were due no later than September 16, 2019.

4. On September 4, 2019, the Claimant filed an Application for Hearing endorsing the issues of compensability, reasonable necessary medical treatment, TTD, and PPD (Exhibit B). The ALJ hereby finds that an Application for Hearing cannot substitute to circumvent the objection and DIME process to challenge a FAL.

Ultimate Findings

5. No timely Objection and Notice and Proposal for a DIME having been filed, the Claimant's claim is closed.

6. There is no disputed issue of genuine material fact herein.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment /General

a. Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) (C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act). As found, the Respondents' Motion for Summary Judgment is supported by exhibits.. As further found, there were no timely response to Respondents' Motion for Summary Judgment.

b. Summary judgment is appropriate when the pleadings show there is no genuine disputed issue of material fact and the movant is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegations of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the Motion for Summary judgment and the attached Exhibits establish that the facts in the present case are undisputed in showing that there was no timely objection to the FAL nor was there a timely Notice and Proposal for a DIME to challenge the admitted MMI date,.

c. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue of material fact that would require a hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). The failure of the opposing party to satisfy its burden entitles the moving party to summary judgment. *Gifford v. City of Colorado Springs*, 815 P.2d 1008 (Colo. App. 1991). As found, Claimant did not respond in a timely manner to contend that there are genuine disputed issues of material fact. As further found, there is no genuine issue of disputed, material fact. The failure of the opposing party to satisfy its burden entitles the moving party to summary judgment. *Ballesteros v. Westaff, Inc.*, W.C. No. 4-475-838 [Indus. Claim Appeals Office (ICAO), November 24, 2008].

Summary Judgment/Case Specifics

d. An issue is ripe for hearing when it is "real, immediate, and fit for adjudication." *Olivas–Soto v. Industrial Claim Appeals Office,* 143 P.3d 1178, 1180 (Colo. App. 2006). "The term 'ripe for hearing' refers to a disputed issue concerning which there is no *legal impediment* to immediate adjudication. Thus, the statutory

reference to 'ripeness' recognizes that although a party may be able to present a legitimate factual dispute…the law itself may impose a barrier to adjudication of the dispute pending the completion of a legal or procedural process." *Casias v. City of Longmont,* W.C. No. 4-357-048 (ICAO, August 16, 2004).

e. Disputes related to MMI are governed by § 8-42-107(8), C.R.S., which requires a DIME when either party disputes the MMI determination of an ATP. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo.App.2002). The Colorado Supreme Court has stated that the DIME procedure is "the only way for an injured worker to challenge the treating physician's findings -- including MMI...." *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003). This applies to a challenge to an ATP's MMI determination. A timely objection is required to challenge a scheduled rarting, even if the challenge is based on a higher scheduled rating.

f. An injured worker has thirty days after a FAL is filed to file an objection to the FAL and a Notice and Proposal for a Division Independent Medical Examination. § 8-43-203(2)(b)(II)(A), C.R.S. An uncontested FAL automatically closes a case as to the issues admitted in the FAL. § 8-43-203(2)(b)(II)(A), C.R.S. This statutory scheme is designed to promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a legitimate controversy. *Dyrkopp v. Indus. Claim Appeals Office*, 30 P.3d 821 (Colo. App. 2001); *Cibola Construction v. Indus. Claim Appeals Office*, 971 P.2d 666 (Colo. App. 1998).

g. As found, pursuant to § 8-43-203(2)(b)(II)(A), C.R.S., the Claimant had until September 16, 2019, to object to Respondents' August 16, 2019, FAL and file a Notice and Proposal for a Division Independent Medical Examination. Neither item was timely filed.

h. The issues endorsed in Claimant's Application for Hearing are compensability, reasonable and necessary medical benefits, TTD, and PPD. Claimant did not endorse *Grover* medical benefits. Claimant failed to timely object to Respondents' August 16, 2019, FAL Therefore, the Claimant'

'i. Pursuant to OACRP, Rule 16B, the Respondents' counsel states that he conferred with the Claimant regarding this Motion and the Claimant indicated that he objects to the Motion.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents' Motion for Summary Judgment is hereby granted.

B. The Final Admission of Liability, dated August 16, 2019, closes the Claimant's claim as to the issues admitted therein.

C. The December 3, 2019 hearing is hereby vacated.

DATED this 15th day of November 2019.

_____

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203**.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-059-799-001

ISSUES

I. Whether Claimant is entitled to disfigurement benefits.

II. Whether the fifty percent safety rule violation should apply to Claimant's disfigurement benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On March 1, 2016, Claimant sustained an admitted injury resulting in the loss of his right upper extremity just above the elbow.
2. A hearing was previously held on May 10, 2018 on the issues of whether Claimant's injury was caused by a safety violation pursuant to §8-42-112(1)(b); and, whether the injury was caused by a controlled substance violation pursuant to §8-42-112.5(1). In his Order, entered on June 28, 2018, ALJ Cannici determined that Claimant's injury was caused by a safety rule violation pursuant to §8-42-112(1)(b) allowing Respondents to reduce Claimant's non-medical benefits by fifty percent. ALJ Cannici declined to make a final determination on the controlled substance violation.
3. At the November 11, 2019, hearing, the only evidence put on record, regarding disfigurement, was the evaluation performed by the ALJ in which the ALJ viewed Claimant's disfigurement. Neither party objected to anything that transpired during this evaluation.
4. Claimant's work injury resulted in the amputation of his right upper extremity just above the elbow. The amputation left a stump, just above where his elbow was, with extensive scaring on the stump and an indentation of the stump.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a

fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) ; *People v. M.A*., 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. Section 8-42-108(2)(c) allows for additional compensation in the form of disfigurement benefits when a claimant sustains a disfigurement in the form of "Stumps due to loss or partial loss of limbs."

C. Here, the ALJ finds that claimant's work injury resulted in an amputation of his right upper extremity, just above his right elbow, that left a stump. There is also extensive scaring on the stump and an indentation on the stump. Based upon this, and all other observations made by the ALJ during the disfigurement evaluation, the ALJ awards Claimant $9,678.66 in disfigurement benefits.

D. Section 8-42-112(1)(b) states "that compensation provided for in articles 40 to 47 of this title shall be reduced fifty percent where injury results from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee."

E. Because the statute mentions disfigurement benefits in Section 8-42-112, the Act mandates that a safety rule violation apply to all non-medical benefits including disfigurement benefits.

F. Accordingly, the ALJ finds that the safety rule violation, and the 50% reduction, is applicable to Claimant's disfigurement award.

G. Claimant's disfigurement award of $9,678.66 is reduced by 50%, pursuant to Section 8-42-112(1)(b), to $4,839.33.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay Claimant $4,839.33 in disfigurement benefits.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail,

as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 3, 2019.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove he suffered a compensable injury on November 28, 2018?
- If Claimant proved a compensable injury, the parties stipulated he is entitled to TTD benefits from November 18, 2018 through December 19, 2018.
- If Claimant proved a compensable injury, the parties stipulated the medical treatment he received, including emergency surgery at S. Joseph's Hospital, was reasonably necessary to cure and relieve the effects of the injury.

FINDINGS OF FACT

1. Claimant works for Employer as a diesel mechanic. He developed groin and testicular pain at work on November 28, 2018 while installing a fuel tank on a bus. Installation of a fuel tank is physically demanding and requires lifting and exerting force overhead, bending, stooping, crouching, and twisting into awkward postures.

2. The bus was raised on a lift and Claimant was working underneath it to secure the fuel tank straps. He was pressing upward and stood up from a crouched position when he felt pain in his groin.

3. The pain intensified and became severe over the next 20-30 minutes. Claimant took a break and went into the restroom to examine his groin. His right testicle was very painful and noticeably swollen.

4. Claimant reported the symptoms to his supervisor, who directed him to the St. Joseph Hospital emergency department. An ultrasound showed probable testicular torsion, and Claimant was evaluated by Dr. Justin Green, the on-call urologist. Dr. Green confirmed testicular torsion and recommended immediate surgery. Claimant was taken to the operating room and underwent emergency surgery with Dr. Joseph Dall'Era.

5. On November 30, 2018, Claimant saw Dr. Brenden Matus, Employer's designated occupational medicine provider. Dr. Matus opined the testicular torsion was not work-related and advised Claimant to follow up with his personal physicians outside the workers' compensation system.

6. Claimant missed approximately four weeks from work after the surgery. He returned to work on December 20, 2019.

7. Claimant followed up with Dr. Dall'Era on February 13, 2019. During the appointment, Claimant asked Dr. Dall'Era's opinion regarding causation of the testicular torsion. Dr. Dall'Era opined,

> He asks if this could have been a result of his work. I reviewed etiology of torsion is typically a congenital issue that predisposes twisting of the testicle around its blood supply due to deficiency in the fixation within the scrotal cavity. The inciting event *may* have been heavy straining while lifting heavy objects at work. There are also cases of spontaneous testicular torsion without identifiable event. Surgical findings do not, and would not be expected to support either etiology.

8. Claimant saw Dr. Richard Heppe, a urologist, for an IME at Respondent's request on July 8, 2019. Dr. Heppe noted Claimant had recovered well from the surgery, with no ongoing sequelae or further need for treatment. Regarding causation, Dr. Heppe opined,

> Although this happened at work, I do not feel that this injury is work-related. Testicular torsion can occur at any time, with or without activity. Testicular torsion often affects patients while they are sitting and completely at rest. I do not feel that the fact that [Claimant] was working overhead put him at increased risk for this testicular torsion to occur, and I feel that this could have happened to him at any time.

9. Dr. Heppe testified via deposition on September 6, 2019 to elaborate on the opinions expressed in his IME report. Dr. Heppe explained testicular torsion is generally associated with a congenital anatomic abnormality called a "bell clapper" deformity. In this condition, the testicles are not properly attached to the tissue inside the scrotum, but instead are "free floating." This makes the testicles susceptible to twisting from normal muscle movements during activities of daily living (including sitting down). Dr. Heppe reiterated his opinion Claimant's testicular torsion is not work-related. He explained,

> [T]here is no evidence in the medical literature of any particular physical activity that puts somebody at increased risk for torsion. Testicular torsion . . . can occur at any time. And actually, typically most classically occurs when the patient is sedentary, just sitting on a couch or sitting in class or watching TV. So it can really occur at any time. There is not a particular motion or physical activity that's going to put somebody at increased risk.

10. Dr. Heppe agreed the treatment Claimant received, including the emergency surgery, was reasonably necessary, but opined none of it was work-related.

11. Dr. Heppe's opinions are credible and persuasive.

12. Claimant failed to prove he suffered a compensable injury. The persuasive evidence shows the testicular torsion Claimant experienced on November 28, 2018 reflects the natural progression of his pre-existing congenital condition, without contribution from his work activity.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A pre-existing condition does not disqualify a claim for compensation if a workplace accident or exposure aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The mere fact that an employee experiences symptoms at work does not compel a conclusion that the symptoms were caused by the employment. *Garamella v. Paul's Creekside Grill, Inc.*, W.C. No. 4-519-141 (March 6, 2002). Rather, the claimant must prove the symptoms were proximately caused by their work activity. A claimant need not present expert medical evidence regarding causation, and can rely on any combination of admissible evidence, including competent lay testimony, to prove their case. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

Claimant failed to prove the testicular torsion was caused or aggravated by his work. While the ALJ does not doubt Claimant's description of his work activities on November 28, 2018 and the onset of symptoms, there is no persuasive evidence linking the development of testicular torsion to his work. Dr. Matus opined the condition was not work-related. Dr. Dall'Era opined the condition "may" be related to heavy lifting but is "typically" a congenital issue. The ALJ is most persuaded by Dr. Heppe's analysis and conclusions. The fact that Claimant experienced symptoms at work was probably coincidental. As Dr. Heppe explained, there is no good empirical evidence that testicular torsion is associated with activity. In fact, it most commonly occurs at rest. After reviewing all the evidence, the ALJ concludes Claimant failed to prove the testicular torsion he experienced on November 28, 2018 was causally related to his work activities.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 3, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether Claimant has proven by a preponderance of the evidence that a spinal cord stimulator trial is reasonable and necessary to relieve the effects of her March 25, 2014 industrial injury.

FINDINGS OF FACT

1. On March 25, 2014 Claimant suffered an admitted industrial injury to her left foot. Claimant was walking into work from Employer's parking lot when she stepped on an uneven part of the ground, rolled her left ankle and broke a bone in her left foot.

2. Claimant subsequently underwent four foot surgeries between 2014 and 2017. The surgeries included hardware insertion and removal as well as a bone fusion.

3. Claimant explained that she began to develop numbness in her left foot after the hardware removal procedure in September of 2014. She specifically experienced burning, diffuse pain throughout the left foot, intermittent swelling and a throbbing/burning sensation on the bottom of her foot. The top of Claimant's left foot also became sensitive to touch.

4. Claimant has received medications and injections from numerous medical providers. She has also undergone diagnostic testing for Chronic Regional Pain Syndrome (CRPS).

5. On September 28, 2016 Claimant visited Authorized Treating Physician (ATP) John J, Aschberger M.D. for an examination. Dr. Aschberger noted that Claimant exhibited left foot swelling. However, skin temperature and moisture were symmetrical between the feet. He "doubt[ed] a significant complex regional pain syndrome issue." However, because of her chronic pain complaints and swelling, he ordered a thermogram to test for CRPS.

6. On October 16, 2016 Claimant visited David Reinhart, M.D. for thermogram testing. Dr. Reinhart determined the test results were positive for CRPS. However, he remarked that an additional positive test was necessary to confirm the CRPS diagnosis and recommended lumbar sympathetic blocks.

7. On December 15, 2016 Claimant visited Albert Hattem, M.D. for an examination. Claimant obtained 80-90% relief from a lumbar sympathetic block. However, the relief only lasted for one week and the pain returned to previous levels. The examination was not consistent with CRPS because there was no swelling, skin discoloration or atrophic skin changes.

8. On December 16, 2016 Claimant underwent a left lumbar sympathetic block with John Sacha, M.D. Dr. Sacha concluded that Claimant exhibited a non-diagnostic response with 0% pain relief.

9. On February 9, 2017 Claimant completed QSART testing with George V. Schakarachwili, M.D. A QSART autonomic battery of the left lower extremity revealed a "high probability for the presence of [CRPS]."

10. On September 19, 2017 Claimant underwent an independent medical examination with Kathleen D'Angelo, M.D. After reviewing Claimant's medical records and conducting a physical examination, Dr. D'Angelo determined that Claimant did not qualify for a diagnosis of CRPS pursuant to the Colorado Level II *Medical Treatment Guidelines* (*Guidelines*) because of the lack of objective findings. She specifically noted that Claimant did not exhibit temperature changes, coloring, hair growth, muscular atrophy, edema, allodynia or hyperalgesia. Dr. D'Angelo concluded that Claimant's CRPS symptoms had resolved.

11. On April 25, 2018 Claimant underwent a Division Independent Medical Examination (DIME) with Richard L. Stieg, M.D. Dr. Stieg reviewed Claimant's medical records and conducted a physical examination. He diagnosed Claimant with CRPS-II "secondary to posterior tibial and superficial peroneal neuropathy in association with work-related cuneiform fracture and subsequent surgical procedures." He also diagnosed an adjustment disorder with depressed mood. Dr. Steig concluded that Claimant had not reached Maximum Medical Improvement (MMI). He recommended the following treatment to reach MMI: (1) an EMG of the left lower extremity to rule out blockade of the superficial peroneal and posterior tibial neuropathy from scar tissue; (2) the exhaustion of all pharmacological means of treating Claimant's pain; and 3) the trial of a spinal cord stimulator if the preceding options failed.

12. On June 11, 2018 Claimant visited Joel Cohen, Ph.D. for a psychological evaluation regarding the possible trial of a spinal cord stimulator. Dr. Cohen noted that he would have Claimant complete the Millon BehavioraLMedicine Diagnostic and a pain patient profile. He remarked that Claimant would return in two weeks to review the results of the testing.

13. On July 16, 2018 Claimant returned to Dr. Cohen for an evaluation. Dr. Cohen noted that Dr. Aschberger had referred Claimant to Giancarlo Barolat, M.D. for consideration of a spinal cord stimulator trial. He remarked that a spinal cord stimulator trial was not a curative intervention, but would provide better pain control and improve function on a daily basis. Dr. Cohen commented that he had filed psychological support for the consultation request and would see Claimant after her visit with Dr. Barolat.

14. On August 31, 2018 Dr. D'Angelo conducted a second independent medical examination of Claimant. Dr. D'Angelo performed a physical examination and reviewed additional medical records. She concluded that Claimant remained at MMI. Dr. D'Angelo detailed that her physical examination did not reveal objective findings of CRPS as enumerated in the *Guidelines*. She specifically noted that Claimant did not exhibit

temperature changes, coloring, hair growth, muscular atrophy, edema, allodynia or hyperalgesia. Because of the lack of objective findings, Dr. D'Angelo could not diagnose Claimant with CRPS and recommended additional objective thermography and QSART testing. Dr. D'Angelo determined that Claimant was not an appropriate candidate for a spinal cord stimulator trial because she did not exhibit symptoms of active CRPS. Finally, she recommended an independent psychological evaluation with comprehensive psychometric testing to "determine the presence of a psychological condition complicating the patient's healing from her ankle injury."

15. Claimant subsequently visited Dr. Barolat for consideration of a spinal cord stimulator trial. On September 24, 2018 Dr. Barolat issued a report addressing Dr. D'Angelo's August 31, 2018 independent medical examination. He disagreed with Dr. D'Angelo's determination that Claimant did not suffer from CRPS. Dr. Barolat specifically noted Claimant's positive instrument evaluation or diagnostic testing and his clinical evaluation. He thus concluded that Claimant "is suffering from a chronic, severe, by now most likely permanent neuropathic pain condition with the characteristics of CRPS."

16. On November 27, 2018 Respondents filed a Final Admission of Liability (FAL). Respondents authorized additional medical treatment as recommended by Dr. Stieg.

17. On March 21, 2019 Claimant visited Dr. Barolat for an examination. Dr. Barolat recorded that Claimant's symptoms have remained unchanged over the previous four years. However, he noted that Claimant's symptoms may have become more severe and "extend further into the foot and ankle." Dr. Barolat remarked that Claimant's left foot exhibited discoloration, temperature changes and allodynia. He thus reiterated that Claimant suffers from a "chronic, permanent neuropathic pain condition with the characteristics of CRPS." Moreover, "instrumental evaluation has also confirmed the diagnosis." Dr. Barolat emphasized that Claimant's neuropathic pain condition "could be an indication for the trial of a spinal cord stimulator." He summarized that Claimant has failed her previous treatment and the only remaining modality is a spinal cord stimulator trial.

18. On May 20, 2019 Dr. D'Angelo issued an addendum to her independent medical examination report. After reviewing additional medical records from Drs. Aschberger and Barolat regarding Claimant's CRPS diagnosis and spinal cord stimulator trial, Dr. D'Angelo emphasized the lack of objective findings supporting a CRPS diagnosis. She reiterated that Claimant should undergo repeat testing to confirm the presence of CRPS.

19. On August 22, 2019 the parties conducted the pre-hearing evidentiary deposition of Dr. Steig. Dr. Steig maintained that Claimant suffers from CRPS Type II as a result of her March 25, 2014 industrial injury. He explained that CRPS is a chronic condition characterized by unrelenting pain. Dr. Steig noted that CRPS changes over time and includes symptoms of coldness, swelling and discoloration in the affected limb. Although Dr. Steig explained that the criteria outlined in the *Guidelines* for diagnosing CRPS were overly restrictive, Claimant nonetheless satisfied the criteria.

20. Dr. Steig remarked that Claimant has not exhausted all pharmacological options to treat her CRPS. He specifically identified anticonvulsive drugs such as Lyrica, topical agents and potentially opioid medications. He also commented that a nerve conduction test and possible exploration and decompression of nerves might provide sufficient pain relief. Dr. Steig summarized that, if a pharmacological combination of drugs or nerve compression failed to provide adequate pain relief, a spinal cord stimulator trial would be warranted.

21. Claimant testified at the hearing in this matter. She explained that she has been suffering increased stabbing and burning pain in her left foot. Claimant noted discoloration and temperature changes of her left foot that wax and wane without a pattern. She commented that she has exhausted her pharmacological options because none of the medication combinations have relieved her symptoms "to a level where I feel like I can function normally without pain." Claimant also noted that she underwent a psychological evaluation with Dr. Cohen prior to the recommendation for a spinal cord stimulator trial. Furthermore, Claimant remarked that she had an EMG nerve conduction study in May 2019 as recommended by Dr. Steig. She explained that she wished to proceed with the spinal cord stimulator trial because it was the "only other option" available.

22. Dr. D'Angelo testified at the hearing in this matter. She maintained that Claimant did not exhibit any objective findings of CRPS. Dr. D'Angelo commented that 74% of CRPS patients go into remission and Claimant requires repeat diagnostic testing. She explained that, because Claimant has not undergone repeat testing to confirm the existence of active CRPS, a spinal cord stimulator trial is not reasonable or necessary. Dr. D'Angelo detailed that "I have examined the patient twice. I have reviewed examinations by other physicians. I have reviewed the literature. My concern is that we are going to treat this patient with an invasive procedure for a condition she may or may not have." She summarized that Claimant was not an appropriate candidate for a spinal cord stimulator trial because she did not exhibit symptoms of active CRPS.

23. Claimant has failed to prove that it is more probably true than not that a spinal cord stimulator trial is reasonable and necessary to relieve the effects of her March 25, 2014 industrial injury. Although the medical records reflect considerable debate about whether Claimant currently has CRPS, her diagnosis is not determinative in deciding whether a spinal cord stimulator trial is reasonable and necessary. Instead, the critical inquiry is whether a spinal cord stimulator trial would improve Claimant's function and decrease her pain. A review of the medical records and consideration of the *Guidelines* reflects that Claimant has failed to undergo a comprehensive psychological evaluation, demonstrate that she has exhausted less invasive treatment modalities or establish that a spinal cord stimulator trial would provide functional improvement.

24. Initially, the *Guidelines* specify that the candidate for a spinal cord stimulator trial must undergo a comprehensive psychological evaluation. The procedure is inappropriate if there are any psychological "red flags." The record reveals that Claimant visited psychologist Dr. Cohen for an evaluation. However, the record is devoid of evidence that Claimant underwent a comprehensive evaluation including a standardized

detailed personality inventory with validity scales, a pain inventory with validity measures and a clinical interview with complete review of the medical records. In fact, Dr. D'Angelo recommended an independent psychological evaluation with comprehensive psychometric testing to "determine the presence of a psychological condition complicating the patient's healing from her ankle injury." In the absence of a comprehensive psychological evaluation, a spinal cord stimulator trial is inappropriate.

25. Second, the record demonstrates that Claimant has not exhausted less invasive treatment modalities. Notably, Claimant testified that she has exhausted her pharmacological options because none of the medication combinations have relieved her symptoms "to a level where I feel like I can function normally without pain." However, Dr. Steig acknowledged that Claimant has not exhausted all pharmacological options to treat her CRPS. He specifically identified anticonvulsive drugs such as Lyrica, topical agents and potentially opioid medications. Moreover, Dr. D'Angelo commented that 74% of CRPS patients go into remission and Claimant requires repeat diagnostic testing. She noted the lack of objective findings to confirm a CRPS diagnosis. Dr. D'Angelo explained that, because Claimant has not undergone repeat testing to confirm the existence of active CRPS, a spinal cord stimulator trial is not reasonable or necessary.

26. Finally, Claimant has not demonstrated that a spinal cord stimulator trial would improve her function and decrease her pain. The *Guidelines* specifically mention that, before surgical intervention, "the patient and treating physician should identify functional goals and the likelihood of improving the ability to perform activities of daily living or work activities." In conjunction with the lack of a comprehensive psychological evaluation and the failure to exhaust less invasive treatment modalities, the lack of functional improvement goals reflects that a spinal cord stimulator trial is not reasonable and necessary to relieve the effects of her March 25, 2014 industrial injury. Accordingly, Claimant request for a spinal cord stimulator trial is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. It is appropriate for an ALJ to consider the *Guidelines* in determining whether a certain medical treatment is reasonable and necessary for a claimant's condition. *Deets v. Multimedia Audio Visual*, W.C. No. 4-327-591 (ICAO, Mar. 18, 2005); see *Eldi v. Montgomery Ward*, W.C. No. 3-757-021 (ICAO, Oct. 30, 1998) (noting that the *Guidelines* are a reasonable source for identifying the diagnostic criteria). The *Guidelines* are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). Nevertheless, the *Guidelines* expressly acknowledge that deviation is permissible.

6. The Guidelines provide a list of surgical indications for spinal cord stimulators. Spinal cord stimulators are appropriate for patients who exhibit the following:

> persistent functionally limiting radicular pain greater than axial pain who have failed conservative therapy including active and/or passive therapy, pre-stimulator trial psychiatric evaluation and treatment, medication management, and therapeutic injections.

W.C.R.P. 17 Exhibit 9(H)(1)(c). In specifically addressing CRPS, the *Guidelines* provide that spinal cord stimulators "may be most effective in patients with CRPS I or II who have not achieved relief with oral medications, rehabilitation therapy, or therapeutic nerve blocks, and in whom the pain has persisted for longer than 6 months." W.C.R.P. 17 Exhibit 9(H)(1)(a). Moreover, before surgical intervention, the patient and treating physician should identify functional goals and the likelihood of improving the ability to perform activities of daily living or work duties. W.C.R.P. 17 Exhibit 9(H).

7. Prior to a stimulator trial a candidate must undergo a "comprehensive psychiatric or psychological evaluation." The evaluation should include the following:

> a standardized detailed personality inventory with validity scales (e.g., MMPI-2, MMPI-2-RF, or PAI); pain inventory with validity measures (e.g., BHI 2, MBMD); clinical interview and complete review of the medical records. The psychologist or psychiatrist performing these evaluations should not be an employee of the physician performing the implantation. This evaluation must be completed, with favorable findings, before the screening trial is scheduled.

W.C.R.P. 17 Exhibit 9(H)((1)(c)(ii). Moreover, neurostimulation is inappropriate unless there are no psychiatric "red flags," the patient understands the risks and benefits of the procedure, the patient has demonstrated a history of adherence to prescribed treatments and all reasonable surgical and non-surgical treatment has been exhausted. W.C.R.P. 17 Exhibit 9(H)(1)(c)(ii).

8. The Guidelines provide that "[i]t is particularly important that patients meet all of the indications before a permanent neurostimulator is placed because several studies have shown that workers' compensation patients are less likely to gain significant relief than other patients." W.C.R.P. 17 Exhibit 9(H)(1)(a). A trial is considered successful if the patient experiences a 50% decrease in radicular or CRPS pain and "demonstrates objective functional gains or decreased utilization of pain medications." Functional improvement includes: "standing, walking, positional tolerance, upper extremity activities, increased social participation, or decreased medication use." W.C.R.P. 17 Exhibit 9(H)(1)(c)(iii).

9. As found, Claimant has failed to prove by a preponderance of the evidence that a spinal cord stimulator trial is reasonable and necessary to relieve the effects of her March 25, 2014 industrial injury. Although the medical records reflect considerable debate about whether Claimant currently has CRPS, her diagnosis is not determinative in deciding whether a spinal cord stimulator trial is reasonable and necessary. Instead, the critical inquiry is whether a spinal cord stimulator trial would improve Claimant's function and decrease her pain. A review of the medical records and consideration of the *Guidelines* reflects that Claimant has failed to undergo a comprehensive psychological evaluation, demonstrate that she has exhausted less invasive treatment modalities or establish that a spinal cord stimulator trial would provide functional improvement.

10. As found, initially, the *Guidelines* specify that the candidate for a spinal cord stimulator trial must undergo a comprehensive psychological evaluation. The procedure is inappropriate if there are any psychological "red flags." The record reveals that Claimant visited psychologist Dr. Cohen for an evaluation. However, the record is devoid of evidence that Claimant underwent a comprehensive evaluation including a standardized detailed personality inventory with validity scales, a pain inventory with validity measures and a clinical interview with complete review of the medical records. In fact, Dr. D'Angelo recommended an independent psychological evaluation with comprehensive psychometric testing to "determine the presence of a psychological

condition complicating the patient's healing from her ankle injury." In the absence of a comprehensive psychological evaluation, a spinal cord stimulator trial is inappropriate.

11. As found, second, the record demonstrates that Claimant has not exhausted less invasive treatment modalities. Notably, Claimant testified that she has exhausted her pharmacological options because none of the medication combinations have relieved her symptoms "to a level where I feel like I can function normally without pain." However, Dr. Steig acknowledged that Claimant has not exhausted all pharmacological options to treat her CRPS. He specifically identified anticonvulsive drugs such as Lyrica, topical agents and potentially opioid medications. Moreover, Dr. D'Angelo commented that 74% of CRPS patients go into remission and Claimant requires repeat diagnostic testing. She noted the lack of objective findings to confirm a CRPS diagnosis. Dr. D'Angelo explained that, because Claimant has not undergone repeat testing to confirm the existence of active CRPS, a spinal cord stimulator trial is not reasonable or necessary.

12. As found, finally, Claimant has not demonstrated that a spinal cord stimulator trial would improve her function and decrease her pain. The *Guidelines* specifically mention that, before surgical intervention, "the patient and treating physician should identify functional goals and the likelihood of improving the ability to perform activities of daily living or work activities." In conjunction with the lack of a comprehensive psychological evaluation and the failure to exhaust less invasive treatment modalities, the lack of functional improvement goals reflects that a spinal cord stimulator trial is not reasonable and necessary to relieve the effects of her March 25, 2014 industrial injury. Accordingly, Claimant request for a spinal cord stimulator trial is denied and dismissed.

ORDER

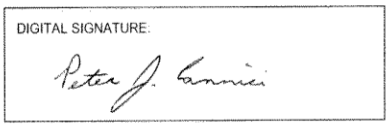
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a spinal cord stimulator trial is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 3, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

I. Whether Respondent overcame Dr. Linda Mitchell's DIME opinion on permanent impairment by clear and convincing evidence.

FINDINGS OF FACT

1. Claimant is a 57-year-old woman who is employed by Employer as a Clicklist Supervisor.

2. On May 25, 2018, Claimant sustained an admitted industrial injury when a pallet jack struck Claimant from behind and knocked her to the ground. Immediately following the work injury Claimant presented to authorized provider Concentra. Claimant reported falling and hitting her head with no loss of consciousness. She complained of headaches and vomiting. Claimant was sent to the emergency room at St. Anthony Hospital for a CT scan. At St. Anthony Hospital Claimant reported neck pain, headaches, nausea, vomiting and vision changes. CT scans of the head and neck were negative for acute injury. Claimant was diagnosed with a concussion without loss of consciousness and cervical myofascial strain.

3. Claimant returned to St. Anthony Hospital on May 28, 2018 with complaints of ongoing headaches. She denied neck pain.

4. On May 29, 2018, Claimant returned to Concentra reporting neck pain. Chelsea Rasis, PA-C diagnosed Claimant with a concussion, contusion of sacrum and neck sprain. Claimant attended follow-up appointments at Concentra on May 31, 2018, June 6, 2018, June 13, 2018, and June 29, 2018. At times Claimant reported improvement of her symptoms and worsening at other times. The medical records on these dates note both "neck range of motion limited secondly to discomfort" and full cervical range of motion. Claimant's course of treatment included medication and physical therapy.

5. On June 29, 2018, physical therapy records note Claimant's cervical range of motion as 30 degrees of flexion, 30 degrees of extension, 25 degrees of right side bending and 25 degrees of left side bending, and right/left rotation within functional limits. July 6, 2018 physical therapy records note Claimant's cervical range of motion as 30 degrees of extension, 50 degrees of right rotation and 60 degrees of left rotation. July 11, 2018 physical therapy records note cervical range of motion of 30 degrees extension, 48 degrees right rotation, and 52 degrees left rotation.

6. On July 27, 2018, a Concentra medical evaluation record notes cervical range of motion of 45 degrees flexion, 60 degrees right rotation, and 45 degrees left rotation.

7. Concentra records dated July 5, 2018, July 18, 2018, July 20, 2018, August 10, 2018, August 15, 2018, August 29, 2018, September 12, 2018 and September 27, 2018 note painful cervical range of motion with no specific measurements included. At the August 15, 2018 evaluation, Claimant reported experiencing increased headaches with new stresses at work and in her personal life.

8. Claimant underwent a neuropsychological consultation on September 5, 2018 with Kevin Reilly, Psy.D. Claimant reported her primary symptoms were headaches at the base of her skull and forgetfulness. Claimant reported some personal trauma and increased stress due to recent losses. Dr. Reilly opined that the evaluation was indicative of intact neurocognitive capacities. He noted that continuing cognitive symptoms related to a concussion were unlikely. His assessment included Somatic Symptom Disorder. Dr. Reilly concluded Claimant had made an "excellent recovery" from her concussion and that her ongoing headache symptoms could be due to recent psychosocial stressors that may be magnifying her pain experience. Behavioral medicine treatment was recommended.

9. At the request of Respondent, Claimant attended a neuropsychiatry Independent Medical Examination ("IME") with Hal Wortzel, M.D. on October 17, 2018. Claimant reported some ongoing "neck tension" and a constant ongoing dull headache that intensified when under stress. Claimant further reported that she had been appreciating decreased frequency and intensity of headaches until she started getting busy at work and encountered some personal losses. Dr. Wortzel opined Claimant sustained a concussion in the work-related accident, underwent the anticipated course of recovery typical for a mild traumatic brain injury, and stated it was "highly unlikely" that the concussion represented a significant contribution to her current neuropsychiatric status or functional abilities. Dr. Wortzel noted that a few months out from the work injury, Claimant experienced a "resurgence of symptoms." He further noted that documentation from August 15, 2018 described Claimant's worsening headaches in the setting of various psychosocial stressors. Dr. Wortzel stated that Claimant's history at the IME was generally consistent with the records and suggested increased symptoms in the context of psychosocial stressors, including a couple of significant losses. He opined Claimant was at maximum medical improvement ("MMI") without permanent neuropsychiatric impairment and did not require maintenance care.

10. On October 4, 2018, Claimant attended an IME with Mark Paz, M.D. at the request of Respondent. Claimant reported that her current symptoms included headaches and left-sided neck pain. On physical examination, Dr. Paz noted full active range of motion in three planes of the cervical spine "on gross inspection." Dr. Paz diagnosed Claimant with work-related concussion without loss of consciousness, left leg contusion, posttraumatic headache and cervical myofascial pain. He opined Claimant reached MMI as of the date of his IME and assigned 5% whole person impairment for post-concussive headache under Table 1 page 109 of the AMA Guides.

11. On return to Dr. Theodore Villavicencio at Concentra on November 1, 2016, Claimant reported minimal headaches and resolving cognitive symptoms. Examination revealed painful range of motion and tenderness in the cervical spine.

12. On November 26, 2018, Dr. Villavicencio placed Claimant at MMI with no permanent impairment, noting Claimant's headaches were resolving. On examination of the cervical spine, Dr. Villavicencio noted full and painless cervical range of motion. Specific cervical range of motion measurements were not included in his report.

13. On May 16, 2019, Linda Mitchell, M.D. performed a DIME evaluation of Claimant. Claimant reported 6/10 headaches occurring several times per week. On examination, Dr. Mitchell noted tenderness in the suboccipital regions bilaterally reproducing headache with no tenderness over the greater occipital nerves. Dr. Mitchell measured cervical range of motion using the two inclinometer method and noted the following measurements: 40 degrees flexion, 30 degrees extension, 20 degrees right lateral flexion 15 degrees left lateral flexion, 60 degrees right rotation and 70 degrees left rotation. Under the Section in her DIME Report titled "Pertinent Issues from Applicable Records," Dr. Mitchell lists the dates of each medical record she reviewed along with notes regarding each record. Per the list, Dr. Mitchell reviewed, *inter alia*, Concentra and St. Anthony Hospital records, physical therapy records, and the reports of Drs. Reilly, Wortzel, and Paz. Regarding the November 26, 2018 evaluation at which Dr. Villavicencio placed Claimant at MMI, Dr. Mitchell specifically noted Dr. Villavicencio found full cervical range of motion.

14. Dr. Mitchell diagnoses Claimant with a mild traumatic brain injury, cervical strain, headaches of unclear etiology and psychological factors affecting a general medical condition. She agreed with Dr. Villavicencio that Claimant reached MMI as of November 26, 2018. Dr. Mitchell assigned 16% whole person impairment under the AMA Guides, consisting of 4% whole person impairment for cervical strain under Table 53(II)(B) and 12% whole person impairment for the loss of cervical range of motion. She specifically stated she found no other ratable conditions. In explaining her impairment rating, Dr. Mitchell stated,

> [Claimant's] only complaint at this time is of throbbing, suboccipital headaches. She has a history of poorly controlled hypertension, which leads me to believe the headaches may be due to her high blood pressure, at least in part. She also has documented cervical tightness and tenderness, and so I have given her an impairment rating of the cervical spine.

15. At the request of Respondent, Dr. McCranie performed an IME on September 3, 2019. Dr. McCranie performed a medical records review and physically examined Claimant. Claimant reported headaches in the occipital area along with neck pain at the base of her head. Claimant reported that her headaches and neck pain were improved by November of 2018, but increased again in December 2018 or January 2019, which Claimant associated with increased stress. A physical examination was positive for

tenderness in the bilateral suboccipital musculature, left cervical paraspinal and left upper trapezius muscle. Cervical range of motion was 60 degrees of flexion, 60 degrees of extension, 45 degrees of right and left lateral flexion, and 80 degrees of left and right rotation. Dr. McCranie's impression was history of concussion without loss of consciousness, and headaches, tension type with associated cervical strain.

16. Dr. McCranie agreed with Dr. Mitchell that Claimant reached MMI as of November 26, 2018, but disagreed with Dr. Mitchell's assessment of permanent impairment. Dr. McCranie felt Claimant should be not rated for both headaches and neck pain as the two symptoms were linked with continuing symptomatology in the same location. Accordingly, Dr. McCranie opined that any examiner would need to choose to rate either the cervical spine or the headaches. She noted Dr. Paz assigned an impairment for Claimant's headaches, which she agreed with as Claimant's headaches were the prominent focus of her treatment. Notwithstanding the foregoing, Dr. McCranie did not feel it was error, in and of itself, to rate the cervical spine. However, she opined that Dr. Mitchell erred in not taking into consideration the previous normal range of motion measurements as outlined by both Dr. Paz and Dr. Villavicencio. Dr. McCranie noted that Claimant reported increased neck stiffness around January 2019 related to personal stressors. Accordingly, she opined that Dr. Mitchell's range of motion findings were erroneous as they were inconsistent with the medical records and unrelated to the work injury. Dr. McCranie noted that Claimant's cervical range of motion at the time of her IME was near normal with only mild decreased cervical extension. She opined that, if she were to assign permanent impairment for the cervical spine, Claimant would receive 4% under Table 53 for spinal disorders and 1% for loss of range of motion, for a total 5% whole person impairment. Accordingly, Dr. McCranie opined that Claimant's whole person impairment is 5% whether she was rated for the headaches or for the cervical spine.

17. Dr. McCranie testified by pre-hearing deposition on October 9, 2019 as a Level II accredited expert in physical medicine and rehabilitation. Dr. McCranie testified consistent with her IME report. Dr. McCranie explained that Claimant sustained a soft-tissue cervical strain as a result of the work injury, which would typically heal within the first three months with continued healing in three to six months. She opined that the medical records show Claimant's cervical strain was healing over time, referencing the range of motion findings in the physical therapy records and findings of full range of motion by Dr. Paz in October 2018 and Dr. Villavicencio in November 2018 when placed at MMI. Dr. McCranie testified that, after being placed at MMI, Claimant reported increased symptoms related to increased stress. However, she testified that this type of pain could be caused by a variety of events other than a traumatic injury, such as poor positioning, muscle tension from anxiety or stress, or body habitus.

18. With regard to Dr. Mitchell's impairment rating, Dr. McCranie testified she felt it was appropriate to do an impairment rating for either the head or neck, but not both. Dr. McCranie testified that if a rating were assigned for the cervical spine, it was important to consider how the range of motion progressed over the course of Claimant's treatment, as a worsening of Claimant's condition or worsening of range of motion

would not be attributable to the work injury. Dr. McCranie opined that Dr. Mitchell erred by failing to compare her range of motion measurements to previous range of motion from other providers. Dr. McCranie testified that Dr. Mitchell did not err in using Table 53(II)(B). She further testified that Dr. Mitchell's measurements were not inconsistent or invalid, but they were significantly different from the measurements of other evaluators. Specifically, Dr. McCranie opined that Dr. Mitchell's range of motion measurements were similar to Claimant's range of motion when she was initially injured. Which Dr. McCranie stated is inconsistent with the medical records which document improved range of motion leading up to being placed at MMI.

19. Dr. McCranie testified that if there is a significant discrepancy, the DIME examiner should comment on the comparison and provide a rationale for the discrepancy in findings. Dr. McCranie opined that Dr. Mitchell did not do this in her report and did not otherwise consider the cause of the decreased range of motion between MMI and the DIME evaluation, which Dr. McCranie testified was an error. Dr. McCranie further opined that the range of motion measurements documented by Dr. Mitchell did not make sense based on Claimant's history and documentation in the medical records. Dr. McCranie testified that Dr. Mitchell's range of motion measurements could have been the result of Claimant having a bad day or failing to give full effort. She testified that, as a DIME examiner, they are trained that if someone is having a bad day, those measurements should not be used. Dr. McCranie further testified that Claimant should have either been brought back on a different day or Dr. Mitchell could have adopted the findings of other providers.

20. Claimant credibly testified at hearing that she had no issues with her head or neck prior to the work injury. Claimant further testified that, when placed at MMI, she was still experiencing headaches and neck symptoms, which have continued. She stated the frequency of her headaches did increase during periods of stress, but that she could not definitively attribute stress as the cause of her headaches.

21. The ALJ finds Dr. Mitchell's DIME opinion more credible and persuasive than the opinions of Drs. McCranie, Villavicencio and Paz.

22. Respondent failed to prove it is highly probable Dr. Mitchell's DIME opinion on permanent impairment is incorrect.

23. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of

proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does

not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

As found, Respondent failed to overcome Dr. Mitchell's DIME opinion on permanent impairment by clear and convincing evidence. Respondent contends Dr. Mitchell erred by failing to consider or comment on the differences between her cervical range of motion measurements and those of prior providers and examiners. Dr. Mitchell's DIME report indicates she conducted an extensive review of the medical records and was aware of the cervical range of motion findings noted throughout Claimant's course of treatment and when placed at MMI. Dr. Mitchell specifically explained that she assessed permanent impairment for Claimant's cervical condition because of the documented cervical tightness and tenderness. Dr. McCranie testified there was no error in using Table 53(II)(B) to rate a cervical condition and acknowledged Dr. Mitchell's range of motion measurements met the validity criteria. There is no indication Dr. Mitchell's measurements were invalid such that she should have required Claimant to return for additional measurements or chosen to use the prior measurements of another examiner. The ALJ is not persuaded that, based on the totality of the evidence, a failure in these specific circumstances to further elucidate on differences in range of motion measurements constitutes error rendering Dr. Mitchell's DIME opinion highly probably incorrect. To the extent Dr. McCranie and other examiners and providers assessed different impairment ratings, this represents a mere difference of opinion which does not rise to the level of clear and convincing evidence.

ORDER

1. Claimant failed to overcome Dr. Mitchell's DIME opinion by clear and convincing evidence. In accordance with Dr. Mitchell's assessment, Claimant's is assigned a 16% whole person impairment rating.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 4, 2019

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Respondents have established that Claimant's injury was caused by Claimant's willful failure to obey a reasonable safety rule and whether Respondents are therefore entitled to a fifty percent reduction in Claimant's temporary total disability benefits pursuant to § 8-42-112(1)(b), C.R.S.

FINDINGS OF FACT

1. Claimant is a 34-year old male and is employed by Employer in the position of Senior Scale.

2. Claimant was initially hired by Employer in October of 2018 for the position Drive Cattle Inside, working the second shift. This job was inside and entailed standing by the slaughter line where cattle are in a single file line. Claimant was required to prod the cattle to keep walking in the line if they froze or stopped. Claimant testified that he used rattle paddles frequently and shook the paddles to make noise to get the animals moving. Claimant did not work in an animal pen or outside in this role. *See* Exhibits 1, F

3. In January of 2019, Claimant was promoted/transferred to the position of Senior Scale, working the third shift. *See* Exhibits 1, F

4. Claimant's job duties in Senior Scale include weighing trucks in and out at Employer's facility. Claimant weighs trucks full of cattle when they arrived, gets information from the truck driver on gender/type, directs the driver to a specific chute to unload the cattle, and then weighs the trucks out on departure to figure out the weight of the cattle dropped off. Claimant testified that this position was a promotion and was a position mainly involving paperwork. Claimant testified that they receive approximately 1,000 cows per day and that he constantly moves trucks full of cattle in and out.

5. On July 15, 2019, Claimant was working his Senior Scale position. Claimant testified that a truck driver didn't wait for instructions and dumped his truckload of cows on top of other cows. Claimant testified that they were urgently called to un-mix the cows to avoid stopping slaughter production.

