e. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, all of the referrals in both cases were within the chain of authorized referrals.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden of proof in both cases.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all the costs of competing the recommended acupuncture treatment by Dr. Shih and the counseling recommended by Dr. Carbaugh as maintenance medical care (W.C. No. 5-004-352-002); and, the costs of medical treatment for the Claimant's compensable toxic exposure of August 25, 2016 (W.C. No. 5-025-676), subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this19th day of March 2019.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of March 2019, electronically in PDF format, addressed to:

Division of Workers' Compensation
cdle_wcoac_orders@state.co.us

_____
Court Clerk

Wc..ord

ISSUES

1. Whether Respondent has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of David W. Yamamoto, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) as a result of his February 2, 2017 admitted industrial injuries.

2. Whether Claimant is entitled to a disfigurement award pursuant to §8-42-108, C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer as a Security Facilitator. On February 2, 2017 he suffered admitted industrial injuries during the course and scope of his employment. Claimant specifically slipped and fell on black ice and suffered a right femur fracture. He was transported by ambulance to the Good Samaritan Medical Center Emergency Room.

2. On February 3, 2017 Claimant underwent surgery with George Chaus, M.D. Dr. Chaus characterized the fracture as "significantly more difficult for fixation and reduction than a standard intertrochanteric or subtrochanteric hip fracture with significant deforming forces requiring an open reduction, cerclage cable wiring and advanced trauma techniques." He prescribed postoperative antibiotics and DVT prophylaxis.

3. On February 6, 2017 Claimant was transferred to a rehabilitation facility. He remained at the location and received treatment for approximately one month. When he returned home in early March, 2017 he utilized a hospital bed on the main floor for sleeping and required a wheelchair to move around the house.

4. On March 10, 2017 Claimant visited Authorized Treating Physician (ATP) Dean L. Prock, M.D. He reported right upper and lateral right leg pain. Dr. Prock diagnosed Claimant with right hip pain, right knee pain and acute intractable tension-type headaches.

5. On April 11, 2017 Claimant returned to light duty work with Employer. He had restrictions of no lifting or carrying more than two pounds, and no walking, crawling, kneeling, squatting, climbing or driving. Claimant was directed to use the wheelchair for movement a maximum of two to four minutes per hour.

6. On May 19, 2017 Claimant returned to Dr. Prok for an examination. Claimant did not report any lower back pain. He utilized a walker instead of a wheelchair. Claimant advised Dr. Prok that he would be leaving soon for a one month-long vacation in the Philippians. Dr. Prok referred Claimant to Nicholas K. Olsen, D.O.

for an examination. However, Claimant noted that he would not be able to undergo an evaluation until after he returned from vacation.

7. On June 29, 2017 Claimant visited Dr. Olsen for an evaluation. Claimant mentioned a recent trip to the Philippines with his family. While in the water he was able to walk with a normal gait and significantly reduced pain. Claimant noted a marked increase of pain with a single-legged stance on the right lower extremity, difficulty walking upstairs and relief when sitting in a recliner or propping his leg up with pillows in bed. Dr. Olsen noted mild forward flexed posture and moderate range of motion deficits in both flexion and extension. He prescribed land-based physical therapy and pool therapy because of Claimant's good experience with water walking while in the Philippines.

8. Claimant underwent land-based physical therapy from July 10, 2017 through August 31, 2017 with CACC Physical Therapy. He received pool therapy with SCLP Broomfield Rehab from June 28, 2017 through September 13, 2017. Claimant did not report any lumbar spine complaints.

9. On August 24, 2017 Claimant visited Dr. Olsen for an examination. Claimant was using a straight cane mostly at work but less at home. He reported anterior right groin pain when weight-bearing as well as pain in his right knee and hip. Claimant did not mention pain in his lumbar spine or SI joint. Dr. Olsen noted "neutral mechanics" in the lumbar spine and full range of motion.

10. Claimant continued to visit Dr. Prok from September 22, 2017 through March 5, 2018. Claimant reported right knee pain and Dr. Prok included "acute pain of right knee" in his diagnoses.

11. On February 5, 2018 Dr. Olsen added, "acute deep vein thrombosis (DVT) of distal vein of right lower extremity" to his diagnoses. He noted that Claimant's personal physician was managing the DVT with blood thinners.

12. On March 5, 2018 Claimant visited Dr. Prok for an evaluation. After performing a physical examination Dr. Prok determined that Claimant had reached Maximum Medical Improvement (MMI). He assigned a 21% right lower extremity impairment rating for loss of range of motion of the hip. Dr. Prok also assigned a 20% right lower extremity impairment rating pursuant to Table 45 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). Combining the ratings yielded a 37% right lower extremity impairment. The 37% lower extremity impairment converts to a 15% whole person rating. Dr. Prok remarked that "[Claimant] reports having some swelling in the lower leg after the DVT event that was not considered occupational due to the duration from the surgical date was a very long time and this was discussed previously and that he should continue management of this issue to his personal physician separately from this claim." He authorized medical maintenance benefits.

13. On March 22, 2018 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Prok's date of MMI and 37% right lower extremity impairment rating. Respondent also agreed that Claimant was entitled to receive medical maintenance benefits. Claimant timely filed an objection to the FAL and sought a Division Independent Medical Examination (DIME).

14. On September 7, 2018 Claimant underwent a DIME with David W. Yamamoto, M.D. Dr. Yamamoto determined that Claimant had not reached MMI. After reviewing Claimant's medical records and conducting a physical examination Dr. Yamamoto diagnosed Claimant with the following: (1) right hip intertrochanteric fracture/subtrochanteric fracture with extension to the proximal right femur requiring an intramedullary implant; (2) antalgic gait requiring frequent use of a cane; (3) mechanical lower back pain secondary to the antalgic gait; and (4) DVT following the right hip fracture, lengthy immobilization and inactivity post-injury. He summarized that Claimant's continuing antalgic gait secondary to his industrial injury resulted in persistent lower back pain and dysfunction that had not been formally treated. Dr. Yamamoto recommended a trial of physical therapy. However, if Claimant did not respond, he suggested referral to a physiatrist for evaluation and treatment.

15. Dr. Yamamoto provided a provisional impairment rating of 33% for Claimant's right lower extremity. The rating included 25% for loss of range of motion and 10% for peripheral vascular system impairment. The right lower extremity 33% impairment rating converts to a 13% whole person impairment. Dr. Yamamoto also provided a provisional lumbar spine impairment rating of 12%. The rating included 5% pursuant to Table 53 of the *AMA Guides* and 7% for loss of range of motion. When combined with the lower extremity ratings the provisional whole person impairment rating was 23%.

16. Respondent filed an Application for Hearing seeking to overcome Dr. Yamamoto's opinion regarding MMI. In support, Respondent obtained an independent medical examination with Carlos Cebrian, M.D. Dr. Cebrian performed the examination on November 29, 2018 and issued a report dated December 18, 2018. He concluded that Dr. Yamamoto clearly erred in determining that Claimant had not reached MMI. Dr. Cebrian explained that the medical records did not contain documentation of any lumbar spine complaints. He specifically reviewed the medical records and noted the various dates of service where the treating physicians directly addressed the lumbar spine. Physicians did not record spinal complaints or symptoms in any of the reports. Instead, Dr. Cebrian noted that the first documentation of lumbar spine complaints occurred during Dr. Yamamoto's DIME over 18 months after Claimant's date of injury. Notably, Dr. Cebrian's examination of the lumbar spine was unremarkable.with no discomfort or positive findings. He summarized that there was simply no objective pathology to support a Table 53 diagnosis or permanent impairment rating for the lumbar spine pursuant to the *AMA Guides*. Finally, Dr. Cebrian explained that Dr. Yamamoto's recommendation for an evaluation with a physiatrist was incorrect because Claimant had already been examined by physiatrist Dr. Olsen.

17. Dr. Cebrian also explained that Dr. Yamamoto clearly erred in attributing Claimant's DVT to his February 2, 2017 industrial injuries because of the significant temporal delay in the onset of symptoms. Claimant specifically did not mention symptoms of a DVT until approximately June 29, 2017. The symptoms occurred after Claimant returned from a long plane ride and vacation in the Philippians.

18. Claimant testified at the hearing in this matter. He explained that he was initially confined to a wheelchair but transitioned to a walker by early May 2017 and no longer used a wheelchair by June 2017. He subsequently began using a cane. Claimant explained that he reported lower back pain to Dr. Prok sometime after he started occasionally walking with a cane. He had not suffered any lower back pain while using a wheelchair. However, Dr. Prok told him that he could not place the lower back complaints in his report because he did not report lower back pain after his initial injury on February 7, 2017. Claimant maintained that his lower back pain has not changed and he has never been evaluated for lumbosacral problems.

19. Claimant underwent a disfigurement evaluation at the hearing. As a result of Claimant's February 2, 2017 industrial injuries, he sustained permanent disfigurement to his right hip area. The disfigurement consists of an approximately four inch long scar on his right thigh and an approximately one inch long scar on his abdomen. Claimant also exhibited a noticeable limp. The disfigurement is serious, permanent and normally exposed to public view. Claimant is thus entitled to a disfigurement award in the amount of $2,000.00.

20. Dr. Cebrian testified at the hearing in this matter. He maintained that Dr. Yamamoto erroneously concluded that Claimant had not reached MMI. Instead, Dr. Cebrian agreed with Dr. Prok that Claimant reached MMI on March 5, 2018 and warranted an 18% right lower extremity impairment rating. He emphasized that Claimant's medical records revealed normal lumbar spine examinations and no lumbar spine complaints. Moreover, Dr. Yamamoto incorrectly attributed Claimant's lumbar spine complaints to an altered gait based on the use of a cane. Dr. Cebrian noted that the medical literature reflects that the use of a cane lessens the stress associated with an altered gait on the lumbar spine. Furthermore, Dr. Yamamoto's referral to a physiatrist was erroneous because physiatrist Dr. Olsen had completed a thorough examination of Claimant's lumbar spine. Finally, Claimant's DVT was unrelated to his February 2, 2017 industrial injuries because Claimant was never completely immobile and the symptoms did not arise until several months after his February 3, 2017 surgery.

21. Respondent has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Yamamoto that Claimant has not reached MMI as a result of his February 2, 2017 industrial injuries. Initially, on February 2, 2017 Claimant suffered a right femur fracture when he slipped and fell while performing his job duties for Employer. He underwent surgery on February 3, 2017 and subsequently spent approximately one month in a rehabilitation facility. Claimant also underwent evaluations with Dr. Olsen and received physical therapy. He developed a DVT in approximately June 2017 that was treated through his personal medical providers. On

March 5, 2018 ATP Dr. Prok determined that Claimant had reached MMI and assigned a 37% right lower extremity impairment rating.

22. On September 7, 2018 Claimant underwent a DIME with Dr. Yamamoto. Dr. Yamamoto determined that Claimant had not reached MMI. After reviewing Claimant's medical records and conducting a physical examination Dr. Yamamoto diagnosed Claimant with the following: (1) a right hip fracture; (2) antalgic gait requiring frequent use of a cane; (3) mechanical lower back pain secondary to the antalgic gait; and (4) a DVT following the right hip fracture because of lengthy immobilization and inactivity. He summarized that Claimant's continuing antalgic gait secondary to his industrial injury resulted in persistent lower back pain and dysfunction that had not been formally treated. Dr. Yamamoto recommended a trial of physical therapy. However, if Claimant did not respond, he suggested referral to a physiatrist for evaluation and treatment.

23. Respondent challenged Dr. Yamamoto's DIME determination based on an independent medical examination with Dr. Cebrian. Dr. Cebrian concluded that Dr. Yamamoto clearly erred in determining that Claimant had not reached MMI. He reasoned that the medical records did not contain documentation of any lumbar spine complaints. Dr. Cebrian noted that the first documentation of lumbar spine complaints did not occur until Dr. Yamamoto's DIME over 18 months after Claimant's injury. Dr. Yamamoto also incorrectly attributed Claimant's lumbar spine complaints to an altered gait based on the use of a cane. Dr. Cebrian further commented that Dr. Yamamoto's recommendation for an evaluation with a physiatrist was incorrect because Claimant had already been examined by physiatrist Dr. Olsen. Finally, Claimant's DVT was unrelated to his February 2, 2017 industrial injuries because he was never completely immobilized and the symptoms did not arise until several months after his February 3, 2017 surgery.

24. Respondent has failed to demonstrate that Dr. Yamamoto improperly applied the *AMA Guides* or otherwise erred in concluding that Claimant had not reached MMI. Although Dr. Cebrian disagreed with Dr. Yamamoto's determination that Claimant has not reached MMI, the conclusion was not clearly erroneous. The medical records and credible testimony reflect that Claimant was initially confined to a wheelchair after his industrial injuries, transitioned to a walker and then began using a cane. Claimant explained that he reported lower back pain to Dr. Prok sometime after he started occasionally walking with a cane. He had not suffered any lower back pain while using a wheelchair. Dr. Yamamoto reasoned that Claimant suffered an antalgic gait requiring frequent use of a cane that caused him to develop lower back pain. Dr. Cebrian's disagreement regarding Claimant's development of lower back pain does not undermine Dr. Yamamoto's reasonable reliance on Claimant's clinical history and credible reports. Moreover, although Claimant had been evaluated by physiatrist Dr. Olsen, Dr. Yamamoto sought a more complete examination of Claimant's lower back dysfunction if physical therapy failed. Finally, Dr. Yamamoto's determination that Claimant's DVT was related to his February 2, 2017 industrial injury based on immobilization constituted a reasonable inference from the medical records despite the temporal delay in the development of symptoms. Accordingly, Respondent has failed to produce

unmistakable evidence free from serious or substantial doubt that Dr. Yamamoto's determination that Claimant has not reached MMI is incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly

applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Respondent has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Yamamoto that Claimant has not reached MMI as a result of his February 2, 2017 industrial injuries. Initially, on February 2, 2017 Claimant suffered a right femur fracture when he slipped and fell while performing his job duties for Employer. He underwent surgery on February 3, 2017 and subsequently spent approximately one month in a rehabilitation facility. Claimant also underwent evaluations with Dr. Olsen and received physical therapy. He developed a DVT in approximately June 2017 that was treated through his personal medical providers. On March 5, 2018 ATP Dr. Prok determined that Claimant had reached MMI and assigned a 37% right lower extremity impairment rating.

8. As found, on September 7, 2018 Claimant underwent a DIME with Dr. Yamamoto. Dr. Yamamoto determined that Claimant had not reached MMI. After reviewing Claimant's medical records and conducting a physical examination Dr. Yamamoto diagnosed Claimant with the following: (1) a right hip fracture; (2) antalgic gait requiring frequent use of a cane; (3) mechanical lower back pain secondary to the antalgic gait; and (4) a DVT following the right hip fracture because of lengthy immobilization and inactivity. He summarized that Claimant's continuing antalgic gait secondary to his industrial injury resulted in persistent lower back pain and dysfunction that had not been formally treated. Dr. Yamamoto recommended a trial of physical therapy. However, if Claimant did not respond, he suggested referral to a physiatrist for evaluation and treatment.

9. As found, Respondent challenged Dr. Yamamoto's DIME determination based on an independent medical examination with Dr. Cebrian. Dr. Cebrian concluded that Dr. Yamamoto clearly erred in determining that Claimant had not reached MMI. He reasoned that the medical records did not contain documentation of any lumbar spine complaints. Dr. Cebian noted that the first documentation of lumbar spine complaints did not occur until Dr. Yamamoto's DIME over 18 months after Claimant's injury. Dr. Yamamoto also incorrectly attributed Claimant's lumbar spine complaints to an altered

gait based on the use of a cane. Dr. Cebrian further commented that Dr. Yamamoto's recommendation for an evaluation with a physiatrist was incorrect because Claimant had already been examined by physiatrist Dr. Olsen. Finally, Claimant's DVT was unrelated to his February 2, 2017 industrial injuries because he was never completely immobilized and the symptoms did not arise until several months after his February 3, 2017 surgery.

10. As found, Respondent has failed to demonstrate that Dr. Yamamoto improperly applied the *AMA Guides* or otherwise erred in concluding that Claimant had not reached MMI. Although Dr. Cebrian disagreed with Dr. Yamamoto's determination that Claimant has not reached MMI, the conclusion was not clearly erroneous. The medical records and credible testimony reflect that Claimant was initially confined to a wheelchair after his industrial injuries, transitioned to a walker and then began using a cane. Claimant explained that he reported lower back pain to Dr. Prok sometime after he started occasionally walking with a cane. He had not suffered any lower back pain while using a wheelchair. Dr. Yamamoto reasoned that Claimant suffered an antalgic gait requiring frequent use of a cane that caused him to develop lower back pain. Dr. Cebrian's disagreement regarding Claimant's development of lower back pain does not undermine Dr. Yamamoto's reasonable reliance on Claimant's clinical history and credible reports. Moreover, although Claimant had been evaluated by physiatrist Dr. Olsen, Dr. Yamamoto sought a more complete examination of Claimant's lower back dysfunction if physical therapy failed. Finally, Dr. Yamamoto's determination that Claimant's DVT was related to his February 2, 2017 industrial injury based on immobilization constituted a reasonable inference from the medical records despite the temporal delay in the development of symptoms. Accordingly, Respondent has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Yamamoto's determination that Claimant has not reached MMI is incorrect.

Disfigurement

11. Section 8-42-108, C.R.S. provides that a claimant may obtain additional compensation if he is seriously disfigured as the result of an industrial injury. As found, as a result of Claimant's February 2, 2017 industrial injuries, he sustained permanent disfigurement to his right hip area. The disfigurement consists of an approximately four inch long scar on his right thigh and an approximately one inch long scar on his abdomen. Claimant also exhibited a noticeable limp. The disfigurement is serious, permanent and normally exposed to public view. Claimant is thus entitled to a disfigurement award in the amount of $2,000.00.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent has failed to overcome Dr. Yamamoto's DIME opinion. Claimant has not reached MMI for his February 2, 2017 industrial injuries.

2. Claimant is entitled to receive disfigurement benefits in the amount of $2,000.00 for his February 2, 2017 industrial injuries.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

I ISSUES TO BE DETERMINED

- Whether Decedent proved by a preponderance of the evidence that the injury and death are compensable.

- Whether Respondents proved by a preponderance evidence that Decedent deviated from the course and scope of his employment thereby removing himself from travel status.

- Whether Decedent proved by a preponderance of the evidence that Decedent returned to the scope of his employment.

- If compensable, whether Respondents have proved by a preponderance of the evidence that they are entitled to a 50% reduction in benefits for intoxication.

II STIPULATED FACTS

1. Decedent was a pilot for Employer since 2007, and resided in the State of California.

2. At the time of his death, Decedent was married to Alayna O_____. Wife and two minor children are dependents of Decedent.

3. Decedent traveled to Denver, Colorado to participate in Employer's flight training to become a captain flying the E175 aircraft. The flight training began mid-January 2018, and took place at the Flight Safety Denver Learning Center located at 6755 Yampa Street, Denver, Colorado 80249. The training center is located west of North Tower Road between East 68th Avenue and East 67th Avenue.

4. During his training, Decedent stayed at the SpringHill Suites by Marriott Denver Airport, located at 18350 East 68th Avenue, Denver, Colorado 80249. This hotel is located on the west side of North Tower Road.

5. Baylee L_____ is a pilot for SkyWest Airlines, Inc. Mr. L_____'s flight training for Employer overlapped in part with Decedent's. Mr. L_____ and Decedent partnered during flight simulator training.

6. During his training, Mr. L_____ stayed at the Fairfield Inn & Suites by Marriott Denver Airport located at 6851 Tower Road, Denver, Colorado 80249. This hotel also is located on the west side of North Tower Road.

7. On February 14, 2018, at 10:00 p.m., Decedent and Mr. L_____ completed the Initial Maneuvers Validation (IMV) testing halfway through their training. Both Decedent and Mr. L_____ passed the testing.

8. Decedent and Mr. L_____ were off from work on February 15, 2018 and were to return to their training on February 16, 2018.

9. That evening, at approximately 10:27 p.m., Decedent and Mr. L_____ ate dinner and drank beer at Ruby Tuesday. Decedent and Mr. L_____ left Ruby Tuesday and went downtown to one or more bars to continue celebrating having passed the IMV test.

10. At approximately 2 a.m. on February 15, 2018, Decedent and Mr. L_____ returned to the Fairfield Inn & Suites where Mr. L_____ was staying.

11. Around 6 a.m. on February 15, 2018, a car heading southbound on North Tower Road struck Decedent, just south of Tower Road and 69th Avenue. Emergency services transported Decedent to the University of Colorado Hospital.

12. Decedent died at University of Colorado Hospital at approximately 9 a.m. the same day.

13. A blood sample was taken while Decedent was receiving treatment at University of Colorado Hospital. No second sample of the blood was preserved.

14. Decedent was a max wage earner at the time of the accident. Upon finding of compensability, the TTD rate for calculation of death benefits is $948.15.

III FINDING OF FACTS

15. Decedent and Mr. L_____ spent time together rehearsing, testing and studying, and had a friendly relationship.

16. Mrs. O_____ testified that Decedent left California for training in Denver on January 12 or 13, and was to be gone for one-and-half to two months for training. Ms. O_____ testified that he remained in Denver training until his death.

17. The night auditor for the Fairfield Inn & Suites, Melissa A_____, testified that at approximately 2:00 a.m. on February 15, 2018, Decedent came to the front desk asking to have a new room key made as his was not working. Ms. A_____ noted that the logo on his room key was for Springhill Suites, not Fairfield Inn & Suites. Ms. A_____ explained to Decedent that he was at the wrong hotel. Mr. L_____ convinced Decedent to go up to his room as he was staying at the Fairfield Inn & Suites.

18. Ms. A_____ observed Decedent at 2:00 a.m. walking as if he was intoxicated. She testified that Decedent smelled of alcohol. As a night auditor, she had observed this type of activity before.

19. At approximately 5:30 a.m. on February 15, 2018, Ms. A_____ interacted with Decedent when he again asked for a room key. Ms. A_____ again informed him that he was staying at the Springhill Suites, not the Fairfield Inn & Suites. Her written statement provides, "He was drunk and he spent about twenty minutes talking to me about how he couldn't put a lid on the coffee cup." She informed him that the Springhill Suites was approximately two buildings away and pointed in the direction of Springhill Suites.

20. Ms. A_____ testified that Decedent still appeared very intoxicated and she worried he might burn himself on the hot coffee. Ms. A_____ observed Decedent struggling with his coffee, unable to put the lid on his cup. She observed Decedent for approximately 10 minutes, and then became distracted helping other hotel guests. Ms. A_____ testified that she was not sure whether Decedent was trying to get to his hotel or not.

21. Ms. A_____ testified that Decedent's attempt to cross Tower Rd. from the Fairfield Inn was in the opposite direction from the Springhill Inn and Suites. Ms. A_____ testified that she was not aware of where the Decedent was going.

22. The police report contains Ms. A_____'s handwritten statement on the day of the accident. Her testimony at hearing was very similar to her written statement. Neither her written statement nor her testimony provide information about where Decedent was heading at the time of the accident.

23. The ALJ finds Ms. A_____ to be credible and her testimony to be persuasive.

24. Mr. L_____ testified that he and Decedent went to Ruby Tuesday to have dinner, and that he and Decedent consumed two beers each. After Ruby Tuesday, they went to a bar for approximately two hours and returned via Uber to the Fairfield Inn. Mr. L_____ could not remember how many drinks they had, but that they ordered an Uber to return to his hotel, the Fairfield Inn and Suites. Mr. L_____ testified after he and Decedent made it up to his room, he fell asleep in hotel room. He did not awaken until shortly before noon. He also testified that as they had the following day off from work, so it was no big deal to go out and drink.

25. The ALJ finds Mr. L_____ to be credible and his testimony to be persuasive.

26. Morgan Simmons, who is a captain, a fleet training manager, and a chief instructor, confirmed that Decedent's training before his death was on February 14, 2018 and he did not have to return to training until February 16, 2018. He explained where the training facility was, and that at the time of the accident, Decedent was heading in the opposite direction of the facility when the vehicle struck him. Mr. Simmons testified that new-hire pilots, such as Mr. L_____ start training three to four weeks earlier, which is why Decedent and Mr. L_____ were staying in different hotels.

27. The Denver Police Department report indicates that Decedent was crossing Tower Road in the 6800 block from the west side to the east side of the street when tragically he was struck by a motor vehicle. The collision occurred while it was still dark at approximately 6:09 a.m.

28. A bystander provided CPR until first responders arrived approximately three minutes later. First responders provided emergency care and transported Decedent to University Hospital, which admitted Decedent at approximately 6:39 a.m. Claimant sustained numerous serious traumatic injuries.

29. During attempts to stabilize Decedent's condition, a critical care doctor initiated a massive transfusion protocol. Decedent received five units of blood at 7:39 a.m. and began receiving his sixth unit of blood at 7:40 a.m.

30. A blood sample was taken at the hospital at approximately 7:47 a.m. Hospital records show Decedent had a blood alcohol concentration of .209 g/100ml.

31. A urine sample was collected from Decedent's catheter at 7:51 a.m. Hospital records show that Decedent tested positive for Ethanol in his Urine, his results being above the 10mg/dL triggering level.

32. Decedent died from his injuries at approximately 9:00 a.m.

33. The Denver Police Department report includes three witness statements from the drivers at or near the accident – two from nearby drivers and one from the driver whose vehicle struck the Decedent. Tina Gresley was driving southbound on Tower Rd. "when she saw a person running across Tower Rd." Larry Hurst was driving southbound on Tower Rd. and as he was passing the Fairfield Inn, he saw a man "come out of nowhere trying to cross Tower Rd." Thomas Poliwka, the driver of the vehicle that struck Decedent stated, "I was southbound Tower Rd. at 40 mph when a pedestrian suddenly jumped in front of my vehicle." Mr. Poliwka confirmed that Decedent "was crossing from the west side of Tower Rd. to the east side."

34. The police report categorized Decedent's attempted crossing as a violation, "Prohibited Crossing of Roadways." Mr. Poliwka received no citation for any moving violation and was absolved of any other criminal charges.

35. Matthew Garrow, one of the first officers arriving at University Hospital for investigation purposes, issued a statement contained in the police report. He noted that while the hospital staff was going through Decedent's personal items, "[t]here were numerous receipts from businesses in the area of 6900 N Tower Rd, Denver Colorado."

36. The police report diagram on page 59 of Respondents' exhibits shows that Decedent was crossing Tower Road away from the training facility and away from his hotel.

IV CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the ALJ draws the following conclusions of law:

GENERAL LEGAL PRINCIPLES

The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102 (1), C.R.S. A Decedent in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is probably more true than not. *Page v. Clark,* 197 Colo. 306, 591 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. See *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936). *Colorado Jury Instructions, Civil*, 3:16.

COMPENSABILITY

For a claim to be compensable, an injury must occur in the "course and scope" of employment and "arise out of the employment." *See* Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work-related functions and be sufficiently related thereto to be considered part of the employee's service to the employer. Additionally, it is the decedent's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). Whether there is a sufficient causal relationship between the Decedent's employment and the injury is generally a question of fact, which the ALJ must determine based on the totality of the circumstances. Section 8-43-301(8), C.R.S. *In Re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996).

DEVIATION FROM EMPLOYMENT AND TRAVEL STATUS

An employee required to travel away from the employer's premises is considered to be in travel status, and is covered for workers' compensation during the entire trip. *Phillips Contracting , Inc. v. Hirst,* 905 P.2d 9 (Colo. App. 1995). However, an exception to this rule exists where the employee engages in a personal errand unrelated to the employer's business and other matters incident to the travel.

If the employee makes a distinct departure on a personal errand, coverage will cease and will not be restored until the errand has been completed. *Pat's Power Tongs, Inc. v. Miller*, 474 P.2d 613 (Colo. 1970); *Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). Whether an employee has returned to the scope of employment after a personal excursion is an issue of fact, with the burden of proof placed on the Decedent. *Wild West Radio, supra*.

The Court of Appeals held in *Pacesetter Corp. v. Collet*, 33 P.3d 1230 (Colo. App. 2001), that "in some circumstances the act of consuming alcohol, by itself, can constitute a personal deviation sufficient to remove the Decedent from the scope of employment." *Id.* at 1234.

Determining when an errand has been completed is a factual determination for the court. *Wild West Radio supra*. Colorado courts have held that a personal errand ends and the claimant returns to the scope of employment the "moment he commences his return to his home or his lodging." *Pat's Power Tongs, Inc., supra*.

In the case of *Nathan Bunn v. Woody's Paint*, W.C. No. 4-370-167 (May 17, 1999) the Industrial Claim Appeals Office upheld an ALJ's order which determined that even though the claimant had returned to and passed his hotel after an evening of drinking, his deviation had not ended when he was injured while heading away from the hotel. The ALJ found a deviation due to the claimant having a "night on the town" of substantial amounts of drinking over several hours after work. The ICAO affirmed the ALJ's holding and concurred that *Pat's Power Tongs* did not require a finding that the deviation had concluded because the ALJ specifically determined that the claimant was heading away from his hotel and rather than on a direct path.

The parties stipulate that Decedent traveled to Colorado to undergo flight training at the Flight Safety Denver Learning Center. Thus, pursuant to the general rule, Decedent was in travel status while in Colorado.

However, the issue is whether Decedent deviated from his employment and said travel status, and if so, whether he returned to the scope of employment after this deviation. Based on the totality of the circumstances, the ALJ finds and concludes Decedent engaged in a deviation and had not returned to the course and scope of his employment at the time of his injury.

As found, Decedent and Mr. L_____ set out at approximately 10:27 p.m. to celebrate their success in completing IMV training. They started with dinner at Ruby Tuesday where they consumed beers. After leaving Ruby Tuesday, they traveled to a bar where they spent an additional couple of hours drinking.

After they finished drinking at approximately 2:00 a.m. on February 15, 2018, Decedent and Mr. L_____ returned to Mr. L_____'s hotel, which was two buildings from Decedent's hotel. The night auditor, Melissa A_____, testified that Decedent and Mr. L_____ stopped by the front desk. Decedent requested a new key as his did not work. Ms. A_____ noticed that the Decedent's key card was for the Springhill Suites and told him he was at the wrong hotel. Decedent and Mr. L_____ left to go upstairs. Decedent appeared intoxicated, as he was not steady when handing her his card key and she smelled alcohol. She had observed these behaviors before with intoxicated guests.

At approximately between 5:30 a.m., Decedent again asked Ms. A_____ for a room key. She informed Decedent that his hotel was two buildings over. She watched Decedent get coffee and became concerned because it was very hot and Decedent appeared intoxicated. He was unable to put a lid on his coffee cup.

When Decedent left the Fairfield Inn, he travelled east and attempted to cross Tower Road at an unsafe crossing point. Decedent headed in the opposite direction of the training facility and his hotel.

Although Decedent's counsel argued that Decedent was returning to his hotel and was lost, Decedent offered no persuasive evidence to support that argument. Although Decedent attempted to cross Tower Road sometime after Ms. A_____ pointed in the direction of his hotel, the ALJ cannot infer that Decedent intended to return to his hotel. Although Decedent had spent approximately one month in the immediate area, evidenced by receipts he possessed, he was travelling away from his hotel.

Neither can the ALJ infer that Decedent was returning to Employer's Training Center, because the uncontradicted testimony of Mr. L_____ and Mr. Simmons established Decedent was not working the day of his injuries.

Persuasive evidence supports a finding and conclusion that Decedent was intoxicated when he sustained his injuries.

- Claimant's blood sample taken at approximately 7:47 a.m. showed Decedent had a blood alcohol concentration of .209 g/100ml. When the sample was taken, Decedent had already received six units of blood that likely would have diluted the alcohol content of the sample.

- Claimant's urine sample taken at approximately 7:51 a.m. showed that Decedent tested positive for Ethanol, his results being above the 10mg/dL triggering level.

- Ms. A_____ observed Decedent shortly before he sustained his injuries and observed that he was confused about which hotel he was staying at, was unable to put a lid on his coffee cup, and smelled like alcohol.

- Decedent exercised poor judgment in trying to cross a road with a fifty-five mile per hour speed limit in the middle of the block wearing dark clothes in the dark.

The Judge finds and concludes Decedent was in a personal deviation at the time of the accident, due to hours of consuming alcohol. The ongoing consumption and resulting intoxication amounted to a continuous deviation that began starting at Ruby Tuesday with the consumption of two beers and continued up until the time of the accident. The consumption of alcohol and high level of intoxication provides no benefit to Employer and is of such a personal nature that one cannot conclude it to be within the course and scope or arise from Decedent's position as a commercial airline pilot.

Decedent bears the burden of showing the return to employment. *Wild West Radio, Inc. v. Industrial Claim Appeals Office of State of Colo.*, 905 P.2d 6 (Colo. App. 1995). While *Pat's Power Tongs, Inc.* held that a worker's personal deviation ends the moment he begins to return to his lodging, the facts here do not support a finding that Decedent began to return to his lodging. Decedent was not heading toward the Springhill Inn and Suites, but rather was heading in the opposite direction. Our facts are more similar to those in *Wild West Radio* and *Bunn.* While Decedent did return to his co-worker's hotel, he never returned to his own hotel. When the motor vehicle struck him, Claimant undisputedly was heading not towards the Springhill Inn and Suites or Employer's training facility. Both are located on the west side of Tower Road and neither location would require Decedent to cross Tower Road. Even if the Judge were to infer that Decedent was trying to return to his hotel by asking for a replacement room key, the facts show he decided not to head in the direction of the Springhill Inn and Suites. These facts are similar to *Dunn*, where an intention eventually to return to a hotel room is not sufficient to end the deviation and specific travel away from the hotel continues the personal deviation.

While Decedent argues he was heading in the wrong direction because he was confused, the Judge finds no persuasive evidence to support it. Persuasive evidence shows that Decedent had been in the location of the hotels and accident since January 12 or 13, 2018, he had been staying at the Springhill Inn and Suites through the date of his death, and hospital staff found "numerous" receipts of restaurants around the area.

Based on a totality of the circumstances, the Judge finds and concludes that Decedent has not met its burden of proving that, more likely than not, Decedent had returned to his employment. Decedent remained on a continuous personal deviation and was not in the course and scope of his employment at the time of the accident. Consequently, this claim is not compensable.

Based on this conclusion, the Judge declines to address other issues.

ORDER

Based on the foregoing Findings of Fact and Conclusions of Law, the ALJ hereby Orders:

1. Decedent's claim is denied and dismissed.

DONE AND ENTERED this 20th day of March 2019.

BY THE COURT:

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman, #400
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Claimant prove injuries she suffered on October 15, 2017, including a fractured left wrist, arose out of and occurred within the course and scope of her employment?

FINDINGS OF FACT

1. Claimant worked for Employer as a manager and bartender. On October 15, 2017, she fractured her left wrist after being pushed to the ground by a bar patron engaged in a fight. Neither party disputes Claimant was injured at work. The disagreement involves how Claimant came to be involved in the altercation and whether the injury "arose out of" her employment.

2. During the shift, Claimant received a call from the bar owner (Joel N[Redacted]) on her cell phone regarding various work issues. It was very loud inside the bar, so she stepped outside to hear better. While she was on the call, she saw two individuals in the street fighting. The men were down past a few vehicles parked diagonally along the street in front of the bar. She recognized at least one combatant as a customer who had been drinking in the bar that evening. She exclaimed to the bar owner "there are two guys from the bar tonight out in the street beating the crap out of each other."

3. At this point, the parties' versions of events diverge. Respondents believe Claimant physically intervened between the two men. Respondents reason that, "claimant took herself outside the scope of her employment at the moment she approached the individuals and physically intervened in a fight happening a half-block away in the middle of the street."

4. Claimant testified "in no way, shape or form" did she physically insert herself into the fight. She testified she moved toward the men yelled something to the effect of, "Knock it off you guys!" Claimant testified she never left the sidewalk and did not go out in the street. She then turned away and continued her phone conversation. A moment later, she turned back and saw one of the combatants ("J[Redacted]") running toward her. She was standing near a parked Ford pickup truck and put her phone on the hood just before the man pushed her to the ground. She hit her head on a "2-hour parking" sign embedded in the sidewalk and broke her wrist when she hit the ground. [1]

5. After being knocked down, Claimant got up and looked for her phone but could not find it. She went into the bar and put her wrist into a bucket of ice. She then

[1] Based on the bodycam video, the 2-hour parking sign was approximately two diagonally-oriented parking spaces away from the front door of the bar, in front of Rockee's Restaurant. The Ford pickup was in the adjacent parking space.

called her daughter about deactivating the phone from their shared plan. Claimant's daughter is a dispatcher for the Pueblo Police Department, and she dispatched police to the scene.

6. J[Redacted] went back into the bar to speak with Claimant and see if she was okay. J[Redacted] remained in the bar and was served another beer.

7. Multiple police units arrived at the bar a few minutes later.[2] One of the officers ("Officer 1") entered the bar and asked what was going on. Claimant was standing behind the bar with her wrist in a bucket of ice. J[Redacted] was sitting at the bar drinking a beer, and the other bartender, Lisa Q[Redacted], was standing with them.

8. Officer 1 asked what happened, and Claimant replied, "There was an altercation outside, I intervened, and I got pushed and somebody took my cellphone." Ms. Q[Redacted] said, "And that guy that's out[side], he's . . . ." She gestured with her arm, but did not finish the thought. The individual outside to whom Ms. Q[Redacted] was referring was named "M[Redacted]." Another man sitting at the bar indicated J[Redacted] was fighting with M[Redacted]. Ms. Q[Redacted] seemed to think M[Redacted] was the instigator and J[Redacted] "had nothing to do with it." Shortly thereafter, Ms. Q[Redacted] can be seen patting J[Redacted] on the arm and stating, "you're alright, you're alright."

9. J[Redacted] and M[Redacted] were semi-regular customers of the bar and known to Claimant before the accident. Both men had been drinking in the bar that evening before the accident.

10. Claimant went outside and discussed the incident with another officer ("Officer 2"). Claimant stated,

> I was over here talking on the phone and two different people were out here fighting. And all I said was, "dudes, you guys have to — you have to move it." Plain and simple. Before you know it, somebody pushed me. My head hit right there, you know, and I bit it pretty bad.

11. Officer 2 asked Claimant if she knew who was involved. Claimant identified M[Redacted] but said she was not sure who else was involved.

12. A few moments later, Officer 2 asked,

> Q: So you're talking on the phone, two people approached you —
>
> Claimant: No. I approached them.
>
> Officer 2: And why was that? Because they had to move what?
>
> Claimant: They were fighting. I mean, there was gonna be a physical altercation, it was like an instinct I guess. Told 'em to knock it off. And that's

[2] Multiple officers responded because the call had been mistakenly coded as an armed robbery.

> all I said was "Knock it off guys, you know, come on." And I don't even know who pushed me. But I got pushed, and then before you know it I hit the back of my head and landed on my left wrist and left side.

13. Officer 1 interved J[Redacted] separately while Claimant was speaking with Officer 2. J[Redacted] was obviously very intoxicated.[3] J[Redacted] said he gave M[Redacted] a cigarette, and while they were talking, M[Redacted] "got all loudmouthy" and made what J[Redacted] perceived as a homophobic comment. The argument escalated and J[Redacted] punched M[Redacted]. J[Redacted] said M[Redacted] then "ran away." Officer 1 asked, "How did her wrist get broken," and J[Redacted] replied, "because she came up to me when I was approaching [M[Redacted]], and I pushed her aside."

14. Officer 1 then went to discuss the matter with Officer 2, who was still speaking with Claimant. Officer 1 relayed what J[Redacted] had said. Officer 2 said, "Did we establish that he [J[Redacted]] was the one that pushed her out of the way?" Officer 2 replied, "Yeah, he's telling me that he pushed her out of the way to get towards him [M[Redacted]]." Claimant interjected,

> I don't know though. . . . He [J[Redacted]] is really pretty cool. It's the bald guy [M[Redacted]] . . . .
>
> Officer 1: But [J[Redacted]'s] telling me basically he's the instigator because of comments that guy [M[Redacted]] made. . . . He told me you were trying to separate them[4] and he pushed you to the side to get towards him.
>
> Claimant: Okay.

15. Claimant declined to press charges against J[Redacted] because, "regardless, I don't know if it was him, so I can't say for sure."

16. One officer accompanied M[Redacted] back into the bar to retrieve his jacket. Ms. Q[Redacted] yelled at M[Redacted] about the incident. Most of what she said was drowned out by loud music playing in the background, but she clearly told him, "don't ever come back here again." After M[Redacted] walked out, the officer asked, "what about the other one [J[Redacted]], is he [banned too]?" Ms. Q[Redacted] replied, "No he's good. . . . That guy [M[Redacted]] gets really belligerent and we usually keep an eye on him, every time he comes in here we're like 'keep an eye on that guy, don't serve him too much.'"

17. Ms. Q[Redacted] testified at hearing for Respondents. She admitted she saw none of the events outside and her knowledge was primarily based on hearsay from

[3] Officer 1 colorfully (and correctly) described J[Redacted] as "fucked up," "freakin' hammered," and "trashed."

[4] This is not an accurate summary of J[Redacted]'s statement; he did not say Claimant was "trying to separate" M[Redacted] and himself.

other patrons. Ms. Q[Redacted] asked Claimant about the incident and testified, “She said she got in the way of the fight and broke her arm.”

18. Claimant’s testimony and statements on the video are largely, but not entirely, credible. Specifically, her testimony that J[Redacted] knocked her down and then looked her in the eye contradicts her statements to the police she did not know who pushed her. The ALJ suspects Claimant did not want to identify J[Redacted] to police because she knew he was drunk and he appears to have been popular with the bar staff. Nevertheless, she provided two irreconcilable accounts on that point. But the fact that part of a witness’ testimony is unreliable does not necessarily mean their testimony should be disregarded in its entirety. The ALJ has relied on Claimant’s testimony to the extent it is reasonably consistent with the Body Cam video.

19. The ALJ disagrees with Respondents’ argument the accident occurred “in the middle of the street.” The persuasive evidence shows the accident occurred on the sidewalk in front of Rockee’s Restaurant next door, where Claimant was standing and talking on the phone. She put her phone on the hood of Ford pickup truck, which the video shows was parked in front of Rockee’s. She hit her head on the signpost shown in the video to the left of the truck. The ALJ interprets Claimant’s statement that “I approached them” to mean she moved in their direction on the sidewalk and yelled for them to “knock it off.” There is no persuasive evidence Claimant ever left the sidewalk. It is not likely Claimant went out into the street and physically intervened between J[Redacted] and M[Redacted].

20. After reviewing all the available evidence, the ALJ finds the following scenario probably occurred: Claimant was speaking on the phone with her boss when she heard J[Redacted] and M[Redacted] arguing/fighting out in the street. She moved toward them and shouted, “Knock it off!” She resumed her telephone conversation while the men continued arguing/fighting. One or more punches were thrown and M[Redacted] eventually tried to get away from J[Redacted], heading back toward the bar. J[Redacted] was on the sidewalk and moving quickly to get at M[Redacted]. Claimant saw J[Redacted] coming toward her and threw her phone on the hood of the pickup truck. At that point, Claimant was probably between the two men, which is consistent with her statement to Ms. Q[Redacted] “she got in the way of the fight.” J[Redacted] pushed her aside to get at M[Redacted]. The ALJ finds Claimant was not attempting to physically separate the two men.

21. Claimant proved by a preponderance of the evidence her injuries arose out of and occurred in the course and scope of her employment.

22. Claimant’s injuries proximately caused a need for medical treatment.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove she suffered an injury “arising out of” and “in the course of employment.” Section 8-41-301(1). The

course of employment requirement is satisfied where the injury occurred within the time and place limits of the employment and during an activity that had some connection with the employee's job-related functions. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991).

Respondents do not dispute Claimant's injuries occurred "in the course of employment." Rather, the dispute centers on whether the injuries "arose out of" Claimant's employment. Respondents argue, "the fight and her intervention had absolutely nothing to do with her job responsibilities or the bar." Respondents argue Claimant stepped out of her employment and "inserted herself into a purely personal dispute, for purely personal reasons, and was injured as a result."

An injury "arises out of" employment when it "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Rather, the question is whether the activity "is sufficiently interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Id*. at 210; *see also Panera Bread LLC v. Industrial Claim Appeals Office*, 141 P.3d 970 (Colo. App. 2006). Whether an injury arises out of and in the course of employment are questions of fact for the ALJ, based on the totality of circumstances. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998).

An employee can step outside the scope of employment by engaging in a purely personal deviation. When a personal deviation is asserted, the question is "whether the claimant's conduct constituted such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing an activity for his sole benefit." *Panera Bread, LLC v. Industrial Claim Appeals Office*, 141 P.3d 970, 972 (Colo. App. 2006). The deviation must be "substantial" to remove the claimant from the course and scope of employment. *Kelly v. Industrial Claim Appeals Office*, 214 P.3d 516 (Colo. App. 2009).

As found, Claimant proved her injuries arose out of her employment. She was on the phone with her boss immediately before the accident occurred. The man who caused her injuries was a drunken bar patron attempting to "get at" another patron. The fight had nothing to do with Claimant personally. She only became involved because she was the manager of the establishment where the men had been drinking. Admittedly, Claimant's comments that she "intervened" in the fight and "approached" the men are ambiguous. But the ALJ accepts Claimant's explanation she "intervened" *verbally* rather than physically. Claimant "approached" the men in the sense of moving toward them and yelling, "Knock it off." She did not go out into the street and try to break up the fight. The ALJ gives no weight to J[Redacted]'s statement Claimant "came up to him." Perhaps that was his perception because she moved toward the hood of the truck to toss her phone. Regardless, given his level of intoxication, the ALJ does not find J[Redacted] a reliable

source of specific details regarding the event, other than the fact that he knocked Claimant down.

B. Treatment for the fractured wrist was reasonably necessary

A compensable injury is one that causes disability or a need for medical treatment. *Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). The persuasive evidence shows Claimant fractured her left wrist because of the industrial accident and required treatment.

ORDER

It is therefore ordered that:

1. Claimant's claim for injuries sustained on October 15, 2017 is compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 20, 2019

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-065-402-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted]
Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 7, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 3/7/19, Courtroom 1, beginning at 1:30 PM, and ending at 3:45 PM).

The Claimant was present in person and represented by [Redacted], Esq. The Respondent WAS represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 11 were admitted into evidence, without objection. Respondent’s Exhibits A through G were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant’s opening brief was filed on March 14, 2019. Respondent’s answer brief was filed on March 21, 2019. No timely reply brief was filed and the matter was deemed submitted for decision on March 26, 2019.

ISSUES

The issues to be determined by this decision concern compensability of an episode of atrial fibrillation (hereinafter "a-fib") on December 10, 2017. If the claim is found to be compensable, medical benefits and average weekly wage (AWW) are additionally designated issues.

The Claimant bears the burden of proof by a preponderance of the evidence on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

The Incident

1. The Claimant is a 34-year employee of the Employer. On December 10, 2017, he had completed a workout routine at the fire station during one of his shifts. He had performed an exercise routine consisting of stretching, yoga, walking up and down stairs while wearing a weighted vest, as well as sets of push-ups, dips, and pull ups in between flights of stairs. The Claimant took a shower and shortly afterwards noticed that his heart was racing. This occurred approximately 30-minutes after the exercise. The Claimant hooked himself up to the EKG machine at the fire station and found that his heart was experiencing an episode of a-fib. Respondent argues, in its answer brief, that the time interval between the vigorous exercise and the episode of a-fib severs the causal link between the a-fib and the exercise. Respondent's Independent Medical Examiner (IME), Mary R. Olsovsky, M.D., a cardiologist, rendered a more global opinion that exercise does not cause a-fib. She implies that the Claimant's sleep apnea and waking with his heart racing could be a more likely cause. For the reasons specified herein below, the ALJ rejects this argument and Dr. Oslovsky's opinion in this regard.

2. Upon the onset of the a-fib, the Claimant notified his supervisor of the situation and was taken to the hospital for treatment. The ALJ finds that Claimant reported his injury to an authorized Employer representative on December 10, 2017.

3. The incident cited as the cause of injury occurred in the course and scope of the Claimant's employment. The Claimant was at work, during working hours, and had just finished a vigorous work-related workout routine when he realized something was wrong with his heart. The injury arose out of employment because the Claimant is expected to maintain a requisite level of fitness to perform his duties as a fire fighter. The fire department expects employees to exercise while they are on shift and provides them equipment to do so. The Claimant's injury also satisfies the positional risk doctrine, because the conditions and obligations of his employment—training related to

maintaining the requisite level of fitness to perform the duties expected of a firefighter—placed him in the position in which the injury occurred. Respondent argues that their IME's (Dr. Oslovsky) opinions do not support the arising out of" test. This opinion is in conflict with the opinion of William Chloe. M.D., a treating cardiologist, as supported by the opinion of the authorized treating physician (ATP), Hiep Leloudes Ritzer, M.D. and the Claimant's testimony. The ALJ resolves this conflict in favor of the opinions of Dr. Chloe, Dr. Ritzer, the testimony of the Claimant and against the opinions of Dr. Oslovsky for the reasons stated herein below.

4. The Claimant has not suffered an episode of a-fib prior to the incident of December 10, and it is more likely than not that this incident at work aggravated and accelerated any underlying heart problem, thus, making it dangerous for the Claimant to fulfill his duties as a firefighter without running the risk of experiencing another episode of a-fib, which could lead to even more serious consequences, as supported by the Claimant's medical restrictions as a result of the December 10 episode of a-fib.

Medical

5. The Claimant was first seen on December 10, 2017, when he was taken to Littleton Adventist Hospital. When he was released from the hospital he was told to see a cardiologist as soon as possible. The Claimant had an appointment with cardiologist, William Choe M.D. on December 11. Dr. Choe diagnosed the patient with paroxysmal a-fib/ flutter. He prescribed a blood thinner and a beta blocker for the Claimant and scheduled him for further testing. Dr. Choe, the Claimant's authorized treating cardiologist, also took the Claimant off line as a firefighter, meaning Claimant could not work as a line firefighter and he was restricted to light duty. Dr. Choe did not conduct a "causation analysis" as to the origin of the Claimant's injuries, however, Dr. Hiep did, taking Dr. Chloe's assessment into account.

6. On December 12, 2017, the Employer referred the Claimant to Dr. Ritzer, who became his authorized treating physician (ATP). Dr. Ritzer is not a cardiologist; she practices family medicine. Dr. Ritzer diagnosed the Claimant with recurrent supraventricular or atrial tachycardia, flutter, or fibrillation. Dr. Ritzer accepted Dr. Choe's findings related to the Claimant's condition and then conducted a "causation analysis" as to the origin of the Claimant's injuries and determined that the Claimant's symptoms were consistent with a work injury. Dr. Ritzer advised the Claimant that he should continue treatment with Dr. Choe. At this point, Dr. Choe became an ATP because he was within the chain of authorized referrals.

7. The Claimant has suffered from sleep apnea, which he was diagnosed with by a Dr. Smith in 2015. He was given a mouth piece to help with the condition. At the time of the incident on December 10, 2017, the Claimant's mouthpiece had a crack in it. Respondents argue that the sleep apnea, or the crack in the mouth piece **could** be an alternative cause of the Claimant's a-fib, but the ALJ does not find this explanation persuasive and rejects it.

8. The Claimant was released to perform regular duty by Dr. Ritzer, in consultation with Dr. Choe, on January 18, 2018.

Mary R. Olsovsky, M.D., Respondents' Independent Medical Examiner (IME)

9. Dr. Olsovsky, engaged by the Respondents to perform a medical records review, reviewed the Claimant's medical records. She did not examine the Claimant in person. Dr. Oslovsky disagreed with Dr. Ritzer's' conclusion that the Claimant's a-fib was a result of work activities aggravating or accelerating an underlying problem. She listed risk factors such as age, physical condition, preexisting sleep apnea as factors that could have caused Claimant's a-fib. The ALJ infers and finds that anything is possible, but Dr. Oslovsky's opinion in this regard is speculative and is not proof of the causation of the Claimant's a-fib. She also explained that an episode of a-fib could be triggered by exercise. The ALJ finds Dr. Oslovsky's opinions and testimony insufficient to outweigh the opinion of Dr. Ritzer, supported and augmented by the findings of Dr. Choe, a cardiologist. Dr. Oslovsky's testimony does not convince the ALJ that the Claimant's a-fib was **not** aggravated and accelerated by his at work exercise routine on December 10, 2017. Stated in the affirmative, the ALJ finds that it is more likely than not that the incident of December 10, 2017, aggravated and accelerated the Claimant's underlying cardiac condition and caused the a-fib.

Ultimate Findings

10. The ALJ finds that the Claimant presented in straight-forward and credible manner. He was not impeached in any way. The ALJ finds his testimony convincing, credible and supporting the vigorous exercise as the precipitating cause of the a-fib on December 10, 2017.

11. The a-fib incident of December 10 was not just a temporary symptom-manifestation. It had consequences that necessitated medical treatment and physical restrictions that temporarily would not permit the Claimant to work as a firefighter.

12. The ALJ finds that ATP Ritzer's determination (supported and augmented by Dr. Chloe's opinion concerning the Claimant's medical condition) that the Claimant's a-fib constitutes a work injury is credible, persuasive, and outweighs the opinion of IME Dr. Oslovsky. Further, the ALJ finds that the Claimant's testimony is credible, persuasive and consistent with the fact that the cardiac episode on December 10, 2017 constituted a compensable injury.

13. Despite the fact that Dr. Oslovsky gave articulate and convincing testimony, the ALJ finds that the conclusion of Dr. Oslovsky is less credible than that of Dr. Ritzer. This is mainly due to the fact that Dr. Oslovsky never examined the Claimant in person, whereas Dr. Choe and Dr. Ritzer spent a substantial amount of time with the Claimant. Dr. Olsovsky was also unable to give a satisfactory explanation as to why she

believed that the Claimant's episode of a-fib on December 10 was not caused by exercise and was instead caused by age, physical condition (the Claimant was physically fit prior to the December 10 incident) or sleep apnea. The ALJ further finds the generalized statements concern age, physical condition and sleep apnea as potential causes unpersuasive for the specific circumstances of this case. She made the statement that exercise is often recommended for individuals with cardiac problems. This statement is disassociated from a cause-and-effect analysis. Dr. Oslovsky also failed to convincingly explain why she thought the temporal connection (30-minutes) between exercise and the onset of the a-fib episode was not relevant to her conclusion. Under the circumstances, such an observation would be more convincing if the time gap was one or two weeks. The ALJ finds Dr. Oslovsky's opinions and testimony insufficient to outweigh the opinion of ATP Dr. Ritzer, supplemented with the findings of Dr. Choe and the testimony of the Claimant.Despite the fact that Dr. Oslovsky gave articulate testimony, the ALJ finds that the conclusion of Dr. Oslovsky is less credible than that of Dr. Ritzer as supported by Dr. Chloe's diagnosis. Despite the fact that Dr. Oslovsky gave articulate testimony, the ALJ finds that her conclusion is less credible than that of Dr. Ritzer as supported by the diagnosis of Dr. Chloe. This is mainly due to the fact that Dr. Oslovsky never examined the Claimant in person, whereas Dr. Choe and Dr. Ritzer spent a substantial amount of time with the Claimant.

14. It is not necessary for the Respondent to come up with a credible alternative explanation for the cause of the Claimant's a-fib. The Respondent may merely put the Claimant on his proof. Dr. Oslsovsky was also unable to give a satisfactory explanation as to why she believed that the Claimant's immediate episode of a-fib on December 10 was not caused by exercise and was instead caused by age, physical condition, or sleep apnea. Underlying this alternative explanation is the proposition that the a-fib was an episode on its way to happen—as a result of the Claimant's dormant predisposition. She also failed to persuasively explain why she thought the temporal connection between exercise and the onset of the a-fib episode was relevant to her conclusion. Dr. Oslovsky's opinion may ultimately be summarized as the cause of the a-fib on December 10 was unexplained. The ALJ finds Dr. Oslovsky's opinions and testimony insufficient to outweigh the opinion of Dr. Ritzer, supplemented with the findings of Dr. Choe and the Claimant's lay testimony.

15. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony as a whole, and the supporting opinions of Dr. Ritzer and Dr. Choe, and to reject all opinions and testimony to the contrary.

16. The ALJ finds that the Claimant has proven by a preponderance of the evidence that he sustained a sufficient compensable injury, or aggravation and acceleration of his underlying and incipient cardiac condition that caused the a-fib on December 10, 2017.

17. The parties stipulated that the medical treatment of Dr. Ritzer and Dr. Choe was reasonably necessary and causally related if this claim was determined to be

compensable, which it has been so determined. Therefore, the ALJ finds that the medical care and treatment that Claimant received for his a-fib, was authorized, causally related to the December 10 incident, and reasonably necessary to cure and relieve the effects of that injury.

18. The parties stipulated as follows if the claim was deemed compensable: the average weekly wage (AWW) is $1,646.88, which yields a maximum temporary total disability (TTD) rate of $948.15. Therefore, the ALJ finds that the Claimant's AWW is $1,646.88 and his TTD rate is $948.15.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaner v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony concerning lack of previous a-fib problems was credible and persuasive. Further, the medical opinion of Dr. Choe was credible and was used by Dr.

Ritzer to conclude that there was a causal, work-related relation to the December 10, 2017 incident, which the ALJ also found to be credible and persuasive. Despite the fact that Dr. Oslovsky gave articulate testimony, the ALJ found that the conclusion of Dr. Oslovsky was less credible than that of Dr. Ritzer, as supported by Cardiologist Dr. Chloe's findings. This was due, in significant part, to the fact that Dr. Oslovsky never examined the Claimant in person whereas Dr. Choe and Dr. Ritzer spent a substantial amount of time with the Claimant. Dr. Olsovsky was also unable to give a satisfactory explanation as to why she believed that the Claimant's episode of a-fib on December 10 was not caused by vigorous exercise and was instead caused by age, physical condition, or sleep apnea. She also failed to persuasively explain why she thought the temporal connection between exercise and the onset of the a-fib episode was relevant to her conclusion. The ALJ finds Dr. Oslovsky's opinions and testimony insufficient to outweigh the opinion of Dr. Ritzer, supplemented with the findings of Dr. Choe and the Claimant's credible testimony.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found, although Dr. Ritzer's opinion as supported by Dr. Chloe's assessment was an important factor in the credibility determination, the Claimant's testimony also played a significant role.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony as a whole, the findings of Dr. Choe, the conclusion of Dr. Ritzer, and to reject opinions and testimony to the contrary.

Compensability

d. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, the a-fib incident of December 10 required medical treatment for the Claimant and physical restrictions that would not permit him to work, temporarily, as a firefighter.

e. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. This is the crucial question. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]. As found, the Claimant established an acceleration and aggravation of his underling condition which caused the episode of a-fib on December 10, 2017.

Medical

f. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As stipulated by the parties and found by the ALJ, the Claimant's medical treatment for his a-fib incident of December 10 was the

result of a referral by the Employer and thereafter further treatment remained in the authorized chain of referrals.

g. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment for his a-fib is causally related to the incident of December 10, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was reasonably necessary to cure and relieve the effects of the a-fib.

Average Weekly Wage

h. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As stipulated by the parties, the ALJ finds that the Claimant's AWW is $1,646.88.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to compensability; the authorization for medical treatment of the Claimant's a-fib; and, for all causally related and reasonably necessary medical care and treatment therefore to cure and relieve the effects of the compensable a-fib of December 10, 2017..

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant experienced a compensable episode of a-fib on December 10, 2017.

B. Respondent shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the Claimant's compensable episode of atrial fibrillation on December 10, 2017, including the costs of treatment by Hiep Lelourdes Ritzer, M.D. and William Chloe, M.D., subject to the Division of Workers Compensation Medical Fee Schedule.

C. The Claimant's average weekly wage is hereby established at $1,646.88.

D. Any and all issues not determined herein are reserved for future decision.

DATED this 25th day of March 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

Whether the claimant had demonstrated, by a preponderance of the evidence, that the L5-S1 anterior lumbar interbody fusion surgery, as recommended by Dr. Douglas Orndorff, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted August 17, 2017 work injury.

FINDINGS OF FACT

1. The claimant worked for the employer at a gravel pit. The claimant's job duties included using a front end loader to load gravel into trucks. He would then "weigh out" the customer trucks and repeat the process. The claimant suffered an injury while performing these job duties on August 17, 2017. The claimant testified that the loader he operated on that date had a faulty air seat. The air in the seat would empty, resulting in little to no support in the seat. On August 17, 2017, the air seat was deflated while the claimant was driving over a rut. The claimant testified that this caused the seat to hit metal on metal resulting in immediate pain in his low back and up into his neck.

2. Prior to his 2017 injury, the claimant treated for low back issues in 2012 and 2013. On May 20, 2013, Dr. Douglas Orndorff performed a L4-5 laminectomy with decompression, medial facetectomy, and foraminal decompression. The claimant testified that following that 2013 surgery he fully recovered and was "pain free".

3. Following the August 17, 2017 incident, the claimant first received medical treatment at Lightning Bolt Chiropractic on August 22, 2017. The claimant testified that he sought treatment at Lightning Bolt Chiropractic at the direction of the employer.

4. Thereafter, the claimant was seen on September 6, 2017 by Dr. Larry Welling with Reliance Medical Group. At that time, Dr. Welling ordered an MRI and discussed a possible referral to Dr. Orndorff given the claimant's prior back surgery.

5. On September 19, 2017, a magnetic resonance image (MRI) of the claimant's lumbar spine showed evidence of the prior L4-5 decompression. In addition, there was evidence of mild reduced disc height and disc desiccation at both the L4-5 and L5-S1 levels; mild bulging the L4-5 and L5-S1 levels; and minimal lateral recess narrowing at the L4-5 level. The MRI also showed that the S1 nerve roots were close to contacting the L5-S1 disc bulge.

6. Thereafter, the claimant's authorized treating provider (ATP) became Animas Occupational Medicine. At that practice, the claimant has primarily treated with Robert Hill, PA-C. The claimant's treatment has included physical therapy, chiropractic treatment, massage, use of an inversion table, and a TENS unit.

7. The claimant first treated with Mr. Hall on October 23, 2017. At that time, Mr. Hall diagnosed a thoracic strain with radiculopathy and a lumbar strain with radiculopathy. Mr. Hall assigned work restrictions of no lifting, pushing, or pulling over 10 pounds and no crawling, kneeling, squatting, or climbing. Dr. Hall recommended the claimant undergo physical therapy. In the October 23, 2017 medical record, Mr. Hall noted that the claimant was scheduled to see Dr. Cyril Bohachevsky. Mr. Hall agreed with that consultation and made the referral to Dr. Bohachevsky.

8. On October 26, 2017, the claimant was seen at Spine Colorado by Dr. Bohachevsky. At that time, the claimant reported aching pain in his low back with tingling into his posterior legs and into his feet. He also reported an occasional sharp pain in this left calf muscle. Dr. Bohachevsky opined that although the claimant had undergone prior surgical treatment of his lumbar spine, the claimant's current symptoms were new and directly related to the August 17, 2017 work injury. Dr. Bohachevsky recommended that the claimant continue with physical therapy.

9. Subsequently, on February 23, 2018, Dr. Bohachevsky administered a L5-S1 epidural steroid injection (ESI). The claimant testified that following the injection he had pain relief for 10 to 13 days. However, the pain returned when he bent over and felt a "shock" in his back. The claimant returned to Dr. Bohachevsky on March 12, 2018 and they discussed additional treatment options, including a second ESI. However, that requested ESI was denied by the respondents at that time. Ultimately, Dr. Bohachevsky referred the claimant to Dr. Orndorff for a surgical consultation.

10. The claimant was seen by Dr. Orndorff for this current claim on April 17, 2018. On that date, Dr. Orndorff noted that the claimant had recovered well after his 2013 surgery. Dr. Orndorff opined that the claimant's work injury exacerbated his low back condition. Dr. Orndorff recommended the claimant undergo an L4-5 and L5-S1 anterior lumbar interbody fusion. Dr. Orndorff indicated that the surgery would help restore lumbar lordosis and address the instability at those levels.

11. On May 15, 2018, the claimant attended an independent medical examination (IME) with Dr. Robert Messenbaugh. In connection with the IME, Dr. Messenbaugh reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Messenbaugh opined that the claimant suffered a myofascial strain/sprain of his low back at the time of the August 17, 2017 work injury. Dr. Messenbaugh further opined that the pathology found on the claimant's MRIs predated the work injury. Following the IME report, Dr. Messenbaugh responded to an email from respondents' counsel on June 8, 2018. In his reply, Dr. Messenbaugh clarified that it is his opinion that the need for fusion surgery is not related to the August 17, 2017 work injury. Dr. Messenbaugh further clarified that it is his opinion the fusion surgery is not reasonable and necessary medical treatment for the claimant. Based upon Dr. Messenbaugh's opinions, the respondents denied the recommended L4-5 and L5-S1 anterior lumbar interbody fusion.

12. Thereafter, the respondents authorized a second ESI. On June 19, 2018, Dr. Bohachevsky administered a left S1 transforaminal ESI.

13. On June 27, 2018, Dr. Bohachevsky administered electromyography (EMG) testing of the claimant's bilateral lower extremities. The EMG showed no evidence of active left S1 radiculopathy, and no evidence of sensorimotor peripheral neuropathy or compressive neuropathy.

14. On July 16, 2018, an MRI of the claimant's lumbar spine showed no significant changes from the prior September 18, 2017 MRI. It was noted that the degenerative disc disease appeared stable without central canal stenosis at any level. The MRI also showed diffuse moderate facet arthrosis with areas of mild to moderate foraminal narrowing.

15. The claimant returned to Dr. Orndorff of July 24, 2018 to discuss the results of the EMG testing and the most recent MRI. At that time, Dr. Orndorff opined that the claimant had exhausted all conservative treatment for his symptoms. Dr. Orndorff recommended an L4-5 and L5-S1 discography to confirm that the claimant's issues were arising from the L5-S1 level.

16. On August 21, 2018, Dr. Bohachevsky performed a left sided L4-5 and L5-S1 discography. Dr. Bohachevsky noted "provocation positive" at the L5-S1 level, but not at the L4-L5 level.

17. The claimant was seen by Dr. Orndorff on August 21, 2018. At that time, Dr. Orndorff noted that the discography showed "clear concordant pain at the L5-S1 level". Dr. Orndorff amended his prior surgical recommendation and has now requested authorization for an L5-S1 interbody fusion.

18. On October 3, 2018, the claimant attended an IME with Dr. Brian Reiss. In connection with the IME, Dr. Reiss reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Reiss opined that the claimant's current symptoms and need for treatment are not related to the August 17, 2017 work injury. It is the opinion of Dr. Reiss that the claimant's symptoms are related to his preexisting condition. In support of his opinions Dr. Reiss noted that the claimant reported pain levels of 1 out of 10 following the work injury. Dr. Reiss opined that the claimant reached maximum medical improvement (MMI) in December 2017. With regard to the recommended fusion surgery, Dr. Reiss opined that the surgery would likely not decrease the claimant's pain, nor increase his function. Dr. Reiss's testimony by deposition was consistent with his written report.

19. In his testimony, Dr. Reiss reiterated his opinion that the claimant's current symptoms are not related to the work injury. Dr. Reiss also testified that in his opinion the August 17, 2017 work injury caused a temporary aggravation of the claimant's preexisting condition, but that aggravation resolved when his pain returned to baseline. With regard to the specific surgery recommended, Dr. Reiss testified that the claimant's symptoms would not be resolved by a fusion at the L5-S1 level. Dr. Reiss opined that

the claimant might benefit from a L4-5 decompression, but such a procedure would also be unrelated to the claimant's work injury.

20. Dr. Orndorff testified by deposition in this matter. Dr. Orndorff testified that following the claimant's 2013 L4-5 laminectomy and decompression surgery, the claimant had resolution of both his back pain and his leg pain. Dr. Orndorff also testified that it is his opinion that the claimant's need for surgery is both reasonable and related to the August 17, 2017 work injury. In support of his opinion, Dr. Orndorff noted that the claimant had close to four years without symptoms between recovering from his 2013 surgery and the 2017 work injury. Dr. Orndorff also reiterated his opinion that the claimant has exhausted all conservative treatment.

21. The claimant testified that currently his average pain is 6 out of 10. The claimant also testified that that his current symptoms include low back pain, pain into his left calf muscle, with tingling into his left foot. The claimant testified that he wants to undergo the recommended lumbar surgery so he had return to work.

22. The claimant's spouse also testified at hearing. Specifically, she noted that within two weeks of the claimant's 2013 surgery, the claimant was "up and around" and "better every day". The claimant's spouse also testified that after recovering from the 2013 surgery the claimant had no back issues until the work incident in 2017. Since the claimant's injury, his spouse has observed that he is unable to do various activities he could prior to the injury. These activities include yard work, fixing fences, repairing the roof, hiking, camping, and skiing.

23. The ALJ credits the claimant's testimony, the medical records, and the opinions of Drs. Orndorff and Bohachevsky over the contrary opinion of Dr. Reiss. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that the claimant's August 17, 2017 aggravated and/or accelerated the claimant's preexisting low back condition, resulting in the need for medical treatment.

24. The ALJ further credits the claimant's testimony, the medical records, and the opinions of Dr. Orndorff over the contrary opinion of Dr. Reiss and finds that the claimant has demonstrated that it is more likely than not that the recommended L5-S1 anterior lumbar interbody fusion surgery is reasonable and necessary to cure and relieve the claimant from the effects of the August 17, 2017 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation

case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, the claimant has demonstrated by a preponderance of the evidence that the need for surgical intervention of his low back is related to the August 17, 2017 work injury. Specifically, the claimant's preexisting long back issues were aggravated and/or accelerated by the work injury. As found, the claimant has demonstrated by a preponderance of the evidence that the recommended L5-S1 anterior lumbar interbody fusion surgery is reasonable and necessary to cure and relieve the claimant from the effects of the August 17, 2017 work injury. As found, the claimant's testimony, the medical records, and the opinions of Drs. Orndorff and Bohachevsky are credible and persuasive.

ORDER

It is therefore ordered that the respondents shall pay for the recommended L5-S1 anterior lumbar interbody fusion surgery, pursuant to the Colorado Medical Fee Schedule.

Dated March 27, 2019

Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 222 S. 6th Street, Suite 414, Grand Junction, Colorado 81501	
In the Matter of the Workers' Compensation Claim of: **DEBORAH WIEKER,** Claimant, vs. **GRAND MESA LANDSCAPE MAINTENANCE, L.L.C.,** Employer, and **PINNACOL ASSURANCE,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-040-083-001**

SUMMARY ORDER

Hearing was set before Keith E. Mottram, Administrative Law Judge (ALJ), on February 14, 2109, in Grand Junction, Colorado. Claimant's Exhibits 1-16 were entered into evidence at hearing. Respondents' Exhibits A-H were entered into evidence at hearing.

STATEMENT OF FACTS

1. Claimant sustained a compensable work related injury on January 9, 2017 when she slipped and fell on a handicap ramp while performing ice removal. Claimant is the owner-operator of employer. Respondents admitted liability for the work injury.

2. Claimant initially sought treatment with Dr. Stagg on January 10, 2017. Dr. Stagg noted claimant reported right shoulder pain which radiated into the neck area and had bruising on her right hip. Claimant was diagnosed with a cervical strain, right shoulder strain and contusions to the right hip and elbow.

3. Claimant continued to treat with Dr. Stagg and it was noted on February 14, 2017 that the right hip contusion had resolved. Claimant continued to complain of pain in her right shoulder, right arm and neck in her follow up visits. Claimant complained of increased pain in her right trapezius on March 28, 2017 after performing some raking. Dr. Stagg provided claimant with a prescription and continued her work restrictions. Claimant's initial treatment focused on her shoulder and neck complaints.

4. Following her work injury, claimant was referred to Body Therapeutics for massage therapy beginning on June 20, 2017. Claimant reported to the massage therapist pain in the right sacroiliac ("SI") joint and glut. Claimant testified that when getting off the massage table on her first treatment, her low back went into spasm. This testimony is corroborated by the massage therapy records. Claimant continued to complain of pain in her hip and SI region through July, August, September, and October of 2017.

5. Claimant was referred to Dr. Clifford for evaluation on July 12, 2017. Dr. Clifford noted claimant's primary complaint involved the neck and right sided shoulder pain. Dr. Clifford focused his initial treatment in this area.

6. Claimant was released to return to work full duty on November 3, 2017 by Dr. Stagg. Claimant testified that following her release to return to work full duty, she was doing more physical work including leaf removal and fall clean up.

7. Claimant returned to the massage therapist on December 16, 2017 and reported that she was raking leaves the past week and overdid it. Claimant reported she had been sore in her low back and shoulder ever since and wants to get an MRI done on her sacral region.

8. Claimant returned to Dr. Clifford on January 17, 2018 and was evaluated by his physicians' assistant, Mr. Ousley. Mr. Ousley noted that claimant had complained of pain in the right side of her low back radiating into the right thigh. Claimant reported that the pain is located near the lumbosacral junction on the right and will occasionally go into the posterior lateral thigh.

9. Mr. Ousley noted that claimant had undergone an MRI of the lumbar spine that demonstrated moderate degenerative changes in the facet joints of the K4-L5 and L5-S1 levels. Mild edema was present on the Left L5 pedicle.

10. Claimant underwent a right SI joint injection on March 5, 2018 with Dr. Clifford. Claimant testified at hearing that her first injection was very helpful. According the medical records, the injection provided claimant with 100% relief of her right sided low back and right posterior thigh pain for about three weeks.

11. Claimant underwent a repeat SI joint injection on May 14, 2018 with Dr. Clifford. According to the medical records, post injection, claimant's leg pain was improved. Claimant testified at hearing that the relief of symptoms with the 2nd injection was not as good as the first injection.

12. Claimant returned to Dr. Clifford on July 2, 2018. Dr. Clifford noted that claimant reported 80% relief for 2 days following the 2nd injection. Dr. Clifford diagnosed claimant with sacroiliitis and recommended claimant undergo a right SI joint fusion.

13. Respondents referred claimant to Dr. Lesnak for an independent medical evaluation ("IME"). Dr. Lesnak reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Lesnak noted that claimant reported only 3 days of relief following her second injection prior to symptom recurrence. Dr. Lesnak noted in his report that claimant frequently "self limited" the evaluation because of her complaints of pain or fear of pain.

14. Dr. Lesnak opined in his report that claimant's recommended SI joint fusion was not recommended per the Colorado Medical Treatment Guidelines. Dr. Lesnak further noted that claimant's repeat right SI joint injection on May 14, 2017 ws non diagnostic and non-therapeutic. Dr. Lesnak opined that there was no medical

evidence to suggest that claimant sustained any type of injury whatsoever to her right SI joint as a result of the occupational incident of January 9, 2017. Dr. Lesnak further opined that claimant was at MMI for her work injury.

15. Dr. Clifford testified by deposition in this matter. Dr. Clifford testified that it was his opinion that the recommended surgery was reasonable based on his experience performing the surgery and that the surgery was related to the injury. Dr. Clifford testified it was his opinion that claimant had a sacroiliitis that was related to the fall and that an SI fusion was reasonable treatment. Dr. Clifford testified he disagreed with Dr. Lesnak's opinion that claimant did not injure her SI joint in the fall based on claimant's reports of pain following the injury. Dr. Clifford further opined that based on his experience, claimant's report of 2 days of pain relief following the second SI joint injection was sufficient for his belief that the recommended SI fusion would provide claimant with relief from the sacroiliitis.

16. Dr. Lesnak testified at hearing in this matter. Dr. Lesnak testified consistent with his IME report. Dr. Lesnak testified that during his examination, he did not see any findings consistent with SI joint dysfunction. Dr. Lesnak testified that the Colorado Medical Treatment Guidelines advise that SI joint fusion is only recommended for fractures of joints, not for minor trauma. Dr. Lesnak testified that following the second SI joint injection, Dr. Clifford did not get documentation of claimant's pain response and the lack of pain relief reported by claimant shows that the pain was not coming from the SI joint.

17. Dr. Lesnak testified that it was his opinion that the surgery recommended by Dr. Clifford involving an SI joint fusion was not reasonable or necessary and was not related to claimant's January 9, 2017 work injury.

18. The ALJ credits claimant's testimony at hearing along with the opinions expressed by Dr. Clifford in his deposition and finds that claimant has established that it is more likely true than not that the SI joint fusion surgery recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

19. The ALJ notes that claimant's testimony at hearing regarding her symptoms following the injury were consistent with the medical records, including the massage therapy records and finds claimant's testimony to be credible.

20. The ALJ acknowledges that contrary opinions expressed by Dr. Lesnak in his report and testimony, but finds that opinions expressed by Dr. Clifford to be more credible and persuasive with regard to the issue before the court.

21. The ALJ therefore Orders respondents to pay for the SI joint fusion surgery recommended by Dr. Clifford pursuant to Colorado Medical Fee Schedule.

DATED: March 27, 2019

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

This decision is final and not subject to appeal unless a Request for Specific Findings of Fact and Conclusions of Law is filed at the Office of Administrative Courts, 222 S. 6th Street, Suite 414, Grand Junction, Colorado 81501 within ten working days of the date of service of this Summary Order. Section 8-43-215 (1), C.R.S. (as amended, SB07-258). Such a Request is a prerequisite to review under Section 8-43-301, C.R.S.

If a Request for Specific Findings of Fact and Conclusions of Law is filed, both parties shall submit proposed Specific Findings of Fact, Conclusions of Law, and Order within five working days from the date of the Request. The proposed order must be submitted by e-mail in Word or Rich Text format to oac-gjt@state.co.us. The proposed order shall also be submitted to opposing counsel and unrepresented parties by e-mail, facsimile, or same day or next day delivery.

STIPULATION

At the outset of the hearing, the parties stipulated that Respondent is presently liable for maintenance medical treatment benefits in the claims which are the subject of this hearing.

ISSUES

The issue raised at hearing involves Claimant's entitlement to additional medical benefits. The questions answered by this decision are:

I. Whether Claimant established, by a preponderance of the evidence, that her need for continued maintenance medical care, including bilateral SI joint injections, chiropractic treatment, and massage therapy is reasonable, necessary and related to any of the above numbered claims.

II. Whether Respondent is estopped from challenging the reasonableness, necessity or relatedness of additional epidural steroid injections (ESIs) based a 2015 order, finding that Claimant had proven entitlement to maintenance ESIs at that time.

III. Whether Respondent established by a preponderance of the evidence that they are entitled to withdraw either their December 2, 2011 and/or September 18, 2013 final admissions for maintenance medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Background

1. The record evidence in this matter is voluminous involving multiple work-related accidents wherein Claimant suffered injuries while working as a State Trooper for Respondent-Employer. Treatment for claimant's industrial injuries has spanned years and has been complicated by the occurrence of several non-industrial accidents. Moreover, these claims have been the subject of a prior hearing held February 11, 2015 on the issue of Claimant's entitlement maintenance medical benefits, specifically whether additional lumbar epidural steroid injections were reasonable, necessary, and related to her 2000 and 2001 work injuries. After a full evidentiary hearing which included testimony from Claimant, Claimant's treating physician, Dr. Jenks, and Dr. Albert Hattem, the undersigned ALJ ordered Respondents to pay for all reasonably, necessary, and related maintenance treatment, including but not limited to the additional injection therapy requested by Dr. Jenks.

2. Claimant's first work-related injury, a slip and fall, occurred on November 14, 2000. Claimant injured her low back in this incident and was treated with physical therapy and medication.

3. A second industrial accident occurring January 4, 2001, caused additional injuries to her back, neck, ribs and head (concussion). On this date, Claimant was involved in a motor vehicle accident (MVA), wherein she was broadsided by a pickup truck traveling 35-40 miles per hour. Chiropractic care and injection therapy were added to Claimant's treatment regimen following this accident. According to Claimant, injections administered into the neck and low back reduced her pain and improved her function sufficiently to allow her to return to full duty work for Respondent-Employer.

4. On September 8, 2001, Claimant aggravated the above referenced injuries to her low back/neck after her patrol car was rear-ended by a drunk driver traveling 35-40 miles per hour. Claimant testified that she was still treating for the injuries sustained in the previous incidents when this accident occurred. According to Claimant, the treatment directed to the injuries caused by the aforementioned accidents had resulted in approximately 70 percent improvement in her symptoms before the September 8, 2001 incident occurred.

5. Claimant was involved in yet another work-related accident on December 22, 2001, when she slipped and fell on ice landing on her elbow. Claimant testified she jammed her shoulder. She also reported an increase in the number of migraine headaches she was experiencing in addition to worsening low back and neck symptoms. Nonetheless, with treatment Claimant testified that she was able to return to her regular duties as a State Trooper.

6. Claimant was placed at maximum medical improvement (MMI) for all injuries arising from these accidents on February 22, 2002. Although she was placed at MMI, Claimant testified that her back and neck remained symptomatic and she was experiencing almost daily migraine headaches, which she reported caused visual disturbances and nausea.

7. Claimant was examined by Division Independent Medical Examiner (DIME) physician Dr. Kenneth Finn on October 9, 2002. During this appointment, she reported left greater than right sided neck pain, ongoing headaches which had decreased since trigger point injections and which were alleviated with Maxalt and Imitrex, central to slightly left-sided low back pain without radiation, bilateral wrist pain, and right rib/chest pain. Claimant's diagnoses included "questionable underlying SI joint dysfunction"; however, Dr. Finn made no recommendation for SI joint treatment and/or injections. Dr. Finn found Claimant to be at MMI as of December 21, 2001 for all her work injuries.

8. Claimant has continued to receive treatment in the form of medications, chiropractic care and injection therapy since being placed at MMI on February 22, 2002. Over the years, maintenance care has been provided by Drs. Morgan, Roberts, Schwender and Jenks. More recently, Claimant's maintenance medical treatment has been managed by Dr. Miguel Castrejon.

Post MMI Events and Medical Treatment

9. In a letter dated October 1, 2003, Dr. Morgan opined that Claimant had post traumatic headaches as a result of her January 4, 2001 work related MVA.

10. On October 11, 2003, Claimant was involved in another on-the-job MVA when her police cruiser was again rear-ended. Claimant experienced a temporary aggravation of her low back and neck symptoms; however, returned to her usual baseline condition soon thereafter. She did not see Dr. Morgan again for her low back until June 10, 2004. On this date, Dr. Morgan noted that Claimant had fallen over her right foot on a couple of occasions in the weeks preceding her June 10, 2004 appointment. Dr. Morgan expressed concern that Claimant's pre-existing disc herniation had increased in size and may be affecting her right L5 nerve root. An EMG completed by Dr. Morgan on June 24, 2004 revealed an active, acute, mild L5 right sided radiculopathy. Dr. Morgan recommended a repeat MRI.

11. A letter authored by Dr. Morgan on December 10, 2003, reflected that Claimant was improving but was still having pain in her low back which seems to be isolated in the SI joint region.

12. On February 25, 2004, Dr. Schwender placed Claimant at MMI without restrictions. Claimant was released to regular duty and advised her to continue her Percocet, Ultram, Zantac, Topomax, Keppra, Phenergan**,** Metoclopramide, Effexor, and Wellbutrin.

13. On August 5, 2004, a repeat MRI was done which, when compared to the May 8, 2003 MRI, revealed a "stable, small right paracentral disc herniation L4-5 and left paracentral disc herniation L5-S1 with associated disc degeneration and dehydration." The interpreting radiologist specifically noted that no new disc herniation or protrusion had developed.

14. On October 28, 2004, Claimant was seen by Dr. Morgan for "intense headaches" along with recurrence of her low back pain radiating down her right leg in the L5 distribution.

15. The medical records support a finding that between December 10, 2003 and November 1, 2004, Claimant received care from Dr. Morgan consisting of the facet injections which provided Claimant some relief.

16. On November 1, 2004, Claimant was involved in another work-related MVA when her car slid on ice and hit a curb. While she was waiting for a tow truck her vehicle was hit on the side by another driver. Claimant experienced low back pain in the area of the left SI joint along with left shoulder pain. There was no "additional" discomfort in Claimant's neck and upper back. Dr. Peterson's physician assistant, Al Schultz, diagnosed Claimant with, among other things, a right shoulder strain and left SI joint strain.

17. On December 9, 2004, Claimant was evaluated by Robert Kiernan, MD, who noted that Claimant continued to have aching about the right side of the neck, the low back, and the midback from the region of the scapula on the right. Dr. Kiernan noted that Claimant had prior accidents and opined that Claimant's ongoing problems are a combination of this accident and "difficulty from before." Dr. Kiernan diagnoses were acute sprain of the sternocleidomastoid and scalene on the right, "old sacroiliac joint sprain", and prior AC joint or shoulder sprain.

18. On January 7, 2005 and February 4, 2005, Claimant saw Dr. Schwender for recheck of her cervical strain, right SI joint dysfunction, and left AC joint strain. Physical examination revealed good cervical range of motion with some limitation. Examination of the back revealed full flexion, extension of 5 degrees, and tenderness bilaterally over the right SI joint. Dr. Schwender diagnosed cervical strain, bilateral SI joint dysfunction, and left AC joint strain.

19. Claimant received care from Dr. Morgan from February 3, 2005 through September 16, 2005. During this timeframe, Claimant's condition continued to improve to about 80%, yet she continued to experience occasional headaches. Most of the care between these dates consisted of facet injections, occipital nerve blocks, and a rhizotomy.

20. On October 26, 2005, Dr. Schwender placed Claimant at MMI for the November 1, 2004 work injury without impairment, restrictions or need for future care. Dr. Schwender found Claimant's cervical strain, SI joint dysfunction, and left AC joint all stable at that time.

21. On July 13, 2006, Claimant was involved in a non-work related car accident in which another car backing out from a driveway hit her vehicle on the passenger side door causing injury to her upper back and further, aggravating her pre-existing right-side low back and SI joint conditions and what she would later report to Dr. Ridings was an injury to her left SI joint causing pain and dysfunction.

22. On July 21, 2006, Claimant presented herself to Dr. Schwender at which time she informed him that she had been in another accident on July 13, 2006. Dr. Schwender indicated that this event "increased Claimant's low back pain (which she has chronically from multiple work-related motor vehicle accidents)." Dr. Schwender diagnosed right sacroiliitis and sacrococcygeal joint strain secondary to a non-work-related accident. Dr. Schwender opined that Claimant had experienced an exacerbation

and flare up of her preexisting sacroiliitis and sacrococcygeal joint strain. Dr. Schwender referred Claimant to Dr. Morgan for treatment.

23. On January 31, 2007, Claimant presented herself to Dr. Eric Ridings with complaints of low back pain. Claimant told Dr. Ridings she had been involved in a MVA on July 13, 2006 and that since that time she had noticed increased low back and mid thoracic spine pain. Claimant told Dr. Ridings about her prior work-related injuries and that she had not had any active treatment for her prior injuries since 2004 other than continuing to take a "significant" number of medications for maintenance care. Additionally, Claimant reported new left SI issues. Dr. Ridings diagnosed Claimant with thoracic and lumbar strain with possible "mild" left SI joint dysfunction. Dr. Ridings wrote in his January 11, 2007 record that Claimant had a significant history of low back pain but based upon the history given during this appointment, the character of the discomfort is "somewhat different" than what she had previously experienced. Claimant told Dr. Ridings that her low back pain prior to July 13, 2006 accident was right sided and as of her January 31, 2017 appointment it was left sided. Dr. Ridings treated Claimant for the July 13, 2006 non-work related MVA through December 11, 2007. At the time Dr. Ridings released Claimant from care on December 11, 2007, she continued to have discomfort with palpation over the left SI joint and slightly along the gluteal musculature.

24. Claimant sustained a work-related injury to her right ankle while engaged in a training exercise and later while chasing suspects on February 28, 2007. Claimant treated with Dr. George Schwender for this injury. After instruction in a home exercise program and being provided with a support brace, Dr. Schwender released Claimant to unrestricted duty without impairment on March 1, 2007.

25. On March 11, 2007 Claimant sustained an eversion injury to her left ankle when she stepped off a curb while walking to her patrol car. Claimant received substantial treatment for this injury under the direction of Dr. Schwender while receiving concurrent treatment with Dr. Ridings for the injuries/aggravation of symptoms to her low back and SI joints caused by her July 13, 2006 non-work related MVA.

26. Dr. Ridings placed Claimant at MMI for the effects of her July 13, 2006 non-work related MVA on October 12, 2007. He recommended maintenance medical care in the form of left trochanteric bursa/lateral piriformis injections and/or left iliotibial band trigger point injections if Claimant's pain flared. He determined that Claimant required no work restrictions and sustained no impairment. Claimant testified that after completing her care with Dr. Ridings she was back to her baseline status of where she was prior to the July 13, 2006 accident.

27. Claimant underwent surgery for her March 11, 2007 left ankle injury on November 2, 2007 with Dr. Shaw. Thereafter, Claimant was referred for post-surgical rehabilitation which exacerbated her mid back condition as well as her chronic work-related low back and SI joint symptoms. Consequently, on November 27, 2007, Claimant retuned to Dr. Ridings for additional treatment. Claimant was provided

additional trigger point injections at T8-T9 as well as an additional physical therapy focusing on her mid back and SI joint region. By December 11, 2007, Claimant's thoracic, lumbar and left SI joint symptoms had resolved. Accordingly, Dr. Ridings placed Claimant at MMI again and released her from his care.

28. On June 24, 2008, Claimant presented herself to Memorial Urgent Care complaining of low back pain and neck pain. The record reflects that Claimant was involved in an automobile accident on June 16, 2008. The intake form from this date of visit indicates that Claimant was the restrained driver of a car hit from behind while moving from a stop. Her airbags did not deploy and she had no loss of consciousness. Claimant testified that she does recall being in this MVA in June 2008, and if she was, she reported any injuries were minor. No medical records were submitted to substantiate that Claimant sought further treatment related to a June 16, 2008 automobile accident.

29. Claimant was seen by Dr. Roberts for ongoing headaches on October 15, 2007, June 25, 2008, November 4, 2008, March 10, 2010, and September 15, 2010. In an office note dated November 4, 2008, Dr. Roberts wrote that Claimant "had been having a number of migraines lately, and these constitute recurrence of her post traumatic migraines which was first caused and originated in a MVA while she was on duty for the highway patrol. Dr. Roberts further noted that Claimant had consistently had a diagnosis of post traumatic migraine. Dr. Roberts administered bilateral occipital nerve blocks.

30. On March 10, 2010, Claimant returned to Dr. Schwender with complaints of severe right sided low back pain. Dr. Schwender referred Claimant to Dr. Jenks to take over chronic pain management and to perform further injections as needed.

31. As part of a prior hearing which commenced February 11, 2015, Dr. Jenks testified via deposition taken January 28, 2014. Dr. Jenks noted that he first evaluated Claimant on April 22, 2010 at which time Claimant gave a history of having been involved in a number of work-related accidents resulting in chronic neck and low back pain. Dr. Jenks performed a physical examination and diagnosed Claimant as having chronic lumbar discogenic pain with possible facet and SI joint involvement. Dr. Jenks based his diagnoses, in part, on the fact that Claimant had epidural injections at L5 which helped in the past in addition to having tenderness over the facet and SI joints. On May 24, 2010, Dr. Jenks administered a right L4-5 epidural steroid injection.

32. Claimant has not worked for Respondent-Employer since 2008. She began a new job with the El Paso County Department of Motor Vehicles in 2010 and has worked exclusively for them since.

33. Claimant returned to Dr. Jenks on February 24, 2011 with complaints of increasing right low back pain sometimes involving the buttocks. Claimant told Dr. Jenks she would like to have another lumbar epidural injection since the one done in May

2010 was very helpful. Dr. Jenks diagnosed discogenic pain and recommended a right L4-5 epidural injection which was done March 18, 2011.