6. Claimant testified that he went outside to the pens to help. Claimant testified that initially he was helping open and shut gates as the cows were being un-mixed and that he was taking direction from a handler and from co-worker Jeremy K_____. Claimant testified that he was not aware whether any handling aids were available. Claimant testified that they had almost all the cattle un-mixed except for one last cow. Claimant testified that he was told to wave his hands and push the cow on the

head to get it to move and that he did so. The cow charged Claimant, knocked him to the ground, and Claimant sustained injuries.

7. Video of the incident was entered into evidence. The video initially showed three cows in one pen. Claimant is in the pen holding onto a gate, opening and closing the gate as he and two other workers try to sort the cattle. Two of the three cows moved into different pens and one cow was left. One co-worker attempted to wave at the remaining cow to get it to move and was unsuccessful. Claimant approached the cow head on, and Claimant pushed the cow on the head while pointing and waving to the pen they wanted the cow to go to. Claimant contacted the cow's head area approximately five times while waving and pointing. Claimant then turned his back and walked away from the cow. Claimant re-approached the cow within 10 seconds and while walking toward the cow head on, the cow lowered its head and charged Claimant, causing Claimant to fall and sustain injury. Any audio from inside the pen and/or between the workers is not on the video. *See* Exhibit H.

8. Saker M_____ was one of the two other workers in the pen with Claimant. Mr. M_____ filled out a witness statement. Mr. M_____ indicated that he was helping Claimant sort out cattle from pen 22 after a trucker unloaded cattle without permission causing two different lots to get mixed. Mr. M_____ stated that they got most of the cattle sorted out but struggled with one steer that would not go to the pen they wanted it to go. Mr. M_____ stated that Claimant walked up to the steer, slapped the animal on the head two or three times as he said "come on mother fucker come and get me" and that the steer did not move at all until Claimant turned his back on the animal. Mr. M_____ stated that the steer then rammed Claimant from behind and lifted Claimant about three feet off the ground bouncing him off a gate that Mr. M_____ was holding. *See* Exhibits 1, G.

9. Jeremy K_____ was the other worker in the pen with Claimant and he also filled out a witness statement. Mr. K_____ indicated that on July 15, 2019 while sorting cattle, he directed Claimant to contact a cow on and around the cow's head in order to get it to move from a pen. Mr. K_____ indicated there was no certification or courses to make someone qualified for the task of cattle sorting while the cattle are mixed in the pens. Mr. K_____ stated that he verbally directed Claimant to contact the cow in pen 22 when the cow was not moving where it should have and was not responding to handlers. Mr. K_____ stated that he was a humane handling certified union worker and gave Claimant direction to contact the cow and that Claimant was not a union worker but was instructed to perform a union worker task. Mr. K_____ stated that he instructed Claimant to use his open hand to contact the cow on its head and push it into pen 20 from pen 22. Mr. K_____ stated that Claimant was a scale operator and is not a cattle pusher or cattle pen worker and that Claimant was not certified in cattle sorting. *See* Exhibit 2.

10. On July 15, 2019, Claimant filled out a Report of Employee Incident form indicating that he had been run over by a cow in pen 22 while sorting cattle that a driver had mixed. Claimant indicated pain in his right leg at a severity of 9/10. An initial nurse note taken provides a statement from Claimant that cattle had been dropped into the

wrong pen and that the cow involved was particularly aggressive and that other coworkers had been unable to move the cow successfully when he attempted to guide the cattle to the correct area and the cow charged. Claimant was referred by Employer's occupational health nurse to UC Health Emergency and Surgery. *See* Exhibit A.

11. On July 15, 2019 at UC Health Emergency Department, Claimant underwent x-rays. The clinical impression was closed fracture of the right ankle and closed fracture of the proximal end of the right fibula. Claimant was provided pain medication, a splint, crutches, and was recommended to follow up with orthopedics on an outpatient basis. *See* Exhibits B, C.

12. On July 16, 2019, Cathy Smith, M.D. evaluated Claimant. Claimant reported a breakdown in the sorting process and that cattle were mixed together at work. Claimant reported that he had to physically get into a corral to sort cattle and that during the process he was charged by a steer, lifted off his feet, and thrown to the ground. Claimant reported that his right leg was then stepped on by the steer. Dr. Smith recommended continued ice, elevation, crutches, splint usage, and medications. Dr. Smith recommended immediate orthopedic evaluation to discuss possible surgical intervention. *See* Exhibit D.

13. On July 18, 2019, Claimant underwent an open reduction and internal fixation of the right bimalleolar ankle fracture with closed reduction and fixation of syndesmotic ligament rupture. The surgery was performed by Robert Baer, M.D. *See* Exhibit D.

14. Respondents admitted liability including payment of temporary total disability benefits.

15. On August 21, 2019, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation based upon an allegation that Claimant committed a violation of safety rule and that he inhumanely handled the cow thereby causing the cow to react. Respondents seek to reduce Claimant's temporary benefits by fifty percent.

16. On August 27, 2019, Claimant filed an objection to the Petition.

17. Employer has adopted reasonable safety rules for its employees and requires its employees to undergo certain training sessions, depending on the job they are hired for.

18. In October of 2018, when he was initially hired, Claimant received a copy of Employer's employee handbook. *See* Exhibits 1, F.

19. Claimant was also required to undergo various training sessions while employed. Claimant's transcript from training indicates he completed courses in stunning in pens, security knocker, and various other general and food safety related sessions. *See* Exhibits 1, F.

20. Exhibit I, entered into evidence, shows completed training sessions for a different employee who is also employed by Employer. This transcript shows completion of courses including stunning in pens, security knockers, proper handling and movement of cattle, animal handling, humane stunning practices for cattle, unloading and receiving cattle at processing, and various other general and food safety related sessions. *See* Exhibit I.

21. Employer has a standard operating procedure titled Humane Handling Violations- Disciplinary Action Guidance. The procedure was in the category of animal handling with the purpose to ensure that disciplinary action for violation of animal handling was implemented fairly, consistently, and appropriate for the violation. Employer's policy indicates that animals are to be treated humanely and that for any disciplinary action to be taken against an employee an investigation must be completed within 48 hours of the incident and must conclude that a violation of animal handling rules or procedures occurred and that the employee received appropriate training prior to the incident in question. The policy continues to state that the investigation must conclude that the employee committing the violation was aware of should have been aware that his actions were a violation of animal handling rules, procedures, or policies. Employer's policy indicates that for disciplinary action to be taken due to a violation of animal handling policies, the employee must have been trained and that all violations will result in disciplinary action up to and including termination. An egregious violation includes kicking, beating, or hitting an animal and the disciplinary action for an egregious action is listed as termination. *See* Exhibits 1, 5, F.

22. The Humane Handling Violations-Disciplinary Action Guidance standard operating procedure also indicates that each employee shall receive training covering the requirements of humane handling during new hire orientation with refresher training conducted at least annually. Claimant testified credibly that he never received this disciplinary action guidance procedure and that he was not trained on humane handling. *See* Exhibits 1, 5, F.

23. Employer also had a handout titled handling aids with pictures of plastic bags, rattle paddles, and electric prods. The handout indicates that handling aids should never be applied to sensitive areas of an animal such as the head, udder, genitals, or anus. Claimant testified credibly that he did not receive this handout during his training. *See* Exhibits 1, 5, F.

24. A document titled Chapter 2, Recommended Animal Handling Guidelines was also presented by Employer at hearing. This document indicates correct positions for handlers to move livestock. Claimant testified credibly that he did not receive this document during his training. *See* Exhibits 1, 5, F.

25. Neil T_____, a human resources manager for Employer, testified at hearing. Mr. T_____ indicated that all employees who receive and initial that they have received an employee handbook are expected to read the handbook and know the contents and requirements. Mr. T_____ testified that everyone who is hired undergoes standard training and then, based on the position they are hired for, would

potentially undergo additional training that can include humane animal handling. Mr. T_____ testified that both jobs Claimant performed, Drive Cattle Inside and Senior Scale, required humane animal handling training.

26. Mr. T_____ testified that Employer uses computer based training where an employee will watch a video and then have to answer questions with their remote. Mr. T_____ testified that the handling aids handout was given during the initial training and that the recommended animal handling guidelines are also covered during initial training. Mr. T_____ testified that Claimant's stunner course and knocker course start with and cover humane handling. Mr. T_____ testified that Employer enforces policies and has previously terminated and demoted workers who have violated the rules. Mr. T_____ testified that Employer has a safety interest in the rules because animals can be irritated and dangerous as well as that they do not want the product from the animal to be downgraded or bruised due to improper handling.

27. Mr. T_____ agreed that Claimant's position as Senior Scale would not be routinely expected to handle cattle in a pen. Mr. T_____ also acknowledged that the course on proper handling and movement of cattle was not in Claimant's transcript, but testified that other classes Claimant took discuss handling at the beginning. Mr. T_____ could not confirm whether Claimant received a copy of the handout titled handling aids or the document titled Chapter 2, recommended animal handling guidelines. Mr. T_____ reviewed the video of the injury involving Claimant and testified that it appeared Claimant was in front of the cow and struck the cow at least two times before Claimant was run over by the cow.

28. Mr. K_____ testified at hearing. Mr. K_____ testified that both he and Claimant worked the same shift and that on the date of Claimant's injury one trucker mixed cattle when unloading. Mr. K_____ testified that the trucker unloaded cattle without notifying them, that the cattle were all mixed up, and that they received a radio call to urgently get the cattle un-mixed. Mr. K_____ testified that one cow would not move and that this was not a common situation. Mr. K_____ testified that he told Claimant to tap the cow on the head and to wave at it to get it moving. Mr. K_____ testified that he had no training on un-mixing cows and that they were just doing their best to get them un-mixed as quickly as they could. Mr. K_____ testified that typically he uses a plastic bag to help move animals but that on the day in question it was a priority to un-mix the cows quickly and that they didn't use any handling tools. Mr. K_____ testified that when training is going on for employees, other employees will often answer questions for people using their remotes when they have to the leave the room.

29. Claimant testified at hearing that he never took a course on the proper handling or movement of cattle. Claimant testified that he had no humane handling courses, no courses on un-mixing cattle, and that he did not know what stunner or knocker training even was until litigation in this case. Claimant testified that he has been asked to return to work since the injury and that he has been told he will be fine as far as his job and discipline. Claimant testified that all the animal handling positions with Employer are union positions and that he is not a union worker and is not supposed to be handling animals per union guidelines. Claimant agreed that how he tried to move the cow was a

bad decision in hindsight but testified that he was just doing what he was told and trusted his co-workers. Claimant testified that he pushed the cow on the head and waved his hands as he was instructed but did not strike or beat the cow.

30. Claimant's testimony is found credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Safety Rule

Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either

formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re Alverado,* W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Willful conduct may be proven by circumstantial evidence including evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimant's conduct. *See In re Heien*; W.C. No. 5-059-799-01 (ICAO, Nov. 29, 2018).

Respondents need not establish that an employee had the safety rule in mind and decided to break it. In re Alverado, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* However, willfulness will not be established if the conduct is the result of thoughtlessness or negligence. *In re Bauer*, W.C. No. 4-495-198 (ICAO, Oct. 20, 2003). "Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez*, W.C. No. 4-561-352 (ICAO, Apr. 29, 2004). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc.*, 907 P.2d at 719.

Generally, an employee's violation of a rule to facilitate the accomplishment of the employer's business does not constitute willful misconduct. *Grose v. Rivera Electric*, W.C. No. 4-418-465 (ICAO, Aug. 25, 2000). However, an employee's violation of a rule to make the job easier and speed operations is not a "plausible purpose." *Id.*; *see* 2 *Larson's Workers' Compensation Law*, § 35.04.

Respondents have failed to establish, by a preponderance of the evidence, that they are entitled to take a 50% reduction in Claimant's compensation. Claimant did not willfully fail to obey a reasonable safety rule adopted by Employer. Claimant did not receive sufficient training nor is there a sufficient showing to establish that Claimant was aware of the rules including not touching an animal about the face/head and not approaching an animal head on. Claimant is credible that he was following the direction of a co-worker he trusted who advised him to push the animal on the head and wave at it to get it moving. Mr. K_____ confirmed that he advised Claimant to do so. Further, as shown by Exhibit I, there are additional training sessions specific to the proper handling and movement of cattle, animal handling, humane stunning practices for cattle, and unloading and receiving cattle at processing that Claimant has not completed. The evidence is insufficient to show, more likely than not, that Claimant was aware of the safety rule and deliberately performed forbidden acts.

The lack of discipline imposed by Employer also supports the conclusion that Claimant was unaware of the safety rules. As noted above, Employer has a standard operating procedure regarding discipline for humane handling violations. Employer's own policy requires an investigation be completed within 48 hours of the incident and that for discipline to be imposed, there must be a conclusion that the employee received appropriate training prior to the incident in question. The policy also states that, in order for discipline to be imposed, the investigation must conclude that the employee was aware of or should have been aware that his actions were a violation of animal handling

rules, procedures, or policies. Claimant has not faced any disciplinary action despite Respondents allegations of a safety violation and Employer's own policy indicating that all violations will result in disciplinary action.

The situation at Employer's facility on July 15, 2019 was unusual with mixing of cattle by an impatient truck driver. Claimant was urgently called to the pens where he does not regularly work to help sort the cattle. Claimant, being untrained in this type of process, followed directions of co-workers. Claimant was not aware of the safety rules in place for handling and moving cattle and did not willfully fail to obey the rules or act with deliberate intent. Therefore, a 50% reduction has not been established to be appropriate.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish that Claimant's injury was caused by Claimant's willful failure to obey a reasonable safety rule. Respondents are not entitled to a fifty percent reduction in Claimant's temporary total disability benefits pursuant to § 8-42-112(1)(b), C.R.S.

2. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 4, 2019 /s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the employer on September 11, 2018.

- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received is reasonable and necessary to cure and relieve him from the effects of the work injury.

- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits.

FINDINGS OF FACT

1. The claimant is employed with the employer as a recycling truck driver. The claimant's job duties include driving to customer homes and picking up recycling. This involves lifting recycling bins and dumping them into the recycling containers on the truck. The claimant testified that he is paid $23.00 per hour and works 45 to 50 hours per week.

2. The claimant testified that on September 11, 2018, he was performing his normal job duties collecting recycling. While the claimant was dumping a customer's recycling bin onto the truck, that bin fell into the truck container. The claimant testified that it was necessary to climb up onto the truck to remove the bin. While doing so, the claimant's left leg became stuck in the truck container.

3. The claimant testified that he did not immediately feel pain. However, as he continued to work his shift, he experienced pain, swelling, and discoloration in his left knee. As a result, the claimant placed his weight on his right leg to complete his job duties.

4. The claimant testified that he notified his supervisor of the September 11, 2018 incident approximately four days later. The claimant also testified that paperwork was completed by Mr. A_____ regarding the incident.

5. Mr. A_____, Operations Manager with the employer, testified at hearing. Mr. A_____ testified that the claimant did not report a work injury to him. There were instances in which the claimant reported knee pain, but did not express a specific incident or injury. Mr. A_____ also testified that the claimant continues to be employed with the employer.

6. The claimant's primary care provider is Mountain Family Health Centers. Medical records entered into evidence show that the claimant reported back pain and joint pain on May 14, 2018 when he was seen at Mountain Family Health Centers by Mary Patterson, FNP.

7. Thereafter, on July 16, 2018, the claimant returned to Mountain Family Health Centers and reported to Claire Graff, PA-C that he had bilateral knee pain with a sudden onset four days prior. The claimant reported similar complaints on July 30, 2018, when he was seen by Corrine Johnson, PA-C. At that time, Ms. Johnson opined that the claimant had a "small meniscal tear" on his left knee and administered an injection to the claimant's left knee.

8. Following the September 11, 2018 incident, the claimant again sought treatment at Mountain Family Health Centers. On September 21, 2018, the claimant was seen at that practice by Dr. Sarah Rieves. At that time, the claimant reported that he had left knee pain for four months, with no history of trauma. The claimant also reported that he had increased swelling in his left knee during the prior three weeks. Dr. Rieves opined that the claimant's symptoms could be caused by osteoarthritis or gout. At that time, she made a referral for an orthopedic consultation. On September 21, 2018, the claimant did not mention the mechanism of injury that he described in his testimony at hearing.

9. On September 24, 2018, the claimant was seen by orthopedic surgeon Norman Harris. The claimant told Dr. Harris that he injured his left knee when he was climbing down from a truck, stepped in a hole, and twisted his knee. Dr. Harris noted that the claimant had chronic bilateral knee issues and opined it was due to arthritis in the medial compartment. Dr. Harris also opined that the claimant suffered a new and acute injury to his left knee. Dr. Harris ordered a magnetic resonance image (MRI) of the claimant's left knee.

10. On October 3, 2018, an MRI of the claimant's left knee showed tricompartmental osteoarthritis; Grade IV chondromalacia in the medial compartment; horizontal and radial tears of the medical meniscus; a Grade 3 sprain of the medial collateral ligament; and edema.

11. On October 8, 2018, the claimant returned to Dr. Harris. At that time, Dr. Harris recommended an arthroscopic meniscectomy of the claimant's left knee to address the meniscal tear.

12. On October 16, 2018, Dr. Peter Weingarten reviewed the request for left knee surgery. In his report, Dr. Weingarten opined that the claimant has advanced and significant arthritic changes in his left knee. Dr. Weingarten further opined that the claimant did not sustain a tear to his meniscus on September 11, 2018. Based upon the opinions of Dr. Weingarten, the respondents denied authorization for the left knee surgery.

13. The claimant chose to undergo the recommended left knee surgery as well as a right knee procedure. Specifically, on October 25, 2018, Dr. Harris performed bilateral knee arthroscopy with medial meniscectomy and chondroplasty. These procedures were paid for by the claimant and his personal health insurance. The claimant testified that he underwent the right knee procedure because of increased symptoms in that knee.

14. Following the October 25, 2018 surgeries, the claimant reported to Dr. Harris that he had improvement in his right knee. However, the claimant continued to experience left knee symptoms including pain and swelling. On December 12, 2018, Dr. Harris administered an intra-articular aspiration and steroid injection to the claimant's left knee.

15. Thereafter, on December 26, 2018, Dr. Harris recommended "a Visco supplement" to address the swelling in the claimant's left knee. On December 28, 2018, Dr. Harris administered a Monovisc injection into the claimant's left knee.

16. The claimant returned to Dr. Harris on March 13, 2019 and continued to complain of left knee symptoms. At that time, Dr. Harris recommended that the claimant undergo either a high tibial osteotomy or unicompartmental knee replacement.

17. At the request of the respondents, Dr. Kathy D'Angelo conducted a medical records review and opined regarding the causation of the claimant's left knee condition and symptoms. In her August 22, 2019 report, Dr. D'Angelo opined that the claimant did not sustain an injury at work on September 11, 2018. Dr. D'Angelo noted that the claimant has a history of generative changes to his knee and those changes are not causally related to an acute injury. Dr. D'Angelo specifically noted that the MRI of the claimant's left knee showed a chronic and degenerative tear. She also opined that it is not medically probable that a chronic tear, (which was symptomatic months prior to an alleged work incident), was causally related to the claimant's mechanism of injury. In addition, In addition, Dr. D'Angelo opined that the claimant did not suffer an aggravation of his preexisting left knee osteoarthritis.

18. The ALJ does not find the claimant's testimony to be credible or persuasive. The ALJ credits the medical records and the opinions of Drs. Weingarten and D'Angelo over the contrary opinions of Dr. Harris. The claimant has failed to demonstrate that it is more likely than not that he suffered an injury at work on September 11, 2018. The claimant has also failed to demonstrate that it is more likely than not that his preexisting left knee condition was aggravated or accelerated by an incident at work. The ALJ places weight on the July 30, 2018 medical record in which Ms. Johnson opined that the claimant had a meniscal tear at that time, approximately six weeks prior to September 11, 2018. The ALJ also places weight on the September 21, 2018 medical record in which the claimant made no reference to a work incident or injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

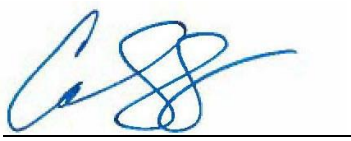
4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered a compensable injury arising out of and in the course and scope of his employment with the employer. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that his preexisting left knee condition was aggravated or accelerated by an incident at work. As found, the medical records and the opinions of Drs. Weingarten and D'Angelo are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits related to a September 11, 2018 incident is denied and dismissed.

Dated this 9th day of December, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant's left hip injury was not caused by her November 13, 2018 work activities.

2. Whether Claimant has established by a preponderance of the evidence that the total left hip arthroplasty recommended by Authorized Treating Physician (ATP) John Schwappach, M.D. is reasonable, necessary and causally related to her November 13, 2018 work activities.

STIPULATIONS

The parties agreed to the following:

1. The issues of Temporary Total Disability (TTD) and Temporary Partial Disability (TPD) are not ripe for adjudication because Claimant has not lost any time from work as a result of her contested Workers' Compensation claim.

2. Claimant earned an Average Weekly Wage (AWW) of $599.44.

FINDINGS OF FACT

1. Employer is an assisted living facility for the elderly. Claimant works for Employer as a Housekeeper. Her job duties involve cleaning residents' rooms, maintaining common areas and bathrooms, restocking the housekeeping closet and removing trash.

2. On November 13, 2018 Claimant was replenishing her housekeeping closet with trash liner boxes. She visited a downstairs closet and loaded boxes onto a laundry cart. After loading the cart, Claimant went up to her floor and unloaded the boxes into her housekeeping closet. While unloading the third box, Claimant twisted and felt a sharp pain in her left hip.

3. Claimant's supervisor Business Office Coordinator Dana Gill testified that Claimant reported her injury on November 13, 2018. Ms. Gill specifically recounted that Claimant reported she was putting away supplies and stocking closets with toilet paper, paper towels, cleaning supplies and trashcan liners when she began to experience left hip pain.

4. On the day of the incident, Claimant received medical instructions over the telephone. Because the recommendations were unsuccessful, Ms. Gill arranged treatment at Concentra Medical Centers.

5. On November 27, 2018 Claimant visited Concentra for an examination. Claimant reported that, while lifting boxes at work on November 13, 2018, she "pulled something on her left leg from hip area down to knee, the pain is constant." An x-ray of the left hip area did not reveal any "significant radiologic findings." Valerie M. Skvarca, PA-C diagnosed Claimant with a left hip strain. She concluded that, in the absence of the November 13, 2018 work incident, it was "51% medically probable that the patient would not have this diagnosis and require treatment." Steve E. Danahey, M.D. determined that Claimant had not reached Maximum Medical Improvement (MMI) but released her to full duty employment.

6. On November 30, 2018 Claimant returned to Concentra for an evaluation. Claimant reported continuing left hip pain that was improving with physical therapy. A physical examination of the left hip revealed full range of motion, no tenderness and normal strength. PA-C Skvarca determined that Claimant had reached MMI and released her from medical care.

7. On December 7, 2018 Claimant again visited Concentra for an examination. Claimant reported mild left hip pain that was generally improving. PA-C Skvarca maintained that Claimant suffered a left hip strain. She reiterated that Claimant had reached MMI and could resume full duty employment.

8. On January 2, 2019 Claimant returned to Concentra for a re-evaluation of her left hip. Claimant reported that she was experiencing shooting pain from the "crease" of her left femur joint down to her knee. She specifically noted worsening symptoms in the left lateral hip, groin, buttock, thigh and knee areas. After performing a physical examination, PA-C Skvarca diagnosed Claimant with a left hip strain and prescribed medications. PA-C Skvarca also recommended an MRI of the left hip and spinal canal. She noted the claim had been re-opened and recommended a follow-up visit in 7-10 days.

9. On January 24, 2019 Claimant underwent a left hip MRI. The MRI revealed a "large region of avascular necrosis in the anterior, central, and superior femoral head measures approximately 34 mm AP by 26 mm transverse. Superior and anterior femoral head subchondral collapse measures up to 3 mm. There is extensive edema throughout the femoral head and neck."

10. On January 30, 2019 Claimant visited Orthopedic Surgeon John Schwappach, M.D. for an examination. Dr. Schwappach noted that Claimant developed the acute onset of left hip pain while at work "doing some twisting and turning." He commented that the left hip MRI revealed a "left femoral head avascular necrosis which appears to be acute or chronic on acute." The MRI also reflected "subchondral collapse of the superior and anterior femoral head," moderate hip effusion, diffuse full-thickness cartilage loss and "chondral thinning of the superior and anterior acetabulum." After conducting a physical examination, Dr. Schwappach recommended a total left hip arthroplasty. Because Claimant did not have hip pain prior to November 13, 2018 and the MRI demonstrated an acute injury, he concluded that Claimant's left hip arthroplasty should be covered under the Workers' Compensation system.

11. On February 4, 2019 Claimant returned to Dr. Schwappach for an evaluation. Dr. Schwappach recounted that Claimant was experiencing shooting pain from her left hip down to her knee that caused walking and weight-bearing difficulties. He remarked that Claimant had failed NSAIDS and physical therapy. Dr. Schwappach summarized that Claimant's avascular necrosis was causing disabling pain and functional disability.

12. On February 12, 2019 Claimant visited Linda Thomas, M.D. for an examination. After reviewing Claimant's medical records and performing a physical examination, Dr. Thomas noted that Claimant's left hip symptoms radiated into her left knee area. She diagnosed Claimant with avascular necrosis of the left hip bone and a left hip strain. Dr. Thomas remarked that Dr. Schwappach had requested authorization for a total left hip replacement.

13. On April 17, 2019 Claimant underwent an independent medical examination with William Ciccone, II, M.D. Dr. Ciccone recounted that in November 2018 Claimant was moving 13-pound boxes. While lifting the third box, Claimant twisted and suffered a burning sensation in her left hip. Dr. Ciccone specified that most of Claimant's pain was located over the anterior and posterior aspects of the hip and radiated into the groin. He reviewed Claimant medical records and conducted a physical examination.

14. Dr. Ciccone concluded that Claimant's left hip injury was not causally related to her November 13, 2018 work activities for Employer. He explained that the mechanism of injury of moving boxes was not associated with hip trauma. Dr. Ciccone detailed that the avascular necrosis observed on the left hip MRI constituted a degenerative, pre-existing condition. He remarked that avascular necrosis is often an idiopathic condition that causes weakening of the humeral head and subsequent collapse. Dr. Ciccone explained that, while Claimant has avascular necrosis with subchondral collapse, she also suffers from degenerative changes including full thickness cartilage loss in the hip. In patients with avascular necrosis the degenerative changes usually occur after the bone collapse has been present for a while. Dr. Ciccone commented that Claimant's level of degenerative disease "denotes a more chronic history of bone deformity." He thus determined that Claimant's work activities did not aggravate or accelerate any underlying disease. Nevertheless, Dr. Ciccone acknowledged that, if Claimant had no previous complaints of left hip pain, "it is possible that the chondral collapse occurred while performing normal work activities." He concluded that Dr. Schwappach's recommendation for a total left hip replacement was appropriate, but the need for the procedure was not causally related to the November 13, 2018 work incident.

15. On April 24, 2019 Respondents filed a General Admission of Liability (GAL). The GAL acknowledged that Claimant was entitled to receive medical benefits for her November 13, 2018 work injury.

16. On May 7, 2019 Claimant returned to PA-C Skvarca for an evaluation. PA-C Skvarca recounted that Claimant had been diagnosed with a left hip strain and acute on chronic avascular necrosis. She noted that, after Claimant underwent an independent medical examination with Dr. Ciccone, Insurer's adjustor informed her that Insurer would

only cover medical benefits for the left hip strain. Insurer's adjuster remarked that the left hip injury was not work-related and the claim should be closed. PA-C Skvarca thus discharged Claimant from care at MMI and released her to full duty employment.

17. On July 22, 2019 Claimant underwent an independent medical examination with John S. Hughes, M.D. Dr. Hughes recounted that on November 13, 2018 Claimant lifted boxes and twisted to place them down. While moving the boxes, Claimant had "sharp, sharp pain in her left lower abdomen and hip." After reviewing Claimant's medical records, Dr. Hughes determined that Claimant did not have any hip problems prior to November 13, 2018. However, Claimant did not sustain an avascular necrosis with collapse of the femoral head on the date of the incident because the condition would have been visible on the November 27, 2018 x-ray.

18. Dr. Hughes agreed with Dr. Ciccone that Claimant described a "relatively low-energy work-related incident that caused onset of her left hip avascular necrosis." However, based on Claimant's pain symptoms associated with the November 13, 2018 work incident, Dr. Hughes reasoned that the event "led to a progressive series of vascular events culminating in avascular necrosis of the left hip." Dr. Hughes thus concluded that Claimant had not reached MMI. He recommended a left hip total arthroplasty.

19. Claimant challenged the MMI determination and sought a Division Independent Medical Examination (DIME). On September 10, 2019 Claimant underwent a DIME with Timothy O. Hall, M.D. Dr. Hall explained that on November 13, 2018 Claimant was lifting boxes weighing about 8-13 pounds from her cart, rotating and putting them down on the floor. He noted that Claimant had not experienced any prior left his symptoms and there were no abnormalities on the November 27, 2018 x-ray. However, Dr. Hall remarked that the only reasonable explanation for Claimant's left hip condition on the MRI involved trauma. He reasoned that Claimant's hip condition developed as a result of her November 13, 2018 work activities. Dr. Hall thus concluded that Claimant's need for a left hip replacement was a consequence of her work injury.

20. Dr. Ciccone testified at the hearing in this matter. He maintained that Claimant's left hip avascular necrosis was not causally related to her November 13, 2018 work activities for Employer. He reasoned that Claimant's left hip MRI revealed the degenerative condition of cartilage loss along the acetabulum with chondral thinning in the socket of the hip. Dr. Ciccone clarified that the acute findings on the left hip MRI referred to the subchondral collapse while the chronic findings pertained to the pre-existing avascular necrosis. Dr. Ciccone testified that it was unlikely Claimant's disease process began on the day of the work event and the collapse occurred within about nine weeks. He further commented that, even in studies involving traumatic hip fractures where there was a clear and complete disruption of the blood supply, there were no changes for three to six months. Therefore, Dr. Ciccone concluded that it was highly unlikely Claimant's November 13, 2018 mechanism of injury caused her avascular necrosis.

21. Respondents have failed to demonstrate that it is more probably true than not that Claimant's left hip injury was not caused by the November 13, 2018 work incident.

Initially, while moving boxes as part of her housekeeping duties for Employer on November 13, 2018, Claimant suffered a sharp pain in her left hip area. PA-C Skvarca diagnosed Claimant with a left hip strain. She concluded that, in the absence of the November 13, 2018 work incident, it was "51% medically probable that the patient would not have this diagnosis and require treatment." A left hip MRI subsequently revealed a large region of avascular necrosis and a femoral head subchondral collapse. ATP Dr. Schwappach commented that Claimant developed the acute onset of left hip symptoms while at work "doing some twisting and turning." Similarly, Dr. Hughes recounted that, while Claimant was moving boxes on November 13, 2018 she suffered "sharp, sharp pain in her left lower abdomen and hip." After reviewing Claimant's medical records, Dr. Hughes determined that Claimant did not have any hip problems prior to November 13, 2018. Finally, Dr. Hall noted that Claimant had not experienced any prior left hip symptoms. He remarked that the only reasonable explanation for Claimant's left hip condition on the MRI involved trauma to the hip. Dr. Hall reasoned that Claimant's hip condition developed as a result of her November 13, 2018 work activities.

22. In contrast, Dr. Ciccone concluded that Claimant's left hip injury was not causally related to her November 13, 2018 work activities for Employer. He explained that the mechanism of injury of moving boxes was not associated with hip trauma. Dr. Ciccone detailed that the avascular necrosis evident on the left hip MRI constituted a degenerative, pre-existing condition. He commented that it was unlikely that Claimant's disease process began on the day of the work event and the collapse occurred within about nine weeks. However, Dr. Ciccone's analysis fails to adequately acknowledge that Claimant's November 13, 2018 work incident aggravated her pre-existing left hip condition and precipitated a cascade of events that caused avascular necrosis. As Dr. Hughes explained, Claimant's November 13, 2018 work incident, "led to a progressive series of vascular events culminating in avascular necrosis of the left hip." The persuasive opinions of multiple medical providers reflect that Claimant's November 13, 2018 work activities aggravated, accelerated or combined with her pre-existing left hip condition to produce a need for medical treatment. Accordingly, Respondents' request to withdraw their GAL is denied and dismissed.

23. Claimant has established that it is more probably true than not that the surgery recommended by ATP Dr. Schwappach, is reasonable, necessary and causally related to her November 13, 2018 industrial injury. Dr. Schwappach recommended a total left hip arthroplasty because Claimant did not suffer hip pain prior to November 13, 2018 and the MRI demonstrated an acute injury. He remarked that Claimant had failed NSAIDS and physical therapy. Dr. Schwappach summarized that Claimant's avascular necrosis was causing disabling pain and functional disability. He concluded that Claimant's left hip arthroplasty should be covered under the Workers' Compensation system. Moreover, Dr. Hughes reasoned that the November 13, 2018 event caused a series of vascular events resulting in avascular necrosis of the left hip. He concluded that Claimant has not reached MMI and recommended a left hip total arthroplasty. Finally, Dr. Ciccone acknowledged that, if Claimant had no previous complaints of left hip pain, "it is possible that the chondral collapse occurred while performing normal work activities." He noted that Dr. Schwappach's recommendation for a total left hip replacement was appropriate, but the need for the procedure was not causally related to the November 13,

2018 work incident. A review of the medical records and the opinions of multiple physicians reflect that a total left hip arthroplasty constitutes a reasonable and necessary procedure designed to treat Claimant's avascular necrosis. Furthermore, Claimant's November 13, 2018 work activities aggravated, accelerated or combined with her pre-existing left hip condition to produce a need for surgery. Accordingly, Claimant's request for a total left hip arthroplasty is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. When the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; see also *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." Specifically, respondents must prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1), C.R.S.

8. As found, Respondents have failed to demonstrate by a preponderance of the evidence that Claimant's left hip injury was not caused by the November 13, 2018 work incident. Initially, while moving boxes as part of her housekeeping duties for Employer on November 13, 2018, Claimant suffered a sharp pain in her left hip area. PA-C Skvarca diagnosed Claimant with a left hip strain. She concluded that, in the absence of the November 13, 2018 work incident, it was "51% medically probable that the patient would not have this diagnosis and require treatment." A left hip MRI subsequently revealed a large region of avascular necrosis and a femoral head subchondral collapse. ATP Dr. Schwappach commented that Claimant developed the acute onset of left hip symptoms while at work "doing some twisting and turning." Similarly, Dr. Hughes recounted that, while Claimant was moving boxes on November 13, 2018 she suffered "sharp, sharp pain in her left lower abdomen and hip." After reviewing Claimant's medical records, Dr. Hughes determined that Claimant did not have any hip problems prior to November 13, 2018. Finally, Dr. Hall noted that Claimant had not experienced any prior left hip symptoms. He remarked that the only reasonable explanation for Claimant's left

hip condition on the MRI involved trauma to the hip. Dr. Hall reasoned that Claimant's hip condition developed as a result of her November 13, 2018 work activities.

9. As found, in contrast, Dr. Ciccone concluded that Claimant's left hip injury was not causally related to her November 13, 2018 work activities for Employer. He explained that the mechanism of injury of moving boxes was not associated with hip trauma. Dr. Ciccone detailed that the avascular necrosis evident on the left hip MRI constituted a degenerative, pre-existing condition. He commented that it was unlikely that Claimant's disease process began on the day of the work event and the collapse occurred within about nine weeks. However, Dr. Ciccone's analysis fails to adequately acknowledge that Claimant's November 13, 2018 work incident aggravated her pre-existing left hip condition and precipitated a cascade of events that caused avascular necrosis. As Dr. Hughes explained, Claimant's November 13, 2018 work incident, "led to a progressive series of vascular events culminating in avascular necrosis of the left hip." The persuasive opinions of multiple medical providers reflect that Claimant's November 13, 2018 work activities aggravated, accelerated or combined with her pre-existing left hip condition to produce a need for medical treatment. Accordingly, Respondents' request to withdraw their GAL is denied and dismissed.

Medical Benefits

10. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

11. As found, Claimant has established by a preponderance of the evidence that the surgery recommended by ATP Dr. Schwappach, is reasonable, necessary and causally related to her November 13, 2018 industrial injury. Dr. Schwappach recommended a total left hip arthroplasty because Claimant did not suffer hip pain prior to November 13, 2018 and the MRI demonstrated an acute injury. He remarked that Claimant had failed NSAIDS and physical therapy. Dr. Schwappach summarized that Claimant's avascular necrosis was causing disabling pain and functional disability. He concluded that Claimant's left hip arthroplasty should be covered under the Workers' Compensation system. Moreover, Dr. Hughes reasoned that the November 13, 2018 event caused a series of vascular events resulting in avascular necrosis of the left hip. He concluded that Claimant has not reached MMI and recommended a left hip total arthroplasty. Finally, Dr. Ciccone acknowledged that, if Claimant had no previous complaints of left hip pain, "it is possible that the chondral collapse occurred while performing normal work activities." He noted that Dr. Schwappach's recommendation for a total left hip replacement was appropriate, but the need for the procedure was not

causally related to the November 13, 2018 work incident. A review of the medical records and the opinions of multiple physicians reflect that a total left hip arthroplasty constitutes a reasonable and necessary procedure designed to treat Claimant's avascular necrosis. Furthermore, Claimant's November 13, 2018 work activities aggravated, accelerated or combined with her pre-existing left hip condition to produce a need for surgery. Accordingly, Claimant's request for a total left hip arthroplasty is granted.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to withdraw their GAL acknowledging Claimant's November 13, 2018 industrial left hip injury is denied and dismissed.

2. Claimant's request for a total left hip arthroplasty is granted.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Respondents proved by a preponderance of the evidence Claimant's indemnity benefits should be reduced by 50% for the willful violation of a safety rule.

FINDINGS OF FACT

1. Claimant worked for Respondents as a truck driver.

2. Claimant sustained an industrial injury on January 5, 2019. Claimant was on the back of a trailer assisting Kyle Wareham in loading sets of stairs onto the trailer. When Claimant attempted to grab a set of falling stairs, he was flung off of the trailer and fell approximately seven feet to the ground. Claimant was not wearing any fall protection gear. As a result of the fall, Claimant sustained injuries to multiple body parts, including a traumatic brain injury, fractured ribs and a punctured lung.

3. Respondents filed a General Admission of Liability (GAL) on February 13, 2019. Respondents took the position Claimant was in violation of a safety rule and reduced his benefits by 50%. Respondents allege Claimant violated Employer's safety rules prohibiting employees from being on the back of a trailer while the trailer is being loaded and requiring employees to wear fall protection gear at heights above four feet.

4. Nick Graczyk, Chief Financial Officer, testified on behalf of Respondents. Mr. Graczyk testified Employer follows Occupational Safety and Health Administration (OSHA) standards, which requires fall protection gear at heights above four feet. He testified Claimant received Employer-provided safety training including OSHA training and a test required by a third party company that runs a site where drivers pick up equipment. Mr. Graczyk stated that the purpose of the training is to ensure the safety of employees and equipment. Mr. Graczyk testified that Employer's policy prohibits employees from being on the back of a trailer while the trailer is being loaded. He stated the policy is not written, but is communicated to employees during training. Mr. Graczyk further testified that Employer enforces safety rules by administering disciplinary actions depending on the severity of the violation. Mr. Graczyk did not reference any specific instances of employees being disciplined for safety rule violations. Mr. Graczyk testified he is located out of state and relies on Mr. Selby to ensure the rules are communicated and enforced. He was not aware of any other employees sustaining injuries of this nature.

5. Lars Selby, Vice President of Operations and Safety, testified on behalf of Respondents. Mr. Selby testified Employer does not have a written policy regarding fall protection, but does follow OSHA and Mine Safety and Health Administration (MSHA) standards. Mr. Selby testified that, per OSHA standards, employees are required to wear fall protection when working at heights over four feet. He testified Claimant was present during Employer's training regarding fall protection. Mr. Selby further testified he

has personally told employees to not be on the back of a trailer while the trailer was being loaded. Mr. Selby stated employees who fail to follow Employer's safety policies could be subject to discipline depending on the severity of the infraction. Mr. Selby did not reference any specific instances of employees being disciplined for safety rule violations. Mr. Selby testified that drivers are on a staggered schedule so two drivers are not always at the same site at the same time, but there could be occasional overlap. As other workers are not always accompanying the drivers, Mr. Selby stated the Employer trusts the drivers to follow their training and comply with the safety rules. Mr. Selby denied ever telling workers to be on the back of a trailer while it was being loaded and denied that he had ever been on the back of a trailer while it was being loaded. Mr. Selby could not confirm he always wore fall protection when working at heights over four feet.

6. Frank Gabaline, Lead Supervisor, testified on behalf of Respondents Mr. Gabaline worked with Claimant on one occasion. Mr. Gabaline testified he personally told Claimant to not be on the back of a trailer while the trailer was being loaded and has given the same instruction to other employees. Mr. Gabaline denied that he has ever been on the back of a trailer while it was being loaded. He admitted he has not always worn fall protection when at heights over four feet. Mr. Gabaline testified Employer provides drivers fall protection harnesses in their Employer-provided trucks; however, he acknowledged no fall protection gear was in the truck provided to Claimant at the time of the work injury.

7. Claimant testified he was never instructed to not be on the back of a trailer while the trailer was being loaded. Claimant testified he has undergone OSHA 10 training as well as training with a prior employer regarding wearing a fall protection harness when working more than four feet off the ground. Claimant testified he was driving the same Employer-provided truck for six to seven months prior to the work injury and was not provided any fall protection gear by Employer.

8. Claimant further testified that on multiple occasions Mr. Selby and Mr. Gabaline specifically instructed him to get on the back of a trailer while the trailer was being loaded in order to ensure the loads were properly positioned and strapped down. Claimant testified Mr. Selby would call him derogatory names if he did not get on the back of the trailer while it was being loaded. Claimant testified if he failed to do as instructed by Employer he would not have been given more work. Claimant testified that he, Mr. Selby, and other drivers had been on the back of a trailer more than four feet above the ground without wearing fall protection. Claimant testified he personally observed Mr. Selby on the back of a trailer while it was being loaded. Claimant testified that, to his knowledge, Employer never disciplined him nor anyone else for failing to follow safety rules.

9. Kyle Wareham testified on behalf of Claimant. Mr. Wareham works for a third party company that contracts with Employer to use Employer's trucks to move rig mats and doghouse stairs to different locations. Mr. Wareham was working with Claimant at the time of the work injury loading sets of stairs onto the trailer. Mr. Wareham testified he is unaware of Employer's specific safety rules. He testified that on other occasions he observed Claimant on the back of a trailer while it was being loaded, and had also

observed Mr. Selby on the back of a trailer while it was being loaded. Mr. Wareham testified neither Claimant nor Mr. Selby were wearing fall protection gear on those occasions.

10. Claimant's wife testified on behalf of Claimant. She previously worked for Employer in a power plant and did not undergo the same safety training as Claimant. Claimant's wife occasionally accompanied Claimant on oil rig moves. She testified she personally observed Claimant, Mr. Selby, Scott Newman, and Jason Hodziewich on the back of trailers while the trailers were being loaded, as well as on trailers over four feet from the ground without fall protection. She testified she never saw any employees of Employer wearing fall protection. She further testified she witnessed Mr. Selby telling Claimant to make sure he got on the trailer while it was being loaded to ensure the load was properly positioned.

11. Jason Hodziewich testified on behalf of Claimant. Mr. Hodziewich performed work for Employer as an independent contractor and did not undergo any Employer training. Mr. Hodziewich testified he was not made aware of any safety rule prohibiting workers from being on the trailer while the trailer was being loaded or requiring fall protection at heights over four feet. Mr. Hodziewich testified Mr. Selby personally instructed him to get on the back of a trailer while it was being loaded. He further testified he has observed Claimant, Mr. Selby, Mr. Newman and Mr. Gabaline on the back of trailers while they were being loaded and not wearing fall protection.

12. Mr. Hodziewich's significant other, Charity Davis, testified on behalf of Claimant. Ms. Davis accompanied Mr. Hodziewich on multiple jobs and testified she personally observed Mr. Selby on the back of a trailer while it was being loaded and without wearing fall protection. Ms. Davis further testified she personally witnessed Mr. Selby telling Mr. Hodziewich to hurry up and get on the back of a trailer while it was being loaded.

13. The ALJ finds the testimony of Claimant, Claimant's wife, Mr. Wareham, Mr. Hodziewich and Ms. Davis more credible and persuasive than the testimony of Mr. Graczyk, Mr. Selby, and Mr. Gabaline.

14. The ALJ specifically finds that, at the time of the work injury, Respondents adopted a reasonable safety rule requiring fall protection at heights over four feet and the rule was communicated to Claimant. Employer also had a purported safety rule prohibiting being on the back of a trailer while the trailer was being loaded; however, this purported rule was not communicated to Claimant and Claimant was instructed to do the opposite. Employer did not enforce either rule, as multiple employees, including supervisors, participated in, encouraged, and acquiesced to violations of the purported rules.

15. Respondents failed to prove it is more likely than not Claimant willfully failed to obey a reasonable safety rule.

16. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Safety Rule Violation

Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re*

Alverado, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Willful conduct may be proven by circumstantial evidence including evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimant's conduct. *See In re Heien*; W.C. No. 5-059-799-01 (ICAO, Nov. 29, 2018).

Respondents need not establish that an employee had the safety rule in mind and decided to break it. In re Alverado, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* However, willfulness will not be established if the conduct is the result of thoughtlessness or negligence. *In re Bauer*, W.C. No. 4-495-198 (ICAO, Oct. 20, 2003). "Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez*, W.C. No. 4-561-352 (ICAO, Apr. 29, 2004). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc.*, 907 P.2d at 719.

Generally, an employee's violation of a rule to facilitate the accomplishment of the employer's business does not constitute willful misconduct. *Grose v. Rivera Electric*, W.C. No. 4-418-465 (ICAO, Aug. 25, 2000). However, an employee's violation of a rule to make the job easier and speed operations is not a "plausible purpose." *Id.*; *see* 2 *Larson's Workers' Compensation Law*, § 35.04.

An employer's failure to enforce its safety rule may render the rule unavailable as a basis to reduce compensation/impose a reduction of benefits. *Lori's Family Dining, Inc.* 907 P.2d at 719 ("The most frequent ground for rejecting imposition of a penalty, whether it be for violation of a safety rule or willful misconduct, is the lack of enforcement of the rule or policy by an employer with knowledge of and acquiescence in its violation").

As found, Respondents failed to meet their burden to establish Claimant willfully failed to obey a reasonable, known safety rule. The ALJ is not persuaded Employer's purported rule prohibiting being on the back of a trailer while the trailer is being loaded was clearly communicated to Claimant and enforced by Employer. Claimant credibly testified he was never told about the rule and, in fact, was specifically instructed by supervisors to do the opposite. The ALJ is persuaded that, at the time of the work injury, Claimant was on the back of the trailer while it was being loaded to ensure the load was properly positioned, which was an effort to facilitate Employer's business. Claimant credibly testified he believed Employer would not give him more work if he failed to do as instructed. The credible and persuasive evidence establishes that on multiple occasions Claimant and others, including supervisors, were on the back of trailers while the trailers were being loaded. It cannot be found Claimant willfully violated a purported safety rule when he was specifically instructed by supervisors to do the opposite and when Claimant and others, including those supervisors, routinely did not comply with the purported rule.

The ALJ is persuaded Employer adopted a safety rule requiring wearing fall protection at heights over four feet and this rule was clearly communicated to Claimant. Claimant was not in compliance with the rule at the time of injury as he was working at a height over four feet and not wearing fall protection gear. However, the credible and persuasive evidence establishes Employer also did not enforce this rule and there was

no willful violation by Claimant. Mr. Gabaline testified Employer provides fall protection gear in its trucks used by drivers. It is unrefuted that, at the time of the work injury, Claimant's truck did not contain fall protection gear. There was no evidence offered indicating Employer had provided Claimant the required fall protection gear. Claimant cannot be said to have willfully violated a rule requiring wearing fall protection if Employer was responsible for providing the gear and failed to do so. Furthermore, Claimant credibly testified that on multiple occasions he and others, including supervisors, did not wear fall protection while working at heights over four feet. This was corroborated by the credible testimony of Mr. Wareham, Mr. Hodziewich, Claimant's wife and Ms. Davis. Additionally, Mr. Selby and Mr. Gabaline acknowledged that they did not always wear fall protection when working at heights over four feet.

The totality of the credible and persuasive evidence establishes violations of the purported safety rules were known and acquiesced by Employer. As the preponderant evidence does not establish Claimant willfully failed to obey Employer's safety rules, a 50% reduction of benefits under Section 8-42-112(1)(b), C.R.S. is not appropriate.

ORDER

1. Respondents failed to prove by a preponderance of the evidence Claimant willfully violated a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. Claimant's benefits shall not be reduced by 50%.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove he is entitled to an additional scheduled rating for left knee range of motion deficits?
- Did Claimant prove entitlement to a general award of medical benefits after MMI?
- Disfigurement.

FINDINGS OF FACT

1. Claimant works for Employer as a gas pipeline welder and wildland firefighter.

2. Claimant suffered an admitted injury to his left knee on September 5, 2018 while working on a welding project. He arose from a kneeling position, twisted his left knee, and felt a pop and pain.

3. Respondent referred Claimant to its designated occupational health clinic, where he saw Dr. Kyle Akers.

4. Claimant had an MRI of the left knee on October 5, 2018, which showed complex medial meniscal tears with a 3mm peripheral extrusion.

5. After reviewing the MRI report, Dr. Akers referred Claimant to Dr. David Walden for an orthopedic evaluation.

6. Claimant had two steroid injections that provided only temporary relief.

7. Dr. Walden performed left knee arthroscopic surgery on November 28, 2018. He wrote to Dr. Akers the next day and reported, "We identified a significant medial meniscus tear treated with a partial medial meniscectomy. He also had some pseudogout[1] crystals in the knee."

8. The surgery only partially relieved Claimant's symptoms. On January 3, 2019, Claimant told Dr. Walden his knee swelled badly after working a full eight-hour shift, so he reduced his schedule to four hours. Dr. Walden stated, "the patient was concerned about the swelling in his knee. This is likely exacerbated by his underlying pseudogout and osteoarthritis." He gave Claimant a steroid injection "to calm this process down." Dr. Walden also documented left knee range of motion of "0- 115°."

[1] In his deposition, Dr. Walden explained the precise nomenclature is "calcium pyrophosphate deposition."

9. On January 24, 2019, Claimant told his physical therapist he was "doing more at the gym" and had "minimal stiffness and swelling."

10. Claimant followed up with Dr. Walden on January 31, 2019. The physical examination showed full extension with improved flexion to 125 degrees. He was "doing well" overall but having difficulty kneeling. Dr. Walden noted, "The patient did have some residual effusion which may be exacerbated by the fact that he had some pseudogout crystals in the knee at the time of surgery. These were debrided, but may lead to persistent effusions." He gave Claimant another steroid injection.

11. That same day, Claimant's physical therapist documented left knee flexion of 120 degrees.

12. Dr. Akers released Claimant to work without restrictions on February 1, 2019.

13. On February 7, 2019, the physical therapist documented Claimant's knee range of motion was "0-125°."

14. Claimant saw Dr. Walden again on February 28, 2019. The previous injection had helped for several weeks, but his symptoms returned with increased activity, particularly cardio workouts and climbing ladders. His knee was typically stiff and swollen in the morning. He was still regularly using ice and OTC anti-inflammatories. Dr. Walden injected the knee with "longer-lasting medications," and opined, "hopefully this will resolve his symptoms. If not, other care could be discussed. As it stands now we're not having him schedule any specific follow-up but we would like it left so that he may have a couple of maintenance visits in the next three months as needed."

15. PA-C Paula Homberger evaluated Claimant on March 12, 2019. Claimant reported 5/10 pain with "popping & clicking at times." PA-C Homberger documented "full" knee range of motion with no visible swelling. Claimant was finished with therapy and had transitioned to independent exercises. PA-C Homberger reported, "we discussed that he may have some chronic low level pain as a result of his injury and this may be the normal course of healing." She believed Claimant was approaching MMI, but wanted him to see Dr. Walden again "to ensure that there is no further [treatment] needed or if repeat injection would be warranted."

16. Claimant saw PA-C Rachel Cerchia in Dr. Walden's office on March 14. His most bothersome symptom was "a deep aching sensation within the medial aspect of his knee." On examination, PA-C Cerchia noted, "there is a small effusion present but it does not limit his motion which is noted to be full." She opined, "it is too close to his prior injection to place another steroid injection. We did discuss the possibility of a Toradol and Marcaine injection but not a steroid injection at this time. He elected to wait until the first week of April when the full injection can be placed. He is treating this appropriately with Advil and ice."

17. Claimant saw Dr. Nicholas Kurz at Employer's occupational health clinic for an MMI evaluation on March 29, 2019. Dr. Akers had left the clinic, and Dr. Kurz took his

place. Dr. Kurz noted, "He had prior injections with Dr. Walden, but they seem to have worn off, providing no sustained benefit." Dr. Kurz determined Claimant was at MMI, with a 5% lower extremity rating for the partial meniscectomy. The report states he measured Claimant's knee "using AMA guideline techniques" and found normal range of motion (0-150 degrees).[2] Regarding future treatment, Dr. Kurz opined,

> The pt has an underlying degenerative knee condition w/ medial joint space narrowing and osteophytic changes noted on x-rays and Grade II scattered tricompartmental chondral fibrillation/thinning, also, pseudogout issues noted at time of surgery requiring crystal deposit debridement, that were/are not related to his work injury/mechanism . . . . The patient was advised and agrees to follow-up with his PCP, on his private insurance, for these chronic pre-existing conditions, as these are not work-related or a result of this claim.

18. Dr. Kurz concluded, "This patient has returned to his full duties, is not requiring any scheduled medications, so no Medical Maintenance is needed."

19. Claimant saw Dr. Walden again on April 9, 2019, and reported continued aching in the knee. Knee range of motion was 0-125 degrees with crepitation. Dr. Walden noted the previous injections "help[ed] with the deep aching sensation present in the medial aspect of his knee." Claimant was still using ice and OTC anti-inflammatories, and performing independent exercises "as tolerated." Dr. Walden stated,

> The patient has had some persistent irritation on the inside portion of his knee. Previously it has responded to steroid injections. One additional steroid injection is considered. . . . The patient has some known osteoarthritis, however with tearing and partial medial meniscectomy, there is some chondral overload on the inside portion of his knee.

20. Dr. Walden gave Claimant another steroid injection. No follow-up appointment was requested or scheduled.

21. Claimant went back to see Dr. Walden on September 5, 2019. He was still having pain, particularly with stairs and ladders. He could only jog for a minute or so before developing severe pain. Claimant related an example of country dancing three songs "which resulted in him being unable to do almost anything the following day." Examination of the knee showed a trace effusion, crepitus with range of motion from 0-125 degrees, and tenderness to palpation. Dr. Walden noted,

> Patient has questions about the origin of his pain and who will cover him for future injuries. His case has been closed and he is concerned that he may require ongoing treatment. I explained . . . this is not necessarily an obvious straightforward medical question but he does have likely components of pain both from missing some of his medial meniscus as well as the

[2] Dr. Kurz mistakenly referenced Claimant's right shoulder in the report, but the remainder of the report makes clear he was addressing Claimant's left knee.

> arthritis/pseudogout component. As to whether or not this would hurt without an underlying injury, no one would really know, however it would make sense that increasing stresses over the knee may irritate him more now that he is missing some of his medial meniscus. Treatment options for this can include over-the-counter anti-inflammatory medications, modalities such as pace, and injections (steroid, Vicso supplementation, or PRP). Future surgeries are not currently contemplated but likely would involve knee arthroplasty.

22. Dr. Walden testified via deposition on October 21, 2019. He testified he had removed the damaged portion of Claimant's meniscus because it was "badly torn" and not repairable. Dr. Walden testified the "pseudogout crystals" were probably calcium pyrophosphate depositions. He explained the condition can be symptomatic in some individuals and asymptomatic in others. He opined the surgery probably aggravated the previously asymptomatic crystals in Claimant's knee,

> [W]hen you go in surgically and you debride . . . basically you stir the pot a little bit, and some of those crystals float around in the knee and become irritable and create a reaction in the joint, which you hope eventually will just go back down to baseline, which in his case, I don't think he was having a lot of symptoms from those prior to his surgery. At least I wasn't aware of any symptoms that he was having, based on his history. . . . [That] made me think that those were probably just stirred up from the surgery little bit.

23. Dr. Walden opined the partial meniscectomy has rendered Claimant's knee more susceptible to symptomatic aggravation due to "chondral overload." He explained removing part of the meniscus subjects the joint and the articular cartilage to greater forces than if the meniscus were intact. The body may eventually adapt by strengthening the bone, but it is common for the joint to be "irritated" during or despite that adaptive process. He testified steroid injections are "not curative; they just kind of knock inflammation down a bit." Dr. Walden explained some patients recover fully from surgery but "they don't all go away happily ever after." Many patients require periodic aspirations or injections, and "it looks to me like he may be one of them." Dr. Walden opined Claimant was a candidate for viscosupplementation or PRP injections, and he is willing to provide those or other modalities.

24. Dr. John Hughes performed a record review for Respondent and issued a report dated August 26, 2019. He also testified at hearing to elaborate on his opinions. Dr. Hughes opined Claimant "had concurrent calcium pyrophosphate depositions and osteoarthritis but appears clearly to have sustained an acute injury with associated partial tearing of the medial meniscus." He agreed the surgery was reasonably necessary to treat the work injury, and accepted the MMI date assigned by Dr. Kurz. Dr. Hughes opined, "I do not find an indication at the present time for maintenance medical treatment," but in the next sentence said, "it does appear likely that he will sustain flare-ups and may at some point require a repeat corticosteroid injection into his left knee."

25. Dr. Hughes testified Claimant has calcium pyrophosphate deposition disease ("CPPD") in his left knee that became apparent during surgery. He testified CPPD usually results from a metabolic imbalance that causes precipitation of calcium phosphate crystals. It differs from gout, which involves uric acid, although both are "crystalline arthropathies." CPPD can cause inflammation, sometimes after trauma and sometimes spontaneously. People can have the condition with no symptoms. Dr. Hughes referred to Claimant's CPPD as "previously occult," meaning it was "hidden" or "unrealized until the person was evaluated." He opined the CPPD was not caused by the work accident.

26. Dr. Hughes testified maintenance care is indicated if a patient's condition is generally stable but they may have "flare-ups" and require prescriptive treatment such as injections or viscosupplementation. He opined additional steroid injections would be reasonable if Claimant has a flare-up, but he could not predict future flares with any degree of precision. He opined Claimant's daily dosage of ibuprofen "is approaching the degree to where we would recommend medical monitoring," including lab work to evaluate kidney function. Dr. Hughes opined PRP and viscosupplementation are "potentially" appropriate maintenance treatments, but he saw no current need for them. He opined it is "an open question" whether any future flares would be related to CPPD or the effects of the work injury. He admitted there is no record of any left knee problems before the work injury. Dr. Hughes agreed the work injury "aggravated and brought to light" the previously asymptomatic CPPD. Regarding impairment, he testified it is "probable" Dr. Kurz measured Claimant's range of motion based on the MMI report and accompanying worksheet.

27. Claimant credibly testified his knee hurts "just about daily." Claimant's job as a welder requires him to be on his knees frequently, and climb ladders and stairs. As a wildland firefighter, he expresses knee pain when walking down hills on uneven ground. As documented in Dr. Walden's notes, Claimant primarily manages his pain with ice and OTC ibuprofen. He typically begins his day by taking 200mg of Advil. Depending on his activities, he may take another 800mg at lunch. When he returns home in the evening, he frequently takes 800mg more Advil and ices his knee.

28. Claimant had no problems with his left knee before the work accident. His knee was asymptomatic, and he did not know he had CPPD.

29. Claimant proved a probable need for future medical treatment to relieve the effects of his industrial injury. The persuasive evidence shows Claimant's ongoing knee symptoms are causally related to his admitted work injury, and he is reasonably likely to require future treatment to manage his symptoms. At a minimum, Claimant's regular use of OTC supports an award of post-MMI medical benefits.

30. Claimant failed to prove he should receive an additional scheduled rating for knee range of motion deficits.

31. Claimant has three (3) ½-inch diameter discolored arthroscopic surgery scars around the left patella and slight but noticeable swelling around the patella. The ALJ finds Claimant shall be awarded $1,250 for disfigurement.

CONCLUSIONS OF LAW

A. Medical benefits after MMI

Respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI or prove a particular course of treatment has been prescribed to obtain a general award of *Grover* medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

A pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravated, accelerated, or combined with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was the proximate result of an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP 17, Exhibit 6 addresses lower extremity injuries. As the arbiter of disputes regarding medical treatment, the ALJ may consider the MTGs as an evidentiary tool, but is not bound by them when determining whether requested treatment is reasonably necessary or injury-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011). The lower extremity MTGs recognize steroid injections as "generally accepted, well-established procedures that can be performed as analgesic or anti-inflammatory procedures." The MTGs also support PRP injections in patients with functionally limiting knee pain.

As found, Claimant proved a probable need for future treatment to relieve the effects of his industrial injury. As a threshold matter, Claimant proved a sufficient causal nexus between his ongoing symptoms and the work accident. He had a serious injury to his meniscus that led to a partial meniscectomy. Although ongoing post-surgery symptoms were not inevitable, they are neither uncommon nor unexpected. The confounding factor here is the CPPD. Claimant had CPPD before the accident, but it was

asymptomatic and "occult." The ALJ considers it unlikely the condition would have spontaneously become a problem absent the knee trauma and resulting surgery. Dr. Walden persuasively opined the surgery probably "stirred up" the CPPD, and Dr. Hughes agreed the injury "aggravated and brought to light" the previously asymptomatic condition.

It is reasonably probable Claimant will require future treatment to relieve the effects of his injury. Claimant received a steroid injection in April 2019 after being put at MMI. The injection was not intended to cure Claimant's condition, but was merely provided for pain relief. As such, the April 9, 2019 injection was administered for the purposes outlined in *Grover* (*i.e*., to relieve the effects of the injury). Claimant went back to Dr. Walden in September 2019 and reported ongoing pain that substantially interferes with activities. Dr. Walden suggested several potential treatment options. He ordered no specific treatment, but that was probably because Claimant told him the claim was "closed" and he was merely seeking Dr. Walden's opinions and recommendations. Dr. Hughes agreed steroid injections would be reasonable to treat flare-ups, but considered the need for specific injections "speculative." The ALJ disagrees. Although the timing of any flare-ups may be speculative, the likelihood they will occur is not. Claimant has remained continuously symptomatic since the accident, with frequent aggravations due to routine activities. That pattern will probably continue for the foreseeable future.

Moreover, Claimant's regular use of OTC ibuprofen provides a legally sufficient basis for a general award of medical benefits after MMI. The ICAO has repeatedly held that OTC medications are a permissible form of *Grover* benefits. *E.g*., *Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-875 (November 20, 2001) ("the fact [a] medication is available without a prescription does not vitiate its compensability or nullify the award of *Grover*-style medical benefits."); *Mann v. Ridge Erection Company*, W.C. No. 4-225-122 (April 4, 1996) (no distinction between "over the counter" medications and prescribed medications for purposes of *Grover* benefits); *Ashton-Moore v. Nextel Communications, Inc*., W.C. No. 4-431-951 (September 12, 2002) (recommendation to use OTC anti-inflammatories "as necessary for pain" can support a *Grover* award).

B. Range of motion rating

Where, as here, the claimant suffers a purely scheduled impairment, he must prove entitlement to a rating by a preponderance of the evidence. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

As found, Claimant failed to prove he should receive an additional rating for range of motion. There is conflicting evidence regarding whether Claimant had ratable range of motion deficits at the time of MMI. Dr. Kurz stated he measured normal range of motion "using AMA guides techniques," but Claimant testified Dr. Kurz performed no measurements. Claimant's testimony appeared credible, but Dr. Kurz's report is also credible on its face. Dr. Hughes opined Dr. Kurz "probably" measured range of motion, as reflected in the narrative report and on the rating worksheet. Medical records in January and early February 2019 show Claimant's knee progressively improved, culminating with reports noting full range of motion by PA-C Homberger and PA-C

Cerchia on February 28, 2019 and March 14, 2019, respectively. Thus, the record contains reports from three different providers showing normal range of motion within a month of MMI. Dr. Walden subsequently documented 125 degrees of flexion on April 9, 2019, but that was after MMI during an appointment at which Claimant requested an injection for a flare-up. Claimant has the burden of proof in this matter, and given the contradictory evidence on this point, the ALJ does not believe he proved a range of motion rating to the level of "more probably true than not."

C. Disfigurement

Section 8-42-108(1) provides for additional compensation if a claimant is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant suffered visible disfigurement to his left knee. The ALJ concludes Claimant should be awarded $1,250 for disfigurement.

ORDER

It is therefore ordered that:

1. Respondent shall cover reasonably necessary medical treatment after MMI from authorized providers to relieve the effects of Claimant's injury or prevent deterioration of his condition.

2. Claimant's request for additional PPD benefits is denied and dismissed.

3. Respondent shall pay Claimant $1,250 for disfigurement. Respondent may take credit for any disfigurement benefits previously paid on account of Claimant's left knee injury.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 12, 2019

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury to his lower back and legs on April 12, 2019?

II. If said injury is compensable, has Claimant shown, by a preponderance of the evidence, that he is entitled to a general award of medical benefits to treat his work injury?

III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to temporary disability benefits?

IV. If Claimant is entitled to temporary disability benefits, have Respondents shown, by a preponderance of the evidence, that Claimant was responsible for his wage loss?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background

1. Claimant, Ruben Carrillo, was an employee for Seaboard Foods, where he had been employed as a sow farm manager since 2016. Claimant had been working in a related capacity at the predecessor corporation, Christianson Farms, for about eight years before Seaboard took over those operations.

2. Claimant's position involved maintaining livestock, overseeing pig production, and completing corresponding inventory paperwork. He was responsible for overseeing three farms for Seaboard: Farm 31, Farm 180, and Farm 799.

Injury of April 12, 2019

3. Claimant testified that on April 12, 2019, [the ALJ administratively notices that 4/12/2019 is a Friday] he was in a pen with 10-12 sows in order to read each sow's ear tag. Each sow weighs 500-600 pounds.

4. While Claimant was standing in the pen, two of the sows started to fight and one attempted to run away. The fleeing sow ran into Claimant from behind and knocked him to the ground. He did not see this collision coming, and he went straight down to his knees on the concrete floor. No other part of his body hit the ground besides his knees; he got back to his feet shortly thereafter.

5. After being knocked to the concrete floor, Claimant felt pain in both sides of his lower back as well as his left knee. Claimant then stopped work immediately, and called his supervisor, Andy Allum, right away. He also filed a written report on April 15, 2019, pursuant to company policy (Ex. P, pp. 95-96).

Symptoms and Treatment for April 12, 2019 Injury

6. Claimant first received medical treatment for his work injury on April 16, 2019, at Stevens County Medical Clinic. At that evaluation, Claimant testified that he advised Nurse Rapp that he was suffering from low back pain after being hit by a sow and had back pain that radiated from his low back and into his left leg. (Ex. A, p. 2.) Claimant advised Nurse Rapp that lying flat, prolonged sitting, raising his legs in a supine position and walking aggravated his symptoms. Claimant also denied any prior treatment to his low back. (*Id.*) Nurse Rapp assessed work restrictions to include no bending, climbing, squatting or other strenuous activity at work or home. *Id* at 4.

7. Claimant returned to work the following day, but did not provide Seaboard with any work restrictions. He testified he was able to perform his job duties as a Sow Farm Manager with those restrictions, and testified that he never saw Nurse Rapp again. Mr. Allum likewise testified that Claimant, as a Sow Farm Manager, would have been able to perform his job with those restrictions.

8. X-rays taken of Claimant's low back and pelvis area on April 16, 2019 revealed a normal lumbar spine with normal disc spaces and mild degenerative changes of the bilateral hips with mild marginal osteophyte formation. (Ex. A, pp. 6-8.).

9. Claimant was seen by Dr. Abbott for his low back injury on May 25, 2019. Dr. Abbott refused to treat the Claimant, indicating that Claimant had a regular physician in La Junta, and that Claimant had sustained a prior workers' compensation injury. He referred Claimant to his prior physician in La Junta. (Ex. D, p. 33.).

10. Claimant then saw Dr. Cameron on May 29, 2019. (Ex. B, pp. 24-27.) At that evaluation, Claimant reported that he was hit by a pig on April 12, 2019, and fell forward onto his knees. Claimant told Dr. Cameron that since that event he had low back pain, numbness and weakness down both his right and left legs with bilateral knee pain. Dr. Cameron opined that he needed to obtain Claimant's medical records from Kansas before proceeding any further. *Id* at 27.

11. Claimant followed up with Dr. Cameron on June 6, 2019, and advised him that he had started a new job and would be starting work there on that Tuesday.

12. Claimant then followed up with Dr. Ray for treatment of his 2019 low back injury. Dr. Ray initially saw Claimant on July 5, 2019, noting that Claimant was there for a medication refill. Dr. Ray noted no obvious issues in his examination and wanted to obtain Claimant's prior medical records before proceeding any further. (Ex. B, pp. 14-16).

13. On August 16, 2019, Dr. Ray recommended an MRI. On September 13, 2019, Dr. Ray saw Claimant following completion of that MRI scan. (Ex. B, pp. 11-12). By September 13, 2019, Dr. Ray had not only received the results of the MRI scan he ordered; he also received the MRI scan results from Claimant's 2015 injury. Dr. Ray indicated in his September 13, 2019 report that Claimant's recent MRI scan revealed degenerative changes in his lumbar spine without any acute findings.

14. Claimant advised Dr. Ray during this evaluation that he had continued to have pain following his last visit with his treating physician in 2015, but was told that his case was closed and it was 'too late' to reopen his 2015 claim. *Id* at 11. Claimant denied continuing leg symptoms at that evaluation. Dr. Ray opined Claimant's injury appeared to be a soft tissue injury with chronic myofascial type pain syndrome. The MRI did indicate some mild disc protrusion, but without nerve root encroachment. *Id*

15. Dr. Ray also noted:

> On exam the patient reports some mild central spinal tenderness over about the L2-L3 level. He reports paired vertebral tenderness at the lumbar level bilaterally, but worse on the left side. He can flex at the hips to about 60° before he starts experiences pain in the lumbar region of the back. He can do extension to about 15° before discomfort sets in. Side to side rotation of the hips causes a straining type discomfort in the lower back. (Ex. B, p. 11).

16. Claimant also reported to Dr. Ray that the meloxicam helps his back pain "somewhat", but that he is managing his [new] work duties since he does not need to do a lot of lifting. Because Dr. Ray was unclear if the MRI revealed a pain generator, he referred Claimant to Occupational Medicine for evaluation and potential treatment options. *Id.*

17. At hearing, Claimant testified that his lower back pain is typically about a 3 or 4 on a scale of 10. Claimant's lower back pain is intensified with activity like bending over. Claimant continues to experience pain in his left knee and it prevents activities like jogging or running he would do prior to the work injury.

Claimant does not believe he has been placed at maximum medical improvement yet by a physician.

Prior Injuries and Treatment

18. Claimant's history of low back pain began in 2002 when he alleged an injury to his low back while working with pigs for Outwest on October 31, 2002. (Ex. D, p. 47.) His back symptoms improved, and by November 20, 2002, he was placed at MMI for this injury.

19. Claimant sustained a subsequent injury to his low back while picking up dead pigs for Christianson Farms on April 23, 2015. (Ex. D, p. 41.) Claimant initially believed his low back pain was caused by performing yard work as reported to his Dr. Hudson, contrary to his testimony at the hearing. On April 30, 2015, Claimant was brought to the clinic by ambulance and treated with Dr. Hudson as his pain complaints were radiating into his right leg. Dr. Hudson diagnosed lumbar strain and myalgia and prescribed the Claimant mediations for pain. *Id* at 42.

20. On June 12, 2015, Claimant returned to Dr. Hudson in follow up seeking a release to full duty as he wanted to get back to full time work. Dr. Hudson recommended an MRI scan of Claimant's low back and discussed lumbar disc disease with him during this evaluation. (Ex. D, pp. 38-39.

21. On July 15, 2015, Claimant attempted to follow up with Dr. Hudson for his 2015 back injury; however, because he had his case closed he was denied any further treatment. Dr. Hudson diagnosed ruptured lumbar discs and intervertebral disco degeneration and advised Claimant to object to the Final Admission and see if he could pursue additional treatment. .

22. Claimant's 2015 low back injury caused pain that would radiate to the upper right side of his back and down the *right* leg to the back of the right knee. (Ex. 7, p. 64) (emphasis added).

23. The current work injury to Claimant's lower back produces bilateral lower back pain with pain that radiates down into Claimant's *left* lower extremity. (Ex. 6) (emphasis added).

Claimant's Termination from Employment by Seaboard

24. At hearing, Andy Allum testified that Claimant had continual problems with his job performance since 2017. On December 4, 2017 Mr. Allum perform a review of Claimant's job performance and noted performance in one or more critical areas did not meet expectations. (Ex. F, pp. 67-70.) Specifically, Mr.

Allum testified Claimant was struggling with following Seaboard's Standard Operating Procedures (SOPs).

25. Mr. Allum also testified that that there were multiple occasions where emergency supplies had to be sent to Farm 31, due to lack of planning by Claimant. At hearing, Mr. Allum was unable to supply the specific dates this occurred, but indicated he could check his records and recite those dates.

26. On November 6, 2018, Mr. Allum issued Claimant a written warning concerning seven critical areas of Claimant's job performance that needed improvement. (Ex. G, p. 71.) The first of those critical issues listed was Claimant's failure to make sure all SOPs are being followed correctly.

27. Mr. Allum testified that he met with Claimant on November 5, 2018 to explain why he was issuing this written warning, what Claimant needed to do to improve his work performance, the consequences of not meeting expectations, and that Claimant was to come by his office the following day to sign and receive the written warning.

28. After this November 6, 2018, written warning Claimant had received, Claimant was offered to participate in management meetings. Claimant testified he was unable to attend most of the management meetings because of work to be done at the farms he managed and the distance needed to travel to attend meetings in Kansas.

29. Mr. Allum further testified that after receiving this written warning, Claimant's job performance improved, although by December, 2018 Claimant was once again struggling to follow Seaboards SOPs. Under "Manager Comments", Mr. Allum wrote:

> Farm 31 have had a disaster year for Breeds, farrows, and Fall out, we have not made a good job of adapting to the pen system and need to continue to work on this going forward. Ruben has struggled at times to stick to the Seaboard SOPS and at times have switched back to some "old ways" he needs to make a better job this coming year following up and making sure that the SOP's are being followed at all times, he also needs to hold his employees accountable for their actions. (Ex. H, p. 73) [sic].

30. Despite this warning, Claimant received a substantial salary bonus, approximately $8,000.00, at the end of 2018.

31. On April 10, 2019, Claimant submitted his first quarterly parity inventory sheet to Mr. Allum tracking all of the live animals on the three farms he oversaw for Seaboard. (Ex. J, p. 77.) That sheet listed a total number of animals of 4105.

32. Mr. Allum testified that the daily inventory sheets Claimant had submitted to him prior to that quarterly report did not match the total number of animals Claimant reported on his parity sheet. As such, he elected to travel to Claimant's farms and conduct a total heard count in person.

33. On April 15, 2019 Mr. Allum conducted an investigation of Claimant's parity calculations and conducted a total heard count of Farms 31, 180 and 799. His results revealed that Claimant's farms were short 65 animals based on his inventory sheets. (Ex. J, p. 76). He met with the Claimant in person on that date and discussed his findings with Claimant as he was responsible for accurately reporting the livestock on the farms he managed. Claimant was not able to provide an explanation for the missing animals.

34. Mr. Allum testified that during his meeting with the Claimant on April 15, 2019 Claimant did not mention anything about having sustained a back injury at work. Mr. Allum also testified at hearing that Claimant's reported work injury had nothing to do with his termination from work.

35. On April 17, 2019 Mr. Allum testified that he met with the Claimant in person to discuss Claimant's termination. At that meeting, Mr. Allum, Claimant and Renee Guerrero, Seaboard's human resources representative, were present. Mr. Allum provided the Claimant the termination memo, and discussed with Claimant the problems with Claimant's job performance and reason for his termination. (Ex. L, p. 80). Claimant refused to sign this document.

36. A Seaboard "Personnel Action Form" prepared on 4/17/2019 indicated that the reason for termination was "Falsification of Information". Claimant did not sign this document, although it is unclear from the face of the document that he was invited to do so. (Ex. M, p. 81).

37. When shown this document at hearing, the following exchange took place:

> Q (By Ms. Mowry) Would you turn to ..Exhibit M, as in Mary, page 81. The bottom third of this section has a termination block. Do you see that?"
>
> A Yes, ma'am.

Q That's because you provided him [Andy Allum] false inventory reports during the year or a false parity sheet, one of the two, and that was inaccurate (inaudible).

A Yes, ma'am. (Hearing Transcript, p. 49).

38.Claimant requested a copy of his employment termination paperwork and Employer refused to provide it. (Ex. N, p. 82).

39.Claimant testified that following his termination he applied for unemployment benefits but was denied. He testified he thereafter was able to secure employment with Stope Farms, an agricultural company, working primarily as a driver. He testified he works between 40 and 50 hours per week earning $21.00 per hour and has never needed to take a day off work due to his back injury, despite his advisement to Nurse Rapp that prolonged sitting aggravates his symptoms and his testimony at hearing that his condition has continued to worsen since his date of injury.

40. Claimant testified that he has not requested any time off work from his present employer, because he is the primary wage earner for his family and needs the income. He further testified that this position requires driving or mostly seated activity.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act ("Act") of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. However, it is the Claimant in a workers' compensation claim who carries the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,* 104 P.3d 273, 275 (Colo. App. 2004). Furthermore, the facts in a workers' compensation case are not to be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. It is axiomatic that a workers' compensation case must be decided on its merits. *Id.*

2. The ALJ's factual findings in a workers' compensation case concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every

piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings in this matter as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility of witnesses, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); C.J.I, Civil 3:16 (2007). While there are some discrepancies between the testimony of Andy Allum and Claimant, the ALJ finds that both persons testified sincerely, from their respective points of view, to the best of their abilities.

Compensability, Generally

4. A Claimant is entitled to workers' compensation benefits when an injury arises out of and occurs in the course of the employee's employment. C.R.S. § 8-41-301(1)(b). "The 'course of employment' requirement is satisfied when it is shown the injury occurred within the time and place limits of the employment relation and during an activity that had some connection with the employee's job-related functions. An injury 'arises out of' employment when it has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6, 8 (Colo. App. 1995), *citing Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991).

5. Additionally, a Claimant must prove by preponderance of evidence direct and proximate causal relationship between an injury and the need for medical treatment sought. C.R.S. § 8-43-301(b)-(c), *Faulkner*, 12 P.3d at 844; *see also Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office*, 989 P.2d 251, 252 (Colo. App. 1999).

6. Causation is the issue of fact to be determined by the ALJ based on an examination of the totality of the circumstances. *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Such causality can even be inferred if the claimant presents evidence of circumstances indicating that the industrial injury necessitated medical treatment with reasonable probability. *Indus. Comm'n v. Riley*, 441 P.2d 3 (Colo. 1968).

7. The mere fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448

(Colo. 1949). The Claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

8. Claimant was performing one of his usual job duties when he was knocked to the ground by a sow weighing more than 500 pounds. Claimant began to experience pain symptoms and reduced range of motion for both his knee and lower back following the fall onto the concrete floor. Claimant timely reported his injury and began seeking medical attention. Despite the lack of corroborating witnesses, the ALJ finds that this incident occurred as described by Claimant.

9. Claimant's current low back and radicular symptoms differ from those reported in 2015 for a low back injury, which showed pain going into his *right* leg. The radicular symptoms are in the *left* leg as a result of this work injury. This indicates that he suffered a new injury on April 12, 2019, rather than a worsening of a prior injury or condition, regardless of whether Claimant might have moved to reopen his 2015 case.

10. Respondents assert that to the extent Claimant suffered an injury on April 12, 2019, the injury was temporary. This argument does not determine whether an industrial injury is compensable under the Workers' Compensation Act or negate an injury that has been suffered. Even if an injury is deemed temporary by trained medical physicians, compensability is still established for the injury as long as the worker was in the course and scope of employment and the injury arose from the employment. Such is the case here, and Claimant was entitled to treatment for this injury.

11. Dr. Ray noted on September 13, 2019, that Claimant's lumbar MRI revealed a protrusion in the upper lumbar spine. It was unclear at that time (and remains unclear) whether the protrusion was a pain generator, and Claimant was to be referred out for evaluation and treatment recommendations if appropriate. Dr. Ray's physical examination revealed considerable evidence that Claimant had suffered an injury. This shows that Claimant suffered injury and was not yet at maximum medical improvement. There has not been any medical evidence presented opining that Claimant's work injury was temporary and fleeting. No such opinion has been offered by Dr. Ray, Claimant's treating physician in this case, or any retained expert. Respondents did not request Claimant undergo an independent medical examination as of September 13, 2019. Claimant has shown by a preponderance of the evidence that he was in the course and scope of his employment when his work injury to his back and legs occurred on April 12, 2019.

Medical Benefits

12. Once causation is established, respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. C.R.S. § 8-42-101(1)(a); *Colorado Comp. Ins. Auth. v. Nofio,* 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the

ALJ. *In re Parker,* W.C. No. 4-517-537 (May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (Nov. 13, 2000).

13. The fact that Claimant has "toughed it out" in order to maintain his current employment is not indicative that he may not have suffered a serious work injury. In this case, since only a *general award of medical benefits* is being sought, that is all the ALJ will order at this time. (Parenthetically, the ALJ notes that the treatment sought by Claimant to date appears to be reasonable, necessary, and related to his work injury, as well as the referral by Dr. Ray to Occupational Medicine to identify a pain generator).

Temporary Total / Partial Disability

14. To establish entitlement to TTD and TPD benefits the Claimant maintains the burden to proof by a preponderance of the evidence that his wage loss has some connection to his industrial injury. *PDM Molding v. Stanberg*, 898 P.2d 542 (Colo. 1995). Once Claimant establishes entitlement to temporary disability benefits, it becomes incumbent upon the Respondent to prove, by a preponderance of the evidence, that the temporarily disabled employee is responsible for his termination of employment, and if proven, the resulting wage loss of the injured worker shall not be attributable to the on-the-job injury. C.R.S. sec. 8-42-105 (4), sec. 8-42-103 (1)(g), *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004).

15. Although Claimant established that he sustained a compensable industrial injury on Friday, April 12, 2019, he did not receive medical treatment until Tuesday, April 16, 2019 wherein he was assessed temporary work restrictions. Regardless of who issued the temporary restrictions on April 16, 2019, Claimant testified that he was able to and in fact did return to his regular work duties on April 17, 2019, did not sustain a wage loss and did not need an accommodation. Thus, Claimant has not met his burden of proof in establishing entitlement to disability benefits from April 12, 2019 through April 17, 2019.

Termination of Temporary Disability / Responsible for Own Termination

16. Claimant will be held responsible for his separation of employment from the insured if he performed some volitional act, or exercised some control over the circumstances of the termination. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994) (opinion after remand, 908 P.2d 1185 (Colo. App. 1995)). The determination of the fault issue is ordinarily one of fact for resolution by the ALJ. *Id.*

17. Claimant acknowledged at the hearing that it was his responsibility to accurately report his inventory of the animals on the farms he managed on a daily basis, and admitted that he did not do this. The testimony of Mr. Allum concerning his advisement to Claimant that he needed to follow Seaboard's standard operating procedures and that he failed to accurately report significant losses of animals he was accountable for on his farms is sufficient to warrant Claimant's termination. Further, it is noted that Claimant received a generous year-end bonus for his performance for 2018, well before Seaboard concluded that his continued employment was no longer tenable.

18. Claimant exercised some control over the circumstances of his termination. Claimant was required to provide daily, accurate inventory logs of all animals over which he had control on the three farms he managed to his supervisor, Mr. Allum. He was responsible for ensuring these daily logs were accurate. He clearly failed to do this. Under his management, he failed to provide accurate daily logs to Mr. Allum and reported a discrepancy of 65 animals in his parity report. After an investigation and a complete headcount of his farms was conducted on April 15, 2019, it was determined that he was responsible for failing to account for the loss of 65 animals from the farms he oversaw – a monetary loss estimated to be more than $20,000 to Seaboard. Claimant was not terminated because animals died or were otherwise lost or stolen; he was terminated because he failed to accurately and timely report these inventory losses when they occurred.

19. The ALJ makes additional findings and conclusions at this time, to wit: *There is insufficient evidence to conclude that Claimant engaged in any intentional misconduct.* Nor does the ALJ find that Claimant was a party to any theft, or engaged in an alleged "cover-up". *The ALJ rejects any notion that Claimant willfully "falsified" company records.* Claimant was responsible for his own termination for his failure to competently manage the farms he was responsible for, and to keep proper records. That is all.

20. Claimant's competence concerns were at issue for many months before he was formally terminated. *The ALJ declines to find that Claimant was terminated in retaliation for reporting a work injury;* the timing of his injury and the head count were purely coincidental. *Conversely, the ALJ explicitly rejects any notion that Claimant reported his 4/12/2019 injury in retaliation for being fired.* Claimant did not, sua sponte, bring up his work injury when he met with Mr. Allum on 4/15/2019, since they were there to discuss inventory counts, not a work injury. Therefore, the ALJ draws no adverse inferences from this non-event.

21. Nonetheless, Claimant was responsible for his termination of employment with Seaboard Corporation and as such, he is precluded from receipt of temporary disability benefits from April 17, 2019 and ongoing.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury on April 12, 2019.

2. Respondents shall pay for all medical expenses that are reasonable, necessary, and related to cure Claimant of his work injury.

3. Claimant's claim for Temporary Disability Benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 13, 2019

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a right knee injury during the course and scope of her employment with Employer on February 6, 2019.

2. If compensable, whether Claimant has established by a preponderance of the evidence that the total right knee arthroplasty recommended by Authorized Treating Physician (ATP) John S. Xenos, M.D. is reasonable, necessary, and causally related to her February 6, 2019 injury.

STIPULATIONS

The parties agreed to the following:

1. Because Claimant has not suffered a wage loss she is not entitled to receive any Temporary Total Disability (TTD) or Temporary Partial Disability (TPD) benefits.

2. Claimant earned an Average Weekly Wage (AWW) of $873.60.

FINDINGS OF FACT

1. Employer operates a retirement facility. Claimant is a 55-year old female who worked for Employer as Head Painter. Her job duties involved preparing, painting and detailing parts of Employer's facility.

2. Claimant underwent right knee surgeries in 2014 and 2018. The procedures involved meniscus repair.

3. On February 6, 2019 Claimant was walking from a carpeted to linoleum surface during the course and scope of her employment with Employer. Claimant explained that she slipped on water, fell to the floor and struck both knees. She remarked that one leg went behind her and the other leg moved out to the side. Co-workers helped Claimant into a chair. Employer referred her to Concentra Medical Centers for treatment.

4. Claimant visited Concentra for an examination. She reported that she slipped, fell to the floor and struck her knees. Physician's Assistant Jordan M. Maas diagnosed Claimant with a left knee contusion. She received an ACE wrap for compression and was released to full duty employment.

5. Claimant explained that her right knee condition failed to improve after her visit to Concentra. On February 28, 2019 Claimant thus sought treatment with John S. Xenos, M.D. at Colorado Orthopedics. Dr. Xenos had performed Claimant's 2018 right

knee meniscus repair. He diagnosed Claimant with an unspecified meniscus tear and a right knee MCL sprain.

6. On March 28, 2019 Claimant underwent a right knee MRI. The MRI revealed a prior partial medial meniscectomy, a horizontal tear to the posterior horn with early to moderate medial compartment chondromalacia, an MCL sprain and a subtle bone bruise.

7. On April 23, 2019 Claimant visited Orthopedic Specialist Nathan Faulkner, M.D. at Concentra for an examination. Dr. Faulkner recounted that Claimant was turning to walk into a different room at work on February 6, 2019 when she slipped and fell. She sustained a "valgus load to her right knee." Although right knee x-rays were negative, an MRI revealed "evidence of previous partial medial meniscectomy with likely new tear of the posterior horn of the body medial meniscus." After reviewing treatment options, Claimant elected to proceed with therapy and steroid injections.

8. On April 23, 2019 Claimant returned to Concentra and visited Thomas Corson, D.O. for an evaluation. Dr. Corson noted that Dr. Faulkner had mentioned a possible "new tear of the posterior horn medial meniscus, though she's also had prior surgical repair of the medial meniscus."

9. On May 7, 2019 Claimant returned to Concentra for an evaluation with Dr. Corson. Dr. Corson referred Claimant back to Dr. Xenos because Dr. Xenos had prior knowledge of Claimant's pre-existing meniscal damage and whether the new injury was amenable to surgery.

10. On May 16, 2019 Claimant returned to Dr. Xenos to discuss treatment options. Claimant explained that she was evaluated by both Dr. Xenos and his partner Ryan Carr, M.D. The providers noted that Claimant had undergone two prior right knee scopes without significant relief. They remarked that Claimant had some tearing in the medial meniscus and a repeat scope was unlikely to provide any relief. The providers determined that Claimant suffered a "work related injury which has caused a precipitation, aggravation, and acceleration of her condition." They discussed a total knee replacement with Claimant and she decided to proceed.

11. On May 28, 2019 Claimant returned to Dr. Corson at Concentra. He recommended visiting an orthopedist so there was no confusion in treatment options. Claimant elected to visit Dr. Xenos for continuing care. She chose to proceed with a total knee replacement instead of PRP injections.

12. On August 22, 2019 Claimant underwent an independent medical examination with Mark S. Failinger, M.D. Dr. Failinger authored a report dated October 15, 2019. He explained that Claimant's March 28, 2019 right knee MRI did not reveal any evidence of a new meniscus tear. He recounted that Claimant had previously undergone a right knee meniscectomy and there was little remaining evidence of meniscus material that could have been re-torn. Dr. Failinger detailed that he did not see evidence of a "major nor acute chondral loss and no significant change in the chondral surface, on the

MRI of 3/28/2019 when comparing that to the MRI of 6/21/2018." He thus determined that there was no objective evidence of pathology as a result of the February 6, 2019 work incident "to the articular cartilage, nor to the chondral surfaces, nor to any intraarticular structures." Dr. Failinger concluded that, based on the objective evidence of the right knee MRI's and x-rays, a total knee replacement was not reasonable, necessary or related to the February 6, 2019 industrial accident.