34. Approximately one year later on March 22, 2012, Claimant returned to Dr. Jenks' office stating that she was once again having low back pain involving the entire lumbar area radiating to the left posterior and lateral thigh. Upon physical examination, Claimant reported discomfort to palpation in both sacroiliac areas and near both ischial tuberosities. SI provocation testing was positive bilaterally. Mr. Hacker's impressions were lumbar discogenic pain, history of cervical discogenic pain, likely ischial bursitis, and bilateral sacroiliitis.

35. On April 11, 2012, Claimant underwent a right L4-5 epidural injection. In a note from Dr. Jenks dated April 24, 2012, he documented that Claimant reported 50-60% improvement from the injection but was still having some low back symptoms, Dr. Jenks recommended an additional epidural injection which was done on May 23, 2012.

36. Claimant retuned to Dr. Jenks on June 6, 2012. She advised Dr. Jenks that her low back pain and leg pain had significantly improved following the injection. Dr. Jenks refilled Claimant's Percocet and told her to call in the future if she wished to repeat the injection. Six months later, Claimant returned back to Dr. Jenks at which time, he noted that Claimant's low back pain was well controlled with medication.

37. On May 9, 2013, Claimant underwent an Independent Medical Examination (IME) at Respondents' request with Dr. Albert Hattem. The purpose of the IME was to determine whether Claimant's ongoing maintenance medical care, including additional injection therapy for her lumbar spine remained reasonable, necessary and related to her numerous work injuries. Dr. Hattem reviewed Claimant's medical treatment records ranging in date from 2001 through April 2012. He also completed a physical examination, which he concluded was normal. During this IME, Claimant reported having fluctuating low back and bilateral leg pain, which was similar to that Claimant depicted on her December 13, 2007 pain diagram. Claimant also told Dr. Hattem that the injections administered previously provided temporary relief. Dr. Hattem noted since Claimant's work injuries, she continued working without restriction and that she had remained exceptionally functional, even during those times when she had not received any epidural steroid injections. Based upon his review of Claimant's medical records, the history provided by Claimant and his physical examination, Dr. Hattem concluded that Claimant's ongoing maintenance care for her lumbar spine was no longer reasonable, necessary or related to her prior work injuries. He questioned why such prolonged treatment had been provided. He also opined that Claimant's migraine headaches were not related to her work injuries occurring almost 14 years previously, noting further that she likely would have had ongoing headaches in the absence of her work-related injuries in light of her pre-existing history of migraines.

38. On August 20, 2013, Claimant was seen in follow up with Dr. Jenks. On this date, Claimant told Dr. Jenks that her back pain was staring to return. Dr. Jenks recommended that Claimant have a repeat L4-5 epidural steroid injection.

39. Claimant saw Dr. Jenks' physician assistant on February 25, 2014 with complaints of increased low back pain. Again, it was recommended she have an L4-5 epidural steroid injection.

40. Claimant was seen in follow up by Dr. Sandell on April 2, 2014 for low back pain that was progressively worsening. In his note from this date of visit, Dr. Sandell indicated that he was asked by Respondents' counsel to review Dr. Hattem's reports, evaluate Claimant, and render an opinion regarding Claimant's care. Dr. Sandell noted that upon physical examination, Claimant had sciatic notch tenderness on the left and right along with tenderness in the bilateral paraspinal muscles, as well as over the SI joints. Dr. Sandell opined that Claimant had received relief from past epidural injections and that she is a good candidate for epidural injections and possibly SI joint injections. Consequently, Dr. Sandell requested authorization for a repeat epidural steroid injection.

41. Claimant was seen by Dr. Jenks on August 21, 2014 and January 15, 2015. On both of these dates, Claimant reported ongoing left low back and left leg pain. Dr. Jenks noted that Claimant reported to him that she realized the extent of the benefit she experienced from the previous epidurals as she was now having significant pain which was "much worse" than it was when she was receiving periodic injections. Physical examination revealed tenderness over the left sacroiliac joint and a positive straight leg raise test bilaterally. Dr. Jenks' impression was ongoing lumbar discogenic pain with probable additional left sacroiliitis. Dr. Jenks recommended an MRI and depending on the results raised consideration of proceeding with both an epidural injection and a left sacroiliac joint injection.

42. On February 3, 2011, Claimant was seen by Dr. Scott Ross for ongoing management of her headaches. Claimant told Dr. Ross that her neck pain was variable and her headaches were periodic. Claimant described her headaches as right-sided and occipitally based with some aura and nausea prior to onset. Dr. Ross felt the medication regimen that Dr. Roberts had been providing should not be changed.

43. According to the medical records Claimant was seen by Dr. Ross on multiple occasions between February 3, 2011 through April 21, 2016 for her headaches. Dr. Ross provided Claimant with Imitrex, Zomig and prophylactically, Timolol, and Topomax. At the time Dr. Ross was treating Claimant, she was experiencing headaches anywhere from five to six times per month and upwards to two to three per week. In a letter to Russell Hendrix, a claims adjuster at Broadspire, dated March 1, 2012, Dr. Ross wrote that regardless of whether the migraines were pre-existing, the muscle spasm and post concussive syndrome related to the September 10, 2001 work related accident would likely exacerbate the frequency of her migraines. Dr. Ross's records reveal the medication he was providing Claimant helped control her headaches.

44. On February 12, 2015 and April 14, 2016, Claimant was seen by Dr. Jenks for low back pain with radiation into her buttocks and occasionally into her left leg.

On both visits, Dr. Jenks' impression was persistent lumbar discogenic pain and left sacroiliitis.

45. Claimant was evaluated by neurologist Dr. Alexander Zimmer on June 11, 2015. Dr. Zimmer reviewed medical records predating Claimant's 2000 and 2001 work accidents, noting that Claimant had a pre-existing history of migraine headaches. Following his medical records review and after obtaining a history from Claimant, Dr. Zimmer opined that she had a history of occasional migraine headaches beginning in her teens or early twenties which became more frequent after the accident. Dr. Zimmer further opined that it is probable that Claimant's pre-existing migraines were playing a part in the vascular component of her headaches but the majority of her current headache problem would be best classified as a multifactorial posttraumatic headache.

46. On July 2, 2015 Claimant underwent a left L4-5 ESI. In follow up on July 22, 2015, Dr. Jenks noted that Claimant's symptoms had improved by about 75% following the July 2, 2015 injection. Physical examination revealed minimal tenderness to palpation of the left paraspinal area at about the L5 level and there was SI tenderness on the left, none on the right, SI provocation test is positive on the left and negative on the right. Dr. Jenks impression was lumbar discogenic pain and left sacroiliitis.

47. Dr. Jenks' office note of September 10, 2015 reveals that Claimant was experiencing increasing pain over her left SI joint. Claimant requested an SI joint injection which was subsequently administered in the office during her visit. A follow up visit on November 10, 2015 reflects that Claimant's left SI joint pain was moderately improved following the SI joint injection. A repeat injection was performed on this date.

48. On April 14, 2016, Claimant was seen by Dr. Jenks for persistent SI joint pain. Physical examination revealed tenderness over the left sacroiliac joints. Dr. Jenks administered a repeat SI joint injection. In follow up with Dr. Jenks on July 12, 2016, Claimant was complaining of low back pain. Dr. Jenks found little or no SI joint tenderness upon examination. Dr. Jenks' impression was lumbar discogenic pain and history of sacroiliitis. Dr. Jenks proposed repeating the lumbar epidural lumbar injection at the L2-3 level.

49. Claimant's ongoing chronic pain management was transferred to Dr. Miguel Castrejon. Dr. Castrejon evaluated Claimant on April 25, 2017. As part of his evaluation, Dr. Castrejon reviewed medical records dating back to April 16, 2003. Dr. Castrejon's physical examination revealed decreased range of motion in the cervical and lumbar spine. There was noted tenderness in the musculature of the cervical spine. Examination of the lumbar spine revealed midline tenderness at L4-S1 involving the paraspinals, as well as left greater than right sacroiliac joints with evidence of pelvic obliquity. SI joint stressing was more positive on the left than on the right. Dr. Castrejon's diagnoses were chronic neck and low back pain with elements of myofascial pain syndrome, cervicogenic headaches, chronic left sacroiliitis, and left lower limb radiculitis previously responsive to spinal injection. Dr. Castrejon felt that Claimant's

condition was stable and recommended continued medication management to include Neurontin, Nortriptyline, and Tramadol.

50. Claimant has been treating with Dr. Castrejon on a regular basis since her April 25, 2017 evaluation. Care has included massage therapy, chiropractic care, SI joint injections, and the provision of prescription medication, including Nortriptyline, Tramadol, and Percocet.

51. On August 21, 2017, Claimant underwent bilateral SI joint injections followed by a series of chiropractic treatments. According to an office note dated September 13, 2017, this treatment provided 65-70% relief of Claimant's persistent low back/SI joint symptoms.

52. On March 7, 2018, Claimant returned to Dr. Castrejon with worsening low back pain. Dr. Castrejon opined that Claimant's physical examination was consistent with bilateral SI joint mediated pain. He recommended bilateral SI joint injections. Dr. Castrejon also dispensed Tramadol, Nortriptyline and refilled Claimant's Metoclopramide and Percocet. On April 9, 2018, Claimant followed up with Dr. Castrejon who noted that Claimant has improved and is stable following her repeat SI joint injections in combination with chiropractic. It was also noted that the medication allowed Claimant to continue to work and participate in her daily home program.

53. On June 23, 2018, Claimant was seen by Dr. Castrejon with a flare up of low back symptoms. Physical examination revealed moderate tenderness of the lumbar paraspinals and both SI joints. In addition, there was tenderness and trigger points scattered throughout the cervical musculature. Dr. Castrejon recommended repeat SI joint injections in combination with chiropractic treatment.

54. On August 27, 2018, Claimant was evaluated by Dr. Tashof Bernton. Similar to other evaluators, Dr. Bernton reviewed Claimant's medical records. His review included records dating back to December 22, 2001. Dr. Bernton also obtained a history from Claimant, noting that she had sustained occupational injuries as a consequence of being involved in several incidents beginning with the accident in November 2000. Dr. Bernton's report indicates that on the date of his evaluation Claimant was having pain in the trapezius bilaterally, in the cervical spine, in the lumbar spine, and in the gluteal area predominately on the left. Physical examination revealed reported tenderness over occipital nerves and diffuse tenderness in the cervical region. It was noted that Claimant had asymmetry of SI motion with forward bending with tenderness over the SI joint. Dr. Bernton opined that Claimant's headaches and low back issues, specifically her SI joint complaints, are unrelated to any of her work injuries which occurred in 2000 and 2001. Regarding the headaches, Dr. Bernton felt that Claimant's migraines pre-existed her occupational injuries. He concluded that Claimant's migraines and her need for headache treatment were unrelated to the work-related accidents occurring in 2000 and 2001.

Dr. Castrejon's Deposition Testimony

55. Dr. Castrejon testified by deposition taken November 28, 2018. He testified as an expert in physical medicine and rehabilitation (PM&R). Dr. Castrejon opined that Claimant's present SI joint problems and treatment are related to the 2000 and 2001 work injuries. Dr. Castrejon's reasons were that dating back to September 8, 2001, Claimant has been experiencing pain in her SI joint. Dr. Castrejon went on to testify that Claimant's low back pain is probably multifactorial when one considers that the total benefit from ESI injections was only in the 65-70% range, meaning something else, i.e. SI joint dysfunction was likely contributing to her pain complex. Because SI joint issues can mimic pain in an L5 pain distribution or an SI distribution, Dr. Castrejon opined that Claimant's SI joint has probably been a pain generator dating back to the 2001 work injury. Furthermore, Dr. Castrejon testified that Claimant had no back pain prior to the 2000 and 2001 work injuries and that she had multiple work-related incidents within a short period of time such that she was never fully recovered from each incident, which ultimately created a chronic low back and SI joint condition. Nonetheless, during cross examination, Dr. Castrejon admitted that as of June 28, 2018, Claimant was reporting increased low back pain that was affecting her work and non-work activities which he recognized was caused by long training sessions and prolonged sitting as part of Claimant's current employment. In his June 28, 2018 report, Dr. Castrejon opined that Claimant had been fairly stable but was now reporting a "flare-up of similar symptoms affecting her daily activities" which Claimant attributed to three days of training involving prolonged sitting at a computer desk on wooden chairs causing an increase in her low back pain.

56. During his deposition, Dr. Castrejon opined the prolonged sitting in the training sessions was an exacerbating activity from which Claimant was unable to return to baseline. Dr. Castrejon testified that this exacerbating activity formed the basis for his recommendation to proceed with bilateral SI joint injections followed by chiropractic and massage therapy to augment the effects of the injection. According to Dr. Castrejon, this treatment was reasonable and necessary to treat Claimant's persistent SI joint problems. Dr. Castrejon reasoned the SI joint injections given under his and Dr. Jenks' direction provided 65% pain relief and, even more importantly, allowed Claimant to function better and reduce the use of medication. Claimant disputed that the recent SI injections provided 65% improvement in her symptoms, testifying that they decrease her pain by 50%.

57. Dr. Castrejon testified that Claimant's ongoing headaches are related to the 2000 and 2001 work injuries and similar to Dr. Zimmer's conclusion, are multifactorial in origin. He felt that the rear end motor vehicle accident and the broadside collision resulting in whiplash and side to side movement likely impacted the occipital nerves leading to cervicogenic headaches. Dr. Castrejon went on to state that the reason Claimant's headaches have persisted so long is that she developed a chronic muscle tension and spasms which cause stress and tension on the occipital nerves which in turn cause headaches. Dr. Castrejon also felt that Claimant's facet joint pain contributed to her headaches. He testified that Claimant's headaches are not true migraines like she suffered from prior to the 2000 and 2001 work injuries because there

is a musculoskeletal component to them. Dr. Castrejon testified that cervical muscle tightness and spasticity along with occipital nerve involvement are consistent with causing muscle tension headaches which usually end up with some sort of vascular contraction leading to a headache which is different from a classical migraine headache with auras, photophobia**,** and nausea. The ALJ infers from Dr. Castrejon's testimony that he does not believe Claimant suffers from true migraine headaches but rather from cervicogenic headaches caused by persistent muscle tension and spasticity in the neck.

58. Regarding care for her headaches, Dr. Castrejon opined that her present medication regimen is reasonable and necessary based on the fact that her headaches are under control and she has not required any injection therapy, including occipital injections to ameliorate the effects of her headaches while under his care. At the time of his deposition, he stated he last prescribed Topamax for her headaches in early 2018, last refilled Imitrex on June 27, 2018, and that Claimant only used these medications as needed.

59. Claimant admitted during her testimony that she had a history of migraine headaches for which she was taking medication at the time of her first work injury in November 2000. She testified that prior to her first work accident she had migraine headaches "three times a year at the most". Claimant testified she took Imitrex for her headaches prior to November 14, 2000, but stated she did not take it very often, only as needed, and at one point had a Demerol shot. She denied taking any other medication, including Maxalt or Amerge for migraines prior to her work injuries. She also testified that these medications were only prescribed by Dr. Roberts, for headaches following her work-related accidents.

60. The medical records submitted into evidence contradict Claimant's representation of her prior migraine history and treatment as follows:

- Medical records from Claimant's primary care provider, Center Pointe Family Medicine, indicate Claimant has been prescribed Imitrex for migraines since 1997;
- On December 17, 1997, Claimant requested a refill of Imitrex;
- On May 30, 1998, Claimant was provided an 18 tablet refill of 50 mg Imitrex;
- On July 20, 1998, less than two months later, Claimant received another 18 tablet refill of 50 mg Imitrex;
- On November 20, 1998, Claimant requested another Imitrex refill;
- A medical note from December 22, 1998 shows Claimant's migraine medication to be both Imitrex and Amerge, and a diagnosis of migraine headaches;

- In what appears to be January 1, 1999, Claimant called in reporting a migraine occurring all day. A prescription was called in for her for Imitrex, both tabs and nasal spray, Maxalt 10 mg and Vicodin;

- In October 1999, her medication was noted to include "Imitrex, Maxalt, Amerge sometimes";

- Claimant requested a refill of Imitrex on October 29, 1999 for a box of 6 pills;

- Claimant requested a refill of 9 Amerge pills, on December 30, 1999, two months later;

- Claimant requested another refill of 9 Amerge pills on March 27, 2000;

- Less than two months later, on May 16, 2000, Claimant requested a 6 tablet refill of Maxalt;

- A month later, on June 26, 2000, Claimant requested another 6 tablet refill of Maxalt;

- Less than a month later, on July 11, 2000, Claimant requested another 6 tablet refill of Maxalt;

- Claimant requested a refill of Imitrex nasal spray on November 27, 2000;
- On February 6, 2001, Claimant requested another refill of Imitrex nasal spray;

- Medical reports indicate Claimant's medications in November 2000, the time of her first work injury, included Imitrex, Maxalt and Amerge. (*See* Exhibit 15, p. 303).

Dr. Bernton's Testimony

61. Dr. Tashof Brenton testified at hearing as an expert in internal and occupational medicine. Dr. Bernton opined, consistent with his report of August 27, 2018, that Claimant's present SI joint problem is not related to her 2000 and 2001 work injuries. Dr. Bernton explained that there were no medical records reflecting that Claimant had any SI joint problems prior to the 2006 non-work related auto accident. Dr. Bernton opined that the SI joint only became a significant problem after the 2006 accident. He explained that prior to the 2006 MVA, medical records showed no significant tenderness to palpation in the paravertebral muscles or over the SI joints. He noted that Dr. Schwender, who treated Claimant both before and after the 2006 MVA,

specifically opined that her exacerbation and flare-up of right sacroiliitis and sacroiliac residual joint strain were not work-related. Dr. Bernton also testified that subsequent to the 2006 accident, Claimant has aged another 12 years and has degenerative changes in the spine which, when coupled with having to sit for prolonged periods of time at her current job, severs the casual relationship between the 2000 and 2001 work injuries. Specifically, he opined that it is not medically supportable to ascribe Claimant's current need for treatment, including the Butrans pain patches, on work accidents that occurred almost two decades ago given the intervening factors, including two non-work MVAs and the effects of degenerative disease in the spine, at play in this case. Accordingly, Dr. Bernton testified that Claimant's need for additional SI joint injections, as recommended by Dr. Castrejon, are not casually related to the 2000 and 2001 injuries.

62. Dr. Bernton testified that Dr. Castrejon appears to have relied upon his mention of a November 10, 2005 SI injection as referenced in his report to support his conclusion that Claimant's SI treatment needs preceded the 2006 non-work MVA. Dr. Bernton clarified, however, that Dr. Castrejon's reference to a November 10, 2005 injection was probably a typo because there is no record to support an injection having been administered on this date. On the other hand, there is record evidence to support that an SI joint injection was performed on November 10, 2015.

63. Dr. Bernton also testified that further epidural steroid injections are not reasonable, necessary and related to the 2000 and 2001 work related injury. Dr. Bernton reasoned that Claimant has not had epidural steroid injections since 2016 and there is no indication of any nerve compression which is why an ESI is given to a patient. There is currently no request for additional ESI's pending. Nevertheless, Dr. Bernton opined that if Claimant needs ESI's in the future it was because something new had happened to cause nerve root impingement or radiculopathy.

64. Finally, Dr. Bernton testified that Claimant reported a 50 to 60% improvement after the injections which does not meet the 80% improvement the Colorado Division of Workers' Compensation Treatment Guidelines (hereinafter the "Guidelines") requires for continued injection therapy. Dr. Bernton explained that the 80% threshold was established to balance the benefits of the injection, which are short-term, against the risks associated with administering additional injections containing steroids.

65. On cross examination concerning the SI injections, Dr. Bernton agreed that the 2000 and 2001 incidents are of the type that can injure the SI joint and that various providers including Dr. Finn had raised the possibility of an SI joint problem. Dr. Bernton testified that SI joint pain can wax and wane and that degenerative changes do not necessarily correlate with pain. Dr. Bernton also testified that while it is important that there be approximately 80% improvement in pain from the injections, he agreed that functional enhancement is important as well. Finally, Dr. Bernton agreed that in terms of documenting pain intensity, it can be difficult for patients in light of it being subjective.

66. The ALJ credits the opinions of Dr. Bernton, Dr. Schwender and Dr. Ridings to find that Claimant's left SI joint dysfunction/condition arose after she was placed at MMI for her work-related injuries on February 22, 2002. Indeed, the evidence presented persuades the ALJ that Claimant's left SI joint dysfunction is the direct and proximate result of her July 13, 2006 non-work related MVA rather than her 2000 or 2001 work related accidents. Moreover, to the extent that Claimant actually suffered from an SI condition, either right or left-sided prior to February 22, 2002, the ALJ is convinced that intervening events. i.e. the July 13, 2006 MVA and more recently her need to sit for prolonged periods of time on a wooden chair while training for her new job with the Department of Motor Vehicles exacerbated her underlying condition giving rise to her current need for treatment. The ALJ agrees with Dr. Bernton that these intervening events are sufficient to sever the causal connection between Claimant's 2000/2001 and her current need for treatment. Because the ALJ finds that Claimant's SI joint condition was likely caused and subsequently aggravated by factors unrelated to her 2000/2001 industrial accidents, the ALJ finds that Respondent-Employer is not obligated to provide or pay for continued SI joint treatment, including SI joint injections, chiropractic care and/or massage therapy.

67. Dr. Bernton testified that the medical records are inconsistent with Claimant's testimony that she only had three migraine headaches per year prior to her work injuries. He testified that the medical records indicate that Claimant had migraine headaches prior to the occupational injuries she suffered in 2000 and 2001 and they were treated with the same medication, Imitrex. He explained Imitrex was in a class of medications called triptans and was taken either one or two at a time at the occurrence of a headache. He opined the doses of medication that the Claimant received prior to her work injuries was not consistent with Claimant's report of only three migraines per year. He explained that Claimant's medical records prior to the first work accident reveal that she was getting refills of triptans sometimes 9 pills or 18 pills monthly, or every other month. He opined that, based upon the frequency at one or two tablets per headache, Claimant likely suffered about four headaches per month, which was not particularly different from what she is currently experiencing. Dr. Bernton further noted that the medical records historically demonstrate that Claimant was on more than one type of triptan at once, including Imitrex and Amerge. According to Dr. Bernton, this indicates that Claimant's migraines were intransigent and difficult to treat even before the first work accident.

68. Dr. Bernton testified that migraines vary over time, particularly in women with hormonal changes, including those going through menopause, and that those factors can have a dramatic influence on migraine frequency. He also noted medical records indicate that Claimant suffers from sinusitis, which frequently causes headaches and can trigger migraines. Accordingly, he opined it was not medically reasonable to say Claimant's current migraines are causally related to the work accidents, which occurred nearly two decades ago.

69. Dr. Bernton explained that occipital nerve blocks are used to treat acute muscle strain in the back of the head. He opined if Claimant needs them again, it would

not be related to the work accidents and would instead be needed because Claimant likely suffered a subsequent acute muscle strain during her post MMI MVA's.

70. Dr. Bernton testified that while he agrees that Dr. Zimmer is capable of diagnosing and treating headaches, he disagrees with Dr. Zimmer's opinion that Ms. Shipley's headaches are post traumatic in origin. In addition, he disagrees with Dr. Roberts and Dr. Castrejon's opinions that Claimant's headaches are related to the 2000 and 2001 work injuries. Finally, Dr. Bernton agreed that reasonable doctors can have reasonable differences of opinions as to diagnoses, treatment plans, and causation.

71. The ALJ finds the opinions of Dr. Bernton that ongoing treatment of Claimant's headaches is no longer reasonable, necessary or causally related to the work accidents, credible and persuasive. The presence of an aura, including visual disturbances and nausea coupled with the fact that Claimant has not required additional occipital blocks to treat muscle tension/spasm for an extended period of time convince the ALJ that Claimant is experiencing migraine headaches rather than cervicogenic headaches as suggested by Dr. Castrejon. The ALJ credits Dr. Bernton's opinion that Claimant's pre-injury migraine condition appears similar to her current migraines in frequency and characteristic. The ALJ also credits the opinion of Dr. Bernton that Claimant's pre-injury migraine complex was difficult to treat given the prescription of multiple migraine medications in the past. More probably than not, Claimant's current headaches represent a natural progression in the incidence of migraines likely due to non-industrial triggers including sinusitis and/or hormonal changes. Accordingly, the ALJ finds Claimant's current need for headache treatment unrelated to her 2000/2001 industrial injuries. Because the need for treatment to ameliorate Claimant from the effects of her migraine headaches is unrelated to her 2000/2001 work-related injuries, Respondent is not obligated to provide or pay for it.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every

item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant suffers from both SI joint dysfunction and migraine headaches. While Claimant probably requires treatment for these conditions, the evidence presented, including the medical opinions of Dr. Bernton persuade the ALJ that Claimant's need for such treatment is unrelated to her 2000/2001 work-related injuries. Based upon the evidence presented, the ALJ concludes that Dr. Bernton's opinions concerning the relatedness of Claimant's need for SI and headaches treatment are credible and more persuasive than both the contrary opinions of Dr. Castrejon and Claimant's testimony.

Claimant's Entitlement to Additional SI Joint Injections, Chiropractic Treatment and Massage Therapy

D. A claimant's need for medical treatment may extend beyond the point of maximum medical improvement where he/she requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his/her condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). It is well settled that where respondents file a final admission admitting for maintenance medical benefits pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), they are not precluded from later contesting liability for a particular treatment. *Snyder v. Industrial Claim Appeals Office, supra*; *Rizo v. Monfort, Inc*., W.C. No. 4-310-241 (ICAO June 16, 1999). Moreover, when respondents contest liability for a particular

medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *Grover v. Industrial Commission*, *supra; Snyder v. Industrial Claim Appeals Office*, *supra.*

E. It is also well settled that the natural development of an intervening, nonindustrial injury, which is separate from and uninfluenced by an earlier industrial injury, is not compensated as part of the original industrial injury. *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934). Respondents contend that such an injury occurred in this case when Claimant aggravated her low back and right SI condition in addition to injuring her mid back and left SI joint on July 13, 2006 when another driver struck her passenger side door as she was passing by the driveway he/she was exiting. Based upon the evidence presented, including the expansion of Claimant's complaints and treatment for body parts and conditions previously untreated, prior to her placement at MMI, the ALJ agrees. Here, the evidence presented persuades the ALJ that Claimant's complaints concerning her SI joints have changed over time since her July 13, 2006 MVA. While Claimant treated primarily for pain in her right low back prior to July 13, 2006, the treatment focus shifted to her SI joints thereafter. Moreover, Claimant has not worked for the Employer since 2008. According to the medical records, Claimant's low back/SI symptoms increased again in June 2018, due to what Claimant testified was prolonged sitting during training sessions with her current employer. Dr. Castrejon opined that this prolonged sitting constituted an exacerbating event, which formed the basis for his recommendation for additional bilateral SI joint injections, chiropractic and massage therapy to return Claimant to baseline.

F. In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). The Court stated "before an order for future medical benefits may be entered there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease." Thus, while a claimant does not have to prove the need for a specific medical benefit, he/she must prove the probable need for some treatment after MMI related to the work injury. The question of whether specific medical treatment is related to and reasonably necessary to cure and relieve a claimant from the effects of a work-related injury is a question of fact for resolution by the ALJ. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Based on the evidence presented and as articulated above, the ALJ is persuaded that while additional SI joint injections, chiropractic treatment and massage therapy is probably reasonable; the need for this treatment is unrelated to any of Claimant's 2000/2001 work-related accidents. Claimant's suggestion, as buttressed by the opinions of Dr. Castrejon, that Dr. Finn identified the SI joint(s) as a work injury related pain generator in 2002 is unpersuasive. Although Dr. Finn questioned whether Claimant may have underlying SI joint dysfunction, he did not request diagnostic testing nor did he recommend treatment for the SI joint. Indeed, treatment for the SI joints was initiated many months after Claimant was declared to

be at MMI and after several intervening accidents had occurred. As found, the ALJ credits the opinions of Dr. Bernton to conclude that Claimant's ongoing symptoms are, more probably than not, associated with an intervening injury to the back and SI joint(s) sustained in multiple MVA's and more recently after having to sit for a prolonged period of time during training sessions for her current job. Consequently, while Claimant would likely benefit from continued SI joint injections, chiropractic treatment and massage therapy, these treatment modalities are not necessary to treat the effects caused by Claimant's industrial injury. Rather, the evidence presented supports a conclusion that this treatment is necessary to address the ongoing symptoms caused primarily by Claimant's July 13, 2006 intervening MVA.

G. The Medical Treatment Guidelines (Guides) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo.App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Medical Treatment Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). Nonetheless, they carry substantial weight. Moreover, the MTGs have been accepted in the assessment and treatment of low back pain and SI joint pain/dysfunction.

H. In Rule 17, Exhibit 9 of the Guidelines titled "Chronic Pain Disorder Medical Treatment Guidelines" under the section entitled "Maintenance Management" there are listed multiple modalities for post MMI care including ESIs and SI joint injections. Under section G (7), "Injections-Spinal Therapeutic" (The Guidelines, Rule 17, Exhibit 9-Page 46) it is specifically stated that for post MMI injections the doctor is to refer to "Section I.8, "Injection Therapy Maintenance Management." Pursuant to Section I.8(b) (The Guidelines-Pages 170-171), patients may require injections for exacerbations of their conditions if they have experienced functional benefits from these injections in the past. In addition, for chronic radiculopathy, injections may be repeated only when a "functional documented response" lasts for three months. A positive result would include a return to baseline function as established at MMI, return to increased work duties, and measurable improvement in physical activity goals including a return to baseline after an exacerbation. In addition, this same section also allows for repeat SI joint injections if the same criteria used for repeat epidural steroid injections is met. The criteria as to whether or not a repeat epidural steroid injection or SI joint injection should be done for maintenance care does not mention the 80% pain reduction noted in other areas of the Guidelines for treatment of low back pain with injections. Nonetheless, the Court is not bound by the MTGs in deciding individual cases on the guidelines or the principles contained therein alone. Indeed, § 8-43-201(3) specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable,

necessary, and related to an industrial injury or occupational disease. The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.

I. As resolved here, the ALJ is convinced that the evidence presented supports a conclusion that additional SI joint injections are reasonable. Moreover, the ALJ is convinced that Dr. Castrejon contemplated their use within the context of expected functional outcomes rather than for purposes of pain relief alone. Nevertheless, the evidence presented persuades the ALJ that the need for additional injections is not causally related to Claimant's 2000/2001 industrial injuries. Consequently, the ALJ finds Claimant reliance on the Guides in an effort to establish that the recommended SI joint injections are reasonable and necessary is of limited evidentiary value. Because Claimant has failed to prove by a preponderance of the evidence that her current need for additional SI joint injections, chiropractic treatment and massage therapy are causally related to his June 16, 2013 industrial injury, Respondents' are not obligated to provide or pay for it.

Collateral Estopple

J. Although developed in the context of judicial proceedings, issue preclusion, frequently referred to as collateral estopple may be applied to administrative proceedings in Workers Compensation Claims. *Sunny Acre Villa Inc. v. Cooper*, 25P3d 44 (Colo. App.). Issue preclusion works to preclude the relitigation of matters that have already been decided. *Argus Real Estate, Inc. v. E-470 Pub Highway Auth.,* 109 P3d 604, 608 (Colo. 2005). The doctrine is intended to promote judicial economy and to confirm the finality of judgments by preventing inconsistent decisions. *Argus,* 109 P3d at 608, 611. Collateral estopple bars re-litigation of an issue if all of the following elements are satisfied: (1) The issue sought to be precluded is identical to an issue actually determined in the prior proceeding; (2) The party against whom estoppel is asserted has been a party to or in privity with a party to the prior proceeding; (3) There is a final judgment on the merits in a prior proceeding; and (4) The party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in a prior proceeding: *Sunny Acre Village, Inc.,* 25 P3d at 47, and *Bebo Construction Co. v. Mattox & O' Brien, P.C.*, 990 P2d 78, 84 (Colo. 1999). In this case, Claimant alleges that Respondent is barred from challenging epidural steroid joint injections (ESIs) due to an order issued by the undersigned following a hearing convened February 11, 2015. Based upon the issues endorsed for hearing along with the evidence presented, the ALJ is not convinced.

K. The ALJ finds/concludes that the issue from the prior 2015 hearing and the issue in the present hearing are not identical. In the present hearing, the issue is whether Respondents have produced sufficient evidence to entitle them to withdraw admissions for ongoing maintenance care, including ESI joint injections whereas the question, i.e. the "issue" presented at the 2015 hearing was whether Claimant established her entitlement to additional recommended ESI's on the grounds that they were reasonable, necessary and related to her 2000/2001 industrial injuries. Thus, the

ALJ agrees with Respondents that the present hearing issue is not the same as the issue litigated at the February 11, 2015 hearing. Insofar as Claimant has failed to meet an element required to be established for the doctrine of issue preclusion to apply, the ALJ concludes that Respondents are not collaterally estopped from litigating the issue of whether they are entitled to withdraw their December 2, 2011 and/or September 18, 2013 admissions for maintenance care.

Respondent's Request to Withdraw the December 2, 2011 & September 18, 2013 Admissions for Maintenance Care

L. A claimant is only entitled to medical treatment under the Act when the need for such treatment is proximately caused by the work injury. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). It is well settled that where respondents file a final admission admitting for maintenance medical benefits pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), they are not precluded from later contesting liability for a particular treatment. *Id.* Moreover, when respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *See Grover v. Industrial Commission*, *supra; Snyder v. Industrial Claim Appeals Office*, *supra.* Where, however, respondents attempt to modify an issue that previously has been determined by an admission of liability, they bear the burden of proof for such modification. *Section 8-43-201(1), C.R.S.*; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the statute in 2009 and provides, in pertinent part:

> …a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. (2) The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed.

M. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed that burden on the respondents and made such a withdrawal the procedural equivalent of a reopening. The statute serves the same function in regard to maintenance medical benefits. The Supreme Court in *Grover v. Industrial Commission*, 759 P.2d 705, 712 (Colo. 1988), provided that after the respondents had admitted for maintenance medical benefits "the employer retains the right to file a petition to reopen, … for the purpose of either

terminating the claimant's right to receive medical benefits or reducing the amount of benefits available to the claimant." The amendments to § 8-43-201(1), C.R.S., then, require that when respondents seek a ruling at hearing that would serve as "terminating the claimant's right to receive medical benefits," they are seen as seeking to reopen that admission and the burden is theirs. In *Salisbury v. Prowers County School District*, *supra,* the Industrial Claims Panel held that where the effect of the respondents' argument is to terminate previously admitted maintenance medical treatment, the respondents have the burden, pursuant §8-43-201(1), C.R.S., to prove that such treatment is not reasonable, necessary or related to the claimant's industrial injury.

N. In this case, Respondent is seeking to withdraw their admissions for ongoing maintenance care, including treatment for Claimant's headaches, SI joint dysfunction and low back based upon Dr. Bernton's opinions that this care is no longer reasonable, necessary or related to Claimant's 2000/2001 industrial injuries. As found above, Claimant's migraine headaches have improved and returned to her pre-injury baseline in terms of frequency and character. As found, the ALJ credits and finds persuasive Dr. Bernton's opinions that Claimant's headaches would not be materially different even if she not suffered the work accidents. Moreover, the ALJ attributes Claimant's current need for SI joint treatment to subsequent intervening causes, including two non-work related MVAs, particularly the July 13, 2006 MVA. As such, the ALJ determines that Respondents have proven that ongoing treatment for these conditions is no longer causally related to the work injuries associated with these claims. Nonetheless, the ALJ finds/concludes that Respondents have failed to establish that Claimant's need for future ESI's to the low back would not necessarily be reasonable, necessary and related to Claimant's 2000/2001 industrial injuries. In an effort to prove that Claimant's need for future ESI's no longer reasonable, necessary or related to her 2000/2001 industrial injuries, Respondent's rely heavily on Dr. Bernton's testimony that future steroid injections would not be reasonable, necessary or related to 2000/2001 work related injuries because there is no current indication of nerve compression and Claimant has not had ESI's since 2016, leading him to surmise that if Claimant needs ESI's in the future, that need will be related to "something" new, i.e. an intervening event causing nerve root impingement and radiculopathy. In this case, the persuasive evidence demonstrates that Claimant probably suffered a right L4-5 paracentral disc herniation and left L5-S1 paracentral disc herniation as a consequence of her 2000/2001 industrial accidents. Moreover, the evidence presented persuades the ALJ that Claimant's low back has never been completely pain free since her 2000/2001 injuries. Indeed, the record evidence supports a finding/conclusion that Claimant would periodically require the administration of ESI's to cure and relieve her of ongoing low back pain associated with her 2000/2001 industrial injuries in the absence of intervening events. While these ESI's have been effective in holding Claimant's work-related low back pain at bay for extended periods of time, the record evidence establishes that they eventually would wear off requiring repeat injections for ongoing pain relief. Although, Claimant appears to have enjoyed a particularly long period of low back pain relief since her last ESI injections administered in 2015/2016, the ALJ questions whether Claimant received an unintended benefit from her SI joint injections in the form of a respite from low back pain. Based upon the evidence presented, the ALJ is not convinced that the

efficacy of the current injections, including the fortuitous effects that the SI joint injections have probably had on Claimant's low back symptoms, might not wear off giving rise to increased low back pain in the absence of an intervening event. Accordingly, the ALJ finds and concludes that Dr. Bernton's testimony regarding the relatedness of the need for future ESI's to the 2000/2001 industrial accidents speculative and unpersuasive. As Respondent has failed to prove that Claimant's need for ongoing low back treatment, including additional ESI's is no longer reasonable, necessary and related to her 2000/2001 work-related injuries or that the December 2, 2011 or September 18, 2013 admissions for maintenance care were filed improvidently, the ALJ concludes that the request to withdraw these admissions must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's request for additional medical benefits in the form of bilateral SI joint injections, chiropractic and massage therapy is denied and dismissed as she has failed to establish that need for this treatment is causally related to her 2000/2001 industrial accidents.

2. To the extent that Claimant seeks the same, her request for additional treatment to cure and relieve her of the effects of her ongoing headaches is denied and dismissed as she failed to establish that this treatment is causally related to her 2000/2001 industrial accidents.

3. Respondents are not estopped from challenging the reasonableness, necessity or relatedness of Claimant's need for additional epidural steroid injections to her 2000/2001 industrial injuries based on the issuance of a 2015 order, finding that Claimant had proven entitlement to maintenance ESIs at that time.

4. Respondent's request to withdraw either the December 2, 2011 or September 18, 2013 admissions for maintenance medical treatment is denied and dismissed as they failed to establish that Claimant's need for ongoing low back treatment, including additional ESIs is no longer related to her 2000/2001 industrial injuries or that the aforementioned admissions were filed by mistaken or otherwise in error.

5. Respondent shall provide all reasonable, necessary and related treatment, including additional ESIs, to relieve and otherwise prevent deterioration of Claimant's low back condition subject to Respondents right to challenge any future request for treatment on the grounds that it is not reasonable, necessary or related to Claimant's 2000/2001 industrial injuries.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the right ankle surgery recommended by Dr. Waqqar Khan-Farooqi (specifically a right lateral ankle reconstruction with arthroscopic debridement, and a peroneal tendon synovecotomy) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted October 16, 2017 work injury.

FINDINGS OF FACT

1. The claimant is employed by the employer as a checker. On October 16, 2017, the claimant was working in the self-checkout area when she stepped on a dip in the floor and rolled her right ankle. The claimant testified that she immediately felt pain in her right ankle.

2. After the claimant reported the incident to the employer, she was referred to Dr. Craig Stagg for treatment. Dr. Stagg has been the claimant's authorized threating physician (ATP) for this claim.

3. The claimant was first seen by Dr. Stagg on October 17, 2017. On that date, an x-ray of the claimant's right ankle showed no acute fracture. Dr. Stagg diagnosed an ankle sprain. In addition, Dr. Stagg placed the claimant in a splint and instructed her to use crutches.

4. The claimant returned to Dr. Stagg on October 20, 2017. Dr. Stagg instructed the claimant to use a controlled ankle motion (CAM) boot and referred her to physical therapy. The claimant testified that physical therapy treatment made her symptoms worse.

5. On November 3, 2017, the claimant was seen by Dr. Stagg. At that time, the claimant continued to have swelling and bruising on her right ankle. Dr. Stagg ordered an x-ray of the claimant's right foot and a magnetic resonance image (MRI) of the claimant's right ankle. In addition, he referred the claimant to Dr. Christopher Copeland for consultation.

6. On November 3, 2017, an x-ray of the claimant's right foot showed no fracture or dislocation. It was read as a "normal study of the right foot".

7. The claimant was first seen by Dr. Copeland on November 9, 2017. At that time, Dr. Copeland noted that the claimant's symptoms included, bruising, swelling, weakness, and decreased range of motion in her right ankle. Dr. Copeland diagnosed a right ankle sprain and recommended that the claimant continue using the CAM boot. Dr. Copeland agreed that an MRI was appropriate.

8. On November 16, 2017, an MRI of the claimant's right ankle showed grade 2 sprains of the anterior talofibular and calcaneofibular ligaments with mild periligamentous and soft tissue edema.

9. Thereafter, the claimant's symptoms continued. On January 23, 2018, the claimant returned to Dr. Copeland who diagnosed a right ankle sprain with probable anterolateral impingement and possible peroneal tendinitis. On that date, Dr. Copeland recommended and administered a diagnostic therapeutic injection. Dr. Copeland opined that if the claimant continued to have symptoms, she could require surgery, including ankle arthroscopy, lateral ligament repair, and possible peroneal tendon exploration.

10. On January 29, 2018, the claimant returned to Dr. Stagg and reported that the injection administered by Dr. Copeland did not provide any immediate relief. On that same date, Dr. Stagg noted that the claimant should wean from her use of the CAM boot.

11. On February 20, 2018, the claimant was seen by Dr. Copeland and reported that the injection caused more pain for ten days after the January 23, 2018 injection. On that date, Dr. Copeland recommended and administered a second injection.

12. On February 21, 2018, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. At the IME, the claimant described the most recent injection administered by Dr. Copeland as a numbing shot that provided no relief from that injection. In his IME report, Dr. Lesnak noted that the claimant continued to use her CAM boot. Dr. Lesnak opined that the claimant suffered an acute right lateral ankle sprain as a result of the October 16, 2017 work injury. Dr. Lesnak opined that the claimant did not need further injections and was not a surgical candidate. Dr. Lesnak recommended that the claimant undergo electromyography (EMG) testing of her right lower extremity to evaluate her right distal peroneal nerve. Dr. Lesnak also opined that the claimant had an underlying somatic disorder/somatoform disorder.

13. On February 28, 2018, the claimant returned to Dr. Stagg. At that time, the claimant requested a referral to another orthopedic surgeon. The claimant testified that she no longer wished to treat with Dr. Copeland because she had lost confidence in him. At that time, Dr. Stagg made a referral to Dr. Cota.

14. On March 16, 2018, Dr. Lesnak was asked to review additional medical records and opine regarding whether a second opinion from Dr. Cota would be reasonable and necessary to address the claimant's injury. Dr. Lesnak opined that a second opinion was not necessary. In that same report, Dr. Lesnak opined that the claimant should be placed at maximum medical improvement (MMI). Based upon Dr. Lesnak's opinion, the respondents denied the referral to Dr. Cota.

15. The claimant returned to Dr. Stagg on March 20, 2018. Dr. Stagg referred the claimant to Dr. Michael Burnbaum for EMG studies, as recommended by Dr. Lesnak in his IME. On that date, Dr. Stagg again encouraged the claimant to stop using her CAM boot.

16. On April 2, 2018, Dr. Burnbaum completed an EMG study of the claimant's right lower extremity. Dr. Burnbaum recorded that it was a normal EMG study. In addition, he found no significant nerve injury in the claimant's right leg.

17. Following the EMG, Dr. Stagg referred the claimant to Dr. Ellen Price for a determination regarding whether the claimant had complex regional pain syndrome (CRPS). The claimant was first seen by Dr. Price on May 11, 2018. At that time, Dr. Price did a bone scan to rule out an occult fracture. In addition, Dr. Price opined that the claimant did not have CRPS.

18. On May 8, 2018, the claimant was seen by Dr. Waqqar Khan-Farooqi regarding her right ankle. The claimant was not initially referred to Dr. Khan-Farooqi by her ATP. The claimant testified that she sought treatment with Dr. Khan-Farooqi independently. On exam, Dr. Khan-Farooqi noted "clinical evidence of chronic laxity" and opined that the claimant had insufficient anterolateral ankle ligaments. He recommended that the claimant undergo a lateral ankle reconstruction "of the Brostrom Gould variety".

19. On May 24, 2018, Dr. Stagg noted that two surgeons had recommended surgery for the claimant's right ankle. At that time, Dr. Stagg made a referral for the claimant to be seen by Dr. Khan-Farooqi.

20. Subsequently, Dr. Stagg referred the claimant for further testing for CRPS, specifically thermography and QSART testing. On July 6, 2018 a phase 3 bone scan was performed and showed no findings related to CRPS.

21. On August 22, 2018, the claimant returned to Dr. Lesnak for an additional IME. In his IME report, Dr. Lesnak reiterated his opinion that the claimant was at MMI. He specifically noted an MMI date of April 2, 2018 as this was the date Dr. Burnbaum found no neurologic abnormalities. Dr. Lesnak further opined the claimant did not have permanent impairment of her right lower extremity.

22. On August 28, 2018, Dr. David Reinhard noted that claimant's QSART results were negative for CRPS. In that same medical record, Dr. Reinhard opined that a CRPS diagnosis could be ruled out.

23. On October 18, 2018, the claimant returned to Dr. Khan-Farooqi. At that time, Dr. Khan-Farooqi noted that the claimant had "pretty significant laxity of the ankle and varus hindfoot." He again recommended lateral ankle reconstruction. Dr. Khan-Farooqi also recommended the claimant undergo arthroscopic debridement of soft tissue impingement lesion and a peroneal tendon synovecotomy.

24. On January 2, 2019, Dr. Stagg noted that the claimant has "laxity on stress testing".

25. On January 8, 2019, the claimant was seen by Dr. James Lindberg for an IME. Dr. Lindberg reviewed the claimant's medical records, obtained a history, and performed a physical examination. In his IME report, Dr. Lindberg noted on his exam that the claimant had more instability in her left ankle than in her right ankle. Based upon his exam and his review of the imaging and testing (including x-rays, MRI findings, bone scan, and EMG testing), Dr. Lindberg found no evidence of ligament laxity. Dr. Lindberg opined that the surgery recommended by Dr. Khan-Farooqi is not reasonable or necessary medical treatment of the claimant's symptoms. Dr. Lindberg's testimony was consistent with his written report.

26. Dr. Lindberg testified that the only reason to perform the recommended surgery would be evidence of laxity. Dr. Lindberg reiterated that he could find no evidence of laxity on exam, or upon review of the various imaging studies.

27. The claimant testified that she wishes to pursue the surgery recommended by Dr. Khan-Farooqi.

28. The ALJ credits the medical records and the opinions of Drs. Lesnak and Lindberg over the contrary opinions of Drs. Stagg and Khan-Farooqi. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the recommended ankle surgery is reasonable and necessary to cure and relieve the claimant from the effects of the work injury. The ALJ is persuaded by the opinion of Dr. Lindberg that the claimant's right ankle does not have the necessary laxity to warrant the recommended surgery. The ALJ finds as persuasive Dr. Lindberg's findings on exam that the claimant had more instability in her left ankle than in her right ankle.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider,

among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

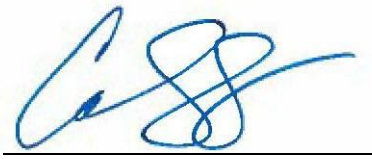
3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the recommended right ankle surgery is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the October 16, 2017 work injury. As found, the medical records and the opinions of Drs. Lesnak and Lindberg are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for a right lateral ankle reconstruction with arthroscopic debridement, and a peroneal tendon synovecotomy is denied and dismissed.

Dated March 28, 2019



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-077-006

ISSUES

- Whether Claimant established by a preponderance of the evidence that he suffered a compensable work injury on May 8, 2018.

STIPULATIONS

1. The Parties agree that if the claim is compensable that Claimant's average weekly wage is $980.00.

2. The Parties agree that if the claim is compensable that Claimant is entitled to Temporary Total Disability benefits from May 8, 2018 to May 20, 2018.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked as a long haul truck driver with Employer.

2. He was driving in the Midwest when his truck's air conditioning unit failed on or about May 3, 2018. It was repaired on or about May 6, 2018. During that three-day period, Claimant testified that temperatures reached as high as 103 degrees. Claimant testified that he sweat continuously because of the heat, including at night when he attempted to sleep in his truck. He eventually stopped sweating.

3. Claimant testified that between May 5 and May 8, 2018, he vomited after eating. Initially, the vomit was a normal color and did not have blood in it.

4. On May 8, 2018, Claimant began vomiting bright red blood and contacted emergency services. Flight for Life ultimately transported Claimant to Northern Colorado Medical Center where medical providers diagnosed him with a bleeding gastrojejunal anastomotic ulcer. Claimant remained hospitalized through May 12, 2018.

5. In the "History of Present Illness/ Injury" note from Northern Colorado Medical Evacuation, the attending provider stated that Claimant called 911 after feeling light headed and vomiting blood. "He states he hasn't been feeling well for 3-4 days. He has been vomiting fresh red blood and coffee ground like emesis for 3-4 days."

6. Claimant attributed his vomiting to the heat and his subsequent dehydration. However, medical records do not support a finding that Claimant was dehydrated. Rather, the Northern Colorado Medical Center notes provide that when Claimant arrived, emergency room doctors tested Claimant's creatinine levels, which can indicate dehydration. Claimant's results were within normal limits. The notes do not indicate that

Claimant complained of dehydration at admission or during his hospital treatment. While Claimant did receive blood and IV fluids during transport to and at the hospital, medical records provide that they were given because Claimant had severe hypotension and do not mention dehydration.

7. Under "Social History" Matthew Remakus, M.D., noted that Claimant smoked three to four cigars a day. Other records provide that Claimant smoked a half pack of cigarettes daily for forty years.

8. On May 9, 2018, Dr. Ahmed M. Sherif performed an upper endoscopy. Dr. Sherif found a gastric ulcer with a visible, actively bleeding vessel. He successfully placed a clip over the vessel and stopped the active bleed. The endoscopy also revealed a large fistula between the bypassed stomach and the native stomach. Fistulas contain gastric acid which can reenter the stomach.

9. Claimant experienced a similar incident in 2010 after he underwent a Roux-en-Y gastric bypass surgery with Dr. Richard Tillquist, M.D. on August 4, 2010.

10. After his surgery, Claimant continued taking a non-steroidal anti-inflammatory although the medication his bypass surgery contraindicated doing so. He also did not take his prescribed proton pump inhibitor.

11. On September 18, 2010, Claimant reported that he had been feeling nauseous and began vomiting blood. He treated at Medical Center of Aurora-South where providers diagnosed an upper gastrointestinal bleed. Providers discontinued Claimant's non-steroidal anti-inflammatory, noting the probability that Claimant's ulcer was NSAID induced. They prescribed the proton pump inhibitor Protonix, but only for a three-week course.

12. While Claimant testified that providers diagnosed a torn esophagus in 2010, an upper GI endoscopy performed on September 18, 2010 showed a normal esophagus. The endoscopy also showed anastomotic ulcers at the site of Claimant's anastomosis.

13. Claimant maintained behaviors that put him at risk of additional upper gastrointestinal bleeds. Medical records from September 2014, note:

- Claimant's medical history was remarkable for acid reflux,
- Claimant took 81 mg aspirin tablets daily,
- Claimant smoked four cigars per day, and
- Claimant's BMI was 37.4.

14. Medical records from October 2014, February 2015, May 2015, June 2015, August 2016, January 2017, March 2017, April 2017, March 2018, and May 14, 2018 show aspirin as one of Claimant's current medications. May 2015 and August 2016 records note, "Patient was encouraged to take daily baby aspirin." On March 16, 2017, Claimant's provider counseled him to "hold aspirin" until after cataract surgery. While

Claimant denied taking aspirin, the ALJ finds the numerous and specific records to the contrary to be more persuasive.

15. While Claimant reportedly stopped smoking in 2014, he resumed smoking three to four cigars a day by May 1, 2015.

16. Claimant alleges that his May 5 through May 8, 2018 vomiting caused his bleeding gastrojejunal anastomotic ulcer. While Dr. Tillquist provided some support for Claimant's position, the greater weight of the evidence supports a finding that Claimant's ulcer caused his vomiting.

17. Respondents retained Dr. Jonathan Fishman, M.D., to review records and literature regarding the medical causation of Claimant's ulcer. Dr. Fishman opined that Claimant's May 8, 2018 nausea and vomiting *resulted from* the anastomotic ulcer, identified in the 2010 upper gastrointestinal endoscopy.

18. Dr. Fishman explained that gastrointestinal ulcers tend to form at the gastrojejunal anastomosis following a Roux-en-Y gastric bypass surgery, the one Claimant underwent in 2010. Ulcers form at that site because acid from the native stomach can enter the new stomach pouch, particularly where a gastric fistula allows even more acid from the native stomach to enter the new stomach. The anastomotic site is a weak area because it is close to the surgical site.

19. Further, Dr. Fishman opined that Claimant's 2010 ulcer became asymptomatic, but that it did not actually heal. Claimant's elevated risk factors including tobacco use, aspirin use, and the gastric fistula noted in Dr. Sherif's endoscopy, caused it to became symptomatic again in 2018.

20. Dr. Fishman therefore concluded there was no connection between Claimant's employment or work environment and the formation or symptoms of the gastric ulcer.

21. On December 10, 2018, Dr. Tillquist responded to Dr. Fishman's report. Dr. Tillquist opined that:

- dehydration can cause vomiting,
- vomiting can cause a pre-existing ulcer to start bleeding, and
- Claimant's vomiting was a "contributing factor" for the pre-existing ulcer to begin bleeding on May 8, 2018.

Therefore, Dr. Tillquist opined that Claimant suffered a compensable work injury on May 8, 2018. Dr. Tillquist criticized Dr. Fishman for failing to address vomiting as a cause for bleeding and for opining that Claimant had a chronic ulcer.

22. The ALJ finds that Dr. Tillquist's opinions speak in terms of possibility, not medical probability. That ALJ also finds Dr. Tillquist's opinions less persuasive because that are premised on Claimant being dehydrated, a finding that the ALJ does not make.

23. Dr. Fishman testified at hearing on Respondents' behalf. While Dr. Fishman is not Level II Accredited with the Division of Workers' Compensation, and had not previously testified at a workers' compensation hearing, he is board certified in gastroenterology with decades of experience in that field, including the treatment of patients with gastric bypass surgery. The Judge accepted him as an expert in gastroenterology.

24. Dr. Fishman testified that Claimant's gastric ulcer, diagnosed in 2010, caused his 2018 gastric bleed. He explained that ulcers do not always heal after they bleed, but rather can become asymptomatic, as Claimant's did in 2010. Over time, the ulcer can become symptomatic again because of non-work factors such as smoking, use of aspirin or other over the counter pain relievers, and time. In this case, Claimant has a number of risk factors that would result in a non-healing ulcer becoming symptomatic, including smoking and taking aspirin.

25. Dr. Fishman explained that Claimant's ulcer was located near the anastomosis, the junction site between the old and new stomach. This ulcer was present in 2010 when a bleeding ulcer caused Claimant's hospitalization. Dr. Fishman explained that it was common for ulcers to become asymptomatic, but not actually "heal." Acid in the stomach typically prevents ulcers from healing completely, which is why doctors prescribe acid blockers for an extended time following a bleeding ulcer. Claimant's doctors did not prescribe a long-term acid blocker following his 2010 anastomotic ulcer bleed. Therefore, Dr. Fishman opined that Claimant had a non-healing gastric ulcer which was asymptomatic for approximately eight years following the 2010 bleed, and which never fully healed. Over time, the acid in Claimant's stomach, exacerbated by the gastric fistula, prevented the ulcer from healing. Claimant's routine smoking and use of aspirin further eroded the lining between the ulcer and the blood vessels underneath, until eventually, the ulcer began to bleed.

26. Dr. Fishman testified that dehydration does not typically cause vomiting; contrary to Dr. Tillquist's theory that Claimant's vomiting caused the ulcer to become symptomatic. Further, emergency room reports do not indicate that Claimant was dehydrated when admitted. Rather, Claimant's creatinine levels were normal, which suggests that he was not dehydrated when admitted.

27. Dr. Fishman opined that Claimant's vomiting resulted from the ulcer becoming symptomatic in the days prior to May 8, 2018. A symptomatic ulcer can cause nausea and vomiting, which is consistent with Claimant's reports that even after his air conditioner began working; he was still unable to eat without vomiting. Additionally, Dr. Fishman explained that a bleeding, symptomatic ulcer would not always immediately produce frank blood in the vomit.

28. Dr. Fishman conceded the possibility that Claimant's vomiting exacerbated the ulcer. However, he explained it was highly unlikely based on the ulcer's location, which was not in the "new" part of the stomach. Vomiting would not directly affect the ulcer site. Thus, Dr. Fishman concluded it was much more likely that Claimant's ulcer became symptomatic on or around May 4, 2018, which caused Claimant to become nauseous and vomit, which eventually resulted in Claimant's hospitalization due to the bleeding ulcer and its complications.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury, which occurs in the course of employment, arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 293 (1951).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43- 210, C.R.S. (2017). *See City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

The fact that a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the logical and recurrent consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

As found, Claimant's testimony that he suffered from dehydration and that dehydration caused his vomiting symptoms is neither persuasive nor consistent with the medical evidence. Claimant testified at hearing that he had not been vomiting up blood before the May 8, 2018 incident. However, contemporaneous Northern Colorado Medical Evacuation records state that Claimant had been vomiting blood and "coffee ground" like emesis for three days prior to the alleged work injury. Further, Claimant's creatinine levels were within the normal range on the date of the admission, which suggests that Claimant was not dehydrated as Dr. Fishman explained. Finally, hospital physicians did not note that Claimant was suffering from dehydration during his hospital stay, but rather noted that Claimant had severe hypotension. Therefore, Claimant's testimony at hearing regarding the cause of his vomiting and his alleged dehydration are not persuasive.

Dr. Fishman testified credibly at hearing regarding the most likely cause of Claimant's gastrointestinal bleed. He explained that it was far more likely that Claimant's nausea symptoms in the days prior to the accident were caused by a newly symptomatic anastomotic ulcer. Further, he explained that based on the location of the anastomotic ulcer, vomiting in and of itself, would not have exacerbated the anastomotic ulcer. While vomiting is a physiologically disruptive event, in Claimant's case the new stomach would contract, causing the vomit to move up the esophagus. This would not affect the

anastomosis and anastomotic ulcer. Therefore, from a physiological standpoint, vomiting in and of itself would not have caused a gastrointestinal bleed as Dr. Tillquist described.

Dr. Richard Tillquist, M.D.'s opinion regarding the work-relatedness of Claimant's ulcer is not persuasive. Dr. Tillquist opined that Claimant's ulcer was symptomatic because of vomiting. He provided little further explanation, except that dehydration can cause vomiting, and that vomiting can exacerbate an ulcer. Dr. Fishman, by contrast, provided a more nuanced view of the facts, taking into account the ulcer's location, Claimant's history of smoking, and his long-term use of aspirin. Further, Dr. Fishman's opinion takes into account the contemporaneous note from the medical evacuation provider that states that Claimant had been vomiting fresh and dried blood for days, which demonstrates that Claimant's newly symptomatic ulcer caused the vomiting.

As found, Dr. Fishman's opinions are more persuasive than Dr. Tillquist's, and presents the most likely medical explanation for Claimant's anastomotic ulcer bleed on May 8, 2018. Thus, Claimant has failed to prove by a preponderance of the evidence that he suffered a work-related injury and therefore his claim for workers' compensation benefits is denied and dismissed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits is hereby denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: March 28, 2019

STATE OF COLORADO **OFFICE OF ADMINISTRATIVE COURTS** 1525 Sherman Street, 4th Floor Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **K,** Claimant, vs. **W.,** Employer, and **I,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-075-671-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on January 3, 2019, before Margot W. Jones, Administrative Law Judge. Claimant was present and was represented by Janet Frickey, Esq. Frank Cavanaugh, Esq. represented Respondents. This matter was digitally recorded in Courtroom 3 convening at 1:30 p.m. in Denver, CO. The parties' exhibits 1-7, A-G, H, I and J were admitted into evidence.

In this order, K is referred to as "Claimant," Respondent-Employer W.is referred to as "Employer," Respondent-Insurer I will be referred to as "Insurer" and Employer and Insurer collectively as "Respondents."

Also in this order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes, "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3 and "the Act" refers to the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S.

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that she suffered a compensable occupational disease; and

2. Whether Claimant proved by a preponderance of the evidence that she is entitled to an award of authorized, reasonably necessary and related medical benefits, specifically, the surgery recommended by Dr. Sean Griggs, M.D.

FINDGINS OF FACT

1. Claimant has been employed by Employer since February 2012. Claimant was assigned to and worked in the Fresh Pack Department in 2012. Her job duties were to prepare, package, and stock all of the fresh food made and sold by Employer in the fresh pack area.

2. Prior to accepting the job position with Employer in 2012 Claimant was employed by a school district in Reno, Nevada as the kitchen manager. Prior to beginning her work with Employer Claimant never had any problems with either one of her extremities in particular her thumbs.

3. Claimant is left-hand dominant and considers herself ambidextrous. However, Claimant writes with her left hand.

4. About a year after working for Employer in the Fresh Pack Department Claimant began to notice problems with her left thumb. Claimant sought medical care and treatment for her left thumb condition which included a surgery. Claimant testified she did not report the condition as work-related because she did not realize that the work she was performing at the time was the potential cause of the problem at that time.

5. The medical records from Golden Ridge Surgery Center indicate on February 8, 2013, Claimant had surgery on her left hand and thumb which included a procedure for trigger finger of the index finger and a left thumb CMC interposition and suspension arthroplasty using flexor carpi radialis with complete excision of trapezium.

6. Following Claimant's left hand surgery she was released to and did return to her job with Employer full duty without restriction. Following Claimant's return-to-work in 2013 she worked for a brief time in the fresh pack department and then was transferred to the deli department. She worked two years as the front line Deli supervisor. Claimant's job duties in the deli were different and less strenuous than the job duties that she performed in fresh pack.

7. Claimant's hand usage as the deli supervisor did not require the forceful grip and pinch necessary to close containers in addition to the repetitive hand usage that was required to perform the fresh pack job position.

8. Claimant was transferred from the deli back to fresh pack in 2016. Following Claimant's return to Fresh Pack, she began to notice problems in her right hand and thumb area in late December 2017 during the Christmas rush which she described as an aching in the right thumb like she had experienced before with her left thumb. While Claimant was closing containers in early January of 2018, she felt a pinch and pain in her right thumb which she immediately reported to Employer's human resource office.

9. Claimant notified Employer on January 17, 2018, that she believed that the right hand and arm problems that she was experiencing were related to the work that she was performing in the fresh pack department particularly the snapping and closing of the food containers.

10. In November and December of 2017, Claimant was in charge of packaging and preparing the family meal packages for Thanksgiving and Christmas meals. This required her to work in the back hallway where it was very cold and get in and out of refrigerated trailers in the docking area which contained the frozen turkeys she needed in order to prepare the family meal packages. She did this work in addition to her normal job duties on the fresh pack wall.

11. Claimant was referred to and evaluated by Dr. Ritzer at Green Mountain Family Medicine on January 17, 2018, by Employer. Claimant advised Dr. Ritzer that she had started noticing pain in early January 2018. She advised that she performs a lot of repetitive motion at work, making upwards of 75 to 100 food products that she places into plastic containers and presses down with both thumbs to close the lid on the container. Claimant also makes sandwiches to go which require a lot of repetitive chopping. Claimant indicated that she noticed initial pain in her right thumb, right forearm and right elbow. Claimant had begun to notice right hand numbness which worsened at night and had started using a right wrist brace as well as a tennis elbow brace with some improvement in her symptoms.

12. Dr. Ritzer was of the opinion that based upon the history obtained, the review of available medical records, and her clinical examination that it was her opinion within a reasonable degree of medical probability and certainty that the symptoms are consistent with a work injury. It was her opinion that it was highly probable that the right thumb pain and right forearm pain and right elbow pain were causally related to her work. Claimant was referred to therapy, medications provided and work restrictions of no repetitive motion with the right arm and a continued use of right wrist brace and elbow tennis brace with no repetitive lifting of the right upper extremity of more than 5 pounds were provided.

13. Dr. Ritzer did complete an M164 initial medical evaluation form indicating that the determination of work relatedness was pending a job demand analysis.

14. A job demand analysis was performed by Genex on February 1, 2018. The Genex report indicates that Claimant's essential functions were to collect by hand or cart various foods and ingredients to be included in recipes. Claimant cleans, cuts, measures, weighs, and prepares various salads, sandwiches, wraps and other prepared foods for assembly. Claimant covers, wraps, labels then transports foods to the fresh pack wall for display. Claimant stocks additional prepared food in the walk-in refrigerator. Claimant removes food items that are past due dates, and restocks and fills the display case as needed. At the end of shift, Claimant sweeps floors, empties trash, sanitizes and squeegees the kitchen work surfaces and may assist in dishwashing activities. This consists of 85 to 90% of Claimant's job tasks.

15. A majority of Claimant's work (up to 90% of the day) was performed in refrigerated or cold areas, these are areas where the temperature was at least 32 degrees. This included the fresh-pack wall, walk in refrigerated coolers, and work assembly areas in a cool area and two other refrigerated areas (blast chiller and another walk in refrigerator).

16. Claimant was required to clock in and out for lunch and was not paid for the lunch break. There were times when Claimant was not able or did not take the allotted 15 minute break two times a day, especially during the busy season.

17. Claimant was referred for EMG testing which was negative for carpal tunnel and was eventually referred for an evaluation by a hand surgeon Dr. Griggs.

18. Claimant has been off work since March of 2018 for non-work related conditions including a foot surgery (March 2018) and a total knee replacement which occurred in December of 2018.

19. Claimant was re-evaluated by Dr. Ritzer on February 19, 2018. Dr. Ritzer was of the opinion that it was highly probable that the right thumb, right forearm, and right elbow pain were causally related to Claimant's work. Dr. Ritzer noted that the job demands analysis was completed on February 1, 2018, and Claimant had risk factors including awkward posture and repetitive duration as a primary risk factor. There were four hours of wrist flexion greater than 45 degrees extension or greater than 30 degrees or ulnar deviation greater than 20 degrees.

20. After review of the job site analysis, Dr. Ritzer confirmed in the subsequent reports and M164 reports that Claimant's condition was work related. Based upon the primary risk factors and her clinical findings Dr. Ritzer requested an EMG nerve conduction study of the right upper extremity with Dr. Wakeshima. She also referred Claimant to Dr. Griggs for further recommendations after the nerve studies were completed.

21. On March 19, 2018, Dr. Ritzer noted that Claimant had improvement from the CMC injection particularly with radiating pain up into the forearm and remained of the opinion that the current problems were consistent with the work injury and it

was highly probable that the right thumb pain and right forearm pain and elbow pain where causally related to her work.

22. Claimant was evaluated by Dr. Sean Griggs who recommended surgery at the CMC joint of the right hand and authorization was pending for the requested surgery. On March 5, 2018, Dr. Griggs diagnosed Claimant with right thumb CMC joint arthritis. Claimant was treated conservatively with splinting, therapy and injections. Since those treatment modalities had failed, he recommended surgical management and x-rays were taken that noted significant arthritic change to the right CMC joint. On April 12, 2018, Dr. Griggs opined Claimant was a candidate for a CMC arthroplasty. The parties have stipulated that if the claim is found to be compensable that the recommended surgery is reasonable and necessary.

23. A medical records review was performed by Dr. Carlos Cebrian on May 8, 2018. At the request of Respondents. As part of Dr. Cebrian's medical record review, he was provided with the first report of injury dated January 17, 2018, a job demands analysis and risk factor analysis from Genex dated February 2, 2018, and Dr. Griggs' request for surgery. Dr. Cebrian noted that Claimant worked five days a week from 2:30 p.m. to 10:30 p.m. with two 15-minute breaks and one 30-minute lunch break. He also noted that overtime was not typical.

24. Dr. Cebrian was of the opinion that the diagnosis of left CMC arthritis osteoarthritis CMC arthroplasty and right CMC osteoarthritis and right trigger thumb were not work related. Dr. Cebrian was of the opinion that the doctors (Dr. Griggs) had not performed a formal causation analysis as required by the Colorado Division of Workers' Compensation medical treatment guidelines (MTG) for cumulative trauma conditions in determining whether Claimant's complaints were causally related to her work.

25. Dr. Cebrian was of the opinion that Claimant's job duties did not require her to engage in forceful or repetitive activity for the amount of time needed to meet the minimum threshold required in the MTG. Dr. Cebrian noted that since Claimant worked a maximum of 7 hours of shift not 8 that the total exposure time was not four hours but three hours 46 minutes and 48 seconds and therefore did not meet the primary risk factors contained in the MTG.

26. Claimant was evaluated by Dr. John Hughes at the request of Claimant's attorney on October 23, 2018. He reviewed the risk factor analysis performed by Genex on February 1, 2018. Dr. Hughes described the risk factors and conclusions of the analysis noting that simple pinch grip was performed by Claimant on a "frequent" basis and that Claimant worked in an environment below 30 degrees in the refrigerated work areas performing cutting, chopping and other food preparation. The job demand analysis also noted fine manipulation/ pinch and grasp as "frequent" during the course of packaging. As a result, Genex concluded that there was a primary risk factor for wrist extension beyond 30 degrees in excess of 4 hours as outlined in her extrapolation of a one-hour study over an 8 hour work shift.

He noted that the job demand analysis did not take into account the combined one hour of breaks taken by Claimant in the course of her work performed 5 days a week.

27. Dr. Hughes credibly opined that Claimant's right thumb basal joint osteoarthritis is work-related. Dr. Hughes referred to the criteria outlined in the Colorado Division of Workers' Compensation cumulative trauma condition medical treatment guidelines, and noted that unlike Dr. Cebrian his conclusion was based on an analysis of all occupational and non-occupational factors that contribute to Claimant's right thumb basal joint osteoarthritis. Dr. Hughes indicated he agreed with Dr. Cebrian that her diagnosis is 'aggravated osteoarthritis'. Dr. Hughes also agreed with Dr. Cebrian that the second step in the causation analysis was to clearly define the job duties of the worker, and he used the job demands analysis for detailed information regarding Claimant's work duties.

28. Dr. Hughes indicated that unlike Dr. Cebrian he had been able to directly interview Claimant and handle the plastic containers that she was required to manually close using the thumb/ index pinch graft. Dr. Hughes noted that the medical treatment guidelines under causation analysis step four indicate that a "pre-existing condition may be aggravated by or contribute to exposures lower than those listed on the table." That same section of the medical treatment guidelines recommend that the clinician identify non-occupational diagnosis and risk factors. He noted that Claimant had additional risk factors of her female gender and age which were independent and non-occupational risk factors for the development of osteoarthritis of the thumb basal joint.

29. Dr. Hughes agreed that if Claimant worked 7 hours of an 8 hour work shift that she would be under the 4-hour recommended time frame by a little bit less than 14 minutes. However Dr. Hughes indicated by looking deeper into the actual tasks performed by Claimant that he was impressed by the combination of risk factors that included work in an environment below 30 degrees during food preparation in refrigerated work areas done in conjunction with cutting/chopping and food preparation that included a pinch grasp of the plastic containers at Employer. Dr. Hughes credibly opined that these multiple factors were quite similar to those referenced by the division of workers compensation in the MTG on page 9 where it is noted that in meat, fish, and poultry processing industries, workers are exposed to repetitive mono task jobs that involve forceful grip, awkward postures, vibration, and cold environments.

30. Dr. Hughes noted that in Claimant's case there was not a vibration exposure but there is a repetitive pinched grip performed in the refrigerated environment. And that overall she meets the division criteria for a secondary risk factor with respect to force and repetition/ duration of "3 hours of use of 2 pounds hinge force or 10 pounds of hand force three times or more per minute." He went on to indicate that taking this to the diagnosis specific risk table on page 34 "aggravated osteo-arthritis of the thumb CMC joint", there is reference to non-evidence-based studies

supporting repetitive thumb movement of 20 times per minute in women contributing to CMC arthritis as well as repetition affecting the thumb joint for 4 hours. He noted that while Claimant does not quite meet the criteria for the hour exposure by 14 minutes she does probably meet the repetitive thumb movement criteria outlined on page 30 of this guideline.

31. As a result of all these considerations and taking into account the non-work-related risk factors, it is found consistent with Dr. Hughes's opinion, that Claimant aggravated a previously occult right thumb basal joint osteoarthritis, making this a work-related medical condition.

32. Dr. Hughes credibly opined that Claimant was not at maximum medical improvement and that the surgical treatment recommended by Dr. Griggs, and endorsed by Dr. Ritzer, was reasonably necessary and related.

CONCLUSIONS OF LAW

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is

sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

Claimant contends that, if her alleged occupational disease is found compensable, she is seeking an award of medical benefits, specifically, the surgery recommended by Dr. Griggs. Claimant contends this medical treatment is reasonable and necessary.

Section 8-42-101(1)(a), supra, provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

Respondents thus are liable for authorized medical treatment reasonably necessary to cure and relieve the employee from the effects of the injury. Section 8-42-101, *supra*; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

It is concluded that greater weight is given to the medical opinions of Dr. Ritzer (ATP) and Dr. John Hughes that Claimant's right thumb osteo-arthirits is related to her work activities with Employer. Dr. Hughes and Dr. Ritzer performed a causation analysis as required by the MTG with all of the information required and based upon a consideration of all the factors determined that Claimant's current right thumb condition is work related.

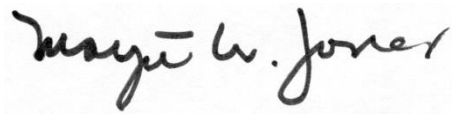
Further, it is concluded that Claimant's need for medical care are related to her work activities at Employer, and the surgery recommended by Dr. Griggs, is reasonable and necessary. Respondents shall be liable for this treatment.

ORDER

1. The right thumb surgery recommended by Dr. Griggs is reasonable necessary and related to work injury. Respondent shall authorize and pay for the same.

2. All matters not determined herein are reserved for future determination.

This 29th day of March, 2019.



Margot W. Jones
Administrative Law Judge
Office of Administrative Court
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-977-676-003

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 26, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 2/26/19, Courtroom 3, beginning at 8:30 AM, and ending at 9:30 AM). The official Spanish/English Interpreter was Jorge Espinosa.

Claimant's Exhibits 1 through 15 were admitted into evidence, without objection. Respondents' Exhibits A through C were admitted into evidence, without objection.

In lieu of his testimony at hearing, the post-hearing evidentiary deposition of Lon E. Noel, M.D., was taken on March 5, 2019, and a written transcript thereof was lodged on March 21, 2019

At the conclusion of the hearing, the ALJ established a deadline for the submission of the written transcript of the evidentiary deposition of Lon Noel, M.D., which was taken on March 5, 2019 and lodged with the ALJ on March 21, 2019. Also, the ALJ established a post-hearing briefing schedule: despite requesting briefs (position statements o written closing statements as described in OACRP, Rule 24), Claimant filed "Proposed Full Findings of Fact, Conclusions of Law and Order on March 25, 2019, indicating that Respondents were filing the same. As a matter of judicial protocol, the ALJ finds it to be inappropriate to entertain a presumed decision, as opposed to argument, which could create an appearance that the ALJ has abdicated his decision-making function. The ALJ will consider the Claimant's filing as an "opening

brief." In this instance, the ALJ gives counsel for the Claimant the benefit of the doubt and infers that counsel was confused concerning the establishment of a post-hearing briefing schedule, which provided for the filing of an "opening brief" within five (5) calendar days; an answer brief within five (5) calendar days of the opening brief; and, a reply brief within two (2) calendar days of the answer brief. Respondents' answer brief was filed on March 29, 2019. Because this decision is in the Claimant's favor in all respects, the ALJ determines that a reply brief is unnecessary sand the matter was deemed submitted for decision on March 29, 2019.

ISSUES

The issues to be determined by this decision involve whether Claimant's claim should be reopened based on a change/worsening of his condition. If the claim is reopened, the ALJ must decide whether Matthew Dhieux, M.D., Alexander Feldman, M.D., and Stephen J. Annest, M.D. are authorized providers (ATPs) because former ATPs refused to treat for non-medical reasons; and whether the medical treatment, including the September 11, 2018 surgery, Claimant received is reasonably necessary, and causally related to his admitted November 25, 2014 industrial injury.

The Claimant bears the burden of proof, by a preponderance of the evidence, on all issues herein.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated that if the claim is reopened, the Claimant is entitled to temporary total disability (TTD) benefits from September 11, 2018, through December 12, 2018. Because the Claim is reopened, the ALJ accepts the Stipulation and so finds.

2. The Claimant has worked for the Employer for over 23 years. On November 25, 2014, he injured his neck and back while working for the Employer. The claim was admitted, and the Claimant underwent extensive medical treatment, including multiple surgeries, and missed time from work (Claimant's Exhibit 1, p. 1). Throughout the course of treatment, the Claimant reported left-sided radicular symptoms (Claimant's Exhibit 10, pp. 123-181). On March 9, 2015, the Claimant underwent an anterior cervical C6-7 discectomy and fusion with Douglas Wong, M.D. (Claimant's Exhibit 8, pp.117-119). Approximately three months later, on June 3, 2015, the Claimant underwent a left shoulder arthroscopic rotator cuff repair, subacromial decompression, and distal clavicle resection with Douglas Foulk, M.D. (Claimant's Exhibit 9, pp. 120-122). Following surgery, the Claimant underwent significant treatment. He worked light duty throughout his recovery.

3. Eventually, in March 2016, the Claimant was placed at maximum medical improvement (MMI) and given a permanent impairment rating. On March 6, 2016, Lawrence Lesnak, D.O.., gave the Claimant an impairment rating and assigned a 9% whole person impairment (Claimant's Exhibit 11, pp. 188-197). On March 9, 2016, Lon Noel, M.D., the Claimant's ATP, adopted Dr. Lesnak's impairment rating and placed the Claimant at MMI. Dr. Noel assigned permanent work restrictions for the Claimant, including occasionally lifting 10 pounds from floor to waist, no repetitive floor to waist lifting, occasionally lifting 10 pounds from waist to shoulder, no repetitive waist to shoulder lifting, no overhead lifting, limited overhead reaching, bilateral upper extremity lift of 10 pounds for 50 feet, 5 pounds lifting with his left upper extremity, 10 pounds lifting with his right upper extremity, bilateral push of 20 pounds, bilateral pull of 20 pounds, no repetitive torqueing maneuvers with his left upper extremity (LUE), no work at unprotected heights, and no use of vibrating machinery with his LUE, among other restrictions, and recommended maintenance treatment (Claimant's Exhibit 7, pp. 82-86).

4. The Claimant challenged Dr. Lesnak's impairment rating, Dr. Noel's adoption thereof and Dr. Noel's MMI determination. On September 9, 2016, the Claimant underwent a Division Independent Medical Evaluation (DIME) with Linda Mitchell, M.D. Dr. Mitchell determined that the Claimant reached MMI on April 6, 2016. Dr. Mitchell further determined that the Claimant had an 18% LUE rating and a 19% whole person cervical rating, combining these ratings, pursuant to the directions of the AMA Guides to the Evaluation of Permanent Impairment, 3rd Ed., Rev., for a 28% whole person rating. [1]Dr. Mitchell agreed with Claimant's work restrictions and maintenance treatment plan (Claimant's Exhibit 1, pp. 6-19.)

5. On October 18, 2016, Respondents filed a Final Admission of Liability (FAL) admitting for Dr. Mitchell's ratings and MMI date (Claimant's Exhibit 1, pp. 1-19).

6. On March 27, 2018, the Claimant filed a Petition to Reopen his claim based on a change/worsening of his condition (Claimant's Exhibit 2, pp. 20-40). On October 31, 2018, the Claimant applied for a hearing on the issues of reopening, reasonably necessary medical benefits, authorized provider, and temporary disability benefits (Claimant's Exhibit 3, pp. 41-43). On November 13, 2018, Respondents filed a Response to Claimant's Application for Hearing and endorsed the additional issue of applicable offsets (Claimant's Exhibit 4, pp. 44-46).

Midtown Occupational Health Services – Lon Noel, M.D., Claimant's Authorized Treating Physician (ATP)

7. On February 5, 2016, the Claimant underwent a Functional Capacities Evaluation (FCE). The examiner determined that the Claimant gave maximum effort. The Claimant was placed in the sedentary work category. The examiner determined

[1] Section 8-42-107 (7) (b) (II), C.R.S. provides that whole person and scheduled injuries must be rated separately.

that the Claimant's maximum lifting, pushing, and pulling capabilities were limited to: occasionally lifting 10 pounds from floor to waist, no repetitive floor to waist lifting, occasionally lifting 10 pounds from waist to shoulder, no repetitive waist to shoulder lifting, no overhead lifting, limited overhead reaching, bilateral upper extremity lift of 10 pounds for 50 feet, 5 pounds lifting with his left upper extremity, 10 pounds lifting with his right upper extremity, bilateral push of 20 pounds, bilateral pull of 20 pounds, no repetitive torqueing maneuvers with his left upper extremity, no work at unprotected heights, and no use of vibrating machinery with his left upper extremity, among other restrictions (Claimant's Exhibit 15, pp. 269-300.) On February 23, 2016, the Claimant treated with Dr. Noel, who assigned the Claimant permanent work restrictions pursuant to the FCE (Claimant's Exhibit 7, pp. 82-83). On March 9, 2016, Dr. Noel placed the Claimant at MMI, adopting Dr. Lesnak's impairment rating, and recommending medical maintenance treatment (Claimant's Exhibit 7, pp. 84-86).

8. On February 9, 2017, the Claimant returned to Dr. Noel for a post-MMI maintenance visit. The Claimant reported increased left shoulder, arm, and neck pain and other symptoms, including cramping. The Claimant reported that his work was making his condition worse. He denied any new injury. He reported that he had to use a pillow for comfort. He reported that his diabetes was well-controlled with medication. Dr. Noel recommended that the Claimant continue with his home exercise program, prescribed medication and a topical cream, and added new restrictions, including minimal forward reaching with the left arm/hand and to avoid painting water tanks (Claimant's Exhibit 7, pp. 87-90). On March 9 and March 14, 2017, Dr. Noel prescribed more physical and massage therapy for the Claimant (Claimant's Exhibit 7, pp. 91-93). On March 23, 2017, Dr. Noel recommended ongoing massage therapy (Claimant's Exhibit 7, pp. 94-96. On April 6, 2017, Dr. Noel stated that the Claimant would not require any additional visits (Claimant's Exhibit 7, pp. 97-101). From March 13, 2017, through April 6, 2017, the Claimant underwent 11 massage and physical therapy sessions through Midtown (Claimant's Exhibit 12, pp. 230-254).

9. On March 23, 2018, the Claimant treated with Dr. Noel, who noted that in October/November 2017 the Claimant attempted to follow-up with Midtown, but Respondents denied the Claimant from following up with him. The ALJ finds that this denial was a refusal to treat for non-medical reasons. Dr. Noel noted that the Claimant then sought treatment with his primary halthcare physician, who referred him to the Vascular Institute of the Rockies, Dr. Annest. Dr. Noel added that Dr. Feldman performed an EMG, which revealed left-sided thoracic outlet syndrome and brachial plexus entrapment. The Claimant reported ongoing left shoulder, upper back, neck, and left upper extremity symptoms, including pain, weakness, numbness, and tingling. Dr. Noel recommended reopening the Claimant's claim and referred the Claimant to Dr. Lesnak (Claimant's Exhibit 7, pp. 102-107). On May 10, 2018, the Claimant treated with Dr. Noel, who noted the Claimant's ongoing symptoms and that the Claimant was awaiting an EMG with Dr. Lesnak (Claimant's Exhibit 7, pp.107-110). On May 17, 2018, Dr. Noel noted that he had spoken with Dr. Lesnak, who did not think the Claimant was a surgical candidate and that the Claimant's ongoing issues were related to his diabetes and not his work injury (Claimant's Exhibit 7, pp. 111-113). On May 25, 2018, Dr. Noel

noted Dr. Lesnak's opinion regarding the Claimant's diagnosis and treatment plan, including that Dr. Lesnak did not think the Claimant had thoracic outlet syndrome and that Dr. Lesnak did not recommend surgery. Dr. Noel then was of the opinion that the Claimant was at MMI and did not require follow-up with him (Claimant's Exhibit 7, pp. 114-116). For the reasons specified herein below, the ALJ finds the opinions of Dr. Lesnak lacking in credibility. Based upon Dr. Noel's manifested deference to the opinions of Dr. Lesnak, the ALJ also finds his opinions lacking in credibility.

10. On March 5, 2019, Respondents took Dr. Noel's evidentiary deposition. Dr. Noel testified that in February 2017, the Claimant returned for treatment because he was having increased pain and symptoms without re-injury (Noel Depo. Tr. p. 10, lns. 23-25; p. 11, lns1-3). Dr. Noel testified that the Claimant requested to be seen in October or November 2017, but the insurance company did not approve for the Claimant to be treated (Noel Depo. Tr. p. 13, lns.11-13; p.24, lns. 21-25; p. 25, lns.1-4). Dr. Noel testified Claimant then treated with his primary care physician, who referred him to Dr. Feldman and to Dr. Annest (Noel Depo. Tr. p. 13, lns.14-19; p. 14, lns.7-11; p. 25, lns.5-13). Dr. Noel testified that he treated the Claimant in March 2018, because the insurance company authorized a one-time evaluation (Noel Depo. Tr. p. 13, lns.8-11). Dr. Noel testified that he agreed with Dr. Lesnak's opinions regarding the Claimant. Depo. Tr. p. 17, lns.15-21). Regarding the Claimant's September 11, 2018 thoracic outlet surgery, Dr. Noel testified, "It sounds like a good result" (Depo. Tr. pp. 27-31).

11. Ultimately deferring to Dr. Lesnak, Dr. Noel implied that no further medical intervention for the Claimant was necessary. Not only is this opinion internally inconsistent with Dr. Noel's continued treatment of the Claimant until he refused to further treat for non-medical reasons, *i.e.,* the insurance carrier's refusal to authorize, but it is contrary to the weight of the credible evidence, thus, the opinion is not credible.

Lawrence Lesnak, D.O.. – Colorado Rehabilitation and Occupational Medicine

12. On August 12, 2015, the Claimant first treated with Dr. Lesnak, who performed a left upper extremity EMG. Dr. Lesnak determined that the EMG revealed evidence of early distal sensory peripheral polyneuropathy, involving the distal median and sensory nerve branches without any motor involvement, and no evidence of any nerve entrapments (Claimant's Exhibit 11, pp. 182-187). On March 9, 2016, Dr. Lesnak next evaluated the Claimant to perform his initial impairment rating, as outlined above. Dr. Lesnak believed that the Claimant's range of motion (ROM) measurements were not valid, so he had Claimant follow-up for repeat ROM testing (Claimant's Exhibit 11, pp. 188-194). On April 6, 2016, the Claimant returned to Dr. Lesnak, who determined that the Claimant's ROM measurements were again invalid (Claimant's Exhibit 11, pp. 195-197). Dr. Lesnak did not give a satisfactory explanation as to why the ROM measurements were invalid. On May 25, 2016, the Claimant treated with Dr. Lesnak for a maintenance visit. Dr. Lesnak noted the Claimant's ongoing pain and other complaints. Dr. Lesnak stated that he believed that the Claimant had financial concerns and may be trying to reopen his case (Claimant's Exhibit 11, pp.198-201). In venturing into the parapsychological and psychological fields, Dr. Lesnak has not demonstrated

any expertise. Moreover, his speculation in this regard demonstrates a bias against an objective medical assessment and the ALJ finds that this substantially compromises Dr. Lesnak's overall credibility. On July 25, 2016, the Claimant again treated with Dr. Lesnak and reported his ongoing left-sided neck, suprascapular/scapular, shoulder, and left upper extremity symptoms. Dr. Lesnak recommended a repeat left upper extremity EMG due to Claimant's ongoing pain and other symptoms (Claimant's Exhibit 11, pp. 202-204). Dr. Lesnak, based on an EMG, formed the opinion that there was no evidence of thoracic outlet (TOS) syndrome. In this respect, Dr. Lesnak disagrees with Dr. Annest and Dr. Feldman, two physicians who diagnosed TOS and have more expertise concerning TOS than Dr. Lesnak. The ALJ does not find Dr. lesnak's opinion in this regard credible.

13. On May 10, 2018, almost two years later, the Claimant again treated with Dr. Lesnak and reported his ongoing symptoms and that he has been undergoing treatment with his PCPs, Dr. Feldman, and Dr. Annest. The Claimant reported these doctors' treatment recommendations and plan. The Claimant reported constant severe left posterolateral neck and suprascapular/scapular pain, numbness throughout his left arm, hand, and fingers, muscle twitching, and left-sided anterior-superior chest pains. Dr. Lesnak recommended repeat EMG testing. Dr. Lesnak stated he does not think that the Claimant has thoracic outlet syndrome. In this regard, the ALJ finds that Dr. Lesnak has not offered a satisfactory explanation for this opinion. In fact, the ALJ finds the opinion speculative. Dr. Lesnak stated that the Claimant has subjective complaints but no real objective findings (Claimant's Exhibit 11, pp. 205-211). On May 17, 2018, Dr. Lesnak evaluated the Claimant and determined that he was a poor surgical candidate, regardless of any EMG or other testing. Dr. Lesnak is not surgeon. Dr. Lesnak performed a left upper extremity EMG and determined the EMG revealed no evidence of thoracic outlet syndrome. Dr. Lesnak determined the EMG did reveal evidence of diffuse peripheral polyneuropathy and recommended that the Claimant undergo EMGs of his three other limbs to confirm the diagnosis. Dr. Lesnak suggested that the Claimant was embellishing his pain complaints and other symptoms (Claimant's Exhibit 11, pp. 212-218). On May 23, 2018, Dr. Lesnak performed the three other EMGs and determined the EMGs showed "evidence of what appears to be diffuse sensory greater than motor peripheral polyneuropathy involving the patient's right upper and lower extremities." Dr. Lesnak stated the opinion that the Claimant does not have thoracic outlet syndrome and does not need surgery (Claimant's Exhibit 11, pp.219-227). Dr. lesnak's opinion in this regard is in conflict with the opinions of other physicians who have more specific expertise than Dr. Lesnak.

14. After having augmented the ATP'S (Dr. Noel) treatment and originally rating the Claimant's permanent impairment. Dr. Lesnak performed a medical records review at Respondents' request concerning the re-opening issue at hand. Apparently, he saw no conflicting role. He reviewed Dr. Annest and Dr. Feldman's records. Dr. Lesnak disagreed with Dr. Annest's diagnosis and treatment plan. Dr. Lesnak was of the opinion that the September 11, 2018 surgery was not related to Claimant's work injury. Dr. Lesnak stated the opinion that the Claimant's mechanism of injury could not

have caused thoracic outlet syndrome (Claimant's Exhibit 11, pp. 228-229). Again, Dr. Lesnak offered no satisfactory underlying explanation for this opinion.

15. Dr. Lesnak rendered the ultimate opinion that no further medical intervention for the Claimant was necessary. The ALJ infers and finds that Dr. Lesnak's opinion in this regard was heavily based on Dr. Lesnak's opinion that Claimant's complaints were primarily "somatic," an opinion refuted by the totality of the evidence and by Dr. Lesnak's lack of sufficient expertise in the fields of psychiatry and parapsychology.

Alexander Feldman, M.D. – Advanced Neurological

16. On January 18, 2018, the Claimant treated with Dr. Feldman and reported a history of his industrial injury, including the nature of his injury and the treatment he received. Also, the Claimant reported that his workers' compensation claim was closed. He reported severe neck and left shoulder pain and increased pain with movement. Dr. Feldman noted that the Claimant had a significantly limited range of motion (ROM) in both his neck and left shoulder and shooting pain in his left hand. Dr. Feldman r. Lesnak's opinion to the contrary is significantly lacking in credibility. Dr. Feldman had an EMG of Claimant's LUE performed. He determined that the EMG **revealed evidence of left-sided thoracic outlet syndrome (primarily a neurological condition).** Dr. Feldman prescribed gabapentin for the Claimant and noted that he was going to obtain Claimant's medical records from his workers' compensation claim (Claimant's Exhibit 6, pp. 71-75). On January 25, 2018, the Claimant followed-up with Dr. Feldman, who confirmed the thoracic outlet syndrome diagnosis and related it to his trauma from three years ago (Claimant's Exhibit 6, p. 79) and referred the Claimant to the Vascular Institute of the Rockies (Claimant's Exhibit 6, pp. 76-77). On March 13, 2018, the Claimant treated with Dr. Feldman, who noted that the Claimant had seen Dr. Annest and been referred back to Dr. Feldman for a left scalene and pectoralis minor block. Dr. Feldman performed the block and noted Claimant had a "highly positive diagnostic left pectoralis minor and scalene muscles block indicating potential good response to the TOS surgery." Dr. Feldman diagnosed Claimant with mononeuropathy and brachial plexus (Claimant's Exhibit 6, pp. 78-81). This diagnosis outweighs any diagnoses made by Dr. Lesnak and Dr. Noel and it is more credible than their diagnoses.

Stephen J. Annest, M.D. – Vascular Institute of the Rockies

17. On February 23, 2018, the Claimant treated with Dr. Annest and reported the nature and history of his industrial injury. Claimant reported that he underwent left shoulder and neck surgery. Claimant reported 7-8/ out-of 10 pain. Dr. Annest noted that the Claimant was referred by Dr. Dhieux, Claimant's PCP. Dr. Annest reviewed Claimant's medical history and the treatment Claimant underwent in relation to his industrial injury. The Claimant reported LUE, shoulder, and neck pain, arm weakness, left shoulder numbness, radiating pain/numbness/tingling down his left arm, and limited ROM. Dr. Annest noted a positive pectoralis stretch, as well as positive upper extremity

tension test and positive ROOS test. Dr. Annest noted scalene tenderness and that the Claimant had an abnormal EMG. Dr. Annest added that he reviewed Dr. Feldman's records and agreed that these findings were consistent with brachial plexus entrapment at the scalene triangle and left pectoralis minor and **diagnosed Claimant with thoracic outlet syndrome**. Dr. Feldman noted that he did not find much irritation on the Claimant's right side. Dr. Feldman noted he reviewed the anatomy of thoracic outlet syndrome with Claimant and his daughter. Dr. Feldman advised Claimant regarding the pros and cons of surgery and that without the surgery, Claimant will likely continue to have the same symptoms. Dr. Annest recommended Claimant undergo a left scalene and pectoralis minor block (Claimant's Exhibit 5, pp. 47-52).

18. On July 2, 2018, the Claimant treated with Dr. Annest, who noted he reviewed the Claimant's treatment options, and the pros and cons of these options, with the Claimant and his daughter (who translated). Dr. Annest noted that he reviewed Claimant's medical records, including Dr. Lesnak's reports, related to his industrial injury. Dr. Annest noted that the Claimant has severe left arm, shoulder, and neck pain and that depending on Claimant's daily activities, the pain could make him nauseated. Dr. Annest noted that the Claimant had disabling shoulder and arm pain with physical and EMG evidence of brachial plexus entrapment, which was supported by the Claimant's positive response to both left pectoralis and scalene blocks. Dr. Annest added that "the above findings support the diagnosis of muscular impingement of his left brachial plexus at the scalene triangle and left pectoralis minor, **the above is in my opinion caused by his on the job work injury"** (emphasis supplied) (Claimant's Exhibit 5, pp. 53-57).

19. On September 11, 2018, the Claimant underwent **thoracic outlet surgery with Dr. Annest** (emphasis supplied). Dr. Lesnak, an osteopathic physical medicine doctor, by virtue of his opinion, projected that Dr. Annest, a vascular surgeon, performed an unnecessary surgery. Dr.Lesnak's opinion in this regard strains credibility to the limit. Dr. Annest performed a left transaxillary pectoralis minor tenotomy, neurolysis of the brachial plexus chest wall, first rib resection, supraclavicular neurolysis of C5, C6, C7, C8, and T1 nerve roots, neurolysis of upper, middle, and lower trunk of the brachial plexus, dissection and control of the subclavian artery, and amniotic membrane wrap of the brachial plexus. Dr. Annest noted that the Claimant had a deep large pectoralis minor muscle that overlaid the brachial plexus and that he was able to free the muscle completely. Dr. Annest noted Claimant's rib was wide, large, and high, adjacent to all the thoracic outlet structure. Dr. Annest added that the anterior scalene muscle was the major component of the compression as was the middle scalene muscle. Dr. Annest noted that the Claimant's muscles tested functional at the completion of the surgery and that the Claimant awoke with normal diaphragmatic function and good arm movement (Claimant's Exhibit 5, pp. 58-64)

20. On October 8, 2018, Claimant again treated with Dr. Annest and reported that he felt great and that he was getting better. The Claimant reported that he had decreased pain but still had some pain in his left shoulder and down his left arm. Claimant reported that overall everything was getting better. Dr. Annest kept the

Claimant off work (Claimant's Exhibit 5, pp. 65-66). On December 10, 2018, the Claimant again treated with Dr. Annest, who noted that the Claimant continues to improve since the surgery and released the Claimant back to work with restrictions of no lifting, pushing, or pulling greater than 15 pounds (Claimant's Exhibit 5, pp. 67-70). The ALJ finds Dr. Annest's opinions credible and highly persuasive.

The Claimant

21. At the hearing, according to the Claimant, after he was released at MMI, he returned to work for the Employer with permanent work restrictions. His light duty job duties included placing stickers and tags on products, gathering supplies, running errands, and overseeing the product. He testified that after MMI, he continued to have symptoms in his neck, shoulder, and chest, including pain, and numbness and he had restricted shoulder and neck ROM/flexibility. He used medications and hot/cold packs. After 2016 to 2017, the Claimant's symptoms changed for the worse. He followed-up with Dr. Noel, who recommended a muscle relaxer, some physical therapy, and a home exercise plan. The Claimant's symptoms did not improve, and he continued to work light duty with his permanent work restrictions and the additional restrictions from Dr. Noel. The Claimant's symptoms only worsened.

22. According to the Claimant, in October or November 2017, he attempted to return to Dr. Noel, but he was not authorized to see Dr. Noel anymore and was not able to see him because of non-medical reasons. He then went to his personal doctor, Dr. Sonia, at Clinica Salud. Dr. Sonia referred him to a neurologist, Dr. Feldman, and then to Dr. Annest.

23. According to the Claimant, prior to his September 11, 2018 surgery with Dr. Annest, he could not reach his left arm overhead or out to his side. Prior to the September 11, 2018 surgery, the Claimant could not work with his left arm. After the surgery, the Claimant is now able to raise his left arm above his head, out away from his body, and across his body, and he can now work with his left arm. The surgery improved the Claimant's condition a lot. According to the Claimant, he has diabetes but it is very well-controlled with medications and diet. His primary care physician told him that his diabetes is well controlled and that he may be able to stop the medications soon. Claimant testified his underlying diabetes did not prevent him from having his neck or shoulder surgery or his September 11, 2018 thoracic outlet syndrome surgery.

Ultimate Findings

24. The ALJ finds the Claimant's testimony to be straight-forward, consistent throughout, credible and highly persuasive. Although Dr. Lesnak attempted to cloud the Claimant's credibility with speculative opinions beyond his area of expertise (Psychology and Metaphysics), he failed to do so. The Claimant's testimony was consistent throughout and supported by the expert opinons of Dr. Annest and Dr. Feldman. Although Dr. Noel meant well in his continued treatment of the Claimant, his excessive deference to Dr. Lesnak's opinions compromises his own opinion. The ALJ

finds the ultimate opinions of Dr. Noel and especially Dr. Lesnak are lacking in persuasiveness and credibility as they relate to the Claimant's present condition and his Petition to Reopen. On the other hand, the ALJ finds the opinions of Dr. Annent and Dr. Feldman highly persuasive and credible because they dealt with the Claimant more on a recent basis, their medical analyses are thorough and well founded and they have more specific medical expertise that is relevant to the Claimant's present condition.

25. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Annent and Dr. Feldman and to reject the opinions of Dr. Lesnak and Dr. Noel. Also, the ALJ makes a rational choice to accept the Claimant's credible testimony and to reject any evidence to the contrary.

26. The ALJ finds that the Claimant has proven by a preponderance of the evidence that the Claimant's condition changed/worsened since being placed at MMI on April 6, 2016. The ALJ finds Dr. Noel discharged the Claimant on April 6, 2017 for non-medical reasons, and Respondents refused to authorize any follow-up treatment, even after the Claimant requested to follow-up with Dr. Noel in October or November 2017. The ALJ finds that the Claimant has proven, by a preponderant evidence, that Drs. Dhieux, Feldman, and Annest are authorized providers. (ATPs) The ALJ further finds that the Claimant has proven, by a preponderant evidence, that the September 11, 2018 thoracic outlet syndrome surgery performed by Dr. Annest was reasonably necessary, and causally related to the Claimant's original industrial injury.

27. Based on the stipulation of the parties and the finding of the ALJ herein above, the Claimant is entitled to temporary total disability (TTD) benefits from September 11, 2018, through December 12, 2018. The ALJ finds that the previously admitted average weekly wage (AWW) is $674.25, which yields a TTD rate of $449.50 per week (Claimant's Exhibit 1).

RESPONDENTS' ARGUMENTS

The main thrust of Respondents' argument focuses on the opinions of Dr. Noel and Dr. Lesnak and their alleged credibility because they were ATPs. As found herein above, their opinions were **not** credible for the most part. Respondents' Answer Brief pays scant attention to the opinions of Dr.Annest and Dr. Feldman. In fact, Respondents' argue that "Dr. Lesnak noted that Dr. Annest ignored that Claimant had an extremely high level of somatic complaints." As found, the "somatic" opinions of Dr. Lesnak have been discredited by the totality of the evidence, including the objective opinions of two physicians (Dr. Feldman and Dr. Annest) with more specific, persuasive and credible opinions than Dr. Lesnak. Overall, the ALJ does not find Respondents' arguments persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was straight-forward, consistent throughout, credible and highly persuasive. Although Dr. Lesnak attempted to cloud the Claimant's credibility with speculative opinions beyond his area of expertise (Psychology and Metaphysics), he failed to do so. The Claimant's testimony was consistent throughout and supported by the expert opinions of Dr. Annest and Dr. Feldman. Although Dr. Noel meant well in his continued treatment of the Claimant, his excessive deference to Dr. Lesnak's opinions compromises his own ultimate opinion. As found, the ultimate opinions of Dr. Noel and especially Dr. Lesnak lacked persuasiveness and credibility as they related to the Claimant's present condition and his Petition to Reopen. On the other hand, as found, the opinions of Dr. Annent and Dr. Feldman were highly persuasive and credible because they dealt with the Claimant more on a recent basis, their medical analyses were thorough and well founded and they had more specific medical expertise that is relevant to the Claimant's present condition.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Annent and Dr. Feldman and to reject the opinions of Dr. Lesnak and Dr. Noel. Also, the ALJ made a rational choice to accept the Claimant's credible testimony and to reject any evidence to the contrary.

Reopening

c. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Where a claimant seeks to re-open based on a worsened condition, he must demonstrate a change in condition that is "causally connected to the original compensable injury." *Chavez v. Indus. Comm'n,* 714 P.2d 1328 (Colo. App. 1985). As found, the Claimant's work-related condition became worse after MMI, within the six-year period of limitations and he is, thus, entitled to a re-opening of his case.

Medical Benefits

d. Respondents are liable for medical treatment that is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(a), C.R.S.; *Snyder v. Indus. Claim. Apps. Office*, 942 P.2d 1337 (Colo. App. 1997). To be a compensable

benefit, medical care and treatment must be causally related to an industrial injury. *Dependable Cleaners v. Vasquez*, 883 P.2d 583 (Colo. App. 1994). As found, Claimant has proven that the medical treatment, including the September 11, 2018 surgery, he received through Dr. Annest and Dr. Feldman, was causally related to his original industrial injury. Additionally, medical treatment must be reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101(1)(a), C.R.S.; *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P.2d 864 (1935); *Sims v. Indus. Claim Apps. Office*, 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical treatment, including September 11, 2018 surgery he received through Dr. Annest and Dr. Feldman, was reasonably necessary to cure and relieve the effects of his original industrial injury.

Refusal to Treat for Non-Medical Reasons/Medical Benefits

e. Under the provisions of § 8-43-404 (5) (a) (I) (A), C.R.S., an "employer or insurer shall provide a list of at least two physicians or two corporate medical providers or at least one physician and one corporate medical provider, where available, in the first instance, from which list an injured employee may select the physician who attends said injured employee." Rule 8-2 (A) (1) – (2) of the Workers' Compensation Rules of Procedure (WCRP), 7 CCR 1101-3, provides for the written list in compliance with Section 8-43-404 (5) (a) (I) (A). Rule 8-2 (D) provides that if an employer fails to comply with Rule 8-21, the injured worker may select an authorized treating physician (ATP) of the worker's choosing**. If the physician selected refuses to treat for non-medical reasons, and the insurer fails to appoint a willing ATP after notice of the refusal to treat, the right of selection passes to the injured worker.** *Weinmeister v. Cobe Cardiovascular, Inc.,* W.C. No. 4-657-812 [Industrial Claim Appeals Office (ICAO), July 10, 2006]. *Also see Lutz v. Indus.l Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Ruybal v. University Health Sciences Center,* 768 P.2d 1259 (Colo. App. 1988). As found, Dr. Noel refused to further treat the Claimant as soon as he learned that the insurance carrier would not authorize further treatment. Thereafter, as found, the Claimant went to the Salud Clinic, which referred him to Drs. Dhieux, Feldman and Annent. The chain of authorized referrals was tightly intact. All referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, ATP Dr. Noel refused to further treat the Claimant upon learning that the insurance carrier would not authorize further treatment. This is a refusal to treat for non-medical reasons, whereupon the Claimant selected the Salud Clinic, which referred him to Dr. Dhieux, Feldman and Annest, who became the Claimant's authorized providers and all of their referrals were authorized an in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App.

1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997).

Temporary Disability After Re-Opening

f. The parties stipulated and the ALJ found that the Claimant is entitled to temporary total disability (TTD) benefits from September 11, 2018, through December 12, 2018. The ALJ finds that the previously admitted average weekly wage (AWW) is $674.25, which yields a TTD rate of $449.50 per week, of $64.214 per day (Claimant's Exhibit 1).

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to reopening and benefits thereafter. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven that his condition changed/worsened since being placed at MMI on April 6, 2016. As further found, Dr. Noel discharged the Claimant on April 6, 2017 for non-medical reasons, and Respondents refused to authorize any follow-up treatment, even after the Claimant requested follow-up with Dr. Noel in October or November 2017. As found, Drs. Dhieux, Feldman, and Annest were authorized providers (ATPs); and, the September 11, 2018 thoracic outlet syndrome surgery performed by Dr. Annest was reasonably necessary, and causally related to the Claimant's original industrial injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Claimant's claim in W.C. No. 4-977-676-001 is hereby reopened.

B. Respondents shall pay the costs of all causally-related and reasonably necessary medical care and treatment provided by Matthew Dhieux, M.D., Alexander Feldman, M.D., and Stephen J. Annest, M.D., including the surgery of September 11, 2018, performed by Dr. Annest, subject to the Division of Workers Compensation Medical Fee Schedule.

C. Respondents shall pay the Claimant temporary total disability benefits from September 11, 2018, through December 12, 2018, both dates inclusive, a total of 93 days at the rate of $449.50 per week, or $61.214 per day, in the aggregate amount of $5, 971.93, which is payable retroactively and forthwith.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this 1st day of April 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Did Claimant prove she suffered a compensable injury on June 5, 2018 and/or July 3, 2018?

- If compensable, is the left hip arthroscopic labral repair surgery recommended by Dr. Doner authorized, reasonably necessary, and related to the compensable injury?

- Does the ALJ have jurisdiction to address the surgery, given Dr. Centi's November 28, 2018 declaration of MMI?

- Is Claimant's request for TTD benefits commencing September 4, 2018 barred because she was responsible for termination of her employment?

STIPULATIONS

1. Claimant's average weekly wage is $265.

2. If compensable, Claimant is entitled to temporary partial disability benefits (TPD) from July 4, 2018 through September 3, 2018. The parties reserved the specific amount of TPD benefits pending receipt of wage records.

3. If compensable, Respondents are entitled to a statutory offset based on Claimant's SSDI benefits. The parties reserved the specific offset pending receipt of information regarding Claimant's initial entitlement.

FINDINGS OF FACT

1. Employer is an assisted living center for seniors. Claimant worked as a "plater" and server in an auxiliary kitchen and dining area, serving meals to approximately 25 residents. Her duties included bussing tables, changing linens, and occasionally cleaning the dining area and kitchen. From Claimant's description of job tasks, the ALJ infers it was a light-medium level job, with frequent lifting and carrying objects weighing 10-15 pounds, and occasional lifting up to 50 pounds.

2. Claimant alleges two separate incidents that have been merged into W.C. No. 5-086-228. She claims she injured her low back and left hip on June 5, 2018 while trying to empty a heavy garbage can into a dumpster. She alleges a second injury or aggravation on July 3, 2018 while pushing two dining room tables together.

3. Claimant has a significant history of pre-existing back problems, including an L4-5 fusion by Dr. James Bee in November 2014. The surgery was successful, particularly regarding pre-surgery radicular symptoms. Approximately seven months after

surgery, Dr. Bee released Claimant to "follow up as needed". Claimant testified her onging back symptoms were minimal and well-managed with oxycodone. There are minimal treatment notes between early 2015 and July 2018, which lends credence to Claimant's testimony.

4. The last pre-accident treatment record submitted into evidence was a September 12, 2016 note from Dr. Bee's PA, Nathan Carpenter. Claimant described "normal day to day back pain and achiness" with no leg symptoms or difficulty walking. She was taking 10 mg of oxycodone q.i.d., which was effectively managing her pain. She rated the severity of her typical back pain as "none at all to mild." She said her most painful episodes were generally associated with long car rides or prolonged sitting in uncomfortable chairs. She could "lift heavy objects," walk up to a mile, sit for an hour, and stand "as long as she wants." Her primary concern was an occasional, nonpainful "popping" in her back while twisting. The physical exam was largely unremarkable, with no pain to palpation of the lumbar spine in good range of motion. X-rays showed a solid fusion with no evidence of instability. Mr. Carpenter recommended no treatment because the popping was not causing any pain.

5. The oxycodone was apparently being prescribed by Claimant's PCP, Dr. Walker. At some unspecified time before June 5, 2018, Dr. Walker referred Claimant to Dr. Bert Willman for pain management. No records from Dr. Walker or Dr. Willman were entered into evidence, so the ALJ must rely on Claimant's testimony and sparse commentary in other medical records.

6. Dr. Willman referred Claimant for a lumbar MRI, which already scheduled before the trash incident occurred. The report shows Dr. Willman requested the MRI for "low back and left hip pain since surgery four years ago." The MRI was completed on June 6, 2018. Besides the prior fusion, the most significant finding was "advanced" degenerative disc disease at L5-S1. The paravertebral soft tissues were described as "normal."

7. Dr. Willman started Claimant on gabapentin in approximately mid-June 2018. In the absence of any records from Dr. Walker or Dr. Willman, the ALJ can make no definitive comparison of Claimant's preinjury and post-injury medical condition.

8. Claimant's job duties for Employer included taking the trash from the dining room area to the dumpster after each meal. The garbage was in a 30-gallon grey "BRUTE"-style container with a bag liner. The garbage was frequently heavy because it contained uneaten food, milk cartons, juice, and other liquids. Claimant typically dragged of the garbage cans of the dumpster and either lifted out the bag or dumped the entire can over the 4-foot dumpster lip.

9. On June 5, 2018, Claimant's last task of the day was taking out the trash. The garbage was quite heavy, so she lifted the can to the edge of the dumpster and tried to pivot the bottom up so the garbage would fall out. While she was lifting, she felt a pop and pain in her low back, buttocks and left hip. Claimant could not get the trash out of the can. She waited by the dumpster a few moments for the pain to subside, then she dragged

the garbage can back into the kitchen. No one else was in the kitchen or dining area, and she did not mention the incident to anyone. Instead, she went home, assuming she had just "pulled a muscle or something."

10. When she arrived at work the next day, she found a note from her supervisor, Mary L[Redacted]. The note reminded Claimant the trash had to be emptied at the end of every shift and to get help if she could not do it alone. During her testimony, Ms. L[Redacted] confirmed leaving the note for Claimant. The ALJ finds this corroborates the incident described by Claimant.

11. Claimant worked her regular schedule despite the pain in her back and buttocks for another month.

12. On June 18, 2018, Claimant attended a meeting with Cindy B[Redacted] (the HR manager) and the director of dining services about a conflict between Claimant and a co-worker. During the meeting, Claimant told Ms. B[Redacted] she was having trouble taking out the trash, but did not report a specific incident on June 5.

13. On July 3, 2018, Claimant was pushing two dining room tables together when she felt a pop and felt pain in her back and groin. In Claimant testified the pain made her nauseous and asked to go home. Ms. L[Redacted] testified Claimant told her she had vomited and felt nauseous and wanted to leave because she did not want the residents to get sick. She did not mention pushing the tables together. Ms. L[Redacted] noted Claimant "looked like she was in pain or not feeling well."

14. Claimant left work and went to the Penrose Community Urgent Care. The report does not mention any illness or nausea/vomiting. Claimant complained of low back pain with occasional radiation down the legs "that has been worsening over the last several weeks." She stated Dr. Willhelm had started her on gabapentin "2 weeks ago" and she recently had an MRI that showed "bulging discs." She already had an appointment scheduled with Dr. Bee for July 9. Claimant said her pain became worse due to heavy lifting at work, and asked for a work excuse. Examination of the low back demonstrated decreased range of motion, tenderness, pain, and muscle spasm. Claimant was diagnosed with chronic bilateral low back pain with sciatica. She was prescribed Flexeril for muscle spasms and lidocaine patches to apply to her back. She was taken off work until July 6 and instructed to follow up with her PCP.

15. Dr. Walker's office was in the same building, so Claimant went there and made an appointment for next morning (July 4). When she arrived for the appointment on July 4, she was turned away and told, "They couldn't see me because it was work-related." Claimant went home and called Ms. B[Redacted] to ask what to do next. Ms. B[Redacted] was out of the office for the holiday, so Claimant left a voice mail.

16. Ms. B[Redacted] retrieved Claimant's message when she returned to work on July 5. At hearing, she confirmed Claimant's voicemail said she hurt herself at work and needed medical treatment immediately due to severe pain.

17. Claimant went to work on July 6 and spoke with Ms. B[Redacted] about the injury. Claimant said she hurt herself on July 3. Ms. B[Redacted] referred Claimant to TriageNow, a contractor that handles injury reports for Employer.

18. Claimant spoke with TriageNow on the morning of July 6, 2018. She described the accident as:

> [Claimant] was at the dumpster throwing trash. She had to lift a 30-gallon bucket full of wet food. She had to lift it up and over the dumpster, lifting it up about four feet. Her left leg locked up. She was able to walk back into the building. The leg did feel weak. She did finish her shift. This week on Tuesday, July 3, she pushed a table and her left leg locked up. She did leave work due to the pain. She is having pain in her left hip that radiates to her left knee and she has groin pain.

The report also states:

> [Claimant] sought care prior to calling. She was examined and was given two days off work, prescriptions for lidocaine patch, and Flexeril. She was told to follow up with her family doctor. She had an appointment today and was not able to be seen because of it being a work injury.

19. Employer directed Claimant to CCOM for medical care. She was not given a list of providers.

20. Claimant's initial evaluation at CCOM was on July 10, 2018 with PA-C Steven Byrne. Claimant described "constant" pain in her low back and left hip, made worse by standing. She stated, "approximately one month ago she was at work throwing [a] trash bag when she felt immediate pain in her left hip." Mr. Byrne noted Claimant had regularly used oxycodone for chronic back pain since her back surgery. The physical examination showed tenderness to palpation of the central lumbar spine, the left lumbar paraspinal muscles, and iliac crest. Mr. Byrne diagnosed "strain of muscle, fascia and tendon of left hip," and opined, "this problem appears to be, in part, related to her work activities." He imposed a 20-pound lifting restriction, prescribed Flexeril and ordered physical therapy.

21. On July 24, 2018, Mr. Byrne authored a report addressing causation of Claimant's reported symptoms. Unfortunately, the text appears to have been garbled by dictation software or some other computer glitch. The ALJ interprets Mr. Byrne's report to reflect his belief that Claimant's pain is mostly chronic and related to degenerative disc disease, but it was exacerbated by recent activities at work. He ordered an MRI to help "determine what appears to be acute versus chronic in nature."

22. Dr. Thomas Centi took over Claimant's care on August 10, 2018. He ordered more physical therapy and eventually referred Claimant to Dr. Geoffrey Doner, an orthopedic surgeon.

23. Claimant had an MRI of the left hip on August 24, 2018. It showed a mild CAM deformity and acetabular over coverage, consistent with mixed-type femoral acetabular impingement. There was a nondisplaced tear of the anterior/superior labrum. The MRI also showed tendinosis of the common hamstring tendon origin and gluteus medius insertion.

24. Claimant saw Dr. Doner on September 18, 2018. He noted, "She did injure her left hip while working at Liberty Heights lifting a trash can into the dumpster [and] she felt a pop." She reported painful locking and catching of her hip, with no benefit from physical therapy. Dr. Doner did not think a corticosteroid injection would fix the problem, and recommended left hip arthroscopy with a labral repair or debridement, depending on the intraoperative findings.

25. Claimant saw Dr. Timothy O'Brien for an IME at Respondents' request on October 31, 2018. Dr. O'Brien concluded Claimant sustained no work-related injury on June 5 or July 3. He opined the alleged incident with the trash "in fact, did not occur," and Claimant's later description of the incident was a "historical revision." He opined Claimant's back and hip pain were solely due to pre-existing conditions. He agreed with Dr. Doner's diagnoses regarding the hip, but opined all the pathology is "attritional" as a result of "aging over the course of many years." He disagreed with the surgical recommendation because "surgery will categorically fail."

26. Dr. Centi placed Claimant at MMI on November 28, 2018, with no impairment or work restrictions. His report contains no detailed analysis to explain his determination, but the ALJ infers Dr. Centi was persuaded by the opinions expressed in Dr. O'Brien's IME report. Dr. Centi refilled Claimant's medications and advised her to "continue home exercise and F/U with PCP for further continued care for a non-work-related condition."

27. Dr. O'Brien testified in a post-hearing deposition for Respondents. The opinions expressed in his deposition testimony tracked those offered in his IME report. Dr. O'Brien reiterated that Claimant suffered no work-related injury, and all of her symptoms are due to non-work-related pre-existing conditions. He opined even if the trash and table pushing incidents happened, they would not cause a labral tear.

28. Employer has a strict policy that one "no call/no show" is considered job abandonment and will result in termination. This policy is clearly spelled out in the employee handbook. All new employees are given a copy of the handbook at the time of hire and must sign a form indicating they received, read, and understood it. The employee handbook is also available on the company intranet.

29. Claimant was terminated on September 4, 2018, for violating the no-call/no show policy. She was scheduled to start at 7:00 AM, but did not report to work and did not call in. She tried to call Ms. L[Redacted] at 5:00 PM that evening and sent a text message. Ms. L[Redacted] texted back and referred Claimant to Ms. B[Redacted]. Claimant called Ms. B[Redacted], who explained she was terminated effective

immediately for violating the no call/no show policy. Claimant offered no excuse for missing work and simply said, “I figured that.”

30. At hearing, Claimant offered an explanation for missing work on September 4. She testified she took Flexeril and oxycodone early in the morning and “I was just out of it, I guess, sleeping.”

31. Claimant proved by a preponderance of the evidence she suffered compensable injuries as a result of her work activities on June 5, 2018 and July 3, 2018. Claimant’s description of the incidents and the resulting development of symptoms was generally credible and supported by the persuasive evidence in the record. Dr. O’Brien’s nonmedical opinion that the June 5 incident “did not occur” is unpersuasive.

32. The treatment Claimant received under CCOM’s direction through November 28, 2018 was reasonably necessary to cure and relieve the effects of her compensable injuries.

33. Dr. Centi is an authorized treating physician notwithstanding Respondents’ failure to tender a designated provider list.

34. Dr. Centi’s November 28, 2018 declaration of MMI deprives the ALJ of jurisdiction to adjudicate medical benefits after that date, including the hip surgery recommended by Dr. Doner.

35. Respondents proved Claimant was responsible for termination of her employment on September 4, 2018.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The claimant need not present expert opinion evidence regarding causation and may rely on lay testimony, medical records, or any other admissible evidence to sustain her burden of proof. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). Each case is decided on its merits, and the facts in a workers’ compensation case are not interpreted liberally for either claimant or respondents. Section 8-43-201.

A pre-existing condition does not necessarily preclude a claim for compensation. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition

to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. Rather, a purely symptomatic aggravation is a sufficient basis for an award of medical benefits if it caused the claimant to need treatment she would not otherwise have required but for the accident. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not automatically establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment*. Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved she sustained compensable injuries on June 5 and July 3, 2018. The ALJ credits Claimant's description of the incidents and resulting onset of symptoms. Dr. O'Brien's non-medical opinion the June 5 incident did not occur is unpersuasive. Dr. O'Brien relied heavily on the July 3 urgent care note, which does not mention the trash incident. The urgent care report likely contains an incomplete summary of what Claimant said, although it does indicate Claimant's pain "became worse" because of heavy lifting at work. Claimant likely attributed her symptoms to an injury at work since Dr. Walker's office refused to see her the next day "because of it being a work injury." The ALJ considers the TriageNow report the most reliable recitation of what Claimant said caused her injury. Claimant's description to TriageNow was consistent with her hearing testimony and with the initial CCOM report. The totality of evidence persuades the ALJ the June 5 and July 3 incidents probably occurred and caused the symptoms she described.

The persuasive evidence shows Claimant suffered at least lumbar and left hip strains, which reasonably required evaluation and conservative care. Additionally, she

either tore her labrum or (more likely) aggravated a pre-existing but asymptomatic tear. Although Claimant had a history of low back problems, there is no persuasive evidence of significant pre-injury labral symptoms such as groin pain, catching or locking. And she worked a relatively demanding job with no apparent limitations despite her pre-existing issues before June 5, 2018.

B. Dr. Centi is an ATP

The employer has the right to select a claimant's treating physician "in the first instance." If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Section 8-43-404(5)(a)(I)(A) requires employers to give injured workers "a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers or a combination thereof . . . ." WCRP 8-2 sets forth procedures employers must follow regarding the designated provider list, and if the employer does not comply with the Rule, "the injured worker may select an authorized treating physician or chiropractor of their choosing." If the employer refers a claimant to a provider but fails to provide the required list, the claimant may designate her own physician under WCRP 8-2(E). *Soledad-Orona v. Color Star Growers of Colorado*, W.C. No. 4-839-677 (February 24, 2012).

It is undisputed Employer referred Claimant to CCOM but did not give her a designated provider list. Claimant argues CCOM and Dr. Centi were not authorized because the right of selection passed to her. Under Claimants' theory, Dr. Centi's declaration of MMI was invalid because he was not an ATP.

The ALJ agrees the right of selection passed to Claimant because the verbal referral to CCOM did not satisfy the requirements of the Act or Rule 8-2. But the mere fact that Claimant gained the right to choose her doctor does not answer the question of whether Dr. Centi was an ATP.

In a purely definitional sense, Dr. Centi qualifies as an ATP. "Authorization" refers to a physician's legal right to treat a claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Claimants can, and often do, have multiple ATPs. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997); *Portillo v. Shoco Oil-Samhill-Oil*, W.C. No. 4-942-783-01 (May 1, 2017). Aside from the initial "selection" as provided in § 8-43-404(5)(a), a physician may become authorized if the employer has "expressly or impliedly conveyed to the employee the impression" that the physician is authorized. *Bestway v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999). Here, Employer explicitly designated CCOM and Insurer paid for treatment provided under CCOM's direction. The ALJ concludes CCOM (and by extension Dr. Centi) was "authorized."

Moreover, Dr. Centi was a "treating physician" as defined in *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002). In *Town of Ignacio*, the court determined a hand surgeon who evaluated the claimant once and did not recommend surgery was a "treating" physician for purposes of declaring MMI. The court

explained, “the specialist was a ‘treating’ physician because he examined claimant not in anticipation of litigation or simply for purposes of providing a disability rating, but to determine whether additional surgery was needed to alleviate claimant’s pain.” *Id*. at 515. In this case, Dr. Centi saw Claimant five times, wrote and refilled multiple prescriptions, ordered therapy and referred Claimant to Dr. Doner for a surgical evaluation. Dr. Centi had far more contact and involvement in Claimant’s care than the hand specialist in *Town of Ignacio*.

The ALJ acknowledges it would be inappropriate to rely solely on a definitional analysis where the initial treatment resulted from an improper designation. The claimant’s right to select a physician would be meaningless if an employer could direct her to one physician who provided minimal treatment such as writing a prescription and ordering x-rays before immediately declaring MMI. Therefore, the statute and the Rule necessarily imply some reasonable window for the claimant to exercise the right of selection if the employer does not follow the proper procedure.

Here, Claimant treated with CCOM for almost five months before Dr. Centi put her at MMI. A claimant “selects” a physician “when [s]he demonstrates by words or conduct that he has chosen a physician to treat the industrial injury.” *Tidwell v. Spencer Technologies*, W.C. No. 4-917-514-03 (March 2, 2015). The Panel has previously recognized that “appearing for subsequent appointments and participating in treatment recommended or prescribed by the designated ATP would indicate [the claimant’s] agreement to the services of the ATP.” *Portillo v. Shoco Oil-Samhill Oil, Inc*., W.C. No. 4-942-783-01 (May 1, 2017). The ALJ finds the Panel’s reasoning persuasive, and concludes Claimant selected CCOM as her ATP by receiving treatment there for many months, notwithstanding the initial improper designation.

C. Treatment Claimant received from CCOM was reasonably necessary to cure and relieve the effects of a compensable injury

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). As found, the treatment Claimant received at the direction of CCOM through November 28, 2018 was reasonably necessary to cure and relieve the effects of her compensable injury.

D. The ALJ lacks jurisdiction to consider benefits after November 28, 2018

Dr. Centi’s November 28, 2018 declaration of MMI deprived the ALJ of jurisdiction to consider indemnity or medical benefits after that date, including the surgery recommended by Dr. Doner.

Sections 8-42-107(8)(b)(I)-(III) provide:

> ***An*** authorized treating physician shall make a determination as to when the injured employee reaches maximum medical improvement . . . . If either party disputes a determination by an authorized treating physician on the question of whether the injured worker has or has not reached maximum

> medical improvement, an independent medical examiner may be selected . . . . A hearing on this matter shall not take place until the finding of the independent medical examiner has been filed with the division. (Emphasis added).

The term "***an***" means any ATP has the authority to declare MMI.[1] If an ATP issues ambiguous or conflicting opinions regarding MMI, the ALJ can resolve the conflict without a DIME. *Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996). But the ALJ does not have authority to reconcile conflicting opinions among multiple ATPs. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002). The fact that Dr. Doner may believe Claimant is not at MMI is irrelevant at this stage.

Once an ATP places a claimant at MMI, a DIME is a "mandatory, jurisdictional prerequisite" to a hearing on additional medical treatment. *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003). Absent a completed DIME, the ALJ may not hear or decide any issue that constitutes an actual or constructive challenge to MMI. *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995). The ICAO has repeatedly held that "after MMI [is] declared, the ALJ lack[s] jurisdiction to award or deny medical benefits to cure and relieve the claimant's condition." *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (January 27, 2006); *see also Eby v. Wal-Mart Stores Inc*., W.C. No. 4-350-176 (February 14, 2001) ("once an authorized treating physician places the claimant at MMI, and ALJ lacks jurisdiction to award additional medical benefits for the purpose of curing the industrial injury and assisting a claimant to reach MMI unless the claimant undergoes a DIME."); *Anderson-Capranelli v. Republic Industries, Inc*., W.C. No. 4-416-649 (November 25, 2002); *Cass v. Mesa County Valley School District*, W.C. No. 4-69-69 (August 26, 2005) ("[i]f an ATP places the claimant at MMI, and ALJ lacks jurisdiction to award additional medical benefits to improve the claimant's condition unless a DIME has been conducted on the issue of MMI.").

Although a DIME is not a jurisdictional prerequisite to a hearing on a request for post-MMI medical treatment, Claimant has not characterized the surgery as a *Grover*-type benefit. The surgery is intended to *improve* Claimant's condition, rather than merely relieve the effects of the injury and prevent deterioration. The ALJ concludes that awarding the treatment requested by Claimant would constitute a constructive challenge to MMI in circumvention of the DIME process. *See Story v. Industrial Claim Appeals Office*, *supra*.

Claimant also argues the ALJ can ignore Dr. Centi's MMI determination under *Harman-Bergstedt v. Loofbourrow*, 320 P.3d 327 (Colo. 2014), which held that a determination of MMI has no legal significance if it occurs before the claimant suffers a compensable disability. The ALJ concludes *Loofbourrow* is not applicable here because the parties stipulated Claimant was temporarily partially disabled by the accident and is

[1] A previous version of the statute gave responsibility for determining MMI to "the authorized treating physician who has provided the primary care." But that section was amended to its current form in 1996.

entitled to TPD benefits. Thus, her claim is "compensable" as that term is used in *Loofbourrow*. The mere fact that no TPD benefits have been paid yet is immaterial.

D. Claimant was responsible for termination of her employment

Sections 8-42-103(1)(g) and 8-42-105(4) preclude an award of TTD benefits if a claimant was "responsible for termination" of her employment. Responsibility for termination is an affirmative defense Respondents must prove by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The mere fact that the employer discharged the claimant in accordance with its personnel rules does not automatically establish that the claimant acted volitionally or exercised control over the circumstances of the termination. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. App. 1987). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004)."

As found, Respondents proved Claimant was responsible for her termination because she did not report to work or call in before her shift on September 4, 2018. Employer has a strict written policy of termination after one no-call/no-show, and her termination was consistent with that policy. Typically, if the employer shows a claimant failed to report to work when scheduled, this amounts to a *prima facie* case satisfying the employer's burden to demonstrate the claimant was at fault for the job separation. *Coleman v. Wellbridge/Starmark Holdings*, W.C. No. 4-969-560-02 (January 13, 2017). The claimant must then introduce exculpatory evidence or evidence showing that her failure to show up for work when scheduled was non-volitional. *Id*.

Claimant offers three arguments why she should not be deemed responsible for termination. First, Claimant argues she was incapacitated by the effects of medication prescribed for her compensable injury and incapable of reporting to work or calling in. The ALJ finds this argument unpersuasive. Claimant has taken the same dose of oxycodone for several years and had been using Flexeril for almost two months by the time of her termination. The ALJ credits Dr. O'Brien's opinion that the combination of medications was not sufficient to so sevrely debilitate Claimant that she could not at least call in to work. The ALJ also notes Claimant did not offer this excuse when she spoke with Ms. B[Redacted] on September 4.

Claimant also suggests she did not know about the policy because she never received a copy of the employee handbook. The ALJ considers it highly unlikely Employer deviated from its standard procedure of giving all new employees a copy of the handbook and requiring them to sign a document acknowledging same. Moreover, the respondents need not prove the claimant knew or should have known her conduct violated the

employer's policy. *Coleman v. Wellbridge/Starmark Holdings*, W.C. No. 4-969-560-02 (January 13, 2017). The dispositive question is whether the claimant performed a volitional act or otherwise exercised some degree of control over the circumstances leading to the termination, and "an employer need not provide the claimant with a warning on whether the violation of a policy would result in termination." *Id*.

Finally, the ALJ finds no persuasive evidence that Claimant's termination was pretextual, or that other employees were allowed to "no-call/no-show" without being terminated. To the contrary, the ALJ is persuaded by Ms. B[Redacted]'s testimony Claimant was terminated for violating the no-call/no-show policy, a volitional act within her control.

ORDER

It is therefore ordered that:

1. Claimant's claim in W.C. No. 5-086-228 is compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably necessary to cure and relieve the effects of Claimant's compensable injury, including but not limited to all treatment provided through CCOM and its referrals through November 28, 2018.

3. Claimant's average weekly wage is $265.

4. Insurer shall pay Claimant TPD benefits from July 4, 2018 through September 3, 2018, subject to the applicable SSDI offset, per the parties' stipulation.

5. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

6. Claimant's request for TTD benefits commencing September 4, 2018 is denied and dismissed.

7. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 1, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant proven, by a preponderance of the evidence, that he sustained compensable injuries arising out of and in the course of his employment?

II. Is the staph infection contracted by Claimant causally related to his employment with the City of Colorado Springs?

III. If the claim is compensable, which medical benefits that are reasonable and necessary to cure and relieve the effects of Claimant's work injuries?

IV. If the claim is compensable, is Claimant entitled to Temporary Total Disability benefits, and for what period of time?

STIPULATIONS

The parties reached the following stipulations:

1) Claimant's average weekly wage of $1,6795.75;

2) Claimant's withdraws the issue that the right of selection of the ATP passed to him;

3) Claimant's withdraws, without prejudice, his request for a change of physician.

The ALJ approves these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed as an "Instrumentation & Electrical Control Specialist, Sr.," by the City of Colorado Springs' Utilities Department. His duties included maintaining instrumentation and telemetry for waste water collection, treatment and distribution for the City of Colorado Springs.

2. On March 20, 2018 at approximately 2:45 p.m., Claimant returned in his work truck to Employer's facility and parked the truck. He got out of the truck, walked behind it to the passenger side, and opened the door so he could access the equipment he needed to

remove and bring with him into Employer's facility. He reached in and got his "Druck" pressure transmitter calibrator from the truck's center console. This device weighed 20-25 pounds. He had the "Druck" in his left hand, then reached over and picked up his laptop computer bag from the floor of the truck with his right hand. He then backed away from the door and tried to shut the door with his hip. When he did that, he felt a pop in the lower right side of his back.

3. Claimant then put both pieces of equipment on the ground and closed the door. When he reached down to pick up the "Druck" he felt a pain in the middle of his back. He picked up and carried the "Druck" and the laptop inside the building. He placed the laptop in its docking station. He went through his laptop bag, found a single Aleve tablet and took it. At that time, Claimant testified he did not have much pain, but by approximately 4:30 p.m. he had severe pain in his back. Claimant reported his injury to a supervisor named Mike Kelly. (Ex. 11, pp. 98, 99.).

4. The next day Claimant's back pain was so bad he called in sick. On March 22 Claimant filled out an "Employee's Statement of Injury." (Ex. 9, p.84). In an "Employee Interview" the accident was described as follows; "…

> Was in the parking lot at the shop at 456 Fontanero St. Opened the passenger side door of his CSU [Colorado Springs Utilities] truck to get his computer and a piece of equipment for PM (Predictive Maintenance, like a hand-pump in a bag) that weighed approx. 20 lbs. Pulled the piece of equipment with his left hand and the computer with his right hand and felt a pop below his right shoulder blade between his ribs and spine. Set the equipment down to shut the door and when he picked it up felt the pain again, sharp pain. Pain increased over the next hour, was having spasms. Took off work the next day to rest, ice, Aleve, claimant advised when still and laying down no spasms…" (Id. at 85)

5. Claimant went to authorized treating physician Jay Neubauer, M.D., on March 26, 2018. Dr. Neubauer is Board certified in Aerospace Medicine, which he testified is the military equivalent to Occupational Medicine. He has practiced for approximately 30 years in the military and approximately 5 years as a civilian. He is Level II accredited. Dr. Neubauer reported, "…He states he was injured on 3/20/18 while lifting equipment out of the front seat of his truck. He states that one piece was 15 pounds and the other was 40 pounds. As he lifted the equipment and turned to set them down he felt a pop in his mid back located just below the right shoulder blade. He noted almost immediate pain. He is noted [sic] gradual increase in pain over the weekend with rest. He has been self treating with Aleve which did not help. He finds that Advil helps more and is currently taking 400 mg every 8 hours…He denies numbness tingling or weakness in the extremities…" (Ex. 2, p. 26).

6. On March 26, 2018, Claimant rated his pain level to be 9 on a scale of 0-10. (Ex. F, p. 45). Dr. Neubauer referred claimant to physical therapy, however, claimant did not attend any sessions before his next appointment with Dr. Neubauer on April 4, 2018.

7. On examination, Dr. Neubauer found "Range of motion to the knees with pain referred to the mid back, pain in all planes referred to the right mid back. No sensory deficit in the upper or lower extremities. Normal strength in the upper and lower extremities." (Ex. 2, p.

27). Dr. Neubauer diagnosed "strain of muscle and tendon of back wall of thorax, initial encounter." Regarding causation, he determined "The cause of this problem is related to work activities." He prescribed Ibuprofen, physical therapy, and imposed work restrictions. (*Id* at 27).

8. At hearing, Claimant testified that he told Dr. Neubauer that he'd had stomach trouble and liver issues and that he was not permitted to take NSAID ("Nonsteroidal anti-inflammatory drugs") medication. However, on the Patient Health and Injury Form that Claimant completed in Dr. Neubauer's office on March 26, 2018, (Ex. F, p. 45), Claimant specifically listed that he had been taking Advil as an over the counter medication. He also admitted on the Patient Health and Injury Form that he was continuing to drink, despite being told specifically by Dr. Van Os to avoid all alcohol.

9. Dr. Neubauer testified that Claimant admitted to having taken Aleve and Advil, and that Claimant had been self-treating with 400 mg of Advil every 8 hours following the March 20, 2018 incident. (Ex. F, p. 45). At hearing, Claimant initially testified that he had stopped taking all NSAID medications in 2016; he later admitted that he had continued to take NSAIDs, including Aleve and Advil.

10. Claimant returned to Dr. Neubauer on April 4, 2018 and the doctor reported, "…He complains of 4-5/10 aching/stabbing mid, mostly right sided, back pain which he states is intermittent. Pain continues to increase with motion…He has not started physical therapy yet. The patient has been returned to work with work restrictions but has taken several days off since last visit due to pain. He denies numbness tingling or weakness in the arms or legs…" (Ex. 2, p. 16). Dr. Neubauer again confirmed that, "The cause of this problem is related to work activities." He again prescribed Ibuprofen, and added Robaxin, a muscle relaxer. (*Id* at 17).

11. Dr. Neubauer testified that Advil is an NSAID. Similarly, Dr. Neubauer testified that the Aleve that claimant testified he took on the date of the alleged injury is also a NSAID medication.

12. Dr. Neubauer testified that Claimant never informed him on either March 26, 2018 or April 4, 2018 of his stomach and liver issues and that he had been directed to avoid NSAID medication. Dr. Neubauer testified that if Claimant had informed him of prior stomach and/or liver issues with the use of NSAID medications that he never would have prescribed NSAID medications to Claimant. He further testified that based on Claimant's own report that he had been self-treating with Advil, coupled with the information claimant provided on the Patient Health and Injury Form, that he was of the reasonable belief that Claimant was able to take NSAID medications.

13. Although Dr. Neubauer documented Claimant's pain complaints as consistent with a work related mechanism of injury, he conceded at hearing that bending over to put items down or pick items up from the ground, such as Claimant did in this instance, was an activity in which Claimant *could have* been engaged at any time and at any location, both on and off work.

14. Claimant participated in physical therapy on April 10, 2018. The therapist noted, "…Ted leaned over to pick up a 20# pressure tester on his console and his PC bag on the floor from the passenger side. As he cleared the door he felt a pop in his right mind back. He put everything down and as he bent over the pick things up again he noticed more pain. Pain increased as he continued working in a seated position. Low back sx started 3 days later. He gets spasm and sx are worse at the end of the day." (*Id* at 14).

15. Claimant was admitted to St. Francis Hospital on April 11, 2018 due to an upper gastrointestinal bleed. Raluca Cascaval, M.D., reported,

> This is a very pleasant 52-year-old male with a history of alcohol use and alcoholic steatohepatitis with also a history of gastritis in 2016 at which time an EGD was performed and showed no evidence of varices. The patient did not have any active bleeding at the time and was told to avoid NSAID's. He had done so for a while; however, he sustained a muscle low back strain injury at work recently for which he was prescribed again ibuprofen and a muscle relaxant. He has been taking that over the last few days along with beginning a course of physical therapy, in which the first session was yesterday. Apparently during physical therapy, he started to experience increased back discomfort and took a few more ibuprofen over the course of the day yesterday. This morning he woke up at about 6:30 feeling that he had something 'gurgling in his stomach.' He started getting up to go to the bathroom, and felt acutely nauseated and then started throwing up bright red blood, which continued as he went into the bathroom and then had subsequently a large dark black bowel movement. (Ex. 12, p. 107).

The doctor noted "No increased lower extremity edema or pain." *Id.* And, "No pitting edema but increased adipose tissue [fat] bilaterally." (*Id* at 108). The medical records reflect, and Claimant admitted at hearing, that he had continued to consume alcohol and take NSAID medications in the weeks prior to and up to April 11, 2018. (Ex. D, p. 28).

EGD testing was performed the day of admission. The examiner reported:

> "...Summary: large volume gastric lavage was performed to clear a large clot in the proximal stomach. A hiatus hernia was found in the esophagus. Multiple ulcers were found in the cardia and body of the stomach. The culprit lesion appeared to be an ulcer just below the GE junction. Clips were applied to control bleeding. Drug delivery was performed…" (Ex. 9, p. 117). Ultrasound of the lower extremities revealed "no evidence of acute deep vein thrombosis in the visualized venous segments of the bilateral lower extremities." (*Id* at 104). Claimant's primary diagnosis was "Brisk upper gastrointestinal bleed, likely secondary to peptic ulcer disease in the setting of resumption of alcohol intake, as well as NSAID use. Counseled again the patient carefully to avoid NSAIDs indefinitely, as well as quit alcohol indefinitely at this time to avoid, not only stomach irritation and peptic ulcer disease, but also worsening of liver dysfunction…" (*Id* at 109). It was documented on April 17, 2018 that Claimant had a fever; "…possibly atelectasis. Blood cultures neg so far. DC antibiotics

since **no obvious cause of sepsis or infection** noted." (*Id* at 105) (emphasis added).

16. Previously, Claimant had seen gastroenterologist Dr. Van Os on November 18, 2016 in follow up after his earlier hospitalization at St. Francis Medical Center in October, 2016 for an upper GI bleed. Dr. Van Os noted the GI bleed was "…related to multiple gastric ulcers, in the setting of heavy alcohol use and NSAIDs. He has stopped alcohol, will continue avoidance of all NSAIDs, including advil…" (Ex. 1, p. 6).

17. Upon his discharge following the hospitalization, Claimant and his family were specifically instructed must avoid alcohol. During this hospitalization, Claimant was also noted to have bilateral lower extremity venous stasis causing significant swelling in his lower extremities. Claimant was also noted to be gravely morbidly obese. Claimant was also diagnosed with cirrhosis of the liver, alcohol related, during this hospital stay. (Ex. C, p. 4) Claimant returned to Dr. Van Os on January 30, 2018, about a month and a half before the work injury. Dr. Van Os again confirmed "…He has stopped alcohol, will continue avoidance of all NSAID's, including advil." (*Id* at 2).

18. At hearing, however, Claimant admitted that he had not stopped drinking, testifying that he continued to drink "moderately," and that he continued to take NSAID medications, including Aleve and Advil.

19. On April 23, 2018 Claimant met with his personal physician, Dr. Dwight Robertson at Pikes Peak Internal Medicine. Dr. Robertson reported, "…He is here today primarily about his back pain. Sx began suddenly while lifting a heavy object and twisting to his L [left]. He heard a sudden pop and had sudden pain around his scapula and T-spine but can't really localize it to a specific area. He continues to c/o pain & stiffness to both sides of his T-spine…" (Ex.3, p. 32). Dr. Robertson summarized; "…1 mo. of severe thoracic back pain following a twisting injury. This sounds like the majority of his pain at this point is spasm, but he should have plain film x-ray. He would like to see a back specialist…" *Id.* Dr. Robertson referred Claimant to Dr. Sung at Colorado Springs Orthopedic Group. (*Id* at 33).

20. Claimant saw Dr. Sung's physician assistant, Phillip Falender, PA-C, on April 25, 2018. He reported Claimant's chief complaint was back pain, and "…these symptoms began on 03/20/2018 when he was moving things out of a truck. He heard a pop in his lower back and has had severe pain off-and-on since then. The majority of his pain is in his mid to lower back. It is more on the left than the right. It increases when he walks or moves…He rates his back pain as the worse pain ever. He describes it as sharp, stabbing, aching, and constant..." (Ex.4, p. 45). X-rays of the thoracic and lumbar spine were performed. PA Falendar noted they showed "…diffuse degenerative changes with osteophytes from the midthoracic to the upper lumbar spine…" PA Falendar diagnosed; "1. Acute left-sided low back pain and spasm. 2. Thoracic and lumbar spine multilevel degenerative disc disease. 3. L4-5 spondylolisthesis. 4. Thoracolumbar scoliosis." PA Falendar reported, "…We reviewed the x-rays and discussed treatment options. I think the majority of his symptoms are muscular. I would like to get him into physical therapy. I will set up this referral…" (*Id* at 46, 47).

21. Due to his unrelenting back pain, Claimant was admitted to the emergency room at Penrose Hospital on May 8, 2018 and it was reported:

> Patient is a 52-year-old male presenting with severe back pain and lower extremity swelling. Patient has a history of alcoholic liver disease, no history of soft gel varices, history of GI bleed related to peptic ulcer disease which was inflamed recently by NSAID use, admitted here for this problem April 11 and discharged April 17 on a proton pump inhibitor. During that admission, patient did experience hypotension and did receive IV fluid boluses. He also received 2 units of packed red blood cells. He began to have lower extreme a [sic] swelling at that time on top of chronic baseline mild lower extreme [sic] swelling, but is here today with severe excruciating swelling for the last 2-3 days, bilateral with left leg feeling more tight and weeping more than the right leg…He has severe midline mid back pain which is **progressively worsening**…" (Ex. 13, p. 397). "Patient c/o right lower back pain since mid-March. States he was moving things from his work and injured his back and was diagnosed with a thoracic strain…" (*Id* at 402) (emphasis added).

22. The doctor reviewed the history of Claimant's back injury at work on March 20, 2018 and the fact that previous x-rays "did not reveal any obvious abnormalities and they sent him to physical therapy. He was able to complete one physical therapy treatment only. After being admitted to the hospital on April 11 and discharged on April 17 for his upper GI bleed, patient states he was still having severe continued mid spine pain. Up until a few days ago he was able to ambulate fairly well. For the last few days he has noted increase midline mid back sharp and spasm pain radiating to bilateral paraspinal muscles…He has *no prior history of back problems* before this problem started on March 20 of this year..." (Ex. 13, p. 398) (emphasis added).

23. Claimant's Social History noted for the May 8, 2018 admission includes Claimant's self-report that he was typically drinking 21 cans of beer and 7 standard drinks or the equivalent per week immediately preceding this admission. (Ex. D, p. 38).

24. Infectious disease specialist Peter Brookmeyer, M.D., evaluated Claimant in the hospital on May 9, 2018. He took a similar history and also reported that, "…Of note, during the admission in April, during that admission, he developed some fever and was placed on ceftriaxone for several days…Since discharge, he has not had fevers or chills, but he has had worsening of his back pain. For that reason, he came to the emergency room at St. Francis yesterday and a CT scan was consistent with diskitis and osteomyelitis of the spine. He was subsequently transferred to this facility for a neurosurgical consultation…Currently, his main complaint is severe back pain. He does have strength in his lower extremities." (*Id* at 335). Dr. Brookmeyer noted blood cultures were "negative thus far." His impression was, "…Probable diskitis osteomyelitis T-spine: He has been partially pretreated with ceftriaxone prior to this admission, is already on antibiotics. I think a biopsy will need to be done to clarify #1 if this is infectious versus malignancy, and #2 to ensure that if this is infection, that we can do our best to come up with the organism." (Ex. 13, p. 336).

25. A CT of the chest to check for pulmonary embolism was performed 5/8/18. (Ex. 13, p. 143). This revealed the issue at T9-T10. A CT of the thoracic spine was performed

5/9/18. (*Id* at 142). Dr. Brookmeyer interpreted that CT to reveal "…destructive process at T11-12 disk with destruction fragmentation adjacent at implants of T9 and T10, adjacent soft tissue swelling favors diskitis osteomyelitis; however, malignant process is possible. (Ex. 13, p. 336).

26. A MRI of the thoracic and lumbar spine was performed on May 9, 2018. The radiologist reported: 1. Images of the thoracic and lumbar spine are severely degraded by patient motion. 2. T9-T10 discitis osteomyelitis with paraspinal abscess and small amount of epidural phlegmon or abscess. 3. Probable discitis osteomyelitis at L3-L4 with severe canal stenosis." (Ex. 13, p. 374).

27. Claimant had a neurosurgical evaluation with Andreas Tomac, M.D., on May 9, 2018. Dr. Tomac assessed; "52-year-old gentleman with an incidental finding at the T9/T10 level destructive in nature with extension. Nonfocal neurological exam. No history of cancer. No white count/no fevers." Dr. Tomas concluded "No acute NS [neurosurgical] intervention indicated at present time." (Ex. 13, pp. 337, 338).

28. On May 11, 2018 a blood culture, for the first time, revealed the presence of the bacteria called staphylococcus lugdunensis. (*Id* at 318).

29. On May 13, 2018 photographs of Claimant's right and left lower extremities revealed "no open wounds." (Id. at 299-301).

30. On May 16, 2018 Dr. Brookmeyer reported, "Assessment: 1. Discitis/osteo: could not do biopsy, pt not interested in rescheduling at this time, no surgery plans at this time. Discussed options – organism in blood is likely causative organism, pt not interested in biopsy to confirm, continue ancef. Inflam markers improving – good sign. 2. +BC: for CNS, S lugdunensis, this is likely the pathogen, repeat BC negative thus far, continue ancef. 3. Discussed importance of therapy, pain still a problem. Subjective: + back pain, no bowel or bladder incontinence, but feels better, and is mobilizing more." (Ex.13, p. 248).

31. On May 17, 2018 an attending physician noted, "…Still c/o very severe mid back pain with minimal improvement in bed with severe spasm." (Id. at 239). A physical therapist noted "…Impaired functional mobility secondary T9-10 discitis vs. abscess vs. neoplasm." (Ex. 13, p. 232).

32. Claimant was discharged on May 22, 2018. The discharge report summarizes:

> Following his GI bleed, he was stabilized and discharged home. He returned back to the emergency department with severe back pain. Initially had a CT scan performed to rule out pulmonary embolism. That showed an incidental finding of severe diskitis in the thoracic region with significant phlegmon. He was transferred to Penrose Hospital for spinal surgery evaluation and started on empiric antibiotic therapy. Ultimately, his cultures grew Staph lugdunensis, and antibiotics were tailored down to Ancef per instructions from Dr. Brookmeyer. He had MRI that showed significant destructive process with this paraspinal phlegmon, although spinal surgery did not feel comfortable operating on the patient given his underlying issue…Once the species was identified in his blood sample, it was felt that this was likely deemed his infectious culprit here as well. The source being his bilateral lower extremity venostasis ulcerations. They were

addressed by wound care. He was on diuresis. Initially pain was difficult to control…" (Ex. 13, p. 140).

It was noted Claimant would be discharged to "Terrace Gardens" for acute rehabilitation.

33. Claimant was admitted to Terrace Gardens on May 22, 2018 but found the level of care unacceptable. He was discharged and transferred to Healthcare Resort on May 24. (Ex. 6). Claimant stayed at Healthcare Resort until June 5, 2018.

34. Claimant was re-admitted emergently to Penrose Hospital on June 5, 2017. On June 7, Dr. John Serak noted, 52yo M with hx of thoracic and lumbar discitis s/p approx. 5wks of abx. Pt continues to have severe pain, and is losing function in LE. Significant weakness of BLE on exam. MRI reveal severe stenosis 2/2 epidural abscess T9-10 and L3-4. Plan for minimally invasive decompression of T9-10 and possibly L3-4 this evening if primary team agrees that pt healthy enough to undergo prone 2hr surgery…" (Ex. 14, p. 579).

35. Dr. Serak performed surgery on June 7, 2018. The procedure was "laminectomy and foraminotomy for decompression centrally to spinal cord, as well as nerve roots, T9-10 and L3-4." (Ex. 14, p. 604). Dr. Serak described; "…A 52-year-old male with a history of diskitis who was initially diagnosed approximately 5 weeks ago. Since then, the patient has been undergoing antibiotic treatment. Recently, while the patient was in rehab, he began to develop weakness in his lower extremities bilaterally, as well as worsening back pain. The patient was completely unable to mobilize or work with physical therapy. The patient was then transferred back to Penrose where MRI was performed, demonstrating worsening stenosis at T9-10 and L3-4, causing severe spinal cord compression at T9-10, as well as severe thecal sac compression at L3-4. Given this, the patient was taken for the above operation to decompress both the spinal cord, the thoracic sac, the thecal sac, and nerve roots in the lumbar spine." (*Id* at 604, 605).

36. Dr. Brookmeyer met with Claimant on June 8, 2018 and reported:

> In summary I initially saw him on May 9 after which [sic] he had an injury at work and he had back pain which dramatically worsened. At some point, he has saw a spine surgeon and was told that nothing could be done. He was subsequently admitted in April at which point he developed fevers and was placed on Rocephin. He subsequently developed increasing back pain and weakness. He came back to the emergency room and a CT scan showed changes consistent with diskitis and osteomyelitis. He was seen by neurosurgery at that point and they did not feel that surgery was indicated. The patient declined a biopsy because of pain, however, cultures grew Staph lugdunensis. He was treated with cefazolin and ultimately discharged to a nursing facility. When he left the hospital, his strength was intact in his lower extremities. In the interim, he became markedly weak. I was not notified of this. His wife tells me that they were told to call me. He said that the nursing home was supposed to call me but that did not apparently occur. I saw him back on Tuesday in my office and noted a markedly changed neurologic exam with significant weakness that was new. For that reason, I sent him to the emergency room to get a stat MRI. He was admitted to the obs unit. An MRI was ultimately done. I suggested neurosurgical

consultation. He was transferred to the medical unit. Neurosurgery saw him yesterday and he was taken to the OR last night…" (Id. at 588).

37. On June 9, 2018 an attending physician reported, "…Acute worsening/loss of LE [lower extremity] function today, now being treated as spinal cord injury patient." (Ex. 14, p. 574).

38. Also on June 9, Dr. Andreas Tomac performed surgery for "evacuation of hematoma" at L3-L4. (*Id* at 564). In the history section of the report, he noted that after the surgery on June 7, Claimant was left with "…complete inability to move lower extremities (0/5 hip/knee/feet)" and that a repeat MRI showed findings consistent with hematoma*. Id.*

39. On June 10, 2018 the attending physician reported: "…The reason the patient is critically ill and the nature of the treatment and management provided by the teaching physician (me) to manage the critically ill patient is: L3/L4 evacuation of hematoma with paraplegia, obesity with BMI of 50, chronic lower ext pain, encephalopathy likely related to pain…" (*Id* at 558).

40. On June 14, an attending physician noted, "…Loss of function: underwent evac of hematoma, found to have an arterial bleeder. Wife notes his toes move when he sleeps but he can't move them volitionally. He was able to correctly identify which foot was being touched per RN. I could not reproduce this. Plan is to go to Capron for rehab 6/18." (*Id* at 453).

41. On June 16 an attending physician noted, "Pt remains essentially numb from waist down. LE sensation to light touch is absent. Pt cannot move feet at all…" (Ex. 14, p. 424). On June 17 it was noted, "No changed in flaccid paralysis LE. Very weak grip bilat. No sensation below waist with pinching." (*Id* at 426).

42. On June 18 it was noted, "Patient has not had much movement in his feet. He does not feel much in the legs and below the waist. He is ready to transfer to Capron for ongoing rehab. Will also need speech rehab there."

43. (Id.) Claimant was discharged to Capron Rehabilitation on June 18, 2018. He stayed there until approximately September, 2018.

44. Dr. Brookmeyer, the treating infectious disease specialist, testified as an expert witness by deposition on October 29, 2018. Dr. Brookmeyer testified regarding the spinal infection:

Q. How does a person get an infection, and then that infection, as you seem to say, destroys vertebrae and a disk?

A. It does that. The infection gets in there and chews it away. Like rotten wood, similarly.

Q. How did he get the infection in the first place?

A That is a difficult question. My guess is he had a transient blood infection with this bacteria that landed or seeded in his back. It is a closed space –

Q. What is?

A. His back. He did not have penetrating trauma. How does someone get an infection in an internal area? Penetrating trauma. So if someone shot a nail gun into your back and it got infected, it is from the nail gun. So if you had surgery and it got infected, it is from surgery probably. We see a lot of cases where there is not obvious evidence. In cases like this we think that people probably get a transient blood infection – I think we probably all get transient blood infections during the day and our immune system eats it up. I don't know it to be a fact, but I think for reasons that are somewhat unclear sometimes it will land in sanctuary areas, a somewhat sanctuary area, and can set up shop and cause a severe infection.

Q. Do you know what caused the infection in this case to set up shop in the thoracic spine?

A. I see patients all the time that have spine infections, or infections in other areas. ***Our group has noted that there seems to be correlation between somebody getting injured and subsequently developing infection in that area. It has been our hypothesis, or our thoughts, that what happens is if you preinjure the area, that area becomes inflamed, increased blood flow, and probably increases the risk of it being subsequently infected.*** Make sense as a thought process? (emphasis added).

Q. It does. Do you think Mr. Martinez had any kind of spine infection before he was hurt at work on March 20, 2018?

A. With the caveat that I had not examined or seen the patient prior, and have only verbal reports of what the imaging at the time of the injury showed, it is my understanding, and correct me if I am wrong, that before he had the spine injury he had no pain, no fever, no chills. Staph aureus and **staph lugdunensis are aggressive bacteria that typically become symptomatic very early**, in my opinion. I will tell you that I have had patients, numerous patients with spine infection -- that have a blood infection. So what happens, they come in with staph aureus, or staph lugdunensis, complain of back pain, have MRI and it is negative. Repeat MRI a week later if they have pain and at that point it has blossomed. So I think these spine infections probably become symptomatic early. Cold abscesses, for example, where you don't get a lot of pus and are not particularly symptomatic, those are most common in patients with tuberculosis or other wimpy type bugs, it is substantially less likely to get them with aggressive bacteria like this. (emphasis added).

Q. When you say infection resulting from these kinds of bacteria come on quickly or aggressively, is that in terms of days?

A. I think that if you get a diskitis, with aggressive bacteria like staph aureus, or staph lugdunensis*, **I would say the progression is days to weeks,*** is my opinion. If you have other bacteria, like those skin staph infections, those can be more prolonged and possibly not as

symptomatic. You never know with 100 percent certainty when these things happen. But that is my best guess as to what the time course of this was. My best guess, when I think it started, ***I think it started in the days prior to the admission in April, and was <u>partially attenuated by the ceftriaxone</u> that he received during the hospitalization*.** (emphasis added).

Q. What about the ceftriaxone?

A. Partially treated it. If I remember correctly, if I can clarify, I think in the April admission he had negative blood cultures. And he did.

45. Respondents' retained expert witness, Dr. Daniel Mogyoros, prepared reports based on his review of medical records. Dr. Mogyoros propounds two theories regarding Claimant's spinal infection. He discussed them in his reports and testified consistently at hearing. The first is that:

> Most likely, the spine infection was present at the time of the work injury, and when Mr. Martinez bent down, the twisting motion caused the previously infected and inflamed muscle to spasm. ***Essentially, this unmasked the pre-existing infection, which in my experience is a common phenomenon. Even without any bending or twisting motion on Mr. Martinez's part, the spine infection would likely have progressed in the same way as it did. The work injury likely did not exacerbate the spine infection or cause it to progress more rapidly than it otherwise would have.*** The "pop" Mr. Martinez felt in his mid-back is anatomically consistent with the known site of infection in the lower thoracic spine, again suggesting that the area was already inflamed at the time of the injury. Additionally, the onset of low back spasms just a few days later, as well as the findings of right paraspinal muscle tenderness at the occupational health visit on April 4 suggest that the infection was already present early in the course. There is no evidence in the medical record of a skin infection or other disruption in the skin caused by the initial injury. Bacteria likely seeded the spine from a previous disruption in the skin due to minor trauma, edema, or infection. The prolonged period of symptoms until diagnosis is consistent with the clinical course of a spinal infection. ***The extensive destruction of the vertebral body may also suggest that the infection had been present for some time."*** (Ex. H, pp. 82, 83) (emphasis added).

46.. Dr. Mogyoros' alternative theory (which he describes as less likely than the first), is that:

> The spine was seeded after the work injury occurred and is not related to the events of March 20, 2018 or the subsequent GI bleed. When Mr. Martinez presented to St. Francis Hospital on May 8, his lower extremities were erythematous with open blisters, consistent with cellulitis. There is not mention of skin issues when he was admitted for the GI bleed. The onset of this cellulitis is not mentioned in the chart, but it would have been between April 11 and May

18. This certainly could have been a source of the Staphylococcus lugdunensis, which then would have seeded the spine and cause the spinal infection. ***There is nothing in the records that would suggest a connection between the lower extremity cellulitis and the prior work injury and subsequent GI bleed."*** (emphasis added).

47. Dr. Brookmeyer testified he agrees that the infection likely entered Claimant's body through the skin. He testified about that and about Dr. Mogyoros' opinions as follows;

Q. Look at the August 11 report from Dr. Mogyoros.

A. I have it.

Q. Third page of the report, third full paragraph at the bottom, Dr. Mogyoros opines there are two possible scenarios to explain Mr. Martinez's clinical course. Take a look at those and I would like your comments.

A. And into the fourth paragraph?

Q. Yes, sir.

A. My opinion is that it would be unlikely to have a pre-existing masked infection with this bacteria.

Q. Why is that?

A. ***This tends to be an aggressive, rapidly progressing infection. I would have a hard time believing he had a spine infection or muscle infection that was not symptomatic at that point.*** I think quite unlikely, in my opinion. I have on one occasion thought that something like that had happened. However, that was a patient previously proven to be infected after an automobile accident and infection became activated again. I believe, if I remember correctly, that patient had hardware in place, which increases the risk of this happening. In this case, patient did not have foreign bodies or hardware in the spine. Oftentimes we can see infections persist on hardware that if you have trauma, it becomes more active. In this case he had no pre-existing surgery, no hardware in place, and was asymptomatic. ***So I don't know what the evidence would be to support that he had a pre-existing infection on the day of the injury. He had no pain, no fever, no chills. That would tend to argue against active infection at that time.***

Two, staph lugdunensis, and staph aureus, are aggressive pathogens which, in my experience, tend to be more rapidly progressive. So I would have -- in my opinion, I think it is unlikely that he had a pre-existing infection at that point. I have basically no evidence to support that he had an infection at that point. (emphasis added).

Q At that point, are you referring to the date of the work injury?

A. Correct. No pain, no fever, no chill. He had an aggressive pathogen, which proceeds rapidly to become symptomatic.

Q. What about Dr. Mogyoros' opinion, at page 4, "The extensive destruction of the vertebral body may also suggest that the infection had been present for some time"?

A. ***I agree that this had been present for some time, but my definition of some time is weeks.*** (emphasis added).

Q. What about the next paragraph on Page 4, "The alternative scenario is that the spine was seeded after the work injury occurred and is not related to the events of March 20, 2018, or the subsequent GI bleed"?

A. I think actually the spine seeded after the work injury is more likely to have occurred.

Q. Why is that?

A. Because at the time of his injury he had no pain, no fevers, no chills. My suspicion is that the back was seeded after the work-related injury, as I commented earlier.

The hard part here is nobody can say what exactly happened. We are opining on what we think most likely to occur. I don't have any evidence that I can determine, with the caveat that I did not examine or see the patient in March, that ***I can find in retrospect -- that I cannot find evidence that he was infected at that point. Objective evidence.***

He had no complaint of back pain, which was generally the main symptom. And I guess I don't know that he didn't have fever and chill before, but no one has mentioned that to me in reports that I have read. With the caveat that I did not examine the patient on March 20, 2018. (emphasis added).

Q. Dr. Mogyoros, on Page 3, says the pathogen -- the source of the infection was the skin.

A. Probably right.

Q What else could it be?

A. Staph lugdunensis is typically a skin bacteria colonized on the skin. Whenever he got seeded, did he have an infection from some other undetermined source? Possible. But agree with Dr. Mogyoros that a skin source is most likely. I see patients all the time with staph in the blood; we can't figure out why. We assume it is the skin. I am probably seeding a couple bugs right now and my immune system gobbles them up.

Q. So the bottom line, Dr. Brookmeyer, we can't say one way or another how he got this infection, where it came from, what the source was, just that he got an infection?

A I think that the skin was the source, likely. *He developed a transient blood infection, and it landed in his back.* ***I think that the injury made it more likely that that area was seeded.*** (emphasis added).

Q. What types of injuries are you seeing that are developing into infections?

A. Developing into, I don't know that that is the correct term.

I have certainly seen ranging from bone and joint stuff. ***I have heard of back infections, where they have been – had some kind of injury, and four, six, eight weeks later that area is infected.*** (emphasis added).

Q. Just as we don't know for sure that on March 20, when Mr. Martinez bent to pick a piece of equipment off the floor, or twisted to retrieve something from the other side of the truck cab, we don't know if it happened, then either, do we?

A. ….It is my opinion, one, that he probably did not have a pre-existing infection that was activated by the injury. It is possible, but probably less likely, in my opinion. I think he probably seeded the spine later.

I think the injury, or alleged injury – I am not going there -- ***probably made the area more likely to have been seeded.*** That is sort of my opinion. (emphasis added).

48. Dr. Mogyoros testified at hearing. He testified that in his practice, he treats on average 2-3 patients per month for diskitis and osteomyelitis. He opined that the Staph lugdunensis would not have and did not enter claimant's body as a result of the upper GI procedure claimant underwent during the April 11, 2018 hospitalization.

49. Dr. Mogyoros explained that diskitis most commonly affects men aged 40 to 60 and that other health factors, including but not limited to liver disease and extreme body habitus, create a higher risk for infection. The infection typically seeds in one of three locations in the body: the heart valves, the spine, and the joints.

50. Dr. Mogyoros testified that Claimant's extreme body habitus in the range of 365 pounds to 380 pounds and the cirrhotic condition of claimant's liver contributed to a lowered immune system and increased claimant's risk of infection. Once the bacteria enters the body, Dr. Mogyoros testified that there is no rhyme or reason where it finally seeds.

51. Dr. Mogyoros discounted the hypothesis theorized by Dr. Brookmeyer that the bacteria seeded in Claimant's thoracic spine because that area had been pre-injured on March 20, 2018 and was, consequently, hyper vascularized. Dr. Mogyoros testified that Dr. Brookmeyer's hypothesis was simply that: a hypothesis without any evidentiary support in established literature or medical papers. Dr. Mogyoros further testified, the way that diskitis

typically forms is because there is a relative lack of blood flow. The bacteria is frequently seeded in the spine because without adequate blood flow to the disks, there is also a corresponding lack of white blood cells to fight and clean out the infection. If, as Dr. Brookmeyer postulates, the thoracic spine was seeded because it was inflamed and therefore receiving higher blood flow, logic would tell you, then, that there would also be increased white blood cells that would then clear out the infection. Dr. Mogyoros further testified that if Dr. Brookmeyer's hypothesis were correct, and that increased blood flow is what attracts the infection to a certain area of the body, then most, if not all, infections would seed in the heart valves, as there is no greater area of blood flow in the body.

52. Dr. Mogyoros testified 'with 100% certainty' that Claimant's movement of bending forward to place equipment on the ground on March 20, 2018 did not in any way cause the infection. Dr. Mogyoros also testified that the infection would have presented itself, because it was already there, even if Claimant had not bent forward on March 20, 2018.

53. When asked how an unmasking of the infection is different from an aggravation or an acceleration, Dr. Mogyoros explained: The bacteria come into the disk space and into the adjacent vertebral bodies. Because there is poor blood flow generally to disks, the infection seeds in the disks, then spreads to the bones, and then spreads to the muscle. The muscle gets inflamed and then spasms to protect the spine or the disk that is inflamed. The muscle spasm is merely a symptom of infection; the muscle spasm did not make the infection worse or cause it to develop any faster.

54. Dr. Mogyoros testified that the "pop" that Claimant heard is a very common clinical history and is consistent with the occurrence of a muscle spasm. He further testified that diskitis is often misdiagnosed as a muscular strain, and that diagnosis of the infection is often delayed because of this misdiagnosis.

55. Dr. Mogyoros opined that there is no certainty at what level of the thoracic spine Claimant alleges injury on March 20, 2018, as there was no imaging or other objective medical evidence. Dr. Mogyoros further testified that the bacteria had also seeded in Claimant's lumbar spine at L3-4, but that he had not complained of any injury to that part of the spine.

56. In the second scenario, Dr. Mogyoros testified that the bacteria could have entered claimant's body 'some time' after March 20, 2018. Dr. Mogyoros testified that he has seen the infection process caused by the Staph lugdunensis bacteria move slowly in some instances and very quickly in other instances. He does not disagree with Dr. Brookmeyer that Claimant's infection and destructive bone process could have happened quickly, over 3 to 4 weeks, but he does not rule out that it could have taken longer, such as in his Scenario 1.

57. Dr. Mogyoros testified (as did Dr. Brookmeyer) that there is nothing about the March 20, 2018 incident that caused swelling in Claimant's legs. Further, according to Dr. Mogyoros, there is nothing about the March 20, 2018 incident that caused the bacteria to enter through Claimant's skin. Dr. Mogyoros testified there is no way to know from one circumstance to another how the bacteria and infection are going to act; therefore there is nothing about the March 20, 2018 work incident that caused or contributed to in any way the infection that Claimant contracted.

58. Dr. Mogyoros explained whether he thought it was too much of a coincidence that Claimant preinjured his thoracic spine resulting in inflammation and then that it where the bacteria seeded, that is more of "a chicken and egg situation. It is just as possible that the tissue is inflamed because of the infection, not the other way around," and that the tissue in Claimant's thoracic spine was already inflamed prior to the March 20, 2018 work incident.

59. Dr. Mogyoros testified that even in the absence of any incident involving Claimant's spine on March 20, 2018, it would not have been possible for Claimant's immune system to fight off the infection because the immune system had already been unsuccessful at clearing out the bacteria from the disk space.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability

or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, two very capable and credible experts in infectious diseases have reached some similar conclusions, and some differing ones. Taken as a whole, the ALJ must determine which opinions are more persuasive on the ultimate issue of causation.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo 1972).

Compensability, Generally

F. A claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. C.R.S. §8-41-301(1)(b) & (c). The question of whether the Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Moreover, a Claimant is not required to prove causation by medical certainty. Rather, it is sufficient if the Claimant presents evidence of circumstances indicating with reasonable probability that that the condition for which he seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and the need for treatment. *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

Aggravation of a Preexisting Condition, Rendering it Symptomatic

G. Claimant has proved he sustained a compensable back injury on March 20, 2018. The retrieval of the Druck and laptop from Employer's vehicle was connected to Claimant's occupation, and not merely a ubiquitous act of daily living. As was noted by the I.C.A.O. in *Weber v. Shiloh House*, W.C. 4-540-459 (2005); "…Few principles are

more fundamental to the Workers' Compensation Act of Colorado (Act) than the rule that "this state does not distinguish between disabilities that are the result of employment-related aggravation of pre-existing conditions and those that are not." Thus, where a "pre-existing condition is aggravated by an employee's work, the resulting disability is a compensable industrial disability." *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990). A similar expression of the same principle is that the "employer must take the employee as it finds him so that the employer is responsible for any increased disability resulting to an employee from a pre-existing weakened condition." See *Cowin and Co. v. Medina*, 860 P.2d 535, 538 (Colo. App. 1992). At other times our courts stated the rule that a pre-existing condition or disease "does not disqualify a claim if the employment aggravates, accelerates, or combines with the disease or infirmity to produce the disability for which workers' compensation is sought." *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990).

H. Even if one accepts Dr. Mogyoros' theory that Claimant had the infection prior to the work injury, and then the work injury "unmasked" the infection, the injury is compensable. Even if there was a pre-existing spine infection, there is insufficient evidence that it would have "progressed in the same way that it did" per Dr. Mogyoros. It is equally possible that Claimant's immune system would have eliminated the infection. In fact, the blood cultures did not show the presence of Staph lugdunensis until May 11, 2018. Alternatively, the infection may have lodged in a part of the body other than the spine. Moreover, if there was a pre-existing infection, it was completely asymptomatic until the work injury occurred and "unmasked" it (in Dr. Mogyoros' words). This would be a work-related aggravation of an underlying asymptomatic condition, and as such it would be a compensable injury. ("If an industrial injury aggravates or accelerates a pre-existing non-industrial condition so as to cause a need for treatment, the claimant has sustained a compensable injury and respondents are liable for treatment and disability caused by the aggravation." *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990)). An employer may not escape liability for consequences resulting from an injured worker's pre-injury frailty or weakened condition, nor may it escape liability when the effects of an otherwise minor injury escalate due to factors beyond the control of the injured worker.

Causation

I. Respondent's retained expert, Dr. Mogyoros, did not meet with or examine Claimant, but prepared reports based on his review of medical records. Dr. Mogyoros propounds two theories regarding Claimant's spinal infection. He discussed them in his reports and testified consistently at hearing.

J. The ALJ is not persuaded by Dr. Mogyoros' first theory. First, there is no evidence that Claimant had any sort of spine infection prior the date of injury on March 20, 2018. Claimant had no back pain, no fever and no chills. Dr. Brookmeyer testified that staph lugdunensis is an "aggressive bacteria that become symptomatic very early, in my opinion." Dr. Brookmeyer testified that pain from a spinal infection is most

commonly described by patients as “fairly severe.” If Claimant had muscle tissue which was “infected and inflamed” (per Dr. Mogyoros) prior to the work injury on March 20, he would have known about it. Claimant reported no such symptoms.

K. Dr. Mogyoros claims that “…the ‘pop’ Mr. Martinez felt in his mid-back is anatomically consistent with the known site of infection in the lower thoracic spine, again suggesting that the area was already inflamed at the time of the injury. Merely because Claimant felt a “pop” does not lead to the conclusion that “the area was already inflamed.” Claimant had no back pain prior to the injury. The more likely scenario, as described by Dr. Brookmeyer, is that the infection began within days of Claimant’s admission to the hospital on April 11, 2018 for the GI bleed.

L. Dr. Mogyoros opines that “…the onset of low back spasms just a few days later, as well as the findings of right paraspinal muscle tenderness at the occupational health visit on April 4 suggest that the infection was already present early in the course.” The ALJ finds insufficient evidence in support of this assertion. Muscle tenderness and back spasms are symptoms that appear to be completely consistent with Dr. Neubauer’s diagnosis on March 26 and April 4 of 2018; “strain of muscle and tendon of back wall of thorax.” In fact, on the latter date Dr. Neubauer prescribed Robaxin “…3 times a day as needed pain/spasm.” Dr. Neubauer certainly expressed no concerns about a possible spinal infection.

M. Dr. Mogyoros also opined that, “…The prolonged period of symptoms until diagnosis is consistent with the clinical course of a spinal infection. The extensive destruction of the vertebral body may also suggest that the infection had been present for some time.” A spinal x-ray at Colorado Springs Orthopedic Group on April 25, 2018 showed only “diffuse degenerative changes with osteophytes from the mid-thoracic to the upper lumbar spine…” It was only 14 days later, on May 8, 2018, that the CT at Penrose revealed the “destructive process within the thoracic spine, epicentered at the T9-T10 disc level…” The timing supports Dr. Brookmeyer’s explanation that Staph lugdunensis is “an aggressive bacteria that typically becomes symptomatic very early” and that Claimant did not have an infection on the date of his work injury.

N. Dr. Mogyoros’ alternative theory (which he describes as less likely than the first), is that:

> “…the spine was seeded after the work injury occurred and is not related to the events of March 20, 2018 or the subsequent GI bleed. When Mr. Martinez presented to St. Francis Hospital on May 8, his lower extremities were erythematous with open blisters, consistent with cellulitis. There is no mention of skin issues when Claimant was admitted for the GI bleed. The onset of this cellulitis is not mentioned in the chart, but it must have occurred between April 11 and May 18 (sic).[May 8]. . This is the likely source of the Staphylococcus lugdunensis, which then would have seeded the spine and cause the spinal infection. There is nothing in the records

that would suggest a connection between the lower extremity cellulitis and the prior work injury and subsequent GI bleed.

O. The ALJ finds Dr. Mogyoros' second theory at least partially persuasive. The onset of the cellulitis likely did indeed occur somewhere between April 11 (when it was not noted), and May 8 (when it was noted). It was indeed possible that during this period that this aggressive pathogen entered the body, seeded the spine and quickly began its path of destruction on Claimant's T9-10 and L3-4 regions. That process can take only days or weeks, once it gets fully underway.

P. However, the ALJ is not persuaded that there is *no connection* between the work injury and the infection in Claimant's spine. Dr. Mogyoros postulates that since Staph lugdunensis tends to concentrate in the spine, joints, and heart valves, and that if Claimant's theory of hyper vascularization is correct, then one would expect the heart valve to be an even more likely target due to high blood flow. The ALJ is not persuaded, since (presumably) one would not 'hyper vascularize' one's own heart valves through injury, whereas one could do so to one's joints or spine. The disc and vertebra, inflamed as they were by the work injury, were more receptive to allow the spread of the pathogens. Dr. Brookmeyer has noted this very phenomenon in his own practice, with timelines commensurate with what occurred here.

Q. In summary, the ALJ concludes, by a preponderance of the evidence, that Claimant inflamed his thoracic and lumbar regions by twisting his back in the course of his employment. No doubt this comparatively benign maneuver caused greater damage to Claimant's back than one might normally expect, due to his excessive weight, poor circulation, and other poor lifestyle choices along the way. Nonetheless, this injury created conditions conducive to the seeding of the inflamed areas by Staph lugdunensis, which then aggressively colonized these areas, causing the lasting damage to his spine. Both physicians believed that Claimant's blood likely became infected through his skin, and the most likely timeline for this to have occurred was when the skin lesions were first noticed by medical personnel-well after the work injury. Said injuries to his spine, and resultant infections, are thus compensable.

Medical Benefits

R. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. §8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The ALJ concludes, based upon the credible evidence presented, that Claimant has proven by a preponderance of the evidence that he requires medical treatment to cure or relieve the effects of his work injury. Substantial

evidence supporting this conclusion includes Claimant's testimony and the opinions and reports of the treating healthcare providers. Respondent is liable for the Penrose Hospitalizations (5/8/18 – 5/22/18 and 6/5/18 – 6/18/18) because they were emergent in nature, and were reasonable, necessary, and related to Claimant's work injury of March 20, 2018.

S. However, Claimant's upper GI bleed, treated on April 11, 2018 was neither related to his work injury, nor was the likely cause of the entry of the Staph lugdunensis into his bloodstream. However, observations during this treatment did provide a reference point for what would be discovered later – blood cultures were negative, and no obvious sepsis or infection was noted as of 4/17/19. While the records were beneficial to the finder of fact, Claimant's treatment for his upper GI bleeding from April, 2018 are not related to his work injury, regardless of his ill-advised consumption of NSAIDs along the way.

T. No treating physician has opined Claimant has reached MMI. Respondent is liable under C.R.S. §8-42-101(1)(a) for medical treatment that is reasonably needed to cure and relieve Claimant of the effects of his injury.

Temporary Total Disability

U. To prove entitlement to temporary total disability (TTD) benefits, Claimant must establish that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. §8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

V. Here, Claimant received temporary work restrictions when he met with Dr. Neubauer on March 26 and April 4, 2018. Employer provided work within the restrictions and Claimant performed modified work until April 11, 2018. It was on that date Claimant presented emergently to St. Francis Medical Center with a GI bleed. Claimant has established that he was not able to work again on or after April 11, 2018; however, it was not until his admission to Penrose on May 8, 2018 that he was unable to work *due to his original work injury.* This injury, and subsequent spinal infection which had manifested itself by this time, caused disability lasting more than three work shifts; Claimant left work as a result of the disability, and the disability was (and is) total

and resulted in actual wage loss. Thus TTD payments are owed from May 8, 2018, and ongoing.

ORDER

It is therefore Ordered that:

1. Claimant has suffered a compensable injury to his spine, including the resultant infection, as a result of a work injury occurring March 20, 2018.

2. Respondents shall pay for all reasonable and necessary medical treatment in connection therewith, but not to include treatment for Claimant's admission in April, 2018, for the upper GI bleed.

3. Respondents shall pay TTD benefits from May 8, 2018 and ongoing, until terminated by operation of law.

4. Respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 1, 2019

Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Respondents have successfully rebutted the presumption of compensability under §8-41-209, C.R.S. by showing that Claimant's basal cell carcinoma (BCC) cancer did not occur on the job and whether they have overcome the opinion of DIME physician Jonathan Bloch, M.D. on causation.

2. Whether Respondents have made the necessary showing to withdraw their medical only General Admission of Liability.

3. If the claim and BCC is deemed compensable, whether Respondents have overcome by clear and convincing evidence the permanent partial disability (PPD) impairment rating provided by DIME physician Dr. Bloch.

FINDINGS OF FACT

1. Claimant works for Employer as a firefighter. Employer hired Claimant in 1994.

2. Prior to his work as a firefighter for Employer, Claimant also worked as a volunteer firefighter, a wildland firefighter, and a firefighter for other employers/agencies. Claimant did this work between 1985 and 1993 before being hired full time by Employer in 1994.

3. Throughout his career, Claimant performed shift work and would regularly work scheduled 24-hour shifts.

4. During the course of his career, Claimant responded to the typical range of fires for career firefighters, including grass fires, dumpster fires, car fires, weed fires, wildland fires, some commercial fires, and house fires. Claimant sustained the known and typical exposures associated with the firefighting profession during his career.

5. As with most career firefighters, Claimant used protective equipment and bunker gear that was eventually improved and replaced over time. In his earlier career, self-contained breathing apparatus' (SCBA) were used only during the suppression phase of fighting fires and not during the overhaul or cleanup phases. Additionally, in the early part of his career, the SCBA masks were shared and not fitted properly. In his early career, the bunker gear was not effectively cleaned after each use nor was there backup bunker gear. Claimant also would take showers after a fire call, but not always immediately. The protective equipment did not provide complete protection and Claimant often had soot on his body.