13. On September 12, 2019 Dr. Failinger issued an addendum report to his independent medical examination. He acknowledged that Claimant may have suffered an MCL sprain. He noted the MRI specified that "perhaps there was some mild lateral tibial condyle bruising with an MCL mild sprain. That would indicate a valgus force, which is consistent with [Claimant's] history notes that could cause some lateral compartment pathology." However, because Dr. Failinger did not find evidence of any other acute pathology, Claimant's right knee symptoms were more reasonably related to the MCL sprain and bone bruising in the lateral compartment.

14. On November 11, 2019 Dr. Failinger issued another addendum report. He reiterated that there are two primary factors used to determine whether to recommend a right knee arthroplasty. Specifically, there must be "significant pathology, in other words, high grade chondromalacia or arthritis of the compartment that is to be replaced" and "significant and recalcitrant pain symptoms." Dr. Failinger remarked that the March 28, 2019 right knee MRI did not reflect significant degenerative changes. He concluded that the proposed right knee arthroplasty was not reasonable, necessary or causally related to the February 6, 2019 industrial incident.

15. On November 15, 2019 the parties conducted the pre-hearing evidentiary deposition of Dr. Failinger. Dr. Failinger maintained that the proposed right knee arthroplasty was not reasonable, necessary or causally related to the February 6, 2019 industrial incident. Notably, after comparing Claimant's right knee MRI's from August of 2018 and June of 2019 he noted the "expected loss of the meniscus where Dr. Xenos would have trimmed out some of the meniscus in the posterior horn." However, Dr. Failinger did not see any significant deepening or worsening of a meniscal tear. The MRI films simply did not reveal any areas that had worsened between August of 2018 and June of 2019. Accordingly, even if Claimant suffered a right knee injury on February 6, 2019, the lack of pathology reflected on the MRI's demonstrates that a right knee replacement is not warranted.

16. Claimant has demonstrated that it is more probably true than not that she suffered a right knee injury during the course and scope of her employment with Employer on February 6, 2019. On February 6, 2019 Claimant was walking from a carpeted to linoleum surface while performing her job duties. She slipped, fell to the ground and struck both knees on the floor. Although Claimant initially received treatment for a left knee contusion, she continued to experience right knee symptoms. Notably, Claimant had undergone two previous surgeries for right knee meniscal repair. A right knee MRI reflected a horizontal tear to the posterior horn with early to moderate medial compartment chondromalacia, an MCL sprain and a subtle bone bruise. Dr. Faulkner specified that the MRI revealed "evidence of previous partial medial meniscectomy with

likely new tear of the posterior horn of the body medial meniscus." Drs. Xenos and Carr determined that Claimant had some tearing in the medial meniscus and suffered a "work related injury which has caused a precipitation, aggravation, and acceleration of her condition." Finally, Dr. Failinger acknowledged that Claimant may have suffered an MCL sprain. He commented the MRI "indicate[d] a valgus force, which is consistent with [Claimant's] history notes that could cause some lateral compartment pathology." Accordingly, based on the overwhelming medical evidence from numerous providers, Claimant's February 6, 2019 work accident aggravated, accelerated or combined with her pre-existing right knee condition to produce a need for medical treatment.

17. Claimant has failed to establish that it is more probably true than not that the total right knee arthroplasty recommended by ATP Dr. Xenos is reasonable, necessary, and causally related to her February 6, 2019 injury. Drs. Xenos and Carr explained that Claimant had undergone two prior right knee scopes without significant relief. They noted that Claimant had some tearing in the medial meniscus and a repeat scope was unlikely to provide any relief. The physicians thus recommended a total right knee replacement.

18. In contrast, Dr. Failinger explained that there are two primary factors in determining whether a total knee replacement is appropriate. Specifically, there must be "significant pathology, in other words, high grade chondromalacia or arthritis of the compartment that is to be replaced" and "significant and recalcitrant pain symptoms." Dr. Failinger remarked that the March 28, 2019 right knee MRI did not reflect significant degenerative changes. He detailed that he did not see evidence of major or acute "chondral loss and no significant change in the chondral surface" on the March 28, 2019 MRI as compared to the June 21, 2018 MRI. Dr. Failinger thus determined that there was no objective evidence of new right knee pathology as a result of the February 6, 2019 work incident "to the articular cartilage, nor to the chondral surfaces, nor to any intraarticular structures." He concluded that the proposed right knee arthroplasty was not reasonable, necessary or causally related to the February 6, 2019 industrial incident.

19. The persuasive opinion of Dr. Failinger and a review of the medical records demonstrate that a total right knee replacement is not reasonable, necessary or related to Claimant's February 6, 2019 slip and fall at work. Although the bulk of the evidence reflects that Claimant suffered a right knee MCL sprain and possible meniscus tear as a result of the February 6, 2019 work incident, her accident did not likely cause right knee pathology in the form of significant changes to the chondral surface that would warrant a total knee replacement. The MRI films simply do not reveal any objective evidence of worsening or degeneration of the right knee between August of 2018 and June of 2019. Although Dr. Xenos recommended a total right knee replacement, his analysis omits sufficient explanation or justification for the procedure based on the February 6, 2019 work accident. Accordingly, the proposed right knee arthroplasty is not reasonable, necessary or causally related to the February 6, 2019 industrial incident. Claimant's request for a total right knee replacement is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered a right knee injury during the course and scope of her employment with Employer on February 6, 2019. On February 6, 2019 Claimant was walking from a carpeted to linoleum surface while performing her job duties. She slipped, fell to the ground and struck both knees on the floor. Although Claimant initially received treatment for a left knee contusion, she continued to experience right knee symptoms. Notably, Claimant had undergone two previous surgeries for right knee meniscal repair. A right knee MRI reflected a horizontal tear to the posterior horn with early to moderate medial compartment chondromalacia, an MCL sprain and a subtle bone bruise. Dr. Faulkner specified that the MRI revealed "evidence of previous partial medial meniscectomy with likely new tear of the posterior horn of the body medial meniscus." Drs. Xenos and Carr determined that Claimant had some tearing in the medial meniscus and suffered a "work related injury which has caused a precipitation, aggravation, and acceleration of her condition." Finally, Dr. Failinger acknowledged that Claimant may have suffered an MCL sprain. He commented the MRI "indicate[d] a valgus force, which is consistent with [Claimant's] history notes that could cause some lateral compartment pathology." Accordingly, based on the overwhelming medical evidence from numerous providers, Claimant's February 6, 2019 work accident aggravated, accelerated or combined with her pre-existing right knee condition to produce a need for medical treatment.

Medical Benefits

8. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

9. As found, Claimant has failed to establish by a preponderance of the evidence that the total right knee arthroplasty recommended by ATP Dr. Xenos is reasonable, necessary, and causally related to her February 6, 2019 injury. Drs. Xenos and Carr explained that Claimant had undergone two prior right knee scopes without significant relief. They noted that Claimant had some tearing in the medial meniscus and a repeat scope was unlikely to provide any relief. The physicians thus recommended a total right knee replacement.

10. As found, in contrast, Dr. Failinger explained that there are two primary factors in determining whether a total knee replacement is appropriate. Specifically, there must be "significant pathology, in other words, high grade chondromalacia or arthritis of the compartment that is to be replaced" and "significant and recalcitrant pain symptoms." Dr. Failinger remarked that the March 28, 2019 right knee MRI did not reflect significant degenerative changes. He detailed that he did not see evidence of major or acute "chondral loss and no significant change in the chondral surface" on the March 28, 2019 MRI as compared to the June 21, 2018 MRI. Dr. Failinger thus determined that there was no objective evidence of new right knee pathology as a result of the February 6, 2019 work incident "to the articular cartilage, nor to the chondral surfaces, nor to any intraarticular structures." He concluded that the proposed right knee arthroplasty was not reasonable, necessary or causally related to the February 6, 2019 industrial incident.

11. As found, the persuasive opinion of Dr. Failinger and a review of the medical records demonstrate that a total right knee replacement is not reasonable, necessary or related to Claimant's February 6, 2019 slip and fall at work. Although the bulk of the evidence reflects that Claimant suffered a right knee MCL sprain and possible meniscus tear as a result of the February 6, 2019 work incident, her accident did not likely cause right knee pathology in the form of significant changes to the chondral surface that would warrant a total knee replacement. The MRI films simply do not reveal any objective evidence of worsening or degeneration of the right knee between August of 2018 and June of 2019. Although Dr. Xenos recommended a total right knee replacement, his analysis omits sufficient explanation or justification for the procedure based on the February 6, 2019 work accident. Accordingly, the proposed right knee arthroplasty is not reasonable, necessary or causally related to the February 6, 2019 industrial incident. Claimant's request for a total right knee replacement is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

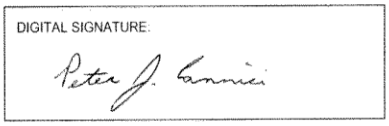
1. Claimant suffered a compensable right knee injury on February 6, 2019.

2. Claimant's request for a total right knee arthroplasty is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 17, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury to his left shoulder on May 6, 2019?

II. If this claim is compensable, has Claimant shown, by a preponderance of the evidence, that he is entitled to medical benefits which are reasonable, necessary, and related to his work injury - including, but not limited to, the shoulder surgery as recommended by Dr. Walden?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background and Hearing Testimony

1. Claimant was employed as a journeyman HVAC (heating, ventilation, and air conditioning) installer. He began work with Employer in April of 2019. At hearing, Claimant testified that on May 6, 2019, he and co-worker Peter Gonzales were working at a building under construction in Colorado Springs. The men, along with another person, were moving a heavy metal "gang box" in which tools and work materials are stored. They were moving the gang box from one floor of the building to another.

2. The gang box had handles on it. Claimant and Mr. Gonzales lifted one end of the gang box and Claimant felt a "strain" in his left shoulder. The men rolled the gang box towards the door of a room into which they intended to put the gang box. They had to pick up and slide one end of the gang box to position it properly in front of the doorway so it could be pushed into the room. When Claimant picked up and slid the end of the gang box, he experienced more pain in his shoulder.

3. Claimant testified "that's when I really felt it." He released the gang box and walked away from it. He told Pete Gonzales that "I messed up man – something happened." Claimant testified that as the day went on, his shoulder pain "got worse and worse." He described what felt like "a major strain, a sharp strain" in his left shoulder, but was able to continue working that day.

4. When Claimant awoke the next morning (May 7), his left shoulder was "locked up pretty good" and he had trouble moving his arm. He called off from work and

told Employer about his injury. He filled out an "Incident Investigation Report" for Employer on which he noted the injury occurred when "moving gang box" and "tryed [sic] to lift & slide gang box (feel pull)." (Ex. 8, pp. 101, 102). Claimant did not go in to work on May 8 due to the injury.

5. Claimant testified that between the time he was placed at MMI on September 19, 2018 for the October 26, 2017 injury, and when he was injured on May 6, 2019, his left shoulder had a "nagging" pain, that fluctuated depending on his work activities. He was able to perform full-duty work during that time. After the May 6, 2019 incident he experienced a "night and day" change in his pain level, and "it blew up, basically, and it hurt significantly worse." The location of the pain in the shoulder remained the same, but the pain was much worse. Claimant testified he experienced no other injuries to his left shoulder between October 26, 2017 and May 6, 2019.

6. Claimant admitted that in July 2019, he began employment with John Bowman, Inc. Claimant testified that the job duties were identical to his employment with Bruce Mechanical. Further, Claimant testified that on July 11, 2019, he executed an employment document with John Bowman in which he confirmed he could do the essential functions of the job, which included being able to lift materials weighing as much as 100 pounds, along with lifting materials from the ground to overhead. Claimant confirmed that the job application which he executed provided a space to list any accommodations he felt would be necessary for him to perform his job and he did not list any limitations related to his left shoulder. Additionally, Claimant testified that he has performed his full duties as an HVAC installer since July 2019.

7. Pete Gonzalez also testified at hearing. He testified that prior to the date of injury, he would go out of his way to assist Claimant as he was aware of his previous right shoulder injury. Additionally, Mr. Gonzales testified that prior to the May 2019 incident, the Claimant complained of left shoulder pain and as a result he would go out of his way to assist the Claimant with some work activities.

8. He is also a HVAC installer and was working with Claimant on May 6, 2019. He confirmed the men were moving a gang box that weighed approximately 200 pounds. He testified he was standing next to Claimant and that at one point, Claimant "kind of winced" and said something about his shoulder hurting. He testified that when they slid the gang across the floor, "that's when he really hurt his shoulder." He knew that because Claimant "stopped, and went off in pain, holding his shoulder."

9. Mr. Gonzalez and other workers finished placing the gang box where it needed to be. Afterwards, he saw Claimant at various times during the day, and Claimant was "either holding it or complaining about it" (referring to the left shoulder).

Treatment History

10. Claimant went to Emergicare on May 9, 2019. On the intake form, Claimant indicated he injured his left shoulder when "moving cart & gang box." (Ex. 2,

p. 42). Erik Ritch, M.D., reported the mechanism of injury as "Moving a large tool box, starting feeling pain in shoulder." *Id* at 40. On examination, Dr. Ritch reported, "…Left shoulder is tender over supraspinatus, anterior shoulder, and subacromial space. ROM limited to about 60 degrees abduction and 80 degrees flexion due to pain. Patient is able to fully internally rotate, external rotation is only 10-15 degrees...slightly decreased sensation in the left hand, especially in the 4th and 5th fingers although there is no weakness and sensation is not completely gone…" *Id* at 39.

11. An X-ray of the left shoulder was performed. (Ex. 5, p. 90). Dr. Ritch noted it was "abnormal: ac joint arthritis, no other significant abnormalities." Dr. Ritch diagnosed "strain of unspecified muscle, fascia, and tendon at shoulder and upper arm level, left arm, initial encounter." He administered an injection of toradol, recommended physical therapy and medications, and imposed work restrictions. (Ex. 2, p. 36).

12. On May 10, 2019 physical therapist Andrew Weiner reported, "…Patient is presenting with an acute non-specific shoulder injury which at this moment is much too guarded to establish a working diagnosis. DN [dry needling] today did not change symptoms. Passive pain suggests articular dysfunction in passive tissue however cannot rule out RTC [rotator cuff] involvement…" (Ex. 2, pp. 33-34)

13. On May 14, 2019, PT Weiner noted, "…Patient is currently a poor candidate for PT due to high levels of perceived pain and fear in moving the shoulder. Recommend further diagnostic testing to rule out major pathology." (Ex. 2, p. 32).

14. Dr. Erik Ritch, MD saw Claimant on May 17, 2019 and reported, "…Pt [patient] says he sees no improvement. Pt has not seen a specialist since last visit. Pt rates pain 7/10 today…No change in symptoms. He is working light duty. Still pain with any attempt to flex/abduct beyond 90 degrees. Discussion with PT indicates that they are not able to get much additional motion from him either actively or passively." (Ex. 2, p. 25). Dr. Ritch recommended a MRI of the left shoulder, with cessation of physical therapy in the meantime. He opined, "This is a work related injury." *Id* at 26.

15. An MRI was performed on May 30, 2019 (Ex. 5, pp. 88-89). This MRI was performed by Colorado Springs Imaging, and was interpreted by Frank Crnkovich, MD. The report notes that it was compared to the X-ray from May 9, 2019, but makes no reference to any prior MRIs.

16. This MRI report notes, under **"Technique":**

> MRI evaluation of the left shoulder was performed using the GE high field magnet. Images were generated in the oblique coronal and oblique sagittal planes utilizing PD and PD FS sequences. A PD fat-sat axial sequence was also performed. *Id* at 88.
>
> Pertinent **"Findings"** were noted:
>
> Rotator cuff: The *supraspinatus* tendon is scuffed, amorphous, and irregular. Anterior third margins, I believe, are *torn*, sequence 7

> images 9 and 10. Middle fibers to posterior fibers irregular and edematous, sequence 7 images 10 through 13. *Infraspinatus* shows tendinosis/tendinopathy change with intrasubstance fluid tracking along the myotendinous junction. Developing ganglion cyst formation. Teres minor tendon intact. Subscapularis shows moderate tendinosis change but remains intact. The area of tearing of the *supraspinatus* tendon complex, I believe, measures approximately 10 x 10 mm. Fluid in the subacromial and subdeltoid bursas. *Id* at 88. (emphasis added).
>
> The pertinent **"Impression"** makes no mention of the infraspinatus tendon, but notes:
>
> 1. Obliquely-oriented complex fraying and irregularity anterior insertional footplate of the *supraspinatus* tendon. Id at 89.

17. Claimant saw Dr. Ritch on June 15, 2019 and he reported, "…Pt states that pain is a little bit better. No PT…Shoulder is about the same as it has been. MRI shows possible linear tear of supraspinatus. Working with restrictions. Still not able to reach overhead…" (Ex. 2, p. 21). Dr. Ritch referred Claimant to orthopedic surgeon Dr. David Walden and noted "…He will look at your MRI and decide what the best next step is for you…" *Id.*

18. Respondents filed a Notice of Contest on June 18, 2019. (Ex. 7, p. 95).

19. Claimant returned to Dr. Ritch on October 4, 2019. The doctor reported, "…Since he was last seen, his shoulder has stayed about the same. He has mild pain at rest but any attempts at overhead movement cause significant pain in the shoulder. He has a new job and is *managing to do everything but overhead work."* (Ex. 2, p. 16) (emphasis added).

20. Dr. Ritch noted, "…We will give another referral for you to see Dr. Walden. Based on your symptoms I think you still need to see an orthopedist. I would not be surprised if he thinks you need surgery." Dr. Ritch again imposed work restrictions and again opined, "This is a work related injury." *Id* at 17.

21. Dr. Walden met with Claimant on October 17, 2019 and reported, "…He injured his left shoulder on May 6, 2018. He was sliding again [a gang] box into a room. It became stuck and he had to pick the box up. He felt as though there was a pull and pain in the shoulder. He felt as though he strained his shoulder at the time but progressively it became worse. He states he had progressive pain that day and trouble with use…Patient states a little over a year ago he was hit by a forklift in his left shoulder. It caused his opposite shoulder to strike and [an] I-beam. He saw Dr. Wally Larson for both shoulders he states. The opposite shoulder had a rotator cuff repair performed. He reports he was able to do his job before the most recent injury and that the injury at his job caused increasing pain and weakness in his left shoulder…" (Ex. 1, p. 4).

22. Dr. Walden reviewed the film and written report of the MRI performed May 30, 2019. He also reviewed a MRI which had already been performed March 24, 2019. (Ex. 1, p. 7). That MRI had been ordered by Anne Underhill, PA, in reference to a reported work injury from 10/26/2017, after Claimant had been struck on his left side by a forklift. It was performed at Penrad Imaging, was read by Nicholas Moore, MD. This report does not note which particular instrument was used.

23. Under **"Technique",** the report notes:

> MRI shoulder Lt [left] without contrast. Fat-saturated proton density in axial and coronal planes. Fat saturated T2 in sagittal and coronal planes. Spin-echo T1 in sagittal plane (Ex. 5, p. 91).
>
> Under **"Findings":**
>
> Muscle quality of the rotator cuff is normal. At the *infraspinatus* tendon insertion, there is *moderate-to-severe* focal tendinopathy with subtle superimposed interstitial tearing. No deep surfacing rotator cuff tendon tear is identified, however. There is *milder supraspinatus* insertional tendinopathy, involving bursal-sided fibers. No other rotator cuff tendon injury is identified.
>
> Under **"Impression",** pertinently:
>
> 2. Focal moderate-to-severe *infraspinatus* insertional tendinopathy with interstitial tearing. *Id* (emphasis added).

24. Dr. Walden then reported:

> …At this point, the patient is experiencing pain and weakness in his left shoulder and has a work up, including an MRI scan, consistent with a rotator cuff tear. *This generally represents a surgical problem.* I talked to the patient about treatment options including continued nonoperative options. He does not feel he is getting better. I would recommend an arthroscopic evaluation of the shoulder with a probable repair (arthroscopic) of the *supraspinatus* tendon. If approved, we will begin the scheduling process…" (Ex. 1, p. 4)(emphasis added).

Dr. Walden's physical exam revealed that Claimant had "full passive motion in the shoulder but has pain and altered mechanisms for full forward flexion and abduction. He has *pain and weakness* with resisted supraspinatus positioning as well as external rotation testing. None exists with resisted internal rotation testing or isolated biceps testing. (Ex. 1, p. 6) (emphasis added). Dr. Walden's diagnosis was "*traumatic complete tear* of left rotator cuff, initial encounter." *Id* at 4.

25. Dr. Walden submitted a request for authorization of left shoulder surgery on October 18, 2019. *Id* at 3. Insurer denied it on October 21, 2019. *Id* at 2.

IME and Deposition Testimony of Dr. Ciccone

26. Dr. William Ciccone performed an Independent Medical Exam ("IME") for Respondents on September 11, 2019. His appointment with Claimant lasted approximately 15 minutes and 20 seconds. (Ex. 6). Dr. Ciccone issued a report dated September 27, 2019. He stated, "…It is my opinion that the claimant did not suffer a work related injury to the left shoulder on 5/6/2019. *While there is no question that one could injure a shoulder lifting a heavy box,* in this situation, the claimant did not have a specific injury. He did not fall or impact the shoulder in any way, he simply had pain that he noticed later…" (Ex. A, p. 13)(emphasis added).

27. Dr. Ciccone testified by deposition on October 23, 2019. He is a practicing orthopedist, Level II accredited, and also evaluates patients with knee and shoulder injuries. He testified regarding the left shoulder MRI's of March 24, 2019 (pre-injury) and May 30, 2019 (post-injury). He opined the two MRI's were "essentially the same" (Depo, p. 21, ll 9-12). In his view there would have to be some sort of different pathology on the second MRI in order for there to be an "objective finding" of an injury. He opined, ultimately, that Claimant did not suffer a work injury on May 6, 2019.

28. Based upon his interview with Claimant, Dr. Ciccone understood the mechanism of injury to have been 'sliding' the box, but nonetheless, when asked if such action was consistent with Claimant's subjective symptoms, he stated "Potentially." (Depo., p 11, ll 17-21).

29. When asked, based upon his examination and his review of both MRIs, if Claimant had a rotator cuff tear, he replied:

> A. Well, *I would say it is really difficult to tell.* I mean, a lost of times with a balanced rotator cuff tear, you don't have a lot of weakness. You can have some pain with motion of the shoulder, but not necessarily a lot of weakness.
>
> So in acute traumatic rotator cuff pathology, people lose motion and have significant pain and symptoms directly from the event at the time. So *I think it is difficult to tell on his examination whether or not he actually has a full-thickness rotator cuff tear.*
>
> Q. Did you have the opportunity to review Dr. Walden's report dated October 17th, 2019?
>
> A. Yes.
>
> Q. Okay. And what was Dr. Walden's assessment?
>
> A. He felt that the claimant had signs and symptoms consistent with a rotator cuff tear.
>
> Q. And did he…express any opinion regarding the two MRI films?..

A ….He said on the May 30th, 2019 film, that it showed a rotator cuff tear about 10 by 10 millimeters and there was some degeneration within the other muscles of the rotator cuff as well.

Compared to the MRI in [sic] March 24th, notes subacromial bursitis with moderate to severe insertional tendinopathy of the rotator cuff.

Q. *Okay. So do you read that as he is saying the May 2019 MRI report shows a rotator cuff tear but the March [3/24/2019] MRI does not?*

A. *Yes.*

Q. Okay. And again, why do you disagree with Dr. Walden?

A. I think it is really hard to tell on the MRI scan. On my reading of the MRI, the tendon is so degenerative, it is difficult to tell. *He [Claimant] may have had a full-thickness rotator cuff tear on May 30th, 2019.* (Depo, pp.14-15)(emphasis added).

30. Dr. Ciccone agreed that those findings constitute a "surgical problem." Dr. Ciccone testified that surgery is reasonable, and that if Claimant were his patient he would perform the same procedure Dr. Walden recommended. He opined that Dr. Walden has a good reputation as an orthopedist. Dr. Ciccone testified about possible causes of the worsened left shoulder pain Claimant experienced on and after May 6, 2019; "I mean, it could be – it could be from continued degeneration of the tendon. *It could be from a minor strain at work.* I mean, it could – anything could have caused an aggravation of his pain." (Depo, p. 24, ll. 7-19) (emphasis added).

Previous Right Shoulder Injury / Complaints of Left

31. Claimant sustained a previous injury to his right shoulder in a forklift accident on October 26, 2017 (W.C. No. 5-062-726). He later claimed to have injured the left shoulder at the same time.

32. Claimant presented to Concentra on October 27, 2017 where David Kleberger, NP, noted, "…Reports on 10/26/17 he was on the 3rd floor of a building loading construction trash onto an elevated forklift. He says the forklift was not secured/leveled properly on the ground. The lift arm shifted suddenly when the trash load shifted. The lift arm hit him and knocked him into a beam where he hit his right shoulder and fell to the ground. C/o [complains of] moderate right shoulder pain…Still has 8/10 shoulder pain with movement." (Ex. B, p. 16). Mr. Kleberger diagnosed contusion and strain of the right shoulder. He prescribed medications, recommended physical therapy, and imposed work restrictions.

33. Dr. Wallace Larson performed surgery on December 21, 2017 consisting of; "Right shoulder arthroscopy, extensive debridement, subacromial decompression, arthroscopic rotator cuff repair, and open subpectoral biceps tenodesis." (Ex. C, p. 21).

34. On January 10, 2018, Claimant returned to the authorized treating physician. On that date, "Today patient is stating that his left shoulder also now hurts. Patient claims left shoulder was injured along with the right shoulder on the date of injury but the right was so painful that he didn't think much about the left." The report indicates that Claimant denied any previous left shoulder injuries. (Ex. D).

35. On April 26, 2018, Claimant presented to Dr. Larson, who reported, "The patient reports that he injured his left shoulder at the time he was hit by a forklift and has been having some left shoulder pain." *(Ex. F)*

36. Dr. Larson followed-up with Claimant for the right shoulder on May 29, 2018 and noted, "…I have told them that I anticipate he probably will need some left shoulder surgery but not until the right shoulder is more completely recovered." (Ex. H, p. 38). Dr. Larson did not perform any causation analysis in his reports regarding Claimant's left shoulder, nor did he at any time indicate what type of surgery he might eventually recommend for Claimant's left shoulder.

37. On June 5, 2018, Claimant returned to Dr. Neubauer. Dr. Neubauer noted, "The patient continues to complain of some left shoulder pain and is currently doing home exercises for his left shoulder." (Ex. I)

38. On July 3, 2018, Claimant returned to Dr. Neubauer continuing to complain of "bilateral" shoulder pain. The pain diagram filled out by Claimant indicated left shoulder symptoms. (Ex. J)

39. John Burris, M.D., performed an IME for Respondents in the other case on July 10, 2018. Dr. Burris opined Claimant had "…nonspecific myofascial left shoulder pain." (Ex. 11, p. 141). He opined it was not related to the work injury because; "…If the left shoulder were involved with the original 10/26/2017 workplace event, subjective complaints and objective findings would have existed within days of the event. Mr. Gallegos' left shoulder complaints cannot, within a reasonable degree of medical probability, be causally associated with the 10/26/2017 workplace event because 1) no injury was identified to the left shoulder at the initial ED visit on 10/26/17, including no pain reported and no pain upon palpation, 2) on 11/21/17 (1 month after the workplace event) the orthopedic surgeon, Dr. Larson, identified a normal examination of the left shoulder with full range of motion and no tenderness, and 3) the first notation of subjective left shoulder complaints are recorded on the 1/10/18 clinic visit (2-1/2 months after the workplace event." (Ex. 11, p. 142). Dr. Burris concluded, "…As stated above, Mr. Gallegos's left shoulder complaints cannot be causally related to the 10/26/17 workplace event. Therefore, no treatment of his left shoulder is reasonable or necessary through the workers' compensation system." *Id.*

40. On July 30, 2018, (after Dr. Burris issued his report), Dr. Larson reported, "…I have explained to him that he probably does meet the criteria for maximum medical improvement [for his right shoulder]. I have had a lengthy discussion with the patient

about this issue." (Ex. L, p. 61). Dr. Larson made no mention about any surgery to the left shoulder, and released Claimant from care.

41. Thomas Centi, M.D., at CCOM placed Claimant at MMI on September 19, 2018. He imposed no permanent work restrictions for either shoulder. (Ex. M, p. 67). On October 22, 2018, he issued a 14% upper extremity rating for the right shoulder injury. He confirmed no permanent restrictions were indicated. (Ex. N, p. 69).

42. Anjmun Sharma, M.D., performed a DIME on January 18, 2019 for the 10/26/2017 injury. Claimant requested Dr. Sharma address "left shoulder and right shoulder." (Ex. 10, p. 110). Dr. Sharma agreed Claimant had reached MMI, and he issued a 13% extremity rating for the right shoulder. (Ex. 10, pp. 109, 125).

43. Concerning the left shoulder, Dr. Sharma reported, "…I noticed that the patient's left shoulder had excellent range of motion. I do not suspect any internal derangement on the examination…The patient wanted to know whether he would require any further medical care for his left shoulder. I advised him that he would likely not need surgery on the left shoulder. It is a very stable shoulder and that from a personal perspective, talking to other patients and reviewing the medical notes that this would not be something that would be necessary to repair, especially with an excellent range of motion that is documented…I concur with the reports that the injured worker likely did not injure his shoulder on the date of the injury. I do not believe that he sustained an injury…" *Id* at 125, 126. Dr. Sharma's diagnoses included, "Left Shoulder NOT CLAIM RELATED." *Id* at 126 (emphasis in original). Respondents in W.C. No. 5-062-726 filed a FAL on April 2, 2019, admitting to the right shoulder impairment rating per Dr. Sharma. (Ex. 9, p. 107).

44. Claimant saw orthopedic surgeon Dr. Wiley Jinkins on February 25, 2019 "…for an evaluation and consultation regarding both shoulders." (Ex. 3, p. 54). Dr. Jinkins had previously treated Claimant for bilateral knee problems. Dr. Jinkins took a history of the shoulder injuries, and reported that; "…Physical examination of both shoulders revealed all testing for impingement to be positive with a positive Neer sign, Hawkins's sign, O'Brien's sign and 'empty can test.' There was tenderness in the area of both trapezii. His symptoms were markedly reproduced with forced abduction against resistance…" *Id.* X-rays revealed only "some very mild degenerative changes." Dr. Jinkins diagnosed "Industrial injury to both shoulders, status post right shoulder arthroscopic rotator cuff repair with persistent symptoms and symptoms of impingement on the left." *Id* (emphasis added).

45. Claimant was seen by Anne Underhill, PA, in the office of his personal physician on February 28, 2019. Ms. Underhill reported, "…History [of] trauma when he was hit by a forklift 10/2017 from the left side. His right shoulder took the initial insult and as a result he needed rotator cuff repair surgery. Since that time he has increasing chronic dull left shoulder pain with and without movement. He does heavy manual labor for work and has noticed he has pain with lifting, raising the left arm above his head and

when he lays on the left shoulder." (Ex. 4, p. 70). Ms. Underhill ordered a MRI of the left shoulder, and it was performed on March 24, 2019. (Ex. 5, p. 91) (details from this same MRI are referenced in Findings of Fact # 22, 23, above).

46. Dr. Burris issued a supplemental report on April 3, 2019 after reviewing the MRI performed on March 24, 2019. He reported the MRI "…is consistent with impingement syndrome secondary to degenerative changes of the acromioclavicular joint. This condition occurs absent trauma and is a normal degenerative process. No acute abnormalities are identified. The 3/24/19 MRI of the left shoulder supports the opinions provided in my July 10, 2018 IME which are unchanged. Specifically, Mr. Gallegos' left shoulder complaints cannot the [sic] causally associated with the 10/26/17 workplace event." (Ex. 11, p. 130).

47. Claimant returned to Dr. Jinkins on April 15, 2019. He again reviewed the mechanism of injury as well as the recent MRI. Dr. Jinkins diagnosed "Left shoulder post-traumatic subacromial impingement syndrome…with MRI evidence of some interstitial tearing of the supraspinatus with a moderate to severe tendinopathy." (Ex. 3, p. 53). Dr. Jinkins injected the left shoulder and afterwards noted, "…His strength appeared to be improved and provocative symptoms for impingement appeared to be much less pronounced. *At this point in time, I still feel that <u>symptoms on the left</u> can be treated appropriately conservatively…" Id.* (emphasis added).

48. Dr. Jinkins wrote to Claimant's attorney on May 13, 2019, although he did not see Claimant on that date. Dr. Jinkins noted, "…*At this point in time, I would recommend vigorous ongoing conservative management.* He [Claimant] did note fairly significant improvement following the initial corticosteroid injection…which was accomplished on April 15, 2019." (Ex. 3, p. 50)(emphasis added). Dr. Jinkins made no mention of the 5/6/2019 injury in this letter, suggesting he might not yet known of it.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case

must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. In this instance, the ALJ finds Pete Gonzalez to have testified sincerely, and to the best of his abilities. He openly acknowledged Claimant's reported issues with his left shoulder even prior to the incident at work on May 6, 2019. Claimant supplied sufficiently consistent versions of the mechanism of injury, and of his symptoms he experienced, to match his objective findings by imaging and physical examinations. While Claimant no doubt "fudged" on his most recent job application regarding his ability to perform the work involved, he did so for an obvious reason; to wit: to get the job. From the records, it appears he has been managing his condition overall, but with issues with working overhead.

E. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As will be addressed forthwith, the ALJ finds that the medical experts involved have each provided medical opinions to the best of their abilities; thus their opinions will be evaluated in terms of persuasiveness, as opposed to credibility per se.

F. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Compensability of Left Shoulder Injury

G. It is the claimant's burden to prove a causal relationship between the industrial injury and the medical condition for which he seeks benefits. Section 8-43-301, C.R.S. 2001; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). However, the claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which he seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley* , 165 Colo. 586, 441 P.2d 3 (1968).

H. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an injury arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

I. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988).

J. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

K. The "in the course of" requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

L. This injury occurred within the time and place limits of Claimant's employment relationship with Employer and during an activity, specifically moving a heavy "gang box" which was connected to his duties and position as an HVAC technician. However, the question remains whether Claimant's condition and need for surgery resulted from his work-related activities on May 6, 2019, or rather was the result of his pre-existing left shoulder condition.

M. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). A claimant may be compensated if a work-related injury "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease to "produce the disability for which workers' compensation is sought." *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Indus. Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986)("[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.")

N. Dr. Burris opined Claimant's left shoulder complaints could not be causally related to the earlier, October 26, 2017 accident. DIME Dr. Sharma unequivocally stated "…I do not believe that he sustained an injury…" to the left shoulder. Claimant was released with no permanent restrictions for either shoulder when he was placed at MMI by Dr. Centi on September 19, 2018. Dr. Larson in the previous case made a vague reference on May 29, 2018 to possible left shoulder surgery, but pursued it no further and released Claimant from his care on July 30, 2018. No physician has made a definitive surgical recommendation until after Claimant was injured on May 6, 2019.

O. Initially, Dr. Ciccone opined that the MRIs from March 24, 2019 ("March MRI") and May 30, 2019 ("May MRI") were "essentially the same." However, the ALJ notes that they were ordered by different providers, were performed by different imaging services (possibly on different instruments), and were interpreted by different radiologists. The testing protocols used were similar, but not identical. Eventually Dr. Ciccone acknowledged that it was "difficult to tell" if both MRIs showed a torn rotator cuff or not, in addition to the degenerative findings. Additionally, the narrative emphasis of the March MRI on to the *infraspinatus* tendon insertion, with the *supraspinatus* insertional tendinopathy being "milder" by comparison. By the May MRI, there was ['believed to be'] a 10 x 10 mm *tear* of the *supraspinatus* tendon, and the *infraspinatus* received far less emphasis. The ALJ simply not concur that these MRIs are 'essentially the same'. Nor did Dr. Walden appear to concur on this point.

P. In fact, Dr. Ciccone, later acknowledged that there might indeed be a full-thickness rotator cuff tear in the May MRI, that it could have occurred from even a *minor* strain at work, and that the surgery proposed by Dr. Walden under these circumstances would be "reasonable". In the end - and to his credit - Dr. Ciccone simply could not be certain of the causation of Claimant's reported symptoms. Shortly before Claimant's May 6, 2019 injury, Dr. Jinkins felt that Claimant's left shoulder symptoms could best be managed conservatively. This all changed when Claimant tried to lift the gang box, which greatly intensified his symptoms, pre-existing though they were, to become sufficiently disabling to warrant a finding of compensability.

Q. The ALJ concludes, by a preponderance of the evidence, that Claimant aggravated his left shoulder condition on May 6, 2019, resulting in the disability for which he seeks workers' compensation benefits. Claimant has proved by a preponderance of the evidence that his left shoulder injury of May 6, 2019 is compensable.

Medical Benefits

R. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

S. As noted above, on October 17, 2019 Dr. Walden diagnosed a "traumatic complete tear of left rotator cuff" and the following day he requested authorization for left shoulder arthroscopic decompression and rotator cuff repair. The ALJ concludes, based upon the facts as found and conclusions drawn, that Claimant has proven, by a preponderance of the evidence, that the left shoulder surgery recommended by Dr. Walden is reasonable and necessary to cure or relieve the effects of Claimant's compensable May 6, 2019 work injury.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury on May 6, 2019.

2. Respondents shall pay for all reasonable, necessary, and related medical benefits in connection therewith, including, but not limited to, the shoulder surgery as recommended by Dr. Walden on October 18, 2019.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 18, 2019

2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Has Claimant, by clear and convincing evidence, overcome the DIME opinion of Dr. Sharma on the issue of MMI for an alleged work injury to his *left* shoulder?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was hired by Employer as an HVAC installer on February 1, 2017. Claimant injured his right shoulder while picking up trash on a jobsite on October 26, 2017. On that date, Claimant and co-workers, including Pete Gonzalez, were working the third floor of a building under construction. They were tasked with gathering construction trash which was then placed into a makeshift "bin" on a forklift that reached from the ground level to the third floor. The forklift operator would then lower the bin to ground where it was emptied. The process would be repeated until the task was finished.

2. At hearing, Claimant testified he could see the forklift operator from his position on the third floor. He was giving hand-signals to the forklift operator to direct him to place the bin in the appropriate place. He signaled the operator to stop the movement of the forklift, but it continued to move. This was apparently due to uneven ground that caused the forklift to become unbalanced and it shifted. When it shifted, part of the forklift struck Claimant's left shoulder.

3. Claimant testified that he saw it coming right before it hit him and had only a "split second" to try and turn away from it. He further testified that the force of the impact knocked him into a steel I-beam, about five feet away. Claimant's right shoulder struck an edge of the I-beam and he fell to the ground. Pete Gonzalez was standing nearby and witnessed the event.

4. Claimant went to the emergency room at Parker Adventist Hospital in Parker, where, "He complains *only of right shoulder pain* . . . ." (emphasis added) Claimant had right shoulder pain, but, "No pain in his other extremities." The examiner wrote, "There is no tenderness of his left upper extremity . . . . " "His only complaint is that of the right shoulder pain . . . ." (Ex. C, pp. 34-35)

5. Claimant underwent a physical examination in the emergency room. His physical exam revealed tenderness in his right shoulder. His left shoulder was also examined at the emergency room. The examiner noted, "There is *no tenderness* of his left upper extremity . . . ." (emphasis added)

6. A right shoulder x-ray showed no fracture or other acute injury. Claimant was given IV Dilaudid, a prescription for Vicodin, and a sling. He was discharged that same day with instructions to see his workers' compensation provider for additional care. Respondents admitted liability for Claimant's right shoulder injury, and he returned to work with restrictions accommodated by employer.

7. Claimant selected Concentra as his designated provider for his treatment in this claim, and saw David Kleberger, N.P. on October 27, 2017. At this appointment, Claimant said he injured his right shoulder. He did not voice any injury, to, complaints about, or symptoms in, his left shoulder. In his Patient Information form he completed at this visit, Claimant wrote: "Right shoulder is injured".

8. In the diagram of his body in that form, when asked to circle the areas where he was injured, Claimant circled only his right shoulder. The provider's hand written note on that same form also stated Claimant only had right shoulder pain. Claimant, when asked to check which side of his body was injured, had the option of just the right side, just the left side, or both. Claimant checked the right side only. (Ex. F, p. 82)

9. Mr. Kleberger's physical exam on October 27, 2017, revealed no abnormalities to his left arm. Claimant's diagnoses were right shoulder strain and right shoulder contusion. Claimant had his first physical therapy session on October 27, 2017, and he did not mention any left shoulder symptoms at that therapy visit. His complaint was, Global R[ight] shoulder pain." (Ex. F, pp. 87-90). The therapist observed "protective cradling of arm," and noted, "Appearance/Palpation comment: Unable to assess due to pain," and "Deferred patient unwilling to perform an AROM [active range of motion]." She reported, "…Patient presents with severe guarding of R UE [right upper extremity]. Unable to perform pendulum ex due to pain with weight of arm dangling." *Id.*

10. Claimant had an unscheduled appointment at Concentra on November 1, 2017, complaining of severe right shoulder pain despite his Vicodin, and use of a sling to immobilize his right shoulder. Dr. Randall Jones saw Claimant at this visit. He said no more narcotic pain medication would be provided. Claimant made no mention of symptoms or any injury to his left shoulder. All provocative tests for a right shoulder rotator cuff tear were positive, and Dr. Jones referred Claimant for an MRI for a possible rotator cuff tear. Dr. Jones also referred Claimant to Wallace Larson, M.D., an orthopedic surgeon, for an evaluation.

11. MRI findings of the right shoulder on November 7, 2017 included "full-thickness rotator cuff tear with retraction and severe adjacent tendinosis." (Ex. 6, p. 179).

12. Claimant told Dr. Larson at his first appointment on November 21, 2017, that physical therapy worsened this pain. Claimant did not voice any complaints of left shoulder symptoms to Dr. Larson. Despite the lack of left-sided complaint, Dr. Larson also examined claimant's left shoulder. Dr. Larson wrote: *The left shoulder has no tenderness. Range of motion is normal*. *There is no instability. Motor and sensory examination are intact. No evidence of muscle atrophy.* (Ex. E, p. 45) (emphasis added).

13. Dr. Larson requested authorization for a right shoulder arthroscopy, decompression, rotator cuff repair and biceps tenodesis on November 27, 2017. That surgery was approved by Pinnacol Assurance, and occurred December 21, 2017, without complication.

14. While at Concentra, Claimant also completed intake/questionnaire forms asking him to, "Mark the areas on your body where you feel the described sensations. Use the appropriate symbol or symptoms. Mark areas of radiation. Include all affected areas." Claimant made follow-up up visits to Concentra on Nov. 1, Nov. 3, Nov. 8, Nov. 10, Nov. 29, and Dec. 3, 2017. Claimant's pain levels at these visits was consistently described as a six on a 10-point pain scale. Claimant was able to fully discuss his symptoms, advocate for treatment, obtain treatment, and work within restrictions during these weeks after the claim's injury. At no point was his left shoulder mentioned.

15. On November 28, 2017, the claim representative assigned to this claim at Pinnacol Assurance, Ms. Marilyn Anderson, spoke with Claimant regarding his injury and his claim. At no time during that approximately 10-minute conversation, (Ex. K), did Claimant claim that he injured his left shoulder, or even mention his left shoulder. Claimant had ample opportunity to do so during this conversation. Claimant's statements heard in this telephone conversation also demonstrate that he was a forceful advocate when he felt he was not being adequately treated, and the ALJ so finds.

16. Dr. Larson performed this preapproved surgery on December 21, 2017 consisting of; "Right shoulder arthroscopy, extensive debridement, subacromial decompression, arthroscopic rotator cuff repair, and open subpectoral biceps tenodesis." (Ex. 3, pp. 127-128).

17. Claimant returned to Concentra on January 10, 2018 and on a pain diagram someone wrote, "*Left shoulder is having pain*. R shoulder still has pain. 12/21/17 surgery." However, the left shoulder is not actually marked on this diagram. (Ex. 2, p. 74). Under History of Present Illness, PA Scofield noted:

> 01/10/18 GS: recheck right shoulder- patient had RTC repair on 12/21/17. Has ortho f/u 02/01/18. Patient in sling today. Patient was fired from this employer and no longer works there. *Today patient is stating that his left shoulder also now hurts.* Patient claims left shoulder was *injured* along with the right shoulder *on the date of injury* but the right shoulder was so painful that he didn't think much about the left. Right shoulder today is 3/10 and left is 2/10. No prior left shoulder injuries." (Ex. 2, p. 70)(emphasis added).

18. At a follow-up appointment on February 1, 2018 Dr. Larson reported, "…Status post repair of very large rotator cuff tear. The patient tolerates early range of motion quite well. This time he may remove the abduction brace but retained the arm sling portion. He was referred to therapy for passive range of motion but no active or strengthening exercises." (Ex. 3, p. 122).

19. Claimant began physical therapy on February 2, 2018 and the therapist reported palpation yielded only "mild tenderness operated shoulder." (Ex. 7, p. 192).