6. Bunker gear, the SCBA masks, and the cleaning processes improved throughout the years of Claimant's employment. Extractors were eventually purchased by Employer to clean the bunker gear and an extra set of bunker gear was eventually purchased.

7. With the improvement in bunker gear and processes, Claimant's exposures that are more recent are less than those in his early career. However, from the start of his career though current, Claimant has undoubtedly had many years of exposure to the known and typical exposures associated with the firefighting profession and many years where his gear did not adequately protect him from exposure.

8. On June 1, 1995, dermatologist William Bowman, M.D. evaluated Claimant. Dr. Bowman noted that Claimant had a history of skin cancer, probably BCC from the right arm 2 years prior in Texas. Claimant reported that he was in for a regular re-check. Dr. Bowman noted 10-15 actinic keratosis of the face, dorsal forearms, and upper back. Dr. Bowman also found a well-healed scar of the right lateral arm. Dr. Bowman assessed: status post BCC, right arm; and actinic keratosis of the face, back, and forearms. Dr. Bowman discussed sun protection and skin cancer and suggested shade UVA or Durascreen. Dr. Bowman performed liquid nitrogen removal of 10-15 lesions of the face, upper back, and forearms. Dr. Bowman recommended an annual re-check. *See* Exhibits 7, H.

9. Dr. Bowman evaluated Claimant in April of 1996, June of 1997 and May of 1998. At each evaluation, Claimant was noted to have actinic keratosis and lesions and several lesions were removed. *See* Exhibit H.

10. On July 27, 1999, Dr. Bowman evaluated Claimant. Dr. Bowman noted a lesion of the right pre-articular cheek. Dr. Bowman assessed BCC of the right pre-auricular cheek. *See* Exhibit H.

11. Claimant continued to see Dr. Bowman annually for skin checks and continued to have lesions removed from his body.

12. On December 13, 2007, Dr. Bowman noted on a skin pathology report that Claimant had BCC of the left wrist. This was determined from a biopsy performed on December 10, 2007. The microscopic pathology showed a proliferation of basaloid tumor cells in the mid dermis with palisading and cystic necrosis. *See* Exhibit 7.

13. In December of 2008, at another skin check, a concerning spot on Claimant's nose was examined. The spot on the nose was determined to be BCC.

14. On December 16, 2008, Claimant underwent an excision of skin cancer from the dorsum of his nose just above the tip performed by David Charles, M.D. It was noted that he had a clinically obvious skin cancer and that the excision was done with pathology showing clear margins. *See* Exhibits 7, F, G.

15. Following his BCC of the right arm in 1993, the right cheek in 1999, the left wrist in 2007, and the nose in 2008, Claimant continued to be vigilant with skin checks.

16. In December of 2012, the spot on his nose and a spot of his left ear were noted to be concerning. On December 12, 2012, excision of lesions on Claimant's nose and left ear were performed. A biopsy dated the same day confirmed that Claimant again had BCC on the nose and that he also now had BCC on the left ear. *See* Exhibits 5, D.

17. On August 15, 2013, Dr. Bowman issued a letter to Claimant's attorney. Dr. Bowman stated that he had followed Claimant as a patient for the past 20 years and that Claimant had several BCCs over that period of time, all which had required surgical excision. Most recently, Dr. Bowman noted that Claimant had a difficult lesion of the nose that required two excisions with a plastic surgical repair. Dr. Bowman opined that Claimant was likely to have more of those type of lesions. Dr. Bowman noted that according to Colorado statutes, these were required to be covered by workers' compensation. *See* Exhibit 7.

18. On August 15, 2013, Claimant filed a Worker's Claim for Compensation noting the date of injury/disease was October 25, 2012 for cancer of the nose and left ear due to exposure at work to carcinogens and sun. *See* Exhibit M.

19. On August 30, 2013, Respondents filed a Medical Only General Admission of Liability noting an injury date of October 25, 2012 and no compensable wage loss. *See* Exhibits 1, 7, L.

20. On August 11, 2014, Dr. Bowman evaluated Claimant. Dr. Bowman noted that Claimant had actinic keratosis on the face, shoulder, and forearms. Dr. Bowman removed 14 lesions with liquid nitrogen. Dr. Bowman noted that Claimant was following up for his BCC from 2012, which was the first recurrence since Claimant's 2008 BCC. Dr. Bowman noted the continued lifetime risk of BCC. *See* Exhibits 7, H.

21. On July 31, 2015, William Miller, M.D. evaluated Claimant. Claimant reported that he had been diagnosed with BCC at the tip of his nose in approximately 2009 and that his symptoms returned in 2012. Claimant reported that he was followed every six months by dermatology and had frequent cryotherapy to his forearms for actinic keratosis. Claimant reported that he had filed a claim under the firefighters act but never had an initial evaluation or any measure for impairment. Dr. Miller noted that Claimant was there for an opening and closing evaluation and evaluation for impairment. Dr. Miller noted that Claimant had multiple risk factors for BCC including time spent in El Paso, lots of outdoor activity, and being fair skinned. Dr. Miller did not include family history. Dr. Miller opined that Claimant qualified for a class 1 skin impairment and rated Claimant at 2% whole person for the BCC of the nose. Dr. Miller noted that the injury was deemed work related per 8-41-209, that Claimant had reached maximum medical improvement as of the evaluation date, July 31, 2015, and that he was released to full duty with no work

restrictions. Dr. Miller recommended dermatology follow-ups every six months. *See* Exhibits 6, 7, E.

22. On May 6, 2016, Dr. Bowman evaluated Claimant. Claimant reported a significant family history of non-melanoma skin cancer and squamous cell skin cancer and reported skin lesions located on his body throughout. Dr. Bowman examined Claimant's scalp, head, lips, neck, chest, abdomen, back, right upper extremity, left supper extremity, right lower extremity, left lower extremity, buttocks, and digits/nails. Dr. Bowman provided the impression of: lentigines located on body throughout; benign nevi located on the body throughout; actinic keratosis distributed on the left forehead, right cheek, right forehead, left cheek, left temple, right hand, right forearm, right wrist, left hand, left forearm, left upper back, and right upper back; dermatoheliosis located on the body throughout; xerosis on the trunk; and history of BCC on the nose. Dr. Bowman advised Claimant that the actinic keratosis were precancerous proliferations occurring within sun-damaged skin. Dr. Bowman treated 22 lesions with liquid nitrogen. Dr. Bowman recommended continuing follow up. *See* Exhibit H.

23. On June 20, 2016, Jonathan Bloch, D.O. performed a Division Independent Medical Examination (DIME). Claimant reported that he was diagnosed with BCC in 2009, and had treatment and then had recurrence in 2012. Claimant reported that he continues to see his dermatologist 2-3 times per year for preventive screening and cryotherapy for up to 14 lesions at a time, mostly on his face. Dr. Bloch specifically noted in his DIME report that he reviewed dermatology records from November 2008 through July of 2015. Dr. Bloch noted past biopsy reports dated December 16, 2008 and December 17, 2012 that both showed BCC. Claimant reported working for 4 years on Employer's drill grounds over 10 years prior where he had no sun or chemical protection except his suit and no shade or hygienic means for de-toxifying. Claimant reported 100 exposures per year in the burn building where they would dump trash and old tires to blaze for training. Claimant reported the facilities had limited showers and it was common to wait until at home to shower. Claimant reported he was concerned for regular screening, ongoing dermatology visits, and daily self-care. Claimant reported that he washes his face every morning, applies sunscreen 4 times per day and is constantly rinsing his face to re-apply sunscreen. Claimant reported 26 years as a firefighter with Employer, 16 as a lieutenant, and that he continued to work full time. Dr. Bloch found on physical examination generally keratosis of the face. Dr. Bloch diagnosed BCC with nodular and infiltrative patterns and actinic keratosis. Dr. Bloch opined that Claimant's prognosis was good but required routine screening and preventive care. Dr. Bloch opined that Claimant reached maximum medical improvement on July 31, 2015. Dr. Bloch provided an impairment rating of 15% class 2 skin impairment because regular intermittent treatment was needed, and rated 15% whole person. Dr. Bloch opined that it was medically more probable that Claimant's cancer did not arise from sources outside the workplace. Dr. Bloch referred to the firefighter's act covering occupational diseases of skin cancer and noted that the act relieved Claimant from the burden of proving his cancer resulted from his employment as a firefighter. Dr. Bloch believed that Claimant's cancer was considered compensable unless the firefighter's employer was able to persuade and show that Claimant's cancer did not occur on the job. Dr. Bloch commented

that Claimant's Employer did not appear to be trying to persuade or show that Claimant's cancer did not occur on the job. Dr. Bloch recommended lifetime maintenance care and continued preventive screening with dermatology. *See* Exhibits 7, C.

24. On August 18, 2016, Sander Orent, M.D. issued a Samms Conference report. Dr. Orent opined that prior to 2008, it was obvious there had been ongoing sun exposure for the Claimant over the course of many years. Dr. Orent opined that as a firefighter and when working, Claimant would be outdoors at least six hours per day and noted that no sunscreen was provided until 2011. Dr. Orent also opined that when working for the forest service in 1989, no respiratory protection was provided to Claimant and that there was ongoing severe sun exposure and outgassing and smoke. Dr. Orent also opined that decontamination processes were marginal or absent with no bunker washing and that from 2001 to 2010 Claimant was working in training and was in and out of burn buildings hundreds of times without washing his bunker gear. Dr. Orent noted two surgical procedures on Claimant's nose, in 2008 and in 2012 showing BCC. Dr. Orent also noted that Claimant had many pre-cancerous lesions removed from the skin over the years. Dr. Orent noted that Claimant had significantly modified his recreational activity and no longer is able to run outdoors and now runs and swims indoors. Dr. Orent noted that Claimant's mother had skin cancer at the age of 61. *See* Exhibit 8.

25. Dr. Orent opined that it was quite clear that the sun exposure in the course and scope of Claimant's job far exceeded any other exposures he had in his personal life. Dr. Orent noted that Claimant denied ever having a severe sunburn as a child and that Claimant reported wearing sunscreen growing up. Dr. Orent opined that Claimant was not provided sunscreen during the time he worked as a firefighter. Dr. Orent opined that cancer is multifactorial. Dr. Orent opined that other factors likely contributed to Claimant's susceptibility to malignancy including occupationally related toxic exposures. Dr. Orent opined that a vast preponderance of evidence showed that Claimant's skin cancers were a direct result of Claimant's occupational exposure. Dr. Orent opined that even if Claimant had a significant pre-existing family history, this would not change his opinion because the solar radiation exposure was far greater in the course and scope of his work. Dr. Orent opined that Claimant had a class III impairment and a 20% whole person impairment. Dr. Orent opined that skin cancers take many years to develop from the initial cell that becomes malignant to clinical diagnosis and that the exposure history needed to be looked at from the beginning of his work as a firefighter. Dr. Orent opined that carcinogen exposure is cumulative in terms of damage it can cause in the skin and that all the exposures together had conspired to create the BCC disease Claimant is facing. *See* Exhibit 8.

26. On August 31, 2016, Henry Roth, M.D. performed an independent medical examination. Dr. Roth noted the chief complaints were BCC of the tip of the nose and actinic keratosis involving the arms and face. Dr. Roth opined that Claimant's skin condition was the result of remote sun damage and opined that the medically probable latency period between exposure and the appearance of the degree of Claimant's sun damage, actinic keratosis, and BCC was 20 to 50 years. Dr. Roth noted that Claimant was initially diagnosed with BCC at the tip of the nose in 2008 and had two surgical

procedures with a third procedure on the tip of the nose done in 2012. Claimant also reported near continuous primary care with liquid nitrogen treatment of actinic keratosis on the dorsal forearms, hands, and face. Dr. Roth noted in family history that Claimant's mother had a similar skin disorder. On skin examination, Dr. Roth found Claimant to be blue-eyed and fair skinned with substantial sun damage to the skin of the face, neck, shoulders, anterior chest wall, upper extremities, upper back, and mid back. Dr. Roth found remote sun damage evidenced by hyperemia, telangiectasia, and widespread inflammation with focal mini pustular lesions throughout. Dr. Roth opined that the skin disorder was not limited to work related exposed facial skin and forearms. *See* Exhibits 9, B.

27. Dr. Roth opined that Claimant's BCC was not work related. Dr. Roth opined that Claimant's risk factors included fair skin and heredity including lifetime sun exposure with a latency of 20 to 50 years. Dr. Roth opined that it was medically probable that the majority if not the entirety of Claimant's risk and advent of BCC was due to non-occupational factors/exposures. Dr. Roth pointed out that studies showed the estimated lifetime risk for BCC in the white population was at 33-39% for men and most often found in light-skinned individuals. Dr. Roth opined the epidemiology for BCC and Claimant's widespread face, neck, chest, shoulder, upper back, mid back, and upper extremity sun damaged skin and actinic keratosis were the result of sun exposure in the remote past. Dr. Roth opined that Claimant's work related sun exposure was not excessive or out of the ordinary and was not the cause of Claimant's skin conditions. Dr. Roth also opined that Claimant's chemical exposure was not a specific risk factor for BCC or a specific accelerant of sun-damaged skin. Dr. Roth finally noted that Claimant's skin condition uniformly covered areas of the skin not exposed to either sun or hydrocarbons in the course of his work duties. Dr. Roth opined that Claimant's condition would continue and need monitoring. Dr. Roth opined that BCC and actinic keratosis occur in 1/3 of the general population with increased incidence and prevalence in fair-skinned person with the damage caused by sun exposure and latency for the appearance of actinic keratosis and BCC of 20 to 50 years. Dr. Roth opined that Claimant was fair skinned with a substantial history of childhood skin sun exposure, which was medically probably the cause of his skin condition. *See* Exhibits 9, B.

28. On September 29, 2016, Annyce Mayer M.D. issued an occupational/environmental clinic summary report. Dr. Mayer noted that Claimant was a 51-year-old career firefighter working for Employer since 1994. Claimant reported that he first began to see a dermatologist for lesions on his skin in approximately 1998. Claimant reported initially that he was treated with liquid nitrogen to remove lesions from his arms and face primarily as well as a few off his back. Claimant estimated that before his diagnosis of BCC on his nose in 2008, he had approximately a dozen lesions removed at his bi-annual visits and that he had 120 to 180 removed from the face and arms and less than 10 off his back. Claimant reported that since his diagnosis of skin cancer, he routinely applies sunscreen 3-5 times per day and is extra careful to try to minimize being in the sun. Under past surgical history, Dr. Mayer noted two Mohs procedures of the nose and excision from the ear. Claimant reported that his mother had a lesion on the cheek in her 50s that he believed was skin cancer. Claimant reported that he grew up in Los

Angeles and was a “normal kid” spending time playing outside. Claimant reported that in the summertime he was often outside all day other than eating and wore pants and a t-shirt although sometimes would take the shirt off to play basketball. Claimant reported he worse sunscreen about 30% of the time and typically wore a ball cap. Claimant recalled one blistering sunburn on the left shoulder. Claimant reported that in the springtime he would tend to burn first when out in the sun and did not tan much but that he did not have problems with sunburn that made him limit or avoid being out in the sun. Claimant reported that he graduated high school in 1983 and attended college in east LA studying fire science.

29. Claimant reported that after his BCC on the nose, he started wearing sunscreen closer to five times per day. Claimant reported that in 2011, Employer started to provide sunscreen. Claimant reported he had been on the Kelly schedule working 24 hours on, 24 hours off, times three followed by 4 days off but that since 2010 he had been working 48 hours on/96 hours off. On examination, Dr. Mayer found Claimant to have blue eyes and dirty blonde hair. Claimant had multiple scattered freckles and had ruddy skin with solar elastosis on his face and neck in a distribution ending approximately at the t-shirt line. The changes due to sun exposure below the t-shirt level on Claimant’s back were noted to be a lesser degree. Dr. Mayer found an intermediate degree of chronic sun damage on the dorsal forearms beginning just above the elbow. Dr. Mayer noted several scars on the forearms, but Claimant reported those were from traumatic injuries rather than skin lesion removals.

30. Dr. Mayer assessed: BCC of the skin, actinic keratosis, and photo aging predominantly on the face and neck. She recommended continue monitoring with a dermatologist. In her discussion, Dr. Mayer noted that Claimant’s first BCC was diagnosed in 1999, 5 years after beginning work for Employer. Dr. Mayer opined that Claimant met the requirement under statue for firefighter cancer presumption. She opined that Claimant was at MMI with a 15% whole person impairment rating.

31. Dr. Mayer opined that a firefighter’s known or typical occupational exposures were capable of causing BCC. She noted that there had been industrial hygiene assessments of fire scenes and that the International Agency for Research on Cancer (IARC), part of the world health organization, had recognized numerous carcinogens as commonly found at fire scenes in the soot and smoke. Dr. Mayer opined that these included group 1 agents that were known human carcinogens, group 2A agents that were probable human carcinogens, and group 2B agents that were possible human carcinogens. She opined that unlike most other cancers, BCC had not been studied in the population of fire fighters because BCC is a non-melanoma cancer and rarely, if ever, results in death. She noted that the risk of BCC had not been studied in U.S. fire fighters to date. Despite the lack of studies, Dr. Mayer opined that within a reasonable degree of medical probability the medical literature supported the causal connection between firefighting and Claimant’s BCC. She noted a study where the application of polycyclic aromatic hydrogen containing elements were placed onto the skin of animals, and skin tumors formed with the largest number of tumors being papillomas, followed by squamous cell carcinoma, but noted that BCC was also observed. Dr. Mayer also opined that the

combination of UVA light exposure with benzopyrene and other PAHs had been found to induce production of reactive oxygen species, DNA damage, and epigenetic changes in cells with the mechanism believed to be due to PAH absorption of UV light, which increased the excited state properties. She also opined that sun exposure was the greatest risk factor and pointed out studies that had linked exposure at a young age to be the most important determinant. However, Dr. Mayer also noted studies that showed occupational exposure including outdoor works having a job in the sun for greater than 3 months of 10 years and farmers had an increased risk of BCC. Dr. Mayer opined that firefighting activities caused perspiration and a loss of sunscreen protection unless re-applied. *See* Exhibit 14.

32. Dr. Mayer also opined that Claimant had been exposed to substances known to cause BCC. Dr. Mayer noted that when Claimant began firefighting, it was not yet recognized that fire soot and smoke contained cancer-causing chemicals. She noted that firefighters could inhale smoke, get soot on their skin, swallow it, and that some chemicals were easily absorbed through the skin and could get into the bloodstream, including PAHs. She noted that the personal protective equipment had gotten better over the years but that the safety practices to reduce firefighter exposure to carcinogens were not in place during the full 32 years Claimant had worked as a firefighter. Dr. Mayer opined that Claimant had heavy exposure to sun and soot when working as a training division instruction in 2001 and from 2004-2005. She opined that Claimant spent considerable time outside in the sun during outdoor grass and brush fires, during training exercises, when washing equipment after a fire, when doing rehab during a fire, and during the fire academy. She opined that he had considerable soot on his skin while also being exposed to sun. She opined that Claimant had a high amount of occupational UV exposure from the sun that well exceeded the definition of greater than 3 months per year for at least 10 years, by an additional 22 years with the additional potentiating exposures to PAHs in soot, which are all exposures known to cause BCC. *See* Exhibit 14.

33. Dr. Mayer opined that Claimant's risk factors do not render it more probable that his BCC arose from a source outside the workplace. Dr. Mayer noted that Claimant had a number of risk factors for BCC including his light colored skin, his age of greater than 20 years, and his sun exposure in outdoor activities as a child and adult, that were not occupational exposures. She opined, however, that his sun exposure was not considered outside the range of normal activities. She opined that Claimant only had one blistering sunburn on his shoulder. Dr. Mayer opined that Claimant would be considered skin photo type II on the Fitzpatrick scale and that Claimant's photo type is more susceptible to the effects of UV radiation including photo aging and BCC. Dr. Mayer opined that Claimant with such a skin photo type, would demonstrate a greater amount of sun related changes at an earlier age and lesser degree of sun exposure than those with other photo types. She opined that Claimant had significantly sun-damaged skin on the neck above the t-shirt line and on the face. Dr. Mayer also opined that if Claimant's mother did actually have skin cancer, it would increase Claimant's risk but that Claimant did not know if she actually had skin cancer or what type of cancer. Dr. Mayer opined that having a prior BCC increases the risk of additional BCCs. She noted that in 1995 there was suspicion that Claimant had BCC 2 years prior but that the records don't show

any BCC diagnosis until 1999. Dr. Mayer opined that Claimant's sun exposure during the course of his career as a firefighter, often unprotected due to sweat causing sunscreen to come off, and the concurrent exposure to fire soot and sun together, meets the medical requirements that BCC was caused by his employment. She opined that Claimant's individual particular risk factors did not make it more probable that Claimant's BCC arose from a source outside the workplace. *See* Exhibit 14.

34. On June 19, 2017, Thomas Kurt, M.D. issued a medical toxicological report. Dr. Kurt reviewed medical records including but not limited to the reports of Dr. Mayer, Dr. Roth, Dr. Orent, and Dr. Bloch. Dr. Kurt noted that Claimant began seeing a dermatologist for skin lesions in 1998 when he was 33 years old. Dr. Kurt opined that was a young age for skin lesions to appear and was consistent with Claimant's heavy sun exposure and blistering sunburn in his teenage years and the 15 year latency period. Dr. Kurt noted Claimant's report to Dr. Mayer that he had approximately a dozen skin lesions removed at each of his bi-annual visits and had 120-180 skin lesions removed from his face and arms. Dr. Kurt also noted the records indicated Claimant was diagnosed with BCC on December 6, 2008 with a Mohs surgery to remove the lesion from the tip of his nose. Dr. Kurt further noted that Claimant was diagnosed with a second BCC on the tip of the nose in December of 2012 with another Mohs surgery on December 17, 2012. Dr. Kurt noted a positive family history of skin cancer in Claimant's mother who had a lesion in her cheek removed. Dr. Kurt also noted Claimant's childhood in Los Angeles where he was often outside all day other than eating and wore sunscreen only 30% of the time. Dr. Kurt pointed to a blistering sunburn and Claimant's report that he tended to burn first when out in the sun in the springtime. Dr. Kurt noted on skin examination, Claimant was found to have multiple scattered freckles, blue eyes, and dirty blonde hair. Claimant had a ruddy skin appearance with solar elastosis on his face and neck and an intermediate degree of chronic sun damage on his dorsal forearms. *See* Exhibit A.

35. Dr. Kurt opined that Claimant's first 1999 BCC that was removed was related to the extensive sun exposure with sunburn Claimant sustained as a teenager. Dr. Kurt also noted that sun exposure is the greatest risk factor for BCC with studies linking exposures at a young age as the most important determinant. Dr. Kurt opined that the Daniels study and the LeMasters study do not support that BCC is associated, causative, or risk related to firefighting as an occupation. Dr. Kurt opined that Claimant's BCC was related to Claimant's tremendous solar ultraviolet exposure in Claimant's childhood and teenage years in Los Angeles evidenced by multiple types of skin damage throughout Claimant's body that are changes not seen among firefighters under the covered designed clothing. Dr. Kurt noted Claimant's lentigenes, benign nevi, actinic keratosis, dermatoheliosis, and xerosis and the locations on Claimant's body in areas covered by a uniform shirt evidencing sun damage exposure in childhood and teenage years. Dr. Kurt again cited studies that ultraviolet radiation is the principal environmental cause of BCC and noted that BCC occurs almost exclusively on sun-exposed body sites among fair-skinned populations. *See* Exhibit A.

36. On July 10, 2017, Dr. Mayer issued a follow up evaluation report after a follow up evaluation on May 4, 2017. Dr. Mayer noted she had reviewed again Claimant's

past firefighter exposures and consideration of BCC and the medical requirements of the firefighter cancer presumption statute. Dr. Mayer reviewed photographs showing exposure to soot on Claimant's body during various times during his career. She also reviewed records from Employer concerning personal protective clothing and the history of the gear and decontamination procedures. Dr. Mayer opined that the photographs document the conditions Claimant had described with repeated sun exposure when Claimant's face, neck, and lower arms were covered with soot. She also opined that several photographs show Claimant to have a red and sweaty face. She opined that Claimant had particularly extended exposure to soot on his skin including when being out in the sun when he served as a training division instructor for 4-5 months in 2001 and for another 2 years from 2004-2005. Dr. Mayer reviewed Dr. Kurt's June 19 report and commented on it. *See* Exhibit 15.

37. Dr. Mayer opined that although Claimant had sun exposure in outdoor activities as a child and teenager, the exposures were not outside the range of normal activities. Dr. Mayer opined that there were many occasions when Claimant was out in the sun in short sleeve shirts while on duty. Dr. Mayer noted that adult sun exposures had been found to increase BCC risk. Dr. Mayer agreed that UV radiation is the principle risk factor for BCC but did not agree that it was the only risk factor. Dr. Mayer opined that evidence of an increased SCC risk and to a lesser extent BCC was found at the highest level of exposure to arsenic. Dr. Mayer agreed that IARC, the LeMasters meta-analysis, and the Daniels study provided no support that BCC is associated, causative, or risk related to firefighting as an occupation but opined that the studies did not include BCC and that BCC had rarely been studied because it rarely leads to death and is not a reportable cancer. Dr. Mayer opined that studies support that other carcinogens are linked to cancer of skin keratinocytes including BCC. Those carcinogens, she opined, include arsenic and PAHs and an enhanced risk of carcinogenic cell injury from the combination of UV radiation with the chemical exposures. Dr. Mayer opined that concurrent PAH and sun exposure occurs when firefighters are out in the sun with soot on their skin. She also opined that increased temperatures can significantly increase dermal absorption. Dr. Mayer opined that arsenic, an established exposure at fire scenes, can play a role as a co-carcinogen with UV and PAHs and can cause DNA damage with UV radiation. She opined that formaldehyde may play a similar role and has been found to induce DNA damage and delay DNA repair after UV irradiation in human keratinocytes. Dr. Mayer opined that Claimant had repeated opportunity for frequent and often unprotected sun exposure during his career even with the use of sunscreen. She opined that Claimants' particular risk factors did not render it more probable that the BCC arose from a source outside of the workplace including the risk from childhood sun exposure. *See* Exhibit 15.

38. A study referenced and relied upon by the experts found farmers to have a higher risk of BCC than the general population. The study noted that sun overdosing in childhood and adolescence and a positive family history of BCC were the strongest independent risk factors for BCC development. It also found the main risk factor for developing BCC was exposure to UV radiation, particularly high-dose exposure at a young age. *See* Exhibit 18.

39. A study referenced and relied upon by the experts found that arsenic can act a as co-carcinogen in the skin with an increased risk in skin cancer when exposed to both UV and arsenic in drinking water. It concluded that arsenic is a co-carcinogen with UV in skin carcinogenesis likely by adversely influencing DNA repair and or ROS mediated damage. *See* Exhibit 17.

40. Claimant testified at hearing. Claimant recalled that he had about 6 lifetime sunburns with blisters. Claimant testified that in a 24-hour shift, he would be exposed to the sun for about 6 hours and that he worked approximately 10 shifts per month. Claimant also testified to the range of both sun and fire exposures he had sustained during his long career as a firefighter. Claimant testified that the soot often permeated and covered his skin.

41. Dr. Kurt testified at hearing. Dr. Kurt noted Claimant's record of BCC in 1993 on the right upper posterior arm. Dr. Kurt opined that risk factors for BCC included sun and uv radiation, fair skin coloring, family history, and living in a sunny area. Dr. Kurt opined that soot exposure and soot combined with sun exposure was a risk factor for squamous cell carcinoma (SCC). Dr. Kurt opined that actinic keratosis are skin lesions caused by sun exposure and blistering sunburns and that they were pre-cancerous but it was not uncommon for BCC to develop in the same spot as an actinic keratosis. Dr. Kurt opined that sun exposure damages the basal cell of the skin. Dr. Kurt opined that immunity declines with age. Dr. Kurt opined that BCC takes time to occur and that there is an approximate 20-year latency period. Dr. Kurt opined that SCC with the exposure to soot could be concerning but that BCC has absolutely not been shown to be linked to firefighting.

42. Dr. Kurt testified that he had reviewed Dr. Mayer's report. He disagreed with her regarding polycyclic aromatic hydrocarbons and testified that they were not associated with BCC. He opined that they were linked to SCC but not BCC. Dr. Kurt testified that he reviewed the very heavy sun exposure as a youth that Claimant had with no effective sunscreen and noted that the FDA did not come out with SPF ratings until 1990. Dr. Kurt also testified that he reviewed Dr. Bowman's reports where there were multiple skin problems associated with excessive sun exposure documented. Dr. Kurt opined that Claimant had heavy sun exposure in his youth in a southern latitude, had a Fitzpatrick type II skin type, a family history of skin cancer, and noted the first BCC on the right upper arm was documented at a young age of 28. Dr. Kurt opined that the BCC from the right upper arm in 1993 couldn't be related to firefighting because it was in an area that would have been covered and protected from sun exposure and that it was more likely due to adolescent exposure given latency periods. Dr. Kurt testified that the 1993 BCC was more consistent with latency period due to youth exposure. Dr. Kurt opined that the first firefighting exposures would have been in 1985 and that 1985 to 1993 was not significant enough of a latency period. Dr. Kurt opined that if Claimant had no exposure after youth, i.e. worked in an office environment, Claimant still would have had BCC and the same lesions develop. Dr. Kurt opined that Claimant's firefighting job and exposures did not contribute to Claimant's BCC. Dr. Kurt also testified noting that the

firefighters cancer presumption statute did not break up the categories of skin cancer, including SCC, BCC, and general skin cancer.

43. Dr. Roth testified at hearing. Dr. Roth noted Claimant's body had extensive solar related skin damage all over including in areas not exposed to the sun at work as a firefighter. Dr. Roth noted that the level of Claimant's skin damage showed that Claimant had extensive and substantial sun exposure as a youth. Dr. Roth opined that Claimant's skin type afforded Claimant little protection from the sun and that the lesions Claimant has on his skin now demonstrate where in the past Claimant had exposure significant enough to damage his skin. Dr. Roth noted that Claimant had his first BCC in 1993 on the right upper arm that was due to sun exposure as a child. Dr. Roth opined that Claimant's sun exposure and damage was so sufficient that cell damage had risen to the level of cancer at the age of 28. Dr. Roth opined that in 1993, Claimant's likelihood to get BCC again and to have recurrence was 100%. Dr. Roth noted the records showed that in 1995 Claimant needed to be closely monitored. Dr. Roth testified that the studies performed had not demonstrated concern with BCC but most related to SCC. Dr. Roth testified that Claimant's BCC was not work related and not caused by work exposures. Dr. Roth opined that Claimant's BCC was due to his unique susceptibility, childhood sunburns, and the level of skin damage shown in Claimant's 20's with his first BCC skin cancer in his 20's. Dr. Roth opined that Claimant's BCC condition is the same as it would have been no matter what type of job he worked as an adult.

44. Dr. Mayer testified at hearing. She testified that in the course of his employment Claimant had sun and soot exposures as well as sunburns. She opined that it was more probable Claimant's BCC arose from sources inside work. Dr. Mayer opined that even after cancer initiation, and a damaged cell mutates, there still need to be promoters to drive the cancer forward. Dr. Mayer opined that childhood sun exposure could have been an initiating event but additional hits were required to drive the cancer forward. She opined that during his firefighting career, Claimant had exposure to sun, soot, and arsenic. Dr. Mayer testified that there is a synergistic mechanism and a combination of the sun exposures and chemical exposures. She testified that Claimant had concurrent exposures of sun and soot. She opined that it was not medically probable that the cause of Claimant's BCC was due to exposures outside of work and that the exposure as a child were not the cause because other promoters were needed. Dr. Mayer agreed that all white men had a 30-39% chance of getting BCC.

45. Dr. Orent also testified at hearing. Dr. Orent testified that Claimant's BCC was related to his work as a firefighter and that the primary contributor was the fire exposures over Claimant's 32-year career. Dr. Orent opined that although Claimant was born with susceptibility to skin cancer that did not create the disease. Dr. Orent opined that the solar exposure combined with the chemical exposures during his career were the reasons for Claimant's BCC. He opined that the known carcinogens that Claimant was exposure to and the sun and the interplay were more likely the cause of BCC than the childhood exposures. Dr. Orent opined that Claimant's work exposures were extensive as compared to his childhood exposures. Dr. Orent also pointed out that the immune system is affected by shift work.

46. The opinions of Dr. Kurt and Dr. Roth are found more persuasive than the opinions of Dr. Mayer and Dr. Orent. The opinions of Dr. Kurt and Dr. Roth are consistent with Claimant's significant history of sun exposure as a youth and the extensive and significant sun damage noted by Dr. Bowman in 1995, including to areas of the back that were not exposed to sun during Claimant's firefighting career.

47. Claimant had BCC of the right arm in 1993 at 28 years old, BCC of the right cheek in 1999 at 34 years old and BCC of the left wrist in 2007 at 42 years old. During his treatment from 1995-2007 he had numerous skin lesions removed and numerous actinic keratosis noted. Claimant had significant sun damage to areas of his skin that would be covered by a firefighting uniform. Not surprisingly, Claimant continued to have BCC lesions in 2008 and 2012 and will likely to continue to have BCCs in the future.

48. The ALJ finds by clear and convincing evidence based on the evidence and testimony as a whole that Claimant's BCC was not caused or contributed to by his firefighting work related chemical or sun exposures.

49. Claimant undoubtedly has been exposed to the sun during his career as a firefighter. He also undoubtedly has been concurrently exposed to soot and sun at the same time at different points in time during his career and to the gamut of known typical firefighter exposures. However, the strongest causative link to BCC is sun exposure. It is clear that Claimant had significant and extensive damaging exposure to his skin during his youth and adolescence. Claimant rarely wore sunscreen during that time, with his estimate being that 70% of the time he wore no sunscreen. Claimant has fair skin, type II on the Fitzpatrick scale. Claimant testified to 6 blistering sunburns. Claimant lived in California, a high sun exposure location. Claimant had significant extensive visible sun damage to his skin in 1995 when only approximately 30 years old. Claimant had BCC first in 1993 and again in 1999 at young ages where a latency period would put him back to early sun exposure.

50. The overwhelming evidence shows that Claimant unfortunately sustained significant sun damage in his youth before the prevalence of sunscreen with adequate protection. This is the greatest causative factor to his BCC with clear skin damage noted to Claimant's skin in his late 20s and early 30s.

51. Based on a review of the evidence as a whole, the ALJ finds that the Respondents have established by clear and convincing evidence that Claimant's BCC is due to his childhood/adolescent sun exposure and not due to his occupational exposures as a firefighter, such that the presumption of compensability is rebutted with regard to specific causation.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME physician opinion and Firefighter Presumption Under § 8-41-209, C.R.S.

For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Ordinarily, the claimant has the burden of establishing his or her entitlement to benefits by a preponderance of the evidence. *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). The question of causation is generally one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

Section 8-41-209, C.R.S., enacted by Colorado's legislature in 2007, reverses the burden of proof for firefighters who have developed certain types of cancers and who have satisfied the threshold criteria set forth in the statute. The statute provides:

> (1) Death, disability, or impairment of health of a firefighter of any political subdivision who has completed five or more years of employment as a firefighter, caused by cancer of the brain, skin, digestive system hematological system or genitourinary system and resulting from his or her employment as a firefighter, shall be considered an occupational disease.
>
> (2) Any condition or impairment of health described in subsection (1) of this section:
>
> (a) Shall be presumed to result from a firefighter's employment if, at the time of becoming a firefighter or thereafter, the firefighter underwent a physical examination that failed to reveal substantial evidence of such condition or impairment of health that preexisted his or her employment as a firefighter; and
>
> (b) Shall **not** be deemed to result from the firefighter's employment if the firefighter's employer or insurer shows **by a preponderance of the medical evidence** that **such condition or impairment did not occur on the job**.
>
> **. .**
>
> § 8-41-209, C.R.S. (emphasis added).

In *City of Littleton v. Industrial Claim Appeals Office*, 370 P.3d 157, 165 (Colo. 2016), the Colorado Supreme Court determined that the statutory presumption embodied in §8-41-209(2), C.R.S. "is substantive in that it remains in the case as a substitute for evidence." *Id.* at 165. However, the court emphasized that the statutory presumption "is not conclusive, or irrebuttable." *Id*. at 168. The employer can overcome the presumption by producing a preponderance of the medical evidence that the firefighter's cancer "did not occur on the job." *Id*. at 165, 169. While the court stated that the employer faces a "formidable" burden "because the employer is tasked with proving a negative," *Id*. at 172, the court also noted that the employer's burden does not require an especially high degree of proof. Rather, in order to meet its burden under §8-41-209(2)(b), the employer or insurer must show that it is "more probable than not" that the firefighter's condition or impairment "did not occur on job." *Id.* at 169. The *City of Littleton* court clarified the types of evidence that employers can use to rebut the statutory presumption and prove that a firefighter's cancer is not work-related. The employer may rebut the presumption with evidence establishing the absence of either general or specific causation. *Id.* at 172. Specifically an employer may prove by a preponderance of the medical evidence either: "(1) that a firefighter's known or typical occupational exposures are not capable of causing the type of cancer at issue; or (2) that the firefighter's employment did not cause the firefighter's particular cancer, where, for example, the claimant firefighter was not exposed to the cancer-causing agent, or where the medical evidence renders it more

probable that the cause of the claimant's cancer was not job-related." *Id*. Notably, §8-41-209(2), C.R.S. does not require the employer "to disprove causation from every conceivable substance." *Id.* at 171. In fact, if a firefighter's exposure is "speculative, remote or illogical, then it is not typical of the occupation." *Id.*

With regard to general causation, the *City of Littleton* court noted that epidemiological evidence is "'highly probative because it considers human physiology and the likelihood that a potential environmental factor is capable of entering the body, traveling to a particular organ, and interacting with that organ in a way that can cause a particular cancer.'" *Id.* at 170. The court cited a 10th Circuit opinion for the proposition that, "[w]hile the presence of epidemiology does not necessarily end the inquiry, where epidemiology is available, it cannot be ignored. As the best evidence of general causation, it must be addressed." *Id.* (citing *Norris v. Baxter Healthcare Corp.,* 397 F.3d 878, 882 (10th Cir. 2005)). The *City of Littleton* court expressly concluded that employers may rely on epidemiological evidence to show the lack of an association or general causal relationship between known or typical substances to which the firefighter is likely to be exposed on the job and the firefighter's particular condition or impairment. The ALJ may then determine whether that medical evidence shows, by a preponderance, that the claimant firefighter's cancer "did not occur on the job." *Id.* at 171.

In the companion case of *Industrial Claim Appeals Office v. Town of Castle Rock*, 370 P.3d 151, 157 (Colo. 2016), the Supreme Court further determined that to meet its burden of proof under §8-41-209(2)(a), the employer is not required to establish a specific alternate cause of the firefighter's cancer. The court addressed the employer's ability to rebut the presumption of compensability by showing a lack of specific causation and noted that the employer may meet its burden to show that the firefighter's condition did not occur on the job by presenting risk-factor evidence demonstrating that it is more probable than not that a particular firefighter's cancer was caused by something other than the firefighter's employment. *Id.* at 156-157.

When a DIME is performed, and as a matter of diagnosis, the DIME physician's assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

It is not disputed that firefighters are exposed to sun during their employment or that sun exposure is the greatest causative factor for the development of BCC.

Respondents in this case are not attacking the possible existence of general causation or that BCC could possibly be caused by sun exposure as a firefighter. Rather, they are arguing the specific causation in this case. Here, Respondents argue that Claimant's extensive skin damage, BCC in 1993, and extensive exposure as a child are the specific cause of his current BCC as opposed to any sun and/or sun/soot exposure as a firefighter.

Respondents have met their burden on specific causation and have shown that Claimant's BCC is not a result of his firefighting duties. Respondents successfully rebutted the presumption of compensability pursuant to § 8-41-209, C.R.S. based on a lack of specific causation. As found above, Claimant's greatest risk factor for developing BCC was his childhood exposure and he had significant and extensive exposure as a child. At the young age of 28, Claimant's damage included his first BCC on his right upper arm. At approximately the age 30, Dr. Bowman noted Claimant's significant level of sun damage to various body areas. Dr. Bowman and Dr. Miller noted in their reports that Claimant's current 2012 BCC was deemed work related per § 8-41-209, C.R.S. Dr. Bowman specifically noted that according to statute, Claimant's BCC was required to be covered by workers' compensation. Neither Dr. Bowman nor Dr. Miller performed a causation analysis nor did they review or reference the studies surrounding BCC, firefighting, exposures, and risk correlation of BCC. Their opinions incorrectly assumed that the BCC was required to be covered. Although the statute creates a presumption, there is no requirement of coverage since the presumption is rebuttable. Dr. Bloch, the DIME physician, also took a similar position. In his report, Dr. Bloch noted that § 8-41-209, C.R.S. covers skin cancer. Dr. Bloch opined that the BCC was considered compensable under § 8-41-209, C.R.S. unless Employer persuaded or showed that it did not occur on the job. Dr. Bloch noted that Employer did not appear to be trying to show Claimant's BCC was not work related. Dr. Bloch opined that it was more probably work related.

Claimant argues that Respondents must overcome DIME physician Dr. Bloch's opinion that Claimant's BCC is work related by clear and convincing evidence. Respondents argue that Claimant, in the first instance, must establish compensability by a preponderance of the evidence and given the presumption statute, Respondents argue that it is their burden to show the BCC is not work related but by a preponderance of the evidence. Respondents argue that only once compensability is determined, would the burden be clear and convincing to overcome the permanent partial disability (PPD) rating provided by the DIME physician.

Assuming Claimant is correct that the burden of proof is clear and convincing, Respondents have still met this standard. The evidence is overwhelmingly clear and convincing that Claimant's BCC is not work related. Dr. Bloch's opinion above is found to be in error. Dr. Bloch incorrectly believed that Employer was not attempting to rebut the presumption of compensability. Similar to Dr. Bowman and Dr. Miller, Dr. Bloch referred to the presumption statute covering skin cancer. Dr. Bloch erred by failing to do a casual analysis of whether or not the Claimant's specific BCC is work related by looking at Claimant's specific exposures both work and personal and comparing these exposures to the known scientific and medical literature. Rather, Dr. Bloch relied on his assumption

that Employer was not contesting the casual relatedness and thus opined under § 8-41-209, C.R.S. that Claimant's BCC was work related. Dr. Bloch failed to mention various studies and medical literature and failed to analyze the firefighting exposures at work versus the childhood exposures and family history before providing his opinion. As found above, Dr. Bloch did not review relevant medical records. His review noted specifically that he had reviewed dermatology records from 2008 to 2015 before providing his DIME opinion. The records from Dr. Bowman dated back to 1995 and showed several prior instances and diagnoses of BCC that Dr. Bloch was not provided. Further, it is clear that even before 1995, Claimant had been not only evaluated but treated for a prior BCC of the right upper arm. By not having the records, Dr. Bloch was unable to complete a full causal analysis or provide an opinion that carries significant weight. Respondents have established that Dr. Bloch erred in finding a casual connection.

Respondents have established both by preponderant and by clear and convincing evidence that Claimant's BCC is not causally related to his employment as a firefighter. When reviewing the medical evidence, scientific literature, and Claimant's exposures as a whole, it is clear and convincing that Claimant's BCC was due to his significant childhood exposures and significant skin sun damage at a young age. As found above, Claimant had an extreme level of skin damage noted at a very young age including to areas of his back that were not exposed during his firefighting work. Claimant had BCC in 1993 and in 1999, both occurrences when he was under the age of 35. These cancers, before the age of 35, and the skin examination notes show the extreme level of damage to his skin at a very young age. The known latency periods and a 20-year development would date the exposures causing those BCCs back to Claimant's youth, when he was approximately 8 and 14 years old. This is consistent with his described significant youth sun exposures with multiple blistering sunburns, his skin type that tends to burn first, and his history of being outside during the summer almost constantly with very little sunscreen use. Dr. Orent opined that Claimant's work sun exposure far exceeded Claimant's personal sun exposure. This is not persuasive. Claimant testified that his work related sun exposure was approximately 6 hours out of every 24-hour shift. Claimant also testified he worked approximately 10 shifts per month, and had a total of 60 hours per month of work related sun exposure. However, he also testified and reported to medical providers that after being diagnosed with BCC, he regularly used sunscreen and tried to cover up. Assuming this all to be fairly accurate, Claimant was first diagnosed with BCC in the early 1990s, wore sunscreen since, and was exposed approximately 60 hours per month to the sun. This exposure is far less than his childhood exposure where he reported being outside almost constantly (coming in only to eat) during summers in California and wearing sunscreen only 30% of the time (when his mom could catch him). He reported approximately 6 blistering sunburns as a child and none during his employment as a firefighter. As found above, Claimant inaccurately reported to Dr. Orent that he never had a severe sunburn as a child and that he wore sunscreen as a child. His more accurate testimony admitted approximately 6 blistering sunburns as a child and that he wore sunscreen approximately 30% of the time, when his mom could catch him.

Similarly, Claimant's reports to Dr. Mayer were not entirely accurate or consistent with the documented medical history. Dr. Mayer believed Claimant to have had one

blistering sunburn in youth. Claimant reported to her that he first began to see a dermatologist for lesions in approximately 1998, when he had BCC in 1993 and started seeing Dr. Bowman in 1995 for continued routine skin checks. Claimant was treating well before 1998 for his multiple significant skin lesions and skin damage.

It is clear from the records that, unfortunately, Claimant sustained significant sun related skin damage in his youth and adolescence that showed visibly and obviously by his late 20s and early 30s. Claimant had BCC in 1993 and 1999. These BCCs and his subsequent 2012 BCC (at issue in this case) are the expected course for someone who has so significantly damaged his skin in his youth. The opinions of Dr. Kurt and Dr. Roth are credible, persuasive, and overwhelmingly consistent with the weight of the medical evidence. The opinions of Dr. Kurt and Dr. Roth show both by preponderant and by clear and convincing evidence that the DIME physician was incorrect and erred by making a causal connection between Claimant's BCC and his firefighting employment. Claimant's BCC is not work related. It is due to his significant skin damage he sustained in his youth and adolescence while spending a significant amount of time outside without sunscreen. This skin damage showed up very early in his late 20s and early 30s, consistent with the medical literature and expected latency periods. Claimant had skin cancer in his late 20s and early 30s consistent with his youth exposures and latency periods. Respondents have met their burden to overcome the DIME opinion, to overcome the statutory presumption of compensability (which only mentions skin cancer and does not break down the different types of skin cancer), and to withdraw their admission of liability.

Withdrawing an Admission of Liability

The Court of Appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of the evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1), C.R.S.

Because Respondents filed a medical only General Admission of Liability on April 24, 2013, they bear the burden of proof to establish by a preponderance of the evidence that Claimant did not sustain a compensable injury. As found, Respondents have not only rebutted the presumption of compensability under §8-41-209 C.R.S. by a preponderance of the evidence, but they also have overcome the DIME physician's causal relatedness opinion by clear and convincing evidence. Consequently, Respondents have satisfied their burden under §8-43-201(1), C.R.S. and are permitted to withdraw their admission of liability in this claim.

ORDER

IT IS HEREBY ORDERED that:

1. Respondents have overcome DIME physician Dr. Bloch's opinion. Respondents have established by clear and convincing evidence that Claimant's BCC is not causally related to firefighting.

2. Respondents have successfully rebutted the presumption of compensability under § 8-41-209, C.R.S.

3. Respondents have thus made the necessary showing to withdraw the medical only General Admission of Liability filed on August 30, 2013.

4. As the claim is not compensable, the issue of the PPD impairment rating is not addressed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 2, 2019

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STATE OF COLORADO **OFFICE OF ADMINISTRATIVE COURTS** 1525 Sherman Street, 4th Floor Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **R,** Claimant, vs. **U,** Employer, and **A,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-071-593-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on February 21, 2019, before Margot W. Jones, Administrative Law Judge. Claimant was present and was represented by William R. Finn, Esq. Linda Newbold, Esq. represented Respondents. This matter was digitally recorded in Courtroom 2 convening at 1:30 p.m. in Denver, CO. The parties' exhibits 1, 3-6 and A-J were admitted into evidence.

In this order, R is referred to as "Claimant," Respondent-Employer U is referred to as "Employer," Respondent-Insurer A will be referred to as "Insurer" and Employer and Insurer collectively as "Respondents."

Also in this order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes, "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3 and "the Act" refers to the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S.

ISSUES

1) Whether Claimant proved by a preponderance of the evidence that she was disabled from her usual employment and therefore is entitled to an order awarding temporary total disability benefits (TTD) from April 12, 2018, and ongoing,

2) Whether Respondents proved by a preponderance of the evidence that Claimant engaged in a volitional act causing her wage loss and therefore is not entitled to an order awarding indemnity benefits, and

3) Whether Respondents proved by a preponderance of the evidence entitlement to an offset for unemployment benefits received against an award of TTD.

STIPULATION OF FACT

The parties reached the following stipulation: 1) Claimant's average weekly wage for this claim is $1103 per week, which includes the COBRA benefit increase. This stipulation was approved and accepted by the ALJ.

FINDINGS OF FACT

1. Claimant is a 49 year old female. She was hired by Employer on February 16, 2015, as an Environmental Health and Safety Specialist. Claimant's position is an overtime exempt position with Employer. Claimant did not work in the field of environmental health and safety prior to her employment with Employer. She previously worked as a parole officer. Her job duties for Employer included operations, inspection and management of the hazardous waste on campus, as well as compliance with Universal Waste and Recycling regulations such as proper disposal of light bulbs, batteries, etc. Claimant also performed duties of mold management, storage tank compliance and emergency response to situations such as fire alarms, water leaks and resident complaints. Claimant also performed some training and was responsible for lab safety.

2. On February 8, 2018, Claimant was lifting an empty steel drum into a truck bed and sustained an injury to her back. Claimant was seen for urgent care, then elected to treat with Workwell. Claimant was given a ten pound lifting restriction at her initial visit and Workwell continued those restrictions. Employer accommodated her restrictions and Claimant returned to modified duty. There was no lost time from work.

3. During the course of her employment, Claimant was supervised by Glenn A_____, Employer's Director of Environmental Health and Safety. Mr. A_____ was employed by Employer for thirteen years.

4. While on restrictions, Employer accommodated Claimant's restrictions. Claimant was able to continue to perform the majority of her job duties. Claimant had "moderate restrictions" post-injury and she was not doing any lifting. Claimant testified she could not "move fast" while working and could not stoop or bend. Claimant further testified that she "has to be fast" in her job and that she "could not keep up."

5. Mr. A_____ testified the majority of Claimant's job consisted of office and computer work as well as attending inspections and other meetings which would not involve exceeding her ten pound lifting restriction. He denied that Claimant's job required her to "move fast" or that he had complaints about the speed of the performance of Claimant's job duties. Claimant's coworkers were available to help her with any duties that did not meet her restrictions. Mr. A_____' testimony was found to be more credible and persuasive than Claimant's testimony.

6. Claimant testified that she was never formally written up regarding her job performance issues. However, she admitted there were discussions regarding her job performance with her supervisor, including one that occurred in January 2018. Claimant recalled that her supervisors discussed her lack of initiative, organizational skills, compliance documentation, her hours and her coming in to work late, among other things. Claimant felt that her restrictions lowered her value to Employer, though she did not provide an explanation of specifically why this was true.

7. During Claimant's employment for Employer, she underwent additional on-the-job training as well as formal training for her job. Mr. A_____ testified that he performed Claimant's training along with others trainers. Mr. A_____ maintained an open door policy with his staff members and encouraged them to come to him for assistance if needed. Claimant exhibited problems with her job performance within a year and a half of starting work for Employer. Mr. A_____ observed significant issues with Claimant's job performance. Over time, these issues did not improve. Although Mr. A_____ hoped that she would improve, that never occurred.

8. Mr. A_____ held one on one meetings with Claimant, a minimum of once a month, during the course of her employment. During these meetings, they would sit down together and discuss Claimant's projects that needed to be completed, goals that were not being met and any issues with her performance such as missing excessive time and organizational issues.

9. In June 2017, Mr. A_____ observed that Claimant was disorganized, repeated mistakes about which she had previously been counseled, produced diminished quality work and continued to lack initiative. As an example, Mr. A_____ credibly testified that, on June 27, 2017, Claimant sent him an email asking whether the School of Nursing could dispose of biohazard waste in the trash. Mr. A_____ replied to Claimant's email citing multiple regulatory requirements and asked her to review the campus Biological Safety Manual. At the point of Claimant's question, she had been in charge of biohazard waste removal since her hire two years earlier, in February 2015. She had been trained multiple times and should have known the Employer's procedures in this regard. Mr. A_____ found it "completely unacceptable" that Claimant would be asking such a rudimentary question and responding incorrectly to this situation after two years and three months of employment being in charge of this issue from the beginning.

10. Claimant exhibited a pattern of repeatedly asking very basic questions that should already be known after going through training and performing the job for several years. Between

June 2017 and January 2018, Claimant exhibited multiple other failures to comply with regulations and to perform her job in an acceptable and organized manner. Clamant failed to maintain the hazardous waste manifest booklet in an accurate and organized manner. Mr. A_____ explained that these types of violations can result in a notice of violation if Employer was inspected by a government agency.

11. In January 2018, Mr. A_____ met with Claimant and reviewed her stated goals for 2017-2018. He informed her that her goals had not been started and/or lacked initiative. He counseled her regarding her failure to prioritize projects and assignments. Mr. A_____ frequently found her disorganized and unprepared for their regularly scheduled monthly meetings. Claimant also continued to ask Mr. A_____ to walk her through her projects and assignments step-by-step rather than using her knowledge, training and her own research to perform her job duties. She continued to be disorganized and unprepared for meetings with other department heads and outside parties. Though no written warning was given, Mr. A_____ testified Claimant was told she needed to "stop doing this as it could hurt us," meaning Employer. These comments were made to Claimant as far back as August 2017.

12. Mr. A_____ approached Employer's Director of Human Resources, Marshall P_____, (DHR) in December 2018 to discuss his concerns and recommended that Claimant be terminated. The DHR has been employed by Employer for nineteen years.

13. Despite Mr. A_____' discussion with the DHR, Mr. A_____ continued to work with Claimant on her issues. He confirmed that he had a meeting with Claimant and another supervisor Betty Rutt on January 11, 2018, and discussed Claimant's performance issues specifically. Mr. A_____ testified that he advised Claimant if the issues were not corrected in a month it could result in her termination.

14. For a few days after that meeting, Claimant exhibited initiative and Mr. A_____ hoped that this would represent a permanent change. Therefore, Claimant was not terminated over incidents that occurred in February shortly after the meeting occurred. However, within a week or two, her performance again fell back to her usual disorganized and unprepared conduct. Ultimately, Mr. A_____ felt that Claimant could no longer remain employed and needed to be terminated.

15. As her supervisor, Mr. A_____ has the delegated authority to terminate Claimant's employment, though the Director of Human Resources serves in an advisory role in those decisions. Notably, Employer does not have any formal disciplinary procedure as it relates to exempt status employees such as Claimant, only for classified staff.

16. On March 16, 2018, Mr. A_____ went to the DHR and advised him that he wanted Claimant terminated from employment. Claimant was placed on administrative leave while Employer's HR department performed additional investigation. While on leave, Claimant did not perform any job duties and was paid her full salary.

17. As part of this investigation, Mr. A_____ was asked to prepare a memorandum outlining the performance issues and the reasons he felt that Claimant should be fired. This was

prepared on March 22, 2018. Mr. A_____ listed in a memo his bases for Claimant's termination. Claimant was formally separated as of April 12, 2018.

18. Claimant received unemployment benefits from September 23, 2018, forward. Claimant receives unemployment benefits at the rate of $520.00 per week.

19. The DHR placed Claimant on administrative leave as of March 16, 2018. Administrative leave allows the employee to be paid while employment issues are investigated.

20. The DHR met with Claimant in person on March 16, 2018, and explained there were issues with her performance. He explained that the decision to place Claimant on administrative leave did not immediately impact her employment status or pay. During this meeting Claimant did not mention her workers' compensation claim.

21. Mr. P_____ reviewed Claimant's personnel file and also discussed the issues further with Mr. A_____. Following his investigation, the DHR supported the decision to terminate Claimant. In this case, because Claimant had some FMLA time and was traveling to see her ill mother, Mr. P_____ was unable to meet with her in person as he would normally do. Since the leave had lasted for almost a month already, he talked to her over the phone on April 12, 2018, advising her that her employment was terminated.

22. Based on the totality of the credible evidence, Respondents sustain their burden of proof by a preponderance of the evidence to establish that Claimant engaged in a volitional act that brought about her wage lost, the termination of her employment. Mr. A_____ was found to be more credible than Claimant in regards to his testimony about unsuccessfully coaching and counseling Claimant about her job performance and about the basis for Claimant's termination.

23. Claimant has not established a subsequent causal connection between her wage loss and her industrial injury as opposed to her termination from employment. The medical records reflect only miniscule changes in the work restrictions, and claimant's subjective complaints changed only slightly after her termination. Claimant's diagnoses did not change and her treatment was not significantly altered post-termination. Claimant testified that she had the lifting issues all along after her injury. The medical records document pain complaints both before and after the termination. Claimant did not offer any additional testimony to establish an actual worsening of her condition post-termination sufficient to warrant an award of temporary total disability benefits.

24. Based on a totality of the evidence presented, Claimant has failed to establish a worsening of her condition sufficient to prove that the causal connection between Claimant's wage loss and her termination from employment had ended. This is especially true since Claimant's direct supervisor's uncontroverted testimony was that even her subsequent five pound restriction would have been accommodated with modified duty if not for her termination for cause.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-201, C.R.S. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. Section 8-43-301(1), C.R.S.

2. The claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his employment with the employer. Section 8-41-301(1)(b) and (c), C.R.S.*; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

3. An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The arising out of element is narrower and requires the Claimant to show a causal connection between the employment and the injury such that the injury had its origins in the employee's work related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair, supra.*

4. In rendering a decision, the ALJ must make credibility determinations, draw plausible inferences from the record, and resolve essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office,* 84 P.3d 1023 (Colo. 2004). In determining credibility, the ALJ considers the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. Colorado Jury Instructions, Civil, 3:16.

Indemnity benefits/Termination for cause

5. Claimant alleges entitlement to indemnity benefits. Respondents respond initially that Claimant never suffered a wage loss since she was offered modified duty employment. Respondents further assert that Claimant's separation from employment was caused by her poor job performance, a volitional act, and therefore Claimant's wage loss was not caused by the work injury and recovery of indemnity benefits is not warranted.

6. Sections 8-42-105(4), C.R.S. and 8-42-103(1)(g), C.R.S. (referred to as the termination statutes), contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1064 (Colo.App. 2002), the Colorado Court of Appeals held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault." Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). Whether the claimant is responsible for the termination of his employment must be based upon an examination of the totality of circumstances. *Id*. As the ALJ correctly recognized, the burden to show that the claimant was responsible for his discharge is on the respondents. *See Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129 (Colo.App. 2008).

7. The question of whether the claimant acted volitionally or exercised a degree of control over the circumstances of the termination is ordinarily one of fact for the ALJ. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004). The relevant consideration is whether the totality of the circumstances establishes that the claimant was at fault for the termination of his employment. As stated by the Colorado Supreme Court in *Gonzales*, at a minimum, the claimant must have performed some volitional act or have exercised some control or choice over the circumstances leading to the discharge such that he can be said to be responsible for the separation. *Gonzales v. Industrial Commission*, 740 P.2d at 1003; *Richards v. Winter Park Recreational Assoc*., 919 P.2d 933 (Colo.App. 1996).

8. Because Claimant in this case was not receiving temporary total disability benefits at the time of her termination due to her performance of modified duty, respondents are not required to prove the existence of one of the elements of Section 8-42-105(3)(a)-(d), C.R.S. Rather, the ALJ is required to resolve the case under Section 8-42-105(4), C.R.S. by deciding whether the claimant's wage loss was caused by the physical limitations or restrictions to earning capacity existing at the time of claimant's termination from employment or, instead, was related to the claimant being responsible for her termination from employment. *Fantin v. King Soopers*, W.C. No. 4-465-221 (ICAO February 15, 2007.)

9. If an injured worker is responsible for his termination from employment, the injured worker is not entitled to receive benefits compensating him for the wage loss after the date of termination. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that "[i]n cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury."

10. For an employee to be responsible for termination, the employee must perform a volitional act that leads to the termination. *Gutierrez v. Exempla Healthcare*, W.C. No. 4-495-227 (ICAO June 24, 2002). Negligent or inadvertent acts qualify as

volitional acts for the purposes of determining whether a claimant is responsible for termination. *Gleason v. Southland Corp*., W.C. No. 4-149-631 (ICAO June 13, 1994). A claimant does not act "volitionally" or exercise control over the circumstances leading to his/her termination if the effects of the injury prevent him/her from performing his/her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO April 21, 2006). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4432-301 (ICAO September 27, 2001).

11. The concept of a worsening of condition necessarily being proven merely because of a change in work restrictions or an increase in impairment has been rejected by multiple ICAP decisions. In *Hammack v. Falcon School District 49*, W.C. No. 4-637-865 (ICAO October 23, 2006) (aff'd *Hammack v. Indus. Claim Appeals Office* (Colo. App. No. 06CA2344, 2007WL4260343, December 6 2007)(unpublished), the ICAP determined that even if claimant's physical restrictions had changed, the ALJ is still required under *Anderson v. Longmont Toyota, Inc., supra*, to determine whether the claimant's condition had worsened and the causal connection between the claimant's wage loss and termination from employment had ended. The facts in *Hammack* are strikingly similar to those at issue here. In that case, claimant had documented performance issues at work and had been counseled that her performance must improve or her job would be in jeopardy. Claimant's injury followed, she was given a 30 pound restriction, and she returned to work at modified duty. Claimant then separated from employment under circumstances for which the ALJ determined claimant to be responsible. Following a DIME, claimant was determined to be not at MMI and her treating physician assigned a 10 pound lifting restriction. The ALJ concluded that claimant failed to prove by a preponderance of the evidence that she suffered a worsened condition following her termination from employment or that any worsened condition, instead of her "for cause" separation, had caused her wage loss. The ICAP affirmed the decision, emphasizing that the claimant must establish an actual worsening of condition in order to obtain temporary total disability benefits after being terminated for cause under the termination statute. The ICAP stated: "[a]nd, as noted, the mere imposition of changed restrictions does not, by itself, compel the conclusion that the claimant is entitled to TTD. Although increased restrictions certainly could support such a conclusion, they do not require it. Even though the claimant's physical restrictions had changed, the ALJ was still required under *Anderson* to determine whether the claimant's condition had worsened and the causal connection between the claimant's wage loss and termination from employment had ended." *See also, Martinez v. Denver Health*, W.C. 4-527-415 (ICAO August 8, 2005.)

12. Respondents have proven by a preponderance of the evidence that claimant was responsible for her termination from employment. Respondents' witnesses presented compelling and persuasive testimony that Claimant's job performance was below an acceptable standard for her position. Claimant admits she was counseled regarding her job performance. The ALJ finds that claimant was given ample opportunity

to improve her job performance and that she failed to do so. Respondents' delay in terminating Claimant does not validate Claimant's continued poor performance.

13. The ALJ further finds that the testimony of Mr. A_____ and the DHR is credible and persuasive as to the fact that Claimant's work related restrictions did not cause or contribute to the performance issues they considered when determining whether to terminate her employment.

14. Therefore, Respondents have established by a totality of the evidence that Claimant was responsible for her termination and is therefore not entitled to temporary total disability benefits as of the termination date, April 12, 2018.

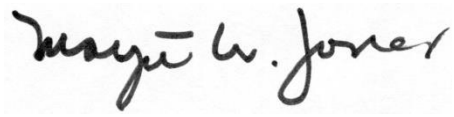
15. Claimant has not established a subsequent causal connection between her wage loss and her industrial injury as opposed to her termination from employment. The medical records reflect only miniscule changes in the work restrictions, and claimant's subjective complaints changed only slightly after her termination. Claimant's diagnoses did not change and her treatment was not significantly altered post-termination. Claimant testified that she had the lifting issues all along after her injury. The medical records document pain complaints both before and after the termination. Claimant did not offer any additional testimony to establish an actual worsening of her condition post-termination sufficient to warrant an award of temporary total disability benefits pursuant to *Anderson v. Longmont Toyota, Inc., Supra.*

16. Based on a totality of the evidence presented, claimant has failed to establish a worsening of her condition sufficient to prove that the causal connection between the claimant's wage loss and her termination from employment had ended. This is especially true since claimant's direct supervisor's uncontroverted testimony was that even her subsequent five pound restriction would have been accommodated with modified duty if not for her termination for cause.

ORDER

Claimant's request for temporary total disability benefits from April 12, 2018 and ongoing is denied.

This 2nd day of April, 2019.



Margot W. Jones

Administrative Law Judge

Office of Administrative Court

1525 Sherman Street, 4th Floor

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-083-370

ISSUES

- Issues raised by Claimant were compensability of an alleged May 2, 2018 injury, and, if found compensable, entitlement to medical benefits authorized and reasonably necessary and related, and temporary disability benefits.

- The issues raised by Respondents were penalties for late reporting of the injury under 8-43-102(1)(a), C.R.S., responsibility for termination of employment set forth in section 8-42-103(1)(g) and 8-42-105(4), C.R.S.; termination of temporary disability benefits pursuant to section 8-42-105(3)(a-c); and all applicable offsets and overpayments.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on September 16, 1965, and was 52 years of age at the time of the hearing.

2. Claimant testified he was injured at work on May 2, 2018, while working for Employer, a day labor placement agency.

3. Respondents contend Claimant did not notify Employer of his alleged injury until July 27, 2018, when Ashley T_____, Employer's Branch Manager, received a letter from Claimant's Counsel stating Claimant's allegation that he was injured at work on May 2, 2018.

4. Respondents filed a Notice of Contest on August 3, 2018.

5. Claimant's Worker's Claim for Compensation form was dated June 8, 2018. The form does not show the date it was filed with, or received by, the DWC.

6. Claimant testified he injured his lower back inside a roll off dumpster when he attempted to dump out a fifty-five gallon trash barrel which was one-third filled with concrete chunks. The barrel that was lying on its side and Claimant tried unsuccessfully to lift the bottom edge of the barrel. Claimant testified that after he was unable to dump the barrel, he went to Mr. S_____ and Mr. S_____ dumped the barrel for Claimant. Mr. S_____ testified he did not remember dumping a barrel of concrete for Claimant.

7. Claimant testified that "after trying to pick that up, I just pulled on my back and I couldn't move." Claimant testified after he injured his back on May 2, he "couldn't lift anymore", "couldn't even hardly walk after that," and "could not work anymore, so I asked them to send me home."

8. Claimant testified that he told Travis S_____, Employer's Assistant Superintendent that he injured his back and needed to leave work for that reason. However, Mr. S_____ contradicted Claimant's testimony. Mr. S_____ testified there was "no time that I was told by Mr. M_____ that he was injured." Rather, Claimant said he was tired and wanted to go home. Mr. S_____ did not witness any accident nor did Claimant report or mention an injury to Mr. S_____ before leaving the job site.

9. Mr. S_____ testified that if Claimant had reported an injury to him, Mr. S_____ would have reported it to Ms. T_____ and Joseph Cahill, lead superintendent, called for medical attention if necessary, documented the incident in his daily log, and filled out an incident report.

10. Claimant identified his co-worker Brian L_____ as someone Claimant told about injuring his back at work. Mr. L_____ performed the same job duties as Claimant on May 2, 2018. Mr. L_____ testified he saw Claimant sweep and pick up trash May 2, 2018. He testified he "thought that [he and Claimant] shared the duties of throwing trash away. Like he would grab one side of the can and I would grab the other." "And I thought we were handling – sharing the duties of throwing the trash away together."

11. Mr. L_____ testified he did not see Claimant move or lift a 50-gallon barrel with cement by himself. Mr. L_____ testified Claimant said "he hurt himself, but he didn't describe nothing to me." Mr. L_____ testified "[i]t didn't seem that serious," and that he did not mention it to Mr. S_____ or Ms. T_____.

12. Claimant left the job site travelling via bicycle and bus, and went to Employer's office to turn in his time sheet for his partial day of work. Claimant testified, "I put my bike on the bus and it takes me down and I ride around the corner to the job site." Claimant testified that after leaving work, he caught the bus with his bike in the same manner to go home. Claimant's testimony is inconsistent with his testimony that after he attempted to lift the trash barrel he could not move.

13. Claimant testified that he reported his injury to Employer by telling Marissa J_____, the woman who took his time card, that he had hurt his back. However, Ms. T_____, Employer's Branch Manager, testified Claimant did not report J_____ that he hurt his back on the job.

14. Ms. T_____, testified that her duties included overseeing workers' compensation claims and her administrators, including Marissa J_____, and that Claimant did not report a work injury to Ms. J_____ on May 2, 2018. Ms. T_____ testified that if an employee reported an injury to Ms. J_____, Ms. T_____ would process the claim if she was in the office, which she was. If Ms. T_____ was not in the office, Ms. J_____ would immediately call Ms. T_____ to walk her through the paperwork. Ms. T_____ would then contact the employee and ensure the employee obtained medical attention.

15. Ms. T_____ testified that on May 2, 2018, and at all times prior to that, Employer posted instructions that employees were to report on the job injuries within four days.

16. After returning to the office in the morning and collecting his check, Claimant did not return to work with Employer until December 7, 2018.

17. On May 3, 2018, at approximately 12:00 p.m., Claimant first sought medical treatment when he visited Denver Health. There, Claimant reported he was lifting a "trash pail" full of cement when he became injured. Claimant reported he had been riding his bike around without difficulty. Claimant chose Denver Health because they accepted his personal insurance. Claimant's providers diagnosed Claimant with a muscular strain in the area of his lumbar spine and provided Claimant with a Toradol intramuscular injection into his low back.

18. Claimant returned to Denver Health on May 14, 2018, and reported to Amy M. Quinones, NP, that his low back and right leg symptoms resolved the prior week. However, Claimant told Dr. Ridings, Respondents' retained medical expert, that the Toradol injection was of no benefit whatsoever.

19. On May 14, 2018, Claimant first reported experiencing pain in his right hip. An MRI performed on June 16, 2018, confirmed the diagnosis of right hip avascular necrosis.

20. No persuasive evidence suggests that Claimant's medical providers took Claimant off work or imposed work restrictions between May 2, 2018 and May 13, 2018.

21. Dr. Ridings testified for Respondents as an expert in Physical Medicine and Rehabilitation. Dr. Ridings testified that Claimant's Toradol injection would last less than twelve hours and would provide only pain relief. It would not cure an injury.

22. Dr. Ridings issued a report on January 3, 2019. He opined that Claimant's reported recurrence of right low back pain more than a week after it had resolved, could not be attributed to the incident at work May 2, 2018, within a reasonable degree of medical probability.

23. Dr. Ridings testified that Claimant's right hip avascular necrosis can cause pain to the right hip, buttock, groin, proximal thigh and extend down to the anterior and posterior lower right leg. Dr. Ridings testified the avascular necrosis and labral tearing at the right hip are not direct and proximate results of the alleged May 2, 2018 incident.

24. Dr. Ridings testified that if Claimant had an injury from the May 2, 2018 incident, it was a lumbar strain which resolved within a couple days, and Claimant was at MMI at his second visit to Denver Health on May 14, 2018. Dr. Ridings testified that because the Toradol injection resolved Claimant's pain, in all likelihood the pain would have resolved spontaneously. Dr. Ridings testified all additional medical treatment was related to Claimant's preexisting right hip avascular necrosis and labral tearing -- not the work incident.

25. Claimant eventually treated with Dr. De La Torre.

- On June 6, 2018, Dr. De La Torre took Claimant off work until June 28, 2018.

- On June 13, 2018, Dr. De La Torre noted Claimant appeared inebriated and inattentive, and referred Claimant to CHS Substance Use Disorder Counseling Services to address Claimant's alcohol use disorder. Notations of Claimant's alcohol abuse appear throughout his medical records.

- Upon physical examination on June 13, 2018, Dr. De La Torre noted "Negative SI and sciatic notch pain bilaterally." Right hip x-rays found mild sclerotic changes at the right acetabulum and femoral head likely due to degenerative changes. The impression was mild right hip osteoarthrosis. Dr. De La Torre noted normal lumbar back range of motion, no bony tenderness, no swelling, no edema, and no deformity. He noted tenderness and bony tenderness at the lateral right hip joint.

- Dr. De La Torre's June 13, 2018, assessment included "refractory to Lidoderm patches, movement, and Flexeril" and "concern for secondary gain vs EtOH [alcohol related] Neuropathy vs DDD [degenerative disc disease]".

26. On June 21, 2018, Claimant returned to Denver Health, where Julianne Puckett, NP, treated him.

- Claimant reporting to hat he had chronic back stiffness, but this was the first time he started to have daily back pain. He also reported that his right hip pain was constant requiring the use of a walking staff.
- Upon physical examination, Ms. Puckett noted "palpation of the SI joint does not induce sciatic pain" and there was no low back midline tenderness to palpation. She noted Claimant had "decreased [right] hip flexion due to pain" and Claimant's "back ROM limited by hip pain."
- Ms. Puckett assessed "Pain of right hip joint due to bilateral vascular necrosis and RIGHT tear of the labrum as evidenced by MRI 05/14/18."
- She also assessed right-sided low back pain with right-side sciatica 2/2 [secondary to] arthritis;" and "[n]erve impingement, foot drop, or surgical emergency unlikely based on exam."

27. On July 11, 2018, Claimant treated with Dr. Wood, reporting continued lower back pain and bilateral hip pain. Claimant did not complain of right lower extremity pain. Dr. Wood noted "hip avascular necrosis, which could be [secondary to] etoh."

28. Claimant continued to treat.

- On August 9, 2018, his physical therapist noted there was "[n]o indication of nerve involvement exam today, symptoms appear more related to musculature."

- On August 17, 2018, Claimant presented to Dr. Iams "with bilateral right greater than left pain involving the hip." "He has had problems with his bilateral hip over the past 6 months …" "Pain has progressed significantly over three months to the point where the patient has 7 out of 10 hip pain with activity. The pain in the hips is mostly located in the groin area with some radiation to the lateral hip."

- Upon physical examination, Dr. Iams found Claimant's spine was "[n]ontender to palpation," noted tenderness to palpation over the right and left lateral hips," and noted bilateral hip x-rays and MRI showed avascular necrosis without collapse. He noted Claimant "has a history of ETOH abuse possible relationship to AVN."

29. Claimant voluntarily left his position with Employer by leaving the jobsite on May 2, 2018 and not returning until December 2018. Claimant's wage loss, if any, is due to his voluntarily not returning to work, not to his alleged industrial injury.

30. After Ms. T_____ received Claimant's Counsel's letter on July 27, 2018, she mailed a designated provider list, what she referred to as "medical panels," to Claimant by certified mail. Although he had no memory of doing so, Claimant signed for the certified mail containing the designated provider list.

31. At Dr. Ridings' IME, Claimant reported he then was working for an acquaintance as a laborer and lifting up to 50 pounds. Dr. Ridings understood that Claimant did not find his work difficult at the time. At hearing, Claimant denied he worked for an acquaintance or that he reported this to Dr. Ridings.

32. The ALJ finds Claimant did not meet his burden of proving compensability. While the ALJ finds that Claimant may have sustained a lumbar strain on May 2, 2018, the preponderance of credible and persuasive evidence establishes that such a strain would have resolved within a few days and did not require medical treatment beyond May 14, 2018.

33. The ALJ finds Dr. Ridings' opinions to be credible, persuasive, and consistent with Claimant's medical records.

34. The ALJ finds Claimant to be a poor historian. He could not remember several events whose occurrence Respondents objectively demonstrated. The ALJ also discredits Claimant's credibility because he denied any problem with alcohol despite his medical records containing numerous references to alcohol abuse and dependency, and his medical providers attributing the avascular necrosis of his femoral head to alcohol abuse.

35. The ALJ finds the testimony of Travis S_____, Brian L_____, and Ashley T_____ credible and persuasive.

36. The ALJ finds that the alleged incident on May 2, 2018, if it occurred, did not disable Claimant from performing his regular job duties.

37. The ALJ finds the medical treatment provided by Denver Health and Dr. Scott was not authorized. Claimant failed to report his allegations of a May 2, 2018 work injury to Employer until Claimant's Counsel sent a letter to Employer in July 2018. Allegedly reporting an injury to a co-worker is not notification to the Employer. After receiving the designated provider list, Claimant did not select and treat with a designated provider. Respondents are not liable for the medical treatment provided by Denver Health and Dr. Scott.

38. The ALJ finds Respondents have proven by a preponderance of the evidence that Claimant failed to timely report a work injury pursuant to 8-43-102(1)(a), C.R.S.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met its burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the

consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ finds and concludes Claimant failed to prove he sustained a compensable industrial injury, and thus failed to meet his burden of proof regarding compensability. Therefore, Claimant is not entitled to benefits under the Workers' Compensation Act for this claim.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000).

Authorized treating providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002).

The ALJ concludes that Denver Health and Dr. Scott_ are not authorized treating physicians/providers. Healthcare provided by Denver Health and Dr. Scott, or their referrals, was not authorized. Respondents are not liable for the healthcare provided by Denver Health and Dr. Scott, or their referrals.

The ALJ concludes that Claimant did not prove he required healthcare treatment as a direct and proximate result of an industrial injury. Pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S., a claimant who is responsible for his/her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and the wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his/her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAP Apr. 24, 2006). An employee is "responsible" if he/she precipitated the employment termination by a volitional act that he/she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4432-301 (ICAP, Sept. 27, 2001). Claimant voluntarily left the job site on May 2, 2018 and did not contact

Employer or return to work for Employer until December 2018. Neither the Denver Health records, nor any other objective medical evidence, contain evidence of Claimant being taken off work or given work restrictions by a medical provider, authorized or not, for May 2, 2018 through May 13, 2018. Claimant did not prove that any work injury prevented him from performing his regular job duties with Employer.

Under §8-43-102(1)(a), "Every employee who sustains an injury resulting from an accident shall notify said employee's employer in writing of the injury within 4-days of the occurrence of the injury… If said employee fails to report said injury in writing, said employee may lose up to one day's compensation for each day's failure to report." The ALJ finds and concludes that Claimant did not comply or substantially comply with this statute.

The ALJ concludes that Claimant did not meet his burden of proof with regard to temporary disability benefits, regardless of whether the claim was compensable.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: April 3, 2019

/s/ Kimberly Turnbow
Kimberly Turnbow, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 South Circle Drive, Suite 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: , Claimant, vs. , Employer, and Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-023-461-001**

ORDER GRANTING RESPONDENTS' OPPOSED MOTION FOR SUMMARY JUDGMENT

The matter comes before the Administrative Law Judge (ALJ) upon Respondents' Motion for Summary Judgment. The ALJ has received and reviewed Respondents' Exhibits A through I, and refers to said Exhibits herein. Upon review and consideration of Respondents' *Motion for Summary Judgment* (filed 2/25/2019), and Claimant's *Response to Respondent's Motion for Summary Judgment* (filed 3/26/2019, after an *Extension of Time* was granted to file said Response), the ALJ finds as follows:

FINDINGS OF FACT

1. This matter arises out of an alleged work-related occupational disease injury that was reported on or about February 26, 2016.

2. Respondents denied liability and compensability of the claim and filed and served a *Notice of Contest* (Ex. A) with Colorado Division of Workers' Compensation ("Division") on September 9, 2016.

3. On June 28, 2017, Respondents filed and served a *Motion to Close Claim for Failure to Prosecute*, (Ex. B) pursuant to Colorado Workers' Compensation Rules of Procedure (WCRP) Rule 7-1(C), 7 Code Colo. Reg. 1101-03.

4. On July 14, 2017, the Director of the Colorado Division of Workers' Compensation ("Director") entered an *Order to Show Cause* (Ex. C) requiring the Claimant to tell the Division what recent effort had been made to pursue his workers' compensation claim. This *Order to Show Cause* was served on Claimant, and notified him that a Response was required to be filed within 30 days of the date of the certificate of mailing or the claim would be automatically closed. The *Order to Show Cause* also indicated that *"if your case is closed after 30 days, you have the right to petition to reopen your case as set for [sic] in § 8-43-303, C.R.S*."

5. On July 20, 2017, Claimant responded to the *Show Cause Order* by filing *Claimant's Response to Order to Show Cause* (Ex. D), by simply requesting a hearing to be set before July 29, 2017.

6. An *Extension of Time to Show Cause* (Ex. E) was entered by the Director on August 11, 2017, giving Claimant an additional 100 days to respond to the original *Show Cause Order*.

7. Claimant never responded to the August 11, 2017 *Extension of Time to Show Cause* entered by the Director. Therefore, pursuant to the terms of the Order by the Director, and by operation of law, Claimant's claim was deemed automatically closed.

8. No activity on the claim occurred for over one year. Then, on August 20, 2018. Claimant then filed his *Petition to Reopen* (Ex. F) on August 20, 2018, alleging a *change in medical condition.*

9. Claimant then filed his *Application for Hearing* (Ex. G) on September 13, 2018. Issues endorsed in this *Application for Hearing* included: *medical benefits, petition to reopen claim, reopen on worsening condition.*

10. Respondents filed their *Response to the 9.13.18 Application for Hearing* (Ex. H) on September 24, 2018, alleging that this *Claim is Closed pursuant to the court order*, and *Statute of Limitations.*

11. The parties then appeared in Pueblo, Colorado, for Hearing on this matter on February 7, 2019. Claimant attempted to call Alex Romero, M.D. as a witness. Respondents filed a written *Motion In Limine,* as Dr. Romero was not listed in Claimant's Application for Hearing, nor in his discovery responses, nor had any *Motion to Add Dr. Romero as a Witness* been filed with the OAC. Respondents had no medical records from Dr. Romero pertaining to Claimant. At that time, counsel for Claimant indicated that Dr. Romero had performed a surgery on Claimant in December, 2018; however, he had also been unable to obtain any medical records, but would attempt to do so. The nature of this surgery, or how it might pertain to Claimant's claim, was not discussed.

12. Respondents then further argued that the claim was closed by Statute of Limitations, and that Claimant's claim has never been found compensable, therefore, it cannot be re-opened as there is no worsening condition to re-open.

13. This ALJ concluded that the hearing could not go forward as scheduled, since there was evidence potentially pertinent to the issues which still needed to be exchanged by the parties. No Hearing Exhibits were exchanged or tendered at this 2/7/19 hearing.

14. The ALJ then issued a *Procedural Order* (Ex. I) on February 11, 2019. In that Order, if Claimant wished to endorse Dr. Romero, he must do so by *Motion* within 10 days, so an *Order* might issue in this matter. Any medical records were to be

obtained and tendered forthwith. Further, Respondents' issues of *Claim Closure* and *Statute of Limitations* were to be filed via written *Motion for Summary Judgment,* and filed well in advance of any reset hearing date.

15. In his *Response to Respondents' Motion for Summary Judgment,* Claimant does not dispute the facts or procedural history as outlined by Respondents. In essence, Claimant argues that any errors or omissions in failing to timely respond to events in this case were not the personal fault of the client; therefore, the relief sought by Respondents should be denied.

16. This case has now been reset for hearing in Pueblo on April 16, 2019 at 9:00 a.m. The issue of adding Dr. Romero is being held in abeyance, pending this *Summary Judgment* issue.

CONCLUSIONS OF LAW

Summary Judgment, Generally

1. Pursuant to the Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in workers' compensation proceeding. *Fera v. Indus. Claim Appeals Office*, 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion for affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *Nova v. Indus. Claim Appeals Office*, 754 P.2 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are inconsistent with the procedural or statutory provisions of the Act].

2. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegations of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996).

3. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). No such genuine issue has been put forth or alleged by Claimant. Claimant has not alleged sufficient evidence to constitute excusable neglect.

Petition to Reopen

4. Section 8-43-303(1), C.R.S. provides that, "At any time within six years after the date of injury, the director of an administrative law judge may, after notice to all parties, review and reopen any award on the grounds of fraud, an overpayment, and

error, a mistake, or a change in condition…§ 8-43-303(1), C.R.S.; *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d. 186, 189 (Colo. App. 2002).

5. The purpose of the "change of condition" ground for reopening is to allow for equitable adjustments to awards of benefits if conditions change over time. *Ward v. Ward*, 928 P.2d 739 (Colo. App. 1996)(*citing to Mascitelli v. Giuliano & Sons Coal Co.*, 402 P.2d 192 (1965)).

6. A change in condition refers to a "change in the condition of the original compensable injury or to a change in claimant's physical or mental condition which can be causally connected to the original compensable injury." *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082, 1083 (Colo. App. 2002). The "change in condition" ground, therefore, refers to "a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which *can be causally connected to the original compensable injury* [emphasis added]." *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 189 (Colo. App. 2002); *Chavez v. Indus. Comm'n*, 714 P.2d 1328, 1338 (Colo. App. 1985).

7. Adopting the position taken in *Larson's Workers' Compensation Law* treatise, see 8 Larson's Workers' Compensation Law § 131.03(2)(a)(2001), the Colorado Court of Appeals has held that the original finding of causation cannot be challenged in reopening or post-reopening proceedings. *City and County of Denver, Industrial Claim Appeals Office*, 58 P.3d 1162, 1164 (Colo. App. 2002). In fact, the court in *City and County of Denver* specifically quoted Larson's indicating "reopening based on a change of condition does not permit re-litigation of every potential issue…neither party can raise original issues such as work-connection, employee or employer status, *occurrence of a compensable accident*, and degree of disability at the time of the first awarded [emphasis added]. *Id*.

8. In the claim of *Amin v. Schneider National Carriers*, W.C. No. 4-881-225-06 (November 9, 2017), the Industrial Claim Appeals Office (ICAO) addressed a nearly identical issue as the one herein. In *Amin*, the claim was closed, pursuant to a Director's *Order to Show Cause.* Claimant then attempted to reopen the claim, pursuant to 8-43-303, C.R.S. on the grounds of a worsening of condition. The ICAO affirmed the order of the ALJ who had granted *Respondents Motion for Summary Judgment* to deny and dismiss the petition to reopen. The original claim had never been admitted or found compensable; it was a denied claim. A similar issue exists here.

9. Here, on August 20, 2018, Claimant filed a *Petition to Reopen* a denied claim, based on a change of medical condition. Claimant attached a medical report from Dwight K. Caughfield, M.D., which purportedly supports this *Petition to Reopen* alleging a change of medical condition. This previously denied claim was previously closed by the Director, since Claimant failed to timely respond to the Director's *Extension of Time to Show Cause* dated August 11, 2017. Claimant is now attempting to obtain an Order reopening a closed claim, which has never been found or admitted to be compensable in the first place.

10. In order for Claimant to reopen his claim pursuant to C.R.S. 8-43-303, based on a change of condition, it must first be established that Claimant sustained a compensable injury. Respondents have never been held liable for benefits, nor have they filed an *Admission of Liability.* Instead, a *Notice of Contest* was timely filed. The underlying compensability of the claim has always been denied by Respondents, and compensability has never been found by a court of competent jurisdiction.

11. Because there is no compensable injury by which a worsening or change of medical condition can be established or evaluated, Claimant's *Petition to Reopen* based on a change of condition must be denied as a matter of law.

ORDER

Based on the foregoing **Findings of Fact and Conclusions of Law**, the Court **GRANTS** Respondents' Motion for Summary Judgment. Claimant's August 20, 2018 Petition to Reopen is denied and dismissed. Claimant's claim remains closed pursuant to the Order of the Director dated August 11, 2017. The hearing currently set in Pueblo for April 16, 2019 is vacated.

April 3, 2019

/s/ William G. Edie
William G. Edie
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-024-099-001

ISSUES

I. Whether Respondents have overcome the DIME opinion of Dr. Mason that Claimant was not at MMI on June 19, 2017.

II. If Claimant is not at MMI as of June 19, 2017:

- Is Claimant not at MMI because he needs additional diagnostic testing and evaluations to determine whether his neurological problems were caused by either his industrial accident or an underlying motor neuron disease such as primary lateral sclerosis; or
- Is Claimant not at MMI because he needs additional treatment to cure and relieve him from the effects of his neurological problems which were caused by his industrial accident?

III. Whether Claimant's need for medical treatment, including the medical treatment caused by a subsequent fall which occurred on August 15, 2017, is causally related to Claimant's work injury of June 28, 2016.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was employed as a pressman.
2. On June 28, 2016, Claimant was repairing a printing press. While making repairs, Claimant fell off the press. Although the exact distance he fell is not entirely clear, it appears Claimant fell approximately 2 feet and hit a portion of the press and travelled an additional two feet and landed on the floor. As a result of his fall, Claimant hit his head on the floor.
3. Claimant was taken by Employer to Sky Ridge Medical Center and arrived at approximately 2:30 p.m. The medical report from that visit provides the following description of the accident and history which was provided by Claimant:

> 53-year-old male w/h/o protein S deficiency takes **COUMADIN** had a mechanical fall while dismantling a cat walk. He fell 2 feet, then hit another cat walk, and fell down another 2 feet onto the right side of his head on the

> concrete just prior to arrival. No LOC. Since then, he had right sided head pain, right clavicle pain, and feeling dizzy. [1]

Under the Review of Symptoms (ROS), it was noted that Claimant's neurological complaints consisted of dizziness, headache, and (no loss of consciousness). Claimant also complained of right shoulder and right knee pain.

Claimant underwent a neurological examination. The findings at that time demonstrated Claimant was "awake, alert and oriented x3, moves all 4 extremities equally, strength 5/5, CN II-XII intact, normal gait, normal speech."

A CT scan of his head was taken and was interpreted as normal.

The record further indicates the physician reviewed the imaging with Claimant, as well as treatment, follow-up, and return precautions. It was specifically noted in the medical report that Claimant understood the treatment, plan, findings, and follow up procedures.

The medical decision making was described as follows:

> This is a 53-year-old male who fell 2 feet and landed on a structure and then fell two more feet. He does take Coumadin and he struck his head. There was no loss of consciousness. He did have a hematoma in the right side of his head. His neck was without any signs of trauma. He also had pain in the right shoulder region. His x-ray of his shoulder was negative for fracture of the clavicle and elsewhere. His CT head was negative. He is coagulopathic but his INR is within normal limits. Overall, he has a closed head injury but no evidence of a bleed. I feel his is stable for discharge.

The final primary diagnosis or impression due to the fall was a "hematoma" and the secondary diagnosis or impression was a "contusion." Claimant was

---

[1] Although Claimant said he felt dizzy, there was no indication that Claimant had any alteration of mental status at that time such as feeling dazed, disoriented, or confused as observed by any witnesses or a medical provider. Moreover, under the neurological examination, it was found that Claimant was awake, alert, and oriented x3.

The Medical Treatment Guidelines define a mild Traumatic Brain Injury (mTBI). In order to be diagnosed with a mTBI, pursuant to the Guidelines, there must be at least one of the following documented within 24 – 72 hours of the injury:

- any loss of consciousness,
- any loss of memory for events immediately before or after the injury,
- any alteration of mental status at the time of the injury (feeling dazed, disoriented, or confused)
- focal neurological deficit(s) that may or may not be transient but where the severity of the injury does not exceed the following:
    - loss of consciousness for approximately 30 minutes or less,
    - at 30 minutes, a Glasgow Coma Scale (GCS) of 13-15, and
    - post-traumatic amnesia (PTA) not greater than 24 hours.