20. Claimant requested a change of provider, stating that it was too difficult for him to drive from his home in Colorado Springs to the Concentra office in Centennial to continue treatment there. Claimant saw Jay Neubauer, M.D. at that office on February 6, 2018. Claimant said his primary problem was pain in his right shoulder that was slightly improving. Claimant had resumed physical therapy on February 2, 2018. Claimant did not voice any left shoulder symptoms at this appointment. When Claimant returned to Dr. Neubauer on February 13, 2018, he said he was slightly better. He was doing passive range of motion in physical therapy. Dr. Neubauer checked the physician's database for opioid medications, and saw multiple prescriptions having been written by multiple providers. He said he therefore would not prescribe narcotics. There was no mention of left shoulder pain in the report from this visit. At Claimant's next appointment, he said he was going quite well. Claimant had full neck range of motion. There was no mention of left shoulder symptoms at this appointment, or at Claimant's next appointment on March 15, 2018. Pain diagrams were only marked on the right shoulder. (Ex. F, pp. 131-145).

21. Dr. Larson met with Claimant on March 29, 2018 and reported, "…the patient has a significant increase in his range of motion but still has some pain. I have explained to him that this is quite normal. Clinically he appears to be definitely improving…The patient may discontinue the arm sling and continue to work on range of motion exercises." Dr. Larson reiterated that "The patient did have a very large rotator cuff tear." (Ex. 3, p. 116)

22. On April 5, 2018 Dr. Neubauer reported, "…He continues to complain of *left shoulder pain* which he states has been present since the beginning as he was struck in the *left* shoulder. He states the *left* shoulder has been largely ignored. His pain level is a 4." (Ex. 1, p. 41) (emphasis added). Dr. Neubauer's diagnoses included "Contusion of *left* shoulder, initial encounter." Dr. Neubauer indicated, "The cause of this problem is related to work activities." *Id* at 42

23. On April 10, 2018 the physical therapist noted, "…pt states, 3/10, CCOM says, might add some stretches for the L side." On April 12 the therapist noted, "…pt states, R shoulder 3/10 and same with L shoulder." On April 17: "…Some gains, but pt's very disappointed [secondary to] no authorization for PT on L shoulder." (Ex. 7, p. 188).

24. Dr. Larson saw Claimant on April 26, 2018 and noted, "…The patient reports that he injured his *left shoulder at the same time that he was hit by a forklift and has been having some left shoulder pain*. At this time he is receiving physical therapy for his right shoulder and reports some improvement in range of motion and some decrease in pain but relatively slow progress." (Ex. 3, p. 13) (emphasis added).

25. At a follow-up, Claimant circled both shoulders in a CCOM pain diagram on April 30, 2018. (Ex. 1, p. 39).

26. On May 21, 2018 Dr. Neubauer reported, "…The patient continues to complain of some *left shoulder pain* and is currently doing home exercises for his *left shoulder* which he received for his right shoulder." (Ex. 1, p. 31) (emphasis added).

27. Dr. Larson saw Claimant on May 29, 2018 and noted, "…He does report *left shoulder pain* and apparently is in the process of submitting this to Workers' Compensation. I have told them that I anticipate he probably will need some *left shoulder surgery* but not until the right shoulder is more completely recovered. I will plan to recheck him in one month." (Ex. 3, p. 110) (emphasis added). Dr. Larson did himself not opine that Claimant's *left* shoulder complaints were work-related.

28. On June 5, 2018 Dr. Neubauer again reported, "…The patient continues to complain of some *left shoulder pain* and is currently doing home exercises for his *left shoulder." (*Ex. 1, p. 26) (emphasis added).

29. On June 14, 2018 a therapist noted, "…pt cont to have left shoulder pain-waiting for court date to try to add left shoulder." (Ex. 7, p. 185).

30. On July 3, 2018 Dr. Neubauer reported, "…He continues to complain of 2-3/10 aching bilateral shoulder pain…He had follow up with Dr. Larson last week and expressed frustration regarding his recovery. Dr. Larsen informed him that he had a significant tear that will take considerable time to rehabilitate…" (Ex. 1, p. 23).

31. Dr. Larson met with Claimant on July 30, 2018 and reported, "…it does appear that the patient is fairly stable in terms of range of motion and I have explained to him that he probably does meet the criteria for maximum medical improvement…The patient does explain to me that in the end of September he has a workers' compensation hearing regarding his *left shoulder*. *He is reporting* this as being work-related." (Ex. 3, p. 103) (emphasis added).

32. From the available record, it appears Thomas Centi, M.D., took over for Dr. Neubauer at CCOM effective August 6, 2018. He followed Claimant until September 19, 2018, at which time he placed him at MMI. (Ex. 1, p. 11). On October 22, 2018, he issued a 14% upper extremity for the right shoulder injury. Dr. Centi did not believe Claimant had any permanent physical restrictions, and that he required no maintenance medical benefits. Dr. Centi did not find or document any injury or impairment to Claimant's left shoulder. . (Ex. 1, pp. 8-10).

33. Respondents filed a FAL consistent with Dr. Centi's opinions on October 29, 2018. (Ex. 11, p. 241).

34. Claimant timely objected to the October 29, 2018, Final Admission of Liability, and requested a Division IME. Dr. Anjmun Sharma performed the Division IME on January 18, 2019. Dr. Sharma noted the lack of medical documentation of any left shoulder injury at the time of and following after the injurious event. Dr. Sharma examined both of Claimant's shoulders, and noted in his report:

> January 18, 2019……The patient is seen and examined for his division independent medical examination of the right shoulder and left shoulder……*The patient's left shoulder was also examined in comparison to the right shoulder. I noticed that the patient's left shoulder had excellent range of motion. I do not suspect any internal derangement on the examination. More importantly, did have pain in his left shoulder* but the right shoulder was the primary pain generator because this is where the primary complaint originating from [sic]. The patient wanted to know whether he would require any further medical care for his left shoulder. I advised him he would likely not need surgery for the left shoulder. *It is a very stable shoulder* and that from a personal perspective, talking to other patients and reviewing the medical notes that this would not be something that would not be necessary to repair, especially with an excellent range of motion that is documented….(Ex. B, p. 30) (emphasis added).

35. Under IMPAIRIMENT RATING, Dr. Sharma considered claimant's allegation that he also injured his left shoulder in this claim's October 26, 2018, injury. He found Claimant had a 13% right upper extremity impairment for this claim's injury, and that Claimant reached MMI on October 22, 2018. He said Claimant did not require maintenance care, and had no restrictions. He wrote:

> Finally, the patient had a left shoulder complaint of pain. It is in the record that the patient reported pain well after the date of injury in January 2019. I concur with the reports that *the injured worker likely did not injure his [left] shoulder on the date of the injury…*Certainly I could understand that there was a direct blow to the opposite shoulder but in this case, *it does appear that at the brunt of the injury occurred to the right shoulder.* More importantly, during the examination, which I completed with the patient in the examination room, I did note that *the patient's left shoulder range of motion was actually better, improved than the right side. Overall, the left shoulder did not appear to have any significant pathology based upon my clinical exam;* otherwise I do not suspect the labral tear or rotator cuff derangement. The patient had no crepitus in the shoulder as well….(Ex. B, p. 31) (emphasis added).

36. The parties' attorneys met with the DIME on March 15, 2019. Dr. Sharma issued an addendum to his January 18, 2019, report, stating Claimant reached MMI on September 18, 2018. He also once again addressed Claimant's left shoulder's relatedness to this claim's injury, reaching essentially the same conclusion.

37. Respondents had also obtained an IME with John Burris, M.D. Dr. Burris saw Claimant on July 10, 2018, and after reviewing and summarizing claimant's medical records and performing a physical exam, concluded Claimant's left shoulder symptoms diagnosed as "nonspecific myofascial left shoulder pain," were not related to claimant's injury covered by this claim. In response to a query from Respondents on the delay in reporting the left shoulder, he replied:

> If the left shoulder were involved with the original 10/26/2017 workplace event, subjective complaints and objective findings would have existed within days of the event. Mr. Gallegos' left shoulder complaints cannot, within a reasonable degree of medical probability, be causally associated with the 10/26/2017 workplace event because 1) no injury was identified to the left shoulder at the initial ED visit on 10/26/2017, including no pain and no pain upon palpation, 2) on 11/21.2017 (1 month after the workplace event) the orthopedic surgeon, Dr. Larson, identified a normal examination of the left shoulder with full range of motion and no tenderness, and 3) the first notation of subjective left shoulder complaints are recorded on the 1/10/2018 clinic visit (2-1/2 months after the workplace event) (Ex. A, p. 11).

38. When asked what could explain the reported onset of symptoms on 1/10/2018, Dr. Burris explained:

> Shoulder pain is one of the most common physical complaints seen in our society. The MRI for Mr. Gallegos' right shoulder injury displayed elements of impingement morphology and degenerative changes. Those conditions occur absent trauma, are usually symmetrical, and are most likely also present in the left shoulder. Impingement syndrome is an extremely common shoulder disorder and is usually a combination of anatomical and functional factors. Mr. Gallegos' nonspecific left shoulder complaints are likely some combination of these common factors, given the fact that these complaints cannot be causally related to the workplace event, as described above. *Id* at 11.

39. Dr. Burris issued an an addendum report concerning this claim's dispute. On April 3, 2019, he reviewed an MRI of claimant's left shoulder. Dr. Burris stated that left shoulder MRI:

> The provided MRI of the left shoulder on 3/24/2019 is consistent with impingement syndrome secondary to degenerative changes of the acromioclavicular joint. *This condition occurs absent trauma and is a normal degenerative process.* No acute abnormalities are identified. (Ex. A, p. 15) (emphasis added).

40. Claimant saw orthopedic surgeon Dr. Wiley Jinkins on February 25, 2019 "…for an evaluation and consultation regarding both shoulders." (Ex. 4, p. 14). Dr. Jinkins previously treated Claimant for bilateral knee problems. Dr. Jinkins took a history of the shoulder injuries, and reported that; "…Physical examination of both shoulders revealed all testing for impingement to be positive with a positive Neer sign, Hawkins's sign, O'Brien's sign and 'empty can test.' There was tenderness in the area of both trapezii. His symptoms were markedly reproduced with forced abduction against resistance…" X-rays revealed only "some very mild degenerative changes." Dr. Jinkins diagnosed "Industrial injury to both shoulders, status post right shoulder arthroscopic rotator cuff repair with persistent symptoms and symptoms of impingement on the left." *Id.*

41. Claimant was seen by Anne Underhill, PA, in the office of his personal physician on February 28, 2019. Ms. Underhill reported, "…History [of] trauma when he was hit by a forklift 10/2017 from the left side. His right shoulder took the initial insult and as a result he need rotator cuff repair surgery. Since that time he has increasing chronic dull left shoulder pain with and without movement. He does heavy manual labor for work and has noticed he has pain with lifting, raising the left arm above his head and when he lays on the left shoulder." (Ex. 5, p. 156). Ms. Underhill ordered a MRI of the left shoulder, which was performed on March 24, 2019. (Ex. 6, p. 176).

42. Claimant was seen by Mailin Celestine, NP, on April 3, 2019 for "chronic pain of both shoulders." (Ex. 5, p. 143). She reported, "…Left shoulder MRI was completed. Chronic pain since 2017. Injury after being hit by forklift. Limited ROM. Referral to ortho will be made after MRI is completed. Reviewed MRI of left shoulder with patient. MRI shows subacromial-subdeltoid bursitis, moderate to severe infraspinatus interstitial tendinopathy with interstitial tearing and advanced acromioclavicular tearing." *Id* at 145. On examination of the left shoulder, Ms. Celestine noted, "...He exhibits decreased range of motion, pain and decreased strength." *Id* at 147.

43. Claimant returned to Dr. Jinkins on April 15, 2019. He again reviewed the reported mechanism of injury, as well as the recent MRI. Positive findings were again noted on examination of the left shoulder. Dr. Jinkins diagnosed *"Left shoulder post-traumatic subacromial impingement syndrome*…with MRI evidence of some interstitial tearing of the supraspinatus with a moderate to severe tendinopathy." (Ex. 4, p. 139). Dr. Jinkins injected the left shoulder and afterwards noted, "…His strength appeared to be improved and provocative symptoms for impingement appeared to be much less pronounced. At this point in time, *I still feel that symptoms on the left can be treated appropriately conservatively…" Id* at 139 (emphasis added).

44. On May 13, 2019, Dr. Jinkins confirmed the injection provided "…fairly significant transient improvement." (Ex. 4, p. 136). He reviewed the history of the case and noted that initially, "…Mr. Gallegos indicated that he had a significant problem with the right shoulder with the right shoulder pain significantly overshadowing the left, to the point that he was actually not having nearly as much problem initially on the left than he was on the right. He did undergo a surgical repair on the right, as noted above. His right arm was immobilized following the surgical procedure and he had to accomplish essentially all activities of daily living with the left arm. It was during this time that his symptoms did significantly increase." *Id* at 135.

45. Dr. Jinkins elaborated; "…Once again, the problem on the right was at the time of the original injury much more severe and did significantly overshadow the problems he was having on the left. He has recovered significantly following his right shoulder surgery done by Dr. Larson and it was during the period following the right shoulder surgery that the left became more pronounced. His MRI findings are completely consistent with his present symptomatology. It is not unusual for an individual, who has multiple injuries, to 'fixate' on the most serious one initially, to the point that the other problems are not notably as pronounced initially…**My opinion** *is that his present left shoulder problem is a direct result of the initial injury of October 26, 2017*…At this point

in time, I would recommend vigorous ongoing conservative management. (emphasis added).

46. Dr. Jinkins did note fairly significant improvement following the initial corticosteroid injection, as noted above, which was accomplished on April 15, 2019. As far as his MMI status, I do not feel he is at MMI in regard to the left shoulder, insomuch that it is presently being addressed and with vigorous ongoing rehabilitation and conservative management, hopefully symptoms will improve, to the point that surgery on the left may not be necessary, however, he is still significantly symptomatic…" (Ex. 4, p. 136). Dr. Jinkins confirmed that "…it is *my opinion* that 100% of his present symptoms are directly related" to the October 26, 2017 accident. *Id.* At no point in Dr. Jinkins' reports does he critique the DIME examination by Dr. Sharma.

47. Claimant testified at hearing about his subsequent treatment. He explained that in the emergency room the right shoulder was "killing me" with pain. He had pain in the left shoulder, which he described as feeling like a "charley horse" but the right shoulder pain "dwarfed it." Claimant testified regarding pain diagrams he filled out at Concentra on November 1, 10, and 29, and on December 13, 2017. He circled his right shoulder in those diagrams, but not his left. At hearing Claimant explained he was told to circle the thing "that hurts the most" so he did. During these appointments, it was the right shoulder. He testified he verbally informed the medical providers of his left shoulder pain, but the right shoulder pain was so bad that the left "paled in comparison."

48. Claimant further testified the right shoulder surgery was beneficial, and that afterwards he was in a sling for about 6 weeks. He primarily used his left arm because he could not use the right. As the right shoulder began feeling better and "calmed down" after surgery, the pain in the left shoulder became more apparent. Claimant experienced left shoulder pain ever since the injury, but as noted, the right shoulder pain was much worse.

49. Pete Gonzalez testified at hearing. He was a co-worker of Claimant, and witnessed Claimant's injury. He testified he was standing about 10 to 12 feet away from Claimant when the "boom part" of the forklift struck Claimant in the left shoulder. He explained the "boom part" is where the forks attach to the forklift. The impact knocked Claimant into an I-beam, and then Claimant fell to the ground. The forklift then struck a nearby post and left an imprint in its foam insulation. Mr. Gonzalez testified the impact of the forklift on Claimant's left shoulder was such that, "if it had hit me it probably would've broken my arm." Mr. Gonzalez went to Claimant afterward and asked whether he was "OK." He tried to help Claimant up. Claimant told Mr. Gonzalez that his right shoulder hurt. Mr. Gonzalez and forklift operator Scott Courtmarsh drove Claimant to the emergency room.

50. Pete Gonzalez was present for the first few minutes when Claimant was talking to medical personnel. He described Claimant as "pretty shook up," "kind of in shock," and "scared." He testified Claimant told the medical personnel he had been hit on the left shoulder and "kind of landed on his right side," and the right side "seemed to be where most of his injury was."

51. Shane Samborsky, former safety director for employer, testified at hearing. Mr. Samborsky testified that he was with Claimant in the emergency room at Parker Adventist Hospital on October 26, 2017, during his examination and evaluation. Mr. Samborsky testified Claimant never mentioned or complained of any left shoulder injury in the emergency room, and did not tell the evaluating and examining medical provider there that he had injured his left shoulder, or that he had symptoms in his left shoulder. Claimant complained only of a right shoulder injury and symptoms. Claimant held his right shoulder and arm with his left hand and arm throughout his time in the emergency room.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential*

Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Claimant's testimony is addressed separately. The ALJ finds the testimony of Pete Gonzalez and Shane Samborsky to be sincere in intent, but simply not outcome-determinative.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that each expert has rendered their opinions to the best of their ability, based upon the information they were provided. The real issue here is one of *persuasiveness.*

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe,* W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines,* W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned

conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008).

H. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

Overcoming the DIME Opinion, as Applied

I. No doubt Claimant was in distress on the day his right shoulder was injured. It is certainly plausible that someone in Claimant's position might well fail to notice a lesser injury in the moments, possibly even hours, following an incident such as occurred here. However, this is not a compound fracture victim failing to note some abrasions in the ER. In this case, Claimant failed to report such symptoms for approximately 2½ months, despite ample opportunity to do so. When Claimant finally did report his alleged symptoms, by his own admission he had recently been fired by Employer-for reasons not entirely clear from this record, but apparently based upon attendance. As noted by the ALJ in Finding of Fact #15, Claimant is no shrinking violet when it comes to advocating for himself. To the extent Claimant contends that he was not provided an outlet by his numerous medical providers to express left shoulder symptoms, the ALJ is simply not persuaded.

J. Similarly, the ALJ is not persuaded that Claimant would have been told, in effect, just to mark the areas that hurt "the worst," and ignore the rest. Such "advice" (which the ALJ does not find occurred) contraindicates every motivation for the providers to comprehensively treat injured workers. It's part of their job, and it pays to do so. Noting and addressing all reported symptoms is also a great way to avoid malpractice claims. It is worth noting that nowhere in the DIME report does Claimant tell the DIME physician that he had been stymied in his efforts to complain of left shoulder symptoms in the 2 1/2 months following his injury.

K. This lack of timely reporting factored significantly in the opinions of Dr. Sharma and Burris that the left shoulder complaints are not related to this work incident. It is further noted that Dr. Larson (appropriately, but without prompting from the Claimant) examined the left shoulder, and found no abnormalities. While Claimant-months later- *reported* to him that his left shoulder was injured at work, Dr. Larson performed no such analysis, nor reached such a conclusion. While Dr. Jinkins is no doubt sincere in his analysis that he feels the left shoulder was work-related, it is

unclear what records were at his disposal. In the final analysis, the opinions of Dr. Jinkins are merely that - differences in medical opinions with those of the DIME physician. **At no time does Dr. Jinkins ever critique the DIME report, or explain why it is highly probably incorrect.**

L. In this case the Division Examiner, Dr. Sharma, found Claimant reached MMI on September 19, 2018, as did Claimant's ATP Thomas J. Centi. No ATP has stated these determinations are erroneous or incorrect. Dr. John Burris' conclusions that this date is claimant's date of MMI and that Claimant's left shoulder is unrelated to Claimant's October 26, 2017, injury are also persuasive. Combined, the collective, informed opinions of Dr. Burris, Dr. Sharma, and Dr. Centi are significantly more persuasive than the contrary opinion of Dr. Jinkins. The ALJ therefore concludes that the DIME physician's opinion on MMI has not been overcome by clear and convincing evidence.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Sharma on MMI has not been overcome.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-100-520-002

ISSUES

I. Whether Respondents overcame the opinion of the DIME physician, Dr. Douthit, that Claimant is not at MMI.

STIPULATIONS

The parties stipulated that if the DIME doctor's opinion of "not at MMI" stands, then:

i) The average weekly wage would be $448.36; and

ii) The authorized treating physician would be Dr. Kristin Mason or Dr. Roberta Anderson-Oeser.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is currently 57 years old. She works as a "part-time loader" at United Parcel Service (UPS), working about 25 hours a week, since July 1, 2018. (*Tr. at 58:11-18*). Her first language is Spanish, and while she feels comfortable speaking English, she is more comfortable speaking Spanish, especially in medical and legal situations. (*Tr. at 58:22-59:7*). During the hearing, Claimant used the services of an interpreter.

2. On November 11, 2018, Claimant was working in an area where she did not typically work. After being in the area only one or two minutes, something hit her on the left side of her head and shoulder. (*Tr. at 59:12-14, 60:1-4*). Her immediate reaction was to hunch down, and the item then fell on the left side of her back. (*Tr. at 59:14-17*). At once, she "felt a lot of pain." She looked down, and realized she had been hit by a large gray bag that fell from a conveyer belt ten feet or so above her head, which was filled with envelopes and boxes. (*Tr. at 60:1-11*; *Cl's Ex. 3 at 36*). Since she had not been working with the particular bag that hit her, she did not know what it specifically weighed, but estimated it weighed somewhere between 15 and 30 to 40 pounds. (*Tr. at 60:12-22*). She did not pick it up to check its weight, but observed that the bag was full. (*Tr. at 60:23-61:1; 69:15-16*). She guesstimated that weight because she often carries those bags for work. (*Tr. at 70:2-3*). Claimant described the bag as approximately four feet by two feet, or the size of a large garbage bag. (*Tr. at 61:2-10*).

3. Claimant provided a video to the Court of the place in UPS where she was injured. She indicated that the location from which the bag fell from was on top of the

conveyor belt, which was at least ten feet above her head, and the bag that fell on her was similar to the bags on the video. (*Cl's Ex. 11; Tr. at 61:22-64:20; Cl's Ex. 3 at 36*).

4. After the bag fell on top of her, Claimant turned around to see if there was someone who could help due to her immediate pain levels, but no one was there. (*Tr. at 59:15-17, 69:23-24*). She then went to the second floor and spoke with her supervisor and the manager, and they filled out a report. (*Tr. at 59:18-20*). Claimant explained to them that the bag had originally fallen on the left side of her head, onto her shoulder, and then when she crunched down, it hit her back. (*Tr. at 69:1-13*). The biggest impact was to her shoulder. *Id*. Claimant was given the option of going to the emergency room or home to rest, as it was about 10:00 p.m. (*Tr. at 59:20-22*). She chose to go home because of the pain she was in, but then went to a clinic, Advanced Urgent Care (AUC), the following day. (*Tr. at 59:23-25*).

5. On November 12, 2018, at Claimant's first visit at Advanced Urgent Care, she was seen by Brittany Blanchard, PA-C. (*Cl's Ex. 1 at 4*). There is no indication Claimant was provided with an interpreter or that the medical provider spoke fluent Spanish. Claimant testified that she explained how the injury occurred (a bag filled with boxes and shipping envelopes fell on top of her from 10 feet above) and that the bag weighed between 15 pounds and 30 to 40 pounds. (*Tr. at 70:21-23, 60:1-11*). Claimant testified that Ms. Blanchard, a Physician's Assistant, asked her if she was in pain, and that she responded "yes . . . it's my shoulder." (*Tr. at 60:1-11, 65:12-17*). Claimant also indicated that Ms. Blanchard then asked her to do a movement with her left arm, and Claimant complied and stated there was pain with the movement. (*Tr. 65:17-20*). According to Claimant, Ms. Blanchard indicated to Claimant that the pain would disappear within 10 days, and that she should use ice and Aleve for the pain. (*Tr. at 60:1-11, 65:19-22*). Claimant also testified that she also explained to Ms. Blanchard that she had left-sided neck pain and some pain in her left lower back. (*Tr. at 60:1-11, 65:23-66:4*). Conversely, the medical record filled out by Ms. Blanchard indicates that a box, weighing approximately 15 pounds, fell from 10 feet and hit Claimant on top of her head. (*Cl's Ex. 1 at 6*). While the record documented Claimant's muscle aches of the low back and neck, as well as a contusion of the head, it failed to document Claimant's pain in her left shoulder. *Id*. Furthermore, according to the medical records and Claimant's history, Ms. Blanchard never performed a comprehensive physical exam of Claimant, but rather just asked her to move her arm. (*Tr. at 50:11-12*). Thereafter, Ms. Blanchard checked the box on the M-164 form that Claimant was at "full duty." (*Cl's Ex. 1 at 6*).

6. Prior to this incident on November 11, 2018, Claimant had never had any problems with her left shoulder, nor had she seen a doctor or received any treatment for her left shoulder. (*Tr. at 66:10-15, 23:14-23*). Claimant also did not have any subsequent injuries after November 11, 2018 to her left shoulder. (*Tr. at 67:2-4*).

7. Claimant testified that about the third day following the injury, she felt a pop in her left shoulder, and "it felt like a little ball." (*Tr. at 66:16-18*). Her left shoulder has continued to pop since then on a regular basis, and more often when she is working. (*Tr. at 66:19-24*). And, when it pops, it also hurts. (*Tr. at 66:25-67:1*).

8. On November 19, 2019, Claimant's second visit to Advanced Urgent Care, she again saw Physician's Assistant Blanchard. At that time, Ms. Blanchard documented strain of neck muscle, low back strain, and injury of head. (*Cl's Ex. 1 at 8, 11*). There is no indication Ms. Blanchard tried to clarify the history of the injury or even discuss the mechanism of injury with Claimant. (*Cl's Ex. 1 at 8-11*). Ms. Blanchard noted that the low back was improving, but again failed to mention Claimant's shoulder, and placed Claimant at MMI with no restrictions, maintenance medical treatment, or permanent impairment. (*Cl's Ex. 1 at 8*).

9. On November 29, 2019, and despite Ms. Blanchard not providing Claimant with a follow-up appointment, Claimant returned to Advanced Urgent Care. Again, Claimant was not evaluated by a medical doctor. Instead, she saw Emily Kuper, FNP-C. Ms. Kuper documented that Claimant was still having left-sided neck pain. She also documented that Claimant had left shoulder pain and strain, and that Claimant indicated she felt a "pop" in her left shoulder around November 23, 2018. (*Cl's Ex. 1 at 14*). But, Ms. Kuper did not indicate that was the only time Claimant had felt a pop in her shoulder since the work accident. Ms. Kuper sent Claimant for an x-ray of her left shoulder, which came back negative, and recommended ice, heat, NSAIDS, and rest. She further provided lifting and carrying restrictions of 10 pounds, and no reaching overhead at all, and determined Claimant was not at MMI. *Id. at 12, 14*. There is also a note of providing rehab exercises for a rhomboid muscle strain. *Id. at 14.* Although Ms. Kuper noted that there was a question as to whether Claimant's shoulder pain was related to the initial work-related injury, she eventually determined that Claimant had "work related medical diagnosis(es) [of] strain of neck and L[eft] shoulder." *Id. at 14, 12*.

10. On December 11, 2018, at Claimant's fourth visit at Advanced Urgent Care, she finally saw a medical doctor. Julie Parsons, M.D., evaluated Claimant, a month following the initial injury. Dr. Parsons documented that the location of the injury body part was "Shoulder L"; the quality of the injury was "aching"; the duration was from the "Date Of Injury: 11/11/2018"; alleviating factors were NSAIDS, heat, and ice; and aggravating factors included lifting, twisting/turning, and movement. (*Cl's Ex. 1 at 19*). Dr. Parsons also noted that Claimant had joint pain and minimal pain over the AC joint, and that Claimant had a half-dollar sized thermal burn over her left anterior shoulder as a result of icing her left shoulder directly on her skin. Id. Dr. Parsons diagnosed a left shoulder strain, neck pain, and a thermal burn. *Id. at 20, 17*. Dr. Parsons, the only physician to ever treat Claimant for her injury, then checked the box on the M-164 form stating that the objective findings were consistent with history and/or work related mechanism of the injury, and that the "work related medical diagnosis(es)" included "L[eft] shoulder strain; burn [from] ice L[eft] shoulder." *Id. at 20, 17*. Dr. Parsons also provided Claimant with rehab exercises for rhomboid muscle strain. *Id*. Dr. Parsons placed Claimant back at full duty, but determined that she was not at MMI. *Id. at 17*; (*Tr. at 35:18-36:12*).

11. On December 26, 2018, Claimant returned to Advanced Urgent Care and again saw Ms. Blanchard. Once again, just as when Ms. Blanchard saw Claimant before, she again placed Claimant at MMI. (*Cl's Ex. 1 at 21*). This time, she documented the work-related medical diagnoses as left shoulder strain, neck sprain, and

thermal burn. *Id*. Ms. Blanchard continued to also document a rhomboid muscle strain. (*Cl's Ex. 1 at 23*).

12. On February 13, 2019, at a follow-up visit, Ms. Blanchard changed her mind again and determined Claimant's left shoulder pain was unrelated to her initial injury. *Id. at 26*. Claimant disputed Ms. Blanchard's opinion because "I always complain that the pain is in my left shoulder since the accident in November 2018." (*Tr. at 75:4-8, 77:23-25*). In fact, when asked specifically about this appointment at Advanced Urgent Care, Claimant stated "I always go there for pain in my left shoulder". (*Tr. at 74:22-75:3*). Ms. Blanchard again placed the Claimant at MMI, even though, by this point, Claimant was complaining of joint pain in her left shoulder, occasional pins and needles radiating down her left arm, and a frequent pinching feeling in her left shoulder joint radiating in her neck. *Id*. *at 28*. Ms. Blanchard documented that Claimant's aggravating factors included movement, specifically overhead. *Id*. Further, Ms. Blanchard objectively documented tenderness on palpation over the left AC joint with a palpable subdermal nodule. *Id*.

13. On March 4, 2019, Respondents filed a Final Admission of Liability admitting Claimant suffered a compensable injury on November 11, 2018. (*Cl's Ex. 4*.) Respondents admitted liability for medical benefits, but denied all other benefits based upon Claimant being placed at MMI without any impairment by Ms. Blanchard on December 26, 2018. *Id*. As noted on the December 26, 2018, report, Dr. Parson's signed off on Ms. Blanchard's findings and conclusions. (*Cl's Ex. 1 at 21*.)

14. Claimant subsequently requested and attended a Division Independent Medical Exam (DIME) with John Douthit, M.D. The purpose of the DIME was to assess, as a matter of diagnosis, whether the various components of Claimant's medical condition, which included her left shoulder complaints, were causally related to her compensable industrial injury for which Respondents had admitted liability.

15. As part of his examination, Dr. Douthit took a history from Claimant, reviewed her medical records from her date of injury, and physically examined her. (*Cl's Ex. 2 at 31-32*). On examination, he found "popping and crepitation of the left acromioclavicular joint with tenderness at the AC joint on active motion of the left shoulder." *Id. at 32*. He also found tenderness in the left trapezius area. *Id*. Dr. Douthit determined that Claimant had the following work-related medical conditions: 1) sprain of the cervical spine, which was at MMI without impairment, and 2) separation of the AC joint of the left shoulder, which was not at MMI. *Id. at 33.* Dr. Douthit provided a provisional extremity impairment rating of the left shoulder of 12%, which converted to 7% whole person. *Id*. Dr. Douthit reasoned that "[t]he claimant has had popping of the AC joint of the left shoulder which is a separation of the AC joint and popping of the clavicle on the acromion. This is painful and can be corrected surgically." *Id*. He further concluded that Claimant "is not at MMI. She needs an orthopedic consultation and possible surgery of her left shoulder." *Id. at 34*. The ALJ finds Dr. Douthit's conclusions to be credible and persuasive because they are consistent with Claimant's testimony, which the ALJ credits and finds persuasive. Moreover, Dr. Douthit's conclusions are consistent with Dr. Failinger's testimony that the mechanism of injury described by Claimant

and clarified by the video submitted at hearing could definitely injure Claimant's left shoulder and the AC joint.

16. On August 5, 2019, Respondents filed an Application for Hearing to overcome the opinion of Dr. Douthit. In their Application, they endorsed the issue of causation and relatedness. But, Respondents did not move to withdraw their Final Admission of Liability in order to dispute the threshold question as to whether Claimant sustained a compensable injury in the first instance. (*Cl's Ex. 5*).

17. Following the determination by Dr. Douthit Claimant was not at MMI due to her shoulder injury, Respondents sent Claimant to Dr. Failinger to perform an independent medical examination (RIME). Dr. Failinger agreed with the history provided by Claimant that she was injured when a bag full of things, which included boxes and mailing envelopes, fell onto her. He noted that he was the only provider who asked enough follow-up questions to fully understand the make-up of the bag and what it contained. (*Tr. at 23:24-24:5, 27:14-19, 76:17-21*). He noted that Claimant described to him the bag falling ten feet, and then hitting the left side of her head, the left shoulder, and then as she flinched forward, her left back. (*Tr. at 24:6-14*). While Dr. Failinger originally was confused whether it was ten feet off the ground or ten feet above Claimant's head, (*Tr. 24:6-12, 15-20*), after reviewing the video of the area, he determined that the fall of the bag was likely from 10 feet above Claimant's head. (*Tr. at 27:3-6*). Claimant reported to Dr. Failinger that she had pain in the left shoulder immediately and that she was worse by the end of the day. (*Tr. at 28:2-5*). Dr. Failinger reported that Claimant told him that Advanced Urgent Care placed her on lifting restrictions of ten pounds, (which Dr. Failinger disputed was in the medical record from the first day, but the clinic actually did place her on 10 pound restrictions at her third visit). (*Tr. at 28:9-11*).

18. Upon physical examination, regarding Claimant's left shoulder, Dr. Failinger found left paraspinal tenderness to deep palpation; as well as left shoulder girdle tenderness in the distal one quarter with bony palpation of the clavicle; tenderness at the AC joint; some tenderness in the bicipital groove in the anterior joint; and tenderness at the greater tuberosity with palpation. (*Tr. at 33:1-10; R's Ex. II.C. at 30-31*). Additionally, Dr. Failinger determined that her left shoulder adduction was decreased from the right; external rotation in the left arm was abducted, less than on the right; there was mild discomfort at the AC joint with adduction of arm across the chest; Hawkins test was positive on the left, showing some potential rotator cuff inflammation or even a tear; and O'Brien's test was equivocal on the left. (*Tr. at 33:12-34:14; R's Ex. II.C. at 30-31*).

19. Upon a discussion between Dr. Failinger and Claimant regarding pain, Claimant described to Dr. Failinger that she had tightness or pain in her left paraspinal region and popping in the left shoulder, as well as some spasm in her left trapezius. (*Tr. at 37:5-8*). She had difficulty sleeping on her left side after the incident, and described a needle sensation in the left shoulder. (*Tr. at 28:17-22*). She noted that would ice her shoulder, but ultimately received some kind of burn from icing it too much without some kind of towel cover. (*Tr. at 28:23-29:3*).

20. Dr. Failinger determined that Claimant had symptoms in her AC joint, and it was probably inflamed. (*Tr. at 32:24-33:2*). Dr. Failinger agreed that sometimes Claimant hears popping in the left shoulder with some discomfort with the popping. (*Tr. at 32:11-13*). And, while Dr. Failinger did not specifically remember Claimant stating "did you hear that" at minute 27 of the RIME, he had no doubt that popping occurred during the exam as "that's classic for an AC joint." (*Tr. at 31:14-18*). While he additionally did not remember specifically Claimant telling him during the exam that when her shoulder pops, it also hurts, he stated "that [pain during popping] would [also] be classic for an AC joint." (*Tr. at 21:19-23*). Dr. Failinger noted in his report that he had some questions about the timing of when the initial popping occurred following the injury, but that he "chose to not ask her" about the topic during his examination of Claimant. (*Tr. at 51:1-15*).

21. Dr. Failinger agreed with Dr. Douthit's diagnosis of separation of the AC joint in the left shoulder. (*Tr. at 38:3-5*). Yet, he determined that because Ms. Blanchard did not include in the history from the first appointment that Claimant had been hit with the bag falling from ten feet above her directly onto the left shoulder, and she did not document Claimant having any left shoulder pain during the initial visits, then the separation of the AC joint was not related to the initial work injury. Importantly, Dr. Failinger did opine that if Claimant had received a direct blow on her left shoulder from the bag, then the left shoulder could "absolutely" be related. (*Tr. at 38:22-39:4; 50:2-5, 40:2-5*). Rather than giving primacy to the history provided by Claimant regarding how the injury occurred and the immediate pain in her left shoulder, Dr. Failinger gave primacy to the records of Brittney Blanchard, "a PA who saw [Claimant] four different times; and three of those times, sent her out the door and said she has nothing wrong with her." (*Tr. at 40:6-11*). Finally, Dr. Failinger agreed that Dr. Douthit did not violate the AMA Guides, Third Edition Revised, in reaching his conclusions, and that the mere difference of opinions between Dr. Failinger and Dr. Douthit came down to the fact that Dr. Douthit believed Claimant's history of the event, while Dr. Failinger did not believe that same consistent history. (*Tr. at 40:21-41:17; 42:5-12*).[1]

22. The ALJ finds that Claimant provided credible and persuasive testimony concerning her work accident, injuries, and interactions with the various medical professionals. Claimant's testimony was supported and corroborated by the video she submitted into evidence. The video clarified and provided context as to how the accident occurred and how she incurred the various injuries, including the injury to her left shoulder. It also highlighted the inaccuracy contained in the initial medical records regarding the mechanism of injury and how that inaccuracy resulted in different causation determinations regarding the injury to her left shoulder. As established at hearing, a single box did not fall and strike Claimant on her head. Instead, a large bag full of boxes and mail envelopes fell from an overhead conveyor belt and landed on Claimant's head and left shoulder.

[1] Dr. Failinger initially noted in his report that he did not believe that Dr. Douthit had reviewed the initial records from Ms. Blanchard, but this is not accurate as Dr. Douthit stated, "review of her medical records was noted from date of injury. There was a form filled out noting that she was working without restrictions. No diagnosis was given by Brittney Blanchard, physician assistant. It was noted she was seen for neck and SI joint injury." (*Cl's Ex. 2 at 21; Tr. at 42:13-43:13*). No other medical record, except that of the first visit, notes an SI joint injury. See, (*Cl's Ex. 1*).

23. There are some variances between AUC's medical records and Claimant's testimony. For example, Claimant testified about an appointment where her shoulder was evaluated and she was prescribed ice and ultimately suffered a skin burn from using the ice. Although Claimant contends her shoulder was evaluated, and ice prescribed at the first visit, the medical records indicate that occurred at the third visit, which was approximately 3 weeks after the work accident. However, the ALJ credits Claimant's testimony over AUC's medical records for a number of reasons.

- First, AUC's medical records do a poor job of capturing and conveying exactly what occurred during each medical appointment. For example, it appears that each medical report prepared by AUC regarding each of Claimant's appointments is an electronic medical record that is created by the merging of various data inputs. Complicating the ALJ's ability to understand what transpired at each visit is that the ALJ is unable to determine whether the information contained in each field or section of each report is, or is supposed to be:

    i. A direct quote from Claimant;

    ii. The evaluator's attempt to interpret what Claimant reported and the evaluator's attempt to state it in Claimant's words;

    iii. The evaluator's attempt to interpret what Claimant reported and the evaluator's attempt to state it in the evaluator's words;

    iv. The evaluator's attempt to provide a diagnosis based purely on Claimant's subjective complaints, or based on Claimant's subjective complaints and the evaluator's objective findings;

    v. Prepopulated data that is automatically generated or carried forward from other appointments;

    vi. A combination of any of the above; or

    vii. Something else.

  To demonstrate the problems with AUC's records, the following section is copied from Claimant's first medical appointment at AUC on July 12, 2018. As shown below, it is difficult to determine the nature and extent of the conversation between Claimant and the medical provider during Claimant's first medical appointment for her work accident. And, based on the information contained in the report, it is difficult to determine, with much accuracy, exactly how Claimant was injured at work and what transpired during her medical appointment. A section from the July 12, 2018, AUC report provides the following information:

HPI

Trauma/Injury
Reported by patient.

Location/Where on body?: back **(neck, SI joints)**
Quality/Description of Symptom (i.e. burning, cramping, constant): neck stiff, burning, lower back sharp, stays in lower back more so on left
Severity/Pain Level: pain level 6/10
Duration/How long? date of injury **(11.11.18)**
Context/How did it occur? work injury **(box fell and hit on top of head, ~15lbs drop from 10feet)**
Notes: Denies LOC, dizziness, change in vision, or HA. She c/o neck stiffness/soreness and low back soreness. Denies previous neck or low back injury/pain. Denies radicular pain, paresthesias, or B/B changes.

ROS

Patient reports **muscle aches (low back, neck)** but reports no swelling. She reports no fever, no significant weight gain, and no significant weight loss. She reports no vision change and no irritation of the eyes. She reports no ear pain, no nose/sinus problems, no sore throat, and no loss of hearing. She reports no cough, no shortness of breath, and no wheezing. She reports no chest pain and no palpitations. She reports normal bowel movements, no abdominal pain, no nausea, and no vomiting. She reports no hematuria and no difficulty urinating. She reports no headaches, no dizziness, and sleeping well. She reports no skin discoloration, no rash, and no skin lesion(s). She reports no depression.

(*Cl's Ex. 1 at 6*).

The section above demonstrates the cryptic and fragmented nature of the medical records that document the evaluation and treatment of Claimant. Moreover, it is this type of cryptic and fragmented medical note that was used by the majority of the medical providers in this case to determine the extent of Claimant's work accident and whether she injured her left shoulder during the work accident.

- Second, the reliability of the information contained in the cryptic and fragmented medical records from AUC is diminished even more since Claimant's primary language is Spanish. This is not to say that Claimant is not sufficiently fluent in English to communicate at work and perform her job, which may not require a lot of precise communication in English. But, Claimant testified that she is more comfortable using an interpreter for important matters like testifying in court and at medical appointments where it has become apparent that linguistic precision matters.

- Third, before Claimant attended the RIME with Dr. Failinger, not a single medical provider and/or evaluator was able to understand the mechanism of injury and clearly document and articulate what fell on Claimant in their medical notes/reports. It was not until Claimant was evaluated by Dr. Failinger that it was articulated in a medical report that a bag of boxes fell onto Claimant and not a single box. Moreover, it was not until the hearing and the video was played showing the conveyor belt and the height from which the bag fell that it was clearly understood what transpired during the accident and how Claimant's injuries occurred.

- Fourth, AUC's medical records that attempt to document and capture what transpired during each medical appointment are not internally consistent. For example, and as found above, the November 12, 2018 report from AUC documents Claimant's neck is supple with full range of motion, but yet also documents Claimant's neck is stiff, spasmatic, and that Claimant is complaining of a stiff neck.

24. To the extent Dr. Failinger's testimony and opinions, support the DIME doctor's report, the ALJ finds them credible and persuasive. To the extent they are not supportive or contradictory to the DIME report, the ALJ rejects them as not persuasive.

25. Dr. Failinger credibly testified that his causation opinion regarding Claimant's left shoulder and MMI status is based upon his decision to rely upon AUC's medical records instead of the history provided by Claimant. In support of his decision to rely upon AUC's medical records, instead of the information provided by Claimant during the DIME and RIME, he stated the following:

> Medical records are the most objective form of documentation of various injuries and events that have occurred in the past in order to be able to determine whether or not there is a reasonable relationship between a work event and the subsequent development of symptoms. As stated in the **AMA Guides to the Evaluation of Injury & Disease Causation, Second Edition**, timeliness or the temporal reporting of symptoms following the incident is the most important and is the only critical element in determining the relationship between the development of symptoms following an incident. There does not appear to be a reasonable temporal reporting, or timely reporting, of the patient's symptoms on either 11-29-2018, nor on 02-13-2019 for there to be a relationship between the work incident of 11-11-2018 and the subsequent development of symptoms. Dr. John Douthit later identified the left shoulder being symptomatic and he felt her symptoms were related to the 11-11-2018 work incident. I disagree with that based on record review, which is distinctly different from the patient's history at the Independent Medical Examination of 09-05-2019.

26. The problem the ALJ has with Dr. Failinger's first premise, (i.e., that medical records are the most objective form of documentation of various injuries and events that have occurred in the past), is that it assumes the medical records are reliable, accurate, and complete. And, in this case, the ALJ has determined that the medical records relied upon by Dr. Failinger are not reliable, accurate, and complete. Moreover, if you assume his second premise is also true, (i.e., that timeliness or the temporal reporting of symptoms following the incident is the most important and is the only critical element in determining the relationship between the development of symptoms following an incident), the ALJ has found that Claimant developed shoulder pain after the accident and that there was a sufficient temporal relationship between the accident and her shoulder symptoms.

27. Moreover, the ALJ is not persuaded by his quotation from the **AMA Guides to the Evaluation of Injury & Disease Causation, Second Edition**, which he contends stands for the proposition that the "timeliness or the temporal reporting *is the only critical element* in determining" causation (emphasis added). Although the AMA Guides to the Evaluation of Permanent Impairment, Third Edition (Revised), have

been adopted and incorporated into the Colorado Workers' Compensation Act, the AMA Guides quoted by Dr. Failinger have not. Thus, the ALJ is not persuaded by Dr. Failinger's attempt to support his opinion, via an appeal to authority of the **AMA Guides to the Evaluation of Injury & Disease**, when there is no agreement or finding by this ALJ that the Guides to which he cites are authoritative or persuasive based on the facts of this case. In the end, the ALJ disagrees with the underlying premise used by Dr. Failinger in his assessment of causation and its application to the facts of this case.

28. Dr. Failinger determined, based on his familiarity with Rule 16-5 as a level II accredited physician and as an expert in occupational medicine, that Advanced Urgent Care did not follow that Rule requiring a medical doctor to evaluate the injured worker by the third visit. (*Tr. at 45:8-25*).