See 7 C.C.R. § 1101-3:17, Exhibit 10, Traumatic Brain Injury, Medical Treatment Guidelines.

discharged the same day at approximately 4:35 p.m. (Ex. A and 3.) Claimant was not diagnosed with a mild traumatic brain injury (mTBI) and the lack of such a diagnosis appears to be consistent with the Colorado Medical Treatment Guidelines.

4. On July 12, 2016, Claimant was seen by Robert Broghammer, MD,[2] at Healthone Occupational Medicine and Rehabilitation for an initial evaluation. This was his first medical appointment after being seen and discharged from the Sky Ridge Emergency Room. The written report restates the mechanism of injury and is fairly consistent with the Sky Ridge report. The report notes Claimant fell and hit his head, right shoulder, and right knee. The report notes that most of Claimant's symptoms at that time revolved around his bilateral upper back region, as well as his neck. His musculoskeletal examination revealed normal gait, station, and posture. Dr. Broghammer's assessment at that time was

    a. Cervical pain,

    b. Right shoulder pain, and

    c. Right knee pain.

    It is not clear if Claimant discussed with Dr. Broghammer any issues relating to hitting his head at this appointment. However, Claimant did complete a Review of Systems checklist and indicated he had suffered from various symptoms during the past 1-2 weeks which included, but were not limited to, the following:

    a. Blurry vision

    b. Change in vision,

    c. Ringing in ears,

    d. Hearing loss,

    e. Dizziness,

    f. Confusion or Cloudiness ("after"),

    g. Headaches,

    h. Balance issues, and

    i. Muscle weakness

    It should be noted that although Claimant checked off various symptoms, such as dizziness and balance issues, he only noted that "Confusion or Cloudiness" occurred "after" the incident. All of the other symptoms he identified, which include balance issues and muscle weakness, were not identified as occurring "after" the work accident. Claimant also completed a pain diagram and noted he was having headaches. In addition, Claimant completed a medical history questionnaire and noted that he suffered from a chronic muscle disease. This Review of Symptoms checklist is consistent with Dr. Broghammer's report of July

[2] Dr. Broghammer's specialty is not specified. His reports, however, have the following designations after his name: "MBA, MPH, and Rph."

28, 2016, and deposition testimony, in which he indicated Claimant specifically stated that he had increasing dizziness over the last couple of years.

5. On July 28, 2016, Claimant returned to Dr. Broghammer. At this visit, Claimant noted he had returned to work but that it was hard to get through a 13-hour day. He did, however, complain of right finger pain which he thought might have been caused by his fall. Dr. Broghammer also put in his report that Claimant indicated he had been getting "increasingly dizzy the last couple of years." Dr. Broghammer noted that he performed a neurologic assessment and that Claimant's gait, station, and posture were maintained. Claimant completed another Review of Systems symptom checklist. Claimant again noted:

    a. Dizziness,

    b. Headaches,

    c. Balance issues,

    d. Muscle weakness.

    And, although the subjective complaint portion of the report does not reference any headaches, the assessment includes:

    e. Cervical pain,

    f. Headache,

    g. Thoracic pain, and

    h. Right index finger pain.

    Therefore, it is not clear how Claimant articulated his various complaints and symptoms to Dr. Broghammer and why only certain complaints and symptoms made it into the body of the written report.

6. On August 11, 2016, Claimant returned to Dr. Broghammer. The medical report notes Claimant reported feeling 10-15% better and that most of his complaints still revolved around his right index finger, neck and shoulder. Dr. Broghammer did not note a neurological examination was performed at this visit. He did, however, note that Claimant had returned to working 12-13 hour shifts and was tolerating working and was occasionally exceeding his 25-30 pound weight lifting restriction. The assessment at that time remained the same and included headaches. Claimant also completed another Review of Systems and checked-off the same complaints, which included dizziness and balance issues. (Ex B, pg. 24.)

7. On August 25, 2016, Claimant returned to Dr. Broghammer. The report indicates Claimant reported that his additional physical therapy visits were beneficial and that his neck and upper back pain was improved. However, he noted that his right index finger was getting worse. Therefore, Claimant was referred to Dr. Craig Davis for his right finger complaints. Claimant also noted that he was continuing to work, with restrictions. (Ex. B, pg. 25.) Claimant completed a pain diagram. He did not indicate he was having any head pain. (Ex. B, pg. 28.) He

also completed a Review of Systems and noted that he continued to feel dizzy, but that his muscle weakness and balance issues were better. (Ex. B, pg. 29.)

8. On September 15, 2016, Claimant presented to Dr. Broghammer with new complaints. At this visit, Claimant reported new symptoms of left arm dexterity problems as well as feeling off balance at times. He reported that the left arm problems had been going on for about 2 months and that he ignored them. Dr. Broghammer indicated these symptoms could represent central nervous system pathology and recommended Claimant follow up with his family physician. In his treatment plan, Dr. Broghammer noted that Claimant will see his family doctor for what sounds like potential central nervous pathology. (Ex. B., pg. 30-31.) On the Review of Systems, Claimant also noted he was having difficulty walking and had a possible tremor. (Ex. B, pg. 33.) Therefore, by September 15, 2016, Claimant was reporting additional symptoms which included:

    a. Left handed dexterity problems,

    b. Difficulty walking, and

    c. Possible tremor.

9. On October 6, 2016, Claimant went to his family physician, Dr. O'Sullivan, at Kaiser. The report indicates Claimant presented for evaluation due to balance concerns. Claimant reported falls, difficulty with balance when trying to put on his pants while standing on one foot, and that he would topple over if bending over to put a leash on his dog. Claimant also reported decreased dexterity with his left hand. This report also contains the following statement: "not sure if the balance is worse since the fall." However, the context of this statement is not clear from this medical record. And, it is not clear whether this statement was from Claimant because Dr. O'Sullivan subsequently wrote in the plan section of his report:

> [S]uspected concussion with recent fall, not clear as to if the imbalance was present prior to the fall, no clear neurological deficits on exam, no clear movement disorder today, encouraged exercise, will monitor pattern.

Dr. O'Sullivan's report is not precise regarding the extent of Claimant's symptoms that preexisted the fall at work and the extent of any neurological symptoms he observed during the appointment. He indicates in his report that "it's not clear if the imbalance was present prior to the fall." He also indicates there were "no clear neurological deficits on exam and no clear movement disorder."

10. On October 20, 2016, Claimant returned to Dr. Broghammer. The report from that visit provides that Claimant saw his personal physician for his balance issues, which were still problematic. It is noted that his personal physician told him that it was because he had a concussion. Dr. Broghammer stated that according to conversations with Dr. Van Dorsten, and the literature provided by him, without loss of consciousness, the medical literature universally supports that symptoms are pretty much 100% resolved within three months, which had

passed. Dr. Broghammer noted that the etiology of Claimant's balance and dizziness issues were unclear and that a consultation, possibly with Dr. Van Dorsten, would be obtained to address relatedness of his ongoing central nervous system-type issues. It was also noted that a wobble board had been recommended to help his balance issues. (Ex. B, pg. 35; Ex. 4, pg. 77-78.) It is found that Dr. Broghammer's lack of expertise to assess head injuries and/or central nervous system issues is evident by his need to confer and consider referring Claimant to a specialist for these issues.

11. On December 30, 2016, based on a referral from Dr. Broghammer, Claimant was evaluated by Samuel Chan, MD., who is also a physical medicine doctor and has a specialty in electrodiagnostics. Based on his assessment, he determined Claimant still had possible postconcussive symptoms and recommended a neuropsychological evaluation as well as testing by Dr. Lipkin for inner ear issues to determine the cause of his ongoing symptoms.

12. On January 3, 2017, Claimant came under the care of Paul Rafard, M.D., MPH., at Health One because Dr. Broghammer moved to a different position. Therefore, Dr. Raford took over the management of Claimant's care. It is noted that Claimant stated his headaches had resolved. He also stated that he felt more of a disequilibrium – compared to a dizziness. He also stated that although he used to be a master guitar player, he could barely move his left hand to place his fingers on the guitar frets. He also indicated that he had several falls, the most recent one requiring care in the ER. Dr. Raford indicated that upon physical examination, he found some slowness and hesitation with alternate finger and alternate hand patting. The symptoms noted by Dr. Raford demonstrated a progressive worsening of Claimant's neurological symptoms. Based on what appeared to be worsening neurological symptoms, Dr. Raford ordered a cranial MRI and referred Claimant to Alan Lipkin, M.D., an otolaryngologist, for vestibulonystagmogram and evoked potential testing. (Ex. C., pg. 46-49.)

13. On January 10, 2017, Claimant returned to Dr. Raford and he noted the results from the cranial MRI revealed only "a few scattered subcentimeter white-matter abnormalities" and that there were none at the surfaces consistent with axonal shearing or a demyelinating process. However, he also stated that the MRI report indicated that "a contribution by diffuse axonal shear injury cannot be excluded." His assessment at that time was postconcussive symptoms and his plan was to determine whether the disequilibrium and cognitive issues were caused by the work injury. (Ex. C., pg. 52-55.)

14. On January 17, 2017, Claimant was again seen by Dr. Raford. At this visit, Dr. Raford noted under his neurological assessment that Claimant had a "**nonantalgic but rather wide-based gait**."(Emphasis added.) (Ex. C., pg. 58.) The emergence of Claimant's wide-based gait demonstrates a progression of Claimant's neurological symptoms compared to when he first fell at work. Even when Claimant was evaluated on October 6, 2016, by Dr. O'Sullivan at Kaiser, it was noted that his gait was normal. (Ex. 8, pg. 192.)

15. On January 19, 2017, Claimant underwent oculomotor testing by Meghan Safko, M.A., F-AAA, Clinical Audiologist. Her January 19, 2017 report indicates Claimant's OPK test results were abnormal. However, she qualified the findings by stating that the findings "***could*** be indicative of ***possible*** CNS (central nervous system) involvement ***or be task related***." (Emphasis added.) (Ex F, pg. 141.) Therefore, she did not conclude the findings were due to a central nervous problem. As noted, the results could have been an immaterial finding based on the task Claimant was performing. Moreover, she did not indicate the sensitivity of the test, the accuracy of the test, or the percentage of the general population that might have this finding – without sustaining head trauma.

16. On January 25, 2017, Claimant was evaluated by Kevin Reilly, Psy.D, a neuropsychologist. Dr. Riley evaluated Claimant and administered an extensive battery of testing in to assist with a diagnoses and treatment planning. As part of his evaluation, Dr. Reilly noted Claimant spoke at an average rate of speed with normal speech volume. Dr. Reilly concluded that his examination and testing indicated Claimant had "intact neurocognitive capacities." (Ex. G, pg. 154.) He noted that symptom validity testing suggested only mild symptom magnification. He also noted that the psychometric testing suggests symptoms of anxiety, depression and somatization and that some of Claimant's current symptoms were being magnified by the significant emotional distress in the form of depression and anxiety.

17. Dr. Reilly also concluded that Claimant's description of his injury is consistent with the diagnosis of a mild traumatic brain injury (mTBI)/post concussional (PCS). This is based on Claimant hitting his head; no loss of consciousness; no identified anterograde or retrograde amnesia; only self-report of confusion or disorientation at the scene of the accident; a Glasgow Coma Scale associated with the injury of a 13-15; and brain imaging studies which were negative. (Ex. G, pg. 154.) It is not, however, clear where Dr. Reilly obtained the Glasgow Coma Scale rating of 13-15.

    Dr. Reilly also stated that:

> The natural history of a mTBI/PCS is one of steadily resolving symptoms in the hours/days/weeks/ post-injury. The neurocognitive symptoms are at their worst immediately after the injury. mTBI symptoms generally rapidly improve spontaneously without any formal treatment interventions. It appears that the patient's recovery has been complicated by significant psychosocial stressors and emotional distress. … Reductions in the patient's emotional distress would likely result in a concomitant reduction in somatic/cognitive symptoms. (Ex. G, pg. 154.)

    Dr. Reilly's post assessment diagnosis was "Adjustment Disorder with Mixed Anxious and Depressed Mood." Under recommendations, Dr. Reilly further concluded:

> [Claimant] presents with intact neuropsychological capacities. The patient demonstrated average performance across all the neuropsychological domains sampled in this assessment. The patient's mechanism of injury would not predict any long-term neuropsychological sequela. (Ex. G, pg. 155.)

Dr. Reilly's report also contains the following Addendum regarding the normal course of mTBI:

> Current research in mild traumatic brain injury documents improving symptoms and spontaneous recovery within the time frame of one month. Concussed athletes have full symptom resolution within 2-10 days (the majority by day 6). At that time here is no detectable cognitive or balance difficulties documented.
>
> . . .
>
> The research indicates that persistent cognitive symptoms associated with concussions (>3 months) are associated with premorbid/comorbid psychosocial factors.
>
> Psychosocial factors include depression, somatization and secondary gain factors. Persistent mTBI symptoms (extending beyond 6 months) are strongly correlated with the presence of litigation. (Ex. G, pg. 156.)

18. On January 26, 2017, Dr. Lipkin wrote to Dr. Raford after he reviewed the various testing he ordered to asses Claimant's balance and hearing issues. He stated that the videonystagmogram showed tracking abnormalities "suggesting" a central issue. He also concluded that overall, the picture is more "suggestive" of central rather than a peripheral vestibular injury. However, he did not recommend any treatment or additional testing. He also did not provide a causation assessment regarding the cause of the possible tracking abnormalities and how the findings tied into Claimant's complaints of dizziness and/or vertigo.

19. On January 25, 2017, Claimant returned to Dr. Raford. He noted Claimant's testing with Dr. Lipkin was all normal except for the oculomotor OPK read as "*asymmetrical… which could be indicative of possible CNS involvement or task related*." At this visit, and pursuant to Dr. Raford's request, Claimant went into significant detail about his continued symptoms. It is noted that Claimant stated that he felt like his muscles on his left side are slowed and that his thought process and speech is also "slowed down…dull." It is also noted that Claimant feels like he cannot get on the treadmill. Dr. Raford also noted at this visit that not only did Claimant have a wide based gait, **but that he was also shuffling.** (Emphasis added) (Ex. C, pg. 63-65.) The addition of "shuffling" shows progression of Claimant's neurological symptoms. Claimant completed another pain - symptom - diagram and noted that he continued having problems with balance and dexterity. (Ex. C, pg. 69.)

20. On January 25, 2017, Dr. Raford also noted that Claimant's care would be transferred to yet another primary care physician, Dr. Christian Updike, who is with Injury Care Associates & Occupational Medicine, to manage his care. However, at this appointment, Dr. Raford indicated that "somatosensory evoked potentials for the left upper extremity coordination issues, and/or electrodiagnostic studies are warranted prior to completion of this final phase of workup." (Ex. C, pg. 65-66.)

21. On February 2, 2017, Claimant was evaluated by Dr. Updike, his new primary care physician. At his very first appointment with Mr. Adamson, Dr. Updike discussed maximum medical improvement. As noted in his report, Dr. Updike indicated that he discussed the meaning of MMI and case closure even if Claimant's symptoms persisted, after appropriate medical workup, which was nearly complete, and that Claimant was advised that he anticipated case closure by July 2017. (Ex. 11, pg. 239.)

    At this visit, Claimant's primary complaint was "wobbliness." Dr. Updike noted that Claimant reported a number of physical problems which included:

    a. Inability to go to the bathroom standing up without missing toilette bowl and inability to wipe himself,
    b. Unable to put on pants while standing up,
    c. Unable to write a normal speed,
    d. Unable to climb stairs and ladders with confidence,
    e. Unable to play guitar
    f. Unable to tie fly fishing knots or fly fish without falling over,
    g. Could partially squat without wobbling, and
    h. Unable to walk backwards/forwards and was not safe standing at the top of stairs.

    Dr. Updike also completed a neurological exam and found the following:

    a. Claimant was unable to walk on his heels forward or backward,
    b. He could stand on his right foot for only 10 seconds and his left foot for only 3 seconds, and
    c. He wobbled with his eyes closed.

    (Ex. 11, pg. 239-240.)

    Dr. Updike also noted that while Claimant was waiting to be evaluated that day, he found out his father passed away. Despite Claimant being extremely upset, he went forward with his appointment that day. Dr. Updike reviewed some of Claimant's prior medical records and noted that Claimant's neurological examination was abnormal, as noted by the problems with balance outlined above.

22. On February 7, 2017, Claimant again saw Dr. Chan. At that time, Dr. Chan thought Claimant's symptoms were mostly post-concussive based on the test results from Dr. Lipkin. (Ex. 11, pg. 179-180.) However, Dr. Chan did not provide any detailed causation analysis and link together Claimant's complicated medical and symptom history with his conclusory statement that Claimant's symptoms were post-concussive.

23. On February 12, 2017, Claimant fell and suffered an injury to his face.

24. On February 13, 2017, Claimant returned to Dr. Updike. At this time, Claimant was no longer working. Claimant advised Dr. Update about his fall on February 12, 2017, which Claimant attributed to his initial work accident. Dr. Updike noted the findings of the January 2017 MRI of Claimant's brain in which the radiologist noted that a "diffuse axonal injury cannot be excluded."

25. On February 27, 2017, Claimant returned to Dr. Updike. At this appointment, Claimant complained of "wobbliness" and was adamant that the word dizziness was not appropriate to describe his symptoms. At this visit, Claimant demonstrated his lack of coordination when clapping his hands. The doctor also noted that the "shin rub test" he administered was abnormal. Dr. Updike concluded that based on these new neurological symptoms, he was going to refer Claimant to a specialist, Dr. Treihaft, a neurologist. The referral to a specialist – neurologist - was to get the expertise necessary to determine whether there was a work related component to Claimant's neurological symptoms or a non-work related component such as the early onset of an organic neurologic process such as a movement disorder, motor neuron disease, or possibly a substance abuse issue. (Ex. 11, pg. 245)

    Dr. Updike also noted at this appointment that he received a letter from the insurance company regarding trying to get the Claimant to MMI. He indicated that he may consider cervical imaging, because it was unclear if such had previously been done. Despite the uncertainty of a diagnosis regarding Claimant's neurological symptoms, Dr. Updike noted that a remaining issue was to "bring the case to MMI." (Ex. 11, pg., 245)

26. On March 1, 2017, Claimant returned to Dr. Chan. Dr. Chan indicated that based on the history provided by Claimant, he does fit the diagnosis of a mTBI. (Ex. H, pg., 158.)

27. On March 1, 2017, Dr. Updike added an addendum to his prior report after speaking with Dr. Chan. He noted that he spoke with Dr. Chan and Dr. Chan said the ENT findings of central origin are reassuring and that no vestibular training was needed. He also noted that Dr. Chan addressed concerns about a possible axonal shear injury, and said that even if present, Claimant should recover.

28. On April 12, 2017, Claimant was evaluated by neurologist Marc Treihaft, M.D. Dr. Treihaft obtained a detailed history, reviewed many of Claimant's medical records, and physically examined Claimant. On his neuromuscular evaluation, he noted:

a. Reflexes were 3+ in the upper extremities and 2+ slightly hyperactive at the knee jerks and ankle jerks.

b. Tone was increased in the upper extremities greater than the lower extremities without cogwheeling.

c. Toes were downgrading.

d. Gait was slightly wide-based and spastic.

e. Hoffman's testing was positive bilaterally.

f. Claimant did not blink with glabellar tap.

g. Snout test was negative.

Dr. Treihaft's initial impression was that Claimant's presentation suggested an extrapyramidal disorder with parkinsonian signs and increased rigidity. He also stated that disorders such as cortical basal ganglion degeneration may be considered as well as primary lateral sclerosis. He concluded that "A relationship to his head trauma has not been established, ***but may not be excluded***." (Emphasis added.)

Dr. Treihaft noted that additional information was still required in order to fully evaluate the case and determine whether Claimant's neurological symptoms and complaints were work related. He indicated that he still needed to:

a. Review brain MRI,

b. Obtain enhanced brain and cervical MRI studies,

c. Obtain and review additional laboratory tests,

d. Review Claimant's neuropsychological batteries for cognitive dysfunction,

e. Consider a lumbar puncture, and

f. Clarify Claimant's alcohol and narcotic usage.

29. On April 17, 2017, Dr. Updike commented about Dr. Treihaft's report. According to Dr. Updike, he quotes Dr. Treihaft as stating: "The relationship to his head trauma has not been established but may not be excluded" and "Work relatedness to be determined." Despite Dr. Treihaft stating that work relatedness may not be excluded, Dr. Updike concluded that it was unlikely Claimant's dexterity and balance problems are work related. (Ex. 11, pg. 274.)

30. On April 24, 2017, Claimant's physical therapist noted Claimant was also suffering from a loss of left sided lower extremity dexterity and control. (Ex. 11, pg. 276.) This could be an indication of a worsening of neurological symptoms since these symptoms have not been noted in prior physical therapy records.

31. On May 3, 2017, Dr. Treihaft wrote a letter/report to Dr. Updike. Dr. Treihaft indicated Claimant was being seen for a neurological disorder which was marked by spasticity, hyperflexia, gait disorder, and cognitive difficulties. He noted that Claimant's symptoms might be due to primary lateral sclerosis or an extrapyramidal disorder such as cortical basal ganglia degeneration with

parkinsonian signs, cognitive dysfunction, and increased rigidity. He was, however, still waiting to receive Claimant's neuropsychological batteries, some laboratory results, and the contrast enhanced brain MRI. On physical examination, Dr. Treihaft noted the following:

a. Claimant's cranial nerves examination revealed slow lateral and vertical saccades with full movements.

b. Claimant's tone was diffusely increased,

c. Claimant's reflexes were 3+ in the upper extremities and knee jerks had 5-6 beats of clonus bilaterally, and

d. Claimant had a severely spastic gait.

Despite his findings on physical examination, Dr. Treihaft stated that "***Work relatedness remains a question***." (Emphasis added.) He also concluded his letter/report by stating "I indicated that I would speak with you over the next several days to review his neurological problems in the work relatedness. Please contact me if we have not spoken in the interim."

Based on the record presented to the ALJ, Dr. Treihaft never completed his assessment and evaluation of Claimant's neurological condition. There is not a subsequent report which indicates he received and reviewed the lab results, contrast enhanced MRI, neuropsychological test results, and finished his analysis of the matter and rendered an opinion regarding the work relatedness of Claimant's neurological symptoms.

32. On May 18, 2017, Dr. Updike saw Claimant. Dr. Updike's report from that day indicates that had not been able to speak with Dr.Treihaft. He goes on to explain that he tried calling him that same day, but he was unable to speak with Dr. Treihaft because he was out of the country. He also noted in his report that Dr. Treihaft indicated that Claimant's problems "might be due to primary lateral sclerosis or an extrapyramidal disorder such as cortical basal ganglia degeneration with parkinsonian signs, cognitive dysfunction and increased rigidity." Despite the fact that Dr. Updike was unable to discuss Dr. Treihaft's opinions or conclusions that day because Dr. Treihaft was out of the country, Dr. Updike concluded and stated in his report that Dr. Treihaft has determined Claimant's problems are not related to his work injury. Dr. Updike specifically indicated:

> Board Certified neurologist Marc Treihaft has opined that Claimant's neurological problems are due to an extrapyramidal movement disorder or primary lateral sclerosis. (See Ex. 11, pg. 291-293.)

Dr. Updike also indicated in his report that notes from Dr.Treihaft indicate that no further neurological workup is necessary. (Ex. 11, pg. 293.)

33. The finding by Dr. Updike that Dr. Treihaft finished evaluating Claimant and rendered an opinion on causation regarding Claimant's neurological symptoms

as of May 18, 2017, and found that they were not work related, is not found to be reliable, credible, or supported by the record currently before the ALJ.

34. As of June 19, 2017, Claimant had not undergone all of the testing suggested by Claimant's authorized treating physician, Dr. Raford, to assess Claimant's left upper extremity coordination issues. The testing included:

    a. Somatosensory evoked potentials testing, and/or

    b. Electrodiagnostic studies.

    In addition, as of June 19, 2017, Dr. Treihaft had not finished evaluating Claimant's neurological condition so he could render an opinion as to the work relatedness of Claimant's neurological symptoms. As noted by Dr. Treihaft, he was waiting to see various test results before rendering an opinion on causation. According to Dr. Treihaft, he still had to review, and have Claimant undergo such tests if they had not been performed, the following diagnostic testing:

    a. Enhanced brain MRI,

    b. Enhanced cervical MRI, and possibly,

    c. A lumbar puncture.

Claimant Placed at MMI by Dr. Updike

35. On June 19, 2017, and before Dr. Treihaft completed his evaluation of Claimant's complicated neurological presentation, Dr. Updike prematurely placed Claimant at MMI.[3] There is no indication in Dr. Updike's report that he ever communicated with Dr. Treihaft after Dr. Treihaft's May 3, 2017, report in which Dr. Treihaft indicated that he could not rule out a work related cause of Claimant's neurological symptoms. Moreover, Dr. Updike stated in his report that Claimant "challenges Dr. Marc Treihaft's thought of a Lewy body disease or dementia." Based upon the evidence presented to the ALJ, it does not appear that Dr. Treihaft ever opined Claimant had Lewy body disease or dementia. Dr. Updike also indicated in his report that Dr. Treihaft opined and concluded Claimant had an extrapyramidal movement disorder or primary lateral sclerosis. However, Dr. Treihaft did not complete his evaluation and analysis and did not conclude Claimant had an extrapyramidal movement disorder or primary lateral sclerosis. Dr. Treihaft merely set forth his thinking of what Claimant might have based on his partial review of the relevant data, but that he still had more work to do before he could rule out a work related cause.

36. Dr. Treihaft never rendered a final opinion regarding the work relatedness of Claimant's neurological symptoms. Therefore, Dr. Updike placed Claimant at MMI before Dr. Treihaft, the specialist to whom Claimant was referred to determine the neurological effects of his work related accident, completed his workup and analysis.

[3] This is consistent with Dr. Updike's February 2, 2017, report when he first evaluated Claimant and set a target date to place Claimant at MMI by July of 2017.

37. Upon placing Claimant at MMI, Dr. Updike provided Claimant a 6% upper extremity impairment, which he converted to a 4% whole person rating, for Claimant's right index finger, and a 12% whole person impairment rating for his cervical spine. (Ex. 11, pg. 295-303.)

38. On July 21, 2017, Respondents filed a Final Admission of Liability and admitted liability for the impairment rating provided by Dr. Updike. They also admitted for reasonable, necessary, and related maintenance medical treatment. (Ex. O, pg. 224.)

39. On July 27, 2017, and based upon a referral from Dr. Updike, Claimant underwent an additional evaluation by another specialist, Dr. Castro, an orthopedic surgeon at Cornerstone Orthopedics. The purpose of the evaluation was to assist in determining whether Claimant's neurological problems might be due to compression of his spinal cord in his neck and related to his work injury. It is important to note that this evaluation and assessment to determine the extent of Claimant's work injuries occurred after Dr. Updike placed Claimant at MMI on June 19, 2017. Dr. Castro documented Claimant's attempt to walk in a straight line with heel-to-toe gait did produce very significant balance problems. (Ex. 13, pg. 324.) Dr. Castro concluded that Claimant's symptoms were not coming from any myelopathy in his cervical spine and therefore he could not offer a surgical solution. He did, however, opine that Claimant's problems appeared to be more of an intracranial problem. (Ex. 13, pg. 324.) In light of Dr. Castro's opinion, the issue of causation was put back into the neurologist's arena, i.e., Dr. Treihaft.

Second Fall – After Claimant was Placed at MMI by Dr. Updike

40. On August 15, 2017, Claimant fell after getting out of his Jeep and hit his head. Claimant was taken to Denver Health where he was admitted and was hospitalized for approximately 10 days.

41. On August 21, 2017, while at Denver Health, Claimant underwent a Physical Medicine and Rehabilitation consultation with Dr. Gale. Although she did not have any of Claimant's prior medical records, Dr. Gale indicated Claimant had poor recovery from his 2016 mTBI with increasing falls. But, she also opined that Claimant's presentation was suspicious for a neurologic illness such as Parkinson's or progressive supranuclear palsy and requested a neurological consult.

42. On August 24, 2017, an MRI of the cervical spine was performed and was noted to be unremarkable. They did, however, note hyperreflexia and that they had a concern for an upper motor neuron condition. (Ex 1, pg. 12.)

43. On August 24, 2017, Claimant underwent a neurology consult at Denver Health which was performed by Dr. Brandon Pope, a Resident. The neurology consult was requested due to Claimant's upper extremity stiffness and less than expected recovery. His main complaint was slowed speech which they noted was non-specific. They also noted that given the report of a mild traumatic brain injury (mTBI), his symptoms seemed out of proportion to that injury. However, Dr. Pope also noted that something might be missing from his history. They noted

Claimant had frontal release signs with concern for more significant diffuse axonal injury from the original insult, but yet Dr. Pope did not have Claimant's prior medical records to assist in determining the extent of Claimant's work accident and his symptoms leading up to his second accident for which he was being treated at Denver Health. Dr. Pope noted Claimant had a very non-focal exam overall. (Ex. 1, pg. 12.) It was also noted that Claimant had spasticity in the upper and lower extremities and a possible positive jaw jerk. Dr. Pope also noted that he did not find any Parkinsonian features or evidence of a neurodegenerative process or dementia. But, it is not clear what specific conditions he was considering when he indicated that he did not observe evidence of a neurodegenerative process at that time. Dr. Pope also indicated that in addition to Claimant's symmetric spasticity, he had significant hyperreflexia and those were concerning for an upper motor neuron injury in the cervical spine or potentially a brainstem injury, however, they might be related to an axonal injury. Dr. Pope wanted an MRI of the brain and C-spine. He thought Claimant's psychomotor slowing might be due to a postconcussive syndrome. He indicated that C-spine imaging was reassuring. He also thought Claimant might have cortical disinhibition from a diffuse axonal injury. Claimant told him that all of his old concussion symptoms had returned and seemed worse than before but they noted no new concerning symptoms specifically. Despite Dr. Pope's listing of possible diagnoses, it does not appear he made a final and reliable diagnosis. Moreover, Dr. Pope, who was a Resident, did not have Claimant's prior medical records in order to assist in his assessment. (Ex. 1, pg. 13.)

44. On September 21, 2017, after being released from Denver Health, Claimant was evaluated by Dr. Updike. At this appointment, Dr. Updike noted Claimant demonstrated "the classic pattern of a parkinsonian patient. I suspect an early 3-6 hertz tremor in both hands. (Ex. D, pg. 123.)

45. On May 10, 2018, Dr. Kristen Mason performed a Division IME. As set forth in her report, Dr. Mason is board certified in Physical Medicine and Rehabilitation as well as Electrodiagnostic Medicine. There is no indication Dr. Mason specializes in brain injuries, and/or neurological disorders, and/or motor neuron disorders.

46. According to her report, Dr. Mason performed a physical examination and reviewed numerous medical records. Consistent with the finding of this ALJ, Dr. Mason noted that despite Claimant being evaluated by Dr. Treihaft, a neurologist, Dr. Treihaft never finished his workup and evaluation of Claimant because he did not have a complete dataset which included the results of various tests, nor the opportunity to request additional tests, if necessary. Therefore, Dr. Mason concluded that Claimant was placed at MMI before his treating neurologist could assess the consequences of Claimant's work accident, via a proper workup and causation analysis, and provide a final diagnosis.

47. Dr. Mason noted that Claimant felt like he had some slowing of motor function on the left side. Dr. Mason also indicated that Dr. Raford discussed with Claimant, when care was being transferred to Dr. Updike, the possibility of somatosensory

evoked potentials testing of the right upper extremity. (Ex. 1, pg. 7.) However, this testing was never done.

48. Therefore, not only did Dr. Treihaft not have a complete dataset to render an opinion on causation, neither did Dr. Mason. Dr. Mason is not a neurologist and does not specialize in motor neuron disorders or head injuries. In order to make a determination of MMI in this case, she needed the expertise and completed analysis of Dr. Treihaft, a neurologist.

49. Despite not having a complete data set, and the assistance of a neurologist with the proper training and specialization to assess this complicated case, Dr. Mason's assessment was as follows:

    a. Mild TBI with postconcussive syndrome, mainly marked by complaints of balance difficulties with objective findings of central vestibular abnormality on testing.

    b. Cervical sprain/strain with the first MRI showing a C5-6 disc osteophyte complex and some central stenosis; second MRI was noted to be unremarkable.

    c. Fall, apparently out of a vehicle striking his head and leading to a large left subdural hematoma requiring craniotomy with complications of late skull osteomyelitis with need for revision craniotomy and cranioplasty and probably flap rotation. His second head injury was much more severe than the first.

    d. Longstanding hearing loss and tinnitus likely non-claim related.

    e. Right index finger injury with some residual stiffness.

    f. No cognitive deficits on neuropsychological testing done post the original injury. This would make most of the debate relevant to whether or not the patient has a neurodegenerative disorder somewhat moot as one would not expect normal neuropsychologic testing in that context.[4] There have been many conflicting opinions regarding preexisting but the medical records do not really reflect a high likelihood that this patient had a preexisting neurodegenerative disorder based on the fact that he did not have any documented neurologic issues prior to this, at least according to the information supplied to me, and had hobbies that would preclude him having significant balance issues if he was indeed participating in them just prior to this original accident.

[4] Due to her lack of specialization regarding motor neuron diseases, Dr. Mason made a critical error in her attempt to assess causation in this case. Both Dr. Hammerberg, who the ALJ finds credible and persuasive, and the specific portion of Dr. Machanic's testimony regarding this point, testified that cognitive deficits are not seen in certain motor neuron diseases such as primary lateral sclerosis. Therefore, Claimant's neuropsychological test results do not make the debate regarding causation "moot" as indicated by Dr. Mason.

50. Dr. Mason also noted that:

> I am informed that the patient has seen two neurology doctors, originally Dr. Marc Treihaft and later Dr. Eric Hammerberg. I have the report of Dr. Treihaft which will be discussed further below. I do not possess the report of Dr. Hammerberg as the visit occurred one and a half months ago. I am informed by the patient and his daughter that they are both totally in disagreement with the two neurologists and apparently a diagnosis of Lewy body dementia and other types of degenerative neuronal diseases were made and the patient was told that the diagnosis could only be confirmed by autopsy. Apparently, the patient did not undergo imaging studies of any kind to prove or disprove these conjectures and indeed denies previous SPECT scan, PET scan, or other dynamic imaging which might or might not rule out such a contention.
>
> Of interest is the fact that his father died of a degenerative dementia and there was a thought this may have been a Lewy body dementia.

51. In her discussion section, Dr. Mason concluded and stated the following:

    a. The patient is not at MMI.

    b. I am not able to give a provisional impairment rating because he is still actively treating for brain-related issues. Unfortunately, I do feel that the second injury resulted from the first injury apart from any other explanation. All of the alternative explanations appeared to have been speculative in nature. *Certainly, if he is ultimately diagnosed with something else, I would certainly take that into consideration but the evidence seemed fairly flimsy.* (Emphasis added.) I have seen other patients whose primary issue was vestibular dysfunction of central origin who had multiple falls and repetitive injuries. Unfortunately, that is a fairly common sequelae of a mild brain injury. Because I feel the patient is not at MMI, he is continuing to treat really more for this second more devastating head injury which was caused by a combination of his balance issues and the fact that he requires anticoagulation for his protein-S deficiency. ***He needs to be under the care of a physiatrist specializing in brain injury or a neurologist specializing in brain injury.*** (Emphasis added.) He likely needs to have another cervical MRI or at least a comparison of the two he has already had. It may be that advanced imaging, such as a SPECT scan, could be helpful in delineating any metabolic abnormalities he may still be experiencing though certainly the symptoms from the original fall have been eclipsed severely by the second injury and complication therefrom. It is possible that somatosensory evoked potentials from the upper extremities might delineate whether there is any central delay. He did have some potential myelopathy on the

previous MRI though it does not sound like most examiners felt he had a clinical myelopathy. He certainly has quite a bit of spasticity at this point and the question is whether that is emanating from the brain or from the cervical cord or from some combination of the two. This is one of the more complicated neurologic pictures that I have seen in the last five years.

c. Due to his current neurologic deficits, he is not in a position to be working.

d. I am not aware of a preexisting apportionable condition. There has been speculation regarding that but no first diagnosis of any other condition which may be impacting his situation, at least not according to the material that I have received. [Report ends.]

52. Dr. Mason did not provide any testimony in this matter. Therefore, other than her report, there is no additional evidence from Dr. Mason as to the precise information required, i.e., diagnostics and opinion(s) from appropriate treating specialists, which is necessary for her to make a final assessment regarding the cause of Claimant's neurological problems and MMI.

53. Dr. Mason concluded that before a finding of MMI can be made, Claimant needs to be evaluated by a physiatrist and/or neurologist who specializes in assessing and treating patients with brain injuries. The ALJ finds that this is not because Claimant's neurological problems are due to his work accident instead of a motor neuron disease such as primary lateral sclerosis, but because a properly qualified specialist will have the expertise to evaluate Claimant and analyze all of the data that has been collected, request additional diagnostic testing if necessary, and determine the extent of Claimant's neurological injuries which flow from his work accident, if any.

54. As noted by Dr. Mason, Claimant might need another cervical MRI or at least comparison of the two he has already had. In addition, Dr. Mason also recommended advanced imaging, such as a SPECT scan and/or somatosensory evoked potentials testing. It is with the additional information in the form of diagnostic testing and evaluations that Dr. Mason will be able to render a reliable opinion regarding the cause of Claimant's underlying symptoms and address the issue of MMI. In other words, the need for additional diagnostic testing and the fully completed evaluation(s) by a proper specialist(s), is to provide her the information necessary for her to render a reliable opinion regarding the full range of pathology resulting from the work accident.

55. Respondents' retained expert neurologist Dr. Eric Hammerberg to examine Claimant and opine on his neurological condition and his diagnosis. Dr. Hammerberg issued a report dated August 16, 2018, and testified at hearing. Dr. Hammerberg concluded that the evidence did not establish Claimant suffered a traumatic brain injury due to his work accident. He stated that although Claimant complained of dizziness, this was later determined to be problems with motor coordination and not true vertigo. He noted Claimant had developed progressive worsening of motor control, with increased muscle tone, but no problems with

cognition. Specifically, he opined that Dr. Mason was correct in identifying the diagnostic distinction related to the absence of significant findings on neuropsychological testing in the presence of impaired motor control, however, she failed to recognize that the absence of impaired cognition rules out the possibility of traumatic brain injury. He felt that if Claimant's severe spasticity and loss of motor control was due to a traumatic brain injury, imaging studies would have shown cerebral contusions and neuropsychological testing would have documented significant problems with cognition. However, imaging was negative and there was no evidence of shear injury. He also indicated that with shear injuries, the lesions that are seen are at the great white junction and are associated with petechial hemorrhaging, which was absent in this case.

56. Dr. Hammerberg pointed out that Dr. Mason failed to note that there are other motor neuron diseases that typically exhibit progressive loss of motor control with increased muscle tone and no problems with cognition. And, he testified that was the exact case here. He found Claimant exhibited a clinical picture consistent with a type of motor nerve disease known as primary lateral sclerosis (PLS). HE also found that the diagnosis related to the original fall on June 28, 2016, was posttraumatic headache with a cervical strain, right shoulder sprain, and sprain/strain of the right index finger. He concluded that the second fall of August 15, 2017, was more likely caused by the dexterity issues associated with PLS and/or a mechanical fall caused by the condition of the concrete, the lighting conditions, and the presence of a puddle in that area. (Ex. K, pg. 188.)

57. The ALJ finds Dr. Hammerberg's opinions and conclusions to be highly credible and highly persuasive. However, whether his opinions and conclusions, when combined with the remainder of the record, provide clear and convincing evidence that Claimant was at MMI on June 19, 2017, or at any other time, cannot be determined without the final assessment and causation analysis of Claimant's authorized treating neurologist, Dr. Treihaft.

58. Claimant retained expert neurologist Dr. Bennett Machanic to examine Claimant and opine on his neurological condition and his diagnosis. Dr. Machanic issued his report on September 27, 2018, and testified via deposition on January 28, 2019.

59. Dr. Mechanic performed a cursory review of the case and relied on inaccurate information and, therefore, he reached inaccurate and unreliable conclusions. He admitted that he did not have an accurate history from Claimant. (Dep., pg. 62.) He admitted that the records available for review regarding Claimant's pre-existing condition were limited. He specifically did not have the records of Claimant's neurological evaluations at Kaiser Permanente with Dr. Schabbing when he formed his initial opinion. (Dep., pg. 63.) He was unaware Claimant had previously undergone a muscle biopsy. (Dep., pg. 63:LL17-20.) He was incorrectly led to believe Claimant's prior muscle problems had been alleviated after discontinuing statin drugs. (Dep., pg. 64:LL11-15.) As such, he steadfastly held that Claimant's pre-existing condition was 100% caused by statin drugs. Even claimant's neurologists at that time did not believe this, and noted that he had a myopathy of yet undefined cause. Dr. Machanic also discounted

observations made by ATPs in the claim, and went as far as suggesting that they were “liars.” Specifically, and without reasonable explanation, he alleged Dr. Broghammer was a liar when he documented that Claimant had a worsening dizziness problems for the two years preceding his fall on June 28, 2016. (Dep., pg. 73-75.) He maintained this position even when presented with confirmation that during his evaluation Claimant omitted some information and was not a reliable historian regarding certain matters. He admitted Claimant’s statements regarding the August 15, 2017, mechanism of injury were inconsistent with other medical records. He noted Claimant reported he had lost balance and did not indicate that he had tripped and had fallen on raised concrete covered by water as set forth in the contemporaneous medical records regarding the second fall on August 115, 2017. (Dep., pg. 81-82.)

60. Dr. Machanic’s cursory, and imprecise review led to inaccurate and unreliable conclusions that cannot be reconciled. During direct testimony, Dr. Machanic specifically concluded that the spasticity seen by himself, Dr. Hammerberg, Dr. Treihaft, and DIME physician Dr. Mason, did not exist until after the second fall on August 15, 2017. (Dep., pg. 43:LL1-11.) He said that he did not see any evidence or discussion of spasticity prior to the second fall of August 15, 2017. (Dep., pg. 43:LL56-24; pg. P47:LL21-24; pg. 48:LL1-4.) This led him to believe that the spasticity seen on examination was caused by a brainstem injury from the second fall and surgery because he determined the initial fall was not significant enough to cause the spasticity. His inaccurate analysis and conclusion was addressed on cross-examination:

Dr. Machanic’s Deposition P87:

2 Q. Indeed, when you looked at Dr. Treihaft's

3 note in this matter, he talks about spastic maneuvers of

4 sorts; rigidity, of course, and Parkinsonian-type

5 findings. Correct?

6 A. Yes.

7 Q. You said in your direct examination that

8 you didn't believe the spasticity or these problems

9 existed until after the second fall. Now looking at

10 Dr. Treihaft's note, you would have to agree he was

11 seeing something similar to rigidity, spasticity,

12 something different than dizziness. Correct?

13 A. Well, Dr. Treihaft saw the patient

14 April 17th, 2017.

15 Q. Yeah.

16 A. That is after all of this.

17 Q. After all of what?

18 A. The events we are talking about.

19 Q. And what is the date of the second fall?

20 A. The date of the second fall is --

21 Q. Because I may be wrong here.

22 A. -- August 15, 2017.

23 Q. Okay.

24 A. And Treihaft sees him before.

25 Q. Oh, so he sees him before?

Dr. Machanic's Deposition P88

1 A. And he sees him April 12th, '17. So that

2 is after the first injury.

3 Q. Okay. So now that we have the timeline

4 correct, do you agree that Dr. Treihaft recognized

5 spasticity, rigidity, Parkinsonian-type symptoms or

6 findings, whatever he is calling that, does that give

7 you some more information that is different than what

8 you said in your direct testimony, that is that

9 spasticity existed only after the second fall?

A. Well, if Treihaft sees it, then it is genuine. But it doesn't occur before the first injury because it is not in the Kaiser notes.

Q. Right. But your testimony was that you felt that the second fall led to a hematoma of sorts that caused an injury to the brain stem, thus leading to the spasticity that did not exist before that. This record would seem to refute that, that the spasticity and rigidity identified by a separate neurologist in your field of practice was before that.

A. Well, I think we have to say something was going on before that, yeah.

Q. Okay. Let's pause there for a second and talk about that. Your theory is that the hematoma or

Dr. Machanic's Deposition P89

whatever it was that happened in the second injury caused brain stem injury leading to spasticity. Now that we see it existing with Dr. Treihaft, on his examination months before the second fall, what would be your theory of the cause of that?

A. So -- well, it can be several things.

7 One, it could be the original head injury was much more

8 significant; number two, could be that there is a

9 comorbidity developing at the same time; and three being

10 that Dr. Treihaft is the first neurologist after

11 Schabbing that saw this man. All I can say is that none

12 of this was evident before the first fall.

61. The revelation that Claimant had spasticity prior to the second injury was perplexing and new information to Dr. Machanic, and caused him to have to postulate two new theories; either that the initial head trauma was much more significant (something he and other physicians in this matter had already discredited through imaging and testing) or that there could be a comorbidity developing at the same time. Therefore, the ALJ finds that Dr. Machanic's opinions and conclusions are not credible, reliable, or persuasive based on the record before the court.

62. As previously found above, on July 28, 2016, approximately four weeks after the work accident, Claimant allegedly represented what he identified as an advancing dizziness to Dr. Broghammer, which according to Dr. Broghammer's medical records and his deposition testimony, was worsening during the two years before the work-related fall. Although Dr. Broghammer was deposed and confirmed Claimant told him he had advancing dizziness during the two years leading up to his work accident, Claimant denies telling Dr. Broghammer such and the medical records from Kaiser which predate the work accident do not document and use the term "dizziness" when describing Claimant's prior problems leading up to his work accident. The ALJ does not think Dr. Broghammer is lying, as indicated by Dr. Machanic. At the time Dr. Broghammer wrote his report, the relevancy of the statement and description of Claimant's symptoms before his work accident was unknown. There is a possibility that Dr. Broghammer wrote "2 years before the accident" instead of "for approximately 2 weeks since the accident." However, at this point, the ALJ is not finding one way or the other that Claimant did or did tell Dr. Broghammer that he had advancing dizziness during the two years before the work accident. But, there is additional evidence in the record which supports Dr. Broghammer's testimony and the information contained in his medical reports that Claimant had dizziness before the work accident.

Preexisting and Undiagnosed Condition

63. Medical records from Denver Health dated September 6, 2017, show Claimant's walking had been affected previously after he had DVTs. (Ex. V.)

64. Before his work related accident, Claimant treated with Kaiser for a preexisting, undiagnosed, condition that Claimant described as affecting his muscles.

65. The medical records from Kaiser Permanente, which predate his work accident, do, however, establish that Claimant's medical providers and his neurologists were attempting for years to diagnose Claimant's preexisting condition without success. It is clear that Dr. Mason and Dr. Machanic were not provided this information by Claimant. They were unaware of this preexisting condition, as confirmed by Claimant at hearing.

66. The Kaiser records indicate that in 2009, Claimant, based on the recommendations of his medical providers, considered undergoing an MRI or muscle biopsy, but did not proceed with either at that time. However, he did undergo electrodiagnostic studies on July 19, 2010, which were normal.

67. Medical records from Kaiser Permanente dated January 13, 2011, indicate Claimant was being assessed for a muscle biopsy after complaining of muscle pain and weakness. Claimant specifically described taking ibuprofen for years to address the problem.

68. Due to ongoing muscle symptoms, Claimant ultimately underwent muscle biopsies on February 25, 2011, which were normal. (Ex. V, pg. 209.) The cause of Claimant's muscle pain and weakness was undetermined as of March 15, 2011. (Ex. W, pg. 205.) Another possible neurological symptom Claimant complained of, which predated his work accident, was that he was also having difficulty with swallowing. *Id.* Although he never followed up and underwent the testing recommended to address his swallowing problems, this symptom could also be evidence and early signs, or emergence, of a motor neuron disorder.

69. Because his symptoms appeared to be neurologically based, Claimant was referred to, and evaluated by, a neurologist, Dr. Robert Schabbing on April 11, 2011. Claimant reported a history of myalgias and muscle tenderness beginning in late 2008. Claimant had been placed on statin drugs which were subsequently stopped in October 2008 due to a complaint of muscle aching. By May 2009, all statin drugs had been discontinued. However, Claimant continued with significant symptoms.

70. In addition, in 2011, it was suggested that Claimant be sent to the University [of Colorado] to be evaluated by a neurologist with more expertise than Dr. Schabbing, the neurologist at Kaiser. (*See* Ex. W, pg. 205.)

71. Claimant felt that his muscle aching was gradually getting worse over time and reported experiencing cramps daily. Claimant also complained of some tingling in his hands, arms, and back which tended to occur with the fatigue. Claimant also indicated his hands would sometimes turn white after periods of inactivity. Claimant also reported some redness or ruddiness to his facial color without associated sun exposure. Although Claimant related this condition to the use of statin drugs, his lack of improvement after the drugs were discontinued led Dr. Schabbing to conclude that Claimant had an undiagnosed myopathy associated with cramps. His providers at that time specifically discussed the lack of a clear

clinical diagnosis beyond a nonspecific myopathy which may have been uncovered by treatment with statins. However, there was no specific relationship to the statin drug. Claimant was advised to follow-up with neurology and rheumatology approximately one year after Dr. Schabbing's evaluations to reassess the exam. (Ex. W, pg. 210-214.) However, despite persisting symptoms, it does not appear Claimant followed-up.

72. On February 25, 2016, Claimant reported to Dr. O'Sullivan at Kaiser Permanente. The report indicates that Claimant had been diagnosed with a myopathy and that they were unsure of the cause. It is specifically noted that his condition did not improve after discontinuing the statin drugs. Claimant also indicated that he was taking hydrocodone 2-4 times a day to address the myopathy, muscle pain, and fatigue. (Ex. W.)

73. The evidence of Claimant's preexisting myopathy, muscle pain, fatigue, and problems swallowing, combined with worsening neurological symptoms after the work accident, are consistent with Claimant's neurological problems being caused by a slowly progressing neurological disorder and unrelated to his work accident. However, whether Claimant suffers from a neurological disorder such as primary lateral sclerosis or a neurological injury from hitting his head at work on June 28, 2016, was unable to be assessed as of June 19, 2017, when Claimant was placed at MMI by Dr. Updike, because Dr. Treihaft had not completed his workup and assessment of Claimant's neurological symptoms.

74. Additional diagnostic procedures and medical evaluations offer a reasonable prospect for defining the extent of Claimant's work injury and need for additional medical treatment, if any.

75. Because Claimant was not provided sufficient medical treatment before being placed at MMI on June 19, 2017, to assist in determining whether his neurological symptoms were caused by his work accident, there is insufficient evidence in the record for the ALJ to determine causation at this time.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents have overcome the DIME opinion of Dr. Mason that Claimant was not at MMI on June 19, 2017.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S.

A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). And, any ambiguities in the DIME physician's report regarding MMI can be resolved by the ALJ. *See MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Under the statute MMI is primarily a medical determination involving the diagnosis of Claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d

270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of Claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007).

However, it is inconsistent with a finding of MMI that additional diagnostic procedures and/or medical evaluations offer a reasonable prospect for defining the extent of Claimant's work injury and need for additional medical treatment. *See Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000).

Therefore, the ALJ finds and concludes that Respondents have failed to overcome Dr. Mason's opinion that Claimant was not at MMI on June 19, 2017, by clear and convincing evidence. The ALJ finds and concludes that Claimant is entitled to additional medical treatment in the form of a completed evaluation with Dr. Treihaft, a neurologist, to assist in determining the cause of Claimant's neurological symptoms and to determine when Claimant reached MMI, if at all, due to his work accident.

The ALJ also finds and concludes that the diagnostic testing recommended by Claimant's authorized treating physicians, which has not been performed, is deemed reasonable and necessary, if Dr. Treihaft or another authorized treating physician indicates the testing is still reasonable and necessary to assist in determining whether Claimant's neurological symptoms are related to his work accident. The diagnostic testing includes, but is not limited to, the "somatosensory evoked potentials for the left upper extremity coordination issues, and/or electrodiagnostic studies" recommended by Dr. Raford.

If an authorized treating physician, such as Dr. Treihaft, believes the additional diagnostic testing or evaluations recommended by Dr. Mason, the DIME, are reasonable and necessary, it will be up to an authorized treating physician to prescribe the diagnostic testing and/or evaluations. The ALJ does not have the authority to order Respondents to provide certain diagnostic testing and/or evaluations which have not been prescribed by an authorized treating physician. *See* WCRP 11*; Potter v. Grounds Service Co.,* W.C. No. 4-935-523-04 (August 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-917-329-03 (May 15, 2018.)

After Claimant was placed at MMI, Respondents had Claimant undergo an IME with Dr. Hammerberg, a neurologist. The ALJ found Dr. Hammerberg's opinions and testimony to be credible and highly persuasive. However, based on the facts and circumstances of this case, the Respondents' IME with Dr. Hammerberg cannot be used as a substitute for Dr. Treihaft's complete assessment.

It is only after Claimant has been provided reasonable and necessary medical treatment, which includes Dr. Treihaft's completed assessment, that the issue of MMI and whether Claimant's neurological problems were caused by the work accident can be evaluated by the DIME physician and then by an ALJ if a disagreement still exists.

Due to the numerous unanswered questions which have been raised by Dr. Mason and the various neurologists who evaluated Claimant before and after he was

placed at MMI, and opined about the possible cause of Claimant's neurological problems, the ALJ considered ordering an IME pursuant to Section 8-43-502, C.R.S. and/or C.R.C.P. 706, with a neurologist specializing in head injuries and/or motor neuron disorders to assist in assessing causation and to provide supporting literature in support of their opinion. However, the fact that the ALJ considered ordering an IME to assist in completing the analysis of Dr. Treihaft drove home the point that Claimant was placed at MMI prematurely and that a determination regarding causation cannot be made until Dr. Treihaft completes his assessment and evaluation of Claimant and renders an opinion.

The ALJ finds and concludes that there is insufficient evidence in the record to determine whether Claimant's neurological problems were caused by his work accident.

II. If Claimant is not at MMI as of June 19, 2017:

- Is Claimant not at MMI because he needs additional diagnostic testing and evaluations to determine whether his neurological problems were caused by either his industrial accident or an underlying motor neuron disease such as primary lateral sclerosis; or
- Is Claimant not at MMI because he needs additional treatment to cure and relieve him from the effects of his neurological problems which were caused by his industrial accident?

As found and concluded above, Claimant is not at MMI because he needs additional diagnostic testing and evaluations to determine whether his neurological problems were caused by either his industrial accident or are the result of something else such as an underlying motor neuron disease like primary lateral sclerosis.

III. Whether Claimant's need for medical treatment, including the medical treatment caused by a subsequent fall which occurred on August 15, 2017, is causally related to Claimant's work injury of June 28, 2016.

Each party has requested the ALJ to address the cause of Claimant's subsequent fall which occurred on August 15, 2018, and the need for medical treatment after such fall. However, addressing such issue is premature because Claimant has not been provided the requisite medical treatment to determine whether his neurological symptoms were caused by his work accident.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome Dr. Mason's opinion by clear and convincing evidence that Claimant was not at MMI on June 19, 2017.

2. There is insufficient evidence in the record to determine whether Claimant's neurological symptoms were caused by his compensable work accident.

3. Claimant was not at MMI on June 19, 2017, because he needs additional medical treatment to determine whether his neurological symptoms were caused by his compensable work accident. This treatment includes Dr. Treihaft's complete assessment.

4. Respondents shall pay for Claimant to return to Dr. Treihaft and for Dr. Treihaft to complete his assessment and render an opinion as to whether Claimant's neurological symptoms were caused by his work accident and also address MMI.

5. The parties shall work together to facilitate getting Dr. Treihaft the relevant information necessary for him to perform and complete his assessment and render an opinion regarding causation and MMI.

Any issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 4, 2019.

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that prescriptions for Cialis and Stendra are reasonable, necessary, and causally related to his September 7, 2016 work injury.

2. If found reasonable, necessary, and causally related to his injury Claimant seeks reimbursement in the amount of $2,857.86 for his out of pocket costs for those prescriptions.

FINDINGS OF FACT

1. Claimant is employed by Employer as an Assistant Fire Chief.

2. In 2016, Claimant was diagnosed with prostate cancer. Respondent ultimately admitted liability for Claimant's prostate cancer, conceding that the cancer was work related.

3. Claimant underwent treatment for his prostate cancer that included biopsy, surgery, and 5 rounds of CyberKnife treatment.

4. On December 14, 2016, Stanley Galansky, M.D. performed a transurethral resection of prostate (TURP) procedure. *See* Exhibits 6, G.

5. On March 27, 2017, Dr. Galansky evaluated Claimant. Claimant reported he was bothered by retrograde ejaculation but was pleased with his voiding pattern and strength of stream following the TURP procedure. *See* Exhibit G.

6. On April 27, 2017, Dr. Galansky had Claimant fill out a Sexual Health Inventory for Men (SHIM) form. Claimant rated his confidence that he could keep an erection at 3. In the four other categories, Claimant rated a 4. His total score was noted to be 19/25 on the SHIM. See Exhibit G.

7. On June 16, 2017, Annyce Mayer, M.D. performed an Occupational/Environmental Clinic Examination and she issued a report on August 30, 2017. Dr. Mayer met with Claimant and obtained a history of present illness from Claimant. Dr. Mayer also reviewed Claimant's past medical history, surgical history, social history, family history, environmental history, and occupational history. Dr. Mayer also reviewed medical records. Dr. Mayer assessed prostate cancer and noted Claimant was to begin CyberKnife treatment. Dr. Mayer also assessed benign prostatic hypertrophy for which Claimant recently underwent a TURP procedure in advance of CyberKnife treatments that resolved his urinary symptoms. Dr. Mayer assessed erectile dysfunction, mild with excellent response to Cialis. Claimant reported some ejaculatory

dysfunction since the TURP procedure. Dr. Mayer noted that Claimant would begin CyberKnife treatment the next week with Dr. Galansky and Dr. McNeeley. Dr. Mayer opined the prostate cancer was work related. *See* Exhibits 7, G.

8. Claimant reported to Dr. Mayer that his PSA prostate screening was elevated in September of 2016 and repeat testing was also high. Claimant reported that he was referred to urologist Stanley Galansky, M.D. who performed a biopsy in October of 2016 and diagnosed prostate cancer. Claimant reported that he had increased urinary symptoms in the last few years and was also diagnosed with an enlarged prostate. Claimant reported it was recommended he undergo a TURP procedure in advance of CyberKnife treatment. Claimant reported he was healing and was scheduled to have a diode placed on June 23, 2017 in preparation for CyberKnife treatment. Claimant reported that for his erectile dysfunction he had taken Cialis on and off basis for the last couple of years, he believed since about 2014. Claimant reported that he had no recent worsening of symptoms, was able to achieve an erection, but that his erection was improved on Cialis. Claimant reported that since the TURP procedure he had variable ejaculation but that his urinary symptoms were much improved with no decreased force of stream, hesitancy, or incontinence. Claimant's medications were listed as Cialis 5 mg as needed. *See* Exhibits 7, G.

9. On June 5, 2018, Clinton Merrill, M.D. issued a report titled Independent Review of Medical Records. Dr. Merrill noted that Claimant had been diagnosed with prostate cancer, underwent a TURP procedure on December 14, 2016 and then received adjuvant therapy by CyberKnife in June of 2017. Dr. Merrill reviewed medical records. Dr. Merrill opined that Claimant's only significant risk factors for prostate cancer were his age and race and that Claimant's exposure to various carcinogens over the years as a firefighter was a primary contributing factor to development of prostate cancer. Dr. Merrill did not review or discuss erectile dysfunction. *See* Exhibit 8.

10. On July 16, 2018, Counsel for Claimant submitted a letter to Respondent requesting Claimant be reimbursed for out of pocket pharmacy expenditures in the amount of $2,877.86. *See* Exhibits 4, B.

11. On October 16, 2018, Counsel for Claimant submitted another letter to Respondent requesting Claimant be reimbursed for out of pocket expenditures in the amount of $2,877.86. *See* Exhibits 4, C.

12. On October 26, 2018, Counsel for Respondent submitted a letter to Counsel for Claimant noting the receipt of Claimant's reimbursement request. Respondent indicated they could not tell from redaction what two listed items for $10 each were and thus could not determine the relatedness of those items. [1] Respondent also indicated that the remaining items on the list had insufficient documentation to support they were related. Respondent noted that the remaining items were for prescriptions of Cialis and Stendra, both erectile dysfunction drugs. Respondent indicated that the medical records showed Claimant had been taking Cialis since as early as February of 2013, several years

[1] Claimant withdrew his request for reimbursement for the two separate redacted $10 items at hearing. Therefore, the amount requested for reimbursement at hearing is reduced by $20 and is $2,857.86.

prior to his prostate cancer diagnosis. Respondent also noted that other records indicate that Claimant reported no worsening of erectile dysfunction symptoms following his surgery. Respondent rejected the request for reimbursement noting that the records did not suggest that the prostate cancer or treatment aggravated Claimant's erectile dysfunction. *See* Exhibit 4, D.

13. On February 19, 2019, Gregory Reichhardt, M.D. performed a Division Independent Medical Evaluation (DIME). Claimant reported that he had an elevated PSA in 2016, underwent a biopsy, and was diagnosed with prostate cancer. Claimant reported he went through the legal process and was accepted as a having a work related cancer. Claimant reported he underwent a TURP procedure and after healing from that, had retrograde ejaculation which had not existed prior to the surgery. Claimant reported that he underwent CyberKnife for five to six treatments and that he had been since discharged to full duty but gets a PSA every three months between follow-ups with providers. *See* Exhibit 1.

14. Claimant reported to Dr. Reichhardt that he had retrograde ejaculation since his TURP. Claimant also reported erectile dysfunction. Claimant reported that he did have prior erectile dysfunction, but felt that the Cialis worked better than it does now and that the Cialis was not as effective at maintaining erection. Claimant reported that he now had difficulty maintaining his erection about one quarter to one half of the time. Claimant's medications were noted to be Cialis, 20 mg, as needed. Dr. Reichhardt noted in the discussion portion of his DIME report that Claimant had erectile dysfunction prior to the injury successfully treated by Cialis and that Claimant reported Cialis was not as effective as a treatment at this time and that he now had difficulty maintaining an erection one quarter to one half of the time. Dr. Reichhardt provided an impairment for sexual dysfunction under Section 11.4(a), impairment of the penis, Class 1 impairment with varying degrees of difficulty erection, ejaculation, and/or sensation. Dr. Reichhardt noted Claimant's reports of increased difficulty maintaining an erection and the retrograde ejaculation since Claimant's TURP procedure. Based on that, Dr. Reichhardt provided a 5% whole person impairment. Dr. Reichhardt opined that Claimant was at maximum medical improvement as of August 3, 2018 and that for maintenance medical treatment required indefinite medical follow up with the urologist and radiation therapy specialist. *See* Exhibit 1.

15. On March 12, 2019, Respondents filed a Final Admission of Liability noting that Claimant had reached maximum medical improvement on August 3, 2018. Respondents admitted to a 5% whole person impairment rating, consistent with the report of DIME physician Dr. Reichhardt. *See* Exhibit A.

16. Records prior to Claimant's prostate cancer diagnosis confirm that he had erectile dysfunction prior to his prostate cancer.

17. On July 9, 2013, Jean Greos, M.D. evaluated Claimant. Dr. Greos assessed as one of Claimant's problems, erectile dysfunction and noted an onset date of February 5, 2013. Under current medications, Dr. Greos listed: Cialis 20 mg tablet, 1

tablet PO PRN, 10 days, 6 refills, for a total of 10, start on February 5, 2013, end on September 21, 2014, maintenance drug. *See* Exhibit E.

18. On September 22, 2014, Dr. Greos evaluated Claimant. Claimant reported that he was sexually active but did not experience sexual satisfaction. Claimant reported that he used Cialis as needed with good results. Dr. Greos noted continued diagnosis of erectile dysfunction and noted under Rx: Cialis 20 mg tablet, 1 tablet PO PRN, 10 days, 6 refills, for a total of 10, start on September 22, 2014, maintenance drug. *See* Exhibit F.

19. Claimant was the only witness that testified at hearing. Claimant testified that after his prostate cancer diagnosis, he had biopsy, surgery, and 5 CyberKnife treatments. Claimant testified that before his prostate cancer he took Cialis for erectile dysfunction to help with sexual performance. Claimant testified that he took Cialis from a "manhood" point of view to provide him longevity during sex.

20. Claimant testified that after his prostate cancer and treatment, his use of Cialis changed. Claimant testified now that he is prescribed Cialis ongoing to help with erectile dysfunction and that now without the use of Cialis, he cannot get or maintain an erection. Claimant testified that he used to take Cialis as needed for longevity in performance but now takes it for daily use to get and maintain an erection.

21. Claimant testified that he had spent $2,857.86 out of pocket for the Cialis prescriptions following his prostate cancer treatment, as he wanted to continue to take Cialis on a continuous daily basis. Claimant asked for reimbursement.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57

P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

Respondent argues that Claimant reported no worsening of his erectile dysfunction symptoms to Dr. Mayer approximately 6 months following his TURP surgery. Respondent also argues that Clamant was on Cialis several years prior to his prostate cancer diagnosis and that his dose for Cialis is the same dose he now takes. Respondent argues that the medical records show no worsening of the erectile dysfunction condition and the same medications. Thus, Respondent argues that the prostate cancer did not cause the need for Cialis or increase the need for Cialis. Claimant argues that before prostate cancer he needed Cialis for performance longevity and took it as needed whereas now he needs it for daily use to get and maintain an erection. Claimant argues his situation now is worse and different from his situation before his prostate cancer treatment.

Claimant had pre-existing issues with erectile dysfunction and longevity in his sexual performance that dated back to February of 2013, several years before his prostate cancer diagnosis. However, his pre-existing erectile dysfunction issues were helped with Cialis, taken as needed, and were longevity issues versus erection issues. Claimant is credible in his testimony that following his prostate cancer treatment, he now has issues with getting and maintaining an erection and now requires daily use of Cialis. Although Respondents point to a medical record where Claimant reported no significant change in his erectile dysfunction, this record was completed after Claimant's TURP procedure but prior to his 5 rounds of Cyberknife. Claimant is credible and persuasive that his erectile dysfunction condition now, and following prostate cancer treatment, is

worse. Claimant has established, more likely than not, that his prostate cancer treatment aggravated and accelerated his erectile dysfunction leading him to have greater disability and greater need for prescription medications. Additionally, it is noted that part of the 5% whole person impairment provided by DIME physician Dr. Reichhardt includes impairment for sexual dysfunction, and varying degrees of difficulty with erection, ejaculation, and/or sensation. Dr. Reichhardt specifically noted in his impairment rating Claimant's reports of increased difficulty maintaining an erection following his prostate cancer treatment. Dr. Reichhardt's opinion and rating included permanent impairment for this problem and is found consistent with Claimant's credible testimony that his erectile dysfunction is worse now than it was prior to his prostate cancer treatment.

ORDER

It is therefore ordered that:

1. Claimant's has established by a preponderance of the evidence that erectile dysfunction medications are reasonable, necessary, and related to his work injury.

2. Respondents shall reimburse Claimant $2,857.86 for Claimant's out of pocket expenses.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 4, 2019

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered an occupational disease in the form of upper back and shoulder pain that began on September 4, 2017 during the course and scope of her employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive Temporary Partial Disability (TPD) benefits for the period December 11, 2017 through April 8, 2018.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits that are designed to relieve the effects of her September 4, 2017 occupational disease or prevent further deterioration of her condition.

FINDINGS OF FACT

1. In 2007 Claimant began working for Employer as a Quality Control Inspector. She inspected tiles that weighed either three or five and one-half pounds. Claimant earned $41,883.33 over a 54-week period in 2016 and 2017 for an Average Weekly Wage (AWW) of $775.62. She did not experience any physical symptoms while performing her job duties.

2. Claimant subsequently began inspecting larger items that required more lifting. She noted that the pace of her work also increased. Claimant developed some upper back and shoulder symptoms on about September 4, 2017 but did not seek medical treatment.

3. Claimant specifically explained that her job duties involved inspecting 5.5-pound tiles under a light by extending her arms slightly higher than chest level. She remarked that, if she discovered a defect during the inspection, she placed the tile on a table and removed any imperfections with a sanding tool. She then placed the tile on a cart. After Claimant completed five tiles, she packaged them in a cardboard box by layering them in packaging cushions and then taping the box. Each box of packaged tiles thus weighed 27.5 pounds. After the cart was full of boxes Claimant pushed the cart and unloaded the boxes onto a pallet. Claimant then returned to her work area to count irreparable, defective tiles and input the information into a computer for tracking purposes.

4. On December 5, 2017 Claimant visited Clarence V. Ellis, M.D. for medical treatment. Claimant reported that in September 2017 she began developing pain across her upper back and shoulders in the absence of a specific injury. She explained that her

job duties consist of lifting 5.5-pound tiles from a table or the floor, holding them in front of her at about eye level and inspecting them. After she completed each inspection she placed five tiles in a box and carried the box a short distance to a palate. Claimant noted that she inspects approximately 300 tiles in a 10-hour day. She remarked that the table from which she lifts the tiles is high for her stature. After conducting a physical examination Dr. Ellis diagnosed Claimant with bilateral trapezius muscle strains that were more than 50% likely related to her job duties for Employer. He prescribed medications and physical therapy but did not assign any work restrictions.

5. On December 11, 2017 Claimant visited Hiep Lelourdes Ritzer, M.D. for an evaluation. Claimant reported that she developed pain in her upper back and shoulders in September 2017 while inspecting tiles for Employer. She did not suffer a specific injury but her symptoms continued to worsen. After reviewing her medical history and conducting a physical examination, Dr. Ritzer diagnosed Claimant with the following: (1) trapezius muscle strain; (2) myofascial pain; (3) right arm numbness; and (4) bilateral shoulder pain. He determined that Claimant's symptoms were consistent with a work-related injury. Dr. Ritzer prescribed physical therapy and medications. He also requested an ergonomic job site evaluation because Claimant is only five feet one-inch tall and performs significant, repetitive lifting throughout each workday. Dr. Ritzer assigned work restrictions including no repetitive lifting, no lifting in excess of five pounds and no overhead reaching.

6. On January 5, 2018 Howard Fallik completed a Job Demands Analysis and Risk Factor Analysis for the position of Quality Control Inspector at Employer's facility. He issued a report on January 11, 2018. Relying on the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Mr. Fallik did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's job duties. After conducting time studies of Claimant's work activities Mr. Fallik specifically determined that inspecting and lifting tiles did not fit within the Primary or Secondary Risk Factors regarding pinch force or lifting.

7. On April 5, 2018 Genex performed an ergonomic evaluation that considered Claimant's work area and job duties. The report included several recommendations to improve Claimant's work environment. Genex recommended lowering Claimant's examining light and moving it closer to her body. Recommendations also included providing Claimant with an adjustable work surface and chair. Finally, the report suggested improved lifting position and shifting Claimant's job responsibilities every two to three hours to provide variety and decrease repetition.

8. On April 17, 2018 Carlos Cebrian, M.D. performed a records review of Claimant's claim. After reviewing Claimant's medical records and considering the Job Demands Analysis, Dr. Cebrian performed a causation analysis pursuant to the *Guidelines*. He remarked that Claimant attributed her upper back and upper extremity symptoms to her work activities for Employer. Dr. Cebrian explained that, in order to perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated primary risk

factors. However, because of the location of Claimant's symptoms in her upper back and upper extremities, the *Guidelines* did not specifically contemplate Claimant's diagnosis. He thus performed a causation analysis utilizing the scientific methodology of a general causation analysis, the cumulative trauma guidelines and shoulder guidelines. Notably, Claimant's medical providers had failed to conduct a causation analysis pursuant to the *Guidelines*.

9. In considering Claimant's diagnosis or differential diagnosis, Dr. Cebrian noted that she suffered upper back pain with intermittent upper extremity symptoms. The differential diagnoses included cervicothoracic myofascial pain, thoracic strain, shoulder impingement and thoracic outlet syndrome.

10. In delineating Claimant's job duties Dr. Cebrian relied on the Job Demands Analysis prepared by Mr. Fallik. Notably, the Job Demands Analysis specified that Claimant spent about 20-30% of her workday inspecting products and determining whether they met quality control standards. She also spent about 20-30% of her day using tools or sandpaper to correct product deficiencies. Claimant also spent about 5-10% of her day using cleaning solution to remove substances from products and 5-10% of her day to document the results of her inspections on a computer. Claimant placed products in boxes and moved the boxes for another 5-10% of her day. Finally, she cleaned her work area 3-5% of the time. Dr. Cebrian summarized that Claimant's job duties included lifting 5.5 pound floor tiles from a table or the floor, holding them at about eye level and then inspecting the tiles. After examining the tiles Claimant packed five in a box and moved the box to a pallet located a short distance away. Claimant reported that she inspected about 300 tiles each 10-hour day.

11. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Cebrian noted that the Table requires six hours of the use of two pounds of pinch force or 10 pounds of hand force for three times or more per minute. Additional risk factors include six hours of lifting 10 pounds greater than 60 times per hour or six hours of using hand held tools weighing two pounds or more.

12. Dr. Cebrian noted that an additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, six hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Additional Primary Risk Factors include computer work for more than seven hours per day or at a non-ergonomically correct work station, continuous mouse use of greater than four hours or use of a handheld vibratory power tool for six hours or more. Dr. Cebrian determined that Claimant's job duties did not meet any of the Primary Risk Factors to meet the minimum thresholds in the *Guidelines.* After outlining the Secondary Risk Factors enumerated in the *Guidelines*, Dr. Cebrian determined that Claimant did not meet the criteria for developing a cumulative trauma disorder.

13. Dr. Cebrian also considered the *Guidelines* in evaluating Claimant's upper thoracic spine complaints that radiated into her shoulders. The *Guidelines* specifically include factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Dr. Cebrian concluded that Claimant's upper back and bilateral upper extremity symptoms were not directly or indirectly related to her work activities for Employer.

14. During the period December 2017 until April 2018 Claimant continued to receive medical treatment from Drs. Ellis and Ritzer. She also underwent physical therapy and chiropractic treatment. On April 23, 2017 Claimant visited Yusuke Wakeshima, M.D. after a referral by Dr. Ritzer for a comprehensive physiatric consultation. Claimant reported neck pain, upper back pain, bilateral shoulder pain and bilateral upper extremity pain that began on September 4, 2017. She attributed her symptoms to cumulative trauma from her work activities as a Quality Control Inspector for Employer. After performing a physical examination Dr. Wakeshima diagnosed Claimant with myofascial pain, neck pain, upper back pain, bilateral arm pain and bilateral hand numbness. He recommended electrodiagnostic testing of her right upper extremity.

15. On April 27, 2018 Claimant returned to Dr. Wakeshima for electrodiagnostic testing. The studies were negative and did not reveal any electrophysiologic evidence of injuries to the right upper extremity.

16. On May 2, 2018 Claimant returned to Dr. Ritzer for an evaluation. Dr. Ritzer recounted that in September 2017 Claimant began to develop symptoms in her upper back and shoulders because of her repetitive job duties for Employer. He noted that Claimant specifically reported bilateral trapezius pain, bilateral shoulder pain, right arm numbness and myofascial pain. After reviewing Claimant's medical records and performing a physical examination Dr. Ritzer diagnosed Claimant with a strain of the trapezius muscle, myofascial pain and right arm numbness. He concluded that Claimant had reached Maximum Medical Improvement (MMI) with no impairment or restrictions. Dr. Ritzer noted that, after reviewing the Job Demands Analysis, Claimant did not have any Primary or Secondary Risk Factors for a cumulative trauma injury. However, he remarked that the ergonomic evaluation revealed risk factors that suggested her symptoms were likely work-related. Finally, Dr. Pitzer recommended medical maintenance treatment in the form of pain management with Dr. Wakeshima.

17. On September 27, 2018 Claimant underwent an independent medical examination with John S. Hughes, M.D. Dr. Hughes conducted a physical examination and reviewed Claimant's medical history. He also summarized the Job Demands Analysis prepared by Mr. Fallik. Dr. Hughes noted that Claimant's job involved occasional lifting of boxes weighing from 20-40 pounds, frequent handling and carrying of pieces weighing 5-10 pounds and occasional manipulation of tools weighing 2-6 pounds. Claimant also pushed and pulled a cart with 15-30 pounds of force, frequently gripped products using 2-8 pounds of force and pulled empty carts with 1-10 pounds of force. Dr.

Hughes diagnosed Claimant with myofascial pain syndrome and myogenic right thoracic outlet syndrome. He agreed with Drs. Ritzer and Wakeshima that Claimant reached MMI on May 2, 2018. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*), Dr. Hughes assigned a 4% whole person rating pursuant to Table 53 and a 4% rating for range of motion deficits for a total 8% whole person impairment.

18. Claimant testified at the hearing in this matter. She explained that she began to develop pain in her neck, shoulders and arms on September 4, 2017 while performing her job duties for Employer. She specifically detailed that she repetitively inspects 5.5-pound ceramic tiles, performs necessary repairs and places groups of five tiles in boxes. After Claimant reported her symptoms to Employer, she obtained conservative medical treatment in the form of massage therapy, physical therapy, dry needling and medications. Claimant also performed modified job duties in which she inspected smaller tiles. She remarked that all of the treatment improved her condition but her symptoms returned when she resumed her regular job duties.

19. On February 11, 2019 the parties conducted the post-hearing evidentiary deposition of Dr. Cebrian. Dr. Cebrian maintained that Claimant did not suffer a work-related exposure that constituted a cumulative trauma condition under either a general causation assessment, cumulative trauma analysis or shoulder causation analysis pursuant to the *Guidelines*. He explained that he utilized multiple causation analyses because the cumulative trauma analysis did not completely encompass Claimant's diagnoses but allowed him to use a scientific approach to causation. Considering the Job Demands Analysis, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Quality Control Inspector failed to meet the causation requirements for a cumulative disorder. Dr. Cebrian specifically remarked that Claimant lifted tiles weighing 5.5 pounds while performing her job duties. She inspected a total of 280-300 tiles during each 10-hour work shift or about one tile every two minutes. The exposure did not constitute a highly repetitive activity under the *Guidelines*. Dr. Cebrian addressed the Genex ergonomic evaluation and noted that none of the suggested modifications correlated with any risk factors or level of exposure that would meet a minimum threshold for a work-related condition under the *Guidelines*. He commented that, although an individual may experience symptoms at work, a sufficient exposure is required to constitute a work-related condition. Dr. Cebrian summarized that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*.

20. On February 22, 2019 the parties conducted the post-hearing evidentiary deposition of Dr. Hughes. Dr. Hughes agreed with other physicians that Claimant suffered a soft tissue injury to her upper back and lower neck area. In assessing whether Claimant's work activities caused her symptoms, Dr. Hughes explained that the cumulative trauma section of the *Guidelines* was not designed or developed to apply to Claimant's condition. He remarked that, in evaluating the causes of conditions such as Carpal Tunnel Syndrome (CTS), the cumulative trauma criteria are useful because factors including repetition, force and vibration have been scientifically well-established contributors to the diagnosis. However, the cumulative trauma section of the *Guidelines*

is not useful in assessing Claimant's case because of the lack of scientific evidence connecting her symptoms to work activities. Dr. Hughes summarized that Claimant simply does not have a condition that is amenable to a scientific assessment. Instead, employing a general causation analysis, Dr. Hughes reasoned that Claimant's repetitive lifting of 5.5 pound tiles at work caused her upper back and shoulder symptoms.

21. Claimant has failed to demonstrate that it is more probably true than not that she suffered an occupational disease in the form of upper back and shoulder pain that began on September 4, 2017 during the course and scope of her employment with Employer. Although Claimant attributed her upper back and shoulder symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Furthermore, Claimant engaged in a variety of activities throughout each shift. The record reflects that Claimant's tasks as a Quality Control Inspector included inspecting 5.5-pound tiles, removing any imperfections with a sanding tool, placing the tiles on a cart, packaging five tiles in a box, pushing the cart and unloading the 27.5 pound boxes onto a pallet. Claimant then returned to her work area to count irreparable, defective tiles and input the information into a computer for tracking purposes.

22. Relying on the *Guidelines* in conducting a Job Demands Analysis, Mr. Fallik did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. After conducting time studies of Claimant's work activities Mr. Fallik specifically determined that inspecting and lifting tiles did not fit within the Primary or Secondary Risk Factors regarding pinch force or lifting. Claimant spent about 20-30% of her workday inspecting tiles and another 20-30% of her day using tools or sandpaper to correct product deficiencies. She also spent about 5-10% of her day cleaning the tiles and 5-10% of her day documenting the results of her inspections on a computer. Claimant boxed tiles and moved them for another 5-10% of her day and cleaned her work area 3-5% of the time. Claimant thus engaged in a variety of tasks throughout her 10-hour workday.

23. Dr. Cebrian persuasively maintained that Claimant did not suffer a work-related exposure that constituted a cumulative trauma condition under either a general causation assessment, cumulative trauma analysis or shoulder causation analysis pursuant to the *Guidelines*. He explained that he utilized multiple causation analyses because the cumulative trauma analysis did not completely encompass Claimant's diagnoses but allowed him to use a scientific approach to causation. Considering the Job Demands Analysis, Dr. Cebrian explained that the combination of repetition, force and cycle time in Claimant's duties as a Quality Control Inspector failed to meet the causation requirements for a cumulative disorder. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Cebrian noted that the Table requires six hours of the use of two pounds of pinch force or 10 pounds of hand force for three times or more per minute. He specifically remarked that Claimant lifted tiles weighing 5.5 pounds while performing her job duties. She inspected a total of 280-300 tiles during each 10-hour work shift or about one tile every two minutes. The exposure did not constitute a highly repetitive activity under the *Guidelines*. Dr. Cebrian also considered the *Guidelines* in evaluating Claimant's upper thoracic spine complaints

that radiated into her shoulders. The *Guidelines* specifically include factors for the development of shoulder pathology. He concluded that Claimant's upper back and bilateral upper extremity symptoms were not directly or indirectly related to her work activities for Employer. Finally, in addressing the Genex ergonomic evaluation Dr. Cebrian noted that none of the suggested modifications correlated with any risk factors or level of exposure that would meet a minimum threshold for a work-related condition under the *Guidelines*. Dr. Cebrian thus summarized that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*.

24. In contrast, Dr. Hughes explained that the cumulative trauma section of the *Guidelines* was not designed or developed to apply to Claimant's condition. He remarked that, in evaluating some conditions the cumulative trauma criteria are useful because factors including repetition, force and vibration have been scientifically well-established contributors to the diagnosis. However, the cumulative trauma section of the *Guidelines* is not useful in assessing Claimant's case because of the lack of scientific evidence connecting her symptoms to work activities. Dr. Hughes summarized that Claimant simply does not have a condition that is amenable to a scientific assessment. Instead, employing a general causation analysis, he reasoned that Claimant's repetitive lifting of 5.5-pound tiles at work caused her upper back and shoulder symptoms.

25. Despite Dr. Hughes' analysis, Dr. Cebrian maintained that he utilized multiple causation analyses because the cumulative trauma analysis did not completely encompass Claimant's diagnoses but allowed him to use a scientific approach to causation. Moreover, the *Guidelines* provide that cumulative trauma conditions of the upper extremity constitute a heterogeneous group of diagnoses that include numerous specific clinical entities. Notably, the *Guidelines* specify that less common cumulative trauma conditions not enumerated are still subject to medical causation assessment. The *Guidelines* thus provide a scientific method for evaluating cumulative trauma conditions that may not be specifically delineated. Accordingly, based on the Job Demands Analysis, a review of the medical records and the persuasive opinion of Dr. Cebrian, Claimant did not engage in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. Rule 17, Exhibit 5 provides an algorithm for evaluating Cumulative Trauma Conditions (CTC) pursuant to the *Guidelines*. In addressing applicability, the *Guidelines* note that "CTC's of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles,

tendons and tendon sheaths, nerves, joints and neurovascular structures." W.C.R.P. Rule 17, Exhibit 5, p. 6. In determining a diagnosis when performing a cumulative trauma analysis the *Guidelines* delineate specific musculoskeletal conditions and peripheral nerve disorders. Nevertheless, the Guidelines provide that "[l]ess common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment." W.C.R.P. Rule 17, Exhibit 5, p. 21.

7. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p. 20.

8. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing two pounds or more. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. If neither Primary nor Secondary Risk Factors are present, the *Guidelines* provide that "the case is probably not job related." W.C.R.P. Rule 17, Exhibit 5, p. 24.

9. The *Guidelines* also specifically delineate factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when

addressing the likelihood of cumulative trauma contributing to shoulder pathology. W.C.R.P. Rule 17, Exhibit 4, p. 16.

10. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered an occupational disease in the form of upper back and shoulder pain that began on September 4, 2017 during the course and scope of her employment with Employer. Although Claimant attributed her upper back and shoulder symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Furthermore, Claimant engaged in a variety of activities throughout each shift. The record reflects that Claimant's tasks as a Quality Control Inspector included inspecting 5.5-pound tiles, removing any imperfections with a sanding tool, placing the tiles on a cart, packaging five tiles in a box, pushing the cart and unloading the 27.5 pound boxes onto a pallet. Claimant then returned to her work area to count irreparable, defective tiles and input the information into a computer for tracking purposes.

11. As found, relying on the *Guidelines* in conducting a Job Demands Analysis, Mr. Fallik did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. After conducting time studies of Claimant's work activities Mr. Fallik specifically determined that inspecting and lifting tiles did not fit within the Primary or Secondary Risk Factors regarding pinch force or lifting. Claimant spent about 20-30% of her workday inspecting tiles and another 20-30% of her day using tools or sandpaper to correct product deficiencies. She also spent about 5-10% of her day cleaning the tiles and 5-10% of her day documenting the results of her inspections on a computer. Claimant boxed tiles and moved them for another 5-10% of her day and cleaned her work area 3-5% of the time. Claimant thus engaged in a variety of tasks throughout her 10-hour workday.

12. As found, Dr. Cebrian persuasively maintained that Claimant did not suffer a work-related exposure that constituted a cumulative trauma condition under either a general causation assessment, cumulative trauma analysis or shoulder causation analysis pursuant to the *Guidelines*. He explained that he utilized multiple causation analyses because the cumulative trauma analysis did not completely encompass Claimant's diagnoses but allowed him to use a scientific approach to causation. Considering the Job Demands Analysis, Dr. Cebrian explained that the combination of repetition, force and cycle time in Claimant's duties as a Quality Control Inspector failed to meet the causation requirements for a cumulative disorder. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Cebrian noted that the Table requires six hours of the use of two pounds of pinch force or 10 pounds of hand force for three times or more per minute. He specifically remarked that Claimant lifted tiles weighing 5.5 pounds while performing her job duties. She inspected a total of 280-300 tiles during each 10-hour work shift or about one tile every two minutes. The exposure did not constitute a highly repetitive activity under the *Guidelines*. Dr. Cebrian also considered the *Guidelines* in evaluating Claimant's upper thoracic spine complaints that radiated into her shoulders. The *Guidelines* specifically include factors for the development of shoulder pathology. He concluded that Claimant's

upper back and bilateral upper extremity symptoms were not directly or indirectly related to her work activities for Employer. Finally, in addressing the Genex ergonomic evaluation Dr. Cebrian noted that none of the suggested modifications correlated with any risk factors or level of exposure that would meet a minimum threshold for a work-related condition under the *Guidelines*. Dr. Cebrian thus summarized that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*.

13. As found, in contrast, Dr. Hughes explained that the cumulative trauma section of the *Guidelines* was not designed or developed to apply to Claimant's condition. He remarked that, in evaluating some conditions the cumulative trauma criteria are useful because factors including repetition, force and vibration have been scientifically well-established contributors to the diagnosis. However, the cumulative trauma section of the *Guidelines* is not useful in assessing Claimant's case because of the lack of scientific evidence connecting her symptoms to work activities. Dr. Hughes summarized that Claimant simply does not have a condition that is amenable to a scientific assessment. Instead, employing a general causation analysis, he reasoned that Claimant's repetitive lifting of 5.5-pound tiles at work caused her upper back and shoulder symptoms.

14. As found, despite Dr. Hughes' analysis, Dr. Cebrian maintained that he utilized multiple causation analyses because the cumulative trauma analysis did not completely encompass Claimant's diagnoses but allowed him to use a scientific approach to causation. Moreover, the *Guidelines* provide that cumulative trauma conditions of the upper extremity constitute a heterogeneous group of diagnoses that include numerous specific clinical entities. Notably, the *Guidelines* specify that less common cumulative trauma conditions not enumerated are still subject to medical causation assessment. The *Guidelines* thus provide a scientific method for evaluating cumulative trauma conditions that may not be specifically delineated. Accordingly, based on the Job Demands Analysis, a review of the medical records and the persuasive opinion of Dr. Cebrian, Claimant did not engage in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

ORDER

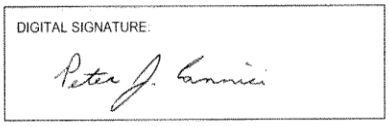
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 4, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues to be determined by this decision involve Claimant's entitlement to medical and indemnity benefits. The questions answered are:

1) Whether Claimant established, by a preponderance of the evidence, that the C3-C5 laminectomy and posterior lateral fusion performed by Dr. John McVicker on June 10th, 2018, was reasonable, necessary, and causally related to his March 9, 2017 work injury; and,

2) Whether as a result of this surgery, Claimant is entitled to temporary total disability (TTD) benefits beginning June 10, 2018 and continuing.

Because the ALJ concludes that Claimant's need for a C3-C5 laminectomy and posterior lateral fusion procedure was causally unrelated to his March 9, 2017 slip and fall and because this condition gave rise to Claimant's disability, this order does not address his entitlement to TTD benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was employed as a laundry worker for Employer. On March 9, 2017, he injured his low back after pulling on a bed sheet that had become lodged in the chute leading to the laundry. As he was yanking on it, the sheet suddenly let loose causing Claimant to slip and fall backwards onto his buttocks and low back. Claimant experienced right mid back pain but did not feel the injury was significant enough to report at the time. Claimant's pain did not subside prompting him to report the injury four days later on March 13, 2017. Claimant testified he had no pain in his neck at the time he reported his March 9, 2017 accident/injury. Claimant he was referred to Concentra Medical Centers where he was evaluated by physician assistant (PA), Kenneth Ginsberg.

2. PA Ginsberg obtained a history and performed a physical examination of Claimant's entire spine. PA Ginsberg documented the following history: "Hotel laundry worker through a temp agency . . . was grabbing the laundry that comes down the chute, but the laundry had become stuck in the chute so he had to forcefully tug t (sic) it until it came lose (sic) and when it came loose he fell to the floor onto his buttocks causing sudden onset right mid low back pain that has persisted and is worse with movement. No radiation or paresthesia's tot (sic) he (sic) extremities." Claimant expressed no complaints concerning the cervical spine.

3. Physical examination revealed the following:

> Cervical Spine: Cervical spine with normal lordosis, no tenderness and full ROM.
> Thoracic Spine: Thoracic spine without kyphosis, no tenderness, full ROM.
> Lumbosacral Spine: Appearance with (sic) normal. Tenderness in the lumbar spine (muscular, paraspinal, L1, L2, L3, L4 and L5) ROM: Full except as noted:
>
> > Flexion: AROM of 45 degrees and painful.
> > Extension: AROM of 15 degrees and painful.
> > Left Thoracolumbar Sidebending: AROM of 10 degrees and painful.
> > Right Thoracolumbar Sidebending: AROM of 10 degrees and painful.

4. Claimant was referred to physical therapy. He was evaluated by Janie Rodriquez on March 17, 2017. Ms. Rodriquez completed a physical examination and made, among others, the following observations:

> Gait: Ambulation using cane full weight bearing. Moderate antalgia.
>
> Gait comment: Pt reporting he has hx (history) right knee pain x2 years at which time he started using a cane.[1] He states he has had no change in his gait pattern with onset of LBP (low back pain).
>
> Reflex testing: Biceps C5 reflexes are hyperactive on the left. Patellar L3-L4 reflexes are hyperactive on the left.
>
> Assessment Comment: . . . He has a hx of left knee surgery and states that his current abnormal gait is from the knee pain/subsequent surgery 2 years ago. He demonstrates UMN (upper motor neuron) signs-hyperreflexia, asymmetrical LE weakness, clonus L ankle, and positive Hoffman's RUE although he does not recall any injury which would have caused these

[1] Claimant testified that the pain in his knee caused him to limp prior to this injury. However, he denied having any treatment or surgery to his knee prior to this incident and denied being treated previously in Mexico for his knee. He also denied any surgical history. Claimant's recollection is inconsistent with the content of his medical records. Indeed, treatment records from Julie Sandoval, NP reflect a history of treatment for the left knee with pain complaints going back for two to four years prior to her initial evaluation on August 25, 2016 documenting a report that he was told in Mexico that he had "bone on bone in the left knee" and "had a piece of bone removed from outside the left knee in Mexico." His pain level was a reported six to eight out of ten. He was referred for physical therapy, but it does not appear that he ever received this treatment. He was given a prescription for Celebrex. In a return visit, Claimant presented requesting surgery though he admitted he had not participated in physical therapy despite having been contacted by the therapy office. (Resp. Exh. K, Bates 216-233.)

neurological deficits. He complaints of back pain 8/10. His balance is poor-uses a cane and demonstrates spastic type gait.

5. Claimant continued to seek medical care at Concentra for persistent complaints of right-sided mid and low back pain. He first saw Dr. Daniel Peterson on April 26, 2017, after completing approximately 10 sessions of physical therapy. In a report from this date of visit, Dr. Daniel Peterson documents that Claimant suffered what he characterized was an "axial loading injury."

6. As of July 21, 2017, Dr. Peterson noted that Claimant had had 12 sessions of chiropractic care with minimal improvement. Consequently, Claimant was referred to physiatrist Dr. Timothy Sandell who evaluated him on July 31, 2017. On this visit Dr. Sandell obtained a history from Claimant concerning the mechanism of injury documenting that Claimant reported he ". . . recalls falling on his right low back." Claimant denies giving this history to Dr. Sandell.

7. Claimant underwent a series of facet injections administered by Dr. Sandell on September 11, 2017. On December 11, 2017, Claimant had a repeat injection in his lumbar spine.

8. On January 9, 2018, approximately 10 months after his slip and fall, Claimant saw Dr. Paul Stanton for a surgical consultation for ongoing back pain. Dr. Stanton completed a physical examination which included "station and gait . . . sensation, reflexes, coordination, balance, . . ." He documented the same to be "within normal limits for this patient". He went on to document that Claimant had full strength in his lower extremities, normal sensation, no clonus, and normal reflexes. There is no mention of any neck complaints in Dr. Stanton's report. Following his examination, Dr. Stanton recommended an L3-L4 laminectomy. Respondents denied the request and sought an independent medical opinion from Dr. Brian Reiss.

9. Claimant was released from care by Dr. Sandell on January 18, 2018. There is no mention of neck pain, increasing gait disturbance or any specific examination testing that would address whether Claimant had symptoms consistent with a progressive myelopathy at the time of his discharge.

10. Claimant was seen in follow-up by Dr. Peterson on January 19, 2018. Dr. Peterson performed a perfunctory exam. Outside of noting that Claimant had a negative straight leg raise test, Dr. Peterson did not record the results of any reflex, gait, balance or neurological testing that would identify whether symptoms of myelopathy were present.

11. Dr. Brian Reiss performed the aforementioned independent medical examination (IME) on February 21, 2018. Dr. Reiss is a board certified orthopedic surgeon with thirty years of experience in the field. He was accepted as an expert in the field of orthopedic surgery with a subspecialty in disorders of the spine. Dr. Reiss took a history and completed a physical examination. In his report, Dr. Reiss reports that

Claimant told him he had fallen onto his back and right side. Claimant denies telling Dr. Reiss this. Dr. Reiss also records that Claimant told him he did not have any pain at the time he fell. Claimant admitted that that is in fact why he did not report the injury until four days later, and that his pain actually started several days later, not immediately. (The initial report from Concentra reflects a service date of March 13, 2017. It also indicates the injury occurred on March 13 and that the injury occurred "today" but this is clearly incorrect. Claimant was being evaluated on the day the injury was reported to the employer, four days after the occurrence.)

12. During the IME, Dr. Reiss noticed several troubling neurological signs/symptoms that had been overlooked by the providers at Concentra. Specifically, he noted signs of hyperreflexia in the upper and lower extremities in addition to a significant gait disturbance. Ultimately, Dr. Reiss opined that the requested lumbar surgery was not related to Claimant's March 9, 2017 industrial injury. He raised concern that Claimant had non-work related myelopathy and encouraged him to seek additional assessment and treatment for this on an urgent basis.

13. Claimant testified that the first time anyone evaluated his gait or his upper extremities was when Dr. Reiss completed his IME. While the documented results of the physical examinations performed by Dr. Peterson, are devoid of findings suggesting that Claimant's gait and/or reflexes were evaluated for signs of myelopathy, the March 17, 2017 report of Ms. Rodriquez makes it clear that she not only evaluated Claimant's gait and reflexes but also raised concern that Claimant had signs/symptoms consistent with upper motor neuron involvement, i.e. myelopathy.

14. Claimant testified that after his appointment with Dr. Reiss he underwent an MRI of his cervical spine on May 14, 2018. The MRI demonstrated "severe spinal stenosis at C3-4 and C4-C5 with cord compression, cord edema, and/or myelomalacia". The MRI report notes that Claimant's stenosis was secondary to an "extruded disc herniation."

15. On May 17, 2018, Dr. Peterson issued an addendum to his May 11, 2018 report after reviewing the results of Claimant's MRI. In that addendum, Dr. Peterson stated, "Now that the MRI of the C spine findings are available to me, it is my unequivocal opinion that Mr. Olivas [had] previously existing spinal stenosis present in both the L spine and C spine, and that the fall he suffered, as an axial loading injury, has initiated a progressive stenotic exacerbation of his underlying conditions to the point that he now has developed, rather dramatically over the last 4 months, myelopathic changes in his spinal cord at the cervical level leading to upper motor neuron signs and symptoms and is in need of surgical decompression in an urgent fashion to prevent progressive loss of use of both lower and upper limbs and become paraplegic or even quadriplegic."

16. Respondents denied the request for neck surgery as unrelated to Claimant's March 9, 2017 slip and fall. Claimant then presented to the emergency room (ER) at UC health on June 8, 2018. The ER report documents that Claimant suffered a

back injury “about one year” prior to his presentation in the emergency department and that he had been “seeing a workers’ comp provider monthly since”. Claimant reported increasing pain generally, weakness, spasticity and urinary incontinence. He was noted to be severely myelopathic. It was noted further that Claimant was using a walker for ambulation, that CT demonstrated “critical” cervical stenosis with cord compression and that Claimant had been evaluated by neurosurgical services who recommended that Claimant proceed with surgery.

17. On June 10th, 2018, Dr. John McVicker performed a C3-C5 laminectomy and posterior lateral fusion. Claimant testified that he believes the surgery was successful in halting the neurological symptoms he was experiencing, and his condition seems to have stabilized. Regardless, he testified that he has not regained the function that he had before his precipitous functional decline. Most notably, he still requires a walker to ambulate effectively.

18. Dr. Peterson testified by deposition taken on October 16, 2018. Dr. Peterson is a “family physician” by training but has been practicing occupational medicine for the past 17 years. He was qualified as an expert in occupational medicine. He is Level II accredited.

19. Dr. Peterson testified that Claimant’s myelopathy and the symptoms triggered thereby could have been caused by an acute injury with a delayed onset. (Deposition of Dr. Peterson, hereinafter Depo., p. 14, l. 25 and p. 15, l. 1-2) He reiterated his opinions that Claimant had pre-existing spinal stenosis in the lumbar and cervical spine and that the March 9, 2017 fall resulted in an axial-loading event transmitting forces through the lumbar spine up the back to the neck accelerating the degenerative changes present in Claimant’s cervical spine. (Depo. p. 16, l. 17-25 and p. 17, l. 1-17) Indeed, Dr. Peterson testified that this “axial-loading” injury caused Claimant’s pre-existing cervical stenosis to “progress more rapidly than it would have otherwise” (Id.) Accordingly, Dr. Peterson opined that Claimant’s need for cervical decompression surgery was causally related to the March 9, 2017 slip and fall event occurring in the hotel laundry. He also opined that given the possible complications created by delayed treatment, including the potential for permanent paralysis, the surgery performed by Dr. McVicker on an urgent basis was reasonable and necessary.

20. On cross examination, Dr. Peterson clarified his opinions regarding both the development of Claimant’s cervical stenosis and the manifestation of symptoms consistent with myelopathy over time. Dr. Peterson had participated in a prehearing Samms conference during which he emphasized how rapidly the signs consistent with myelopathy had progressed. (Depo. p. 20-21, l. 1-20). When asked to address whether the symptoms consistent with myelopathy manifested slowly, rapidly or slowly at some point and rapidly later, Dr. Peterson testified that this case has been “challenging” because at the beginning of the claim, Claimant did not complain of any neck symptoms. Rather, his complaints always centered on the lumbar and low thoracic area. Dr. Peterson admitted that “none of us picked up on any myelopathic findings” until after Claimant was evaluated by Dr. Reiss. He admitted that, given the level of

pathology present on MRI, that the development of Claimant's cervical stenosis was "more consistent with a slow degenerative process over time" rather than a sudden acute injury. (Depo. p. 24, l. 18-24) Dr. Peterson also agreed that as stenosis worsens the spinal canal is compromised slowly giving rise to myelopathy and that this is progressive and irreversible. (Depo. p. 24, l. 25 and p. 26, l. 1-10)

21. Based upon Dr. Peterson's testimony, the ALJ finds that while spinal stenosis can be caused by an acute injury, the evidence presented here is persuasive of the fact that Claimant's cervical stenosis was pre-existing and the consequence of a long standing naturally progressing degenerative process. This finding is supported by the radiologist's comment to Dr. Peterson after reading Claimant's MRI that the level of severity of cervical cord compression was inconsistent with it being caused by an acute event. According to Dr. Peterson, the radiologist informed him that if the stenosis were the result of an acute injury, Claimant would have been paralyzed and in the hospital long before he ultimately developed symptoms. (Depo. p. 20, l. 21-24)

22. Regarding the development of symptoms consistent with myelopathy, Dr. Peterson reiterated his opinion that while he could not be certain about how Claimant's stenosis was progressing, it "progressed more rapidly than it would have without the - - without the axial-loading injury". (Depo. p. 25, l. 11-21) Dr. Peterson went on to testify that "in the absence of another explanation for his myelopathic symptoms and the discovery of the severe spinal cord compression, that [he] would opine that this fall and the axial-loading injury hastened the development of his myelopathic findings." (Depo p. 21, l. 3-7) Dr. Peterson couched the central question to be addressed as whether Claimant's myelopathic symptoms had been "there all along" and were simply missed or whether they "[showed] up during that period of time from when he had last seen Dr. Stanton to when he saw Dr. Reiss". (Depo. p. 21, l. 12-20) Following additional questioning, Dr. Peterson agreed that Claimant's symptoms probably developed more slowly over time and did not represent a sudden manifestation between January 9th and February 21st, when he was evaluated by Dr. Reiss. (Id.) Regardless, the ALJ infers from Dr. Peterson's testimony that he believes Claimant's March 9, 2017 slip and fall accelerated the degenerative changes in the cervical spine which in turn hastened his myelopathic findings.

23. Claimant sought an IME with Dr. John Hughes on November 5, 2018. Dr. Hughes assessed: 1. Occult Cervical and lumbar spondylosis and spinal stenosis, with no documentation of spinal problems prior to March 9, 2017. 2. Work-related fall with progressive stenotic exacerbation and development of cervical myelopathy, necessitating C3, C4, and C5 laminectomy surgery as done by Dr. McVicker on June 10, 2018. 3. Postoperative deconditioning, meriting additional postoperative rehabilitative care. Dr. Hughes echoes the opinion of Dr. Peterson that Claimant's previously occult spinal stenosis was aggravated by his work-related injury which caused progressive stenotic exacerbation. Although Dr. Hughes states that the fall was the proximate cause of Claimant's need for a C3-C5 laminectomy and posterior lateral fusion, he offers no analysis of the medical record to support this opinion nor does he

address the other potential causes for Claimant's need for surgery such as the normal natural progression of spinal stenosis leading to myelopathy.

24. Dr. Reiss testified at hearing and confirmed that Claimant only spoke to him about back pain and leg pain, not any neck symptoms or loss of function in his hands or arms. According to Dr. Reiss, a visual inspection of Claimant revealed obvious signs of myelopathy at the time of the IME. Claimant had a prominent gait disturbance, was uncoordinated and had difficulty with balance. Physical examination revealed hyperreflexia in the upper and lower extremities, a positive Hoffman's sign bilaterally and a few beats of clonus at the ankle bilaterally. The physical examination confirmed Dr. Reiss' suspicion that Claimant had myelopathy. Dr. Reiss testified that even a targeted exam aimed at the lumbar spine would have identified sufficient pathologic findings to lead a competent surgeon to perform further examination of the upper extremities and cervical spine to investigate the findings he observed and uncovered during his IME.

25. According to Dr. Reiss, the spinal cord adapts to the lack of room caused by encroaching stenosis over time. Patients also adapt to the slow subtle signs of myelopathy and are frequently unaware that they are neurologically compromised. This worsening/adaption pattern continues until the spinal canal becomes so narrow that the spinal cord can no longer function properly, at which time the signs/symptoms associated with myelopathy become patently obvious. This testimony mirrors the deposition opinions of Dr. Peterson who testified that "the body has an amazing ability to - - to adjust and adapt as things progress slowly versus as a dramatic injury. . ." (Depo. p. 20, l. 24-25, p. 21, l.1)

26. Dr. Reiss was asked about the March 17, 2017 examination findings documented by Physical Therapist Rodriguez. Dr. Reiss explained that the findings associated with the prior reflex testing performed by Ms. Rodriquez were not the same as the pathological hyperreflexia he found on examination of Claimant. The ALJ notes that not only did Ms. Rodriquez document that Claimant had upper and lower extremity hyperreflexia, but also asymmetrical lower extremity weakness, a spastic gait, clonus in the left ankle, and a positive Hoffman's in Claimant's right upper extremity, the presence of which lead her to document that Claimant had signs consistent with an upper motor neuron disorder. The ALJ finds the results of Ms. Rodriquez' examination to be strikingly similar to the observations/findings noted by Dr. Reiss during his IME.

27. Because of the presence of other abnormal neurologic signs and because Dr. Reiss was not present at the March 17, 2017 PT examination and did not observe the "hyperreflexia" that Ms. Rodriquez documented, the ALJ finds his testimony that Claimant did not have "pathologic hyperreflexia" on March 17, 2017 speculative and unpersuasive. The ALJ also finds Dr. Reiss' suggestion that pathologic signs were not present as of March 17, 2017 because no provider took action following the March 17, 2017 PT appointment equally unconvincing as it assumes that Dr. Peterson actually saw and read the March 17, 2017 PT report. While the ALJ finds Dr. Reiss' testimony concerning the issues described above unpersuasive, this does not fully answer the

question of whether Claimant's slip and fall aggravated and/or accelerated Claimant's pre-existing spinal stenosis to cause his myelopathy.

28. As noted, Dr. Reiss believes Claimant's myelopathy is unrelated to the industrial injury, in part, because the medical records do not include physical findings to suggest the presence of a myelopathy post-injury. The ALJ is not persuaded. As noted above, the physical findings of Ms. Rodriquez persuade the ALJ that despite having no obvious complaints associated with myelopathy, Claimant probably had understated neurologic signs of the same eight (8) days following his slip and fall, begging the question of whether these signs were caused by an aggravation/acceleration of Claimant's underlying spinal stenosis or whether they represent the consequence of the natural progression of that degenerative process.

29. While the ALJ rejects, as unpersuasive, Dr. Reiss' testimony that the medical record fails to support findings consistent with myelopathy post-accident, he is nonetheless convinced that Claimant's severe spinal stenosis and subsequent myelopathy are unrelated to the March 9, 2017 slip and fall for the following reasons:

- In this case, the level of stenosis identified in the MRI and subsequent CT scan from May 2018 is severe at C3-C4 and C4-C5. The MRI revealed cord compression, cord edema, and/or myelomalacia in addition to spurring and end-plate ridging of the vertebral bodies. Moreover, the canal opening at C3-C4 had been reduced by extruded disc material to 3 millimeters. The presence of the above described changes supports a reasonable inference that Claimant's stenosis is the product of a long-standing, slowly progressing degenerative process. Indeed, both Dr. Reiss and Dr. Peterson agree that Claimant's spinal stenosis pre-existed his March 9, 2017 slip and fall. Consequently, the ALJ is convinced that Claimant's March 9, 2017 slip and fall did not cause the severe stenosis in his cervical spine.

- There is a lack of persuasive evidence to support a conclusion that Claimant sustained an injury to the neck severe enough to aggravate and/or accelerate his underlying spinal stenosis to cause symptoms consistent with myelopathy. Dr. Peterson's theory that Claimant suffered an "axial-loading" injury to the cervical spine sufficient to aggravate/accelerate his spinal stenosis and result in myelopathy is speculative and unpersuasive. Although it is theoretically possible that some degree of force was transmitted up the spine when Claimant fell on his buttocks, there is a death of convincing evidence to support a finding that the force was sufficient to result in an aggravation/acceleration of Claimant's spinal stenosis. Indeed, Dr. Peterson admitted that Claimant's stenosis could have been progressing along a normal degenerative path. Nonetheless, he surmises that the degenerative process progressed more rapidly than it would have if Claimant had not

fallen and suffered what he characterized was an "axial-loading" injury. The ALJ credits the opinions of Dr. Reiss to find that had Claimant suffered an acute injury sufficient to aggravate and/or accelerate the stenosis in his cervical spine to subsequently give rise to his myelopathy, he likely would have experienced some immediate neck symptoms at the time of the incident rather than months later. Here, Claimant never complained of neck pain nor did he demonstrate overt signs consistent with myelopathy for approximately a year following his industrial accident. Moreover, the medical record fails to document that Claimant specifically complained of neck pain[2] at the time he presented to the ER, lending support to Dr. Reiss's testimony that Claimant did not suffer an injury to his neck sufficient to change the natural course of his degenerative cervical stenosis in the year following his slip and fall. While Dr. Peterson is free to assert that Dr. Reiss is biased and his opinions "always favor the insurance company", it is Claimant's burden to produce sufficient evidence to establish a causal connection between his industrial accident that the medical benefits he seeks. Here, the reliable evidence supports a finding that need for a C3-C5 laminectomy and posterior lateral fusion is, more probably than not, causally related to the natural progression of his pre-existing degenerative cervical stenosis.

- While Claimant suggests that the March 17, 2017 PT report constitutes evidence that his underlying spinal stenosis was aggravated and/or accelerated by this March 9, 2017 slip and fall, there is an absence of evidence to support a finding that Claimant's condition rapidly deteriorated either by way of somatic complaint or functional decline in the weeks and months following the March 17, 2017 physical therapy evaluation. Indeed, following this PT evaluation, Claimant's subsequent neurological examinations were ostensibly within normal limits and no providers noticed any signs/symptoms consistent with myelopathy until Claimant was evaluated by Dr. Reiss on February 21, 2018, eleven months after Ms. Rodriquez completed her evaluation. Consequently, the ALJ finds another, more persuasive explanation for the findings described in the initial PT evaluation, namely that irrespective of Claimant's fall, his underlying degenerative spinal stenosis had progressed naturally to the point that he was demonstrating subtle signs consistent with myelopathy on March 17, 2017. Based upon the evidence presented, including the testimony of both Dr. Reiss and Dr. Peterson that the body has an "amazing" ability to adapt as underlying stenosis progresses, the ALJ finds it probable that as

[2] Indeed, the ER report indicates only that Claimant reported progressive pain- it does not provide a location for that pain. Moreover, the chief complaint on presentation to the ER was documented as: "My left hand and leg shake like people that have Parkinson's".

> Claimant's stenosis was progressing naturally, he was adapting until the compression on his spinal cord precluded normal function resulting in the overt signs of myelopathy recognized by Dr. Reiss during the February 21, 2018 IME. Indeed, according to both Drs. Reiss and Peterson, this is how myelopathy normally develops in the absence of an acute injury – slowly and over time. The evidence presented here persuades the ALJ that while Claimant probably fell on his buttocks, he likely did not suffer an acute cervical injury sufficient to cause, aggravate and/or accelerate his underlying stenosis to cause the appearance of his myelopathy. Indeed, there is a paucity of evidence to support that Claimant suffered any cervical symptoms contemporaneous with his March 9, 2017 slip and fall. Consequently, the ALJ finds the evidence presented insufficient to establish a causal connection between the fall and the progression of Claimant's underlying stenosis and the eventual manifestation of his myelopathy. More probably than not, Claimant's myelopathy and need for cervical spine surgery is related to the natural progression of his underlying degenerative disc disease/stenosis.

30. Based upon the evidence presented as a whole, the ALJ finds the opinions of Dr. Reiss regarding the cause of Claimant's myelopathy and need for cervical decompression surgery to be credible and more persuasive than the contrary opinions of Drs. Peterson, Hughes or McVicker.

31. While Claimant established that his neck surgery was reasonable and necessary, he failed establish that his spinal stenosis and need for C3-C5 decompression and fusion surgery was caused, aggravated or accelerated by his March 9, 2017 slip and fall. Consequently, his claim for additional medical benefits must be denied and dismissed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ

has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). In this case, Claimant's recollection of the events surrounding his injuries is flawed and imprecise. The medical record is replete with contradictory descriptions of the fall he sustained. In fact, Concentra is the only provider to whom he reported falling directly onto his buttocks. He told the chiropractor he fell flat on his back. He told Dr. Reiss he fell onto his back and right side. Claimant reported to Dr. Sandell he fell back and to the right, falling onto his right low back. Claimant told Dr. McVicker that fell on his back and that he had only started using a cane in January 2018. During all of these appointments, Claimant was accompanied by a Spanish interpreter. The disparate descriptions make it difficult to discern with any measure of confidence exactly how he fell. Nonetheless, the ALJ finds the activity in which Claimant was involved at the time of his accident, namely forcefully pulling on a sheet stuck in a laundry chute, likely to result in a fall onto the buttocks if that sheet suddenly let loose as Claimant described here. Consequently, the ALJ has little trouble concluding that the accident occurred substantially as Claimant described. To this extent, Claimant ALJ concludes that Claimant is a credible witness.

D. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant's spinal stenosis is the consequence of a long standing degenerative process which continued, irrespective of Claimant's slip and

fall, to compromise the spinal canal giving rise to his myelopathy and need for treatment. While Claimant undeniably required surgical decompression and fusion treatment for this condition, the evidence presented, including the medical opinions of Dr. Reiss persuade the ALJ that Claimant's need for such treatment was unrelated to her March 9, 2017 slip and fall. Based upon the evidence presented, the ALJ concludes that Dr. Reiss' opinions concerning the relatedness of Claimant's need for cervical spine surgery are credible and more persuasive than the contrary opinions of Dr. Peterson, Dr. Hughes or Dr. McVicker.

II. Medical Benefits

E. The claimant in a workers' compensation claim bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of the his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). As found here, Claimant has failed to establish, by a preponderance of the evidence, that his spinal stenosis is causally related to his March 9, 2017 slip and fall or that this fall aggravated the degenerative process in Claimant's cervical spine causing an acceleration of that spinal stenosis to give rise to his myelopathy and need for medical treatment, including the C3-C5 laminectomy and posterior lateral fusion.

F. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). However, an employer is not liable for the natural progression of pre-existing conditions if a claimant's employment duties do not aggravate, accelerate or combine with the pre-existing infirmity or disease to produce disability and/or the need for treatment. *See generally, H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990); *Roberts v. Industrial Commission*, 509 P.2d 1285 (Colo.App. 1973). The mere fact a claimant experiences symptoms in a body part at some point following a workers' compensation claim does not require the inference there has been an aggravation or acceleration of a preexisting condition. See *Cotts v.*

Exempla, Inc., W.C. No. 4-606-563 (ICAO August 18, 2005). The courts have long recognized that such symptoms could represent the "logical and recurrent consequence" of a preexisting condition. See *Chasteen v. King Soopers, Inc., W.C. No. 4-445-608 (ICAO April 10, 2008);*

G. As found in this case, the totality of the evidence presented persuades the ALJ that Claimant's symptoms and subsequent need for neck surgery were likely caused by the natural progression of his long standing pre-existing progressive disc/spinal disease. While the ALJ is convinced that Claimant's need for treatment was reasonable and necessary, the persuasive evidence establishes that it was not related to an industrial cause. Because Claimant failed to establish his employment aggravated, accelerated, or combined with a pre-existing infirmity or disease to produce the disability and/or need for treatment, he failed to prove that there the requisite causal connection between his March 9, 2017 industrial injury and the resulting condition for which he seeks medical treatment benefits. Accordingly, his request for coverage concerning his C3-C5 spinal surgery under this claim must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's request for medical treatment, including surgery, for his cervical myelopathy condition is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO

W.C. No. 5-056-384-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

,

Employer,

and

,

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 10, 2019 and concluded on March 18, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 1/10/19, Courtroom 3, beginning at 1:30 PM, and ending at 5:15 PM; and, 3/18/19, Courtroom 3,) beginning at 1:30 PM, and ending at 3:30 PM). The official Spanish/English Interpreter at the January 10 and March 18 concluding session of the hearing was Myrian Lewis. A written transcript of the January 10 session of the hearing was lodged with the ALJ on March 18, 2019.

The Claimant was present in person and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 11 were admitted into evidence, without objection. Respondents’ Exhibits A through K were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Claimant's opening brief (mistakenly labeled as "Opening Findings of Fact) was filed on March 25, 2019. The ALJ had not made a decision as of the filing of Claimant's "Opening Findings of Fact" and would instruct counsel, in the future, to file an "opening brief" as ordered at the conclusion of the hearing. The ALJ will hereby consider the Claimant's filing as an opening brief. Respondents' answer brief was filed on March 29, 2019. Although the Claimant was giver two working days within which to file a reply brief, no timely reply brief was filed. The matter was deemed submitted for decision on April 4, 2019.

ISSUES

The issues to be determined by this decision concern compensability; if compensable, medical benefits [including whether David Yamamoto, M.D. became an authorized treating physician (ATP) by virtue of Respondents' refusal to authorize further treatment at the hands of the original ATPs and the original ATPs refusal to further treat on this basis]; and, temporary total disability (TTD) benefits from August 8, 2017 and continuing. Respondents raised the affirmative defense to TTD benefits of "responsibility for termination." The parties stipulated that if the claim is compensable, the average weekly wage (AWW) is $892.93 and the Claimant's unemployment insurance (UI) benefits were $520 per week from August 31, 2017 to March 26, 2018.

The Claimant bears the burden of proof by a preponderance of the evidence on all issues with the exception of "responsibility for termination," for which the Respondents bear the burden of proof by preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated, and the ALJ finds, that if the claim is compensable, the average weekly wage (AWW) is $892.93 and the Claimant's unemployment insurance (UI) benefits were $520 per seek from August 31, 2017 to March 26, 2018.

2. After the conclusion of the hearing, Claimant was permitted to file specific UI information, in addition to what was stipulated at hearing. Specifically, the Claimant received additional UI benefits of $429 per week from October 5, 2018 through January 23, 2019. Claimant represented as an officer of the tribunal that Respondents agreed to this addition, and the ALJ so finds.

3. The Claimant was employed by the Employer for 11 years and she performed payroll, bookkeeping, shipping and receiving, storage, and account/client contact functions (Tr. 22:3-23:6).

4. Respondents mailed a Notice of Contest to the Claimant on September 19, 2017.

The Incident/Compensability

5. The cause of the Claimant's back injury on August 9, 2017, is explained by the fact that she was in the course and scope of her employment while moving a desk, an activity required by her job at the time it occurred.

6. The Claimant suffered a back injury while moving a desk on the job she was required to perform for the Employer. It arose out of and in the scope of employment as there is no persuasive evidence that "it would not have occurred but for the fact that the conditions and obligation placed [the] Claimant in the position where he [or she] was injured." Her injury would not have occurred but for the fact that the work she was performing placed her in a position to be injured.

7. The Claimant suffered a back injury on August 9, 2017. On August 8, 2017 (later amended to August 7, 2017). The Claimant moved the heavy table and felt a pull in her back around 1:00 PM, and she experienced a strain in her back. She continued to work that day. She reported this injury to her Employer on August 15, 2017 and was sent by to the doctors at Concentra by her Employer.

8. Based on the totality of the evidence as herein above and below specified, the ALJ finds that the Claimant sustained a back strain, arising out of the course and scope of her employment with the Employer.

Medical at Concentra

9. The Claimant first obtained treatment on August 15, 2017 at Concentra. She was given restrictions (which were lift/push/pull up to 15 pounds, no sitting more than 50% of time and may use keyboard and mouse) and received physical therapy afterwards at Concentra (Respondents' Exhibit H, p. 1).

10. The Claimant first saw the doctors at Concentra on August 15, 2017. Francis A. Thompson, M.D., delineated the Claimant's pain complaints as follows:

> Was moving furniture which she reports as heavy. She started feeling pain in her lower back. States that while she was working, she was warm and so she did not feel the pain as much but after work she started feeling more pain. States she feels like a "tractor has run over her". Between last week and presentation today she was taking OTC analgesia

> but states that the pain has increased and radiates from her lower to upper back. she reports that she is unable to find a comfortable position when lying down.
>
> States she has pain in her upper back, shoulders, lower back and hips 7/10. Aggravated by sitting for prolonged periods at her computer. Reports some tingling in her fingers but states she has numbness in her 3rd, 4th and 5th toes. Denies any weakness in her LE s bilaterally. Denies any saddle anesthesia, bladder/bowel dysfunction. Denies any prior back injury

(Claimant's Exhibit 4, BS 42).

11. According to the Claimant, she gave Julie Weiss (co-owner of the Employer) her restrictions on August 16, 2017 and then was fired that day. She testified that her termination occurred during a meeting with Weiss and Marji Adelstein. At the meeting, she was told the reasons for her termination were not being on time and meeting with clients while on a trip to California (Tr at 29:9 – 30:15). Claimant denied receiving a severance agreement. Adelstein and. Weiss testified that they provided her with such an agreement which the Claimant never signed. The Employer did not produce a copy of the alleged severance agreement at the hearing.

12. The last day the Claimant treated at Concentra was September 8, 2017 due to the claim being denied (Tr. at 32:3-6). The ALJ finds that further medical treatment at Concentra was refused for non-medical reasons.

David Yamamoto, M.D.

13. The Claimant then sought treatment with Dr. Yamamoto starting on September 18, 2017. She did not tell her Employer that she was treating with Dr. Yamamoto. The ALJ finds that the Employer was not advised of the Claimant's alternative treatment with Dr. Yamamoto after Concentra's non-medical refusal to further treat the Claimant.

14. Dr. Yamamoto described the Claimant's pain complaints as follows:

> Low back strain: Pain is located midline, lumbar spine, radiates down into both buttocks. Describes pain as achy and sharp. Rest makes it better, sitting, standing and bending make it worse. Rates pain 6-7/10. Associated symptoms: She has tingling and numbness

> in both feet, toes 3,4, and 5. **2.** Midback pain: Not present all the time, but has burning sensation in the midback after she has been sitting or standing for a long period of time, > 45 minutes. Describes pain as "burning." Changing position makes it worse. Rest makes it better Rates pain 5/10. **3.** Paresthesias, bilateral hands: present in digits 3, 4, and 5, bilaterally. Comes and goes. Nothing makes it better or worse. No neck pain. **4.** Insomnia: Has never had an issue sleeping. Now, can fall asleep, but wakes up after a few hours in pain from her low back.

(Claimant's Exhibit 5, BS 133).

15. The Claimant last saw Dr. Yamamoto on August 21, 2018. Dr. Yamamoto requested authorization for an MRI (magnetic resonance imaging) on November 3, 2017, which was never completed. He also gave her restrictions of no lifting over 10 pounds, occasional lifting of 5 pounds, carrying 5 pounds, and push/pull of 10 pounds. He also restricted her walking/standing to 6 to 7 hours and sitting to 1 to 2 hours. (tr. at 34:11-17 and Exhibit 5).

(Claimant's Exhibit 5, BS 102).

16. The Claimant has not yet been placed at maximum medical improvement (MMI) by any authorized treating physician (ATP).

17. The ALJ finds that all of the Claimant's medical care and treatment for her back injury of August 7/8, 2017, at Concentra was authorized, causally related and reasonably necessary to cure and relieve the effects of that compensable injury.

18. The ALJ further finds that Dr. Yamamoto became authorized by default because Concentra refused to further treat the Claimant for non-medical reasons and the Respondents would not authorize further treatment because they were fully contesting the Claimant's claim. Under the circumstances, it would have been an exercise in futility to require the Respondents to re-consider their refusal to authorize further treatment and make a new referral.

19. All of the medical care and treatment by Dr. Yamamoto for the Claimant's compensable injury herein was causally related and reasonably necessary to cure and relieve the effects of that injury.

After the Injury

20. After the injury, she had worked for Steven Roberts Original Desserts and Quick Holdings, but she is currently not working. She was terminated from Quick Holdings for attendance issues on August 20, 2019. She received UI benefits after her termination.

21.. The Claimant denied working for her husband's company, Think 5 Graphics. There was an email regarding her designing tee shirts admitted into evidence. (Tr. at 56:15 – 57:20 and Respondents' Exhibit L). Beyond that there is no other evidence concerning Think 5 Graphics. The ALJ finds that there is insufficient circumstantial evidence to prove that the Claimant was actually working for Think 5 Graphics.

Average Weekly Wage (AWW) and Temporary Disability Benefits

22. As stipulated and found, the Claimant's AWW is $892.03, which is a baseline for temporary wage loss, and would yield a TTD rate of $594.68 per week, or $84.95 per day.

23. After her termination, the Claimant worked for Steven Roberts Original Desserts for an indeterminate duration and unspecified wages, however, she received UI benefits of $520 per week from September 5, 2017 through March 25, 2018, which means she was not working at all during this period. Also, she worked for Quick Holdings for an unspecified period at unspecified wages; and, she was terminated from Quick Holdings on August 29, 2018. She received additional UI benefits of $429 per week from October 5, 2018 through January 23, 2019, which means she was not working at all during this period of time.

24. The Claimant's physical restrictions have remained and not been modified to date. The Employer terminated her but claims to have offered her part-time work. The ALJ finds that this does not qualify as a bona fide offer of modified work since it was not made in writing and no ATP approved it. The Claimant has not reached MMI and she has been experiencing a 100% temporary wage loss during the following specified periods: September 5, 2017 through March 25, 2018; October 5, 2018 through January 23, 2019; and, August 30, 2018 through the present time. These are the periods of time when the Claimant received UI benefits, thus, permitting a plausible inference of TTD. Because the Claimant was employed for unspecified wages from August 9, 2017 through September 5, 2017; and, from March 26, 2018 through August 29, 2018, it is not possible to calculate a temporary wage loss for these periods of time.

25. The Claimant's physical restrictions remain and do not permit her to perform her pre-injury work. She has not reached MMI. During the periods during which she has been receiving UI benefits, she has been experiencing a 100% temporary wage loss. Consequently, the Claimant has established temporary total disability from September 5, 2017 through March 25, 2018, both dates inclusive, a total of 202 days; from October 5, 2018 through January 23, 2019, both dates inclusive, a total of 111 days; and, from January 24, 2019 through March 18, 2019, both dates

inclusive, a total of 54 days. As of the last session of the hearing on March 18, 2019, the Claimant had been temporarily and totally disabled for an aggregate of 367 days. After March 18, 2019, the Claimant continues to be temporarily and totally disabled until she is released to return to work at full duty; until she actually returns to work; or, until she reaches MMI.

"Responsibility for Termination" Affirmative Defense

26. The Respondents argue that the Claimant is at fault for termination based on her chronic tardiness. Their argument is based on the testimony of co-owner Julie Weiss. As found herein below, the other co-owner accommodated the Claimant's tardiness and flexible schedule and Weiss' testimony concerning Claimant's tardiness and absenteeism from work was conflicting, confusing and Weiss' actions vis a vis the Claimant were sometimes ambiguous. Because of this Respondents have failed to demonstrate that it is more likely than not that the Claimant engaged in willful behavior that she could have reasonably known would get her fired. Nonetheless, Weiss' ultimate dissatisfaction with the Claimant's later performance may well have been supportable by virtue of the fact that Claimant did not measure up to Weiss' requirements, which was not willful on the Claimant's part.

27. At the January 10, 2019 session of the hearing, the Respondents implied that the Claimant may have violated the company's non-compete regulations. At the hearing session on March 18, 2019, Weiss disavowed a non-compete allegation and unequivocally agreed that this was not a basis of termination.

28. According to Weiss, her relationship with the Claimant had been very positive until approximately March or June 2017 when the Claimant's work performance was erratic and she was showing up late. Weiss testified, however, that her co-owner had allowed the Claimant flexibility in work schedules, but was uncertain of the specifics, thus creating ambiguity in the allegations of "chronic tardiness." Indeed, based on Weiss' recounting of her co-owner's allowing the Claimant flexibility in her schedules, the ALJ infers and finds that the Claimant was confused about "tardiness," and could not know, as a reasonable person, that her tardiness would get her fired. Claimant received mixed signals from Weiss and Weiss' co-owner.

29. There are documents, which were not clear in the documentary evidence which allegedly establish that the Claimant had been warned that her attendance was unsatisfactory from March 2017 up to the date she was terminated on August 16, 2017 (Respondents' Answer Brief). Again, the Claimant was receiving mixed signals about her attendance.

30. Weiss agreed, however, that the Claimant was permitted to take leave without pay and would receive up to five (5) hours a month of paid time off. No documentary evidence was presented to show that the Claimant sought payment for dates she when she was off. Claimant was receiving mixed signals about time-off from work.

31. According to Weiss, she had a conversation with the Claimant on the day of the Claimant's termination. Weiss asserts that she and witness Marji Adelstein, an HR (human resources) professional, had spoken with the Claimant for several hours on August 17, 2017. Both Adelstein and Weiss claim that the Claimant was presented documentation concerning a voluntary resignation. No documentation supporting this assertion was presented at hearing. The Claimant testified that this information was never provided to her. On such a critical point concerning "termination," or voluntary resignation (which could nullify Claimant's right to TTD benefits), it makes no sense that Respondents would not present a copy of such a document in evidence, thus, the ALJ finds a failure of proof on this proposition.

32. According to Weiss, on August 16, 2017 the Claimant had told her in Spanish that she wanted to go on unemployment. The Claimant disputed this. Rather, according to the Claimant, she only had told Weiss and Adelstein that she was going to apply for unemployment and that she believed she was entitled to it. The ALJ resolves this conflict in favor of a failure of proof insofar as Weiss heard something other than what the Claimant said. Weiss stated that the last statement by the Claimant to her and to Adelstein was that the Claimant wanted unemployment and that she did not think it was fair that she should be terminated because she injured her back.

33. According to the Claimant, during this meeting Adelstein and Weiss attempted to conduct this meeting in Spanish. The Claimant stated that their Spanish was poor and the Claimant requested a translator. This request was denied.

34.. The Claimant denied telling either Weiss or Adelstein that she wanted to be fired. In context, Weiss testified that but for Claimant's termination, she could have accommodated Claimant's work restrictions. Weiss testified that she offered the Claimant part-time work at the meeting and the Claimant allegedly said she'd rather be fired. The ALJ infers and finds that Weiss took whatever the Claimant said out-of-context, in light of Weiss' lack of ability in the Spanish language. Based on the Claimant's credible demeanor at hearing and the fact that Weiss' Spanish-language abilities were "poor" according to the Claimant, and not refuted by Weiss, the ALJ resolves this conflict in favor of the Claimant never having said that she wanted to be fired. Further, Claimant testified that at the end of their conversation she asked Weiss and Adelstein why she was being fired because of her back injury. Consequently, the ALJ infers and finds that the Claimant did **not** voluntarily resign.

35. Although the Employer may have had every right to fire the Claimant because the Claimant did not measure up to Weiss' expectations, Colorado is in an "employment-at-will" jurisdiction and an employer may fire an employee without consequences as long as the employer does not discriminate against a protected class. The standard for terminating temporary disability benefits in workers' compensation is specific and higher. The employee must engage in willful conduct that a reasonable person could know would lead to a termination from employment. The ALJ finds that the mixed messages that Claimant received on her attendance, including ambiguous

documents (Respondents' Exhibits D, E and K), offered to attempt to establish documentation of the Claimant being warned about her "performance problems," which they do not, the ALJ infers and finds that Respondents have failed to establish that the Claimant, as a reasonable person, should have known that her attendance and other areas of performance would lead to her termination from employment. Thus, Respondents have failed to prove, by preponderant evidence, that the Claimant, through willful conduct, should have known that her conduct would cause her firing. There was a pattern of toleration by the Employer.

Ultimate Findings

36. The ALJ finds the Claimant's testimony to be credible. Although she may not have been a model employee and the Employer may have had a prerogative of firing her for inadequate performance, Weiss' testimony, as co-owner, implanted confusing signals in the Claimant's mind concerning Claimant's attendance. The ALJ infers and finds that a reasonable person, under the circumstances, would believe that their behavior is tolerated and would not lead to being fired. The ALJ resolves conflicts in the testimony in favor of the Claimant's testimony and against the critical portions of Weiss' and Adelstein's testimony.

37. Between conflicting evidence concerning compensability and "responsibility for termination," the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and to reject the critical parts of Weiss' and Adelstein's testimony.

38. Claimant has proven, by a preponderance of the evidence that she sustained a compensable back injury on August 7/8, 2017, arising out of the course and scope of her employment with the Employer herein.

39. The medical care and treatment at Concentra was and is authorized, causally related and reasonably necessary to cure and relieve the effects of Claimant's back injury of August 7/8, 2017.

40. The medical care and treatment of Dr. Yamamoto became authorized by virtue of Respondents' refusal to further treat for non-medical reasons. Concentra refused to further treat the Claimant for non-medical reasons and Respondents failed to designate a new provider, thus, Claimant had the right to select Dr. Yamamoto, whose treatment was and is causally related to the compensable injury and reasonably necessary to cure and relieve the effects thereof.

41. As found, the Claimant's AWW is $892.03, which is a baseline for temporary wage loss, and would yield a TTD rate of $594.68 per week, or $84.95 per day.

42. The Claimant's physical restrictions have remained and not been modified to date. The Claimant has not reached MMI and she has been experiencing a 100%

temporary wage loss during the following specified periods: September 5, 2017 through March 25, 2018; October 5, 2018 through January 23, 2019; and, August 30, 2018 through the present time. The Claimant, as found, has proven entitlement to TTD benefits for these periods.

43. Because the Claimant was employed for unspecified wages from August 9, 2017 through September 5, 2017; and, from March 26, 2018 through August 29, 2018, it is not possible to calculate a temporary wage loss for these periods of time, thus, she has failed to prove entitlement to temporary partial disability (TPD) benefits during these periods of time.

44. As found, the Claimant has proven, by preponderant evidence, that she is entitled to TTD benefits from September 5, 2017 through March 25, 2018, both dates inclusive, a total of 202 days; from October 5, 2018 through January 23, 2019, both dates inclusive, a total of 111 days; and, from January 24, 2019 through March 18, 2019, both dates inclusive, a total of 54 days. As of the last session of the hearing on March 18, 2019, the Claimant had been temporarily and totally disabled for an aggregate of 367 days. After March 18, 2019, the Claimant continues to be temporarily and totally disabled until she is released to return to work at full duty; until she actually returns to work; or, until she reaches MMI.

45. The Claimant has failed to prove, by preponderant evidence that he is entitled to TTD benefits from August 8, 2017 through September 4, 2017; and, from March 26, 2018 through October 4, 2018.

46. Respondents have failed to prove their affirmative defense of "responsibility for termination" because of a failure of proof concerning willful conduct that Claimant reasonably could have known would get her fired.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within

the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was credible. Although she may not have been a model employee and the Employer may have had the prerogative of firing her for inadequate performance, Weiss' testimony, as co-owner, implanted confusing signals in the Claimant's mind concerning her attendance. The ALJ infers and finds that a reasonable person, under the circumstances, would believe that their behavior is tolerated and would not lead to being fired. The ALJ resolves the credibility conflicts in the testimony in favor of the Claimant's testimony and against the critical portions of Weiss' and Adelstein's testimony.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found, the Claimant's lay testimony is corroborated by medical opinions.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting evidence concerning compensability and "responsibility for termination," the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and to reject the critical parts of Weiss' and Adelstein's testimony.

Compensability

d. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, the Claimant's injury was both disabling and required medical attention.

e. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** [presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment]. Once shown to have happened at work, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant's back injury of August 7/8, 2017 occurred at work while the Claimant was performing work-related duties.

f. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo.

App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's back injury arose out of the course and scope of her employment and regardless of any pre-existing condition, her injury amounted to an aggravation and acceleration of a dormant condition and was, therefore, a compensable event.

Medical and Refusal of Treatment for Non-Medical Reasons

g. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment was and is causally related to her back condition on August 7/8, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of her compensable injury.

h. The employer's initial right to select the treating physician is triggered once the employer has some knowledge of the facts concerning the injury or occupational disease with the employment and indicating "**to a reasonably conscientious manager**" that a **potential** workers' compensation claim may be involved. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). As found, The Employer referred the Claimant to an authorized medical provider, Concentra (an Employer authorized medical provider). As found, the Employer first sent the Claimant to Concentra. Thereafter, Concentra refused to treat the Claimant for non-medical reasons.

i. Under the provisions of § 8-43-404 (5) (a) (I) (A), C.R.S., an "employer or insurer shall provide a list of at least two physicians or two corporate medical providers or at least one physician and one corporate medical provider, where available, in the first instance, from which list an injured employee may select the physician who attends said injured employee." If the physician selected refuses to treat for non-medical

reasons, and the insurer fails to appoint a willing ATP after notice of the refusal to treat, the right of selection passes to the injured worker. *Weinmeister v. Cobe Cardiovascular, Inc.,* W.C. No. 4-657-812 [Industrial Claim Appeals Office (ICAO), July 10, 2006]. *Also see Lutz v. Industrial Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Ruybal v. University Health Sciences Center,* 768 P.2d 1259 (Colo. App. 1988). As found, the insurance carrier refused to approve further treatment by Concentra and Concentra refused to treat for non-medical reasons. Consequently, as found, the Claimant selected Dr. Yamamoto, who became the Claimant's ATP, and all of Dr. Yamamoto's treatment for the Claimant's back injury as authorized, causally related and reasonably necessary.

Average Weekly Wage (AWW)

j. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. The parties stipulated and the ALJ found that the Claimant's AWW is 892.03, which is a baseline for temporary wage loss, and would yield a TTD rate of $594.68 per week, or $84.95 per day.

Temporary Disability/Unemployment Benefit Offsets (UI)

k. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that she has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses her employment for other reasons which are not her responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair her opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). Claimant's termination in this case was not her fault as herein below illustrated. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, a claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant's testimony concerning her back injury of August 7/8, 2017 is corroborated by medical opinion and restrictions that would not permit her to perform her pre-injury work.

l. Once the prerequisites for TPD and/or TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring in modified employment or modified employment is not made available, and there is no actual return to work), TPD and TTD benefits are designed to compensate for

temporary wage loss. TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant was experiencing a 100% temporary wage loss for the following periods of time: from September 5, 2017 through March 25, 2018, both dates inclusive, a total of 202 days, during which the Claimant received UI benefits of $520 per week; from October 5, 2018 through January 23, 2019, both dates inclusive, a total of 111 days, during which she received UI benefits of $429 per week; and, from January 24, 2019 through March 18, 2019, both dates inclusive, a total of 54 days. Also, as found, after March 18, 2019, the Claimant continues to be temporarily and totally disabled until she is released to return to work at full duty; until she actually returns to work; or, until she reaches MMI. As found, the TTD rate is $594.68 per week, or $84.95 per day.

Unemployment (UI) Benefit Offset

m. Section 8-42-103 (1) (f), C.R.S., provides for a 100% offset of UI benefits against temporary disability benefits. As found, from September 5, 2017 through March 25, 2018, a total of 202 days, the Claimant received $520 a week in UI benefits; and, from October 5, 2018 through January 23, 2019, a total of 111 days, the Claimant received $429 per week in UI benefits, all of which are 100% offsetable.

Temporary Partial Disability

n. As found, the Claimant failed to establish a temporary wage loss for the periods she worked after her termination by the Employer, which are: from August 9, 2017 through September 5, 2017; and, from March 26, 2018 through August 29, 2018, thus, she failed to prove entitlement to temporary partial disability (TPD) benefits during these periods of time.

Affirmative Defense of "Responsibility for Termination"

o. Section 8-42-105 (4), C.R.S., provides that an employee responsible for her own termination is not entitled to temporary disability benefits. This statutory provision has been interpreted to mean that "responsibility for termination" must be through a volitional act on the part of the terminated employee. *Colorado Springs Disposal v. Indus. Claim Appeals Office,* 58 P. 3d 1061 (Colo. App. 2002). A finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to termination. *Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129, 1132 (Colo. App. 2008); *Apex Transport, Inc. v. Indus. Claim Appeals Office,* **2014 COA 25.** In determining whether a claimant is responsible for termination in the workers' compensation context, the ALJ may be required to evaluate competing factual theories concerning the actual reason or reasons for the termination. *See Rodriguez v. BMC West*, W.C. No. 4-538-788 [Indus. Claim Appeals Office (ICAO), June 25, 2003]. As found, Respondents failed to satisfy their burden of proof on the affirmative defense that Claimant was responsible for her termination through a volitional act on her part and/or that she exercised ad degree of control over the circumstances leading to

termination. Although the Employer may have had every right to fire the Claimant because the Claimant did not measure up to Weiss' expectations, Colorado is in an "employment-at-will" jurisdiction and an employer may fire an employee without consequences as long as the employer does not discriminate against a protected class. The standard for terminating temporary disability benefits in workers' compensation is specific and higher. The employee must engage in willful conduct that a reasonable person could know would lead to a termination from employment. As found, the mixed messages that Claimant received on her attendance, including ambiguous documents (Respondents' Exhibits D, E and K), offered to attempt to establish documentation of the Claimant being warned about her "performance problems," which they do not. Respondents failed to establish that the Claimant, as a reasonable person, should have known that her attendance and other areas of performance would lead to her termination from employment. Thus, Respondents failed to prove, by preponderant evidence, that the Claimant, through willful conduct, should have known that her conduct would cause her firing. There was a pattern of toleration by the Employer.

Burden of Proof

p. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to compensability, medical benefits, including authorization of Dr. Yamamoto, AWW, and for TTD benefits for the periods specified herein above, The Claimant failed to sustain her burden with respect to TPD benefits for the periods specified herein above,

q. Respondents failed to sustain their burden with respect to their affirmative defense of "responsibility for termination."

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents affirmative defense of “Responsibility for Termination” is hereby denied and dismissed.

B. Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the compensable back injury of August 7/8, 2017, including treatment by David Yamamoto, M.D., subject to the Division of Workers Compensation Medical Fee Schedule.

C. The Claimant’s average weekly wage is $892.03.

D. Respondents shall pay the Claimant temporary total disability benefits in the amount of $594.68 per week for the period from September 5, 2017 through March 28, 2018, both dates inclusive, a subtotal of 202 days, less a $520 per week offset for UI benefits, in the net amount of $74.68 per week, or $10.68 per day, in the aggregate subtotal amount of $2,157.36; and, from October 5, 2018 through January 23, 2019, both dates inclusive, a subtotal of 111 days, the net amount of $165.68 per week, or $23.67 per day, in the aggregate subtotal amount of $2,627.37.

E. From march 18, 2019, the last session of the hearing, Respondents shall pay the Claimant $594.68 per week in temporary total disability benefits until termination thereof is warranted by law.

F. Any and all claims for temporary partial disability benefits for the periods the Claimant worked after her termination are hereby denied and dismissed.

G. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

H. Any and all issues not determined herein are reserved for future decision.

DATED this 8TH day of April 2019.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 South Circle Drive, Suite 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **,** Claimant, vs. **,** Employer, and **Self Insured** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 3-606-711-001**

ORDER GRANTING RESPONDENTS' OPPOSED MOTION FOR PARTIAL SUMMARY JUDGMENT

The undersigned ALJ has reviewed Respondent's *Motion for Partial Summary Judgment,* dated 3/26/2019, and Claimant's *Response* thereto (*"Request for Dismissal or Modification of Court Ordered Judgement [sic] reached in Reference to Claim #3-606-711"),* dated 4/4/2019, and enters the following Findings of Fact, Conclusions of Law and Order.

FINDINGS OF FACT

1. Claimant sustained a work related injury on May 8, 1980.

2. Claimant, with assistance of counsel, entered into a *Stipulation for Order Approving Compromise Settlement and Release of Claim* ("Stipulation") on October 20, 1983.

3. Paragraph #5 of the Stipulation reads, in its entirety:

> 5. The Claimant understands that this is a **final settlement** and that approval by the Division of Labor of this settlement and an Order by the Division of Labor approving this stipulation means that the Claimant **cannot receive ever again** any temporary or **permanent disability benefits** for the injury or disease which is the subject of this action after the Division of Labor issues an Order approving this settlement. (emphasis added).

4. Paragraph #6 of the Stipulation reads, in its entirely:

> 6. The Claimant understands that the terms of this settlement and its approval by the Division of Labor mean **he cannot reopen his claim at any time in the future.** (emphasis added).

5. Paragraph #13 of the Stipulation reads, in pertinent part:

> 13. The Respondents, therefore, agree to pay to the Claimant, coincidentally with the approval of this agreement, the sum of $30,292.00, as herein before provided.
>
> The Claimant agrees to accept this settlement as offered by the respondents and to **withdraw his claim for all workmen's compensation benefits <u>other than</u> medical, surgical and hospital arising** out of his injury or disease which cause disability on May 8, 1980….(emphasis added).

6. The Stipulation, in its entirety, addresses in great detail that Claimant was represented by counsel, was of sound mind at the time of the Stipulation, that he understands his future employment might be limited, that he might otherwise avail himself of vocational rehabilitation, and what his statutory rights might otherwise be if he persisted in his claim.

7. Despite all clearly written admonitions, Claimant signed the Stipulation, and availed himself of its benefits.

8. The Stipulation was approved by the Director on October 24, 1983.

9. Claimant, pro se, has now filed an Application for Hearing on January 28, 2019 endorsing medical benefits, petition to reopen, penalties, and permanent total disability benefits.

10. Claimant's claim for penalties in his Application for Hearing reads, *in its entirety:*

> Because of their continued efforts to not comply to the orders of October 20th 1983 and January 5th 1997 on multiple occasions over the last 39 years I am asking that a monetary penalty be assessed against Workmans Compensation Major Medical Division

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

1. Rule 17, OACRP permits any party to file a motion for summary judgment seeking resolution of any endorsed issues for hearing. *See also Fera v. Industrial Claim Appeals Office of State,* 169 P.3d 231 (Colo. App. 2007); *McCormick v. Exempla,* W.C. No. 4-594-683 (July 03, 2007).

2. Summary judgment is a drastic remedy and is not warranted unless the moving party demonstrates that it is entitled to judgment as a matter of law. *Van Alstyne v.*

Housing Authority of Pueblo, 985 P.2d 97 (Colo. App. 1999). All doubts as to the existence of disputed facts must be resolved against the moving party, and the party against whom judgment is to be entered is entitled to all favorable inferences that may be drawn from the facts. *Kaiser Foundation Health Plan v. Sharp,* 741 P.2d 714 (Colo. App. 1987). However, once the moving party establishes that no material fact is in dispute, the burden of proving the existence of a factual dispute shifts to the opposing party. The failure of the opposing party to satisfy its burden entitles the moving party to summary judgment. *Gifford v. City of Colorado Springs,* 815 P.2d 1008 (Colo. App. 1991).

3. *Pro se* litigants must adhere to the same principles and procedures as those who are qualified to practice law. *Feeney v. Steamboat Ski & Resort Corp*., W.C. No. 4-246-365 (March 5, 1996); *Bryan v. City Market*, W.C. No. 4-799-180 (July 28, 2010). A *pro se* litigant is presumed to have knowledge of the applicable statutes and must be prepared to accept the consequences of his own mistakes if he elects to represent himself. *Dyrkopp v. Industrial Claim Appeals Office*, 30 P.3d 821, 823 (Colo. App. 2001); *Manka v. Martin*, 614 P.2d 875 (Colo. App. 1980); *Rosenberg v. Grady*, 843 P.2d 25 (Colo. App. 1992); *Paul v. Industrial Commission*, 632 P.2d 638 (Colo. App. 1981).

4. Section 8-43-204(1), C.R.S. provides that an injured worker may settle all or part of any claim and that if a settlement provides by its terms that the employee's claim shall not be reopened, such settlement shall not be subject to being reopened. As found, Claimant cannot seek permanent total disability benefits or the reopening of his claim.

5. Section 8-43-304(4), C.R.S. provides that a claim for penalties shall be pled with specificity. *Jakel v. Northern Colorado Paper Inc.,* W.C. No. 4-524-991 (October 6, 2003); *Gonzales v. Denver Public School District No. 1*, W.C. No. 4-437-328 (December 27, 2001); *Hendricks v. Industrial Claim Appeals Office,* 809 P.2d 1076 (Colo. App. 1990); *Lovett v. Stroup Insurance Services, Inc.*, W.C. No. 4-808-092 (August 30, 2013). As found, Claimant's claim for penalties is not plead with specificity.

6. There are no issues as to any material fact with regard to permanent total disability benefits, and reopening.

7. Claimant has failed to plead his claim for Penalties with sufficient specificity, as required by C.R.S. 8-43-304(4). No attachments accompany this claim. No facts are alleged with specificity. Respondents are unable to meaningfully respond or prepare for Claimant's vague claim.

8. Respondent is entitled to Summary Judgment as a matter of law on all issues endorsed in Claimant's Application for Hearing, except medical benefits.

ORDER

IT IS THEREFORE, ORDERED:

A. Respondent's Motion for Partial Summary Judgment is hereby GRANTED.

B. The only issue to be litigated at the hearing on June 13, 2019 is medical benefits.

C. Claimant is further advised that he is responsible for understanding all applicable Statutes, case law, and Rules while litigating this case. Failure to comply with said requirements could lead to sanctions, up to and including possible dismissal of his remaining claims.

D. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ORDERED this 9th day of April, 2019.

/s/ William G. Edie
William G. Edie
Administrative Law Judge

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that she sustained an injury arising out of and in the course and scope of her employment with the employer on March 21, 2018.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that medical treatment she received from Vail Health was reasonable and necessary to cure and relieve her from the effects of the injury.

- This matter came before the ALJ as a "full contest". However, at hearing, the parties agreed that certain issues would be held in abeyance pending the ALJ's determination of the issues of compensability and the relatedness and necessity of medical treatment identified above.

- The issues the parties have agreed to hold in abeyance are: average weekly wage; temporary total disability benefits; whether the medical treatment the claimant received was authorized; the reasonableness and necessity of other medical treatment; and whether the claimant is entitled to a change of physician.

FINDINGS OF FACT

1. The claimant has worked for the employer for two and one-half years. On March 21, 2018 the claimant was working in Maintenance and Sanitation in the Bakery Department. The claimant's job duties in that position involved maintaining the cleanliness of the bakery, including cleaning dishes and floors. In addition, the claimant would "break out" frozen items for presentation in the bakery.

2. The claimant testified that on March 21, 2018, she was injured when she reached overhead for a box of bagels. The claimant testified that the box weighed approximately 12 pounds. The claimant also testified that as she reached overhead for the box she felt a "pop" in her neck and a dull ache on the right side of her neck. The claimant testified that in the days following the pop she developed pain in her right shoulder, right elbow, down her right forearm, and into her ring finger and little finger. The claimant did not report the incident on March 21, 2018 and completed her scheduled shift on that date.

3. The claimant sought medical treatment with her primary care physician, Dr. Jean Hadley, on March 21, 2018. The claimant sought treatment with Dr. Hadley at that time because she believed that her pain symptoms were related to her prior diagnosis of rheumatoid arthritis. The claimant reported to Dr. Hadley that she had had pain "in multiple joints for the last few weeks". In addition, the claimant reported that for

two to three months she had experienced pain in her right shoulder and neck that radiated into her right arm with numbness into her fingers. Dr. Hadley diagnosed the claimant with carpal tunnel syndrome on the right, with possible reoccurrence of the claimant's rheumatoid arthritis. On that date, testing was done to determine whether the claimant's symptoms were related to rheumatoid arthritis.

4. Thereafter, Dr. Hadley notified the claimant that the test results showed that the claimant's symptoms were not caused by rheumatoid arthritis. On March 30, 2018, Dr. Hadley authored a letter in which she noted that the claimant had work restrictions of no lifting over 10 pounds, and that the claimant had carpal tunnel syndrome. The claimant provided these work restrictions to the employer.

5. On March 31, 2018, the claimant sought medical treatment at the urgent care offices of Vail Health and was seen by Colleen Ihnken, NP. At that time, the claimant reported to Ms. Ihnken that she had been diagnosed with carpal tunnel. The claimant also reported that she wanted to pursue a workers' compensation claim because "when she went back to work [after seeing Dr. Hadley] someone mentioned that this could be a Worker's [sic] Comp claim". Ms. Ihnken extended the claimant's work restrictions and referred the claimant to a workers' compensation provider.

6. On April 6, 2018, the claimant was seen at Vail Health Occupational Health by Lucia London, CNP. The claimant again reported right arm pain with finger tingling. Ms. London listed the claimant's diagnoses as "[p]ossible carpal tunnel and/or cubital tunnel syndrome" and "[m]uscular aches and pains – not work related". Ms. London ordered electromyography (EMG) testing of the claimant's right upper extremity and referred her for physical therapy. The claimant testified that physical therapy did not help relieve her symptoms.

7. On May 8, 2018, Dr. Marc Treihaft administered EMG testing of the claimant's right upper extremity. Dr. Treihaft determined that the claimant's studies were negative for carpal tunnel. However, he did note that the claimant had C6-7 radicular changes, right greater than left.

8. The claimant returned to Ms. London on May 23, 2018. Ms. London noted the results of the EMG and opined that the claimant had cervical radiculopathy. At that time, Ms. London determined that the claimant's work restrictions would be limited lifting, carrying, pushing, and pulling over 15 pounds.

9. In May 2018, the claimant's job position was changed from the Bakery to working at the front door of the employer's store. The claimant's job duties in that position include checking customer receipts and membership cards. The claimant's new position is less physically demanding as compared to her prior position in the Bakery. However, the claimant's pain symptoms have not improved since she has changed work duties.

10. On June 29, 2018, the claimant was again seen by Ms. London and reported that her symptoms were worse. Ms. London referred the claimant for a magnetic resonance image (MRI) of her cervical spine and made a referral to Dr. Scott Raub for consultation.

11. On July 11, 2018, an MRI of the claimant's cervical spine showed diffuse degenerative disc disease and multiple level canal stenosis, greatest at the C5-6 level (which was described as "severe"). The MRI also showed diffuse uncovertebral and facet arthrosis with multilevel foraminal stenosis, greater on the right at the C5-6 level, and greater on the left at the C6-7 level.

12. The claimant was seen by Dr. Raub on July 23, 2018. At that time, the claimant reported that she was injured at work in March 2018 after doing "a lot of heavy repetitive lifting". Dr. Raub reviewed the claimant's EMG and MRI results and determined that due to the claimant's anatomy, she was not a candidate for interspinal injections. At that time, Dr. Raub referred the claimant to Dr. Ernest Braxton for a surgical consultation.

13. On August 3, 2018, the claimant was seen by Dr. Braxton. In the medical record of that date, Dr. Braxton noted that the claimant first experienced her symptoms "after doing heavy lifting at work." Based upon the claimant's MRI findings and his own exam, Dr. Braxton opined that the claimant has cervical radiculopathy, cervical disc degeneration, cervical stenosis, and osteoarthritis of the cervical spine. At that time, Dr. Braxton recommended that the claimant undergo either a C5-6 anterior cervical discectomy and fusion, or in the alternative, a C5-6 artificial disc replacement.

14. On October 2, 2018, the claimant attended an independent medical examination (IME) with Dr. Linda Mitchell. In connection with the IME, Dr. Mitchell reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In her IME report, Dr. Mitchell opined that the claimant's diagnoses of cervical degeneration, cervical stenosis, osteoarthritis of the cervical spine, and cervical radiculopathy are not related to a work injury or accident. Dr. Mitchell noted that there is no evidence that the type of degenerative changes the claimant has would be caused by repetitive work, and more specifically repetitive work does not cause cervical degeneration or radiculopathy. Dr. Mitchell further opined that the claimant's symptoms are likely caused by her rheumatoid arthritis and a motor vehicle accident the claimant was involved in in the 1980's. Dr. Mitchell's testimony was consistent with her written report.

15. The ALJ notes that the claimant failed to report the alleged incident to the employer until someone mentioned that it might be a workers' compensation matter. She initially sought treatment for symptoms that she believed were related to her diagnosis of rheumatoid arthritis. Additionally, in her initial discussion of her symptoms with her various providers, the claimant believed that her symptoms were the result of a repetitive motion type injury (such as carpal tunnel) and did not mention a specific incident or injury. It was only later that the claimant began to assert the acute onset of

her symptoms. However, this contradicts the claimant's initial report to Dr. Hadley that she had experienced these symptoms for two to three months.

16. The ALJ credits the medical records and the opinions of Dr. Mitchell and finds that the claimant has failed to demonstrate that she suffered an injury arising out of and in the course and scope of her employment with the employer. The claimant has failed to demonstrate that she suffered an acute injury. The claimant has likewise failed to demonstrate an occupational disease arising from her employment with the employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

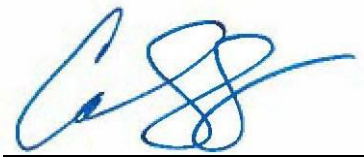
6. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

7. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she suffered an injury or an occupational disease that arose out of and in the course and scope of her employment with the employer. As found, the medical records and the opinions of Dr. Mitchell are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated April 10, 2019



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Does the ALJ have jurisdiction to hear Claimant's request for medical benefits, since a DIME opinion has determined that Claimant's left arm complaints are not related to his 9/15/2011 work injury?

II. Assuming jurisdiction remains, has Claimant shown, by a preponderance of the evidence, that the requested left arm EMG and left shoulder MRI are reasonable, necessary, and related to his work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained an admitted work injury to his left shoulder on September 15, 2011 while working for the Respondent. Claimant was referred for treatment at CCOM, with ATP Dr. Richard Nanes, D.O. CCOM records for visits between 9/15/11 and 12/16/11 make no mention of elbow or forearm pain associated with the injury to treating providers. (Ex E pp. 61-65; Ex. A pp. 8-12; Ex. C pp. 25-27).

2. Claimant underwent a left shoulder arthroscopic acromioplasty and arthroscopic subacromial extensive debridement of bursal tissue, with scalene block on January 9, 2012. Sometime after surgery, Claimant reported pain and numbness in his left forearm. *Id*.

3. Claimant had an EMG/NCV on May 16, 2012 regarding the radial forearm numbness and pain complaints. The results were:

> 1. Mild left neuropathy at the wrist…likely a sub-clinical finding and is not related to his radial forearm symptoms.
>
> 2. No EDX evidence of brachial plexopathy, musculocutaneous neuropathy, radial neuropathy or cervical radiculopathy.
>
> 3. Clinical examination does reveal evidence of a lateral epicondylitis with irritation of the radial tunnel but no radial tunnel neuropathy noted on EDX study." (Ex. F pp. 73-77).

4. Dr. Nanes, the ATP, placed Claimant at maximum medical improvement (MMI) on July 11, 2012 with a 9% upper extremity rating for his left shoulder.

5. Respondents filed Final Admission of Liability ("FAL"). Claimant then timely objected and filed a Notice and Proposal for a Division IME ("DIME") on August 16, 2012. (Ex. B).

6. Dr. Velma Campbell was selected as the DIME physician. She evaluated Claimant on October 18, 2012. Claimant reported to her that on September 15, 2011 he pulled a door and felt a pulling sensation in his left shoulder with immediate pain. He reported that, following shoulder surgery, he experienced pain in his left neck and shoulder and numbness in his left arm. Claimant reported he had an ongoing feeling there was something wrong in his arm, that he felt pressure and pain. He also reported neck pain, headaches, right leg numbness, worsening low back pain over the past year, and numbness and burning in his feet. (Ex. A).

7. Dr. Campbell reviewed Claimant's medical records, including the May 16, 2012 EMG/NCV. She concurred with the MMI determination of Dr. Nanes of July 11, 2012. She opined that the median neuropathy found on the EMG was unrelated to the work injury. She also opined that Claimant's left arm paresthesia and pain was not related to the September 15, 2011 injury. She noted that the "left arm paresthesia without considering the cervical spine, scalene block could be associated with peripheral neuropathy and paresthesia, which usually resolved within 6 months of the block. In this case, the EMG/NCV did not show abnormalities of the potentially affected nerves." (Ex. A, p. 14).

8. Dr. Campbell opined "***no findings were identified that connect the neck pain or the left upper extremity and lower arm pain and paresthesia to the date of injury 9/15/11."*** (***emphasis added***). She opined that while the left arm and hand paresthesia ***may*** ***have*** a relationship to the scalene block, they are improving as would be expected and "***the other arm symptoms are not explained by peripheral nerve symptoms due to scalene block***." (*Id*.)(***emphasis added***).

9. Dr. Campbell also opined that Claimant's right shoulder, right leg pain, low back pain and paresthesia of the feet were not related to the September 15, 2011 injury. (*Id*.).

10. Respondent filed a FAL on November 20, 2012 consistent with the DIME's report. (Ex. A).

11. Claimant did not object to the November 20, 2012 FAL nor did he timely file an Application for Hearing to challenge the DIME's opinions. (Ex. B).

12. A second EMG/NCV was conducted on September 26, 2013 which again showed left median neuropathy with "mild progression since 5/2012" "c/w [consistent with] a mild left carpal tunnel syndrome." (Ex. F pp. 69-72).

13. Claimant continued to complain of left shoulder and arm pain. On November 27, 2013, Dr. Nanes opined that Claimant was no longer at MMI for his September 15, 2011 work injury. (Ex. E p. 59).

14. Subsequently, a General Admission of Liability (GAL) was filed reopening the claim on January 9, 2014. (*See* Ex. B).

15. Claimant subsequently underwent additional treatment and evaluation of his left shoulder and left forearm. (Ex. 3, E, F, G, H, I). This included left carpal tunnel surgery performed by Dr. Karl Larson on May 20, 2014 (Ex. 5).

16. Claimant was evaluated by Dr. Derek Purcel of the Colorado Center of Orthopaedic Excellence. On March 27, 2014 Dr. Purcell opined there was no significant evidence of rotator cuff or biceps pathology on exam. He did not recommend any surgical intervention for these conditions. (Ex. I pp. 86-87).

17. Dr. Robert Waltrip, an orthopedic surgeon, performed a peer review on March 30, 2015. Dr. Waltrip opined Claimant's September 15, 2011 work injury was limited to a left shoulder strain, with subacromial bursitis/impingement. Similar to the DIME, he opined there was no indication of an injury to the left elbow or forearm. He further opined that it did not make sense to attribute radial tunnel symptoms to either the interscalene block or the use of the sling following shoulder surgery. Dr. Waltrip opined Claimant's potential left radial tunnel syndrome, left elbow cubital tunnel, and lateral epicondylitis was unrelated to the September 15, 2011 work injury. (Ex. D).

18. On May 14, 2015, Dr. Nanes, noted he reviewed Dr. Waltrip's causation analysis and an Independent Medical Examination (IME) report of Dr. Griffis, and agreed that Claimant's left elbow conditions, including epicondylitis and possible left radial tunnel syndrome, were not related to Claimant's original left shoulder injury. (Ex. E, p. 58).

19. On May 20, 2015, Dr. Nanes had "a long discussion" with Claimant about the IME of Dr. Griffis and Peer-to-Peer report of Dr. Waltrip. He advised Claimant that he agreed with the physician, Dr. Waltrip, as he is the expert in the area. (Ex. 3, pp. 72-73).

20. Claimant was again placed at MMI by Dr. Nanes on June 10, 2015 without additional impairment. (Ex. 3, pp. 75-76).

21. A FAL was again filed on July 29, 2015, admitting to *maintenance care* for the September 15, 2011 injury. (Ex. 1).

22. Claimant then underwent a repeat left shoulder MRI on March 11, 2016 which noted tendinosis, but no rotator cuff tears. (Ex. G).

23. Dr. Daniel Olson took over Claimant's maintenance care as the ATP in March 2017. At that time, he noted that most of Claimant's records were in paper chart in storage. He also noted that Claimant's radial tunnel and elbow pain had not been accepted under the claim. (Ex. E, p. 99).

24. On March 26, 2018, Dr. Olson referred Claimant to Dr. Sandell for “chronic left arm pain, old EMGs showed radial tunnel syndrome,” carpal tunnel syndrome symptoms “returning/worsening also ? irritation from scalene block. Please repeat EMG/NCV of LUE.” (Ex. 7, p. 304).

25. At hearing, Claimant testified that at the time of injury he felt ‘like a rubber band snapped in his left shoulder’, and a burning to his elbow and forearm. He stated he reported his symptoms to the medical providers.

26. Claimant testified that he had shoulder surgery on January 9, 2012. He testified that following surgery, his entire arm felt dead from the scalene block and he had a heaviness that he had never had before and felt a burning sensation like a sunburn. He testified that he reported these symptoms to his treating physicians.

27. Claimant also testified that he underwent a DIME with Dr. Velma Campbell in 2012. He reported to her the ongoing symptoms he was having in his left arm, including the left elbow. He testified these were the same symptoms he is having now. Claimant testified that he was seeking treatment for his left elbow and forearm.

28. Dr. William Ciccone II performed an IME of Claimant on September 17, 2018, and provided testimony by deposition on February 20, 2019. Dr. Ciccone has been accepted as an expert in orthopedic surgery who is Level II Accredited. Dr. Ciccone reviewed medical records dating back to September 2011, took a history from Claimant, and performed a physical examination. Dr. Ciccone testified he also reviewed Claimant’s interrogatory responses, Claimant’s hearing testimony, and Dr. Olson’s deposition testimony.

29. Dr. Ciccone noted that Claimant initially reported pain in his left shoulder following the incident at work. He noted Claimant’s symptoms persisted through physical therapy and on January 9, 2012 left shoulder arthroscopy with subacromial decompression was performed with scalene block. Claimant then developed left arm numbness. He noted Claimant was felt to have *radial* tunnel syndrome, but EMGs from May 2012 and September 2013 were negative for this condition, although *carpal* tunnel was detected. He noted Claimant had been seen by multiple doctors to address his persistent forearm pain and that an EMG from August 12, 2015 showed left *cubital* tunnel syndrome and mild *radial* tunnel syndrome. (Ex. C).

30. Dr. Ciccone opined that Claimant’s upper extremity paresthesias was not related to the work injury, nor from the nerve block performed during surgery. He explained that while there was a less than 2% chance of nerve symptoms following an interscalene block, these symptoms show up initially after surgery, not at some later point. He noted that no nerve damage was noted on the initial EMG from May 16, 2012 prior to Claimant being placed at MMI.

31. Dr. Ciccone further opined that, while there was a small chance of peripheral neuropathy following an interscalene block, there was no relationship to the block and nerve entrapment, which is what carpal tunnel syndrome, radial tunnel syndrome and cubital tunnel syndrome were. He opined that the potential diagnosis of *radial* tunnel syndrome, and the incidental finding of *cubital* tunnel syndrome was not related to the work injury, nor to the regional anesthesia used during surgery. This should not, he opines, be covered by workers' compensation. (Ex. C pp. 42-43).

32. Dr. Ciccone confirmed that Claimant's current left arm symptoms were the same as those Claimant previously discussed with the DIME physician. He noted the DIME physician opined Claimant's left arm symptoms were not causally related to the work injury in this matter.

33. Dr. Ciccone opined that Claimant did not require any further imaging of his shoulder, as it would not be causally related to the work injury. (Ex. C. pp. 43[i]-43[ii]). In reaching this conclusion, Dr. Ciccone noted that Claimant had four MRIs. Further, a direct arthroscopic examination during his prior surgery had not revealed any significant shoulder pathology. He also noted Claimant was evaluated by a shoulder specialist on March 27, 2014, who did not feel Claimant's symptoms were secondary to rotator cuff or biceps pathology. (Ex. C).

34. Dr. Daniel Olson, Claimant's current ATP, provided testimony by deposition on January 24, 2019. Dr. Olson is accepted as an expert in occupational medicine who is Level II Accredited. Dr. Olson testified that he was familiar with Claimant's September 15, 2011 injury; however, Dr. Nanes was the original treating physician. He reviewed the initial medical report from September 15, 2011 and noted that Claimant reported only left shoulder and upper arm pain.

35. Dr. Olson testified that he first became involved when Claimant presented for a maintenance visit on March 27, 2017, after Dr. Nanes had retired. At this time, Claimant complained of forearm pain. Dr. Olson stated there has been disagreement on whether or not the presumed diagnosis of radial tunnel was related to this injury. He stated there had been a number of EMGs, of which he believed one was positive, and he was recommending an updated EMG to see where things stood. This exchange followed:

> Q. As of today's date, January 24, 2019, do you still believe he needs this third EMG; and depending on the outcome that he may need surgery?
>
> A. I think the EMG gives me the answers that we need to make any *treatment recommendations.* The argument whether it is related or not related will go on forever.
>
> Q. What is your opinion as to whether it is *work-related or not work-related?*

A. It is *hard for me* because I was not involved in the case, and *I would <u>have to</u> rely on the doctors who were seem him back then.* (Olsen Deposition, p. 20, ll. 14-22) (emphasis added).

36. Dr. Olson testified that Dr. Nanes had been the treating physician of Claimant's injury since September 2011. He also stated that the majority of Claimant's medical records pertaining to treatment for this injury were in storage. He testified that had not reviewed the medical records from September 2011 through the March 2017 [when he took over Claimant's care] other than the July 11, 2012 MMI report of Dr. Nanes. Dr. Olsen did further indicate that if Insurers deny care, the only practical alternative is to place the patient at MMI.

37. He testified his recommendation for the repeat EMG would be primarily to check on Claimant's *radial* tunnel and also the *cubital* tunnel. He stated he was not aware Claimant had a DIME addressing these symptoms/condition. Dr. Olson agreed Dr. Nanes' was of the opinion that Claimant's elbow complaints and potential radial tunnel syndrome was not related to the September 15, 2011 work injury. Dr. Olson stated he would not offer an opinion regarding whether he disagreed with Dr. Nanes without reviewing the documents Dr. Nanes reviewed in reaching his opinion.

38. At no time did Dr. Olson make mention of a current request for a left shoulder MRI or any other recommended treatment for Claimant's left shoulder.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every

item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, the ALJ finds that Claimant has presented sincerely to his treatment providers and in his hearing testimony. However, it is understandable that Claimant's memory, with the passage of time, is not as persuasive as medical records which were kept contemporaneously with his reported symptoms. Secondly, while Claimant can describe his symptoms, he cannot be expected to offer persuasive opinions on issues of causation. Such opinions are best sought from medical professionals, as will be noted further.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, two very capable and credible experts in infectious diseases have reached some similar conclusions, and some differing ones. Taken as a whole, the ALJ must determine which opinions are more persuasive on the ultimate issue of causation.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo 1972).

Jurisdiction to Hear a Challenge of the DIME Opinion

F. Section 8-42-107(8), C.R.S. provides that a DIME's findings concerning MMI and permanent medical impairment are binding unless overcome by clear and convincing evidence. The determination of MMI inherently requires a DIME to assess as a matter of diagnosis whether the various components of a claimant's medical condition are causally related to the work injury. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). As such, a DIME's opinions regarding

causation are likewise entitled to presumptive weight. *See Laprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475, 482 (Colo. App. 2005); *see also Egan v. Indus. Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

G. A *pro se* claimant is presumed to know applicable statutes and is required to act accordingly. *Kyrkopp v. Indus. Claim Appeals Office*, 30 P.3d 821 (Colo. App. 2001); *see Manka v. Martin*, 200 Colo. 260, 614 P.2d 875 (1980); see *also Muragara v. Xerox Business Services*, W.C. 4-946-815-02 (ICAO January 27, 2015). A claimant, pro se or not, has 30 days after the filing of a FAL to file an Application for Hearing on any disputed issues that are ripe for hearing. §8-43-203(2)(b)(II), C.R.S.

H. Absent a timely objection to the DIME physician's findings, an ALJ lacks jurisdiction to resolve a dispute as to those findings. *Leprino Foods Co. v. Indus. Claim Appeals Office*, *supra.*; *see also Schneider Nat'l Carriers, Inc. v. Indus. Claim Appeals Office*, 969 P.2d 817 (Colo. App. 1998).

I. In the present case, Claimant attended a DIME with Dr. Velma Campbell in October 2012 to evaluate his ongoing symptoms, including left elbow, forearm and hand pain/numbness, which he reported after the January 9, 2012 left shoulder surgery. The DIME opined that Claimant's left upper extremity median neuropathy (left carpal tunnel syndrome) ("CTS"), revealed in the May 16, 2012 EMG was *not related* to the September 15, 2011 shoulder injury-or the scalene block which preceded the surgery. The DIME also opined Claimant's "other arm symptoms were not explained by peripheral nerve symptoms that could be due to the scalene block." The DIME opined "no findings were identified that connect the neck pain or the left upper extremity and lower arm pain and paresthesia to the date of injury 9/15/11." The DIME found Claimant to be at MMI for conditions related to the September 15, 2011 shoulder injury.

J. Respondent filed a FAL consistent with the DIME report on November 20, 2012. Claimant did not timely challenge the DIME's MMI opinion, which inherently includes the finding that Claimant's left CTS, elbow and forearm pain and paresthesia, were *not related* to the injury or surgery. As such, the DIME's opinions are binding. The ALJ concludes, based upon the DIME report, that Claimant's left lower arm symptoms/conditions are not related to the September 15, 2011 injury.

K. Claimant acknowledges his current left arm symptoms for which he is seeking treatment are the same symptoms he reported to Dr. Nanes before being placed at MMI. They are essentially the same symptoms reported to the DIME in October 2012. In determining Claimant was at MMI, the DIME physician opined that Claimant's left arm/forearm symptoms were not causally related to the initial injury or surgery. As such, the ALJ finds that Claimant's claim for medical benefits to treat conditions beyond the scope of his work injury constitutes a constructive challenge to the DIME's MMI opinion. Claimant did not act to timely contest the causation opinions of the DIME. The ALJ is not now in a position to hear such a contest or resolve any dispute regarding the DIME's opinions. *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475 (Colo. App. 2005); *see also Schneider Nat'l Carriers, Inc. v. Indus. Claim Appeals Office*, 969 P.2d 817 (Colo. App. 1998).

Reopening of this Claim's Effect on the DIME Opinion

L. After a case is reopened based on a change in condition, causation is limited to whether there is a change in the claimant's physical or mental condition that can be causally connected to the original compensable injury. The original finding of causation cannot be challenged in reopening or post-reopening proceedings. *City and County of Denver v. Indus. Claim Appeals Office*, 58 P.3d 1162, 1164 (Colo. App. 2002).

M. The DIME's findings that Claimant's left upper extremity symptoms are not causally related to the September 15, 2011 injury or shoulder surgery became binding on the parties on December 21, 2012: 31 days after the unchallenged November 20, 2012 FAL.

N. The GAL filed on January 9, 2014 reopening the claim to address Claimant's worsened condition, did not allow, or provide, Claimant the ability to challenge the binding causation opinions made by the DIME in this matter over six years ago. The reopening of the claim in 2014- *to address Claimant's shoulder injury*- has no effect on the DIME's causation opinions for other body parts. As such, they remain binding on the parties. §8-42-107(8), C.R.S.; *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *City and County of Denver v. Indus. Claim Appeals Office*, 58 P.3d 1162 (Colo. App. 2002).

Causal Relationship Between the Work Injury and Current Treatment Recommendations / Repeat Left Arm EMG

In the event the ALJ is deemed to maintain jurisdiction to address Claimant's request for medical treatment on the merits, the ALJ makes the following Conclusions:

O. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. §8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

P. Merely because a Respondent paid for prior treatment or a medical procedure does not allow for a finding that the Respondent has admitted that in the future that same treatment is either reasonable treatment or that it is *related* to the work injury. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Morin v. ACE Hardware*, W.C. 4-906-748-04 (ICAO May 6, 2014). Even though an admission for maintenance benefits exists, "[t]he employer may contest any future claims for medical treatment on the basis that such treatment is unrelated to the industrial injury or occupational disease." *Grover v. Indus. Com'n*, 759 P.2d 705, 712 (Colo. 1988).

Q. Prior payment of treatment by Respondent directed toward Claimant's left elbow, forearm, CTS, radial and/or cubital tunnel syndrome and the filing of a FAL admitting to maintenance benefits for the September 15, 2011 injury does not equate to a waiver of the binding causation opinions of the DIME. *See Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *see also Morin v. ACE Hardware*, W.C. 4-906-748-04 (ICAO May 6, 2014). Nor does it waive Respondent's right to challenge future treatment or waive Claimant's burden to prove that the medical treatment being sought is reasonable, necessary and causally related to the September 15, 2011 work injury. *Grover v. Indus. Com'n*, 759 P.2d 705, 712 (Colo. 1988).

R. The DIME's opinion that Claimant's left upper extremity symptoms in his elbow, forearm, and wrist (CTS) are not causally related to the work injury are binding. As such, the Claimant has failed to prove a causal relationship between the September 15, 2011 work injury and the recommended EMG evaluation of his left upper extremity (elbow, forearm, wrist and/or hand), or any treatment recommended for same. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999).

S. The ALJ finds that even if the DIME's causation opinions were not binding, substantial evidence in the record supports a finding that Claimant's left elbow, forearm, and wrist symptoms/conditions are not causally related to the industrial injury. First, the DIME opined the CTS, which showed up on both the May 16, 2012 and September 26, 2013 EMGs, was unrelated to the shoulder injury or the scalene block performed with arthroscopy. Similarly, Dr. Ciccone opined that the CTS was an incidental finding, and not related to the work accident.

T. Second, the DIME opined that no findings were identified that connect the left upper extremity and lower arm pain and paresthesia to the date of injury. The DIME opined that Claimant's other arm symptoms were not explained by peripheral nerve symptoms due to scalene block. Dr. Robert Waltrip also opined Claimant's potential left radial tunnel syndrome, left elbow cubital tunnel, or lateral epicondylitis were unrelated to the September 15, 2011 injury, the interscalene block, or Claimant's use of a sling after surgery. Dr. Nanes, the ATP who had been treating Claimant since September 2011 for this work injury, agreed with Dr. Waltrip that Claimant's left elbow conditions, including lateral epicondylitis and possible left radial tunnel syndrome were not related to the original shoulder injury, over the contrary opinion of Dr. Griffis. Moreover, Dr. Ciccone, opined that Claimant's upper extremity paresthesia is not related to the work injury or the nerve block. Dr. Ciccone - like Dr. Waltrip - opined there was no relationship between nerve entrapment and the regional anesthesia used in the shoulder surgery. He also opined that the presence of radial tunnel syndrome and incidental finding of cubital tunnel syndrome are not related to the work injury or surgery.

U. The ALJ finds persuasive the opinions of the DIME Physician (Dr. Campbell), and Drs. Waltrip, Nanes, and Ciccone more than any opinions to the contrary. The ALJ finds Claimant has failed to meet his burden to prove that the potential conditions of radial tunnel syndrome, cubital tunnel syndrome, and/or carpal

tunnel syndrome, which Dr. Olson has indicated are the basis for his recommendation of a repeat left upper extremity EMG followed by any necessary treatment, are *causally related* to the work injury in this matter. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Grover v. Indus. Com'n*, 759 P.2d 705, 712 (Colo. 1988).

Causal Relationship Between the Work Injury and Current Treatment Recommendations / Repeat Left Shoulder MRI

V. As noted, Respondents are liable to pay for medical treatment which is reasonably necessary to "cure and relieve" the claimant from the effects of the industrial injury. §8-42-101, C.R.S. The need for medical treatment may extend beyond MMI if claimant requires further treatment to relieve the effects of the injury or prevent deterioration of their condition. *Grover v. Indus. Com'n*, *supra.*

W. As also noted, even where the Respondents admit liability for post-MMI medical benefits, they remain free to contest the reasonable necessity and causal connection of any specific future treatment. *Grover v. Indus. Com'n*, 759 P.2d 705, 712 (Colo. 1988); *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992). Where the relatedness, reasonableness or necessity of medical treatment is disputed, Claimant has the burden to prove by a preponderance of the evidence that the disputed treatment is reasonably necessary to cure or relieve the effects of the injury. *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

X. In the present case, Claimant testified that he was also seeking a left shoulder MRI, which he believed was recommended by Dr. Olson. No recent medical report from CCOM specifically recommends or even mentions a repeat left shoulder MRI or discusses whether a left shoulder MRI would be reasonable or necessary at this time. Additionally, Dr. Olson made no recommendation for an MRI in his deposition testimony.

Y. Moreover, Dr. Ciccone opined that Claimant did not require any further imaging of his shoulder. In reaching this conclusion, Dr. Ciccone opined a repeat left shoulder MRI was not reasonably necessary or causally related given that four prior MRIs of the shoulder and a direct arthroscopic examination failed to reveal any significant shoulder pathology. The ALJ credits the opinions of Dr. Ciccone and finds that Claimant has failed to meet his burden to prove that a repeat MRI is reasonably necessary or causally related to the September 15, 2011 work injury, or that a recommendation for a repeat MRI even currently exists. *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1997).

ORDER

It is therefore Ordered that:

1. Claimant's request for repeat left arm EMG is denied and dismissed.

2. Claimant's request for repeat left shoulder MRI is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 11, 2019

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that the left L4-5 decompression surgery performed by Dr. James Gebhard on October 29, 2018 constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the May 15, 2018 work injury.

- Whether the claimant has demonstrated by a preponderance of the evidence that the left L4-5 transforaminal epidural injection recommended by Dr. James Gebhard constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the May 15, 2018 work injury.

FINDINGS OF FACT

1. The claimant was injured on May 15, 2018 while he was delivering a large television for the employer. The specific injury occurred when the claimant was removing the television from the back of his work truck, and while the claimant was stepping backwards out of the truck, he missed the step/bumper. This resulted in the claimant falling backwards and hitting his head on the ground.