29. Claimant has not had sufficient evaluations and treatment of her left shoulder. (*Tr. at 68:3-6*). Even though Claimant has been in constant pain since her work injury, she has never stopped working. (*Tr. at 67:13-21*). As she stated in her testimony, the medical treaters had conveyed to her that she did not have any problems and that she needed to go back to work, and so that is what she did. *(Id. & Tr. at 71:2-6*). She continues to work full duty, but is in pain when she lifts packages with her left arm. (*Tr. at 71:7-10*).

30. The work accident resulted in an injury to Claimant's left shoulder. Claimant needs additional medical treatment to fully diagnose the extent of her left shoulder injury and determine the medical treatment that is reasonable and necessary to cure her from the effects of her injury or improve her condition.

31. Claimant is not at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents overcame the opinion of the DIME physician, Dr. Douthit, that Claimant is not at MMI.

Litigants bear a high burden of proof when challenging opinions rendered by a DIME physician. The opinion of the DIME physician concerning MMI and impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8), C.R.S. Both determinations inherently require the DIME physician to assess, as a matter of diagnosis, whether the various components of Claimant's medical condition are causally related to the industrial injury. *Leprino Foods Co. v. Indus. Claim Appeals Office of State*, 134 P.3d 475, 482–83 (Colo. App. 2005); *Egan v. Indus. Claim Appeals Office,* 971 P.2d 664 (Colo. App. 1998); *Qual-Med, Inc., v. Indus. Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). Therefore, a DIME physician's determination concerning causation are binding unless overcome by clear and convincing evidence. *Id*. Moreover, the party challenging the DIME physician's MMI determination bears the burden of proof by clear and convincing evidence. *See, Leprino* at 482, 483.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of an injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. However, it is inconsistent with a finding of MMI that additional diagnostic procedures and/or medical evaluations offer a reasonable prospect for defining the extent of Claimant's work injury and need for additional medical treatment. *See Patterson v. Comfort Dental East Aurora*, WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co*., W.C. No. 4-638-712 (ICAO August 11, 2000).

Under the clear and convincing standard, the party challenging a determination by the DIME physician must produce evidence that shows that it is highly probable that the

IME determination is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d at 414. The evidence contradicting the DIME must be "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). The enhanced burden of proof reflects the underlying assumption that a physician selected by an independent and unbiased tribunal (the Division) will provide a more reliable medical opinion. *Qual-Med*, 961 P.2d at 592. A mere reasonable difference of opinion between physicians usually fails to constitute clear and convincing evidence. *See Garner v. Home Depot USA, Inc*., W.C. No. 4-644-099 (July 23, 2008); *Villalobos-Chaparro v. Benny's Concrete*, W. C. No. 4-356-868 (Jan. 4, 2001).

As found, Dr. Douthit, the DIME physician, assessed, as a matter of diagnosis, whether the various components of Claimant's medical condition, which included her left shoulder, were causally related to the industrial injury. Dr. Douthit concluded Claimant's left shoulder condition is causally related to, and a component of, her compensable injury.

As found, Dr. Douthit further opined that Claimant is not at MMI since she needs additional treatment for her left shoulder that was injured during the work accident. Dr. Douthit reasoned that "[t]he claimant has had popping of the AC joint of the left shoulder which is a separation of the AC joint and popping of the clavicle on the acromion. This is painful and can be corrected surgically." He further concluded that Claimant "is not at MMI. She needs an orthopedic consultation and possible surgery of her left shoulder." The ALJ found Dr. Douthit's conclusions to be credible and persuasive because they are consistent with Claimant's testimony, which the ALJ credited and found persuasive. Moreover, Dr. Douthit's conclusions are consistent with Dr. Failinger's testimony that the mechanism of injury described by Claimant and clarified by the video submitted at hearing could definitely injure Claimant's shoulder and the AC joint.

As found above and as concluded now, Respondents have failed to meet their heightened burden of proof. Respondents contend that the lack of documentation of left sided shoulder complaints in the initial records from AUC establishes Claimant's left shoulder condition is not related to her work accident and therefore she is at MMI. However, the ALJ did not find the AUC records to be reliable in documenting exactly what occurred during each medical appointment. Instead, the ALJ credited the statements made by Claimant contained in the DIME, RIME, as well as her testimony at hearing, that she did have the immediate onset of left shoulder pain after the work accident. Thus, the ALJ did not find those records to be persuasive in establishing by either a preponderance of the evidence - or by clear and convincing evidence - that Claimant did not injure her shoulder at work and is therefore at MMI.[2]

Moreover, Respondents also relied upon the opinions of Dr. Failinger to overcome the DIME opinion that Claimant is not at MMI. Dr. Failinger did opine that Claimant's left

[2] Respondents contend in their proposed order that their burden of proof as it relates to whether Claimant suffered an injury to her left shoulder in the first instance is a preponderance of the evidence. This raises two issues. First, if they are correct and they still have the burden of proof, but it is only a preponderance of the evidence, the ALJ also finds and concludes that Respondents failed to overcome the DIME opinion regarding MMI by a preponderance of the evidence. Second, if under Respondents contention, Claimant has the burden to prove she suffered a compensable shoulder injury in the first instance, the ALJ also finds Claimant met her burden and established that she suffered a compensable left shoulder injury by a preponderance of the evidence.

shoulder condition is not related to her work accident and therefore she is at MMI. However, the underpinnings of his opinions regarding causation and MMI are the AUC records that the ALJ has found to be unreliable. And, "[l]ike a house built on sand, the expert's opinion is no better than the facts on which it is based." *Kennemur v. State of California*, 184 Cal. Rptr. 393, 402–03 (Cal. Ct. App. 1982). Therefore, because the data upon which Dr. Failinger relied upon to determine causation is not reliable, the ALJ did not find his opinion to be persuasive at is relates to causation and MMI.

On the other hand, Dr. Failinger admitted that if Claimant suffered a direct strike to the left shoulder AC joint, then it was "absolutely" possible that the work injury caused her left shoulder problems. And, the ALJ did credit that portion of his opinion and found it to be persuasive.

The findings of fact set forth above compel the conclusion that the Claimant suffered a compensable injury to her left shoulder and she is not at MMI and that Respondents have failed to overcome Dr. Douthit's opinion by credible or persuasive evidence, much less clear and convincing evidence.[3] Therefore, the ALJ finds and concludes that Claimant is not at MMI and she should be evaluated and treated for her left shoulder injury under this claim.

The ALJ accepts the stipulation of the parties with respect to AWW and authorized provider.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the DIME physician's opinion of "not at MMI."
2. Claimant is not at MMI for her compensable left shoulder injury;
3. Claimant is entitled to choose a new authorized treating physician, either Dr. Kristin Mason or Dr. Roberta Anderson-Oeser;
4. Claimant's average weekly wage is $448.26; and
5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

[3] *Id*.

DATED: December 20, 2019.

/s/ *Glen Goldman*

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he sustained a work-related injury on January 15, 2019.

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to medical benefits.

FINDINGS OF FACT

1. Claimant began working for Respondent in June, 2016 in the bakery department of its store #24. After approximately five months, Claimant transferred to store #137 as an assistant manager of the produce department. One of Claimant's job duties involved receiving and unloading produce shipments. Claimant testified that on January 15, 2019, he was trying to unload a box of bananas from the top of an unstable palette when he felt a painful pop in his neck.

2. Claimant testified that he "knew right away that something was very wrong," and that his pain radiated to his low back. Claimant finished his shift and worked the following day, allegedly worsening his symptoms. However, Claimant did not report his injury until January 19, 2019, although he had four previous workers' compensation claims and acknowledged that Respondent had also trained him to immediately report any injuries.

3. Claimant acknowledged that at the time of his alleged injury he was taking opioid pain medications for preexisting gout, and shoulder, foot, and ankle pain. Claimant also admitted to being addicted to opioid pain medications prior to the date of the hearing.

Claimant's Pre-Existing Injuries

4. In 2013 Claimant sustained injuries to his neck, bilateral shoulders and low back while working for a different employer. Claimant received a 17% whole body rating and was assigned permanent work restrictions. As of January 2018, Colleen Grady, FNP, at Claimant's primary care clinic, NextCare, documented that Claimant was addicted to opioid medications as a result of the 2013 injuries but could not seek alternative treatments because he did not have health insurance. Notwithstanding his addiction, Nurse Grady continued to prescribe Percocet to Claimant.

5. On May 2, 2018, Claimant returned to Nurse Grady again requesting additional opioid medication because he was unable to seek alternative treatments with a spinal specialist or pain management physician. Nurse Grady documented that she gave Claimant "post-dated scripts" for Claimant's opioid medications because Claimant's insurance would be expiring, and Claimant would not be able to return to NextCare.

Pharmacy records indicate that Claimant filled prescriptions for opioid medications on May 2, June 2, and July 2, 2018.

6. On November 24, 2018, Claimant returned to NextCare complaining of back spasms for the past six days and "requesting a refill of Valium and Percocet." Physician's Assistant Kerrie Kim documented she declined to prescribe Percocet, but did provide a "short Rx of Valium."

Claimant's testimony as to the alleged injury on January 15, 2019, is not credible

7. A few days before Christmas 2018, Claimant transferred to Employer's Store No. 137 in Arvada as an assistant produce manager. A large part of Claimant's job duties included unloading pallets of produce off the delivery truck into the cooler room by use of pallet jacks, removing or "breaking down" the boxes of produce from the pallets and storing the boxes of produce in the cooler room or cutting room.

8. Claimant testified that he injured his neck/right shoulder and low back on January 15, 2019, while lifting a box of bananas off an unstable pallet onto the floor. Claimant testified that the incident occurred immediately after receiving a load off the truck. Claimant was working with at least one coworker at the time he alleges he was injured, but the coworker did not witness the event.

9. One of the store's surveillance cameras captured Claimant's activities while breaking down the pallets in the cooler room after the load arrived. The pallet containing the bananas is seen clearly in the store video as it is wheeled through the cooler room and into the cutting room by another employee at 5:11:47 p.m.

10. Claimant follows the pallet jack into the cutting room at 5:12:10 p.m. Claimant testified that he immediately unloaded the bananas off the pallet because the pallet was unstable so he wanted to prevent the boxes of produce from falling off the pallet. Claimant further testified that after removing the bananas from the pallet he immediately felt pain which caused him to realize something was wrong and which required him to stop unloading the bananas to walk the pain off.

11. However, Claimant's testimony is inconsistent with the video which shows the pallet jack with the bananas being wheeled to the left side of the cutting room and coming to a stop at 5:12:22 p.m. A third employee opens the doors between the cutting room and the cooler at 5:12:42 p.m., at which time Claimant is seen standing at the far end of the cutting room with no boxes in his hands. Claimant's body is visible through the left window into the cutting room from 5:12:42 p.m. as he walks from the back of the cutting room through the doors into the cooler with the other employee at 5:12:55 p.m. Thus, the period of time that Claimant could have unloaded the pallet and removed the bananas was only *twenty seconds* – from the time the pallet jack drops the pallet on the left side of the cutting room at 5:12:22 p.m. until Claimant is seen at the back of the cutting room when the third employee exits the cutting room at 5:12:42 p.m.

12. Even if the coworker assisted Claimant unloading the pallet, the twenty seconds when Claimant was not visible in the cutting room is not sufficient time for both employees to cut the plastic off the two brown trays containing product at the top of the pallet, remove those trays, cut the plastic from the 12 boxes of bananas, remove the 12 boxes of bananas from the pallet, and then Claimant to walk to the back of the cutting room where he is seen at 5:12:42 p.m.

13. After Claimant returns to the cooler room at 5:12:54 p.m., Claimant's activities are captured on video for the next eight minutes. Claimant is seen unloading multiple boxes from the pallets and distributing the boxes throughout the cooler room without any apparent pain, frequently bending at the waist and rising on his toes using both hands overhead to remove boxes from the top of pallets and move them to other areas of the cooler room. These activities are inconsistent with Claimant's testimony of significant pain from an injury to his neck, low back or right shoulder area.

14. Claimant leaves the cooler room at 5:20:35 p.m., and returns at 6:03:28. Over the next eight minutes, Claimant again lifts numerous boxes from carts and pallets and distributes the produce throughout the cooler room without any apparent pain, several times placing boxes on his right shoulder to carry through the cooler room. Claimant's activities again are visible from 6:19:21 p.m., through 6:24:38 p.m., and from 6:45:53 through 6:48:34 p.m. During both of these periods, Claimant lifts and distributes boxes without apparent pain.

Claimant did not report the alleged injury until January 19, 2019

15. Claimant has filed at least four prior workers' compensation claims and also testified that he was aware that Employer had a policy requiring all work-related injuries to be reported to store management. However, Claimant did not report the alleged injury to store management on January 15, 2019. Instead, Claimant returned to work on January 16, 2019, and alleged that his work duties on that date made his condition even worse.

16. The ALJ reasonably infers based on Claimant's prior workers' compensation claims that Claimant knew Employer was required to provide medical treatment to an employee who sustained a work-related injury. Claimant's medical records from NextCare show that he did not have health insurance and could not afford to treat his pre-existing neck, low back and shoulder pain. Thus, if Claimant knew he had sustained a "very, very severe" injury, the ALJ finds it more probably true than not that Claimant would have reported the injury to Employer and sought medical treatment immediately.

Claimant testified untruthfully regarding the reason for taking Gabapentin

17. Claimant testified that he was not taking any medications for his pre-existing neck, shoulder and low back conditions at the time of his alleged injury, and that the gabapentin was prescribed to treat his bilateral lower extremity gout. Claimant's

testimony is contradicted by the medical records which establish that Claimant was taking gabapentin for his prior neck/shoulder complaints.

- On September 15, 2016, Jennifer Allison, FNP, documented Claimant's history of gout in his bilateral big toes. Allison documented that Claimant was switched to colchicine at his last visit "for the first time. He found this to be very effective at controlling his symptoms. Saw improvement within 2-3 hours of starting treatment." Nurse Allison started Claimant on allopurinol for gout.

- On November 17, 2016, Charlene Archulet, FNP, documented that Claimant "reports good response to allopurinol. Last gout flare was > 2 weeks ago."

- On November 13, 2017, almost one year after Claimant's last treatment for gout-related pain, Claimant returned to NextCare complaining of pain to the upper back and neck radiating to his bilateral arms and causing both hands to go numb. Paul Mack, PAC, assessed Claimant with "Neck Pain (M54.2) start Neurontin cervical paraspinal muscle spasm (M62.838) start Neurontin." Thus, the gabapentin (generic Neurontin) was prescribed for Claimant's cervical spine pain radiating into his upper extremities, at a time when Claimant had not had any complaints of gout-related pain for almost a full year.

- On December 14, 2017, Colleen Grady, FNP, documented Claimant's statement that gabapentin "makes him sleepy but is very effective for nerve pain and upper extremity numbness." Nurse Grady's Assessment was "Chronic pain of both shoulders (M25.512) Comments: Stable, improved with gabapentin."

- On November 24, 2018, Claimant returned to NextCare requesting a prescription for opioid medications for increased upper back pain. Kerri Kim, PA-C, documented that Claimant "will refill his gabapentin on Monday for his neuropathy." Claimant had no complaints of gout pain or symptoms on this visit, clearly showing that Claimant's gabapentin was prescribed for his upper back, neck and bilateral shoulder pain.

- On January 21, 2019, Jenelle Tittelfitz, PA-C, documented "Patient reports he is on long-term Gabapentin for pain associated with the shoulders."

- On January 24, 2019, Janine Kennedy, PA-C, documented that Claimant stated "He is on gabapentin chronically for his shoulders."

- On January 31, 2019, Karen Larson, M.D., documented that Claimant stated "He is 1 [sic] on chronic gabapentin for chronic shoulder pain after prior work injury."

18. Despite the persuasive medical evidence that Claimant knew his medical providers prescribed gabapentin to treat his neck and bilateral upper extremity numbness, Claimant testified that he was prescribed gabapentin for his gout and that he never told

any of the Concentra physicians that it was prescribed for his neck/shoulder pain. All three Concentra providers used different wording to document that Claimant was taking gabapentin for his shoulder condition, which indicates that the providers did not simply copy the information from a prior note but rather obtained the information directly from Claimant, as it is extremely unlikely that all three providers would have misunderstood Claimant and incorrectly documented that Claimant stated he was taking gabapentin for his shoulder condition.

Claimant attempted to hide his prior treatment records

19. When Claimant reported the alleged injury on January 19, 2019, he was sent to Employer's Assistant Store Manager Brandon Blakley to complete the Kroger Associate Incident Report Packet. Mr. Blakley testified that he completed an Employee Incident Questionable Claim Form because Claimant "disclosed that he had been to the doctor before the injury for nerve and muscle pain … also stated that the doctor had given him some medication to help with pain prior to injury." Mr. Blakley recalled that Claimant may have stated he received either an injection or medication the day before the alleged injury.

20. Claimant denied receiving any treatment shortly before the injury. However, Mr. Blakley and Claimant both testified that they had not previously discussed Claimant's medical treatment or medical condition. Thus, when Mr. Blakley completed the Employee Incident Questionable Claim Form on January 19, 2019, he would have had no way of knowing that Claimant ever had any "nerve and muscle pain" or received any medication prior to the alleged injury date unless Claimant told Mr. Blakley that information when he reported the alleged injury on January 19, 2019. Weighing the evidence, the Administrative Law Judge finds that it is more likely than not that Claimant told Mr. Blakley that he had received treatment or an injection only the day or two before the alleged injury.

21. Claimant attempted to hide his prior treatment records from Respondent and the court:

- On February 7, 2019, Claimant's attorney sent a letter to the adjuster disclosing four prior medical providers: NextCare, St. Anthony's Hospital, Concentra, and Lutheran Medical Center.

- On March 5, 2019, Claimant's discovery responses identified four additional health care facilities providing prior treatment: Touchstone Imaging, Hampden Surgery Center, Cary Motz, M.D., and Panorama Physical Therapy.

- On March 28, 2019, a Pre-Hearing Conference Order granted Respondent's motion to compel Claimant to provide an authorization to release pharmacy records. Those pharmacy records disclosed evidence of treatment with at least eight additional medical providers Claimant had not previously disclosed.

- At hearing, Claimant testified that has seen “ninety-plus” medical providers in the five years prior to the alleged injury.

Claimant’s allegation of an injury is based entirely on his Claimant’s testimony

22. Claimant introduced into evidence a letter on Concentra letterhead purportedly from James Cross, COD. Dr. Larson testified that Mr. Cross is not a physician but the Concentra center operations director and her supervisor “from an administrative standpoint.” Neither Dr. Larson nor Mr. Cross signed the letter, and Dr. Larson testified that she had no recollection of answering any of the questions posed.

23. Claimant argues that the letter establishes Dr. Larson’s opinion that Claimant sustained an injury on January 15, 2019. However, Dr. Larson’s testimony at hearing differed from the unsigned letter of which Dr. Larson has no recollection. At hearing, Dr. Larsen testified that she found no objective evidence of an injury when she examined Claimant on January 31, 2019, and based her recommendations for treatment solely on Claimant’s complaints of pain and restricted ranges of motion.

24. When Dr. Larson initially examined Claimant, he asked for Valium and Percocet by name. Dr. Larson did not prescribe them because Claimant “looked comfortable.”

25. Respondent obtained an Independent Medical Examination from F. Mark Paz, M.D., on April 25, 2019. Dr. Paz testified by deposition that Claimant’s subjective symptoms are not supported by objective findings on physical examination or diagnostic testing. During the interview portion of the examination, Claimant denied prior neck or back pain. Dr. Paz described Claimant as a poor historian, and described Claimant’s answers as vague and elusive. Dr. Paz testified that the CT scan of the cervical spine showed only arthritis and no evidence to explain Claimant’s alleged tingling of his hands. Dr. Paz further testified that the March 18, 2019 MRI of the lumbar spine showed an L5-S1 disc extrusion on the left, which had been documented on an MRI taken on August 2, 2013, so it was not a new findings and is on the opposite side of Claimant’s right-sided low back complaints. Dr. Paz’s ultimate opinion was that to a reasonable degree of medical probability, Claimant did not sustain an injury or an aggravation of an industry on January 15, 2019.

26. The Administrative Law Judge finds that Dr.Larson’s testimony that there was no objective evidence of an injury is more credible than the opinions purportedly expressed in Ex. 17. Dr. Larson has no recollection of responding to the questions as set forth in Ex. 17. Further, even assuming that Dr. Larson did respond to the questions as set forth in Ex. 17, it is unclear what information she may have reviewed or how much time she spent in considering the questions. Dr. Larson’s testimony at hearing was more detailed and in response to direct questions posed to her. Further, her testimony is consistent with Dr. Paz’s testimony that no objective evidence supports a finding that Claimant sustained an injury on January 15, 2019.

27. The Administrative Law Judge finds that Claimant has failed to prove it more likely than not that he sustained an injury or an aggravation of his pre-existing condition on January 15, 2019. Claimant's testimony regarding the mechanism of injury is not supported by surveillance video. The store video shows the period of time that Claimant could have unloaded the pallet in the cutting room and removed the bananas was only twenty seconds, which was not sufficient time for Claimant to have cut the plastic off the two brown trays containing product at the top of the pallet, remove those trays, cut the plastic from the 12 boxes of bananas, and remove the 12 boxes of bananas from the pallet. Claimant's testimony that the alleged injury occurred shortly before his shift ended at 7:04 p.m.is contradicted by the video over the next 90 minutes which shows Claimant bending, twisting, and lifting multiple boxes over his head and onto his shoulders without any noticeable discomfort. Claimant did not report the injury until January 19, 2019, despite testifying that he knew lifting the box caused a serious injury on both January 15, 2019, and January 16, 2019. When Claimant reported the injury to Mr. Blakley on January 19, 2019, he specifically told Mr. Blakley that he had received either an injection or other medical treatment a day or two before his alleged work injury. Claimant also engaged in a conscious and systematic attempt to hide his prior treatment records from Respondent to prevent Respondent from presenting evidence of Claimant's pre-existing medical treatment.

28. Claimant has a history of opioid dependence and drug-seeking behavior since his 2013 injury to neck and low back, the same body parts Claimant alleges he injured on January 15, 2019. Claimant was unable to obtain any opioid medications from July 2, 2018, until he alleged this injury on January 15, 2019; and immediately began requesting opioid medications despite Dr. Larson testifying that Claimant appeared comfortable and not in need of opioid medications. Claimant's testimony of an injury on January 15, 2019, is not credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it

is for the Administrative Law Judge to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the Administrative Law Judge. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the Administrative Law Judge may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. V. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease "to produce the disability for which workers' compensation is sought." *H&H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *See Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Industrial Comm'n*, 736 P.2d 1262, 1263 (Colo. App. 1986) ("[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling."). However, the injury must be a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. *Reynolds v. U.S. Airways, Inc*, W. C. Nos. 4-352-256, 4-391-859, 4-521-484 (May 20, 2003). It is the claimant's burden to prove a causal relationship between the industrial injury and the medical condition for which she seeks benefits. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether an industrial injury is the cause of a subsequent need for medical treatment is largely one of fact for determination by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

The Administrative Law Judge's factual findings concern only evidence found to be dispositive of the issues involved; the Administrative Law Judge has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The Administrative Law Judge finds that Claimant has failed to prove it more likely than not that he sustained an injury or aggravation of his pre-existing condition on January 15, 2019. Both Dr. Larson and Dr. Paz testified that there was no objective evidence of an injury. Claimant's claim of injury is based almost entirely on his subjective, self-serving

testimony of an incident occurring while lifting a box of bananas. However, his testimony is not consistent with the store surveillance video of his activities and his testimony on various points is not credible. The inconsistencies in Claimant's reported mechanism of injury and Claimant's attempts to hide his prior treatment undermine Claimant's credibility.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to prove by a preponderance of the evidence that he sustained a compensable injury on January 15, 2019.

2. All maters not determined herein are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **P,** Claimant, vs. **B,** Employer, And **SELF INSURED,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-074-433-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Administrative Law Judge (ALJ) Margot W. Jones presided at a hearing in this matter held on September 13, 2019, convening at 9:00 a.m. in Greeley, Colorado. Claimant was present and represented by _____, Esq. Respondents were represented by _____, Esq. Exhibits 1-8 and A-O were admitted into evidence.

In this order, the ALJ refers to P as "Claimant," B as "Self Insured Employer" and "Respondent."

The ALJ may use the following acronyms in this Order: "C.R.S." refers to Colorado Revised Statutes (2019); "the Act" refers to the Workers' Compensation Act of Colorado, Sections 8-40-101, et seq., C.R.S.; "OAC" refers to the Office of Administrative Courts; "OAC Rules" refers to the Office of Administrative Courts Rules of Procedure, 1 Code Colo. Reg. 104-1; and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUES

1. What is Claimant's average weekly wage (AWW)?

2. Whether Claimant proved by a preponderance of the evidence that she is entitled to an order awarding reasonably necessary medical benefit, specifically, whether Claimant's need for surgery to her right knee, as recommended by Dr. Gardner, Dr. Noonan and Dr. Brogmus, is a reasonably necessary and related medical benefit?

STIPULATION OF FACT

The parties stipulate and agree that Claimant's AWW is $1525.00.

FINDINGS OF FACT

1. Claimant was employed with Respondent and sustained an admitted injury to her right knee on January 19, 2018, when she slipped on food while serving patients.

2. Claimant testified that she slipped on unseen food, went into a deep lunge, hyperextended her right knee with her knee striking the ground. She got up after the fall, took Advil and tried to rest her knee as much as she could.

3. Claimant credibly testified she had never had an injury to her right knee before January 19, 2018, and had never had any pain, swelling or problems with her right knee before the incident at work. She had never received any medical care or treatment for her right knee before the work incident.

4. Claimant waited three days to seek medical care because she rested, iced and elevated her right leg.

5. On January 22, 2018, Claimant was examined at Urgent Care at which time she presented with a chief complaint of right knee pain after falling with her knee in flexion on January 19, 2018, at work. Claimant reported that she had never injured her knee before. She was assessed with a right knee strain and given restriction of no weight bearing on her right leg.

6. Bryan D. Copas, PA-C, (PA Copas) examined Claimant at Respondent's Clinic on January 23, 2018, for Claimant's right knee pain and swelling. Claimant reported slipping on food while serving the noon meal at work. Claimant reported never having similar problems with her right knee. PA Copas diagnosed Claimant with a contusion of the right knee and fitted her with a knee brace and recommended she use a cane. He provided work restrictions of walking and standing 10 minutes per hour and reported his findings to be consistent with a work related mechanism of injury.

7. On March 8, 2018, Claimant returned PA Copas at which time she reported her pain was worse; tenderness had increased and her swelling had increased. He requested an MRI and referred Claimant for physical therapy.

8. Claimant underwent physical therapy treatment at Banner Therapy/McKee Rehabilitation from March 22, 2018, to April 4, 2018.

9. An MRI of Claimant's right knee was taken on March 27, 2018, which showed a full-thickness radial tear at the posterior root of the medial meniscus with associated meniscal extrusion; uniform deep partial thickness cartilage loss on the weight bearing medial compartment articular surfaces with prominent subchondral edema on both sides of the joint; mild patellar chondromalacia and large volume joint effusion with synovitis.

10. Dr. Donna Brogmus and PA Copas, referred Claimant for an orthopedic evaluation on March 27, 2018.

11. An orthopedic evaluation was performed on April 8, 2018, by William Eschrich, PA and Eric Gardner, M.D. Claimant reported she fell on a flexed right knee and had immediate associated pain on January 19, 2018. Claimant was assessed with a medial meniscus tear and chondromalacia of the right knee. Corticosteroid injections and arthroscopy for medial meniscus repair were discussed. Claimant elected to proceed with arthroscopy.

12. Respondent requested Dr. William Ciccone II perform a medical record review. Dr. Ciccone performed the record review on April 18, 2018. His impression was of right knee degenerative changes and right knee degenerative meniscus tear. He opined that Claimant did not suffer a work-related injury as a result of the fall. He opined that the meniscus tear was degenerative in nature and unrelated to the fall at work. He opined that the request for surgery should be denied under workers' compensation.

13. Respondent sent a letter with specific questions to Dr. Eric Gardner concerning Dr. Ciccone's record review. Dr. Gardner opined that Claimant suffered a work related injury which exacerbated a pre-existing condition, degenerative joint disease (DJD), and more likely than not caused her meniscal root tear. He further reported that a degenerative meniscus tear and a posterior root tear are different medical conditions. Dr. Gardner reported Claimant's x-rays show minimal DJD and that she had a posterior meniscal root tear which will rapidly cause DJD. He opined that not fixing the root tear will lead to the need for a total knee replacement. Dr. Gardner faulted Dr. Ciccone for rendering his opinion without examining Claimant or reviewing radiographic studies.

14. Respondent sent Claimant to Dr. Mark Failinger for an independent medical examination which he performed on May 7, 2018. Dr. Failinger opined that it does appear the patient's symptoms are related to the incident of January 19, 2018. Dr. Failinger noted there was nothing in the record noting a previous history of symptomatology, treatment or problems of the right knee prior to her fall. He opined that it appears the patient sustained an exacerbation of pre-existing arthritis. He recommended a steroid injection, viscosupplementation and additional physical therapy. He opined that knee arthroscopy was not medically probable to help this patient's symptoms, given the MRI reading.

15. Claimant returned to Dr. Brogmus on June 26, 2018, for evaluation of her right knee pain. Dr. Brogmus stated that she agreed with sending Claimant for a steroid injection and she ordered more physical therapy sessions. Dr. Brogmus opined that Claimant will need a meniscal repair.

16. A right knee steroid injection was performed on July 5, 2018, by Rayan Ritchhart, PA of Dr. Gardner's office.

17. Claimant underwent physical therapy treatments at Banner Therapy/McKee Rehabilitation from July 11, 2018, through July 24, 2018.

18. Dr. Brogmus examined Claimant on July 24, 2018, for a follow up evaluation for her right knee. She noted Claimant to walk with an antalgic gait and diagnosed her with peripheral tear of medial meniscus, current injury, right knee. Dr. Brogmus requested a univisc injection.

19. A univisc injection was performed on Claimant's right knee on August 3, 2018 by Dr. Gardner.

20. Claimant returned to Dr. Gardner on August 24, 2018, for a routine post injection follow up. He reported it was a root tear and that essentially the entire meniscus was nonfunctional and as a result she was going to be putting increased loading pressure on the cartilage on the inside of her knee which would lead to premature arthritis. He opined that it was in her best interest to try and fix the meniscus to prolong the potential need for her to have a knee replacement.

21. On August 28, 2018, Dr. Brogmus opined that she concurred with Dr. Gardner's assessment that Claimant's fall at work probably aggravated any underlying condition and she did not think she had a symptomatic meniscal tear before the injury.

22. Dr. Failinger prepared an Addendum Report dated November 26, 2018, and stated that after reviewing the MRI taken on March 27, 2018, the patient had

a preexisting underlying degenerative changes and he agreed with Dr. Ciccone's recommendation of a denial of approval for an arthroscopy.

23. Claimant returned to Dr. Brogmus on November 29, 2018, for a follow up evaluation. Dr. Brogmus reported Claimant was having more difficulty walking especially noting sharp pain with walking on ramps and not taking a full stride to compensate for the pain. Dr. Brogmus requested an MRI.

24. A right knee MRI was taken on January 4, 2019, showing complex tearing of the posterior horn root ligament of the medial meniscus with peripheral extrusion of the medial meniscus body; moderate to advanced medial compartment degenerative joint disease with associated reactive bone marrow edema in the medial femoral condyle and medial tibial plateau; focal cartilage defect overlying the patellar eminence and large knee joint effusion with areas of lipoma arborescens.

25. Dr. Brogmus evaluated Claimant on January 18, 2019, at which time Claimant again noted medial posterior right knee pain which had remained since her injury. Claimant noted she cannot be as active with her knee. It was noted Claimant continued to look symptomatic despite a steroid and synvisc injection. Dr. Brogmus referred Claimant to Dr. Thomas Noonan for a consultation and recommendations.

26. On February 7, 2019, Thomas Noonan, M.D. of Steadman Hawkins Clinic evaluated Claimant for right knee pain. Claimant reported her symptoms began January 19, 2018, when she slipped on some food and fell into a deep knee bend and noted pain, instability and swelling since then. Dr. Noonan reported that given Claimant's age, 46 years old, he opined that arthroscopic debridement was a reasonable treatment option and may delay the need for knee replacement. He also stated that despite the fact that her chondral degeneration preexisted her injury he thought her current symptomatology was from her fall at work.

27. Claimant returned to Dr. Brogmus on February 15, 2019, for follow up. Dr. Brogmus reported that with over one year of conservative care and increasing pain and shortening of her stride Claimant wanted to proceed with right knee arthroscopy. Dr. Brogmus concurred with this plan.

28. On March 15, 2019 Claimant returned to Dr. Brogmus. Claimant reported no improvement and some worsening of her condition. She was unable to pivot without significant pain and noted even with walking that her steps were shorter. Her right knee was more swollen. Dr. Brogmus reported Claimant continued to look symptomatic despite a steroid and synvisc injection and was not back to pre-existing activity level. She concurred with Dr. Noonan's arthroscopic recommendation.

29. Claimant testified that since the incident of January 19, 2018, she has seen slight improvement in the swelling of her right knee. She testified that she has pain with every step and walks with a pretty severe limp. Her endurance is much less. She has difficulty with walking up an incline or down a decline and cannot pivot on her right knee. She testified that although her work duties have not changed since the incident that her co-workers have had to assist her with several duties. She testified that she cares for adult dementia patients and they are able to walk faster than her which creates problems when they try to leave the facility.

30. Dr. Failinger testified that his diagnoses were degenerative joint disease, significant arthritis and a meniscus tear. He felt the tear was degenerative based on the MRI taken on March 27, 2018, but stated that the MRI was of poor quality. He testified that in his opinion surgery was not reasonably expected to improve Claimant's condition and not medically probable to change her pain pattern. He testified that he felt her pain was coming from arthritis and not the meniscus tear and would not recommend arthroscopic surgery. He stated that in his opinion Claimant's symptoms were caused by the fall. Dr. Failinger acknowledged that his opinion regarding the arthroscopic surgery differs from the opinions of Dr. Brogmus, Dr. Gardner and Dr. Noonan and Dr. Failinger's opinion was deemed less credible.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo 306, 592 P.2d 792 (1979).

2. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the

testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

3. In this case, Claimant has proven by a preponderance of the evidence that she sustained an injury to her right knee including a meniscus tear after falling at work on January 19, 2018. The evidence presented established that this compensable injury is the proximate cause of Claimant's need for medical treatment and the recommended arthroscopic surgery.

4. Claimant credibly testified that she had never suffered an injury to her right knee before the work incident on January 19, 2018. She credibly testified that she did not have any pain or swelling in her right knee and had never sought or received any medical care to her right knee prior to the work incident on January 19, 2018.

5. Claimant underwent conservative care including medications, physical therapy, cortisone injection and synvisc injection but her symptoms did not improve and have worsened since the admitted injury. She is continuing to experience pain with every step, walking with a limp, inability to pivot and difficulty walking on inclines or declines.

6. Dr. Donna Brogmus is Claimant's primary treating physician for her work injury and has treated her since the incident on multiple occasions. Dr. Brogmus stated that she did not agree with the denial of Dr. Noonan's recommended arthroscopic surgery. Dr. Brogmus stated that Claimant had done conservative treatment for 14 months and her condition continued to worsen. She further stated that she concurred with Dr. Noonan's arthroscopic recommendation. Dr. Brogmus' opinion is credible and persuasive as she has examined Claimant on multiple occasions since the admitted work injury.

7. Eric Gardner, M.D., an orthopedic surgeon, examined Claimant on several occasions and reported her MRI demonstrated a medial meniscal tear and chondromalacia. He opined that the residual symptoms she was having were as a result of her nonfunctioning meniscus. Dr. Gardner also stated that Claimant's work injury exacerbated a pre-existing condition and more likely than not caused the meniscal root tear. Dr. Gardner strongly disagreed with the medical record review of Dr. Ciccone and the denial of Claimant's surgery. He opined that it

was in Claimant's best interest to try and fix the meniscus to prolong the potential need for her to have a knee replacement.

8. Thomas Noonan, M.D. of Steadman Hawkins evaluated Claimant for her right knee pain and opined that arthroscopic debridement was a reasonable treatment option which may delay the need for knee replacement. He also stated that despite the fact that her chondral degeneration pre-existed her injury he felt her current symptomatology was from her fall at work. Dr. Noonan was also deemed credible.

9. Dr. Ciccone performed a records review and did not examine the Claimant and did not personally review the x-rays or MRI. Dr. Ciccone's opinion is not credible or persuasive.

10. Dr. Failinger's opinion is also not persuasive. He stated that it does appear the patient's symptoms are related to the work incident and reported there was nothing in the record, nor was there any history which noted any previous history of symptomatology, treatment, or problems of the right knee prior to her fall. He also stated that it appears the patient sustained an exacerbation of pre-existing arthritis. He stated that in his opinion the arthroscopic surgery would not be successful and therefore it should be denied. Dr. Failinger reviewed the MRI taken on March 27, 2018 but did not review the MRI taken on January 4, 2019. He stated that the MRI he reviewed was of poor quality. Dr. Failinger also did not review the medical record or opinion of Dr. Noonan as Dr. Noonan's examination and medical record were performed and prepared after Dr. Failinger's last Addendum dated November 28, 2018.

11. The opinions of Claimant's treating and examining physicians including Dr. Brogmus, Dr. Gardner and Dr. Noonan are more credible and persuasive than the opinions of Dr. Ciccone who performed a record review and Dr. Failinger who performed an independent medical examination concerning the need for the arthroscopic surgery for Claimant's right knee work injury.

12. Based on the totality of the credible and persuasive evidence, Claimant has proven by a preponderance of the evidence the right knee arthroscopic surgery recommended by Dr. Gardner and Dr. Noonan is reasonable, necessary and related.

13. The ALJ accepts as credible and persuasive the opinions of Dr. Brogmus, Dr. Gardner and Dr. Noonan and reject opinions to the contrary. Claimant established that it is more probably true than not that she is entitled to receive reasonable, necessary and related medical treatment including arthroscopic surgery to relieve the effects of her admitted January 19, 2018, right knee injury or prevent further deterioration of her condition.

.

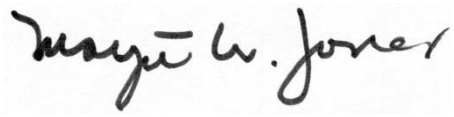
ORDER

It is ordered as follows:

1. Claimant has proven by a preponderance of evidence that the right knee arthroscopy is reasonably necessary to cure or relieve Claimant from the effects of the admitted work injury.

2. Respondent shall pay the costs of the right knee arthroscopy subject to the Division of Workers Compensation Medical Fee Schedule.

DATED: December 23, 2019.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **R,** Claimant, vs. **F** Employer, And **L,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-092-188-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Administrative Law Judge (ALJ) Margot W. Jones presided at a hearing in this matter held on October 8, 2019, convening at 8:30 a.m. in Courtroom 3 in Denver, Colorado. Claimant was present and represented by , Esq. Respondents were represented by , Esq. Exhibits 1-9 and A-J were admitted into evidence.

In this order, the ALJ refers to R as "Claimant," F. as "Employer" and to L as "Insurer." "Respondents" refers to both Employer and Insurer, collectively.

The ALJ may use the following acronyms in this Order: "C.R.S." refers to Colorado Revised Statutes (2019); "the Act" refers to the Workers' Compensation Act of Colorado, Sections 8-40-101, et seq., C.R.S.; "OAC" refers to the Office of Administrative Courts; "OAC Rules" refers to the Office of Administrative Courts Rules of Procedure, 1 Code Colo. Reg. 104-1; and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable work-related injury on July 25, 2018.

2. Whether Claimant has established an entitlement to reasonable and necessary medical benefits to treat his alleged July 25, 2018, injury.

3. What is Claimant's average weekly wage.

4. Whether Claimant established that he is disabled from his usual employment and entitled to an order awarding temporary partial disability benefit from July 25, 2018, and continuing until terminated by law.

FINDINGS OF FACT

1. Claimant was working for Employer on July 25, 2018. He had been working for the Employer for six or seven months. He alleges he sustained an injury to his left knee on July 25, 2018, which is the primary subject of this litigation.

2. Claimant testified that he felt pain in his left knee after hearing a pop. He testified that he felt the pain when he was putting a tote on a pallet. He turned his body to put down a tote, which he alleged caused the onset of left knee pain. Claimant continued to work and finished the remainder of his shift after the alleged incident. He did not have to stop working as a result of the alleged work injury.

3. Claimant was first seen by his authorized treating physician (ATP) Nicole Huntress, MD on July 26, 2018. The medical record contains no objective evidence of a traumatic injury. The medical record explained that Claimant had "not had any swelling" and the physical examination section noted, "no soft tissue swelling, ecchymosis, erythema, effusion, or deformity."

4. Claimant returned to his ATP at Concentra five days after the alleged injury on July 30, 2018. At that appointment, there was no objective evidence of a work injury and again the note indicated, "no swelling appreciated." and "no soft tissue swelling, ecchymosis, erythema, effusion, or deformity."

5. Dr. Huntress noted the possibility that Claimant could be suffering from degenerative joint disease and not an acute tear, but that an MRI would be necessary to make a final determination.

6. An x-ray of the Claimant's left knee was taken on July 30, 2018, which revealed no joint effusion, no acute bony abnormality and degenerative

changes. There was no evidence of an acute injury in the medical records or in the initial diagnostic testing.

7. Claimant initially testified that he had never had pain in his knee prior to the alleged work injury on July 25, 2018. Subsequently, Claimant admitted that he had in fact had pain and other problems with his left knee due to old age and arthritis prior to July 25, 2018.

8. Dr. O'Brien credibly testified within a reasonable degree of medical certainty that Claimant did not sustain a traumatic injury to his left knee. Dr. O'Brien explained that when the Claimant was examined on July 26, 2018, his knee was quiescent with no effusion, no bruising or swelling, and no objective evidence of tissue breakage or yielding.

9. Dr. O'Brien explained that when a traumatic tearing of the meniscus occurs, there will be objective findings such as redness, bruising, swelling, warmth due to increased metabolic activity. He noted that there would be signs of bleeding in the knee on diagnostic studies such as the MRI and the x-rays that were performed.

10. On August 9, 2018, Claimant underwent an MRI to assess pathology. Dr. Huntress noted in her report that the MRI revealed "complex medial meniscus tearing" and added end stage osteoarthritis to the Claimant's diagnosis. The MRI report concluded that the Claimant has tricompartmental osteoarthritis with grade 3 cartilage fissuring and loss in the medial compartment.

11. Dr. Failinger examined the Claimant and discussed the findings of the MRI, which he noted revealed "beyond severe patellofemoral degenerative joint disease with remodeling of the retropatellar surface and severe lateral femoral condylar arthritic changes," "some medial compartment moderate chondromalacia and degenerative meniscus tearing," and that "the lateral compartment has degenerative changes as well as minimal fraying of the lateral meniscus."

12. Dr. Failinger did not find evidence of an acute or traumatic injury, but rather characterizes Claimant's condition as degenerative in nature. Dr. Failinger also commented that Claimant was unable to straighten his knee because of the severe patellofemoral arthritis and explained that the Claimant's arthritis was so severe that there is essentially no chance of a knee scope helping his condition.

13. Shortly after being evaluated by Dr. Failinger, Claimant was given viscosupplementation to treat his "severe arthritic changes" in his left knee. Viscosupplementation involves lubrication being injected into the knee to help reduce pain from the severe arthritis.

14. Claimant was referred to John Burris, MD and was evaluated on November 30, 2018. Dr. Burris noted in his report that Claimant's initial examination by Dr. Huntress was "benign with no evidence of effusion or signs of trauma to the knee." Dr. Burris also noted that the MRI that was performed on August 9, 2018, "revealed tricompartmental osteoarthritis with no acute abnormalities."

15. Dr. Burris explained that the Claimant's alleged work-event "did not likely cause, aggravate, or contribute to [the Claimant's] preexisting condition." Dr. Burris placed the Claimant at MMI and opined that no work restrictions or maintenance care were appropriate. Dr. Burris concluded by noting that Claimant could seek Viscosupplementation injections for his preexisting arthritis, but that this would not be related to his workers' compensation claim.

16. Dr. Huntress and Dr. Burris at Concentra and Dr. Ballinger at Advanced Orthopedic all agree with Dr. O'Brien that Claimant's complaints are the result of the end-stage osteoarthritis in his left knee and not the result of any work-related incident. All of the Claimant's treating physicians found that Claimant's condition is due to a severe end stage degenerative condition.

17. Claimant's IME Physician, Dr. Yamamoto is the only doctor who found the knee condition to be work-related. However, when providing testimony, Dr. Yamamoto confirmed that the degeneration in the Claimant's knee is so bad the Claimant may even have bone-on-bone contact. Dr. Yamamoto also confirmed that when a physician refers to a meniscal tear as "complex" it means that the patient's meniscus is starting to fall apart in multiple places due to degeneration of the meniscus. Dr. Yamamoto also confirmed that viscosupplementation injections like the ones recommended to treat Claimant, are a medical treatment that is performed to treat patients suffering from severe degeneration by lubricating the knee to help it function.

18. Dr. Yamamoto initially testified that the MRI of August 9, 2018, revealed edema and swelling in the Claimant's knee. However, Dr. Yamamoto conceded that arthritis alone can cause such "trace fluid" in the knee.