Medical Treatment Prior to the May 15, 2018 Fall

2. Prior to the claimant's May 15, 2018 work injury, the claimant received treatment for low back pain that radiated into his left leg. The claimant testified that in October 2016, he was injured while working for the company Menards in St. Louis, Missouri. The claimant described that injury as occurring when he was operating a floor scrubber. The claimant further testified that he pursued a workers' compensation claim related to that 2016 injury.

3. The medical records entered into evidence indicate that the claimant received medical treatment for his October 2016 injury and low back symptoms at DePaul Medical Group beginning on October 17, 2016. At that visit the claimant reported that he had experienced low back pain for four weeks.

4. A magnetic resonance image (MRI) of the claimant's lumbar spine was taken on October 19, 2016. The MRI showed chronic minimal loss of height at the L2 level, with degenerative changes most significant at the L4-5 and L5-S1 levels.

5. When the claimant was seen by providers at Concentra on October 26, 2016, he reported that he had a compression fracture at the L2-3 level.

6. The medical records entered into evidence demonstrate that the claimant returned to Colorado and began treatment with the Department of Veterans Affairs (VA). The claimant was seen by Dr. John Severs at the VA on April 14, 2017. At that time,

the claimant reported to Dr. Severs that he had experienced low back pain since working in St. Louis. The claimant also reported that he had received three epidural steroid injections, but the injections were not helpful. At that time, Dr. Severs referred the claimant for further injections.

7. On May 10, 2017, the claimant began treatment with Dr. Ashish Chavda with Colorado Injury and Pain Specialists. Based upon the records entered into evidence, the claimant continued treatment with Dr. Chavda for his low back symptoms from May 10, 2017 through June 5, 2018. During that time, the claimant underwent a number of treatments for his low back pain and related radiculopathy including injections, medical branch blocks, and radiofrequency ablation.

8. On May 18, 2017, Dr. Chavda administered a left L5-S1 transforaminal epidural steroid injection (ESI). Thereafter on May 24, 2017, the claimant reported he had "almost no pain". On June 29, 2017, Dr. Chavda administered medial branch blocks (MBBs) at the right L4-L5 and L5-S1 levels. On July 11, 2017, the claimant reported that the MMBs did not provide any relief. As a result, on July 20, 2017, Dr. Chavda recommended and administered MMBs at the right L3-4, L4-5, and L5-S1 levels. On August 3, 2017, Dr. Chavda administered additional MBBs at those same levels. On August 9, 2017, the claimant reported that the MBBs provided "great relief".

9. Based upon the claimant's positive response to the MMBs, Dr. Chavda recommended radiofrequency ablation (RFA) at the right L3-4, L4-5, and L5-S1 levels. On September 21, 2017, Dr. Chavda administered RFA at those levels. On October 11, 2017, the claimant reported that the RFA provided relief of his low back pain, but he continued to have radiating pain down his left leg. On October 12, 2017, Dr. Chavda administered a transforaminal ESI at the left L5-S1 level. On October 30, 2017, the claimant reported improvement in his lower left leg pain. Thereafter, the claimant was seen by Dr. Chavda on January 19, 2018. At that time, the claimant continued to report left leg radiculopathy pain.

10. On March 27, 2018, the claimant again reported left leg radiculopathy pain. At that time, Dr. Chavda recommended repeat transforaminal ESI at the left L5-S1 level as well as the L4-L5 level.

11. The claimant testified that the injections recommended by Dr. Chavda on March 27, 2017 were not administered.

Medical Treatment After the May 15, 2018 Fall

12. The claimant testified that on May 15, 2018, he lost consciousness as a result of his fall. When he awoke, he called emergency services. Thereafter, the claimant was transported from the location of his fall in Battlement Mesa, Colorado to Grand River Hospital. The claimant reported to hospital personnel that that he had head pain, left lateral chest pain, and right lateral hand pain. The claimant remained at the hospital for observation related to symptoms of a concussion and closed head injury. The claimant was discharged from the hospital on May 16, 2018.

13. The claimant's authorized treating physician (ATP) for this claim is Dr. Craig Stagg. The claimant was first seen at Dr. Stagg's practice on May 22, 2018 by James Harkreader, NP. At that time, Mr. Harkreader noted that the claimant presented with head, back, and rib injuries. However, in that same medical record, Mr. Harkreader noted that the claimant denied neck and back pain. Mr. Harkreader diagnosed a closed head injury, a chest wall strain, and a left paralumbar back contusion. Mr. Harkreader placed the claimant on work restrictions of a 20 pound lifting and no CDL driving. Thereafter on May 29, 2018, Mr. Harkreader referred the claimant to physical therapy for six visits.

14. June 7, 2018, was the first time the claimant was seen by Dr. Stagg. At that time, the claimant reported significant cervical pain with radiation in to his bilateral shoulders. The claimant reported some back pain, but that his significant issues were related to double vision, blurry vision, and headaches[1]. Dr. Stagg referred the claimant for head and cervical spine MRIs.

15. The claimant returned to Dr. Stagg on June 18, 2018. At that time, Dr. Stagg noted that the MRI showed a compression fracture at T2. Based upon this information, Dr. Stagg referred the claimant to a spinal surgeon for consultation.

16. On June 26, 2018, an x-ray of the claimant's lumbar spine showed moderate lumbar spondylosis and a superior endplate compression at L2 of indeterminate age.

17. On June 27, 2018, the claimant was seen by Dr. Stagg who noted that the lumbar x-ray showed an endplate compression at the L2 level of indeterminate age as well as a compression fracture at the T2 level. Based upon this information, Dr. Stagg ordered MRIs of the claimant's lumbar and thoracic spines.

18. On July 3, 2018, an MRI of the claimant's lumbar spine showed multilevel facet arthrosis and multilevel mild degenerative disc disease with degenerative anterolisthesis of L5 on S1 and of L4 on L5. The MRI also showed moderately severe bilateral foraminal narrowing at the L4-5 level.

19. On July 5, 2018, the claimant was seen by spinal surgeon, Dr. James Gebhard. At that time, the claimant reported equal pain in his neck, upper thoracic spine, and lumbar spine. The claimant also reported left leg pain that he had experienced prior to the May 15, 2018 injury. Dr. Gebhard reviewed the claimant's lumbar spine MRI and noted age appropriate degeneration. Dr. Gebhard recommended the claimant continue with conservative treatment including physical therapy and a core strengthening program.

[1] As noted above, the claimant was diagnosed with a closed head injury following the May 15, 2018 fall. However, treatment of symptoms related to the claimant's head injury are not at issue in this order. Therefore, the ALJ does not make further reference to treatment of those head injury related symptoms.

20. On August 21, 2018, Dr. Gebhard administered a left L4-5 transforaminal epidural injection. The claimant returned to Dr. Gebhard on October 4, 2018, and reported two weeks of relief following the injection. However, at the time of the appointment, the claimant's left leg pain had returned. At that time, Dr. Stagg recommend a left L4-5 surgical decompression.

21. On September 12, 2018, Dr. Stagg referred the claimant to Dr. Ellen Price for physical medicine rehabilitation consultation. The claimant began treatment with Dr. Price on October 24, 2018.

22. At the request of the respondents, Dr. Michael Janssen reviewed the claimant's medical records and opined regarding the reasonableness, necessity, and relatedness of the recommended left L4-L5 decompression surgery. In his October 26, 2018 report, Dr. Janssen opined that the claimant could benefit from the recommended decompression surgery. However, Dr. Janssen also opined that the claimant's need for surgery is solely related to the claimant's preexisting degenerative spondylolisthesis. Dr. Janssen further clarified that in his opinion the claimant's symptoms and any need for surgery are not related to the May 15, 2018 fall at work.

23. Based upon the opinions of Dr. Janssen, the respondents denied authorization for the recommended left L4-5 decompression surgery.

24. Despite the respondents' denial of the decompression surgery, the claimant elected to proceed with the surgery. On October 29, 2018, Dr. Gebhard performed the left L4-5 decompression surgery. The cost of the surgery was paid for by the claimant's private health insurance and the claimant.

25. On November 13, 2018, the claimant was seen at Dr. Gebhard's office by Todd Ousley, PA-C. The claimant reported to Mr. Ousley that following the surgery, the claimant's left leg pain had significantly improved.

26. On December 6, 2018, the claimant was seen by Dr. Stagg and reported persistent symptoms of numbness down his left leg. Dr. Stagg referred the claimant to Dr. Mitchell Burnbaum for electromyography (EMG) testing.

27. On December 13, 2018, Dr. Gebhard saw the claimant and noted that the claimant was doing very well and had reported no back and no leg pain, with a little bit of tightness in his left knee.

28. On December 14, 2018, Dr. Burnbaum administered EMG testing of the claimant's left lower extremity. Dr. Burnbaum noted that the claimant had an L5 root injury with denervation in the L5-innervated muscles. Dr. Burnbaum recommended an additional MRI.

29. On January 8, 2019, a lumbar spine MRI showed mild granulation enhancement in the lateral epidural space and lateral recess at the L4-5 level with chronic moderate left foraminal narrowing at that level.

30. On January 17, 2019, the claimant returned to Dr. Gebhard and reported that his radicular symptoms had returned over the prior three to four weeks. Dr. Gebhard reviewed the claimant's most recent MRI results and noted a new disc herniation at the L4-5 level. Dr. Gebhard opined that the claimant's symptoms of left leg radiculopathy were caused by that new disc herniation. At that time, Dr. Gebhard recommended an transforaminal epidural injection at the left L4-5 level.

31. On January 28, 2019, Dr. Janssen reviewed the reasonableness, necessity, and relatedness of the recommended left L4-L5 transforaminal epidural injection. In his report, Dr. Janssen noted that the need for the recommended injection was secondary to the decompression surgery. As the surgery was unrelated to the claimant's work injury, Dr. Janssen opined that the recommended injection was likewise unrelated.

32. Based upon the opinions of Dr. Janssen, the respondents denied authorization for the recommended left L4-5 transforaminal epidural injection.

33. On December 5, 2018, Dr. Price recommended the claimant undergo sacroiliac (SI) joint injections, obtain an SI belt, and "microstem" treatment.

34. The respondents' arranged for the claimant to attend an independent medical examination (IME) with Dr. Brian Reiss. However, the claimant did not attend the IME. As a result, Dr. Reiss's February 24, 2019 report is based upon his review of the claimant's medical records. In his report Dr. Reiss opined that the claimant did not sustain a low back injury on May 15, 2018. Therefore, Dr. Reiss further opined that any diagnosis for the claimant's low back would not be attributable to the claimant's fall on May 15, 2018. It is the opinion of Dr. Reiss that the claimant's low back symptoms are related to the claimant's preexisting condition. With regard to the recommended decompression surgery, Dr. Reiss stated in his report that it is his opinion that there is not adequate pathology indicated in the MRI findings to perform a decompression and therefore the surgery is not reasonable or necessary to treat the claimant's symptoms. Dr. Reiss also opined that the recommended surgery is not related to the May 15,2018 work injury. Dr. Reiss's testimony at hearing was consistent with his written report.

35. Dr. Reiss testified that he does not agree with Dr. Gebhard that the decompression surgery is reasonable or necessary to treat the claimant's symptoms. Dr. Reiss stated that he does not believe there is enough pathology to support a decompression procedure. With regard to the issue of relatedness, Dr. Reiss testified that the claimant's symptoms are the result of a preexisting condition. Dr. Reiss further testified that the claimant's preexisting condition was not aggravated or changed by the May 15, 2018 fall at work.

36. On February 27, 2019, Dr. Brian Mathwich was asked to review the reasonableness, necessity, and relatedness of the recommended SI joint injections. In his report Dr. Mathwich opined that the claimant's current low back symptoms are not causally related to the May 15, 2018 work injury. Dr. Mathwich agreed with the opinions

of Dr. Janssen and noted that the claimant's symptoms are caused by his long standing degenerative condition.

37. Based upon the opinions of Dr. Mathwich, the respondents denied authorization for the recommended SI joint injections and microstem treatment.

38. The ALJ credits the medical records and the opinions of Drs. Reiss, Janssen, and Mathwich over the contrary opinion of Dr. Gebhard and finds that the claimant has failed to demonstrate that the left L4-5 decompression surgery performed by Dr. James Gebhard on October 29, 2018 constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the May 15, 2018 work injury.

39. The ALJ credits the medical records and the opinions of Drs. Reiss, Janssen, and Mathwich over the contrary opinion of Dr. Gebhard and finds that the claimant has failed to demonstrate that the recommended left L4-5 transforaminal epidural injection constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the May 15, 2018 work injury.

40. The medical records demonstrate that the claimant's low back pain and related left leg symptoms remained the same before, at the time of, and after the May 15, 2018 fall. The ALJ finds that the claimant did not suffer an acute injury to his low back on May 15, 2018 that necessitates surgical intervention and/or additional lumbar injections. The ALJ further finds that the claimant did not experience an aggravation or acceleration of his preexisting condition as a result of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the

testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, the claimant has failed to demonstrate, by a preponderance of the evidence that the that the left L4-5 decompression surgery performed by Dr. James Gebhard on October 29, 2018 constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the May 15, 2018 work injury. As found, the medical records and the opinions of Drs. Reiss, Janssen, and Mathwich are credible and persuasive.

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence that the that the recommended left L4-5 transforaminal epidural injection constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the May 15, 2018 work injury. As found, the medical records and the opinions of Drs. Reiss, Janssen, and Mathwich are credible and persuasive.

ORDER

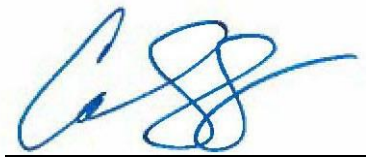
It is therefore ordered:

1. The claimant's request for reimbursement of the left L4-5 decompression surgery performed by Dr. James Gebhard on October 29, 2018 is denied and dismissed.

2. The claimant's request for authorization of the recommended left L4-5 transforaminal epidural injection is denied and dismissed.

3. All matters not determined here are reserved for future determination.

Dated April 12, 2019



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

Whether the claimant has demonstrated by a preponderance of the evidence that continued mileage reimbursement related to travel to and from a gym is reasonable, necessary, and related to the admitted August 2, 2016 work injury.

FINDINGS OF FACT

1. The claimant suffered a compensable injury on August 2, 2016 when he was involved in a motor vehicle accident. At the time of the injury, the claimant injured his back, ribs, and left knee. These injuries resulted in a number of treatment modalities including surgery and injections.

2. The claimant's authorized treating physician (ATP) for this claim is Dr. Ellen Price. On November 28, 2018, Dr. Price opined that the claimant had reached maximum medical improvement (MMI)[1]. At that time, Dr. Price recommended maintenance medical treatment that included a one-year gym membership.

3. In a medical record dated January 7, 2019, Dr. Price noted that the claimant was trying to exercise daily and that he "goes to the gym and sits in the hot tub and the steam room and also goes to the pool". In that same medical record Dr. Price indicated that she encouraged the claimant to continue to do so and that the claimant should "stay active and busy".

4. Previously, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak on September 19, 2018. More recently, the respondents asked Dr. Lesnak to address whether the claimant's daily trips to the gym are reasonable and necessary. On January 11, 2019, Dr. Lesnak issued an addendum to his IME report on that specific issue. Dr. Lesnak opined that daily hot tub, pool and steam room treatment are not reasonable or necessary treatment for the claimant. In support of his opinion, Dr. Lesnak noted that there is "no current medical diagnosis that would require the [claimant] to 'make daily trips to the hot tub, pool or steam room.'" Dr. Lesnak also noted that there is "no medical diagnosis whatsoever that 'requires' daily hot tub, pool or steam room treatments."

[1] As of the date of the hearing, the respondents have not filed a Final Admission of Liability (FAL) as a Division Sponsored Independent Medical Examination (DIME) was performed on February 26, 2019.

5. On January 30, 2019, Dr. Price authored a letter in which she noted that the claimant was not using the hot tub and steam room only. Dr. Price further noted that the claimant goes to the gym "for physical conditioning and a home exercise program that was started by his physical therapist."

6. On February 26, 2019, the claimant attended a Division-sponsored independent medical examination (DIME) with Dr. John Hughes. In his report, Dr. Hughes opined that appropriate maintenance medical treatment for the claimant would include monitoring by Dr. Price in compliance with the Colorado Medical Treatment Guidelines for chronic pain. In addition, Dr. Hughes indicated in his report that "an independent progressive physical exercise program" would be appropriate for the claimant, but such an exercise program would not require "prescriptive medical supervision".

7. The claimant testified that a gym membership was previously recommended during this claim. The claimant recalls that he first received a gym membership in approximately July 2017. That membership was renewed for a second year in approximately July 2018. The claimant further testified that the respondents authorized and paid for his gym membership.

8. The claimant testified that he tries to go to the gym seven days a week. On Mondays, Wednesdays, and Fridays he primarily works on a cardiovascular workout in the pool, with some flexibility as well. On Tuesdays, Thursdays, and Saturdays the claimant focuses more on flexibility in the pool. On Sundays the claimant swims small laps in the pool. The claimant sits in the steam room prior to his exercises to loosen his muscles. He will then sit in the hot tub following his exercises.

9. The claimant credibly testified that he has continued these workouts to increase his ability to move and function. The claimant further testified that the buoyancy of the water helps him complete his exercises that he would otherwise be unable to do out of the water.

10. The ALJ credits the opinions of Drs. Lesnak and Hughes and finds that the claimant has failed to demonstrate that his daily trips to the gym are reasonable and necessary. While the ALJ recognizes that the claimant finds completing his exercises in the pool on a daily basis to be beneficial, there is no evidence that the claimant's routine is ordered by any authorized provider. Therefore, the ALJ finds that the claimant has failed to demonstrate that daily mileage to and from the gym is reasonable and necessary.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. Colorado courts have recognized that a claimant is entitled to reimbursement for travel to and from medically related appointments. *Safeway, Co. v. ICAO*, 186 P.3d 103 (Colo. App. 2008); *Sigman Meat Co. v. ICAO*, 761 P.2d 265 (Colo. App. 1988).

5. In addition, WRCP Rule 18-6 (E) specifically provides:

> The payer shall pay an injured worker for reasonable and necessary expenses for travel to and from **medical appointments** and reasonable mileage **to obtain prescribed medications**. The rate for mileage shall be 53 cents per mile. The injured worker shall submit a request to the payer showing the date(s) of travel and mileage, and explain any other reasonable and necessary travel expenses incurred or anticipated. (*emphasis added*).

6. As found, the claimant has failed to demonstrate by a preponderance of the evidence that his daily mileage to and from the gym is reasonable and necessary. The claimant's daily trips to the gym are neither a "medical appointment" nor mileage "to obtain prescribed medications". While Dr. Price has encouraged the claimant to continue his exercise routine and to generally stay busy, the ALJ concludes that the mileage to and from the gym is not covered by WRCP Rule 18-6(E). The ALJ concludes that the claimant is not entitled to mileage reimbursement for mileage to and

from the gym. As found, the opinions of Drs. Lesnak and Hughes are credible and persuasive on this issue.

ORDER

It is therefore ordered that the claimant's request for mileage reimbursement related to his daily trips to and from the gym is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Is the amniotic wrap procedure recommended by Dr. Annest in conjunction with surgery for thoracic outlet syndrome reasonably necessary?

FINDINGS OF FACT

1. Claimant suffered admitted injuries on February 1, 2016 when she slipped on ice and fell on her outstretched left arm. Her compensable injuries include left thoracic outlet syndrome (TOS).

2. Dr. Stephen Annest, a vascular surgeon, has recommended TOS surgery. As part of the procedure, Dr. Annest plans to use an amniotic membrane wrap to protect the brachial plexus from inflammation and scar tissue formation.

3. Respondents authorized the surgery, but denied the amniotic wrap as experimental, unproven, and outside the MTGs.

4. One of the most significant risks of TOS surgery is recurrence of symptoms from scar tissue formation. Studies have shown a 25% to 30% recurrence rate at the 2-year follow-up. Surgeons have explored several techniques to mitigate scar formation, with varying degrees of success. Synthetic antiadhesive materials such as SurgiWrap and Seprafilm, that have successfully reduced adhesions in the abdomen, have not worked with TOS surgery. Some of the more effective options, such as fat wraps, saphenous veins, and latissimus muscles, entail additional surgical risks associated with harvesting the tissue.

5. In 2015, Dr. Annest and his partners started using amniotic wraps to protect the brachial plexus after surgery. After resecting the muscles and (usually) the first rib, the surgeon wraps a rectangular patch of amniotic membrane around the brachial plexus "like a blanket." The membrane retards the development of scar tissue and prevents it from encroaching on the nerves. It also inhibits inflammation that contributes to scarring, fibrosis, and adhesion formation. The membrane contains regenerative chemicals and stem cell-like properties that stimulate nerve growth.

6. The risks associated with amniotic wrapping are minimal. The wraps are made from placental tissue obtained from cesarean sections. The tissue is "immune-privileged" and triggers no adverse immune response. The risk of infection is minimal because the harvested tissue is tested for communicable diseases, carefully sterilized, and stored cryogenically until ready for use. No patient in Dr. Annest's practice has never developed an infection because of an amnion wrap.

7. During his deposition, Dr. Annest presented literature to support the procedure. A 2016 study in the Journal of Shoulder and Elbow Surgery showed amniotic

wrapping of the ulnar nerve was safe and effective for patients with debilitating recurrent cubital tunnel syndrome. There were no adverse reactions or complications in any patient, and all patients were satisfied with the results. A 2017 retrospective study published in the Journal of Hand Surgery showed good results with amniotic wrapping in three patients who underwent revision radial sensory nerve neurolysis for Wartenberg's syndrome. The authors found no adverse events or complications associated with the membrane. A 2018 study of sciatic nerve wrapping in rats showed "strongly reduced adhesions" and "significantly higher" postsurgical functional abilities. The authors concluded amniotic wrapping "is strongly effective against recurring nerve scarring and induces an anti-fibrotic and pro-regenerative effect, making it highly promising for treating adhesion-related disorders."

8. In 2018, Dr. Annest and Dr. Richard Sanders published a case study in the Journal of Vascular Surgery Cases and Innovative Techniques regarding a patient who had undergone TOS surgery and brachial plexus amniotic wrapping. The patient required a second surgery a year later due to recurrence of symptoms. During the second surgery, the amnion wrap was observed to be intact and the nerves underneath the wrap were clean and free of adhesions. However, dense scar tissue had formed around the brachial plexus nerve roots above the wrap, which accounted for the patient's recurrent symptoms. Dr. Annest and Dr. Sanders concluded the amniotic membrane had successfully protected the portion of the brachial plexus that had been wrapped. The poor outcome from the first surgery was not due to failure of the amnion wrap, but because the brachial plexus roots had not been wrapped.

9. Dr. Annest's case study article also includes statistics regarding the use of amniotic wrapping in his practice since 2015. Amnion wrapping had been used in 97 TOS operations by the time the article was written in 2017. The first 40 patients had been observed for one year, with only a 5% recurrence rate. The article noted patients must be observed for 24 months before acceptable long-term results can be established, and longer-term studies were in progress.

10. Dr. Annest has not finished compiling statistical data regarding long-term outcomes, so no hard numbers are available. In his reports, Dr. Annest said he has noticed an approximately 50% improvement in outcomes using the membrane. In his deposition, he estimated a recurrence rate of approximately 20% in cases where amnion wrap was used. It is unknown whether any recurrent cases were due to failure of the wrap or, like the patient in the June 2018 paper, because the wrap was not used extensively enough.

11. Based on his personal experience, Dr. Annest considers the amnion wrap "indispensable."

12. Respondents obtained a Rule 16 peer review regarding Dr. Annest's preauthorization request from Dr. Teruya, a vascular surgeon, and Dr. Sollender, a plastic surgeon. The peer review concluded, "The requested amniotic wrap is not recommended by the guidelines and peer-reviewed literature states long-term studies are in progress. Therefore, the request is modified to approve [the surgery] without the amniotic wrap."

13. Health insurance carriers have generally covered the amnion wrap, with the exception of Kaiser.

14. Amnion membranes have been used successfully for scar prevention in many areas of medicine and surgery, including burns, diabetic ulcers, chemical and thermal eye injuries, prostatectomy, and back surgery. Animal models have demonstrated "profound success" according to the authors of one study.

15. Dr. Annest's opinions regarding the reasonable necessity of the amnion wrap are credible and persuasive.

16. Claimant proved by a preponderance of the evidence inclusion of the amnion wrap as recommended by Dr. Annest is a reasonably necessary adjunct to the TOS surgery.

CONCLUSIONS OF LAW

The respondents must provide medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). The claimant must prove any requested treatment is reasonably necessary by a preponderance of the evidence. The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure the quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP Rule 17, Exhibit 6 addresses lower extremity conditions, including meniscal pathology. As the final arbiter of disputes regarding medical treatment, the ALJ may consider the MTGs as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011). But the ALJ is not bound by the MTGs when determining whether requested medical treatment is reasonably necessary or injury-related. Section 8-43-201(3).

As found, Claimant proved the amnion wrap is a reasonably necessary adjunct to the pending TOS surgery. Based on the evidence presented, the procedure appears reasonably efficacious, with no significant downside risk. Dr. Annest's explanations were cogent, well reasoned, and persuasive. The science behind the procedure is sound, and the technology is being successfully deployed in several areas of medicine. Dr. Annest has supportive anecdotal evidence from his patient population regarding its utility. Although empirical evidence regarding the procedure is limited at present, the available data shows good outcomes with minimal or no risk. Dr. Teruya and Dr. Sollender provided no opinions regarding the merits of the procedure, beyond simply noting the MTGs do not address it and long-term studies are ongoing. The current TOS MTGs were written in 2014, before Dr. Annest and his partner even started using amnion wraps. In any event, the MTGs recognize that "acceptable medical practice may include deviations from these guidelines, as individual cases dictate." Dr. Annest has adequately justified the use of amnion wrapping.

ORDER

It is therefore ordered that:

1. Insurer shall cover the amnion wrap in conjunction with the TOS surgery to be performed by Dr. Annest.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 16, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the cervical spine surgery performed by Dr. Paul Stanton on July 30, 2018, was reasonable, necessary, and related to his work injury of April 13, 2018?

II. Has Claimant shown, by a preponderance of the evidence, that the lumbar spine surgery performed by Dr. Paul Stanton on December 12, 2018, was reasonable, necessary, and related to his work injury of April 13, 2018?

STIPULATION

At hearing, the parties stipulated that Claimant's Average Weekly Wage is $1413.97. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant has been employed by Global Medical Response as a paramedic since 1997. As a paramedic, Claimant's duties included responding to emergency medical calls, performing CPR, participating in rescues, and lifting and transferring injured people. On April 13, 2018, Claimant slipped and fell on icy stairs outside of his workplace. There were approximately 5 stairs. In his initial written injury report to the Employer, Claimant described the circumstances of his injury as follows:

> I fell onto concrete steps landing on my right elbow, back and ankle awkwardly. I felt immediate pain to right ankle, knee, elbow, and lower back. I went into the station and immediately took some ibuprofen and began icing my back and elbow and finished my shift. I went home and kept treating elbow, back, and ankle with ice due to swelling and severe pain to elbow. Later that day I began having increased pain, swelling, and numbness to right hand and was having problems grabbing or holding objects in hand. I called supervisor and advised him of injury and called off duty for my shift the next day, I filled out brief incident report." (Ex. Y, pp. 1-2).

Cervical Spine

2. Medical records do not show that Claimant reported injuring his head or neck in his initial written injury report relating to the April 13, 2018 slip and fall. *Id*

3. Between the date of injury and May 23, 2018, Claimant had 6 appointments through Concentra, including with Dr. Randall Jones, Dr. Timothy Hart, and Dr. George Johnson. (Ex. D, pp. 10-13). Cervical spine symptoms were not mentioned in the medical reports for any of these 6 appointments. *Id*.

4. At hearing, Claimant testified that he remembered describing cervical spine symptoms to Dr. Jones and Dr. Johnson at Concentra during his first two appointments, but alleged that each of the providers omitted the cervical spine symptoms from their respective medical reports.

5. Claimant testified he believed he aggravated the previous fusion when he fell and hit his head on the stairs. He had experienced the same kind of finger numbness and tingling after the previous work injury but the fusion surgery resolved those symptoms. He testified that his pre-existing neck pain resulted from an incident in which a large patient became combative and tried to overturn the stretcher that she was strapped onto. Claimant tried to catch the stretcher to prevent it from overturning, and in the process injured his neck. That was the injury which led to the fusion in 2010.

6. Claimant testified that he treated with Christopher Malinky, M.D. prior to the injury in this case. He was able to manage his pre-existing neck and low back pain through use of medications, stretching, and diet. He was fully able to perform his job with no restrictions. He typically worked a shift of 48 hours, then four days off. He frequently worked overtime. During time off work, Claimant played sports with his four children, coached baseball and basketball, and went hunting, fishing and hiking with them. He had no limitations in his activities of daily living prior to the injury in this case. Prior to this work injury, Claimant had some minor low back pain but no difficulty walking. After the injury, Claimant had low back pain with radicular symptoms in his lower extremities. Claimant described the low back pain as "completely different" than he experienced previously, and described it as feeling like someone "stuck a hot poker" in his back. After the injury, Claimant experienced some urinary incontinence. He had some of this after his original neck injury but it resolved after the fusion surgery in 2010. After initially admitting that he received acupuncture, physical therapy, and chiropractic treatment prior to the date of injury to treat his lower back, Claimant later described those treatments as part of a "body wellness" regimen.

7. Claimant also testified that his low back pain was severe. He knew it was a different type of pain than what he experienced by lifting patients and performing other normal tasks of a paramedic. He testified he was concerned he may have broken his tailbone. Claimant's pre-existing back pain was caused by an incident in which he was kicked out of the back of an ambulance by a "PCP patient." He struck the bumper of the ambulance then landed on the street. That incident happened approximately three years into Claimant's employment. Claimant experienced approximately nine other work-related injuries with Employer prior to this case. (Ex.

W). Some injuries were to his low back and some to his neck. Claimant did not have any surgery to his low back prior to the injury in this case. Claimant reported in his testimony that he didn't like methadone, stopped taking methadone tablets soon after it was prescribed, and did not request an increase to his methadone prescription.

8. On May 15, 2018, Claimant reported to Dr. Paul Stanton for an orthopedic evaluation. (Ex. R). Dr. Stanton performed an examination of Claimant's neck and upper extremities. They were found to be within normal limits. No cervical symptoms were mentioned in this medical report. *Id*.

9. On May 24, 2018, Claimant reported to Dr. Stanton for a follow up appointment. (Ex. S). No cervical spine symptoms were referenced. A cervical spine x-ray was ordered, to address Claimant's perineal numbness and erectile dysfunction, and it revealed a "previous anterior cervical fusion at C5-6 and C6-7. There appears to be stable position of his instrumentation. He does have *advanced disc disease* at C4-5 with mild retrolisthesis and posterior spondylotic ridging." (Ex. S, p. 71). Dr. Stanton ordered a cervical spine MRI to try to identify Claimant's erectile dysfunction and perineal numbness. (emphasis added).

10. On June 1, 2018, Claimant reported to Dr. Johnson for a follow up CCOM appointment. (Ex T). On physical examination, Dr. Johnson noted that the cervical spine appeared normal with no tenderness, and that Claimant stated that his neck was "normal for him." *Id* at 75.

11. On June 21, 2018, Claimant underwent a cervical spine MRI. This revealed:

> ACDF C5-C7 with mature osseous fusion, C4-5 circumferential disc osteophyte complexes contributing to severe central spinal canal stenosis with deformation of the cord and no cord signal abnormality, a C3-4 central protrusion resulting in mild spinal canal stenosis and moderate left neural foraminal stenosis, left paracentral osteophyte contributing to mild central spinal canal stenosis, and additional disc bulges and degenerative changes. (Ex. U).

12. On June 26, 2018, Dr. Stanton recommended Cervical Spine Surgery. (Ex. 3, p. 171). This surgery was denied by Respondents, based upon the Rule 16 Record Review of Dr. Michael Rauzzino, M.D., which opined that the Surgery was:

> …clearly outside the scope of the patient's injury and fall. The initial notes clearly document a lack of cervical symptoms or radiculopathy. The original note documents no evidence of cervical paresthesias. Dr. Stanton's original note also did not indicate cervical myelopathy or radiculopathy. He obtained cervical and

> thoracic MRIs due to the patient's complaints of erectile dysfunction and perineal numbness; these are not findings attributable to the chronic cervical spinal cord stenosis that are related to degenerative changes above the previous fusion." (Ex E, p. 19).

13. Dr. Rauzzino noted that during the June 26, 2018 appointment with Dr. Stanton, Claimant listed a number of new symptoms including numbness and tingling in his upper extremities, fine motor difficulty, trace Hoffman's, and mild weakness of the deltoids and biceps.

> Given the lack of cervical radiculopathy or myelopathy documented by the original providers after the fall including Dr. Johnson and Dr. Stanton, there is no evidence to indicate that Mr. McIntyre sustained any injury to his cervical spine in this fall.
>
> As is sometimes seen in these cases, only after a positive finding is noted do the appearance of clinical symptoms occur, i.e., the documentation of a positive Hoffmann's sign as well as weakness in the deltoid. These findings were clearly not evident immediately after the patient's fall.
>
> If Mr. McIntyre had, in fact, sustained an injury to his cervical spine, his symptoms would have been acute and would have then been expected to improve. They would not be expected to be quiescent and then abruptly develop several months after the injury." (Ex. E, p. 19).

14. Dr. Stanton reviewed the MRI results on June 26, 2018 and noted, "Douglas returns to the office for evaluation of his cervical and thoracic spine. He is now reporting that he is having numbness and tingling in his upper extremities. He has find [sic] motor difficulty. He said that he is dropping objects and also said that his balance has been off. This is one of the reasons we originally imaged his cervical and thoracic spine." (Ex. 3, p. 170). Dr. Stanton noted the cervical MRI "…demonstrates previous ACDF at C5-7 with retained instrumentation. The C4-5 level demonstrates collapse of disc space, retrolisthesis, a broad based disc herniation causing cord contact and flattening bilaterally slightly more on the right side. At C7-T1 there is a broad based subligamentous disc herniation without significant stenosis." (Id. at 171).

15. Dr. Stanton then remarked, "…At this point, I had a long talk with Douglas regarding options. His symptoms I think in regards to his balance, fine motor difficulties and upper extremity symptoms are mainly due to his cervical stenosis. There is cord compression with obvious flattening and he is exhibiting signs of cervical myelopathy. I think this is the more pressing issue. I think that this needs to be reconstructed surgically. He is already having myelopathic symptoms and I do not think that further conservative care is in his best interest. I think he needs a C4-

5 ACDF with revision of his anterior instrumentation…He understands the reason to have surgery for myelopathy is not necessarily for improvement of symptoms but to slow progression of his symptomatology. We would address his lumbar spine if needed following his cervical spine surgery." (Id. at 171, 172).

16. On July 30, 2018, Dr. Stanton performed the Cervical Spine Surgery. The surgery costs were paid through Claimant's personal health insurance.

17. Claimant testified he had no cervical symptoms of this nature prior to the work injury at issue. He also testified the lumbar surgery was successful. He no longer feels that something is "broken," and while he continues to have some problems with balance, they are improving and are better than before surgery. He is regaining strength and feeling in his legs.

18. Upon the submission of additional medical records, Dr. Rauzzino, performed a follow up Rule 16 Record Review. A report was submitted to Respondents on February 4, 2019. (Ex. F, pp. 21-32). Dr. Rauzzino found that:

> my opinion is unchanged regarding the causality of the need for cervical spine surgery. I would again point to Dr. Stanton's note dated 05/15/18 when he noted no neck pain or arm pain, numbness, weakness, tingling, or evidence of cervical radiculopathy. His subsequent note on 05/24/18 also failed to document any of these symptoms. Dr. Stanton ordered MRIs of the cervical and thoracic spine to investigate erectile dysfunction and perineal numbness. Dr. Stanton is certainly qualified as an orthopedic surgeon to diagnose cervical radiculopathy and myelopathy. I would again note the nature and timing of Mr. McIntyre's complaints along with Dr. Stanton's notes. This information excludes the possibility of cervical spine injury requiring treatment related to the fall." (Ex. F, p. 32).

19. The February 26, 2019 pre-hearing deposition of Dr. Rauzzino reveal the following excerpts:

> A. When [Claimant] had this fall, he didn't complain of neck pain or arm paresthesias or anything that was suggested an acute injury to a cervical spine. He did have some chronic neck pain from his previous injury, but Dr. Jones' note is very clear, no increase in chronic neck pain, no history of paresthesias; and also the way the doctor treated him – the doctor didn't order pictures of his neck or anything like that because that's not where the patient complained of symptomatology." (Depo. P. 11, ll. 15-25).
>
> A. Subsequent to this evaluation, the patient was seen – was referred to a Dr. Stanton, who is an orthopedic surgeon in Colorado

Springs, who was evaluating for his lumbar spine. In the process of evaluating the lumbar spine, the patient complained of some symptoms of erectile dysfunction, and as a result of that, Dr. Stanton ordered MRIs of both the thoracic and cervical spine. When the MRI of the cervical spine came back, it was noted the patient had very severe preexisting cervical stenosis above the previous fusion. At that point the narrative changed. As soon as this radiographic finding was noted, *new symptoms were documented* that suggested the patient needed to have surgery for this." (Depo. p. 12, ll. 1-15).

A. The findings that were noted on the MRI were chronic degenerative changes. *I'm not saying it would have been unreasonable to treat him given the amount stenosis that was found, but it was not related in any way to the single fall on the ice that occurred in April [2018]."* (Depo. p. 13, ll. 6-11).

A. [T]hat (cervical) surgery was prophylactically to treat him…..It was an elective surgery to be done to try to prevent Mr. McIntyre from having trouble with his neck down the line…" (Depo. pp. 18-19).(emphasis added).

20. Records reveal that Claimant has a pre-existing history of cervical spine conditions and complaints as documented below:

i. On February 5, 1998, Claimant injured his head, neck, back, and left knee. (Ex. W, p. 90).

ii. On October 16, 2003, Claimant suffered aggravated neck and back injuries following a motor vehicle collision. (Ex. W, pp. 91-92).

iii. On October 5, 2009, Claimant developed neck and left shoulder pain while moving a cot carrying a 500lb patient. (Ex. H, p. 34). He filed a worker's compensation claim for this injury.

iv. An x-ray of Claimant's cervical spine on October 12, 2009 showed "narrowing of the C5-6 disk space with significant posterior spurring of C5 and 6 at these disks." (Ex. G, p. 33). There was evidence of degenerative disc disease at C5-6 and C6-7.

v. An MRI of Claimant's cervical spine on October 26, 2009 revealed "a C5-6 disk protrusion with moderate spinal compression." (Ex. H, p. 34).

vi. On February 8, 2010, Dr. Ghiselli performed an anterior cervical decompression and fusion at C5-6/C6-7. *Id.*

vii. On September 21, 2010, Claimant was assigned a 20% whole person impairment rating for *abnormal cervical motion*, and an 11% whole person impairment rating for a "single-level operation with residual signs and symptoms for a spinal stenosis and segmental instability." (Ex. H, p. 36). These were combined for a 29% whole person impairment rating. Claimant's residual signs and symptoms at the impairment rating appointment included pain rated at 7/10, occasional bilateral arm and numbness, and a marked decreased cervical range of motion. *Id*, p. 35. (emphasis added)

viii. On January 4, 2012, Claimant experienced cervical and back strains. (Ex. W, p. 89).

ix. The same day, Claimant underwent a cervical CT which revealed mild degenerative disc disease at the level above the fusion ay C4-C5. (Ex. I, p. 37).

Lumbar Spine

21. As noted, Claimant's first appointment with his worker's compensation ATP (Dr. Randall Jones at Concentra) took place on April 19, 2018. (Ex. M). Claimant reported immediate pain and swelling in his right elbow, and some increase in his chronic back pain. *Id* at 50. The physical examination revealed left paraspinal and right paraspinal tenderness, full range of motion with painful flexion, and findings 'otherwise normal'. *Id*, at 51. No medications were prescribed or dispensed at this appointment.

22. At this April 19, 2018 appointment, Claimant underwent a lumbar spine x-ray. This revealed

1. Multilevel *degenerative* disc disease,

2. Straightening of the normal lordosis,

3. Slight loss of height of L1 and L2 *probably old*, and mild dextroscoliosis. (Ex. M, p. 54). (emphasis added).

23. During this same appointment, Claimant also underwent a lumbar spine MRI, which revealed the following:

> 1. L5-S1: assymetris spondylotic disc bulge, moderate-severe left and moderate right foraminal stenosis, bulging facet capsules contacts both exiting L5 nerve root in their foramina, spondylotic disc material contacts the undersurface of both exiting L5 nerve roots in the extraforaminal zones with continued contact into the lateral zones (correlate for L5 radicular symptoms on either side),

prominent left L7 transverse process has pseudoarticulation with the left hemisacrum (correlate for Bartolutti disease, especially on the left), mild left facet capsulitis, focal posterior end-plate edema (contusion versus stress reaction)

2. 22 degree dextroconvex lower lumbar curvature (severe lumbar scoliosis).

3. Bilateral L4 and L5 pars sclerosis with low-grade stress reaction the right L5 pars.

4. L1-2: asymmetric right foraminal-lateral spondylotic disc bulge, modic 1 end-plate edema, mild bilateral facet capsulitis, mild central thecal sac stenosis

5. L2-3: concentric spondylotic disc bulge, grade 1 retrolisthesis, modic 1 end-plate edema

6. L3-4: shallow concentric disc bulge, disc material gently contacts exiting left L3 nerve root as it exits the root foramina (Ex. N, p. 56).

24. On April 23, 2018, Claimant reported to PAC Haeffner for a medicine evaluation. (Ex. O). Claimant requested that he keep the same prescriptions, and reported lower back pain with radiculitis, bilateral posterior thigh and groin pain with some new urinary/bowel incontinence. *Id* at 57. Claimant's pain level was 9/10. His lumbar range of motion remained the same as his pre-injury range of motions, except that his flexion had decreased from 70º with pain to 45º. Trigger points included points to the sacrum/perineal area with numbness. Claimant was diagnosed with postlaminectomy syndrome, multiple sites of myositis, lumbar region radiculopathy, and right elbow pain. *Id* at 60. Claimant's prescriptions were renewed for Ambien, bupropion, gabapentin, methadone, oxycodone, Requip, Skelaxin, and Soma. *Id*.

25. On April 24, 2018, Claimant reported to Dr. Jones for a follow up appointment. (Ex. P). Claimant noted that his lower back pain had worsened. *Id* at 61. Dr. Jones noted regarding Claimant's lumbar spine that there was "no CE but chronic changes." Claimant had a full range of motion with painful flexion and U level bilateral paraspinal tenderness. *Id* at 62. Dr. Jones referred Claimant to Dr. Stanton for an orthopedic evaluation.

26. On May 8, 2019, Claimant reported to Dr. George Johnson for a follow up appointment. (Ex. Q). Claimant reported that his lower back pain was his primary concern, as it was severe, and worse with sitting and standing. *Id* at 65. On physical examination, Claimant's range of motion and paraspinal tenderness were unchanged. Dr. Jones opined that he did "not think [Claimant was] a surgical candidate. *90% of his pain is in his back not his legs.* He has intermittent numbness in his legs and occasional problems with urine retention. ***I do not think***

this is due to his back injury […] *I think that his disc problems are old and are not causing his current problems." Id* at 67. Claimant then informed Dr. Johnson that he could not return to work per Dr. Stanton. (emphasis added).

27. On May 15, 2018, Claimant reported to Dr. Stanton for an orthopedic evaluation. (Ex. R). Claimant rated his back pain as 8-10/10, and his leg pain as 6-10/10. *Id* at 68. On physical examination, Dr. Stanton found tenderness to palpitation over Claimant' lumbar spine and paraspinal muscles, decreased trunk flexion and extension secondary to pain, diffuse decreased sensation over the posterior and lateral aspects of his bilateral lower extremities, and an antalgic gait.

28. Lumbar x-rays conducted in Dr. Stanton's office showed "degenerative scoliosis of the lumbar spine apex right. Lateral view shows disc height collapse most severe from L1 to L3 with degenerative endplate changes and disc height collapse at L5-S1." *Id*. Dr. Stanton diagnosed *degenerative* scoliosis of the lumbar spine and bilateral lower extremity radicular symptoms. He prescribed a Medrol Dosepak and recommended that Claimant return with copies of his lumbar MRI.

29. On May 24, 2018, Claimant returned to Dr. Stanton complaining of significant pain and weakness in is lower extremities, extreme radicular pain, perineal numbness and erectile dysfunction with urine stream difficulties. (Ex. S, p. 71). He had undergone an epidural steroid injection, which had provided two days of relief. Claimant's physical examination was within normal limits except the he had mild weakness in the anterior tibialis and extensor hallucis longus, and he ambulated with an antalgic gait.

30. An updated lumbar MRI showed the severe collapse of the L5-S1 disk space with severe foraminal stenosis, a mild disc collapse of the L1-2 and L2-3 levels with asymmetric collapse and resultant mild foraminal stenosis. (Ex. S, p. 72). Claimant was diagnosed with lumbar region spinal stenosis with neurogenic claudation, lumbosacral intervertebral disc degeneration and disc disorders with radiculopathy, scoliosis, and thoracic spinal pain. Dr. Stanton recommended reconstruction of Claimant's L5-S1 segment.

31. This Surgery was also denied by Respondents, based upon the Rule 16 Record Reviews performed by Dr. Rauzzino. He opined that the Surgery was not causally related to Claimant's workplace injury. (Ex. D, p. 15; Ex. E, p. 18). In support of his determination, Dr. Rauzzino referenced the January 1, 2018 medical record from PAC Haeffner, wherein it was noted that Claimant had experienced significant back pain and radiculopathy prior to the workplace injury, "suggesting a crescendoing pattern of the pain." (Ex. D, pp. 14, 15). He also noted that *"[p]ost reported injury imaging of the lumbar does not appear to demonstrate a new acute structural injury to the lumbar spine that would produce ongoing symptoms or need for treatment."* (emphasis added).

32. On December 12, 2018, Dr. Stanton performed the Lumbar Spine Surgery. The surgery costs were paid through Claimant's personal health insurance.

33. Upon the submission of additional medical records to Dr. Rauzzino, a follow up Rule 16 Record Review was performed, with a report submitted to Respondents on February 4, 2019. RHE F. Dr. Rauzzino found that "the records clearly indicate a long history of low back pain going into his legs for which he required significant use of narcotics. He has a degenerative lumbar scoliosis and stenosis with no evidence of acute structural injury to the lumbar spine as a result of his fall. His ongoing symptoms after the reported fall were similar to those that he reported previously." *Id*, p. 32. "Mr. McIntyre has received a number of treatments for his low back pain in the past including injections, chiropractic care, and acupuncture. He was diagnosed with post-laminectomy syndrome, myositis, neuralgia, neuritis, and lumbar region radiculopathy and was being actively treated by Dr. Malinky for a number of years for these conditions prior to his fall. Mr. McIntyre was felt by Dr. Malinky to have opioid dependence and was being actively treated for symptoms at the time of his workplace injury." *Id*. Dr. Rauzzino therefore concluded that Claimant's need for surgery was "related to his multilevel degenerative disc disease with deformity and scoliosis which are unrelated to his fall." *Id*.

34. During the February 26, 2019 pre-hearing deposition of Dr. Rauzzino, the following excerpts are noted:

> A. He [Claimant] complained of very severe back pain with pain radiating to his legs. He saw his primary care provider, Dr. Zirkle, in January of that year, I believe, and at that time he was not to be taking methadone, Oxycodone, he had 8 out of 10 back pain. In fact, the patient at that point, Mr. McIntyre, was asking for an increase in his medications due to his symptoms. And, again, his medications were listed as gabapentin, 300 q.i.d., which is a medicine to treat nerve pain in the legs. Methadone, 5 milligrams, which is a very strong medicine to treat pain. He was taking Oxycodone, 10 milligrams, four times a day. He was taking Requip, Skelaxin, Soma. These are all medications to treat symptoms with back and leg pain, muscle spasm, and nerve pain." (Depo. p. 8, ll. 9:23).
>
> A. This [Lumbar Spine] surgery wasn't done for a single level of spine to his injury, it was done for chronic, multi-level degenerative changes. The fact that the surgeon treated three to five levels of the lumbar spine, basically the entirety of the lumbar spine – in fact, no level of the lumbar spine was left untreated. This shows this is a chronic deformity, a degenerative deformity, not an acute structural injury which occurs as a result of a single fall. (Depo. p.15, ll. 3-11).

35. Claimant has a history of lumbar spine complaints. (Ex. I-L).

x. On February 5, 1998, Claimant injured his head, neck, back, and left knee. (Ex. W, p. 90).

xi. On June 22, 2000, Claimant suffered a lumbar contusion and strain. RHE W, p. 91. Claimant received a 17% whole person impairment rating for this injury. (Ex. X, p. 103).

xii. On October 16, 2003, Claimant suffered aggravated neck and back injuries following a motor vehicle collision. (Ex. W, pp. 91-92).

xiii. On November 19, 2006, Claimant strained his lumbar and lumbosacral spine. (Ex. W, pp. 86-87).

xiv. On January 4, 2012, Claimant experienced cervical and back strains. (Ex. W, p. 89).

xv. The same day, Claimant underwent a lumbar spine x-ray which revealed mild lumbar dextroscoliosis, multilevel spondylosis and degenerative disk disease most pronounced at the L1-L2 and L5-S1 levels, and mild vascular calcifications. (Ex. I, p. 38).

xvi. In 2017-2018, Claimant was treating for chronic lower back pain with his primary care provider Dr. Christopher Malinky and PAC Adam Haeffner. (Ex. J-L).

xvii. On September 25, 2017, Claimant reported to PAC Haeffner for a medicine evaluation. (Ex. J, p. 39). Claimant was treating for *constant lower back pain* radiating down his legs with a pain level of 6-7/10. *Id*. He reported that he was "not sure how much relief he got with methadone" and he wanted to discuss his options. Claimant also reported that *his condition was worse with prolonged sitting, lifting, and at the end of the day.* Changing position, ice, and heat improved his symptoms. **Previous interventions:**

L L5/S1 TL ESI [translaminar epidural steroid injection] (multiple)

L L3-5 MBB [medial branch block]

R L3-5 MBB [medial branch block]

B/L L5/S1 SNRE [selective nerve root block], 50%

L4/5 TL ESI [translaminar epidural steroid injection] (emphasis added).

xviii. Claimant's lumbar range of motion was 10º tight extension, 70º flexion with pain, 20º left and right lateral. Trigger points included the L4 spine and bilateral anterior legs. *Id*. Claimant was diagnosed with postlaminectomy syndrome (not elsewhere

classified), multiple sites of myositis, and unspecified neuralgia and neuritis. PAC Haeffner recommended a lumbar spine MRI.

1. The specific symptoms reported by Claimant are as follows:

    a. Constitutional symptoms included chills, dizziness, fatigue, restless sleep, and sleeping problems. *Id* at 39.

    b. Cardiovascular symptoms included leg cramps or pain in legs when walking a short distance. *Id* at 40.

    c. Respiratory symptoms included shortness of breath or difficulty breathing, and 2 liters of oxygen every night. *Id*.

    d. Gastrointestinal symptoms included heartburn or indigestion. *Id*.

    e. Musculoskeletal symptoms included muscle pain, constant back pain, neck pain, intermittent joint pain, joint stiffness, neck stiffness, weakness, and occasional left leg pain. *Id*.

    f. Neurological symptoms included difficulty walking, difficulty with balance, falling down, leg numbness, and tingling or “pins and needles” in the legs. *Id*.

    g. Psychiatric conditions included anxiety. *Id*.

2. Claimant had an extensive medication regimen at this time, including: (Ex. J, p. 40)

    a. Skelaxin, 800mg, once/day for 90 days (quantity: 270 tablets), start date: 1/27/2016

    b. Gabapentin, 300mg, once/day for 90 days (quantity: 360 capsules, start date: 8/15/2016

    c. Bupropion HCl, 150mg, once/day for 90 days (quantity: 90 tablets), start date: 11/7/2016

    d. Provigil, 100mg, for 90 days (quantity: 60 tablets), start date: 11/7/2016

e. Soma, 350mg, once/day for 90 days (quantity: 90 tablets), start date: 11/7/2016

f. Requip, 4mg, (quantity: 30 tablets), start date: 2/8/2017, 2 refills

g. Oxycodone, 10mg, 1 tablet by mouth (quantity: 120 tablets), start date: 5/1/2017

h. Ambien, 10mg, once/day for 90 days (quantity: 90 tablets), start date:7/31/2017

i. Methadone, 5mg, twice/day (quantity: 60 tablets) start date: 7/31/2017

j. Oxycodone, 10mg, 1 tablet by mouth (quantity: 120 tablets), start date: 7/31/2017

k. Viagra, 100mg, for 90 days (quantity: 15 tablets), start date: 7/31/2017

l. Methadone, 5mg, twice/day (quantity: 60 tablets), start date: 9/25/2017

xix. On November 20, 2017, Claimant reported to PAC Haeffner for a follow up appointment. (Ex. K). Claimant reported his lower back pain level as 7/10, and his primary problem was mid and lower back pain with radiation into the left posterior and lateral thigh, and neuropathy. *Id*, p. 43. Claimant's prescriptions were renewed for Ambien, bupropion, gabapentin, methadone, oxycodone, Requip, Skelaxin, and Soma. *Id* at 46.

xx. On January 29, 2018, Claimant reported to PAC Haeffner for a follow up appointment. (Ex. L). Claimant reported his lower back pain level as 8/10. *Id*, p. 47. He was concerned about lower back pain radiating into his legs which was aggravated by walking and sitting, and relieved by "not doing the same thing for too long." *Id*. **"Pt. would like to consider medication <u>increase</u>, methadone."** Claimant was diagnosed with uncomplicated *opioid dependence*, a lumbar region intervertebral disc displacement, postlaminectomy syndrome, and multiple sites of myositis. *Id* at 49. His request for a methadone *increase* was denied, and Claimant's prescriptions were renewed for Ambien, gabapentin, methadone, oxycodone, Requip, Skelaxin, and Soma. (emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, while the Claimant may well ascribe his improved condition to his surgeries, such description sheds no significant light on whether such need for surgery was causally related to his work injuries. As noted further, Claimant's contentions about his methadone usage, reporting of current symptoms, and prior back treatments are not convincing.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d

186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ finds Dr. Rauzzino's reports and testimony persuasive on the issue whether Claimant's surgeries were causally related to the work injury.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo 1972).

Medical Benefits, Generally

F. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. §8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may challenge the reasonableness and necessity of treatment. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Claimant must then prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The ALJ's factual determinations must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Delta Drywall v. Industrial Claims Appeals Office*, 868 P.2d 1155 (Colo. App. 1993).

G. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Moreover, a claimant is not required to prove causation by medical certainty. Rather, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that that the condition for which he seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and the need for treatment. *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

H. In *Weber v. Shiloh House*, W.C. 4-540-459 (2005), the ICAO noted; "…Few principles are more fundamental to the Workers' Compensation Act of Colorado (Act) than the rule that "this state does not distinguish between disabilities that are the result of employment-related aggravation of pre-existing conditions and those that are not." Thus, where a "pre-existing condition is aggravated by an employee's work, the resulting disability is a compensable industrial disability." *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990). A similar expression of the same principle

is that the "employer must take the employee as it finds him so that the employer is responsible for any increased disability resulting to an employee from a pre-existing weakened condition." See *Cowin and Co. v. Medina*, 860 P.2d 535, 538 (Colo. App. 1992). At other times our courts stated the rule that a pre-existing condition or disease "does not disqualify a claim if the employment aggravates, accelerates, or combines with the disease or infirmity to produce the disability for which workers' compensation is sought." *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990).

Cervical Surgery

I. The records for this claim do not show that Claimant hit his head or neck on the stairs on the date of injury, nor did Claimant display any cervical spine symptoms resulting from the slip and fall. As adduced by Dr. Rauzzino, the Cervical Spine Surgery was a prophylactic measure to prevent future worsening of Claimant's symptoms due to his preexisting, degenerative disease and history of cervical injuries. The fact that the Surgery occurred contemporaneous with treatment for an unrelated worker's compensation injury does not create a presumption of causation or relatedness. The initial written incident report completed by the Claimant was detailed, and documented injuries to his right elbow, right ankle, knee, right hand, and lower back. The written report did not reference any injuries to Claimant's head or neck.

J. Cervical spine symptoms are not referenced in Claimant's first 6 appointments with 3 different doctors at Concentra, as acknowledged by Claimant. At hearing, Claimant alleged that he remembers orally reporting head and neck symptoms to his Concentra physicians, however, not one of his physicians lists a single relevant symptom in their initial reports. To the extent that Claimant now contends that the records are inaccurate in this respect, the ALJ finds this contention unconvincing.

K. Furthermore, the physician who recommended the Cervical Spine Surgery, Dr. Stanton, did not note any cervical symptoms in his first two appointments with the Claimant. Cervical surgery had not been discussed or considered by Dr. Stanton prior to June 26, 2018. Claimant had not been presenting any active symptomology before that date. The impetus of the surgery recommendation was the June 21, 2018 cervical spine MRI. This revealed a number of underlying cervical conditions, as noted in Finding of Fact #11. Per the expert opinion of Dr. Rauzzino: "[a]t that point the narrative changed. As soon as this radiographic finding was noted, *new symptoms were documented* that suggested the patient needed to have surgery..."

L. Claimant has a history of cervical spine complaints and surgery. Claimant did not report hitting his head or experiencing any relevant symptoms in his written injury report. There is no evidence of relevant symptomology in the medical records until June 2018. Respondents' expert witness Dr. Rauzzino confirmed that the June 21 MRI revealed very severe preexisting cervical stenosis above the previous fusion, and that it was this degenerative condition that the Cervical Spine Surgery treated, unrelated to Claimant's workplace injury. As Dr. Rauzzino concedes, ***"it would not have been unreasonable to treat,*** *given the amount of stenosis that was found".* However, the ALJ further finds (and therefore concurs with Dr. Rauzzino) that there is **insufficient**

evidence that the need for surgery is **causally related** to the fall which occurred at work on April 13, 2018. Nor was this surgery necessitated by an aggravation of a pre-existing condition.

Lumbar Surgery

M. Extensive documentation relating to Claimant's pre-existing degenerative lumbar condition and related opioid dependence exists in the record. This documentation was submitted to Dr. Rauzzino for three separate Rule 16 Record Reviews. Furthermore, Claimant's arguments in support of causation and relatedness rely upon statements made by the Claimant, both in his hearing testimony and as reported to his physicians. Claimant reported in his testimony that he didn't like methadone, stopped taking methadone tablets soon after it was prescribed, and did not request an increase to his methadone prescription. The documentary evidence suggests otherwise. Claimant was provided with methadone refills several times between September 25, 2017 and April 23, 2018. On January 29, 2018, Claimant requested an *increase* to his methadone dosage, according to the medical report of PAC Haeffner.

N. Claimant also minimizes the nature of the care for his preexisting lumbar condition. After initially admitting that he received acupuncture, physical therapy, and chiropractic treatment prior to the date of injury to treat his lower back, Claimant later described those treatments as part of a "body wellness" regimen. The medical reports from Interventional Pain Management document that Claimant's treatment was not for general care, but specifically for treatment of his lower back pain and radiculopathy. In addition to acupuncture, physical therapy, and chiropractic care significant "previous interventions" were noted:

> Left L5/S1 translaminar epidural steroid injection (multiple)
> Left L3-5 medial branch block
> Right L3-5 medial branch block
> Bilateral L5/S1 selective nerve root block, 50%
> L4/5 translaminar epidural steroid injection.

O. Claimant's degenerative lower back conditions are well documented, and have not been overcome through Claimant's unsupported testimony. Per Dr. Rauzzino's deposition testimony, "[t]he fact that [Dr. Stanton] treated three to five levels of the lumbar spine, basically the entirety of the lumbar spine – in fact, no level of the lumbar spine was left untreated. This shows this is a chronic deformity, a degenerative deformity, not an acute structural injury which occurs as a result of a single fall." The ALJ finds this reasoning persuasive.

P. The ALJ concludes that while the Lumbar Spine Surgery was arguably reasonable and necessary, it *was not related* to Claimant's current workplace injury. Claimant has a significant history of lumbar spine complaints and treatment. Although diminished the importance of the treatment provided in the months leading up to his date of injury, he failed to provide convincing evidence or testimony to overcome the medical records of his various treating physicians, and Respondents' expert witness testimony and Rule 16 Record Reviews. Nor does the ALJ conclude that the lumbar

surgery was necessitated by an aggravation of Claimant's pre-existing injury to his back.

ORDER

It is therefore Ordered that:

1. Claimant's request for reimbursement for the costs of his cervical and lumbar surgeries performed by Dr. Stanton is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 16, 2019

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-933-851-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 20, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 2/20/19, Courtroom 2, beginning at 1:30 PM, and ending at 4:20 PM).

Claimant's Exhibits 1 through 10 were admitted into evidence, without objection. Respondent's Exhibits A through O were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Claimant's opening brief was due within 5 working days and one extension of time was granted. Despite requesting briefs (position statements or written closing statements as described in OACRP, Rule 24), Claimant filed "Proposed Full Findings of Fact, Conclusions of Law and Order on March 27, 2019, presumably indicating that Respondent was filing the same. As a matter of judicial protocol, the ALJ finds it to be inappropriate to entertain a presumed decision, as opposed to argument, which could create an appearance that the ALJ has abdicated his decision-making function. The ALJ will consider the Claimant's filing as an "opening brief." In this instance, the ALJ gives counsel for the Claimant the benefit of the doubt and infers that counsel was confused concerning the establishment of a post-hearing briefing schedule, which provided for the filing of an "opening brief" within five (5) calendar days; an answer brief within five (5) calendar days and a reply brief within 2 calendar days. On April 9, 2019,

Respondent filed its answer brief. No timely reply brief was filed and the matter was deemed submitted for decision on April 12, 2019.

ISSUES

The issues to be determined by this decision concern medical benefits (post maximum medical improvement (MMI) medical maintenance benefits, specifically, the reasonable necessity and causal relatedness of sympathetic nerve blocks recommended by authorized treating physician (ATP) Roberta Anderson-Oeser, M.D; the causal relatedness and reasonable necessity of an echocardiogram, recommended by Todd M. Bull, M.D. of uchealth; and, reimbursement of the Claimant for out-of-pocket $100 co-pays om her health insurance for sympathetic nerve blocks that the Claimant received at Kaiser and for which the Respondent would not pay..

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues herein.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant suffered admitted work related injuries to her back and right lower extremity (RLE) on October 24, 2013, when she slipped and fell on a wet floor.

2. The latest Final Admission of Liability (FAL) dated August 23, 2018, admits for medical benefits, temporary total disability (TTD) benefits through April 11, 2016; an MMI date of April 12, 2016; and permanent partial disability (PPD) benefits, based on 18% whole person, and 20% of the RLE.

3. The Claimant began treating with Dr. Anderson-Oeser on October 31, 2013 and Dr. Anderson-Oeser is the Claimant's primary ATP.

4. On March 31, 2014, the Claiman Floyd Ring., M.D. After the block, Dr. Ring noted significant temperature rise and venous dilatation indicating a successful sympatholysis with near resolution of Claimant's pain complaints.

5. On May 1, 2014, Dr. Anderson-Oeser diagnosed the Claimant with probable RLE Regional Chronic Regional Pain Syndrome (CRPS) and referred the Claimant for another block with Dr. Ring. The Claimant underwent a total of 16 blocks between 2014 and 2018.

6. On May 14, 2014, after Dr. Ring administered a block, the Claimant instantly reported almost complete pain relief.

7. On June 3, 2014, Dr. Anderson-Oeser noted that Claimant had a positive response to the block performed on May 14 and "recommended that Claimant continue receiving lumbar sympathetic blocks."

8. On January 26, 2015, the Claimant underwent another block from Dr. Ring. Dr. Ring documented, "Diagnosis of CRPS with good response to blocks…"

9. On March 26, 2015, after performing an independent medical examination (IME) of the Claimant, Sander Orent, M.D., noted that the lumbar sympathetic blocks relieved Claimant's pain.

10. Dr. Orent also agreed that pulmonary issues are related. Dr. Orent also agreed with the opinion of Bull (a Pulmonologist at the University of Colorado Anschutz Center) that Claimant's pulmonary hypertension and tricuspid regurgitation was made worse by recurrent pulmonary embolus.

11. The Claimant underwent additional blocks from Dr. Ring on April 27, 2015; September 14, 2015; December 14, 2015; and February 22, 2016.

12. On March 10, 2016, Annyce Mayer, M.D., performed a Respiratory Impairment Evaluation. Dr. Mayer assessed, *inter-alia*, work-related right lower extremity DVT (deep vein thrombosis) and pulmonary embolism, as well as a pulmonary hypertension that worsened since the work injury. Dr. Mayer assigned a 20% whole person impairment rating for the conditions of pulmonary emboli and pulmonary hypertension.

13. On April 8, 2016, the Claimant reported to Dr. Mayer that her CRPS has improved with nerve blocks.

14. On April 25, 2016, the Claimant underwent another block from Dr. Ring and reported, on May 10, 2016, to Dr. Mayer that her CRPS improved with nerve blocks.

15. On June 23, 2016, Dr. Anderson-Oeser reported improvement of symptoms after the Claimant underwent a block.

Division Independent Medical Examination (DIME) by Douglas Scott, M.D.

16. On August 9, 2016, Dr. Scott performed the DIME. Dr. Scott reviewed the Claimant's medical records and he physically examined her. Dr. Scott determined that the Claimant sustained a peripheral nerve injury and CRPS Type 2, resulting from the work injury. Dr. Scott assigned an 18% whole person impairment rating when

addressing Claimant's work-related CTEPH (chronic thromboembolic pulmonary hypertension).

17. On September 20, 2016, Claimant reported a decrease in pain after undergoing blocks to Dr. Anderson-Oeser, and Claimant reported that she had since been able to "get up and get dressed, perform light cooking and cleaning, and leave the house to perform small errands."

Respondent's Independent Medical Examination (IME) by Lawrence Lesnak, D.O.

18. On March 21, 2017, Dr. Lesnak performed an IME of THE Claimant at the request of Respondents. Dr. Lesnak (a physical medicine doctor) questioned if Claimant sustained any pulmonary emboli. He ultimately stated the opinion that the Claimant did not have CRPS, as there were no clinical physical findings supporting a CRPS diagnosis, multiple inconsistencies in the report of George Schakaraschwili, M.D. (a reputed expert on CRPS), and no significant documented evidence of improvement.

Hearing Testimony

19. During the June 26 and June 30, 2017, hearing, Dr. Anderson-Oeser testified as an expert in physical medicine and rehabilitation and occupational medicine. Dr. Anderson-Oeser is board certified in physical and rehabilitation medicine and is Level II accredited. She testified consistently with her prior opinions in that she maintained that Claimant's work-related diagnosis were CRPS of the right-lower extremity, right peroneal neuropathy, chronic pain syndrome, depression and anxiety, muscle spasms, pulmonary embolis and pulmonary hypertension.

20. Dr. Anderson-Oeser further disagreed with Dr. Lesnak's opinion that Claimant's exam findings were inconsistent and that there was a low probability that Claimant's diagnosis is CRPS. Additionally, Dr. Anderson-Oeser expressed the opinion that the sympathetic blocks were helpful and allowed the Claimant to get out of bed, dress herself, do simple chores, and do light shopping. Without the blocks, the Claimant was bed-bound, according to Dr. Anderson-Oeser.

Todd M. Bull, M.D., Pulmonologist

21. On October 18, 2017, Dr. Bull stated, "In general, 3 months of anticoagulation would be recommended for provoked pulmonary embolisms without evidence of CTEPH. After a provoked PE, patients at 5% chance of recurrent VTE at 1 years and 15% chance of recurrent VTE at 5 years. There is evidence of a PH on RIGHT HEART CATH and on transthoracic echo. Here VQ does not show evidence of clot. We however do no have another cause of PH for her, so I suspect this may be CTEPH." Dr. Bull further stated, "She (Claimant) has noted chest tightness and shortness of breath since the most recent clot and that those symptoms had neither resolved nor improved in the interim. It was noted that Claimant complained of being

fatigued. She also had DOE (dyspenea on exertion) going up stairs or in the shower. She noted some dizziness with exertion as well.

ALJ Kara Cayce

22. On November 3, 2017, ALJ Cayce determined that the Claimant met the Colorado Division of Workers Compensation Diagnostic Criteria for the diagnosis of CRPS, because the Claimant had two positive diagnostic tests. ALJ Cayce further determined that the Claimant's testimony was credible and persuasive. ALJ Cayce credited the opinions of Dr. Anderson-Oeser and the supporting medical records over the conflicting opinion of Dr. Lesnak. According to ATP Dr. Anderson-Oeser, the Claimant's work-related diagnosis is CRPS, depression and anxiety, muscle spasms, pulmonary embolis and pulmonary hypertension.

23. On June 22, 2018, the Industrial Claim Appeals Office (ICAO) affirmed the ALJ Cayce's credibility determination in favor of Dr. Anderson-Oeser over Dr. Lesnak. ICAO stated in part, Dr. Anderson-Oeser or her medical staff saw [Claimant] on a monthly basis between the date of MMI and June of 2017. ICAO confirmed: "The ALJ found [Claimant] has been diagnosed with CRPS, depression, and anxiety resulting from the industrial accident." ICAO further confirmed, "The ALJ was not persuaded by Dr. Van Dorsten's or Dr. Catageorge's opinions that [Claimant] has a somatic pain disorder. The ALJ instead credited the conflicting testimony of [Claimant] and the opinions of Dr. Anderson-Oeser…

24. On May 25, 2018, Dr. Anderson-Oeser disagreed with Dr. Lesnak's second assessment of the Claimant. Dr. Anderson-Oeser was of the opinion that the right lumbar sympathetic blocks were reasonably necessary because as Dr. Anderson-Oeser had previously indicated, the prior blocks (the same that are being presently recommended) did, in fact, improve the Claimant's symptoms and increased her ability to function.

Amar Patel, M.D.

25. On August 24, 2018, Dr. Patel requested lumbar sympathetic blocks stating "This is the only treatment that provides her [Claimant] with pain relief."

26. On September 20, 2018, Dr. Anderson-Oeser reported, "Since the block, [Claimant] has been doing more around her home in regards to house work, cooking, laundry, and her ADLs (activities of daily living). She is also able to perform several errands such as light grocery shopping and taking her children to and from activities. She is going to the gym since she had the blocks. She is performing her water walking and also utilizing a stationary bike. She has been able to reduce her Gabapentin and has not had **any** Percocet since the block" *(Emphasis Added)*

27. On November 27, 2018, Dr. Anderson-Osier stated that [Claimant] responded well to right lumbar sympathetic block was able to reduce her oxycodone/APAP as a result of undergoing the blocks.

The Claimant's Hearing Testimony

28. During the February 20, 2019, hearing, [the Claimant] testified that she is currently receiving medications, nerve blocks, pool therapy, home exercise, and massage therapy as treatment. She further testified that the nerve blocks provider her with the most relief. She testified that the 16 or more nerve blocks she underwent relieved her from the wing daily symptoms: "extreme burning, aching, spasms, coldness in [the] leg, numbness, and tingling." Claimant testified that without the nerve blocks, her pain was a 9 out of 10. Further, she testified that the severe pain affected her ability to think, concentrate, and rendered her bedridden. In addition, she became very anxious or depressed, extremely irritable and she had a hard time dealing with noise or people. Claimant testified, "I'm completely miserable" when she isn't able to undergo a block.

29. [The Claimant] testified that all the blocks have helped her work related condition. Specifically, after the undergoing the block, [the Claimant] testified that she was able to think more clearly, do more things, be more active, perform her pool therapy, do light duties around the house, and even get out of the house for a little bit and drive.

30. [The Claimant] testified that after the undergoing the blocks, she took less Oxycodone (judicial notice – Oxycodone is taken for pain). She stated that the relief from the nerve blocks lasted between two and five months. She said that the sympathetic blocks increased her ability to function and required her to take less medication. According to the Claimant, she received her last block from Kaiser because the workers' compensation insurance company denied the nerve block recommended by Dr. Anderson-Oeser. As a result, [the Claimant] paid a $100.00- copay out of her pocket.

31. As it relates to the work-related pulmonary issues, the Claimant further testified that she continued to suffer from shortness of breath, fatigue, dizziness, headaches, and tightness in her chest. Although she had symptoms in August of 2013, the symptoms got "a whole lot worse" after the work-related injury.

Jeffrey Schwartz, M.D.

32. Dr. Schwartz is of the opinion that the Claimant does not have pulmonary hypertension. He disagreed with Dr. Bull because "he is treating her as if she has pulmonary hypertension." According to Dr. Schwartz, the Claimant does not have a work-related condition, because she does not have chronic thromboembolism or pulmonary hypertension. According to Dr. Schwartz, Pulmonologist Dr. Bull's opinions

were "**absurd"**. Based on this last characterization and Dr. Schwartz's categorical denial of any work-related condition in the face of considerable and respected medical information to the contrary, the ALJ finds Dr. Schwartz's opinions unworthy of belief ad, therefore, lacking in credibility.

Dr. Lesnak

33. Dr. Lesnak testified that repeat nerve blocks require a functional measure of return to work or maintaining a work status. In addition, Dr. Lesnak testified that functional objective measures were required to confirm a therapeutic response to nerve blocks. Such measures increased Range of Motion and Increased Strength. The medical treatment guidelines do not state that all factors are required, nor do they state that one is required. Dr. Lesnak fails to offer any persuasive underpinnings for this opinion which attempts to discredit the weight authorized medical opiniions herein.

34. Dr. Lesnak stated that Dr. Anderson-Oeser's reports never change medication levels and the doctor never reports (the Claimant] has returned to work. Dr. Lesnak stated that he did not review the most recent nerve blocks provided by Kaiser. He stated the last time he examined [the Claimant] was two years ago and his opinions were based solely upon the medical records he reviewed and he had not reviewed any of the [Claimant's] medical records for the past six (6) months. Dr. Lesnak testified that a lot or many of the medical records indicate [Claimant] is expressing a reduction over 50% of pain relief. Dr. Lesnak testified further that he had not seen any new or up to date psychological reports or test results since 2017. The last record that Dr. Lesnak reviewed was dated December 4, 2017. Nonetheless, it was his opinion that the Claimant does not have CRPS. His opinions are contrary to the weight of credible medical evidence in the record, his latest opinion appears to be "off-the-cuff," in order to be consistent with his previous opinions. For this reason and the reasons herein above specified, the ALJ finds Dr. Lesnak's opinions lacking in credibility.

Ultimate Findings

35. The ALJ finds the Claimant's testimony to be credible and supported by the weight of the persuasive medical evidence. For the reasons herein above specified, the ALJ finds the opinions of ATP Dr. Anderson-Oeser, Dr. Bull and Dr. Patel highly credible, persuasive as supported by the FAL of 18% whole person for the Claimant's back injury and 20% RUE. Also, the ALJ finds DIME Dr. Scott's diagnosis of CRPS and 18% whole person rating credible, persuasive and supported by the totality of the medical evidence in the record. On the other hand, as found herein above, the ALJ finds the opinions of Respondent's IME Dr. Lesnak and IME Dr, Schwartz as lacing in adequate study, underlying persuasive explanations and lacking in credibility.

36. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of ATP Dr. Anerson-Oeser, Dr. Bull, DIME Dr. Scott, Dr. Patel, and to reject the opinions of Dr. Lesnak and Dr. Schwartz and any other contrary opinions..

37. The Claimant's probable CRPS, pulmonary embolism and need for an EKG and other medical treatment and benefits by her authorized medical providers is causally related to her injuries of October 24, 2013 and reasonably necessary to maintain the Claimant at MMI and to prevent a deterioration of her condition.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was credible and supported by the weight of the persuasive medical evidence. Also, the opinions of ATP Dr. Anderson-Oeser, Dr. Bull, DIME Dr. Scott and Dr. Patel were highly credible, persuasive as supported by the FAL of 18% whole person for the Claimant's back injury and 20% RUE. Additionally, DIME Dr. Scott's diagnosis of CRPS and his 18% whole person rating was credible, persuasive and supported by the totality of the medical evidence in the record. On the other hand,

the opinions of Respondent's IME Dr. Lesnak and IME Dr, Schwartz lacked adequate study, underlying persuasive explanations and overall credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** that would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ATP Dr. Anerson-Oeser, Dr. Bull, DIME Dr. Scott, Dr. Patel, and to reject the opinions of Dr. Lesnak and Dr. Schwartz and any other contrary opinions.

Medical

c. An employer must provide an injured employee with reasonably necessary medical treatment to "cure and relieve the employee from the effects of the injury." § 8-42-101(1) (a), C.R.S. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). The

chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, the Claimant's probable CRPS, pulmonary embolism and need for an EKG and other medical treatment and benefits by her authorized medical providers is causally-related to her injuries of October 24, 2013.

d. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the injury

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on all issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondent shall pay the costs of all medical maintenance benefits resulting from her injuries of October 24, 2013, subject to the Division of Workers Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this 17 day of April 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-031-421-001

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that he is permanently and totally disabled.

II. Permanent partial disability benefits.

(a) Whether Claimant has overcome the Division IME's opinion by clear and convincing evidence that Claimant does not have chronic regional pain syndrome (CRPS) and should be provided an impairment rating for such.

(b) Whether Claimant has established by a preponderance of the evidence that he has suffered functional impairment, which is not on the schedule of disabilities and is entitled to a whole person impairment rating.

III. Penalties:

(a) Whether Respondent is subject to penalties for the late payment of temporary total disability benefits.

(b) Whether Respondent is subject to penalties for the late payment of permanent partial disability benefits.

(c) Whether Respondent is subject to penalties for dictating the type or duration of medical treatment or degree of physical impairment.

IV. Overpayments.

(a) Whether Claimant has been overpaid, and recovery of same, is reserved.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 44-year-old male formerly employed with RTD. In April 2007, Claimant commenced his employment with RTD in the maintenance department. His position involved cleaning the interior and exterior of buses, checking fluids, including gas and oil, and fueling buses. Claimant worked in this capacity for approximately 7-8 years, then bid for, and accepted a subsequent position, vault puller. Claimant sustained a work injury during the second day of his new position. (Respondent's Exhibits, pp 546-47)

2. On November 4, 2016, Claimant presented to Dr. Christian Updike, an authorized treating physician. Claimant described the work injury as follows: “As he was stepping out [of a bus], the large metal bus door closed, hitting him on the inside of the left knee and left ankle.” Dr. Updike assessed Claimant with a left knee and left ankle contusion. He recommended Claimant undergo x-rays. (Respondent’s Exhibit A)

3. Subsequently, Claimant underwent x-rays, which revealed no fracture to the left knee, but a possible avulsion fracture to the lateral malleolus of the left ankle. (Respondent’s Exhibit B)

4. On November 15, 2016, Claimant returned to Dr. Updike, who assessed Claimant with left knee pain, “with reassuring x-ray;” and a possible left ankle avulsion fracture. Dr. Updike dispensed a walking boot and took Claimant off work pending a referral to an orthopedist. (Respondent’s Exhibit D)

5. On November 28, 2016, Claimant underwent an MRI of the left ankle, which revealed edema of the lateral talar dome, along with a possible stress reaction in the 4th and 5th metatarsal shafts. (Respondent’s Exhibit E)

6. On December 1, 2016, Claimant presented to Dr. Ocel. Claimant complained of pain in the left ankle in the 6/10 range. Claimant described the pain as aggravated by lifting, walking and standing, with no relieving factors. Dr. Ocel recommended that Claimant continue in a CAM boot and restrict his current activities. (Respondent’s Exhibit F)

7. On December 6, 2016, Dr. Updike assessed Claimant with left ankle pain with abnormal MRI, pending ultrasound. He recommended Claimant utilize Aleve over-the-counter along with continued use of a CAM boot. (Respondent’s Exhibit G)

8. On January 9, 2017, Claimant returned to Dr. Lugliani. Claimant requested medication for his pain as he was experiencing increased discomfort. He described the pain on the medial side of his left knee and lateral side of his left ankle with continued swelling. He denied any new symptoms. Dr. Lugliani acquiesced to Claimant’s request and prescribed Tramadol for breakthrough pain. (Respondent’s Exhibit H)

9. On January 9, 2017, Claimant underwent an ultrasound of the left ankle. (Respondent’s Exhibit I)

10. On February 2, 2017, Claimant returned to Dr. Ocel, who opined that Claimant sustained derangement of the ankle and failed conservative treatment. Dr. Ocel recommended diagnostic ankle arthroscopy and treatment of interarticular pathology as well as a lateral ankle stabilization. (Respondent’s Exhibit J)

11. On February 7, 2017, Dr. Updike assessed Claimant with acute left ankle pain and acute left knee pain. Dr. Updike noted that the recent ultrasound showed objective evidence of ligament instability. He opined the surgery recommended by Dr. Ocel would be reasonable.

12. On February 22, 2017, Claimant underwent surgery performed by Dr. Ocel, including left ankle arthroscopy, chondroplasty, and modified lateral ankle stabilization. (Respondent's Exhibit M)

13. On March 9, 2017, Dr. Ocel placed Claimant in a short-leg weight-bearing cast. He indicated Claimant would be in the cast for approximately 2 weeks and then switch to a CAM boot. (Respondent's Exhibit N)

14. On March 10, 2017, Dr. Updike recommended that Claimant commence physical therapy, including gentle range of motion for post-surgery treatment. At the examination, Claimant presented with a walking boot. He complained of pain when walking down stairs but otherwise had no new complaints. (Respondent's Exhibit O)

15. On March 23, 2017, Claimant underwent an MRI of the left knee, which revealed a lateral meniscus tear. (Respondent's Exhibit P)

16. On April 4, 2017, Dr. Updike noted that Claimant was doing well. Dr. Updike observed that Claimant's left lower extremity was slightly discolored compared to the other. However, he noted, "I assured him this was also normal with the healing process." Claimant requested additional medications for pain. Claimant did not describe any pain or symptoms to his lumbar spine. In fact, the general examination included the spine and returned normal. Dr. Updike agreed to refer Claimant to Dr. Hsin for an orthopedic evaluation of the knee. (Respondent's Exhibit Q)

17. On April 10, 2017, Claimant presented to Dr. Hsin, who assessed Claimant with acute lateral meniscus tear of the left knee. Dr. Hsin recommended surgery, but wanted to wait until after Claimant was out of the CAM boot. (Respondent's Exhibit R)

18. On April 18, 2017, Claimant returned to Dr. Updike. Claimant reported discoloration of his left leg, which completely went away when he elevated it. Additionally, Claimant noted "some minor back discomfort" when he was up walking for a long period. However, the pain completely alleviated when at rest. Dr. Updike recommended Claimant continue physical therapy three times a week for four weeks in relation to the left ankle. Additionally, he noted the surgery recommended from Dr. Hsin would be reasonable. (Respondent's Exhibit S)

19. On May 2, 2017, Claimant reported walking with his boot. Dr. Updike noted Claimant had proceeded in physical therapy in relation to the low back pain. Dr. Updike noted that left knee surgery was scheduled for May 9, 2017. He assessed Claimant with left ankle, status post surgery; left knee pain; and "low back discomfort, mild." (Respondent's Exhibit T)

20. On May 9, 2017, Claimant underwent left knee surgery performed by Dr. Hsin. The operation included left knee arthroscopy with partial medial and lateral meniscectomy. (Respondent's Exhibit U)

21. On May 15, 2017, Claimant returned to Dr. Updike. Claimant described no postoperative complaints. Claimant was out of the walker boot regarding his ankle and was only utilizing a cane. Dr. Updike noted, "He is making good functional

gains regarding the ankle." Under assessment, Dr. Updike noted left ankle surgery, left knee surgery, and low back pain, mild. However, the body of the report did not reveal any complaints from the Claimant with regards to his low back. (Respondent's Exhibit V)

22. On May 24, 2017, Claimant reported improvement with the left knee. Additionally, Claimant reported "occasional" back pain in the morning, "but it goes away when he walks." Dr. Updike reported Claimant was out of the walker boot regarding the ankle. (Respondent's Exhibit W)

23. On June 2, 2017, Dr. Updike reported that the physical therapist expressed concerns regarding Claimant's complaint of a sudden onset of left calf pain. "He was uncertain if there was symptom magnification or other concerns." Dr. Updike recommended a DVT ultrasound. Additionally, Dr. Updike assessed Claimant with left knee surgery, left ankle surgery, and low back pain mild. However, the medical report did not reveal specific lumbar complaints from the Claimant. (Respondent's Exhibit X)

24. On June 2, 2017, Claimant underwent the recommended ultrasound, which returned normal. (Respondent's Exhibit Y)

25. On June 8, 2017, Claimant returned to Dr. Updike reporting improvement. At this stage his pain had dropped to a 5/10. Claimant denied any new problems. Current medical treatment included physical therapy for the left ankle and left knee. Claimant complained of balance issues while walking. Dr. Updike noted, "I have discussed with the patient I do not feel that his balance problem is due to a brain issue or a medication issue. I think it is most clearly due to a weakness issue regarding the left knee." (Respondent's Exhibit Z)

26. On June 22, 2017, Dr. Ocel noted Claimant made strong progress in physical therapy but still described tenderness over the medial and laterally based portal sites. Physical examination revealed no soft tissue swelling or edema. "Relatively maintained a range of motion with slight diminution of dorsiflexion." Dr. Ocel was pleased with Claimant's progress and predicted an additional 4-6 weeks before complete healing. Claimant had no additional complaints. (Respondent's Exhibit BB)

27. On June 23, 2017, Claimant returned to Dr. Updike. He noted Claimant's chief complaints as left ankle surgery, left knee surgery, and minor low back discomfort secondary to altered gait. Dr. Updike noted that both Drs. Ocel and Hsin recommended additional physical therapy. Dr. Updike also noted, "His pain is primarily in his left knee and left ankle. He also has some discomfort in the low back." Regarding examination of the lower extremity, Dr. Updike noted, "Left ankle has expected post-operative minor edema. There are minor color changes. There is some lavender color possibly concerning for CRPS, but I do not think that is the case. Left knee has minor postoperative changes." Regarding the back, Dr. Updike noted, "Palpation of the back is nontender in the midline, nontender in the right lumbar area, nontender in the right buttock. Left back has significant point tenderness in the left muscular region of the posterior superior iliac spine." Regaring back pain, Dr. Updike wrote, "On today's exam, it appears to be purely

left lumbar musculature." Dr. Updike noted the case would be monitored for CRPS. (Respondent's Exhibit CC)

28. On July 5, 2017, Dr. Updike discussed the possibility of CRPS with the Claimant and recommended a bone scan. (Respondent's Exhibit CC)

29. On July 11, 2017, Claimant presented to Dr. Michael Varney, chiropractor. Regarding the lumbar spine, Dr. Varney noted, "In reference to the patient's bilateral, lumbar spinal and lumbosacral junction, that pain generators appear to be primarily compensatory in nature, post knee and ankle surgeries." (Respondent's Exhibit DD)

30. On July 19, 2017, Claimant returned to Dr. Updike. Claimant continued to utilize a left knee brace. However, Claimant disclosed his left foot was "hurting more." Physical examination revealed that Claimant's gait and station were "unremarkable." Regarding the lower back, under assessment, Dr. Updike noted, "Prior back pain that appeared to be muscular." (Respondent's Exhibit FF)

31. On July 21, 2017, Claimant underwent a triple-phase bone scan. The impressions included, "Slightly increased blood flow to the left foot and ankle as compared to the right which may be seen with inflammation or infection; … Low-grade blood pool activity over the lateral side of the left ankle and low-grade delayed activity over both sides of the left ankle and near the Achilles tendon insertion into the left calcaneus. Findings may reflect posttraumatic or postsurgical changes or arthritis. Infection unlikely given low-grade activity on delayed images." (Respondent's Exhibits, p. 118) Later, the radiologist attached an addendum per the request of Dr. Wakeshima: "The findings of slightly increased blood flow, slightly increased blood pool activity and mildly increased delayed phase activity in the left lower leg, foot and ankle are not specific but could be related to CRPS." (Respondent's Exhibits, p. 119)

32. On July 21, 2017, Claimant returned to Dr. Ocel who noted, "He is five months status post left ankle arthroscopy, treatment of interarticular pathology and lateral ankle stabilization. Unfortunately, he continues to have pain in the ankle particularly over lateral reconstruction site." Dr. Ocel recommended a repeat MRI "to determine structural integrity of reconstruction as well as an evaluation of the interarticular cartilaginous structures." (Respondent's Exhibit HH)

33. On July 25, 2017, Claimant returned to Dr. Updike. Under examination, Dr. Updike noted, "gait and station unremarkable." Under chief complaint, Dr. Updike noted minor low back discomfort, however the report does not reference specific complaints. For example, under assessment, Dr. Updike writes, "prior back pain that appeared to be muscular." (emphasis added) (Respondent's Exhibit II)

34. On July 31, 2017, Claimant underwent an MRI of the left ankle, which returned relatively normal. (Respondent's Exhibit JJ)

35. On August 4, 2017, Claimant returned to Dr. Updike, who addressed the MRI. He noted, "A copy of the MRI was given to the patient that the ATFL was intact, and that I anticipate Dr. Ocel may offer a steroid injection to the ankle to address postoperative inflammation versus additional ankle surgery to correct the cartilage

defect versus nothing left to offer." Dr. Updike did note, "He still has some low back pain." Under summary of interventions, Dr. Updike noted, "July 2017, triple-phase bone scan. No evidence of CRPS." Under the exam, Dr. Updike again noted, "Gait and station unremarkable." (Respondent's Exhibit KK)

36. On August 10, 2017, Claimant returned to Dr. Ocel. Claimant reported occasional erythema throughout the leg, along with occasional burning pain. Dr. Ocel noted the ankle itself appeared structurally sound. He recommended an evaluation by a pain management specialist to evaluate for CRPS. (Respondent's Exhibit MM)

37. On August 25, 2017, Claimant presented to Dr. Robert Kawasaki. Claimant complained of continued ankle and left knee pain, including swelling. Additionally, Dr. Kawasaki noted, "The patient is also incidentally indicating some low back pain that he says is related to his gait alteration." Regarding potential for CRPS, Dr. Kawasaki noted, "The patient clinically had some mild erythema of the left foot but otherwise did not have physical exam findings for CRPS. He had some symptoms that could be suspicious for CRPS. However, this has been ruled out with the triple-phase bone scan." Regarding the continued pain in the left lower extremity, Dr. Kawasaki recommended Claimant undergo an EMG nerve conduction study. Regarding the low back, Dr. Kawasaki assessed Claimant with, "complaints of low back but no specific injury to the lumbar spine." (Respondent's Exhibit OO)

38. On August 29, 2017, Claimant underwent a psychological consultation with Dr. Kevin Reilly, per Dr. Updike's request. Claimant described his mood as "very bad." Dr. Reilly noted, "His affect was variable and incongruent with thought content. Pain behaviors consistent with a very significant somatic focus in the patient's discussions." Dr. Reilly assessed Claimant with somatic symptom disorder with predominant pain, along with adjustment disorder with mixed anxious and depressed mood. (Respondent's Exhibit PP)

39. On August 31, 2017, Claimant returned to Dr. Updike. His complaints continued to include the left ankle, left knee, and "minor low back pain." Dr. Updike noted Claimant's gait continued to be "unremarkable." He recommended that Claimant undergo an MRI of the lumbar spine to rule out a pain generator in the spine that was causing the continued knee pain. (Respondent's Exhibit QQ)

40. On September 7, 2017, Claimant underwent a lumbar spine MRI. The MRI revealed severe multilevel lumbar spinal stenosis with disc bulges, paracentral disc protrusions and annular fissures. Findings were compounded by congenital stenosis with diffusely short pedicles. (Respondent's Exhibit RR)

41. On September 12, 2017, Claimant returned to Dr. Kawasaki, who noted Claimant had undergone the EMG which returned normal. Again, Dr. Kawasaki reported that Claimant did not have physical exam findings for CRPS. He did, however, recommend an additional test for further evaluation. (Respondent's Exhibit SS)

42. On September 14, 2017, Claimant returned to Dr. Updike. Regarding the lumbar spine, Dr. Updike assessed the MRI, noting "I discussed with the patient in brief that he has a significantly degenerated spine, but I do not see a focal problem suggestive of surgery. However, given the expanding and slow progress and

nature of the case, I think it is reasonable for a one-time evaluation with a conservative surgeon to review the case and opine: "(1) If the leg pain could be coming from the spine, and (2) if any invasive procedures should be done on the spine." Dr. Updike went on to explain that if any invasive procedures were recommended, it would be difficult to consider those procedures work-related. Accordingly, Dr. Updike referred Claimant to an evaluation with an orthopedic surgeon, along with a referral to CROM for purposes of CRPS diagnostics. (Respondent's Exhibit TT)

43. On September 22, 2017, Claimant returned to Dr. Updike for an unplanned evaluation. Claimant complained of increased back pain and increased left knee pain. Claimant requested muscle relaxants. Dr. Updike assessed claimant with a "back pain flare of unclear etiology." Dr. Updike noted that Claimant was a poor surgical candidate. (Respondent's Exhibit UU)

44. On September 28, 2017, Claimant presented to CROM and underwent a comprehensive medical consultation with Dr. Tashof Bernton. Dr. Bernton performed a clinical examination of the Claimant. He wrote, "The clinical findings are not impressive for complex regional pain syndrome. The patient has some decreased range of motion in the knee and slight color difference noted, but otherwise clinical examination is fairly benign." Dr. Bernton performed two diagnostic tests, including the autonomic testing battery which returned negative and the stress thermography which returned positive. Regarding the results of the two tests, Dr. Bernton opined, "Patient does not meet the criteria for diagnosis of complex regional pain syndrome under the Colorado Workers' Compensation Treatment Guidelines, which do require two positive objective tests. However, diagnosis is not ruled out by one negative test, and the autonomic testing battery results are fairly borderline, while the thermography is clearly positive." There is no indication that Dr. Bernton reviewed the triple-phase bone scan which returned, at best, ambiguous. Dr. Bernton recommended that Claimant undergo a diagnostic sympathetic block. (Respondent's Exhibit VV)

45. On October 2, 2017, Claimant underwent an evaluation with Dr. Andrew Castro. Dr. Castro noted that Claimant underwent surgeries performed by Drs. Ocel and Hsin for right ankle and knee problems. "He did very well from these procedures, but incurred the sudden onset of back pain and leg pain after walking in a boot. The back pain is much improved at this time, and the main complaint is the left lower extremity pain at the knee down to the ankle." Dr. Castro performed a physical evaluation of the lumbar spine: "No palpable deformity appreciated. Good lumbar range of motion with forward bending, extension, lateral bending, and rotation." Dr. Castro assessed Claimant with bilateral lumbar radiculopathy. "I will have him continue to walk and ambulate as long this is cleared by Drs. Hsin and Ocel. I recommend pool therapy, strengthening, stretching, and range of motion as much as possible. I do not think he is going to benefit from surgical intervention. I recommend a continued conservative algorithm for him as long as possible. I do not think back surgery is part of this case or that it will be required in this case." At no point during the evaluation did Dr. Castro opine that utilizing a walking boot was

the primary or even secondary cause of Claimant's subjective lumbar complaints. (Respondent's Exhibit WW)

46. On October 3, 2017, claimant attended an independent medical examination (IME) with John Hughes, M.D. (Claimant's Exhibit 4, p. 32.) After a thorough review of the medical history and a physical examination, Dr. Hughes diagnosed the following: (left knee, leg, ankle contusions sustained on 11/2/16; (2) left ankle anterior talofibular ligament disruption, chrondral injury involving the medial tibial plafond, and extensive synovitis; (3) persistence of left ankle arthritis; (4) left knee medial and lateral meniscus tears with persistence of left knee arthritis, (5) occult severe multi-level spinal stenosis and intervertebral disc pathology as seen on the MRI of 9/7/16; (6) antalgia of gait with development of axial lumbar spine pain, meriting continued supportive treatment; (7) emerging left lower extremity pain with clinical and thermographic features suggestive of CRPS-1; (8) suspected gout; and (9) opioid-induced constipation and hyperalgesia.