19. Dr. Yamamoto's causation opinion is found to not be credible.

20. Timothy O'Brien, MD, an orthopedic surgeon, performed a review of the Claimant's medical records and provided an expert opinion. Dr. Tim O'Brien reviewed the mechanism of injury and opined mechanism of injury was very low energy and did not exceed the injury threshold for the meniscus. Dr. Brien opined that Claimant did not suffer a traumatic injury to his meniscus on July 25, 2018.

21. Dr. O'Brien supported the opinions of Claimant's ATPs, Dr. Burris, Dr. Failinger, and Dr. Huntress that Claimant's stated complaints of pain in his left knee are only related to his preexisting arthritis and are not related to the incident on July 25, 2018.

22. Dr. O'Brien explained that given the advanced nature of Claimant's tricompartmental osteoarthritis in his left knee, Claimant's assertion that he did not have any pain or functional limitation prior to July 25, 2018 is medically unlikely.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo 306, 592 P.2d 792 (1979).

2. In accordance with Section 8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the

testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

Compensability

4. The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp*., 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc*., WC 4-606-563 (ICAO August 18, 2005).

5. Claimant failed to establish, by a preponderance of the evidence, that he sustained a work-related injury on July 25, 2018. Claimant failed to establish that his work aggravated or accelerated the advanced tricompartmental osteoarthritis that was present in his left knee prior to July 25, 2018.

6. Although the Claimant alleges he experienced pain in his knee while at work, there is insufficient evidence to establish that the Claimant's work duties caused his symptoms or aggravated/accelerated his condition.

7. The credible testimony provided by Dr. O'Brien and supported by the medical records confirms that the mechanism of injury described by the Claimant was very low energy and likely did not exceed the injury threshold necessary to produce a meniscus tear.

8. Rather, the symptoms that Claimant experienced after putting a tote on a pallet are more likely the result of Claimant's pre-existing tricompartmental osteoarthritis and unrelated to his employment. As found above, the MRI that was completed in August of 2018 showed numerous findings consistent with advanced end-stage arthritis and "complex" degenerative tearing. The medical records from the Claimant's authorized treating physicians persuasively indicate that the MRI of Claimant's knee supports a finding that Claimant had degenerative changes in his knee and no evidence of any acute injury. Dr. O'Brien persuasively testified that if Claimant had in fact sustained a traumatic injury, there would have been clear signs of the traumatic injury in the MRI including significant swelling.

9. Although Dr. Yamamoto testified and provided an IME report indicating that the Claimant sustained an aggravation of his pre-existing osteoarthritis, his opinion is not persuasive. It is noted that Dr. Yamamoto's medical opinion was based on the assumption that Claimant did not have pain or limitations in his left knee prior to July 25, 2018, which, during live testimony, was found to be inaccurate.

10. The medical records and medical opinions of Dr. O'Brien, Dr. Failinger, Dr. Huntress and Dr. Burris, that the Claimant's pain is the result of severe arthritis in his left knee and that no work-related event of July 25, 2018 caused, aggravated, or contributed to the Claimant's preexisting condition, is persuasive over the testimony and written opinion of Dr. Yamamoto.

11. Claimant has failed to establish that an injury occurred on July 25, 2018 or that his employment aggravated or accelerated his right knee condition. Therefore, his claim is denied and dismissed and no medical benefits are awarded.

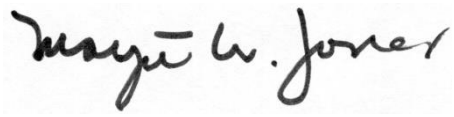
ORDER

It is ordered as follows:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work related injury to his left knee on July 25, 2018.

2. Claimant's request for temporary disability and medical benefits is denied with prejudice.

DATED: December 23, 2019.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-070-396-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Self-Insured / Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 7, 2019 and concluded on November 15, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: Courtroom 1, 8/7/19, beginning at 1:30 PM, ending at 4:15 PM; and, 11/15/19, beginning at 1:30 PM, and ending at 2:10 PM).

The Claimant was present in person and represented by [Redacted], Esq., and Scott Meiklejohn, Esq. Respondent was represented by [Redacted], Esq., Assistant City Attorney. .

Hereinafter [Redacted] shall be referred to as the "Claimant." [Redacted], shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 17 were admitted into evidence, without objection. Respondents' Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief was mailed on November 14, 2019 (one day before the concluding hearing). Respondent's answer brief was filed on November 8, 2019 (7 days before the concluding hearing. Both briefs were designated as "proposed

findings," apparently in anticipation of a favorable ruling. The ALJ gave the Claimant 2 days within which to file a reply brief, however, in light of the fact that the answer brief preceded the opening brief, the opening brief is hereby considered a combined opening and reply brief. The matter was deemed submitted for decision on November 15, 2019.

A transcript of the August 7, 2019 hearing was lodged on or about September 20, 2019 (hereinafter "Tr., followed by a page and line number).

ISSUES

The issues to be determined by this decision concern: (1) whether the Claimant has overcome the opinion of the Division Independent Medical Examination (DIME) of Richard Gordon, M.D., in his determination that the Claimant did not have a work-related impairment of his lumbar spine;, (2) or, in the alternative, whether the admitted left lower extremity (LLE) rating of 26% scheduled LLE rating should be converted to a whole person (WP) rating by virtue of a situs of functional impairment extending to the lumber spine; and, (3) post maximum medical improvement (MMI) maintenance medical care.

The Claimant's burden of proof for overcoming the DIME is by "clear and convincing evidence." His burden for converting the scheduled LLE rating and for maintenance medical care is by a "preponderance of the evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated that the Claimant reached MMI on July 9, 2018.

2. The Respondent filed a Final Admission of Liability (FAL), dated February 7, 2019, admitting an MMI date of July 9, 2018; an average weekly wage of $1,706.08; temporary total disability (TTD) benefits through April 22, 2018, 26% scheduled left lower extremity (LLE) permanent partial disability (PPD), pursuant to DIME Dr. Gordon's rating; and, for post-MMI medical maintenance benefits, pursuant vto the opinion of Cynthia Kuehn, M.D. The Claimant timely requested a hearing to challenge the DIME rating.

3. The Claimant is a 48- year old Firefighter for Employer and has been employed in this position since 2008. On August 3, 2017, he suffered a compensable injury while responding to a fire. While stepping on a pile of debris at a fire scene, the debris gave way, causing the Claimant to jump off the debris and twist his back with an

injury to his back and his left lower extremity (LLE) on landing. When he jumped he felt a twinge in his lower back (Respondent's Exhibit A, pp. 1-3). Mark S. Hughes, M.D., testified at his deposition that the Claimant told him that when he fell he caught himself by holding onto a demolition pole that he was using at the time [Claimant's Exhibit 16, Bates Stamp (hereinafter "BS") 00190 lines 1-4).

Medical

4. The Claimant was first seen by Denver Health on the date of the injury, August 3, 2017. Joan Mankowski, M.D., noted that the Claimant had jumped 6-8" off a pile of debris at a fire scene and landed on the floor. He denied falling but recalled a moderate jolt on impact. His left low back ache occurred within one half hour of the incident, associated with a burning and stabbing pain. He reported limping since the incident and noted anterior hip pain. The pain was noted as being "aching, burning, constant stabbing with the left lower back aching. Left hip is burning and stabbing. The Claimant was referred for conservative care and was restricted to sedentary work. The note indicates that the Claimant had a right sided L5-S1 herniation in 2008, treated with acupuncture and physical therapy and no surgical intervention. It resolved within a short period of time (Claimant's Exhibit 4, BS 006-008; Respondent's Exhibit A. pp 1-3)

5. On August 7, 2017, a lumbar MRI (magnetic resonance imaging) found minimal facet atropathy and related listhesis at L5-S1, multilevel degenerate disc disease and a "previously identified disc herniation at L4-5 and L5-S1 that are no longer present (Respondent's Exhibit D, BS 23).

6. On August 9, 2017, the Claimant was referred for a course of physical therapy. There is a note that his condition is unchanged (Respondent's Exhibit D, BS 023).

7. The notes from the Denver Health visit with Sadie Sanchez, M.D., notes that Claimant has a dull back ache at rest and that his condition is worsening (Respondent's Exhibit D, BS 027).

8. On September 6, 2017, the Claimant was seen by Dr. Sanchez. She noted that Claimant had a dull ache in his back at rest but his left leg nerve pain had improved. He was taking Ibuprofen and Tylenol. He wanted to fast track his issue to return to full duty. There is a note that the condition is worsening (Respondent's Exhibit D BS 027).

9. The left hip MRI taken on September 8, 2017, found moderately severe degenerative changes of the left hip with synovitis and extensive complex labral tearing with several paralabral cysts (Respondent's Exhibit F. BS 097).

10. On September 25, 2017, the Claimant was seen at COSH and reported ongoing pain in the left hip which would worsen with repetitive movement. He also reported that back pain increases to 2-3/10 at the end of the day that is partially relieved

by heat. He reports low but persistent pain in the lower back (Respondent's Exhibit D, BS 30-32).

11. On October 2, 2017, Nathan Faulkner, M.D., did an orthopedic evaluation of the Claimant's left hip. Dr. Faulkner noted that the Claimant had degenerative changes in his left hip that were likely preexisting but had become symptomatic after the work injury. Any recommendations concerning the lower back were deferred until after the hip injection was done (Respondent's Exhibit E). The hip injection was done on October 23, 2017. the examination of Samuel Chan, M.D., on November 20, 2018, noted that the Claimant was involved in physical therapy. There was tenderness to palpation over the left PSIS and sacral sulcus. The left SI joint engages somewhat slower than the right with lumbar forward flexion. With physical therapy and oral steroids the numbness and tingling have improved (Respondent's Exhibit E. BS 75).

Medical Record Review by Allison Fall, M.D. and Dr. Chan

12. Dr. Fall undertook a medical records review on October 27, 2017. She was of the opinion that the most likely etiology of the LLE pain was irritation of the peroneal component of the Claimant's sciatic nerve due to a large paralabral cyst in the left hip. She noted that while the degenerative changes in the hip were pre-existing, there was no indication that Claimant was symptomatic prior to the injury. She stated that she did not feel that an epidural steroid injection would be beneficial and Claimant would not meet the criteria for such an injection (Respondent's Exhibit H).

13. Dr. Chan's notes from January 4, 2018, indicate that the patient did have a diagnostic as well as a therapeutic response to the epidural steroid injection. Dr. Chan felt there was a good prognosis if the patient continues to follow through with an active exercise program. The importance of following through with a core stabilization exercise program was discussed (Respondent's Exhibit E, BS 084-85).

14. Dr. Chan noted after a visit on January 29, 2018, that the Claimant had an antalgic gait **which was rather significant**. The Claimant had low back pain at 4/10 but had a significant diagnostic response to the epidural steroid injection. He was continued with Lyrica (Respondent's Exhibit E, BS 86-7).

15. In the notes from the appointment with Dr. Chan on February 18, 2018, it was noted that Bryan Castro, M.D.(the orthopedic surgeon) felt that the majority of the back pain could well be stemming from the left hip joint. There is still pain over the lumbar spine area causing numbness. He was still using Lyrica and rates his pain to be 3-4/10 (Respondent's Exhibit E, BS 088). The ALJ places considerable weight on Dr. Castro's orthopedic opinion and finds that it supports functional impairment stemming from the left hip, as a consequence of the left hip injury. It does not support a specific injury to the back.

16. The Claimant returned to COSH on March 8, 2018. He reported that he was still taking Lyrica, participating in chiropractic treatment with acupuncture and medical massage (Respondent's Exhibit D BS 56-58)

17. Dr. Chan's notes from the Claimant's March 15, 2018, visit notes that there is still pain at 3/10. He (Claimant) still uses Lyrica. The notes indicate there is tenderness in his lumbar spine and that the lumbar range of motion is slightly limited in flexion as well as extension because of pain. There was a direction that Claimant continue with Lyrica and his core stabilization program (Respondent's Ex.hibit E, BS 091-092).

18. Dr. Chan's April 17, 2018, note reported that the Claimant was still on Lyrica for nerve pain and that he should continue physical therapy (PT) for range of motion (ROM) strengthening and gait training. The patient walked with a mild antalgic gait with the limp on the LLE. The summary on the left side of the report notes no low back pain (Respondent's Exhibit G. BS 102-103).

19. May 3, 2018, Dr. Chan noted that the Claimant was still on Lyrica, did not have back pain and should still continue with the PT program (Respondent's Exhibit E, BS 094).

Cynthia Kuehn, M.D.

20. Dr. Kuehn saw the Claimant on June 12, 2018, and noted that there was improvement. She noted that Claimant had aching pain in his low back rated at 1/10. He was continued with Lyrica and there is no note of low back complaints other than what was indicated in the note (Respondent's Exhibit D, BS 64-65).

21. On June 20, 2018, Dr Kuehn noted that the Claimant was ready for a trial of full duty. She noted tightness in the low back, no pain. She noted that the Claimant is no longer taking Lyrica (Respondent's Exhibit D, BS 066-067).

22. Dr. Kuehn placed the Claimant at MMI on July 9, 2018. She noted that he could work full duty as a firefighter. She noted there was soreness in his lower back which comes and goes. She noted heat and rest and stretching help alleviate the problem and that he was still using the H wave or TENS machine. Dr. Kuehn provided an 18% whole person impairment for the lumbar spine and a 42% scheduled rating for the left hip (Respondent's Exhibit D, BS 068-073).

Dennis H. Chang, M.D.

23**.** On September 11, 2018, the Claimant saw Dr. Chang who did the hip surgery. There was no indication of low back pain (Respondent's Exhibit G, BS 108-109). Dr. Chang indicated that there should not be long distance running and jogging but no other limitations were placed. on the Claimant.

DIME Exanminer Richard Gordon, M.D.

24. Dr. Gordon performed the DIME and indicated that there was a diagnosis of post left hip total arthroplasty with extensive complex labral tearing and several para-labral cysts, lumbar spondylosis L5-S1 currently asymptomatic and referred LLE pain resolved. Dr. Gordon found the the Claimant was at MMI effective July 9, 2018. He provided a 26% scheduled impairment rating for the left hip (Respondent's Exhibit C, BS 006-013).

25. In addressing the lumbar spine, Dr. Gordon made specific findings on causation stating:

> This examiner does not feel that any permanent impairment was sustained to the lower back. It is this examiner's opinion that his left lower extremity pain was most likely due to irritation of the peroneal component of his sciatic nerve due to the large paralabral cyst in the posterior superior acetabulum. This is consistent with Dr. Fall's impression from her medical record review performed on 10/27/17 and the 3/13/18 visit with Dr. Chang where the patient history section did not mention any current low back or lower extremity radicular symptoms. The majority of the discussion regarding his complaints revolved around left hip pain. There were clinic visits with Dr. Chan on 5/3/18 and 7/31/18, after the patient underwent left total hip arthroplasty, where there was no mention of low back pain or left lower extremity radicular pain and no objective findings of lumbar spine mediated pain and with normal lower extremity neurological exam. Postoperative follow-up visits with Dr. Chang on 4/17/18, 5/15/18 and 6/12/18 also did not document low back or left lower extremity radicular symptoms. Furthermore, [Claimant] does not complain of any current low back pain or radicular symptoms. Therefore, it was determined by this examiner that he would not be assigned an impairment rating pertaining to his lumbar spine (Respondent's Exhibit , BS 14).

26. The ALJ finds that aggregate medical opinions seemingly to the contrary of DIME Dr. Gordon's opinion concerning the Claimant's back amount to differences of opinion and do not rise to the level of making it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Gordon's opinion concerning the Claimant's back as a specifically rateable body part was in error. Nonetheless, Dr. Gordon does not persuasively address the referred pain from the LLE to the back, which functionally impairs the Claimant, thus, making the situs of functional impairment overlapping the LLE and the low back.

John S. Hughes, M.D.—Claimant's Independent Medical Examiner (IME)

27. The Claimant was seen for an IME with Dr. Hughes on March 14, 2019. Dr. Hughes noted that he definitely had an improvement in his back from a corticosteroid injection done in December 2017. He noted that after the total hip arthroplasty in April 2018, the Claimant had recrudescence of his lumbar spine pain which has persisted. He described an aching numbness pain in his lumbar spine which fluctuates with respect to severity and currently has a magnitude of 5/10. The physical examination noted limitations on the lumbar spinal ranges of motion. Dr. Hughes is of the opinion that the waxing and waning of low back pain represents a loss of function extending beyond the region of the left hip into the region of the lumbosacral spine. Dr. Hughes notes that there was a benefit and a therapeutic response to the epidural steroid injection done on December 6, 2017. The ALJ finds that Dr. Hughes' opinion does not persuasively support a separate and rateable impairment of the low back, however, it supports a situs of functional impairment overlapping the LLE and the lumbar spine.

John Burris, M.D.

28. Dr. Burris stated that he has no evidence that the Claimant had any symptoms of low back pain in the eight or nine years prior to the August 3, 2017, work-related injury.

29. The Claimant had no treatment for his back before August 3, 2017, except for brief treatment eight or nine years prior which had resolved. He was asymptomatic with regard to his back prior to the August 3, 2017 injury (Tr., p 87, ln l 2-6)..

30. Dr. Burris agreed that from August 2017 until July 2018, the Claimant had a lot of treatments on his back (Tr, p 80, ln l 7-11). These treatments included c). He also agreed that there was a therapeutic response to Lyrica which is used to treat nerve pain (Tr. p. 79, ln14-18).

31. Dr. Burris agreed that there was low back pain at the time of the hearing and that was the Claimant's initial complaint after the injury on August 3, 2017 (Tr. p. 68, lns 22-25). Dr. Burris also agreed that at the time of his examinations on October 18, 2018 and June 18, 2019 the Claimant complained of back pain (Tr. p. 74,, lns 1-7; Respondent's Exhibit L, BS 117-140).

Claimant's Testimony

32**.** According to the Claimant, he has done physical therapy, chiropractic, acupuncture, massage therapy and utilized Lyrica and a TENS unit. He still utilizes that for back pain. As Judge Felter noted the unit confounds nerve signals and thus mitigates pain (Tr., p. 31, lns 12-14). The Claimant stated that it helps keep pain at bay. He stated that he has constant pain that fluctuates from a lower level to a higher level

(Tr., p. 31, ln 20). The Claimant also does yoga and core strengthening exercises for his back on a daily basis.

33. According to the Claimant, he used Lyrica for a long time, is somewhat apprehensive about drugs but because of its good results he would be willing to try it again (Tr., p. 32, lns16-17).

34. According to the Claimant, around June 20, 2018, at the time of his return to work examination, he still felt the effects of the Lyrica, was on PT, doing yoga daily and still was using the H wave or TNS unit (Tr., p. 32, lns 19-22).

35. According to the Claimant, the pain in his back was a 2/10 and can spike to a 4/10 for pain depending on whether he is standing too long, standing on hard surfaces and on the activities he is doing (Tr. p. 34 ,lns 7-10). The Claimant states that he has been dealing with back pain for some time and believes that one gets used to dealing with it (Tr., p. 35, lns 17-19). He stated that when he went back to work he stopped taking Lyrica and was supplementing with over the counter medication like Ibuprofen and Aleve (Tr., p. 39, lns 22-25).

36. At the continuation hearing on November 15, 2019, the Claimant stated that he has been continuing to go to PT for continued back pain, has ongoing appointments with Dr. Chan, Dr. Chang and would like to be able to resume Lyrica. He modified some tasks with the Employer, testing for his condition. He pulled a dummy rather than directly carrying the dummy so that he could remain in a more upright position. He does grass mowing and other household activities in small segments to minimize back pain.

37. When the Claimant identified to Dr. Burris an area in his low back that was tender to palpation, Dr. Burris touched another spot, not the one which the Claimant indicated was tender.

38. According to the Claimant, even after the removal of the cyst on his acetabulum, it did not eliminate the back pain (Tr. pp .47-49).

39. According to the Claimant, he was always anxious and wanting to go back to full duty and this desire may have colored his pain complaints (Tr., p. 88 lns2-5).

Ultimate Findings

40. The ALJ finds the opinion of Dr. Hughes persuasive and credible insofar as it supports a situs of functional impairment that overlaps the LLE and the low back, however, the ALJ also finds DIME Dr. Gordon's opinion of no specific impairment to the back credible and persuasive against a backdrop of the totality of the evidence, which does not exclude the situs of functional impairment as overlapping the LLE and low back. Consequently, Dr. Gordon's converted rating for the LLE of 10% whole person is an appropriate measure of the Claimant's permanent medical impairment.

41. Based on the totality of the evidence, the Claimant has failed to prove that DIME Dr. Gordon's declining to rate impairment of the Claimant's back as a separate and specific matter was clearly erroneous. Specifically, the Claimant failed to prove, by clear and convincing evidence that DIME Dr. Gordon was in error by declining to specifically rate the Claimant's back. Dr. Gordon, however, did not persuasively address the issue of the situs of functional impairment. In this regard, it is likely, that Dr. Hughes' opinion, supporting the situs of functional impairment as overlapping the LLE and low back is more probably correct.

42. The Claimant, along with the totality of the evidence, proves, by preponderant evidence that a conversion of DIME Dr. Gordon's 26% LLE scheduled rating to his 10% whole person rating, accurately establishes the degree of Claimant's permanent medical impairment.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad

discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinion of Dr. Hughes was persuasive and credible insofar as it supports a situs of functional impairment that overlaps the LLE and the low back, however, as found, DIME Dr. Gordon's opinion of no specific impairment to the back was credible and persuasive against a backdrop of the totality of the evidence, which does not exclude the situs of functional impairment as overlapping the LLE and low back. Consequently, Dr. Gordon's converted rating for the LLE of 10% whole person was an appropriate measure of the Claimant's permanent medical impairment.

Overcoming the DIME

b. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI and degree of permanent impairment is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Claimant failed to overcome the DIME physician's declining to rate the Claimant's low back as a specific body part by clear and convincing evidence.

Conversion to Whole Person/Burden of Proof

c. It is well-established that the question of whether a claimant sustained a scheduled loss within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8) (c), C.R.S. is one of fact for determination by the ALJ. *Delaney v. Indus. Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000). In resolving this question, the ALJ must determine the situs of a claimant's "functional impairment," and the situs of the functional impairment is not necessarily the situs of the physical injury itself.. *Langston v. Rocky Mountain Healthcare Corp.,* 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Further, pain and discomfort which limit a claimant's ability to use a portion of his body may be considered as "functional impairment" for purposes of determining whether an injury is on or off the schedule. *Also see, Fresquez v. Montrose School District RE-1J,* W.C. No. 4-969-602-01 [Indus. Claim Appeals Office (ICAO). April 14, 2017]. For a conversion, the party seeking it must accept the four corners of an ATP's or DIME'S opinion letter. The standard of proof is then "preponderance of the evidence." As found, a conversion to DIME Dr. Gordon's whole person rating of 10% whole person has been proven by preponderant evidence. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Division Independent Medical Examiner's opinion has **not** been overcome insofar as it did not rate the Claimant's low back as a specific body part.

B. The Respondent .shall pay the costs of all causally related and reasonable necessary medical maintenance benefits, pursuant to the Final Admission of Liability, subject to the Division of Workers' Compensation Medical fee Schedule.

C. Respondent shall forthwith pay the Claimant permanent partial disability benefits, based on 10% whole person disability.

D. Respondent is entitled to a credit for all schedule permanent disability benefits paid pursuant to the Final Admission of Liability

E. Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not aid when due.

DATED this 26th day of December 2019.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **K,** Claimant, vs. **A,** Employer, And **S,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-069-188-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Administrative Law Judge (ALJ) Margot W. Jones presided at a hearing in this matter held on September 13, 2019, convening at 1:30 p.m. in Greeley, Colorado. Claimant was present and represented by _____, Esq. Respondents were represented by _____, Esq. Exhibits 1-7 and A-D were admitted into evidence.

In this order, the ALJ refers to K as "Claimant," A as "Employer" and S as "Insurer." Employer and Insurer collectively will be referred to as "Respondents."

The ALJ may use the following acronyms in this Order: "C.R.S." refers to Colorado Revised Statutes (2019); "the Act" refers to the Workers' Compensation Act of Colorado, Sections 8-40-101, et seq., C.R.S.; "OAC" refers to the Office of Administrative Courts; "OAC Rules" refers to the Office of Administrative Courts Rules of Procedure, 1 Code Colo. Reg. 104-1; and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUES

1. Whether Claimant is entitled to temporary benefits.

2. Whether the surgery requested by Dr. Joshua Snyder is reasonable, necessary, and related to the work-related injury.

FINDINGS OF FACT

1. Claimant sustained a compensable injury to her right hip and groin on January 27, 2018.

2. Respondents offered Claimant modified duty within her restrictions on February 15, 2018. Claimant was able to perform the modified duty and was paid her regular wages.

3. Claimant worked varying amounts at the modified duty position.

4. Claimant testified that she was often unable to complete her entire shift or assigned hours at the modified duty position due to her ongoing symptoms.

5. Claimant further testified that the offered and accepted modified duty position was always within the restrictions given by her authorized treating physicians.

6. Claimant testified that when she felt she was unable to continue to meet the requirements of her modified duty position at the A_____, she would sometimes request accommodations from her supervisor. Claimant testified that her supervisor would allow her to work in a different area, such as the jewelry counter where she could sit, or offer other accommodations as needed.

7. As Claimant's restrictions from her authorized treating physicians changed, her modified duties changed as well. Claimant's schedule changed from one 10-hour shift per week to five two-hour shifts per week.

8. At no time did employer or any supervisor require Claimant to perform work outside her restrictions in place at any given time.

9. Dr. Joshua Snyder evaluated Claimant on April 16, 2019. He diagnosed Claimant with right hip pain with signs of impingement and concern for chondral injury in the acetabulum due to a labral cyst. He recommended Claimant undergo a hip MRI.

10. Claimant underwent a hip MRI on May 7, 2019. The MRI showed degenerative cysts in the right anterior acetabulum consistent with mild right

hip osteoarthritis, otherwise no discrete muscle or tendon injury was identified.

11. Dr. Snyder saw Claimant again on May 14, 2019. He reviewed the MRI. He noted that it was difficult to discern any labral tear on the MRI. Nevertheless, he disagreed with the MRI interpreter. He opined the cyst is a red flag for articular cartilage delamination and recommended a right hip arthroscopy, debridement of cyst, possible micro fracture, and possible labral repair.

12. Dr. William Ciccone performed a records review and issued a report on May 27, 2019. Dr. Ciccone is Level II certified by the Division of Workers' Compensation and is board-certified in orthopedics and orthopedic sports medicine.

13. Dr. Ciccone agreed with Dr. Snyder that the cyst present is probably related to articular cartilage degeneration, and that Claimant probably had a small labral tear. However, he opined that those injuries were degenerative in nature, and not the result of any acute injury. Dr. Ciccone opined that up to 70% of all individuals in their 30's have labral tears, and 24% have chondral defects. He further opined that Claimant's mechanism of injury would not have caused the hip pain; but that given the degenerative nature of her condition, some intermittent hip and groin pain is to be expected.

14. Dr. Snyder issued another report on June 25, 2019. He apparently reviewed a job description and opined that it does appear it could be something that causes labral pain. He admitted that Claimant's hip pain was intermittent in nature, but went on to state that she did not have hip pain prior to her injury, and therefore her condition must be related.

15. It cannot be determined that Dr. Snyder reviewed Claimant's medical records prior to this injury. Although he notes Claimant's pain in 2017, he does not address any specifics.

16. Dr. Ciccone testified by deposition. He testified that he performed a records review, but did not examine Claimant. Dr. Ciccone testified that the fact that he did not examine Claimant did not impact or influence his opinions. Rather, he stated that his opinions were based on the objective findings in the medical records.

17. Dr. Ciccone opined that the findings on the hip MRI were not acute, but rather degenerative. He stated that cyst formation is a common finding associated with pre-existing degenerative changes, resulting from fluid and cartilage chronic changes.

18. Dr. Ciccone also stated that any labral injury is degenerative in nature as well as it is a common occurrence from early arthritis. He stated labral tears

are so common that it would be out of the ordinary if she did not have one, given her degenerative condition and age group.

19. Per Dr. Ciccone, degenerative conditions frequently present with intermittent symptoms that can be brought on by activity, but that alone does not indicate an acute injury. Rather, it is a normal presentation of a degenerative condition.

20. Dr. Ciccone testified that surgical intervention in this matter is not a common next step where Claimant failed conservative treatment.

21. Finally, Dr. Ciccone testified that simply experiencing pain at work does not necessarily reflect an injury occurred. Claimant's degenerative condition is reason for her to have pain. He further opined that the described mechanism of injury in this matter would not cause any injury, because there were simply no acute findings on the MRI. In Dr. Ciccone's opinion, he chronological progression of Claimant's pain is not an indication of any acute injury, but in fact the intermittent nature of the pain is directly associated with early degenerative changes.

22. Dr. Snyder did not specifically opine that Claimant's current condition is related to a work injury. Rather, he qualified his opinions by stating that the injury "could" be a cause, or that it "could have been" resulting from an injury.

23. Neither Dr. Ciccone nor Dr. Snyder opined that Claimant definitely has a labral tear, as both stated that it was not visible on the MRI.

24. Dr. Snyder's opinions are based on speculation without objective evidence of any acute injury. Both Dr. Ciccone and Dr. Snyder opined that the cyst is not an acute injury. Dr. Snyder's rationale for requesting the surgery is based on an assumption of a labral tear, for which there is no evidence. Further, Dr. Snyder cannot and does not state that there is an acute injury, only that there could be. Finally, Dr. Snyder himself admits that Claimant does have degenerative changes in her hip and offers no rebuttal to Dr. Ciccone's conclusions.

25. Dr. Ciccone's opinions and testimony are credible. Although he did not examine Claimant, he relied on the medical records, which were based on Claimant's own statements. Claimant did not testify or otherwise offer any evidence that the description of the mechanism of injury as set forth in the records was incorrect or contained any misstatements. Dr. Ciccone's reliance on the records is reasonable.

26. Claimant failed to meet her burden of proof to show entitlement to temporary benefits. Although Claimant testified that she felt unable to

complete her shifts due to pain at times, she failed to offer any evidence that her modified job duties were outside her restrictions as approved by the authorized treating physicians. She further testified that, when requested, she received additional accommodations to allow her to continue working. Claimant also did not offer any evidence that her supervisor or employer sent her home due to pain or inability to work.

27. Claimant did not offer any evidence that her injury caused any reduction in earnings. Rather, the credible evidence shows that Claimant's lost wages were due solely to her own subjective complaints.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo 306, 592 P.2d 792 (1979).

2. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all,

part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

3. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence*. Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

4. Here, Claimant failed to meet her burden of proof to show the requested surgery is reasonable, necessary, and related to her injury. The evidence shows that Claimant's symptoms are more likely than not caused by her degenerative condition, and not the result of her work injury. Dr. Ciccone's opinions were found more credible than Dr. Snyder.

5. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Thus, if the injury in part contributes to the wage loss, TPD benefits must continue until one of the elements of Section 8-42-106(2), *supra,* is satisfied. *Champion Auto Body v. Industrial Claim Appeals Office, supra*.

6. Here, Claimant returned to modified duty. Claimant was able to perform the modified duty and received her regular wages. The evidence showed that the modified duty was within her restrictions, and she was offered the same number of hours. Claimant failed to meet her burden of proof to show any temporary wage loss resulting from her injury.

ORDER

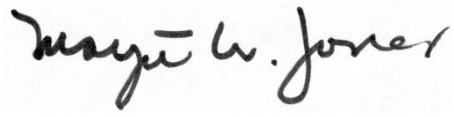
It is ordered as follows:

1. Claimant's claim for temporary benefits is DENIED and DISMISSED.

2. Claimant's request for the surgery recommended by Dr. Snyder is DENIED and DISMISSED.

3. Any issues not determined in this decision are reserved for future determination.

DATED: December 26, 2019.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Respondents have established by a preponderance of the evidence that they are no longer financially responsible for providing Fentanyl patches and Oxycodone pursuant to their August 1, 2017 Final Admission of Liability (FAL) that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's January 20, 2013 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. On January 20, 2013 Claimant suffered admitted industrial injuries to her right upper extremity when she slipped and fell during the course and scope of her employment with Employer. Claimant subsequently underwent two right shoulder surgeries, thoracic outlet surgery and two right wrist surgeries.

2. On June 30, 2017 Authorized Treating Physician (ATP) David W. Yamamoto, M.D. determined that Claimant had reached Maximum Medical Improvement (MMI) and assigned an 18% whole person impairment rating, a 40% right upper extremity rating and a 3% psychological impairment.

3. On August 1, 2017 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Yamamoto's MMI and impairment determinations. Respondents also acknowledged post-MMI reasonable, necessary and related medical maintenance benefits.

4. On October 31, 2017 Claimant underwent an independent medical examination with John S. Hughes, M.D. Dr. Hughes recounted Claimant's extensive medical history subsequent to her January 20, 2013 industrial injuries. He noted Dr. Yamamoto's impairment ratings for her injuries. Dr. Hughes remarked that Claimant's current medications included Metformin, Lisinopril, Omeprazole, Gabapentin, Topiramate, Lidocaine, Morphine, Fentanyl and Zolpidem.

5. After conducting a physical examination, Dr. Hughes determined that Claimant had undergone significant surgical treatment without "measurable benefits" other than partial restoration of right wrist function. He agreed with Dr. Yamamoto that Claimant had reached MMI. Dr. Hughes noted that Claimant was not permanently and totally disabled but recommended work restrictions. He suggested monitoring of Claimant's continued opioid tapering process and remarked that her "opioid-induced hyperalgesia" would abate as she eliminated opioid medications.

6. On April 18, 2018 Dr. Yamamoto authored a report recommending a transfer of care to Amar G. Patel, M.D. for interventional pain management. Dr. Patel subsequently performed Botox and epidural steroid injections.

7. On June 3, 2019 Claimant underwent a second independent medical examination with Dr. Hughes. Dr. Hughes reviewed additional medical records and performed a physical examination. He noted that Claimant had an 'increasingly perplexing medical history." Dr. Hughes remarked that he originally attributed Claimant's pain generator to her January 20, 2013 musculosketal injuries. However, Claimant experienced "progressive ambulatory difficulties, difficulties with sensation and motor control [and] a loss of coordination." He thus concluded that Claimant actually suffers from progressive diabetic retinopathy and has sustained substantial functional losses. Because Dr. Hughes determined that Claimant suffered neuropathic rather than musculoskeletal pain, he reasoned that she no longer has opioid-induced hyperalgesia.

8. On August 21, 2019 Dr. Yamamoto responded to an inquiry from Claimant's counsel regarding Dr. Hughes' second independent medical evaluation. Dr. Yamamoto agreed that Claimant likely suffers from diabetic peripheral neuropathy. However, he also remarked that Claimant continued to require opioid and other prescribed medications as outlined in Dr. Hughes' June 3, 2019 report.

9. On September 4, 2019 Dr. Patel's Physician's Assistant David Eastlund responded to inquiries from Claimant's counsel. In addressing whether he agreed with Dr. Hughes that Claimant likely suffers from diabetic peripheral neuropathy, P.A. Eastlund explained that opioid pain medications helped Claimant control chronic, sharp pain in her neck, shoulders, upper arms, forearms, hands and fingers. He noted that Gabapentin and other medications treated Claimant's consistent numbness and tingling. Furthermore, P.A. Eastlund commented that Claimant would require opioid and other medications even in the absence of diabetic peripheral neuropathy. P.A. Eastlund specified that "[o]ur objective is to decrease reported chronic pain levels while increasing overall physical function. I feel these goals are being met through the use of intervention procedures and the current opioid and other prescribed medications."

10. On October 9, 2019 Claimant visited P.A. Eastlund for an examination. P.A. Eastlund noted that Claimant's medications included Cymbalta, Topiramate, Gabapentin, Omeprazole, Fentanyl, MS Contin and Oxycodone. He remarked that he had been addressing the slow tapering of extended release opioid medications for treatment of Claimant's chronic right shoulder and neck pain.

11. On October 25, 2019 P.A. Eastlund issued an addendum report regarding Claimant's medications. He remarked that he discussed with Claimant the best way to safely and effectively taper her opioid medications. P.A. Eastlund commented that the use of a Fentanyl patch makes it difficult to taper medications because of the fixed amount of medication in the patch. He thus recommended the following: (1) stopping Fentanyl patches; (2) beginning extended release Morphine Sulfate; (3) continuing Oxycodone; (4) ceasing Oxycodone and starting instant release Morphine next month and; (5) in two months tapering IR or extended release by 5-10%.

12. Claimant testified at the hearing in this matter. She explained that her current medications decrease her pain and increase her function. Claimant noted that without her pain medications her functional abilities would be greatly reduced. Nevertheless, Claimant recognized that she would like to eliminate opioids but it has been a difficult process.

13. Dr. Hughes testified at the hearing in this matter. He noted that the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*) suggest limitations on the duration of opioid pain medications. Notably, the *Guidelines* specify "12 visits within a 12-month period to review the opioid plan." The *Guidelines* also recommend "[l]aboratory and other monitoring." WCRP 17, Exhibit 9 (I)(6). Dr. Hughes remarked that the use of opioid medications should be linked to functional improvements. He agreed with the tapering plan of P.A. Eastlund regarding the elimination of Fentanyl patches and Oxycodone.

14. Respondents have established that it is more probably true than not that they are no longer financially responsible for providing Fentanyl patches and Oxycodone pursuant to their August 1, 2017 FAL that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's January 20, 2013 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988). Initially, on January 20, 2013 Claimant suffered admitted industrial injuries to her right upper extremity when she slipped and fell during the course and scope of her employment with Employer. Claimant underwent two right shoulder surgeries, thoracic outlet surgery and two right wrist surgeries. She subsequently received significant interventional pain management treatment including numerous medications.

15. P.A. Eastlund explained that opioid pain medications helped Claimant control chronic, sharp pain in her neck, shoulders, upper arms, forearms, hands and fingers. He specified that "[o]ur objective is to decrease reported chronic pain levels while increasing overall physical function." By October 9, 2019 P.A. Eastlund noted that Claimant's medications included Cymbalta, Topiramate, Gabapentin, Omeprazole, Fentanyl, MS Contin and Oxycodone. He remarked that he had been considering the slow tapering of extended release opioid medications for treatment of chronic right shoulder and neck pain. By October 25, 2019 P.A. Eastlung commented that the use of Fentanyl patches makes it difficult to taper medications because the patches provide a fixed amount of medication. He thus recommended the following: (1) stopping Fentanyl patches; (2) beginning extended release Morphine Sulfate; (3) continuing Oxycodone; (4) ceasing Oxycodone and starting instant release Morphine next month and; (5) in two months tapering IR or extended release by 5-10%. Dr. Hughes agreed with the tapering plan of P.A. Eastlund regarding the elimination of Fentanyl patches and Oxycodone. He noted that the *Guidelines* suggest limitations on the duration of opioid pain medications. Notably, the *Guidelines* specify "12 visits within a 12 month period to review the opioid plan" and laboratory monitoring. WCRP 17, Exhibit 9 (I)(6). Dr. Hughes also remarked that the use of opioid medications should be linked to functional improvement.

16. Claimant explained that her current medications decrease her pain and increase her function. She noted that without her pain medications her functional abilities would be greatly reduced. Nevertheless, Claimant stated that she would like to eliminate opioids, but it has been a difficult process. The *Guidelines* reflect that opioid medications should be used to provide pain reduction and promote functional improvement. Moreover, as Dr. Hughes remarked, the *Guidelines* suggest limitations on the duration of opioid pain medications. P.A. Eastlund persuasively delineated a process for tapering the medications. The process is consistent with the appropriate use of opioid medications outlined in the *Guidelines*. Furthermore, Dr. Hughes agreed with P.A. Eastlund's tapering plan regarding the elimination of Fentanyl patches and Oxycodone. The medical records reveal that continued treatment with Fentanyl patches and Oxycodone would not be designed to relieve the effects of Claimant's January 20, 2013 industrial injury or prevent further deterioration of her condition. Accordingly, Respondents are no longer financially responsible for providing Fentanyl patches and Oxycodone pursuant to their August 1, 2017 FAL.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo.

1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. However, when the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; see also *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." Specifically, respondents must prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1), C.R.S.

6. It is appropriate for an ALJ to consider the *Guidelines* in determining whether a certain medical treatment is reasonable and necessary for a claimant's condition. *Deets v. Multimedia Audio Visual*, W.C. No. 4-327-591 (ICAO, Mar. 18, 2005); see *Eldi v. Montgomery Ward*, W.C. No. 3-757-021 (ICAO, Oct. 30, 1998) (noting that the *Guidelines* are a reasonable source for identifying the diagnostic criteria). The *Guidelines* are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). Nevertheless, the *Guidelines* expressly acknowledge that deviation is permissible.

7. The *Guidelines* provide, in relevant part, that "medications should be clearly linked to improvement of function, not just pain control." WCRP 17, Exhibit 9 (I)(6). Furthermore, the *Guidelines*, specify that, "examples of routine functions include the ability to perform work tasks, drive safely, pay bills or perform math operations, remain alert and upright for 10 hours per day, or participate in normal family and social activities." WCRP 17, Exhibit 9(I)(6).

8. As found, Respondents have established by a preponderance of the evidence that they are no longer financially responsible for providing Fentanyl patches and Oxycodone pursuant to their August 1, 2017 FAL that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's January 20, 2013 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988). Initially, on January 20, 2013 Claimant suffered admitted industrial injuries to her right upper extremity when she slipped and fell during the course and scope of her employment with Employer. Claimant underwent two right shoulder surgeries, thoracic outlet surgery and two right wrist surgeries. She subsequently received significant interventional pain management treatment including numerous medications.

9. As found, P.A. Eastlund explained that opioid pain medications helped Claimant control chronic, sharp pain in her neck, shoulders, upper arms, forearms, hands and fingers. He specified that "[o]ur objective is to decrease reported chronic pain levels while increasing overall physical function." By October 9, 2019 P.A. Eastlund noted that Claimant's medications included Cymbalta, Topiramate, Gabapentin, Omeprazole, Fentanyl, MS Contin and Oxycodone. He remarked that he had been considering the slow tapering of extended release opioid medications for treatment of chronic right shoulder and neck pain. By October 25, 2019 P.A. Eastlung commented that the use of Fentanyl patches makes it difficult to taper medications because the patches provide a fixed amount of medication. He thus recommended the following: (1) stopping Fentanyl patches; (2) beginning extended release Morphine Sulfate; (3) continuing Oxycodone; (4) ceasing Oxycodone and starting instant release Morphine next month and; (5) in two months tapering IR or extended release by 5-10%. Dr. Hughes agreed with the tapering plan of P.A. Eastlund regarding the elimination of Fentanyl patches and Oxycodone. He noted that the *Guidelines* suggest limitations on the duration of opioid pain medications. Notably, the *Guidelines* specify "12 visits within a 12 month period to review the opioid plan" and laboratory monitoring. WCRP 17, Exhibit 9 (I)(6). Dr. Hughes also remarked that the use of opioid medications should be linked to functional improvement.

10. As found, Claimant explained that her current medications decrease her pain and increase her function. She noted that without her pain medications her functional abilities would be greatly reduced. Nevertheless, Claimant stated that she would like to eliminate opioids, but it has been a difficult process. The *Guidelines* reflect that opioid medications should be used to provide pain reduction and promote functional improvement. Moreover, as Dr. Hughes remarked, the *Guidelines* suggest limitations on the duration of opioid pain medications. P.A. Eastlund persuasively delineated a process for tapering the medications. The process is consistent with the appropriate use of opioid medications outlined in the *Guidelines*. Furthermore, Dr. Hughes agreed with P.A. Eastlund's tapering plan regarding the elimination of Fentanyl patches and Oxycodone. The medical records reveal that continued treatment with Fentanyl patches and Oxycodone would not be designed to relieve the effects of Claimant's January 20, 2013 industrial injury or prevent further deterioration of her condition. Accordingly, Respondents are no longer financially responsible for providing Fentanyl patches and Oxycodone pursuant to their August 1, 2017 FAL.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

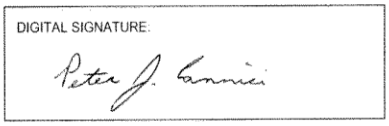
1. Respondents are no longer financially responsible for providing Fentanyl patches and Oxycodone pursuant to their August 1, 2017 FAL.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street,

4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 23, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant overcome the DIME's MMI determination by clear and convincing evidence?
- If Claimant did not overcome the DIME regarding MMI, did he overcome the DIME's determination he has no psychiatric impairment?
- If Claimant did not overcome the DIME regarding MMI, did he prove entitlement to post-MMI mental health treatment by a preponderance of the evidence?

STIPULATIONS

1. Claimant is entitled to disfigurement benefits of $9,949.17, the maximum payable for his date of injury. Respondent has already paid the disfigurement benefit.

2. Respondent will reimburse Claimant $845 for treatment from Dr. Schrader.

FINDINGS OF FACT

1. Claimant worked for Employer as part of a crew operating a downhill ski course. He was injured in a work-related snowboarding accident on December 31, 2016, when he lost control on an icy slope at a high rate of speed and crashed into a wall.

2. Claimant initially assumed he suffered a severe left ankle sprain. He and his supervisor decided not to report the injury as work-related because Claimant did not think he could pass Employer's mandatory post-accident drug test.

3. Claimant went to Avon Urgent Care later that afternoon and reported he injured his ankle falling down some stairs. A CT scan showed multiple severe fractures, and occlusion of the posterior tibial artery immediately above the ankle.

4. Claimant was airlifted to St. Anthony Hospital in Lakewood where he underwent emergency surgery. Unfortunately, his leg had suffered severe vascular damage and progressively worsened over the next several days. Attempts at revascularization failed, and Claimant had a below-knee amputation on January 6, 2017.

5. Claimant filed a workers' compensation claim on January 23, 2017. Respondent denied the claim because the injury had originally been reported as a non-work-related accident.

6. Claimant has a longstanding diagnosis of bipolar disorder for which he received treatment before the work accident. He has seen Dr. Larry Sanders, a psychiatrist, since September 2012. He initially sought treatment for problems such as

racing thoughts, inability to sleep, and difficulty maintaining steady employment. Claimant was serving in the Army National Guard at the time. His PCP was been prescribing antidepressants and clonazepam, which were not helping. Dr. Sanders diagnosed bipolar II and prescribed Seroquel and lamotrigine.

7. At his deposition, Dr. Sanders clarified that technically Claimant did not meet the criteria for bipolar II in 2012, which indicates "severe depression, incapacitating depression, with hypomania, some moderate manic symptoms." Dr. Sanders opined a better diagnosis would have been bipolar NOS because Claimant did not have severe depression and was primarily hypomanic.

8. On January 4, 2013, Claimant told Dr. Sanders he had stopped Seroquel and lamotrigine because they were too expensive and "marijuana helps as much." He had been discharged from the National Guard.

9. Claimant and his family subsequently moved to North Carolina. A new psychiatrist changed his medication to Abilify 10mg, and he remained on that dose for several years.

10. Claimant and his family returned to Colorado in 2016, and he resumed treatment with Dr. Sanders on August 1, 2016. Claimant told Dr. Sanders Abilify "helped" to keep his mood swings at a "minor" level." He had stopped taking medication because his PCP was not comfortable managing his psychiatric condition, which caused him to lose his job. Claimant had also lost his license for a year for driving under the influence of marijuana. Dr. Sanders increased Abilify to 15mg and added Concerta. He also prescribed gabapentin for insomnia.

11. Claimant saw Dr. Sanders again on November 1, 2016. He had recently been fired from a job for missing work after a motor vehicle accident. Dr. Sanders stopped Concerta because it was not helping, but continued Abilify 15mg and gabapentin.

12. Claimant's next appointment was on January 23, 2017, a few weeks after the work accident. His main complaint was akathisia (restlessness), which Dr. Sanders believed was probably related to the accident. Claimant was taking opioids for pain but did not want to become addicted. He stated the Abilify "helped a lot" with the bipolar symptoms. Claimant was in "high spirits" and seemed hopeful that "everything was going to work out." Dr. Sanders added clonazepam for the akathisia.

13. Claimant returned a week later (January 30, 2017) and reported the clonazepam resolved the akathisia. Claimant again appeared to be doing well with no noticeable depression. Dr. Sanders noted he was "coping very well."

14. In his deposition, Dr. Sanders testified how surprised he was by Claimant's presentation in January 2017 after the accident. He testified, "So I'm expecting to see a really depressed kid come in. And he comes in, I mean, almost jovial. It was weird . . . you see the opposite of what you anticipated." Dr. Sanders opined Claimant was probably "in denial" about the loss of his leg.

15. Claimant appeared worse at his March 14, 2017 appointment, describing significant irritability and frustration. Dr. Sanders added lamotrigine for depression, irritability, and to help Claimant "not get so overwhelmed by things." Adding lamotrigine confirms a worsening of Claimant's condition because he could no longer be optimally managed solely with Abilify. Confusingly, at that same appointment Dr. Sanders circled a template notation that Claimant's condition was "very much improved." No explanation was provided for this inconsistency.

16. Claimant followed up with Dr. Sanders on August 14, 2017. He had recently had a "mental breakdown" because "loss of [my] leg hit me." His irritability was "less frequent" but "more intense" since starting lamotrigine. Dr. Sanders credibly testified Claimant's breakdown in the summer of 2017 "was due to finally getting past the denial state and into the more emotional state of loss." The accompanying treatment note incongruously rated Claimant's illness as "normal, not at all," and "very much improved." The ALJ gives no weight to those notations, as they are inconsistent with other persuasive evidence regarding Claimant's mental status at the time.

17. Claimant's next scheduled appointment was November 13, 2017. Dr. Sanders was running late that day, and Claimant left the office before he could be seen. Dr. Sanders spoke with Claimant by phone that evening and "he was going through a very difficult time." His girlfriend had robbed and left him. His car broke down and he had no money. Then the connection was lost. Dr. Sanders called back several times but could not reconnect with Claimant.

18. Claimant was very distressed at his next appointment on December 7, 2017. He was living in an RV parked at his parents' house. He had recently been working a job he liked in Leadville, but lost the job because a former "friend" had "slept with [his girlfriend] and told boss lies that pt doing drugs." Dr. Sanders prescribed Latuda for Claimant's worsening depression. In his deposition, he explained Ability treats the manic or hypomanic portion of bipolar disorder, whereas Latuda treats the depressive component. Dr. Sanders further testified,

> Q. [W]hat was the change in the level of depression that . . . led you to prescribe [Latuda]?
>
> A. One was . . . I could see that he was struggling with the loss of his limb. And then at that time he also had a breakup with his girlfriend, and a lot of psychosocial issues were occurring. . . . [S]tarting Latuda would certainly indicate that . . . his depression was very significant. Because, again, Abilify does not treat bipolar depression. Latuda does.

19. On December 20, 2017, the parties attended a hearing to decide compensability. Judge Goldman found the claim compensable in a final order dated February 9, 2018.

20. Claimant returned to Dr. Sanders on March 20, 2018 and appeared somewhat better. He brought a support dog to the appointment, and noted the dog "helps

make him get out of bed." He said he felt "worthless" but also said he was being hard on himself and "life is pretty good." He was not having manic symptoms and his depression was "mild recently." He described "small freak-outs" with "increased heart rate, mind racing, can't think." Dr. Sanders indicated Claimant was "doing pretty well," but added alprazolam (Xanax) to use prn for the panic attacks.

21. After receiving Judge Goldman's order, the parties agreed to Dr. Annu Ramaswamy as Claimant's ATP. Claimant's initial visit with Dr. Ramaswamy was on March 27, 2018. Before the appointment, Claimant had a bipolar rage outburst triggered by an unruly child in the waiting room. Dr. Ramaswamy's staff had to remove Claimant from the waiting room to deescalate the situation. Claimant "was fairly upset and angry" at the beginning of the appointment, but calmed down "fairly quickly" after the evaluation started. Claimant cried while describing the work accident. Claimant told Dr. Ramaswamy he had bipolar disorder and PTSD and was getting medication from Dr. Sanders. Claimant was "very upset" about his injury and angry with his employer, but was not interested in counseling. Claimant was using marijuana regularly, which helped his phantom pain. Dr. Ramaswamy was not willing to prescribe narcotics while Claimant was using marijuana, so he referred Claimant to Dr. Ogin (a physiatrist) for pain management. From a physical standpoint, Claimant was functioning relatively well with his prosthesis, and Dr. Ramaswamy thought he was approaching MMI.

22. Claimant saw Dr. Ogin on April 23, 2018, who reported,

> [He] tells me that he is doing well from a physical standpoint. He has been able to return to walking and running[1] and wants to get back to snowboarding, particularly when he gets a better prosthetic. He did suffer quite a bit emotionally. He has a history of bipolar disorder, which is adequately controlled with Abilify. He also has mild PTSD related to being in the Army. . . . He works with a psychiatrist, Dr. Larry Sanders. His Abilify dosage has been stable.[2] His mood overall has been stable, and he seems well motivated.

23. Dr. Ogin commented that Claimant "seems remarkably well-adjusted." Claimant indicated he found marijuana helpful for pain control but also asked about opioids. Citing literature showing marijuana for pain control can help reduce narcotic usage, Dr. Ogin prescribed low-dose oxycodone to supplement the marijuana. He also ordered a compound cream to help the neurogenic pain in Claimant's stump. Dr. Ogin recommended Claimant obtain a new prosthesis and was "likely approaching MMI."

24. Claimant followed up with Dr. Ramaswamy on April 26, 2018. He was "depressed and little down today," but stated this was "normal for him." Dr. Ramaswamy noted, "He does have a history of bipolar condition and states that he is pretty much back

[1] Based on information later provided by Claimant's mother, the ALJ finds Claimant's description of his activity level is probably inaccurate.

[2] Claimant overstated the stability of his medication regimen, as he neglected to mention Dr. Sanders had recently added Latuda for depression and alprazolam for anxiety. Claimant likely downplayed the severity of his mental status at this appointment.

to his baseline state from a mental health standpoint." The report contains no further analysis or discussion regarding Claimant's mental status or psychiatric history. Dr. Ramaswamy opined Claimant was at MMI with permanent restrictions against working at heights. He recommended post-MMI pain management with Dr. Ogin and periodic replacement of his prosthesis. Dr. Ramaswamy assigned a 70% lower extremity impairment rating.

25. Respondent filed a Final Admission based on Dr. Ramaswamy's report, and Claimant timely requested a DIME. Dr. Yamamoto was selected as the DIME physician.

26. Claimant returned to Dr. Sanders on August 16, 2018. His depression continued to worsen since his last appointment in March. His mother also attended the appointment and gave Dr. Sanders additional insight regarding Claimant's mental status. Claimant's mother reported, "Any challenges, he explodes. [He] can't get past anger to remedy anything. Lasts about half a day. He apologizes, remorseful. Punches himself in the face so he won't hit others." Claimant was distraught because "I can't get help. Not disability, not VA." He was angry about being denied food stamps and threatened to blow up a building. His mother noted he was "so down on himself." Claimant was "tired of feeling like a failure." Because Abilify and Latuda were not working, Dr. Sanders tried Vraylar to stabilize Claimant's mood. Vraylar is a relatively new atypical antipsychotic medication that can effectively treat both the manic and depressive elements of bipolar disorder. Vraylar proved to be very helpful for Claimant.

27. On or about August 29, 2018, Dr. Sanders wrote a letter addressing Claimant's mental condition. He stated,

> [Claimant] has bipolar disorder which is now well controlled by medications. He also has ADHD and issues from loss of [his] left leg following a traumatic accident. Despite his bipolar symptoms being well controlled, many deficits still persist from that and the other two conditions mentioned above. In order for him to learn how to overcome these deficits, he must be in psychotherapy to learn coping and self-management skills. I referred him to Dorianna Schrader. It is a good fit for him with an excellent therapist.

28. Claimant followed up with Dr. Ogin on September 4, 2018. His mother also attended the appointment. Dr. Ogin noted Claimant had been on psychotropic medications for years, but "the trauma from his injury has aggravated his underlying psychiatric condition. . . . [He] is clearly going through a period of adjustment and has had worsening mood and anger issues as well as depression." Claimant told Dr. Ogin the recent addition of Vraylar helped "quite a bit." But Dr. Sanders still wanted him to see a psychologist to work on coping strategies and accepting the loss of his leg. Claimant had seen Dr. Schrader once and was motivated to continue working with her. Dr. Ogin agreed psychotherapy "would be quite helpful in offering him pain management strategies and to assist with the grieving process." He made a formal referral for therapy. He also gave Claimant a prescription for Latuda, but deferred to Dr. Sanders whether it should be covered under the claim.

29. Dr. David Yamamoto saw Claimant for the DIME on September 18, 2018. His mother went with him to give more detailed and accurate information than Claimant would likely have given himself. Dr. Yamamoto spent considerable time reviewing Claimant's records and going over the history. Dr. Yamamoto documented,

> Psychologically, he has been unstable. His mother notes that over the past 6-8 weeks, his mood has been more labile and he can lose his temper easily. His mood will fluctuate significantly from day to day or week to week. His mother adds that he will give misleading information and will tell providers that he is much more functional than he actually is, saying that he is able to run and do climbing which he does not do. His mother notes that he does have a strong desire to get back to being very physically active although there are periods where he does not believe he can do anything.

30. Dr. Yamamoto opined the work injury aggravated Claimant's pre-existing bipolar disorder, and he was not at MMI from a psychiatric perspective. Dr. Yamamoto noted Claimant had been stable on relatively low doses of Abilify for many years before the injury but had required escalating medications since the accident. Although Dr. Yamamoto's report contains errors regarding the pre-injury dose of Abilify, his overall impression is consistent with the record and Dr. Sanders' testimony.

31. The Division subsequently struck Dr. Yamamoto's DIME because he had called Claimant's mother after the appointment to get additional information without obtaining prior approval. Dr. Yamamoto's report was submitted into evidence as a claimant's IME, not a DIME. It is entitled to no special weight.

32. Dr. David Orgel was chosen as the new DIME physician, and the appointment was scheduled for April 1, 2019.

33. Claimant saw Dr. Ogin on March 1, 2019, one month before his upcoming DIME with Dr. Orgel. Dr. Ogin had a lengthy conversation with Claimant and his mother regarding Claimant's mental status before and after the injury. He noted Claimant saw Dr. Sanders more frequently after the accident and required multiple medication changes. Vraylar was helping stabilize his moods. Claimant had attended approximately ten psychotherapy sessions with Dr. Schrader at his own expense to work on coping and self-management skills. Claimant thought the sessions were "very effective," and his mother confirmed, "he was quite diligent in doing his homework." Unfortunately, he had to discontinue treatment because Respondent would not reimburse the cost. Dr. Ogin indicated Claimant would continue to manage his pain primarily with medical marijuana, which "has proven quite effective." He prescribed 60 oxycodone, which he anticipated would last approximately six months because Claimant used it sparingly for breakthrough pain. Dr. Ogin opined it was reasonable for Claimant "to receive psychiatric treatment through the occupational claim." His opinion was based on his impression that Claimant's mental state was worse than his pre-injury baseline, and "furthermore, his necessity to see a pain psychologist is directly due to his loss of limb and chronic pain."

34. Claimant attended the DIME with Dr. Orgel on April 1, 2019. For unknown reasons, Claimant's mother did not accompany him to the appointment. Unfortunately, the evaluation was cut short because Claimant became irate and stormed out of the office. Based on the information available to him, Dr. Orgel concluded Claimant's mental health issues were purely related to his pre-existing bipolar disorder. He agreed with Dr. Ramaswamy's MMI date and impairment rating. He concluded Claimant's ongoing mental health issues were not related to the industrial injury. But Dr. Orgel recognized he did not have a complete picture of Claimant's mental health condition, and left the door open for changing his opinion. He stated,

> Additional information in this regard may be helpful.
>
> First, **a pain psychology evaluation with extensive testing** must be done to determine any confounding or pre-existing problems. **This should be obtained before any additional psychiatric evaluation**. This may be sufficient to determine the work relatedness of his psychiatric complaints.
>
> However, if it is not, either a psychiatric Independent Medical Examination to determine impairment or inquiry directly to Dr. Sanders about the change in [Claimant] as relates to his work injury might change my mind about his psychiatric impairment. (Bold text in original).

35. Claimant saw Dr. Robert Kleinman for an IME at Respondent's request on July 11, 2019. He interpreted Dr. Sanders' pre-injury records as showing "an up and down course, with difficulty maintaining stability." He opined Claimant's pre-existing bipolar disorder complicated his recovery from the work injury and "made him difficult to treat" because he became angry at doctors easily and was not always cooperative. Dr. Kleinman opined the injury temporarily exacerbated Claimant's pre-existing condition, and Dr. Sanders had appropriately recommended psychotherapy. He opined the treatment with Dr. Schrader was "likely" injury-related and helpful, although "he is still sad, and is still grieving." Despite Claimant's "lingering grief," Dr. Kleinman opined he "has had a complete course of psychotherapy to deal with grief and loss regarding the amputation." In Dr. Kleinman's opinion, any further therapy would be related to his pre-existing condition. He agreed with Dr. Ramaswamy and Dr. Orgel that Claimant has returned to his pre-injury baseline.

36. Dr. Sanders testified in a lengthy deposition on September 25, 2019. Dr. Sanders believes Claimant's work injury aggravated his pre-existing bipolar disorder. He reviewed the reports from Dr. Ramaswamy, Dr. Yamamoto, and Dr. Orgel and opined Dr. Yamamoto's report "was by far the most accurate report of any of the evaluations that I read." He added, "The other reports . . . I had my red pen out writing "What?" and exclamation points . . . ." He opined Claimant needs psychotherapy despite the benefit he has received from Vraylar because,

> [T]hat's more of a change in self-reception, and that's usually something you have to do through talk therapy . . . and you have to go through the grieving stages, and finally come to a level of acceptance. And that's done

with talk therapy; whereas bipolar disorder would be mostly through medication.

37. Dr. Sanders' opinions are credible and persuasive.

38. Dr. Orgel's determination Claimant reached MMI on April 26, 2018 was highly probably incorrect. Claimant overcame the DIME regarding MMI by clear and convincing evidence.

CONCLUSIONS OF LAW

A DIME's determination of whether a claimant has reached MMI is binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(c). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the DIME is incorrect. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The DIME's opinion regarding the cause of a claimant's condition is an "inherent" part of the diagnostic assessment that comprises the DIME process of determining MMI and rating permanent impairment. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). Therefore, the DIME's finding that a particular condition is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Id*.

As found, Claimant overcame the DIME's determination he was at psychiatric MMI on April 26, 2018 by clear and convincing evidence. Dr. Ramaswamy did not put much effort into determining whether Claimant was at psychological MMI. His conclusion was based simply on Claimant's response to casual questioning. Claimant certainly did not help himself by minimizing his mental issues and overselling how "well adjusted" he was. Nevertheless, asking a young bipolar male to rate and compare his symptomology and functionality was not a very effective way to assess Claimant's mental status or need for additional treatment. Claimant has previously demonstrated unwillingness to frankly and accurately describe the severity of his condition. Moreover, Dr. Ramaswamy only met Claimant twice and did not have an opportunity to build trust and rapport, making Claimant even less likely to open up. A more effective approach would have been to speak with Claimant's mother, and better yet, discuss the matter with Dr. Sanders. Instead, Dr. Ramaswamy simply accepted Claimant's statement he was back to baseline, without exploring whether that statement was accurate.

Although Claimant's bipolar disorder adversely affected his life before the injury, it got worse after the accident. Claimant became increasingly unstable as he grappled with the ramifications of his life-changing injury. His explosive episodes became more frequent and intense. There is no persuasive pre-injury evidence of behaviors such as punching himself in the face or threatening to blow up buildings. Claimant was primarily hypomanic before the accident, whereas depression became a much more prominent component of his illness after the accident. Dr. Sanders initially added Latuda to treat the worsening depression, and eventually switched to Vraylar, which was much more effective. Vraylar

was the most significant treatment modality to stabilize Claimant's condition, but it was not implemented until several months after he was put at MMI. Dr. Sanders also recommended psychotherapy to help Claimant develop insight and tools to manage his situation from an emotional perspective. All of this should have been done before putting Claimant at MMI.

Moreover, the ALJ considers Dr. Orgel's determination of MMI to be relatively "soft".[3] He recognized he did not have a complete picture of Claimant's mental health condition, and conceded additional information from Dr. Sanders might change his mind. Dr. Orgel did not have the benefit of Dr. Sanders' testimony, but the ALJ does. Dr. Sanders' deposition testimony is compelling. Dr. Sanders has a longitudinal perspective regarding Claimant's mental status not shared by any other treating or examining provider. Dr. Ramaswamy saw him twice and primarily focused on his physical condition. Dr. Orgel saw Claimant only once, and the evaluation was cut short by an explosive confrontation. The ALJ has credited Dr. Sanders' opinion that the accident aggravated Claimant's bipolar disorder, and he needed Vraylar to stabilize his mental state and psychotherapy to help him cope with the emotional sequelae of the injury. This essentially fills in the gaps in Dr. Orgel's understanding of Claimant's situation.

Additionally, Dr. Kleinman's opinions support a determination Claimant was not at MMI in April 2018. Dr. Kleinman agreed psychotherapy was reasonably necessary and related to the accident. The ALJ notes Claimant did not start therapy until ***after*** the MMI date declared by Dr. Ramaswamy and the DIME. Although Claimant went to therapy on his own, he could not continue because of cost. Although the ALJ does not necessarily agree that Claimant had a "complete course" of therapy as opined by Dr. Kleinman, the ALJ will leave that decision to a treating provider. Regardless, Claimant was most certainly not at MMI before starting therapy.

The ALJ has no serious or substantial doubt Claimant had not returned to baseline and was not at MMI on April 26, 2018. Accordingly, Dr. Orgel's MMI determination was highly probably incorrect, and Claimant overcame the DIME on MMI by clear and convincing evidence. Based on this determination, issues of permanency and post-MMI treatment are premature.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME's determination he reached MMI on April 26, 2018 is granted.

2. Respondent shall cover reasonably necessary and related treatment to bring Claimant to MMI.

[3] This is not to suggest Dr. Orgel's conclusion is not entitled to the presumptive weight accorded all DIMEs, or that Claimant has any lesser burden. It simply acknowledges that Dr. Orgel appreciated the limits of his knowledge and expressed doubts about the correctness of his conclusion.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury to his right leg on June 9, 2019?

II. If the injury is compensable, has the right of selection of an Authorized Treating Provider passed to Claimant?

III. If the injury is compensable, has Claimant shown, by a preponderance of the evidence, that the medical treatment rendered to date by Dr. Simpson and others is reasonable, necessary, and related to his work injury?

IV. If the injury is compensable, is Claimant entitled to Temporary Total Disability payments?

STIPULATIONS

I. Claimant's Average Weekly Wage is $565.93.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Job Duties on Date of Injury

1. Claimant was a fuel driver for Employer. He would pick up and deliver fuel to different store locations in Colorado. Part of the process of delivering fuel required Claimant to set up a safety area so that motorists would not run over the fuel hoses, or strike the driver, while he was working.

2. In the evening of June 9, 2019, Claimant arrived at King Soopers on Stetson Hills Boulevard in Colorado Springs, Colorado and began performing his job duties necessary to deliver fuel to that location. This included setting up the orange safety cones for his safety area. While Claimant's truck also had orange safety cones on it, he would use the cones supplied by the stores, because those cones were larger and more visible, thereby providing him a safer work area.

3. Claimant began to retrieve the station's safety cones from behind the gas station attendant's enclosure. This was located on a small island, which was raised above grade level by a few inches-in effect, a small curb. He made one trip to retrieve some cones to set them up, then returned to this same location on the island a second time for more cones.

Claimant's Work Injury

4. As Claimant was returning to his safety area for the second time, having retrieved additional cones, he took a misstep with his left foot stepping off this curb. The misstep caused him to roll his left ankle, followed by his right ankle. During this fall, Claimant's right leg folded behind him and to the left and he heard a ripping sound come from his right knee.

5. Claimant's fall was captured King Soopers' closed circuit television, and has been viewed by the ALJ. Right after this fall, Claimant lay on the pavement for several minutes, before eventually being assisted. At hearing, Claimant described the pain as "excruciating", leaving him unable to breathe. He described the physical appearance of his right knee as being "deformed" in appearance. He initially thought his right knee had been dislocated, due to its appearance.

6. When he was physically able, Claimant notified his Employer's dispatch of his injury and need for medical treatment by phone. Claimant also arranged through his dispatch for other employees of Employer to come to his injury location to secure the fuel truck. He hid the keys in the truck for his relief driver to find. Claimant also called his supervisor "Breanne", and informed her what had occurred. Claimant waited until it was confirmed that relief was on the way, prior to calling for an ambulance.

Claimant's Medical Treatment

7. Claimant was transported to Penrose/St. Francis Medical Center by ambulance. Claimant was diagnosed to have suffered a right quadriceps tendon rupture.

8. Claimant was instructed by St. Francis Medical Center personnel to contact Dr. Michael Simpson for a surgical consultation, which Claimant did. Dr. Simpson's office advised Claimant that he would have to be referred to him by a place like Concentra since Claimant's injury was work-related. Based on this information, Claimant began treating with Dr. George Johnson with Concentra, and was then referred to Dr. Simpson for a surgical consultation by Dr. Johnson. Dr. Simpson ultimately performed a surgical repair of Claimant's right quadriceps tendon on June 17, 2019. (Ex K).

9. Dr. Simpson, stated, "[Claimant's] preoperative workup was consistent with a traumatic quadriceps tendon injury with a full-thickness disruption of the squad [sic.]. While his weight may have contributed to the severity of the injury, it does not change the fact that *the injury was a direct and immediate cause of the problem that required treatment. This would not have been a pre-existing condition. A patient cannot walk with a complete rupture of the quadriceps tendon.* The patient would not have been able to do any type of work had this been a pre-existing condition." (Ex. 4, p. 63) (emphasis added).

10. Following surgery, Claimant was initially in physical therapy through Concentra but was referred to Colorado Sport & Spine by Dr. Simpson, due to his workers' compensation claim being denied and physical therapy being discontinued with Concentra.

Employers' Response to Claimant's Injury

11. Respondent Employer filed a First Report of Injury ("WC1")(Ex. A) on June 10, 2019. On Employer's WC1, it notes that they were notified on the same day of the injury [June 9, 2019], and the following question was asked "What was the employee doing just before the accident occurred?" Employer's answer was "Stepped off small ledge ***while prepping load/& heard knee pop/Knee strain"*** (Ex A, p. 1) (emphasis added).

12. For reasons unclear, Employer's WC1 under "Initial Treatment," indicated "None", despite Employer knowing (from two different phone calls from Claimant) that Claimant had been transported to the ER. *Id.*

13. Respondents later filed a *Notice of Contest* on June 20, 2019, and indicated that the claim was being denied, as the injury/illness was *"Not work-related".* (Ex. B).

14. Claimant testified at hearing that he also received two letters from Employer. The first, dated 6/10/19, informed him that he would be placed on suspension status if he did not return to work within 30 days. The second, dated 6/20/19, [after he informed his supervisor that he had hired an attorney, due to the denial of his claim] informed him that he was being terminated, instead of suspended. Claimant's understanding, as of the hearing date, is that he had been terminated from Employer.

15. Claimant testified that at no point in the process has Employer tendered a list of Authorized Treating Providers, nor provided any guidance on how to obtain one.

Dr. O'Brien's IME Report and Deposition Testimony

16. Claimant underwent an independent medical examination ("IME") with Dr. Timothy O'Brien on September 26, 2019. Dr. O'Brien issued two reports, the first dated October 14, 2019, and the second, an addendum report, dated November 13, 2019. (Ex. O).

17. Dr. O'Brien conducted a review of Claimant's pre-existing and claim-related medical records and conducted a physical examination. He ultimately opined that Claimant was predisposed to a quadriceps tendons rupture for a number of reasons related to several pre-existing health conditions. (Ex. O, pp. 165-167).

18. Dr. O'Brien noted that MRI scans of Claimant's *left* knee from 2006 demonstrated a lateral tilt of the patella as well as chondromalacia. He further noted that a repeat MRI of the left knee in 2017 demonstrated "profound quadriceps and patellar tendinosis." He stated that, due to how the aging process and DNA controlled rate of desiccation plays

out, there was “near 100 percent certainty that the same process equally affected the right knee.” Dr. O’Brien opined that this condition “dramatically” affected the competency of the knee quadriceps and patellar tendon, thereby predisposing the Claimant to this type of injury. *Id.*

19. Dr. O’Brien was also deposed on November 25, 2019. He testified that the 2006 MRI revealed a “normally hydrated” quadriceps tendon while the 2017 MRI revealed “really significant changes of desiccation, losses of water.” He explained how in layman’s terms, the diagnosis of “tendinosis” refers to hydration changes over time. He further explained that from 2006 to 2017, these changes were “substantial.” Dr. O’Brien stated that you “can’t say that’s a normal [quadriceps] tendon. If it had been normal, a common fall might not have resulted in an uncommon rupture.” He again testified that in his medical experience, including the available MRI scans, there was near 100-percent certitude that what was occurring in the left knee [loss of normal hydration] was also present in Claimant’s right knee.

20. Dr. O’Brien also noted that the prior MRI results revealed a “laterally tilted patella.” (Ex. O, p. 165). He reiterated that this anatomic alignment would have equally impacted his right knee, thereby resulting in an altered biomechanical state. He explained how the patella is not supposed to be tilted outward; rather, it should be equally articulating on the medial and lateral facet of the trochlear groove. However, because Claimant did not have a normally aligned patella, this condition predisposed the Claimant to tendinosis of the quadriceps tendon and patellar tendon, which in turn predisposed the Claimant to a quadriceps tendon rupture. *Id.*

21. During his deposition, Dr. O’Brien expanded on this finding, testifying that in a normal knee, the patella has a “keel,” similar to that of a ship, which literally sits in a groove on the top of the femur, such that its position creates symmetry for both the medial and lateral side of the keel. He explained that, unlike in a normal knee, this symmetrical alignment did not exist in Claimant’s knee. Dr. O’Brien testified in detail about the effects of this tilt on surrounding knee musculature, which included medial and lateral muscles existing at varying strengths, thereby pulling differently on the medial and lateral aspects of the knee. He reiterated that, absent some strange abnormality, the presence of this condition on the left side would similarly be present on the right.

22. Dr. O’Brien also opined that Claimant’s morbid obesity predisposed him to this type of injury. On the date of his examination, Dr. O’Brien recorded that Claimant stood 6’ tall, and weighed 325 pounds. Dr. O’Brien opined that obesity adversely impacts the tissues in the body. He concluded that Claimant’s obesity contributed to the onset of the quadriceps and patellar tendinosis, which in turn weakened the patellar tendon and the quadriceps tendon of Claimant’s right knee.

23. Dr. O'Brien also opined that his wieght had an adverse impact on Claimant's "proprioception," or awareness of bodily position and movement. Dr. O'Brien testified that proprioception involves our brain, gravity, and overall balance and put simply, is the literal phenomenon that keeps someone upright. He stated that people with morbid obesity tend to have alterations in their center of gravity, and experience an altered and less reliable sense of proprioception and balance. Dr. O'Brien concluded that this phenomenon also contributed to the Claimant's fall. (Ex. O, p. 166).

24. In his 10/14/19 report, Dr. O'Brien, wrote, in pertinent part, his "IMPRESSION":

> The **June 9, 2019 work injury,** *which occurred while Mr. Richardson was employed at Groendyke Transport, Inc.,* **resulted in** a closed complete right knee **quadriceps tendon rupture.** The facts in this case are concordant.
>
> The injury mechanism was sufficient to have produced the pathology documented on exam and MRI scan. Mr. Richardson did not delay seeking medical attention after this incident occurred. His exam findings and behavior after the incident occurred were entirely consistent with an acute quadriceps tendon rupture. The MRI scan corroborated the presence of the quadriceps tendon rupture, and Dr. Simpson, more importantly, documented the presence of the acute quadriceps tendon rupture at the time of his surgical intervention. (Ex. O, p. 161) (emphasis added).

25. In this original [10/14/19] report, Dr. O'Brien was asked the following Question #1:

> Does Claimant have any pre-existing injuries and/or conditions? Please explain, including any prior care he sought.
>
> Response: Yes, he has pre-existing patellofemoral arthritis, but *that did not lead to his quadriceps tendon tear.* He has pre-existing ill health aerobically and musculoskeletally and that *probably predisposed him to a quadriceps tendon rupture,* but ultimately he was a fit enough individual and the quadriceps tendon rupture was in essence unavoidable and **it was <u>definitely</u> work related.** (emphasis added).

On 10/14/19, Dr. O'Brien was also asked Question #2:

> Are Claimant's symptoms and conditions allegedly caused by or related to his employment consistent with Claimant's described mechanism of injury? **Are Claimant's symptoms and conditions caused by or related to his employment with Groendyke Transport, Inc. on June 9, 2019,** and was there any specific triggering event on June 9, 2019 that caused the avulsion of the quadriceps tendon, or was the avulsion solely caused by a pre-existing condition?

Response: **Yes.** See *"Impression"* section above. (emphasis added).

26. In his supplemental [11/13/2019] report, Dr. O'Brien was asked the following question:

> To a reasonable degree of medical probability, what is the likelihood that Claimant's preexisting injuries and/or conditions led to his quadriceps tendon rupture? Please explain.
>
> Response: In my opinion, Mr. Richardson's predisposition for quadriceps tendon was at least 50 percent responsible for the *rupture* that occurred on the date of injury that is being considered: June 9, 2019. If Mr. Richardson has not had these pre-existing factors at play in his life on June 9, 2019, it is unlikely that he would have *ruptured his quadriceps tendon* due to the fact that *he misstepped off the curb and then fell.* This is not an uncommon injury mechanism. The vast majority of people who experience this type of injury mechanism, do not end up *rupturing* a quadriceps tendon which is not a common injury for orthopedic surgeons to address. (Ex. O, p. 176)(emphasis added).

At no point in his supplemental report [11/13/19], nor in his deposition testimony, did Dr. O'Brien walk back the Conclusions and Impressions he reached in his original [10/14/19] report. He merely elaborated on what he saw as Claimant's elevated risk factors for sustaining such an injury in the manner in which it occurred.

27. During his deposition, Dr. O'Brien elaborated on this conclusion, stating that "quadriceps tendon ruptures are exceedingly rare." He testified that the quadriceps tendon is "massive," and patellar tendon ruptures are more common due to their smaller size. Dr. O'Brien testified that over the course of his career as an Orthopedic Surgeon, in which he has performed over 9,000 surgeries, including 3,000 knee replacements, he had dealt with less than 10 quadriceps tendon ruptures.

28. Dr. O'Brien explained how, in his experience, quadriceps tendon ruptures were the result of eccentric loading where the knee is flexing, the bodyweight loads the tendon, and the quadriceps contracts with such massive force that the quadriceps tendon is overcome. He went on to explain that the patella has to be exactly in the right location for that to occur, since the weaker patellar tendon "really is the one that should go." In other words, "the quadriceps tendon is so much stronger than the patellar tendon that in order to rupture, it necessarily entails the positioning of the knee." He reiterated that, to a reasonable degree of medical probability, the positioning in Claimant's right knee was not normal.

29. Dr. O'Brien testified that, "[t]he reason I said that it's more than 50 percent likely that predisposing factors contributed to this quadriceps tendon rupture is because ***Mr. Richardson did something that we commonly do; he fell.*** But he did something that

was uncommon ***as a result of that fall; he <u>ruptured</u> his quadriceps tendon*.** And I think that the predisposing factors play a role in that regard." (emphasis added).

Dr. Stull's Deposition Testimony

30. During his deposition, Dr. Stull testified that a quadriceps tendon rupture is not a common injury. He concurred with Dr. O'Brien regarding what can cause a quadriceps tendon rupture; namely, deep flexion of the knee and eccentric loading placed on the knee. He estimated that in his 24-year career, he had only treated "dozens" of quadriceps tendon tears.

31. Nonetheless, Dr. Stull was unable to offer a reason as to why a quadriceps tendon rupture was not a common injury. When asked how much force was required to rupture the tendon, he stated that he was unsure since he was not an engineer. When asked if the injury is not that common because the amount of force required is not something that is encountered in day-to-day activities, he responded with "[m]aybe, but I can't say for certain."

32. Dr. Stull agreed that existing MRIs of Claimant's left knee demonstrated degenerative findings. On the date of his own examination, he even took x-rays of Claimant's right knee, which revealed patellofemoral joint space narrowing. (Ex. 10, p. 126).

33. Dr. Stull acknowledged that on the date of his examination he did not record the Claimant's height and weight, though he testified that arthritic, degenerative changes in the knee can occur, in part, from how much weight a person carries. He described the Claimant as "a fairly robust built man…he wasn't ginormously [*sic*] obese."

34. When asked if he agreed with Dr. O'Brien's conclusion that the Claimant's pre-existing issues predisposed him to a quadriceps tendon rupture, Dr. Stull testified that he would "not necessarily" concur. He opined that maybe Dr. O'Brien knew the Claimant better than he did, stating "[b]ut I don't know the patient that well, right, I met him for half an hour, chatted with him about his injury…." Earlier in his testimony, Dr. Stull acknowledged that his examination consisted only of a "directed history" related to the knee injury and he did not take a more detailed medical history.

35. Dr. Stull was also asked if the quadriceps tendon tear was "idiopathic", and he was clear that it was traumatic in nature. *"They [quad tendons]…. just don't spontaneously rupture."* (emphasis added).

36. Dr. Stull testified that certain medications could weaken particular tendons in the body. No such medications were identified in Claimant's records. On follow-up, when asked if anything else could contribute to a weaker tendon he responded, "I don't think so. …. I was thinking about it as you asked that…..diabetes, and I don't know any literature … that says – or my experience has not been diabetics have a higher… percentage

rupture of body tendons, people with cardiovascular health. I don't know of any literature to support that either, and I don't have any clinical experience to support that either…." Once again, nothing of this sort was revealed in any of Claimant's records.

Claimant's Pre-Existing Issues with his Knees, Weight, and Prior Incidents of Slipping and Falling

37. At hearing, Claimant testified that the MRI taken in 2006 for his left knee was the result of reporting for treatment due to pain he was experiencing in the knee. He estimated that the pain had existed for approximately a year or two before that.

38. Claimant further testified that the prior surgery on his left knee was "basically, cutting tissue on the inside of the .. the kneecap there…it was, basically, … to see if that kneecap would move back on its own. When asked if his understanding of the treatment was to address a tilting of his patella, Claimant responded affirmatively.

39. Claimant confirmed that his understanding from his treating providers was that the titling of the patella in his left knee was similarly present in his right knee. He testified, "Yes. Yes, usually, if there's one, there's two."

40. The MRI from 2017, under the History section states as follows: "Fell a few weeks ago. Patient has a prior history of patellar instability. Numerous injections over the past 10 years." (Ex. G, p 19). When asked about what precipitated this MRI, Claimant responded, "God, I didn't even remember that one. That … would have been while I was working at Love's. I don't remember that. Did – did it happen at work?" He testified that while he did not remember much about it, it must have been the result of a slip-and-fall at work where he missed a step climbing down off his truck. Claimant confirmed that from 2006 to 2017, he remained symptomatic for pain in his left knee.

41. In terms of his weight, Claimant testified that he presently weighed approximately 340 lbs. On June 9, 2019, he estimated that he weighed around 310 lbs. He has gained the weight since the injury as a result of inactivity.

42. Claimant also noted that he had two prior work-related injuries related to his right and left shoulders. He testified that "both" of those injuries were the result of falls at work. Claimant reiterated that the left knee injury in 2017 was also the result of a fall at work. Thus, when asked if slipping and falling was something that has happened to him on a fairly regular basis, Claimant responded, "It does. It's – I'm just a very hard worker…." Claimant then testified, however, that he did not slip-and-fall on a regular basis in a non-work-related capacity."

43. Claimant further testified that while the physical layout and surfaces of the service stations varied, he did not always work on flat surfaces, noting the presence of snow and curbs, depending on the location. He agreed that someone walking outside, and

stepping either up onto, or down off, a curb was a common mechanism of day-to-day living. Claimant stated that throughout his life, it was something he had done a number of times.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. In this instance, the ALJ finds that Claimant has testified sincerely and credibly in every aspect of his testimony. He also provided accurate medical histories to

every medical provider involved in this process. The fact that he has suffered prior work injuries to his shoulders or elsewhere has no bearing on the evidence in this case.

E. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As will be addressed forthwith, the ALJ finds that the medical experts involved have each provided medical opinions to the best of their abilities; thus their opinions will be evaluated in terms of *persuasiveness*, as opposed to *credibility* per se.

F. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Compensability, Generally

G. It is the Claimant's burden to prove a causal relationship between the industrial injury and the medical condition for which he seeks benefits. Section 8-43-301, C.R.S. 2001; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). However, the Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which he seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley* , 165 Colo. 586, 441 P.2d 3 (1968).

H. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an injury arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

I. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988).

J. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

K. The "in the course of" requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d

379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

Pre-existing Medical Conditions

L. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). A claimant may be compensated if a work-related injury "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease to "produce the disability for which workers' compensation is sought." *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Indus. Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986)("[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.")

M. Assuming, arguendo, that Dr. O'Brien is correct in all of his assessments of Claimant's elevated risk factors for such an injury, nothing changes. It does not matter that Claimant was overweight. It does not matter that he came into this position with poorly aligned kneecaps. It does not matter that Claimant had desiccated tendons, wrought by age, or that he might have below-average proprioception. It does not matter that a more "typical" worker might have fallen, but not suffered a *rupture*, as Claimant did in this case. Claimant might have risk factors for falling and injuring his quad tendon elevated by 90% above the average worker for all we know. So what? None of this matters. A highly credentialed expert might [quite convincingly] opine that tall persons are more likely to bump their heads, or ageing Boomers who were big into Zeppelin are more likely to miss forklift beepers, or petite home healthcare workers who lift patients are more susceptible to back injuries, or that stupid people are at elevated risk to get hurt by power tools. It's still a work injury, and in the final analysis, Dr. O'Brien got it right.

Idiopathic Condition

N. A "but-for" test is used in cases that involve an unexplained fall and the "arises out of" element is satisfied "if the fall would not have occurred *but for* the fact that the conditions and obligations of employment placed the employee in a position where he or she was injured." *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). An unexplained fall is considered to be within the "neutral risk" category" and the "but-for" test is applied to determine whether unexplained falls "arise out of" employment. *Id.*

O. “Employees must only demonstrate that there were specific connections to employment in cases *not* involving neutral risks. For example, if an employee has epilepsy and is injured after having a seizure at work, the employee must show that he or she was exposed to and additional ‘special hazard’ of employment.” The “special hazard” doctrine, therefore, only applies to cases involving an idiopathic condition.

P. **This is no “unexplained fall”.** Claimant fell while performing his work duties. He momentarily lost focus. As a direct result of his work-related fall, he was seriously injured. Not one person, expert, or entity (except Employer, for reasons unclear) disputes this simple fact. It was captured on video. It was credibly described by Claimant at hearing. It was documented on Employer’s own WC1. It was corroborated not only by Drs. Simpson and Stull; it was unequivocally corroborated by Respondents’ own expert, Dr. O’Brien.

Q. **Claimant’s medical condition is not “idiopathic”.** Not even close. The ALJ declines to find that Claimant’s quad tendon spontaneously avulsed, apparently right as he stepped off the curb, but before his other foot hit the ground. The cause and effect relationship is direct. Claimant took a step, landed awkwardly, fell, and got hurt on the job. The ALJ finds, by a preponderance of the evidence (and them some) that Claimant has suffered a compensable work injury.

Authorized Treating Providers/Right of Selection

R. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers’ Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, “the employee shall have the right to select a physician.” W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, “the employer shall provide the injured worker with a written list of designated providers.” W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that “the injured worker may select an authorized treating physician of the worker’s choosing.” An employer is deemed notified of an injury when it has “some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim.” *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

S. In this instance Employer was put on notice right away by Claimant’s phone calls that he suffered a work injury. Despite the pain, Claimant took heroic efforts to assure that his load got delivered. Employer then found a back-up driver so Claimant’s route could be finished. A “reasonably conscientious manager” would have followed up, and provided a list of medical providers upon Claimant’s release from the

ER. Instead, Claimant worked for Groendyke. Employer denied medical treatment without even inquiring further. At no point did Employer provide a designated provider list. Instead, Groendyke threatened to suspend their own seriously injured worker, then followed through with a firing, while he was still at home, suffering a total disability. There is nothing in the record indicating that Employer even tried to speak with Claimant, in person or over the phone, after the date of injury.

T. Dr. Simpson, in an abundance of caution (and since the work-related nature was blatantly obvious to all concerned) wanted to send Claimant through the Workers Compensation system to get a referral. Claimant dutifully, and in good faith, complied by going through Concentra, but in an effort to secure Dr. Simpson's services. A surgery was inevitable. In this case, the right of selection has passed to Claimant in its entirety, and the ALJ so finds. The ALJ is not persuaded that Concentra, by Dr. Johnson, remains the ATP - unless Claimant desires it. At no point did *Employer* provide this name; it was Dr. Simpson, who was attempting to create a proper Workers Compensation conduit for medical treatment. Employer, through its own conduct, has surrendered any influence over who will treat Claimant. Dr. Simpson, and his designees, are now Claimant's Authorized Treating Providers.

Medical Benefits

U. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

V. Claimant has suffered a compensable work injury. Claimant has shown, by a preponderance of the evidence, that all treatment rendered to date has been reasonable, necessary, and related to his work injury. This includes, but is not limited to, his treatment in the ER, any services rendered by Concentra, all services provided by Dr. Simpson, all medications prescribed, as well as all physical and occupational therapy as recommended by Dr. Simpson.

Temporary Total Disability

W. To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to

establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)).

X. Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Y. The ALJ finds, by a preponderance of the evidence, that Claimant continues to suffer a Temporary Total Disability as a result of his work injury. Ample evidence in support includes Claimant’s credible testimony, the medical records from Dr. Simpson, and even the expert opinions of Dr. O’Brien. Claimant has not reached MMI. He has not been released by his ATP at this point to return to work, even on a limited basis. He was terminated from employment, in a manner that the ALJ finds unconscionable, and thus will not be returning to work for Employer in any modified capacity. As a result, he is entitled to Temporary Total Disability payments, until terminated by operation of law.

ORDER

It is therefore Ordered that:

1. Claimant’s injury is compensable.

2. Claimant’s Authorized Treating Provider is now Dr. Michael Simpson, MD, and his designees.

3. Respondents shall pay for all medical treatment rendered to date for Claimant’s work injury.

4. Claimant’s Average Weekly Wage is $565.93.

5. Respondents shall pay Temporary Total Disability to Claimant until terminated by operation of law.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.