47. Dr. Hughes went on to opine claimant was not at MMI and that he needed a continued medical treatment, including assessment of the left knee and ankle. Dr. Hughes assigned a 20% whole person impairment rating and also stated that claimant had "profound" work restrictions that were consistent with the sedentary work demand level as defined by the U.S. Department of Labor.

48. On October 3, 2017, Claimant returned to Dr. Kawasaki. Claimant described symptoms consistent with CRPS, including erythema, swelling, hypersensitivity, and temperature change. Accordingly, Dr. Kawasaki recommended lumbar sympathetic blocks on the left side. (Respondent's Exhibit XX)

49. On October 9, 2017, Dr. Ocel explained that from a surgical standpoint, there is nothing further for the ankle. He did recommend continued physical therapy and pain management with Dr. Kawasaki. Regarding CRPS, Dr. Ocel noted, "He continues to have a relatively global pain about the left lower extremity [sic] pain is currently being evaluated by Dr. Kawasaki for possible CRPS although this is a low likelihood." (emphasis added) (Respondent's Exhibit YY)

50. On October 10, 2017, Dr. Updike noted "minor low back pain." Regarding CRPS, he explained, "It appears the patient may have CRPS, based on what the patient reports regarding the thermogram, and six sessions of pool therapy may be reasonable to try having the patient continue to move the left leg. I think it is reasonable to try CRPS nerve blocks." Regarding gait, Dr. Updike observed "unremarkable." (Respondent's Exhibit ZZ)

51. On October 24, 2017, Claimant returned to Dr. Updike, who noted Claimant recently continued treating with Drs. Reilly and William Beaver for counseling and biofeedback. Regarding Claimant's current medications, Dr. Updike noted, "The patient continues to be very vague about his medications." Gait evaluation was unremarkable. Dr. Updike noted that Claimant would be scheduled for a sympathetic nerve block. (Respondent's Exhibit CCC)

52. On October 27, 2017, Claimant returned to Dr. Kawasaki. Claimant reported no change with regards to his pain, swelling, and left lower extremity symptoms.

Claimant was scheduled that day for sympathetic nerve blocks but was unable to proceed due to a lack of IV access. (Respondent's Exhibit DDD)

53. On November 6, 2017, Claimant returned to Dr. Ocel. On physical examination, Dr. Ocel noted, "I do not detect any significant soft tissue swelling, edema, or erythema about the left ankle." (Respondent's Exhibit FFF)

54. On November 7, 2017, Claimant returned to Dr. Kawasaki. Unlike the evaluation from Dr. Ocel, Dr. Kawasaki observed mild distal edema around the ankle and into the foot. (Respondent's Exhibit HHH)

55. On November 8, 2017, Claimant complained of ongoing left knee pain, left shin pain, and left low back pain. Dr. Updike referred to Claimant's gait and station as "unremarkable." He assessed Claimant's back as "MRI showing degenerative changes." Dr. Updike no longer referred to the low back pain as related to altered gait. (Respondent's Exhibit III)

56. On December 5, 2017, Claimant continued to report pain in the 6/10 scale with regard to the left ankle and left knee. Dr. Updike noted that they had been unable to complete the lumbar sympathetic nerve block and Claimant agreed not to proceed. He recommended pool therapy. (Respondent's Exhibit MMM)

57. On December 18, 2017, Claimant returned to Dr. Ocel. Regarding the ankle exam, Dr. Ocel noted, "He is doing quite well with regards to his left ankle. He states that it is constantly getting better. His most notable complaints today are about his knee as well as his spinal issues that he has been having." Dr. Ocel recommended one final series of full therapy after which he would anticipate Claimant being at maximum medical improvement (MMI). (Respondent's Exhibit OOO)

58. On December 27, 2017, Claimant returned to Dr. Updike. Regarding gait and station, Dr. Updike noted "appear unremarkable." At this time, Claimant had been utilizing Lyrica, Voltaren, and Glucosamine. Additionally, Dr. Updike refilled Claimant's Percocet. (Respondent's Exhibit RRR)

59. On January 9, 2018, Claimant presented to Dr. Updike. Since the last visit, Claimant indicated that his condition was improving. He complained of continued back pain, blaming the walking boot. Dr. Updike assessed Claimant with left knee and left ankle pain, and CRPS. Claimant's medications included continued Lyrica. Dr. Updike recommended an evaluation with Dr. Wakeshima. Dr. Updike's work restrictions were 20 pounds lifting, with no other restrictions. (Respondent's Exhibit UUU)

60. On January 15, 2018, Claimant presented to Dr. Kawasaki. Claimant continued to complain of ankle, knee, and lumbar pain. "He did report some pain down the left leg with straight leg raise, but appeared to be more related to ankle and knee pain." Dr. Kawasaki noted that if Claimant was unable to undergo the sympathetic nerve block, there was no additional treatment required. Due to his continued knee complaints, Claimant requested a second opinion. (Respondent's Exhibit VVV)

61. On January 9, 2018, Claimant presented to Dr. Updike. At this visit, Dr. Updike indicated that he anticipated Claimant would be at MMI on February 1, 2018. Therefore, he referred Claimant to Dr. Wakeshima to perform an impairment rating.

Dr. Updike specifically stated in his report for Dr. Wakeshima to "please due IR [impairment rating] due to CRPS/complexity/career ending." Dr. Updike did not request Claimant's back to be rated. Quite the contrary, he only requested Dr. Wakeshima to rate Claimant's CRPS. (Claimant's Exhibit 9, p. 93.)

62. On January 10, 2018, Stephanie Daniels, from Dr. Updike's office, faxed a request to Wakeshima's office for him to perform an impairment rating. Consistent with Dr. Updike's last report, she wrote on the fax:

> Dr. Updike wants Dr. Wakeshima to complete an IR [impairment rating] due to CRPS/Complexity/Career ending. IR – 3rd Edition.

Consistent with Dr. Updike's January 9, 2018, report, Ms. Daniel's request for an impairment rating only requested Dr. Wakeshima to rate Claimant's CRPS.

63. On January 24, 2018, Claimant presented to Dr. Wakeshima for a permanent impairment rating. Regarding CRPS, Dr. Wakeshima noted that the stress thermogram on July 21, 2017 returned positive. Additionally, Dr. Wakeshima interpreted the triple-phase bone scan as demonstrating "findings consistent with" CRPS. Accordingly, he assigned a 25% whole person rating for CRPS. Regarding the lower extremity, Dr. Wakeshima assigned a 33% lower extremity rating for the left knee and a 12% lower extremity rating for the ankle. Regarding the lumbar spine, Dr. Wakeshima noted that:

> I was suspicious of whether the lumbar spine would warrant an impairment rating due to the patient's mechanism of injury and no further treatment performed to the lumbar spine aside from Dr. Castro's evaluation and MRI studies. I therefore had my medical assistant contact both Dr. Updike and the adjuster's office and they both confirmed that the lumbar spine is not work related and therefore would not warrant an impairment rating as related to his work injury of 11/2/16.

[The issue of the conversation noted in Dr. Wakeshima's report which indicates he spoke with Dr. Updike, and with someone at the adjuster's office, will be addressed in further detail below.] Dr. Wakeshima assigned a combined 37% whole person impairment rating. (Respondent's Exhibit XXX)

64. On January 31, 2018, Claimant returned to Dr. Updike, who opined that Claimant reached MMI on January 31, 2018. Regarding permanent restrictions, the sole restriction assigned by Dr. Updike was a 20-pound lift. (Respondent's Exhibit YYY)

65. Rather than admit to Dr. Wakeshima's rating, Respondent requested a Division-sponsored independent medical evaluation (DIME).

66. On February 7, 2018, Claimant presented to Dr. Ciccone for a second opinion on the lower extremity. Dr. Ciccone performed a physical examination which showed no obvious muscular atrophy, normal alignment, normal skin, and no significant color change. Dr. Ciccone concluded that Claimant did not require any surgical intervention. (Respondent's Exhibit ZZZ)

67. On April 13, 2018, Dr. Updike continued Claimant's permanent restrictions as, "lifting is limited to up to 20 pounds." There were no additional changes to the treatment plan. (Respondent's Exhibit AAAA)

68. On May 14, 2018, Claimant returned to Dr. Kawasaki. During this evaluation Claimant began complaining of increased cervical symptoms. Dr. Kawasaki noted that Claimant did have some signs and symptoms consistent with cervical radiculopathy and recommended an MRI and a referral for cervical epidural steroid injections. (Respondent's Exhibit BBBB)

69. On May 17, 2018, Dr. Stanley Ginsburg performed the DIME. Regarding CRPS, the DIME physician opined:

> I find no clinical evidence to suggest CRPS. The testing done as indicated in that report requires that both be positive and only one was positive, and triple-phase bone scan was not positive either. It is interesting that initially the clinicians did not describe symptomology suggesting CRPS. Later, there is a description compatible clinically with CRPS but the same clinician describing permanent clinical features did not see this initially. This is confusing at best and as I indicated, if sympathetic block is accomplished and it is markedly positive, I could probably be persuaded to change my mind but I would have to be convinced in that perhaps two trials would have to be accomplished.

70. Additionally, the DIME wrote:

> The diagnosis of CRPS has been applied and although throughout the patient's clinical examinations, there were very few examples of individuals testing him for possible CRPS, I thought it interesting that initially Dr. Kawasaki found no difference through side-to-side as did others and then a difference was found. The difference was stated by Dr. Hughes as well but when I see the patient in May 2018, I do not see a difference nor do I find an abnormal response to stimuli. Furthermore, and I think this is also interesting and I think is helpful, the patient actually does not complain of the type of pain which would accompany a CRPS syndrome.

Ultimately, the DIME physician opined that Claimant reached maximum medical improvement and was limited to an impairment rating to the lower extremity, 46%. (Respondent's Exhibit CCCC)

71. On July 11, 2018, Employer filed a Final Admission of Liability (FAL) consistent with Dr. Ginsburg's report. (Claimant's Exhibits, p. 142) Claimant filed an Application for Hearing raising numerous issues, including PPD, PTD, and penalties.

72. On May 25, 2018, Claimant returned to Dr. Wakeshima, who Dr. Updike had requested take over Claimant's pain treatment. Claimant's medications included

Lyrica and Percocet. Dr. Wakeshima noted that Claimant remained at MMI. He recommended a TENS unit for home use. Additionally, Dr. Wakeshima recommended that Claimant pursue the lumbar sympathetic nerve block. (Respondent's Exhibit DDDD)

73. On July 5, 2018, Claimant underwent an independent medical examination with Dr. Mark Failinger. Dr. Failinger reviewed the medical records and performed a physical examination. Regarding the issue of Claimant's ability to earn wages, he wrote, "Of importance are the patient's ongoing elevated pain complaints, which appear to be significantly elevated for the pathology identified on imaging studies and at his surgeries. The patient underwent an ankle ligament reconstruction which has provided stable ankle on examination. He was noted to have some chondromalacia at his ankle on surgery. However, his pain appears to be out of proportion to the MRI reading of chondromalacia of the talar dome, particularly with the extent of chondromalacia that was found by Dr. Ocel at surgery of 2/22/17. Likewise, the pain complaints in the left knee are out of proportion to what appears to have been found at the surgery performed on the left knee by Dr. Joseph Hsin on 5/9/17." Regarding his lumbar complaints, Dr. Failinger wrote, "His back complaints appear to be degenerative in nature. It is not likely, with a reasonable medical probability, that wearing a walking boot which weighs at most several pounds, that a patient, who is minimally ambulatory, could develop pain complaints and symptomatology in his lower back from the use of a boot when he is essentially sedentary with minimal ambulation over the months following his knee and ankle surgery." Dr. Failinger also addressed CRPS, and agreed with Dr. Ginsburg. "It certainly was not clear in the review of the medical records that CRPS is present. There has been a favoring by the various physicians who have examined Mr. Siyam that he does NOT likely have a CRPS diagnosis. Dr. Tashof Bernton felt that 'the clinical findings are not impressive for complex regional pain syndrome.' Dr. Kawasaki did not find obvious physical findings for CRPS in the clinic note of 9/12/17." Regarding Claimant's ability to work, he concluded that Claimant was not permanently totally disabled from a physical standpoint. Although he may not "choose to return to various work positions due to his subjective complaints, there does not appear to be evidence on examination nor on his imaging studies, nor on pathology found in surgery to support an inability to return back to a reasonable, although somewhat restricted, work capacity." (Respondent's Exhibit HHHH)

74. In July 2018, Employer performed video surveillance of the Claimant. (Respondent's Exhibit AAAAA) Employer forwarded the video surveillance to Dr. Updike who reviewed the information and provided a response. Regarding Claimant's assertion of an inability to earn wages, Dr. Updike concluded that Claimant is not totally disabled. "The video shows him walking and entering a vehicle without assistive devices. He appears that he can do most activities of daily functioning without much problem. Not only is he not disabled, he appears quite able to work modified duty jobs." Additionally, Dr. Updike clarified his opinion regarding the CRPS. He concluded that Claimant does not meet the Colorado Treatment Guideline criteria. Regarding clinical findings, Dr. Updike wrote, "In summary, the lack of confirmatory objective results, the lack of convincing clinical symptoms and the doubts of the experts Dr. Bernton and Dr. Ginsburg caused me

to doubt a CRPS diagnosis. Finally, after watching the video of Mr. Siyam limp as he walked out of my office, and then later casually walk under surveillance convinced me there is symptom magnification present. I no longer believe CRPS is present." Finally, with regards to Claimant's lumbar back complaints, Dr. Updike confirmed he did not believe Claimant's back pain relates to the industrial injury. "I have NOT seen leg injuries lead to long term back impairment nor disability. Even if the leg does not fully recover, the body adapts to the new normal of a patient's gait pattern." Regarding Claimant's exaggerated symptomology, Dr. Updike wrote, "Yes, his pain complaints are out of proportion to his anatomical findings, and the modest mechanism of injury. In my clinic he walks with quite a limp. He walks far more comfortably in the surveillance video than I have ever seen in clinic." (Respondent's Exhibit JJJJ)

75. On August 15, 2018, Dr. Wakeshima noted a normal gait pattern. Dr. Wakeshima discontinued the Lyrica and TENS unit and recommended that Claimant commence Cymbalta, and an H-wave unit. Additionally, he recommended that Claimant undergo the lumbar sympathetic nerve block. (Respondent's Exhibit LLLL)

76. On September 5, 2018, Claimant underwent the left lumbar sympathetic nerve block. Prior to the nerve block, Claimant described a pain level of 7/10. Two hours after the procedure, Claimant described a pain level of 3-5. Four hours after, a level of 4, and then thereafter it continued to rise. Over the next few days, Claimant's pain levels ranged from 3/10 to a 7/10. In the four days following the injection, Claimant did not perform any activities. (Respondent's Exhibit MMMM)

77. On September 12, 2018, Claimant followed up with Dr. Wakeshima. Claimant reported a current pain level of 4/10. Dr. Wakeshima noted that Claimant's pre-injection level was 7/10. Accordingly, Dr. Wakeshima believed the sympathetic nerve block was successful and demonstrated CRPS. During the same evaluation, Dr. Wakeshima continued Claimant on Cymbalta. (Respondent's Exhibit NNNN)

78. On November 7, 2018, Claimant returned to Dr. Wakeshima, reporting "profound" benefit from the H-wave unit. Further, Claimant reported continuing to utilize Cymbalta with benefit. Nonetheless, Claimant still described a pain level of 6/10, only one level less than his pain prior to the injection. (Respondent's Exhibit RRRR)

79. On November 29, 2018, Dr. Wakeshima testified by evidentiary deposition. In his opinion, Claimant met the criteria for CRPS. He relied upon the stress thermogram study from November 2016, which showed findings consistent with CRPS. Additionally, Dr. Wakeshima interpreted the triple-phase bone scan report as positive for CRPS. He testified that the Colorado Medical Treatment Guidelines required two positive diagnostic criteria for a diagnosis. Regarding functional impairment in the lumbar spine, Dr. Wakeshima noted that during his examinations Claimant's gait was normal. (Depo of Dr. Wakeshima, p. 18)

80. During cross-examination, Dr. Wakeshima conceded that the Colorado Medical Treatment Guidelines include both diagnostic and clinical criteria. (Depo of Dr. Wakeshima, p. 20) Dr. Wakeshima conceded that multiple physicians, including

the DIME physician, Dr. Updike, and Dr. Bernton, concluded that Claimant did not meet the clinical criteria for CRPS. (Depo of Dr. Wakeshima, pp. 21-22) Dr. Wakeshima noted that in his opinion he could not say that the DIME physician was incorrect in his conclusion. (Depo of Dr. Wakeshima, p. 23)

81. Regarding sympathetic nerve blocks, Dr. Wakeshima is not supportive of this procedure as a diagnostic tool. (Depo of Dr. Wakeshima, p. 37) "It's very subjective, yes. And that's why in treatment guidelines they have it up to 50 percent because it can – it can fluctuate on that." Notwithstanding the Medical Treatment Guidelines requiring two sympathetic nerve blocks within a 14-day period, Dr. Wakeshima did not perform a second sympathetic nerve block. (Depo of Dr. Wakeshima, p. 37)

82. To the extent Claimant reported improvement in September 2018, Dr. Wakeshima conceded that the switch to Cymbalta and H-wave unit may have improved Claimant's condition, as opposed to the sympathetic nerve block. (Depo of Dr. Wakeshima, pp. 39-40) Throughout the course of his testimony, Dr. Wakeshima did not offer an opinion as to whether Claimant sustained functional impairment to a body part not listed on the schedule of disabilities. Additionally, Dr. Wakeshima did not testify that the DIME physician clearly erred with regards to his opinion that Claimant did not sustain permanent impairment in relation to CRPS. Finally, Dr. Wakeshima did not address whether Claimant was unable to earn wages as a result of the work injury.

83. The matter proceeded to hearing on January 4, 2019. Claimant's wife testified. She indicated that Claimant does not perform the same physical activities now as before the work injury. She observes Claimant elevating his leg every day in order to alleviate the pain. Claimant can no longer drive for long periods of time but can do small trips such as take their children to school or drive to the grocery store. She advised they are attempting to sell their home to purchase new living arrangements without a set of stairs.

84. Claimant testified at hearing. Claimant attended Emily Griffith in 1995, where he learned English. He then began working at a car dealership. He worked there for approximately a year and then began employment at a Diamond Shamrock gas station. Claimant is a native Arabic speaker but was able to learn English. It should be noted that Claimant testified at hearing without the assistance of an interpreter. Further, there is no indication in the medical records that Claimant had any difficulty communicating in English with his treating physicians.

85. Claimant testified that after the two surgeries he began experiencing low back pain once he utilized a CAM boot. (Hearing Tr. p. 87) Claimant stated that there are a number of activities he can no longer do, including driving long distances or physical activities. Claimant testified that he experiences pain in his leg which is aggravated by the cold and only alleviated by elevation. Additionally, he experiences difficulty sleeping at night due to the pain.

86. During cross-examination, Claimant confirmed that prior to his injury performed all of the essential functions at his job. (Hearing Tr. p. 111) The essential duties are listed in Respondent's Exhibit YYYY. Claimant confirmed that after his injury he

was separated due to RTD's policy. (Hearing Tr. p. 111) Further, Claimant conceded he did not reapply for any positions at RTD. (Hearing Tr. p. 112) Claimant testified he applied to numerous positions. However, the vast majority of positions Claimant applied included commercial driving jobs. (Hearing Tr. p. 114) Claimant confirmed on the job applications that he spoke English. (Hearing Tr. p. 114)

87. During cross-examination, Claimant confirmed that his functional impairment is limited based upon his knee and ankle. (Hearing Tr. pp. 116-118)

88. During the hearing, Claimant exhibited numerous pain behaviors, which included elevating his left leg and resting it on a chair during the hearing.

89. Donna Ferris, vocational expert, submitted both a vocational report and testified at hearing. Ms. Ferris' conclusion, based upon the work restrictions provided by the authorized treating physicians, the employment records, her interview with the Claimant, and her job survey, is that Claimant maintains the ability to earn wages. Ms. Ferris identified numerous full- and part-time cashier positions including parking garages, casual fast food restaurants, car washes, and entertainment venues. She noted these positions were well within the Claimant's physical abilities as well as providing the ability for position changes. Additionally, she identified numerous full and part-time driving and light delivery positions which did not require a commercial driver's license. These driving positions included transporting vehicles for auto rental agencies, moving vehicles within auto rental agencies, picking up and delivering auto dealership service customers, and driving vehicles for a vehicle repair company. Delivery positions included local deliveries for a dental lab, takeout orders for fast food restaurants and newspaper deliveries. Additionally, Ms. Ferris identified a part-time school crossing guard position along with a part-time production position with a tea manufacturer. (Respondent's Exhibit WWWW) During her hearing testimony, Ms. Ferris testified she found Claimant articulate and very engaging. She reviewed notes that Claimant had brought to their meeting and found them well organized. (Hearing Tr. pp. 176-177) Ms. Ferris discussed the appropriate permanent work restriction. She persuasively testified that the ATP assigned a work restriction of 20 pounds lifting. She noted that Claimant's vocational expert, Joe Blythe, who did not testify at hearing, relied upon work restrictions which predated MMI. In her review, utilizing temporary work restrictions for purposes of determining a claimant's permanent ability to earn wages would be inappropriate. Additionally, she commented that aside from using the temporary work restrictions, Mr. Blythe relied upon restrictions assigned by Claimant's expert. In summary, Ms. Ferris credibly testified that the appropriate work restrictions to rely upon would be those assigned by the authorized treating physician. In this case, Ms. Ferris testified that there were numerous jobs available within those work restrictions.

90. Dr. Updike testified by evidentiary deposition. Dr. Updike testified that he assigned a permanent restriction of no lifting over 20 pounds. (Depo of Dr. Updike, p. 6) Additionally, while he has continued to see Claimant post-MMI, the permanent restrictions have not changed. (Depo of Dr. Updike, p. 6) Dr. Updike explained that a permanent restriction differs from a temporary restriction in that for

permanency he assigns the restriction that is medically necessary to prevent damage or worsening pain. (Depo of Dr. Updike, p. 8) Here, the 20-pound lifting restriction was sufficient to protect Claimant from injury or worsening. (Depo of Dr. Updike, p. 8) Dr. Updike confirmed that Claimant did not require any additional restrictions, such as elevation and/or positional changes. (Depo of Dr. Updike, p. 9) Dr. Updike confirmed that Claimant maintains the physical ability to earn wages. (Depo of Dr. Updike, p. 11)

91. Regarding Claimant's lumbar spine complaints, Dr. Updike confirmed his opinion that the lumbar pain does not relate to the industrial injury. Dr. Updike's opinion is based on his history as an occupational physician, along with medical research. (Depo of Dr. Updike, p. 12) In his experience, he has not observed permanent anatomical change from a limping gait. (Depo of Dr. Updike, p. 12) In the present case, Dr. Updike explained that he sent Claimant to Dr. Castro due to the "nature of the claim." (Depo of Dr. Updike, p. 13) Ultimately, based on his review of the medical records, his experience with Claimant as the treating physician, and viewing of the surveillance video, Dr. Updike persuasively testified that Claimant's lumbar complaints do not relate to the industrial injury. Additionally, he noted that Claimant showed signs of symptom magnification. (Depo of Dr. Updike, p. 14) "So if we cannot find an anatomic or physiologic explanation for the pain, then that is a concern. What I find most -- for me, most helpful in determining symptom magnification is surveillance because the anatomy and physiology does not change inside my clinic versus outside the clinic, but one's pain tolerance and motivation can. So when I saw him walking more comfortably, I was much more confident that there is a layer of symptom magnification. I do believe there is real pain there also." (Depo of Dr. Updike, p. 15) However, Dr. Updike clarified that the pain relates to Claimant's knee and ankle. (Depo of Dr. Updike, p. 15) But, he also testified that Claimant presented with "much more dramatic limping when he is in my office" compared to what was seen on the surveillance video. (Depo of Updike, p. 10.)

92. Regarding functional impairment, Dr. Updike testified:

> After seeing the video of him walking with a bit of a limp, what I saw outside was appropriate for somebody with a surgical knee and surgical ankle, and that was more what I would have expected. So I don't feel that the back is contributing to his limits of impairing his ADLs. (Depo of Dr. Updike, p. 15)

93. Counsel for Claimant examined Dr. Updike regarding the diagnosis of CRPS. Dr. Updike testified that he was not an expert on CRPS and would instead rely upon the opinions of Drs. Bernton, Ginsburg, and Wakeshima. (Depo of Dr. Updike, p. 26) With regards to CRPS, though, Dr. Updike noted that examination of Claimant's lower extremity did not consistently show signs of CRPS. (Depo of Dr. Updike, pp. 29-30)

94. The ALJ finds that Dr. Updike's testimony is consistent with the medical record and the evidence submitted at hearing, which includes the surveillance video of Claimant. Therefore, the ALJ finds Dr. Updike's testimony regarding Claimant's

restrictions, symptom magnification, and the extent of Claimant's work injury to be credible and persuasive.

95. On January 18, 2018, Dr. Mark Failinger testified by evidentiary deposition. Dr. Failinger is an expert in orthopedic surgery. Dr. Failinger testified that Claimant's subjective complaints did not match up with the objective findings. (Depo of Dr. Failinger, p. 7) Additionally, he agreed with Dr. Updike's assignment of a 20-pound lifting restriction. (Depo of Dr. Failinger, p. 8) Regarding Claimant's lumbar pain, Dr. Failinger did not believe that Claimant's current symptoms relate to the industrial injury. (Depo of Dr. Failinger, p. 11)

> There is not a lot of medical rationale that someone would have permanent back problems by wearing a boot that weighs a couple pounds at most." (Depo of Dr. Failinger, p. 11)
>
> So it is a long way of saying it wouldn't be a -- in my experience, a great medical rationale for developing any significant or permanent low back problems wearing a boot for several months like he did." (Depo of Dr. Failinger, p. 12)

Dr. Failinger credibly and persuasively testified that Claimant did not sustain functional impairment to a body part beyond the lower extremity. (Depo of Dr. Failinger, p. 13) Dr. Failinger discussed CRPS. He noted that there were inconsistent clinical findings with regards to such a diagnosis. (Depo of Dr. Failinger, pp. 13-14)

96. The ALJ finds Dr. Failinger's opinions in his report and testimony to be credible and persuasive since they are supported by the medical record and consistent with Dr. Ginsburg's testimony, the Division Examiner.

97. On January 31, 2019, the parties took the evidentiary deposition of the DIME physician, Dr. Ginsburg. At the time of the evidentiary deposition, Dr. Ginsburg had received supplemental records up through the date of the hearing, along with the surveillance video. Dr. Ginsburg conceded that at the time of his initial DIME report, he did not have a copy of Dr. Wakeshima's impairment report. However, he testified that such a report would not be something that he would usually rely upon in forming his opinion. (Depo of Dr. Ginsburg, p. 5) Dr. Ginsburg testified that the medical records did not reveal consistency regarding the Claimant's clinical presentations over the course of the claim. (Depo of Dr. Ginsburg, p. 19) Regarding the video surveillance, Dr. Ginsburg indicated that it was very persuasive. (Depo of Dr. Ginsburg, p. 21) He reconfirmed his opinion that Claimant does not suffer from CRPS and consequently a permanent impairment rating for that condition is not required. (Depo of Dr. Ginsburg, p. 22) Additionally, regarding his impairment rating, Dr. Ginsburg clarified that the reason he extended his rating out to a whole person was due to instructions based on the Level II training and the AMA Guides, Third Edition Revised. (Depo of Dr. Ginsburg, pp. 24-25) Finally, he agreed with Drs. Updike and Failinger that Claimant's lumbar pain did not relate to the industrial injury. (Depo of Dr. Ginsburg, p. 26)

98. Dr. Ginsburg also testified as to his assessment of the surveillance video of Claimant. Dr. Ginsburg testified that there is a dramatic difference between how Claimant presented at the DIME appointment and to his medical providers compared to what he saw on the surveillance video. Dr. Ginsburg testified that:

> Parenthetically, I might say that oftentimes we're shown videos. And my response is, So what? It doesn't prove one thing or another. It doesn't prove anything. There are some -- maybe three times in many years where I'm given a video and I go, Oh, wow, that is significant. The guy who said he couldn't walk and taught tennis. And you saw him teaching tennis. That was an example. This is another example. If he hadn't said he can't walk more than 10 feet or stay in the car more than a certain amount of time, and then it shows him walking normally in flip-flops, doing various tasks, getting into a vehicle and so forth, I wouldn't make a big deal out of it. But it's contradictory to his assertion of how bad the pain is. (Depo of Dr. Ginsburg p. 21.)

99. Dr. Ginsburg also testified that the testing performed to assist in making a diagnosis of CRPS was equivocal and ambiguous. He testified that when he performed the DIME, he concluded Claimant did not have CRPS based on the medical record, his physical examination, and other factors such as Claimant alleging he suffers from consistent and unrelenting pain but yet he was not taking his pain medication.

100. After reviewing all of the evidence, Dr. Ginsburg again concluded that a diagnosis of CRPS "just doesn't make any sense." (Depo of Dr. Ginsburg p. 22-23.)

101. In summarizing his assessment of the video and the contrast between Claimant's contention regarding the extent of his pain and disability due to his work injury and what Dr. Ginsburg observed as a physician, he said:

> I have to tell you, I've been shown many videos, and my usual response is, so what? You can't analyze somebody walking from the supermarket to the car. I don't buy that. ***But in this case, it was impressive*.** (Emphasis added.) (Depo of Dr. Ginsburg p. 23.)

102. The ALJ finds Dr. Ginsburg's opinions to be credible and persuasive. Dr. Ginsburg's opinions are consistent with the medical record as well as the opinions of Drs. Failinger and Updike.

103. The ALJ is left with the same impression as Dr. Ginsburg after viewing the surveillance video of Claimant. Claimant presented in court with numerous pain behaviors. This included elevating his left leg on a chair throughout the hearing and exhibiting additional mannerisms and pain behaviors which were intended to convey a state of being in pain and being disabled. However, the mannerisms and pain behaviors exhibited by Claimant during the hearing were completely absent from what was captured during the surveillance. The ALJ finds and concludes that

Claimant's representations as to the extent of his pain, the cause of his pain, the extent of his disability and the extent of his restrictions are not credible or reliable.

Penalty Issues

Dictation of Medical Care

104. In Dr. Wakeshima's report dated January 24, 2018 (Respondent's Exhibit XXX), Dr. Wakeshima wrote: "I did have my medical assistant contact the adjuster and Dr. Updike's office and was informed that the lumbar spine is not authorized for evaluation treatment under his workers' compensation claim and therefore the lumbar spine is not to be rated on the impairment rating. Therefore the impairment rating was not accomplished for the lumbar spine." (Respondent's Exhibits, pp. 277-78) Additionally, under assessment, Dr. Wakeshima wrote: "Upon receiving information from the adjuster, the lumbar spine is not authorized for treatment as related to his workers' compensation claim and therefore also not authorized for impairment rating." Respondent's Exhibits, p. 276) Finally, under chronic pain, Dr. Wakeshima wrote: "I therefore had my medical assistant contact both Dr. Updike and the adjuster's office and they both confirmed that the lumbar spine is not work related and therefore would not warrant an impairment rating as related to his work injury of 11/2/16." (Respondent's Exhibits, p. 277)

105. During his evidentiary deposition, Dr. Wakeshima did not address Claimant's allegation that the adjuster dictated that he not rate the lumbar spine. Additionally, Claimant did not present evidence in the form of Dr. Wakeshima's "medical assistant" with regards to the allegation of dictation of care.

106. At hearing, Christina Giles testified. Ms. Giles is the adjuster for RTD and handled Claimant's workers' compensation claim. Ms. Giles testified that Dr. Updike contacted her office to request a referral to Dr. Wakeshima to perform the impairment rating. Ms. Giles approved the referral. She testified she did not have any conversations with Dr. Wakeshima or his medical assistant regarding the scope of the impairment ratings. Ms. Giles testified that in the 11 years she has worked with RTD, she had never spoken to Dr. Wakeshima directly. When asked what her general practice was with regards to speaking with physicians and advising them what is and is not related to the claim, Ms. Giles responded:

> Ultimately, I would have allowed that to be Dr. Updike's decision. He is the ATP. If he is referring for the impairment rating, I anticipate he would ask what he wants for the impairment rating. We just - - whatever they rate, we would then file our FA according to the body part that we have accepted. But we wouldn't tell them what they can or can't do. (Hearing Tr., pp. 154-55)

Additionally, Ms. Giles testified that prior to hearing she reviewed her adjuster notes and confirmed that no reference existed with regards to any conversation with Dr. Wakeshima or Dr. Wakeshima's medical assistant.

107. The evidence presented by Claimant with regards to dictation of care or degree of impairment is neither credited nor found persuasive. In Dr. Wakeshima's report, he references a conversation with both the adjuster and Dr. Updike. It is difficult to discern whether Dr. Wakeshima's interpretation with regards to ratable body parts could just as well have come from Dr. Updike as opposed to the adjuster. Additionally, the reference in Dr. Wakeshima's report is based upon a conversation his medical assistant had with an additional person. Essentially, this is hearsay within hearsay. Claimant did not present the testimony of the medical assistant to further clarify this issue. Lastly, Ms. Giles persuasively and credibly testified that she did not have any conversations with Dr. Wakeshima's office regarding this issue. Finally, Ms. Giles persuasively and credibly testified that her general practice was to not dictate to the physicians what body parts to rate.

108. Accordingly, it is hereby found that there is insufficient credible, reliable, and persuasive evidence to establish that the adjuster dictated to Dr. Wakeshima the degree of impairment to provide Claimant in violation of 8-43-503(3).

Late Indemnity Payments

Failure to Plead Penalties with Specificity

109. Pursuant to Section 8-43-304(4), when a party files an application for hearing to seek a penalty, they must "state with specificity the grounds on which the penalty is being asserted." In addition, Section 8-43-211(2)(b) requires a request for hearing to be filed by using forms provided by the Office of Administrative Courts. Consistent with the statutory requirement to state with specificity the grounds on which each penalty is being asserted, the Application for Hearing form provided by the Office of Administrative Courts provides the following instructions:

> Penalties: Describe with specificity the grounds on which a penalty is asserted, including the order, rule or section of the statute allegedly violated, and the dates on which you claim the violation began and ended.
>
> (Attach additional pages as needed)

110. Claimant did not state with specificity the basis of his penalty allegations as required by the Act. Instead, Claimant cited merely a portion of the relevant rule regarding the payment of TTD and then failed to specify which TTD payments were late and how late. Claimant merely asserted Respondent violated the act by the late payment of TTD, TPD, and PPD. And, instead of providing any specificity regarding which payment were late and how late, Claimant merely asserted that the Respondent has access to the information and therefore the Respondent can figure out any penalty claims on their own.

On his Application, Claimant merely stated the following:

> WCRP 5-6 (B) provides in part "…Temporary total disability benefits are payable at least once every two weeks".

. . .

> Respondents did not make timely payment of TTD, TPD or PPD on multiple occasions in violation of Rules and Act. Specific dates are within Respondents' knowledge and reflected on indemnity checks.

111. Moreover, Claimant did not cite the rule that governs the payment of PPD benefits. Thus, Claimant also failed to state with sufficient specificity any penalty regarding the late payment of PPD benefits.

112. Therefore, Claimant failed to state with specificity the grounds on which each penalty regarding the late payment of indemnity benefits was being asserted.

113. At hearing, and in his post hearing submission, Claimant's lack of specificity continued. Claimant appears to argue that each TTD payment was due exactly two weeks from the prior payment - even if the prior payment was early. Under this theory, Claimant alleged Respondent was 37 days late in paying various TTD and PPD benefits.

114. Claimant, however, failed to cite WCRP 5-6 (B) in its entirety, and the missing portion of the rule undercuts his position. The rule provides that TTD benefits are payable at least once every two weeks based on the date of the admission. W.C.R.P. 5-6 (B) provides:

> Temporary disability benefits awarded by admission are due on the date of the admission and the initial payment shall be paid so that the claimant receives the benefits not later than five (5) calendar days after the date of the admission. Temporary total disability benefits are payable at least once every two weeks thereafter ***from the date of the admission***. (Emphasis added.)

115. Therefore, once an admission is filed for temporary total disability benefits, a check for TTD must be issued at least once during each two-week period. Moreover, the date by when each subsequent TTD check is due, before being late, is based on the date of the admission. The due date is not modified based on the date of each prior check.

Lack of Admission of Liability

116. Moreover, the record before the ALJ does not contain the relevant General Admission(s) of liability. Although the relevant General Admission of Liability admission might not be necessary to support Claimant's argument and theory, the relevant General Admission – with the date it was filed - is necessary for the ALJ determine the due date for each TTD payment at issue pursuant to W.C.R.P. 5-6 (B).

Penalties are not assessed on a strict liability standard.

117. Claimant takes the position that the imposition of penalties is mandatory if an indemnity payment is late. However, penalties under § 8-43-304(1) are not imposed on a strict liability standard. *See Cruz v. Sacramento Drilling, Inc*., W.C. No. 4-999-129-04, (July 28, 2017).

118. Once a claim for penalties is properly plead, the imposition of penalties under § 8-43-304(1) is a two-step process. The ALJ must first determine whether the disputed conduct constituted a violation of the Workers' Compensation Act, of a duty lawfully enjoined, or of an order. If the ALJ finds such a violation, he may impose penalties if he also finds that the actions were objectively unreasonable. *City Market v. ICAO*, 68 P.3d 601 (Colo. App. 2003); see also *Jimenez v. ICAO*, 107 P.3d 965, 967 (Colo. App. 2003) (reasonableness of conduct in defense of penalty claim is predicated on rational argument based in law or fact).

Claimant must prove by clear and convincing evidence Respondent knew or reasonably should have known they were in violation of the Act or Rule.

119. However, once a party files an application for hearing for a penalty pursuant to subsection § 8-43-304(1), with the requisite specificity of the violations asserted, the alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking a penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. *See* § 8-43-304(4), C.R.S.

120. By the time Claimant filed his application for hearing and asserted a penalty for the late payment of indemnity benefits, the indemnity benefits at issue had been paid. Thus, Respondent had cured any violations. Therefore, Claimant had to establish by clear and convincing evidence that Respondent knew or reasonably should have known they were in violation of the act.

121. Claimant's claim for penalties is based on his contention that certain indemnity benefits were late. Claimant argues that each TTD payment was due exactly two weeks from the prior payment - even if the prior payment was early. Claimant contends his interpretation is based on the unambiguous langue of Rule 5-6.

122. Ms. Giles, the adjuster, testified that it was her understanding of the Workers' Compensation Rule of Procedure that a TTD check shall be issued every two weeks and that the "two weeks" referenced by the rule refers to the indemnity period. Accordingly, so long as the indemnity check for the two-week period is issued on or before the last day of the indemnity period, the adjuster believed she met the applicable rules as the indemnity check has been issued every two weeks.

123. Therefore, the adjuster thought that benefits were timely if they were paid during the period for which they were compensating Claimant. For example, on July 20, 2017, Respondent issued a TTD check for $1,183.98 for the period of July 16, 2017 through July 29, 2017. The ALJ notes that this check was issued only 7 days after the previous TTD check. The check for the next TTD period, July 30, 2017 through August 12, 2017, was issued on August 10, 2017. The number of days between the July 20, 2017 check and the August 10, 2017 check equals 20 days. However, the TTD check issued August 10, 2017 was issued within the TTD period, July 30, 2017 to August 12, 2017.

124. The fact that Claimant is seeking an interpretation that is different from the adjuster's, and the interpretation of each party is different from the ALJ's interpretation, lends support to a finding that Claimant has failed to meet his burden of proof, i.e., that the adjuster's actions were objectively unreasonable. In other words, Claimant's contention as to how to calculate the due date for each TTD payment is inconsistent with the plain language of W.C.R.P. 5-6 (B). Therefore, the adjuster's failure to pay TTD pursuant to Claimant's theory cannot be found to be objectively unreasonable.

125. The adjuster also testified that when Claimant was terminated from employment, he was no longer in Respondent's payroll system from which TTD checks were being issued automatically. Therefore, once she was made aware of the problem, she promptly corrected the issue and began issuing ongoing TTD payments out of a different payment system. She testified that the payroll system would not allow a check for TTD or wages to be issued to someone who is not a current employee. The adjuster characterized the payment system as a bit archaic. However, merely describing a system as a bit archaic does not mean the system – by definition – is objectively unreasonable. There was no credible and persuasive evidence submitted which demonstrated what archaic meant and that such system was not reasonable under the circumstances for the payment of indemnity benefits by a self-insured Employer like Respondent.

126. Due to the foregoing reasons, the ALJ finds and concludes that Claimant has failed to establish that he is entitled to penalties regarding the payment of indemnity benefits.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has established by a preponderance of the evidence that he is permanently and totally disabled.

Pursuant to § 8-40-201(16.5)(a), C.R.S., a claimant is entitled to PTD benefits if he is "unable to earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. places the burden of proof on the claimant to establish by a preponderance of the evidence that he is permanently and totally disabled. The overall objective is to determine whether employment is reasonably available to the claimant under his particular circumstances. In making this determination, the ALJ may consider the effects of the industrial injury in light of the claimant's human factors. These factors may include the claimant's physical condition, mental ability, age, employment history, education and the availability of work the claimant can perform. *Weld County School District RE-12 v. Bynes*, 955 P.2d 550 (Colo 1998).

Here, the evidence establishes that Claimant maintains the ability to earn wages. This ALJ found that the ATP assigned a 20-pound lifting restriction, with no other limitations. While Claimant testified that other restrictions apply, such as elevating his leg and changing positions, Dr. Updike persuasively testified that those limitations were subjective and not necessary to protect Claimant from further injury. Dr. Failinger agreed that a 20-pound lifting restriction would be appropriate.

Based on this restriction, Ms. Ferris persuasively testified that Claimant maintained the ability to earn wages. She identified numerous available positions in the Denver area that Claimant could safely perform. Claimant's expert, Joe Blythe, is not credited as he based his analysis on temporary work restrictions, which do not reflect Claimant's permanent condition.

In addition, as found, Drs. Updike and Failinger persuasively testified that Claimant maintained the physical ability to perform physical work activities that are necessary to earn wages.

Dr. Ginsburg, the DIME physician, testified that Claimant's presentation on the surveillance video was impressive. The ALJ is left with the same impression when comparing Claimant's presentation as set forth in the medical records and during the hearing when compared to what is demonstrated on the surveillance video. The ALJ finds and concludes that Claimant's representations as to the extent of his pain and disability is neither credible nor reliable.

Claimant failed to prove by a preponderance of the evidence that he is entitled to PTD benefits.

II. Permanent partial disability benefits.

(a) Whether Claimant has overcome the Division IME's opinion by clear and convincing evidence that Claimant does not have chronic regional pain syndrome (CRPS) and should be provided an impairment rating for such.

The party seeking to overcome the DIME physician's finding regarding impairment bears the burden of proof by clear and convincing evidence. *Magnetic Eng'g, Inc. v. ICAO, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding impairment has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Here, Claimant contends the DIME physician erred by failing to assign a permanent impairment rating for CRPS. The DIME physician's opinion is that Claimant does not suffer from CRPS and is therefore not entitled to an impairment rating. As found, the DIME physician's opinion is supported by the opinions of Drs. Updike, Failinger and Bernton. Further, the DIME physician reviewed the entirety of the medical records, including the diagnostics, surveillance video, and the impairment report authored by Dr. Wakeshima. Additionally, the DIME physician specifically referenced the diagnostic criteria set forth for CRPS in the Colorado Medical Treatment Guidelines. He concluded that the medical records, including his physical examination of the Claimant, did not meet the applicable criteria. While Dr. Wakeshima opined differently, a mere difference of opinion is not sufficient to establish the DIME physician clearly erred.

The ALJ finds and concludes that Claimant failed to overcome the DIME physician's opinion regarding impairment.

(b) Whether Claimant has established by a preponderance of the evidence that he has suffered functional impairment, which is not on the schedule of disabilities and is entitled to a whole person impairment rating.

Scheduled and nonscheduled impairments are treated differently for purposes of determining permanent disability benefits. "Specifically, the procedures of subsection (8)(c), which state that the division-sponsored independent medical examination finding as to permanent impairment can be overcome only by clear and convincing evidence and that such finding is a prerequisite to a hearing on permanent impairment, are applicable only to nonscheduled impairments." *Delaney v. Indus. Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000). Therefore, Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. *Younger v. City and County of Denver*, 810 P.2d 647 (Colo. 1991).

"Whether claimant has suffered a functional impairment that is listed in the schedule of disabilities is a factual question to be resolved by the administrative law judge." *Strauch v. PSL Swedish Healthcare Sys*., 917 P.2d 366 (Colo. App. 1996); Delaney v. Indus. Claim Appeals Office, 30 P.3d 691 (Colo. App. 2000); *Kolar v. Indus. Claim Appeals Office*, 122 P.3d 1075 (Colo. App. 2005).

Here, Claimant contends the lower extremity rating should be converted to whole person because he sustained functional impairment to a body part not listed on the schedule of disability. Specifically, Claimant contends that beginning with his placement in a CAM boot he began experiences lumbar symptoms necessitating an MRI, chiropractic treatment, physical therapy, and a surgical evaluation. Further, Claimant contends his "altered gait" contributed to his symptoms. These lumbar symptoms, Claimant argues, have resulted in functional impairment.

First, the mere fact Claimant complains of lumbar symptoms does not result in conversion as the lumbar symptoms must relate to the industrial injury (i.e. the ankle/knee injuries). Here, Drs. Updike and Failinger specifically opined that Claimant's lumbar complaints did not relate to the industrial injury. Both physicians disagreed with the suggestion that a CAM boot would result in lumbar symptoms. Further, neither physician credited Claimant's suggestion that "altered gait" caused the problems. Rather, based on the opinion of Dr. Castro, the physicians concluded Claimant suffers from degenerative disc disease, unrelated to the industrial injury.

Second, as pointed out by Drs. Updike and Ginsburg, the surveillance video shows Claimant walking relatively normally, as opposed to the exaggerated gait displayed during medical visits. Accordingly, Claimant's descriptions of his gait and relationship to the alleged lumbar symptoms are not credited.

Third, Claimant failed to credibly testify that his lumbar pain resulted in any functional impairment. During the course of his testimony, Claimant testified as to all the activities he could no longer perform due the work injury. However, during cross-

examination, Claimant conceded these activities were limited due to his lower extremity injury, not lumbar pain.

Fourth, Claimant argues that because the DIME physician converted the scheduled rating to whole person, the DIME essentially opined Claimant's rating should be whole person. This is incorrect. The DIME physician testified that the AMA Guides and Colorado Division of Workers' Compensation Level II training instruct rating physicians to take all ratings up to whole person. This exercise is not related to a determination of "functional impairment." Further, the DIME physician testified that Claimant's lumbar symptoms did not relate to the industrial injury.

The ALJ finds and concludes Claimant failed to prove by a preponderance of the evidence that he sustained functional impairment to a body part not listed on the schedule of disabilities.

III. Penalties

(a) Whether Respondent is subject to penalties for the late payment of temporary total disability benefits.

(b) Whether Respondent is subject to penalties for the late payment of permanent partial disability benefits.

General Penalties Provision and Standard

Section 8-43-304(1) allows an ALJ to impose penalties of up to $ 1000 per day against any party "who violates any provision of articles 40 to 47 of [Title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court." The failure to comply with a procedural rule has been determined to be a failure to obey an "order" and failure to perform a "duty lawfully enjoined" within the meaning of § 8-43-304(1); *Pioneers Hospital v. ICAO*, 114 P.3d 97,98 (Colo. App. 2005).

Failure to Plead Penalties with Specificity

Pursuant to Section 8-43-304(4), when a party files an application for hearing to seek a penalty, they must "state with specificity the grounds on which the penalty is being asserted." In addition, Section 8-43-211(2)(b) requires a request for hearing to be filed by using forms provided by the Office of Administrative Courts. Consistent with the statutory requirement to state with specificity the grounds on which each penalty is being asserted, the Application for Hearing form provided by the Office of Administrative Courts provides the following instructions:

> Penalties: Describe with specificity the grounds on which a penalty is asserted, including the order, rule or section of the

> statute allegedly violated, and the dates on which you claim the violation began and ended.
>
> (Attach additional pages as needed)

Claimant did not state with specificity the basis of his penalty allegations as required by the Act. Instead, Claimant cited merely a portion of the relevant rule regarding the payment of TTD and then failed to specify which TTD payments were late and how late. Claimant merely asserted Respondent violated the act by the late payment of TTD, TPD, and PPD - and since the Respondent has access to the information, the Respondent can figure out any penalty claims on their own.

On his Application, Claimant merely stated the following:

> WCRP 5-6 (B) provides in part "…Temporary total disability benefits are payable at least once every two weeks".
>
> . . .
>
> Respondents did not make timely payment of TTD, TPD or PPD on multiple occasions in violation of Rules and Act. Specific dates are within Respondents' knowledge and reflected on indemnity checks.

Moreover, Claimant did not cite the rule that governs the payment of PPD benefits. Therefore, Claimant failed to state with specificity his penalty claims relating the payment of indemnity benefits.

At hearing, and in his post hearing submission, Claimant's lack of specificity continued. Claimant appears to argue that each TTD payment was due exactly two weeks from the prior payment - even if the prior payment was early. Under this theory, Claimant alleged Respondents were 37 days late in paying various TTD and PPD benefits.

Claimant, however, failed to cite WCRP 5-6 (B) in its entirety, and the missing portion of the rule undercuts his position. The rule provides that TTD benefits are payable at least once every two weeks based on the date of the admission. W.C.R.P. 5-6 (B) provides:

> Temporary disability benefits awarded by admission are due on the date of the admission and the initial payment shall be paid so that the claimant receives the benefits not later than five (5) calendar days after the date of the admission. *Temporary total disability benefits are payable at least once every two weeks thereafter from the date of the admission*. (Emphasis added.)

Therefore, once an admission is filed for temporary total disability benefits, a check for TTD must be issued at least once during each two-week period. Moreover, the date by when each subsequent TTD check is due, before being late, is based on the date of the admission. The due date is not modified based on the date of each prior check.

Lack of an Admission(s) of Liability

Moreover, the record before the ALJ does not contain the relevant General Admission(s) of liability. Although the relevant General Admission of Liability admission might not be necessary to support Claimant's argument and theory, the relevant General Admission – with the date it was filed - is necessary for the ALJ determine the due date for each TTD payment at issue pursuant to W.C.R.P. 5-6 (B).

Penalties are not assessed on a strict liability standard.

Claimant takes the position that the imposition of penalties is mandatory if an indemnity payment is late. However, penalties under § 8-43-304(1) are not imposed on a strict liability standard. *See Cruz v. Sacramento Drilling, Inc*., W.C. No. 4-999-129-04, (July 28, 2017).

Once a claim for penalties is properly plead, the imposition of penalties under § 8-43-304(1) is a two-step process. The ALJ must first determine whether the disputed conduct constituted a violation of the Workers' Compensation Act, of a duty lawfully enjoined, or of an order. If the ALJ finds such a violation, he may impose penalties if he also finds that the actions were objectively unreasonable. *City Market v. ICAO*, 68 P.3d 601 (Colo. App. 2003); see also *Jimenez v. ICAO*, 107 P.3d 965, 967 (Colo. App. 2003) (reasonableness of conduct in defense of penalty claim is predicated on rational argument based in law or fact).

Claimant must prove by clear and convincing evidence Respondent knew or reasonably should have known they were in violation of the Act or Rule.

Moreover, once a party files an application for hearing for a penalty pursuant to subsection § 8-43-304(1), with the requisite specificity of the violations asserted, the alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking a penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. *See* § 8-43-304(4), C.R.S.

By the time Claimant filed his application for hearing and asserted a penalty for the late payment of indemnity benefits, the indemnity benefits at issue had been paid. Thus, the Respondent had cured any violations. Therefore, Claimant had to establish by clear and convincing evidence that Respondent knew or reasonably should have known they were in violation of the act.

Claimant's claim for penalties is based on his contention that certain indemnity benefits were late. Claimant argues that each TTD payment was due exactly two weeks from the prior payment - even if the prior payment was early. Claimant contends his interpretation is based on the unambiguous langue of Rule 5-6. The adjuster, however, contends she thought benefits are timely if paid within the period when disability benefits are due.

The adjuster testified that it was her understanding that benefits were timely if they were paid during the period for which they were compensating Claimant. For example, on July 20, 2017, Respondent issued a TTD check for $1,183.98 for the period of July 16, 2017 through July 29, 2017. The ALJ notes that this check was issued only 7 days after the previous TTD check. The check for the next TTD period, July 30, 2017 through August 12, 2017, was issued on August 10, 2017. The number of days between the July 20, 2017 check and the August 10, 2017 check equals 20 days. However, the TTD check issued August 10, 2017 was issued within the TTD period, July 30, 2017 to August 12, 2017.

The fact that Claimant is seeking an interpretation that is different from the adjuster's, and the interpretation of each party is different from the ALJ's interpretation, supports a finding that Claimant has failed to meet his burden of proof, i.e., that the adjuster's actions were unreasonable. More specifically, Claimant's contention as to how to calculate the due date for each TTD payment is inconsistent with the plain language of W.C.R.P. 5-6 (B). Therefore, the adjuster's failure to pay TTD pursuant to Claimant's theory, which the ALJ rejects, cannot be found to be objectively unreasonable.

The adjuster also testified when Claimant was terminated from employment, he was no longer in Respondent's payroll system from which TTD checks were being issued automatically. Therefore, once she was made aware of the problem, she promptly corrected the issue and began issuing ongoing TTD payments out of a different payment system. She testified that the payroll system would not allow a check for TTD or wages to be issued to someone who is not a current employee. The adjuster characterized the payment system as a bit archaic. However, merely describing a system as a bit archaic does not mean the system – by definition – is objectively unreasonable. There was no credible and persuasive evidence submitted which demonstrated what archaic meant and that such system was not reasonable under the circumstances for the payment of indemnity benefits by a self-insured Employer like Respondent.

Due to the foregoing reasons, the ALJ finds and concludes that Claimant has failed to establish that he is entitled to penalties. Claimant failed to state with specificity his penalty allegations regarding the payment of indemnity benefits with sufficient specificity. Such failure, in and of itself, is sufficient to deny Claimant's claims for penalties as it relates to the payment of indemnity benefits.

Moreover, even if Claimant had stated with sufficient specificity his penalty allegations, his Claims still fail due to a lack of sufficient evidence to establish Respondent should be subject to penalties. Claimant had to establish that certain payments were late, as well as how late. Claimant also had to establish by clear and convincing evidence that the late payments were due to objectively unreasonable conduct of Respondent. As found, Claimant failed to submit the relevant General Admission(s) of Liability which would set forth the date payments were due. In addition, Claimant failed to establish by clear and convincing evidence the requisite negligence of Respondent. The mere fact that a payment is late does not mean that penalties must be awarded. The law as it relates to penalties does not expect perfection in the management of claims. The fact that a payment is late, and cured before an Application is filed, cannot mandate the automatic imposition of penalty. As stated above, penalties are not imposed on a strict liability standard. Thus, the fact that a payment is late cannot be used to establish the requisite negligence, via a theory such as the doctrine of res ipsa loquitur – a tort theory

- because such theory or doctrine reverses the order of proof and is contrary to the standard of proof mandated by the statute when a penalty has been cured. As indicated above, once a penalty is cured, the burden of proof shifts to Claimant.

In this case, the adjuster testified that TTD was not timely when Claimant was no longer an employee and the automatic TTD payments which were being made out of Respondent's payroll account ceased, because payroll payments, which includes TTD, cannot be made to non-employees. She credible and persuasively testified that once she was advised of the problem, she immediately restarted payments out of a different account/system. Again, although the system was not perfect, Claimant failed to establish that such occurrence was objectively unreasonable. Moreover, Claimant failed to establish the actual due date of each TTD check at issue since the relevant General Admission(s) of Liability is/are not part of the record. Lastly, the ALJ rejects Claimant's theory that indemnity payments are due exactly two weeks from when the last payment was made.

Therefore, the ALJ finds and concludes that Claimant has failed to meet his burden of proof and establish that penalties should be imposed on Respondent regarding the payment of indemnity benefits.

(a) Whether Respondent is subject to penalties for dictating the type or duration of medical treatment or degree of physical impairment.

Section 8-43-503(3) provides: "Employers, insurers, claimants, or their representatives shall not dictate to any physician the type or duration of treatment or degree of physical impairment."

As found, Employer did not direct to Dr. Wakeshima the degree of physical impairment by prohibiting the rating of the lumbar spine. While Dr. Wakeshima's impairment report contains a statement that the adjuster directed him not to rate the lumbar spine, the report also implies that this direction came from Dr. Updike. Further, as found, the contact was purportedly made by Dr. Wakeshima's "medical assistant," who did not testify, and Dr. Wakeshima did not address this issue during his deposition. Finally, Ms. Giles credibly testified that she was the sole adjuster on this claim and did not direct Dr. Wakeshima regarding impairment.

Ultimately, the ALJ finds and concludes that Claimant failed to prove a violation of § 8-43-503(3) by a preponderance of the evidence.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for PTD benefits is denied and dismissed.

2. Claimant's request for additional PPD benefits is denied and dismissed.

3. Claimant's request for penalties is denied and dismissed.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 18, 2019

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffered an occupational disease to the form of Hypersensitivity Pneumonitis (HP) that began on January 30, 2017 during the course and scope of her employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered an occupational disease to the form of an aggravation of her pre-existing pulmonary condition that began on January 30, 2017 during the course and scope of her employment with Employer.

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her occupational disease.

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage (AWW) of $1,446.29 in 2017 and $1,548.01 in 2018.

2. If Claimant's claim is compensable, she is entitled to receive Temporary Total Disability (TTD) benefits for the periods January 30, 2017 through April 20, 2017 and February 6, 2018 through May 29, 2018.

FINDINGS OF FACT

1. Employer is a public school district in Colorado. Claimant is a 45-year old female who works for Employer as a teacher. She contends that she suffers from a lung disease known as Hypersensitivity Pneumonitis (HP) with a date of onset of January 30, 2017. Claimant alleges that her exposure to airborne mold in classroom 2698 at Powell Middle School caused her HP or aggravated her pre-existing pulmonary condition.

2. Claimant's medical records reveal a significant history of pulmonary issues prior to beginning work at Powell Middle School. The medical records document Claimant's condition prior to her date of disability. On February 10, 2012 Claimant presented to her physician at Kaiser Permanente complaining of chest tightness and sinus issues. She remarked that teaching was difficult because she had to get closer to students in order to hear them. The treating physician assessed Claimant with chronic sinusitis. During the visit Claimant and the physician "had a long discussion about chronic fatigue."

3. On March 10, 2012 Claimant returned to her personal physician at Kaiser. Her diagnoses included persistent asthma with an acute exacerbation and chronic sinusitis. Claimant reported asthma exacerbation for three days with wheezing, coughing and night sweats. The doctor noted that Claimant was "frustrated as has recurrent asthma exacerbations and chronic sinus congestions. Wonders if she needs admission for full testing or eval at National Jewish."

4. On March 12, 2012 Claimant engaged in an e-mail exchange with Kaiser physician Lane Fairbairn, D.O. Claimant recounted that she had inquired about one month earlier whether she should take a leave of absence from work. She noted that she recently had a "very bad scare with asthma" and had to miss work "today for it as well." Claimant explained that she had been reading about Chronic Fatigue "and it seems like that fits my cycle of illness for the past 2 years and 9 months." She inquired whether she qualified for leave.

5. Later on March 12, 2012 Claimant exchanged correspondence with Peter J. Cvietusa, M.D. at Kaiser. Claimant again requested the possibility of a referral to National Jewish Hospital. She wrote, "I almost always have a sinus infection then sometimes it gets to my chest and makes my asthma so bad. I have been very ill this Jan-March. I'm starting to worry that I need a leave of absence from my work. I want my life and health back. I'm so limited in what I used to be able to do."

6. On March 19, 2012 Claimant visited Allergist Richard Crockett, M.D. for an evaluation. Dr. Crockett noted that Claimant's symptoms and respiratory infections started in 2009. He remarked that Claimant had "jaw surgery for persistent staph infection of the bone, which probably started from a sinus infection." Claimant reported frequent bronchitis and "chronic fatigue since 2009, getting worse." Dr. Crockett reviewed a prior CT scan of Claimant's sinuses from November 2009 that showed "extensive inflammatory changes."

7. On May 6, 2013 Claimant underwent spirometry testing at National Jewish. The testing did not reveal airflow obstruction at baseline or any change in her FBC and FEV1 after receiving nebulized Albuterol.

8. Claimant subsequently left the country for one year to live and teach in Costa Rica. She testified that she had very little trouble with her asthma and sinusitis. Claimant returned to Colorado and began teaching at Powell Middle School for the 2014-15 school year.

9. On March 2, 2015 Claimant returned to Kaiser complaining of shortness of breath and asthma. She was diagnosed with acute exacerbation of moderate, persistent asthma. Claimant complained of cough and dyspnea for the previous few days. She expressed concern about "missing more work" and wanted to ensure she could return to the classroom as soon as possible.

10. Claimant returned to her medical providers during the following year for continuing treatment of her chronic sinusitis and asthma symptoms. During the summer

months of 2015 Claimant visited her physicians on numerous occasions including June 8, 2015, July 12, 2015, July 20, 2015, July 21, 2015 and July 31, 2015. On July 21, 2015 Claimant presented with a chief complaint of "fatigue." She underwent a chest scan to address her concern regarding Churg-Strauss disease. The scan reflected that Claimant's "lungs and plural spaces are clear. The cardiac silhouettes and pulmonary vessels are within normal limits."

11. On October 29, 2016 Claimant visited Joseph Peila, M.D. at Kaiser for an evaluation. Dr. Peila diagnosed Claimant with moderate persistent asthma and chronic sinusitis. She had just traveled for a school trip to Washington, DC and developed worsening symptoms that included a productive cough, sinus pressure and increased discharge. Dr. Peila instructed Claimant to take prednisone as directed and use a nebulizer every 4-6 hours.

12. On January 3, 2017 Claimant suffered from an especially severe bout of asthma and chronic sinusitis symptoms while spending the weekend in the mountains with her family. She thus sought treatment at Fraser Medical Clinic in Winter Park, Colorado. After a brief examination, the providers at Fraser Medical Clinic diagnosed Claimant with High Altitude Pulmonary Edema ("HAPE"). However, Claimant's treating physicians subsequently ruled out the diagnosis.

13. On January 10, 2017 Claimant left a message for Dr. Cvietusa advising that her asthma had flared and she woke up the previous night unable to breathe. She remarked that "I don't understand why I am not controlling the asthma well. Very frustrated and feeling limited in what I can do."

14. On January 12, 2017 Claimant returned to Dr. Cvietusa to discuss her asthma and allergies. Claimant reported that her asthma was not well controlled and her quality of life was poor. Dr. Cvietusa commented that she "[f]eels she's not breathing right, that she constantly gets sick and/or has asthma flares, particularly in the winter. Less so in the summer." Additionally, Claimant advised that "she has had a bad quality of life for years now. Mostly poorly controlled asthma. Sinus disease better." Claimant informed Dr. Cvietusa that she would be speaking with her principal about taking a leave of absence from school. In commenting on spirometry testing Dr. Cvietusa noted, "[m]ore striking is the steady decline in both her FEV1 and FVC, while maintaining a stable ratio, suggesting restriction with increasing weight gain." He diagnosed Claimant with persistent asthma, obesity and rhinitis. Dr. Cvietusa summarized that Claimant's asthma was not well controlled and her condition was "somewhat related to her weight."

15. Claimant took a leave of absence from her job as a teacher at Powell Middle School from January 30, 2017 to April 20, 2017. She asserts that January 30, 2017 was the date of onset for either the occupational disease of Hypersensitivity Pneumonitis (HP) or the aggravation of her pre-existing pulmonary issues including asthma and chronic sinusitis.

16. Claimant testified that she took a leave of absence because Dr. Cvietusa had informed her that her lung volumes had been steadily declining over the prior four

years. She was concerned that her decreasing lung volume was attributable to Churg-Strauss disease. Claimant explained that her father had died of Churg-Strauss in February 2007 and she was concerned she might be suffering from the disease. Claimant detailed that the condition is a lung disease that develops in individuals who have suffered from long-term asthma and sinusitis. Because Claimant feared permanent lung damage from Churg-Strauss she sought to obtain proper rest, diet and exercise. However, Claimant noted that she was not ultimately diagnoses with the disease and sought a leave of absence primarily because of her increasing respiratory symptoms.

17. Despite Claimant's attempt to reduce her symptoms and improve her health, she continued to experiences a myriad of respiratory difficulties during her leave of absence. On February 21, 2017 Claimant visited Robert Douglas, M.D. She reported moderate, persistent asthma and presented with flu-like symptoms including fevers, chills, headache and sinus/head congestion. Claimant advised Dr. Douglas that she was not breathing well and used Albuterol. Dr. Douglas assessed Claimant with influenza including upper respiratory symptoms and moderate, persistent asthma with acute exacerbation. He also diagnosed Claimant with sinusitis that was probably secondary to influenza.

18. On March 20, 2017 Claimant sent an email to Dr. Cvietusa titled "lungs are terrible." Claimant explained that her condition was worsening. She detailed that "I am so frustrated because I have such a small stress level being on leave, I sleep and rest whenever I need it, and I am exercising more than I have in years." She noted that her lungs were in "bad shape."

19. On March 23, 2017 Claimant visited Dr. Cvietusa for an evaluation. She reported bronchitis/asthma flare symptoms. Dr. Cvietusa noted that Claimant experienced the flu approximately one month earlier and recovered well after receiving antibiotics and prednisone. Notably, Claimant utilized prednisone for respiratory symptoms three times within five months.

20. On April 18, 2017 Claimant contacted Kaiser by telephone. She reported worsening congestion and "terrible issues with her asthma." Dr. Cvietusa noted that Claimant might be experiencing inflammation from allergies.

21. Claimant returned to teaching from her leave of absence on April 21, 2017. Approximately five more weeks of the academic year remained until summer vacation.

22. On April 22, 2017 Claimant presented to Kaiser for an examination. A physician assistant summarized that Claimant "has been sick since February and notes that she has been on leave from work for 12 weeks and is out of leave and has to return to work to teach for the next five weeks of school no matter how poorly she feels. She notes that she has almost no quality of life now." Claimant underwent a chest scan that did not provide significant evidence of pneumonia. The radiologist noted, "scattered nonspecific round glass density opacities in both lungs which may represent hypo-inflation or mild pneumonitis." Throughout the remainder of 2017 Claimant continued to visit her treating physicians with respiratory conditions.

23. Claimant subsequently switched primary care physicians and obtained medical treatment at UC Health. Because of her steadily declining condition, Claimant was referred by her primary treating physician to pulmonologist Joshua Portnoy, M.D. Dr. Portnoy diagnosed Claimant with allergic rhinitis, reflux disease and asthma. He recommended a high resolution CT scan of the chest, pulmonary function testing and allergy testing with Arvin Rao, M.D.

24. On January 10, 2018 Claimant underwent a pulmonary function test with Dr. Rao. Dr. Rao noted decreased lung function and sensitivity to molds. He diagnosed Claimant with "persistent asthma, uncomplicated."

25. On January 15, 2018 Claimant underwent a chest CT scan. Dr. Portnoy testified that the CT scan revealed a finding of mosaic attenuation. In 29 out of 30 cases mosaic attenuation means the patient suffers from an interstitial lung disease instead of simple asthma. Dr. Portnoy thus ordered a surgical lung biopsy to further investigate Claimant's condition.

26. Claimant took a second leave of absence from her job as a teacher at Powell Middle School from February 6, 2018 through May 29, 2018. Claimant testified that she took the leave of absence because her symptoms had continued to escalate. She had trouble having a conversation at home, walking very far and awoke at night because she was unable to breathe.

27. Claimant underwent the recommended lung biopsy on February 16, 2018 at Littleton Adventist Hospital. The lung biopsy revealed bronchiolitis obliterans organizing pneumonia, granulomas and cellular inflammation. Dr. Portnoy testified that the three findings are generally considered the classic "triad" associated with a diagnosis of Hypersensitivity Pneumonitis (HP). HP is an immune inflammation in the lung that occurs in response to an inhaled agent. It can stimulate the immune system and may ultimately lead to lung scarring. Therefore, Dr. Portnoy recommended that Claimant begin taking the immunosuppressant CellCept. He determined that Claimant's HP was likely due to exposure to mold in her classroom. Claimant thus reported a work-related condition to Employer on March 12, 2018. Respondent referred Claimant to Authorized Treating Physician (ATP) John S. Hughes, M.D. for evaluation and treatment.

28. On April 2, 2018 Claimant visited Dr. Hughes for an examination. Dr. Hughes reviewed environmental studies from Powell Middle School and performed a physical examination. Claimant reported that she worked primarily in room 2698. He commented that room 2698 exhibited elevated mold levels but after remediation the levels "decreased significantly." Moreover, an environmental assessment of Claimant's house on March 14, 2018 reflected low mold probability except for the first floor or family room area of the structure. Dr. Hughes diagnosed Claimant with asthma and occupational exposure to mold with acute bronchitis. He concluded that Claimant suffered an occupational aggravation of her long-standing asthma. Dr. Hughes recommended permanent restrictions on any occupational exposure to mold and any respiratory irritants or sensitizers.

29. Claimant visited Dr. Hughes for continued evaluation and treatment on April 18, 2018, May 16, 2018 and June 27, 2018. In his reports he confirmed a diagnosis of HP. Specifically, in his June 27, 2018 report Dr. Hughes explained that Claimant's diagnosis of HP was confirmed by biopsy. Dr. Hughes remarked that HP "is probably a superimposed occupational disease that developed with exposure to airborne mold spores. This will take at least 6 months to resolve back to [Claimant's] baseline of long-standing asthma."

30. In addition to the referral to Dr. Hughes, Claimant was also referred to National Jewish Health for additional opinions regarding the diagnosis of HP. Claimant was evaluated by Michael Wechsler, M.D. and Cecile Rose, M.D. Both doctors confirmed that Claimant suffered from HP.

31. Dr. Rose practices pulmonology and occupational medicine at National Jewish Health. She focuses primarily on occupational and environmental lung disease diagnosis and treatment. Dr. Rose evaluated Claimant on July 12, 2018 at the request of Dr. Portnoy. After reviewing Claimant's medical records and conducting a physical examination, Dr. Rose concluded that Claimant suffers from HP.

32. Dr. Rose testified through a pre-hearing evidentiary deposition in this matter on October 8, 2018. She explained that patients who suffer from HP generally present with symptoms of shortness of breath and cough that may worsen slowly and subtly over time with ongoing exposure to an antigen. Dr. Rose commented that it is also common for a patient with HP to have abnormal lung function and abnormal chest imaging showing ground glass opacities and/or mosaic attenuation with air trapping. However, the most definitive test for HP is the surgical lung biopsy. The classic findings of HP on a lung biopsy are poorly formed noncaseating granulomas, organizing pneumonia and cellular infiltrates.

33. Dr. Rose explained that there are three primary causes of HP: (1) microbial bioaerosols, including bacteria, fungus and other organic dusts; (2) animal proteins most commonly found in birds; and (3) low molecular weight chemicals called bisophonates. She specifically determined that the cause of Claimant's HP was exposure to microbial contaminants in classroom 2698 at Powell Middle School. Dr. Rose considered the environmental sampling reports from Powell Middle School. Specifically, the March 19, 2018 report revealed penicillium aspergillus-like spore counts at over 200 times the outdoor level and three times higher than other areas of the school. Dr. Rose also noted that, because Claimant's symptoms worsened while at school and improved during periods of absences, mold exposure at school caused Claimant's HP.

34. On July 16, 2018 Claimant underwent an independent medical examination with pulmonologist Jeffrey Schwartz, M.D. Dr. Schwartz reviewed Claimant's medical history, conducted a physical examination and considered mold inspection reports from Powell Middle School. He specifically reviewed mold inspection reports for Claimant's classroom 2698 from August 15, 2017, August 24, 2017, March 15, 2018, March 19, 2018 and March 26, 2018. He noted that the March 15, 2018 report did not reveal visible mold in the classroom but air sampling reflected aspergillus-penicillium mold spores in room

2698 that were significantly higher than outdoor ambient concentrations. Dr. Schwartz remarked that the report recommended further investigation to determine the source of the mold spores and remediation of the problem. He detailed that excess airborne mold in Claimant's classroom 2698 was "discovered only during routine surveillance on 3/18/2018, four months after [Claimant] became acutely ill in November 2017 with symptoms typical of her multiple previous respiratory exacerbations." Dr. Schwartz concluded that, "whether the excess mold was present prior to her becoming ill in November 2017, is a matter for speculation."

35. Dr. Schwartz explained that the diagnosis of HP in this case was improper. Dr. Schwartz relied upon two pieces of medical literature: an article entitled Diagnosis of Hypersensitivity Pneumonitis written by Talmadge King, Jr., M.D. and an article entitled Hypersensitivity Pneumonitis: Perspectives in Diagnosis and Management, written by Martina Vasakova, M.D. Dr. Schwartz concluded that Claimant did not satisfy the diagnostic criteria for the development of HP enumerated in either of the preceding articles.

36. Dr. Schwartz explained that subacute and chronic forms of HP are caused by continued low-level exposure to an offending antigen. Symptoms typically include "shortness of breath with exertion, cough with mucoid sputum, anorexia and weight loss." Dr. Schwartz summarized that, based on Claimant's lack of acute symptoms while working in room 2698, recurrent, acute respiratory symptoms while not at work, pre-existing conditions and lack of specific diagnostic findings, Claimant does not have HP. He concluded that, because Claimant had never been satisfactorily diagnosed with HP and there is no evidence of an exacerbation of her pre-existing symptoms, Claimant did not suffer from a work-related condition.

37. On July 31, 2018 Dr. Hughes drafted a letter in response to inquiries from Respondent's counsel about Dr. Schwartz' conclusions. In addressing whether Claimant had HP, Dr. Hughes noted he was "unqualified" to directly provide an opinion regarding Claimant's HP diagnosis. However, he acknowledged that, from his past training in occupational pulmonary disease at National Jewish Health, Dr. Schwartz was correct and agreed to omit HP from Claimant's diagnoses. Furthermore, Dr. Hughes agreed with Dr. Schwartz that Claimant suffers from "substantial underlying pulmonary pathology and that the majority of her problems are non-occupational in nature." He commented that he expected Claimant to experience unpredictable flare-ups of her condition that would lead to complete disability independent of any occupational factors. Nevertheless, Dr. Hughes disagreed with Dr. Schwartz that Claimant did not suffer an aggravation of her pre-existing condition while working for Employer. Dr. Hughes agreed with Dr. Schwartz's review of the mold inspection reports from Powell Middle School. However, he maintained that Claimant "sustained measurable exposures to mold that aggravated her underlying condition." Dr. Hughes noted that, simply because testing was not performed at the time Claimant became ill, "does not exonerate a potential workplace risk factor." Finally, Dr. Hughes explained that Claimant will return to her baseline of pulmonary health and did not suffer a permanent impairment from her work at Powell Middle School.

38. Employer's Facilities Manager Brad Leitner testified at the hearing in this matter. His job duties include addressing air quality concerns and performing remediation at Employer's facilities. DS Consulting performed air quality testing and mold inspection sampling at Powell Middle School. Mr. Leitner located and produced all of the reports he could locate regarding testing at Powell Middle School. Many of the reports address locations other than Claimant's room 2689. Nevertheless, the air quality reports consistently demonstrate airborne mold as less-than or comparable-to the outdoor air. Between January 2013 and January 2017 each report demonstrated airborne mold as less-than or comparable-to the outdoor air.

39. The report dated August 15, 2017 specifically considered classrooms 2696 and 2698. The report noted that classrooms 2696 and 2698 are located on the second level of the science wing in the southeast corner of a multi-level structure. A known water intrusion had occurred in classroom 2698 "some time ago," but the problem had been corrected. The technician observed visible mold behind some cabinets in the southeast corner of classroom 2698. However, air quality testing demonstrated airborne mold as less-than or comparable-to the outdoor air. The area was remediated and a second air quality test of room 2698 was conducted on August 24, 2017. The testing demonstrated airborne mold as less-than or comparable-to the outdoor air. The August 24, 2017 report noted that there was no visible mold on "any of the remaining drywall, cabinets or insulation."

40. On March 15, 2018 an air quality report revealed elevated mold levels in classrooms 2696 and 2698. Although inspectors did not observe any visible mold, the level of mold spores in room 2696 was "slightly elevated" and the level in room 2698 was "significantly higher" than outdoor ambient concentrations. A March 19, 2018 follow-up report specified that a single piece of wood under a cabinet or kick plate showed visible mold. Testing on March 19, 2018 revealed elevated levels of airborne mold growth spores within room 2698 and the southeast cabinet within the room. However, tape lift samples of several locations for possible mold growth within room 2698 were negative. Remediation of mold growth in room 2698 was performed by removing the piece of wood debris in the cabinet underneath a sink. The cabinet was cleaned and treated with an anti-microbial material. A follow up air quality test on March 26, 2018 demonstrated airborne mold as less-than or comparable-to the outdoor air. The remaining air quality testing at Powell through October 2018 also demonstrated airborne mold as less-than or comparable-to the outdoor air.

41. Although Claimant testified that she would commonly see flooding in her classroom from snowmelt and rain, Mr. Leiter explained that he did not receive any reports of water issues. He also commented that, even if there was water in Claimant's classroom and the school janitor did not report the incident, there was no mold issue provided the water was timely removed.

42. Dr. Schwartz testified at the hearing in this matter. He recounted that Claimant has suffered a long history of asthma and other respiratory problems. Dr. Schwartz maintained that the environmental studies of Claimant's classroom 2698 only revealed the presence of mold four months after she became acutely ill in November

2017. Moreover, although Claimant's symptoms should have improved while she was away from school if mold in her classroom was the cause of her symptoms, medical records reflect Claimant suffered respiratory problems while away from school. Furthermore, relying on articles specifying the diagnostic criteria for HP, Dr. Schwartz concluded that Claimant did not have HP. He summarized that, because Claimant's respiratory symptoms preceded her work at Powell Middle School and she did not suffer an exposure based on the environmental testing, her work activities did not cause or aggravate her condition.

43. Dr. Portnoy testified in rebuttal at the hearing in this matter. He maintained that Claimant's lung biopsy confirmed the diagnosis of HP and the articles referenced by Dr. Schwartz only provide proposed criteria for physicians who suspect a patient may have HP. He also explained that he had no reason to suspect that Claimant suffered from anything other than asthma and allergies until he obtained the results of Claimant's chest CT scan that suggested a small airway disease. Dr. Portnoy acknowledged that he had not reviewed Claimant's Kaiser records or the environmental mold studies conducted at Powell Middle School.

44. Claimant has failed to establish that it is more probably true than not that she suffered an occupational disease to the form of HP or an aggravation of her pre-existing pulmonary condition that began on January 30, 2017 during the course and scope of her employment with Employer. The record reflects that Claimant has suffered an extensive history of recurrent, worsening asthma and other respiratory issues. Moreover, environmental studies conducted in Claimant's classroom 2698 demonstrate that there was an insufficient exposure to cause HP or aggravate her pre-existing condition. Finally, the persuasive report and testimony of Dr. Schwartz reveals that it is speculative to attribute Claimant's worsening respiratory symptoms to her work activities for Employer beginning on January 30, 2017.

45. Initially, the record is replete with medical records demonstrating that Claimant has suffered a long-history of worsening asthma and other respiratory conditions. In March 2012 Claimant visited her personal physician at Kaiser. Her diagnoses included persistent asthma with an acute exacerbation and chronic sinusitis. The doctor noted that Claimant was "frustrated as has recurrent asthma exacerbations and chronic sinus congestions. Wonders if she needs admission for full testing or eval at National Jewish." On March 12, 2012 Claimant exchanged correspondence with Dr. Cvietusa at Kaiser and again requested the possibility of a referral to National Jewish Hospital for testing. She noted that her respiratory issues limited her activities and inquired about a leave of absence from work. . Claimant began teaching at Powell Middle School for the 2014-15 school year after living and teaching in Costa Rica for one year. She continued to suffer chronic sinusitis and asthma symptoms with periodic flare-ups. By January 12, 2017 Claimant reported to Dr. Cvietusa that she had experienced a bad quality of life for years because of poorly controlled asthma. Dr. Cvietusa noted a steady decline in both Claimant's FEV1 and FVC testing. The medical records and Claimant's reports reflect that she had been suffering recurrent asthma symptoms that produced a steady decline in her quality of life and activities for years before and during her work at Powell Middle School.

46. Environmental mold studies reflect a dearth of evidence suggesting that Claimant was exposed to mold spores while teaching at Powell Middle School. Initially, many of the air quality reports from Powell Middle School address locations other than Claimant's room 2689. Nevertheless, the air quality reports consistently demonstrate airborne mold as less-than or comparable-to the outdoor air. Claimant contends that the occupational disease of HP or the aggravation of her pre-existing respiratory condition began on January 30, 2017. The records reveal that the first environmental mold testing of Claimant's room 2698 occurred on August 15, 2017. The technician observed visible mold behind some cabinets in the southeast corner of classroom 2698. However, air quality testing demonstrated airborne mold as less-than or comparable-to the outdoor air. The area was remediated and a second air quality test of room 2698 was conducted on August 24, 2017. The testing again demonstrated airborne mold as less-than or comparable-to the outdoor air.

47. Claimant took a second leave of absence from her teaching duties at Powell Middle School from February 6, 2018 through May 29, 2018 because of escalating respiratory symptoms. During Claimant's leave of absence a March 15, 2018 air quality report revealed elevated mold levels in classrooms 2696 and 2698. Although inspectors did not observe any visible mold, the level of mold spores in room 2696 was "slightly elevated" and the level in room 2698 was "significantly higher" than outdoor ambient concentrations. A March 19, 2018 follow-up report specified that a single piece of wood under a cabinet or kick plate showed visible mold. Mold remediation in room 2698 was performed by cleaning and removing the piece of wood debris in the cabinet underneath a sink. A follow up air quality test on March 26, 2018 demonstrated airborne mold as less-than or comparable-to the outdoor air. Notably, the positive mold report did not occur until after Claimant began her second leave of absence and more than 13 months after she alleged the onset of her occupational disease. The remaining air quality testing at Powell Middle School through October 2018 demonstrated airborne mold as less-than or comparable-to the outdoor air. The preceding testing reveals that Claimant did not suffer environmental mold exposure in excess of outdoor levels while teaching at Powell Middle School. In the absence of documented mold exposure, it is speculative to suggest that Claimant's teaching duties caused HP or aggravated her pre-existing respiratory condition.

48. Dr. Schwartz reviewed Claimant's medical history, conducted a physical examination and considered mold inspection reports from Powell Middle School. He noted that the environmental studies of Claimant's classroom only revealed the presence of mold four months after she became acutely ill in November 2017. Dr. Schwartz remarked that, "whether the excess mold was present prior to her becoming ill in November 2017, is a matter for speculation." He commented that Claimant's symptoms were typical of her multiple previous respiratory exacerbations. Moreover, although Claimant's symptoms should have improved while she was away from school if the presence of mold in her classroom caused her symptoms, medical records reflect Claimant suffered respiratory problems while away from school. Furthermore, relying on articles specifying the diagnostic criteria for HP, Dr. Schwartz concluded that Claimant did not have HP. He persuasively summarized that, because Claimant's respiratory symptoms preceded her work at Powell Middle School and she did not suffer an exposure

based on the environmental testing, her work activities did not cause or aggravate her condition.

49. In contrast, Drs. Rose and Portnoy concluded that Claimant's exposure to microbial contaminants in classroom 2698 while working at Powell Middle School caused her to develop HP. Dr. Rose considered the environmental sampling reports from Powell Middle School. Specifically, the March 19, 2018 report revealed penicillium aspergillus-like spore counts at over 200 times the outdoor level and three times higher than other areas of the school. Dr. Rose also noted that, because Claimant's symptoms worsened while at school and improved during periods of absences, mold exposure at school was the source of Claimant's HP. However, Dr. Rose's opinion reflects that she relied significantly on Claimant's subjective characterization of mold exposure in her classroom. For example, Dr. Rose noted in her report that in 2014 Claimant began working at Powell Middle School in a below ground classroom area that "had recurrent problems with moisture intrusion, water damage, and visible microbial contamination behind the cabinets." Additionally, in her deposition Dr. Rose described Claimant as "occupying this water damage and mold contaminated indoor environment" for years. Furthermore, Dr. Portnoy acknowledged that he had not reviewed Claimant's Kaiser records or the environmental mold studies conducted at Powell Middle School. Despite the opinions and testimony of Drs. Rose and Portnoy, the medical records reflect that Claimant has suffered a long-history of worsening asthma and other respiratory conditions. Furthermore, the environmental testing records do not document an environmental mold exposure in excess of outdoor levels while teaching at Powell Middle School. In the absence of documented mold exposure, it is speculative to suggest that Claimant's work activities caused HP or aggravated her pre-existing respiratory condition.

50. Dr. Hughes agreed with Dr. Schwartz that Claimant suffers from "substantial underlying pulmonary pathology and that the majority of her problems are non-occupational in nature." He commented that he expected Claimant to experience unpredictable flare-ups of her condition that would lead to complete disability independent of any occupational factors. Dr. Hughes ultimately withdrew his diagnosis of HP but concluded that Claimant's "sustained measurable exposures to mold" had aggravated her underlying condition. He noted that, simply because testing was not performed at the time Claimant became ill, "does not exonerate a potential workplace risk factor." However, attributing Claimant's symptoms to mold while working at Powell Middle School when the environmental testing records do not reveal elevated mold levels until Claimant was on her second leave of absence is speculative. The gradual worsening of Claimant's respiratory condition and the absence of exposure to mold reveal that Claimant's work activities did not cause, aggravate, intensify, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's Workers' Compensation claim is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1),

C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the

occupational exposure contributed to the disability. *Id.* The failure to establish a causal connection between the injury and the employment defeats a claim for compensation. *In Re Murtha*, W.C. No. 4-876-210 (ICAP, Sept. 12, 2013).

6. As found, Claimant has failed to establish by a preponderance of the evidence that she suffered an occupational disease to the form of HP or an aggravation of her pre-existing pulmonary condition that began on January 30, 2017 during the course and scope of her employment with Employer. The record reflects that Claimant has suffered an extensive history of recurrent, worsening asthma and other respiratory issues. Moreover, environmental studies conducted in Claimant's classroom 2698 demonstrate that there was an insufficient exposure to cause HP or aggravate her pre-existing condition. Finally, the persuasive report and testimony of Dr. Schwartz reveals that it is speculative to attribute Claimant's worsening respiratory symptoms to her work activities for Employer beginning on January 30, 2017.

7. As found, initially, the record is replete with medical records demonstrating that Claimant has suffered a long-history of worsening asthma and other respiratory conditions. In March 2012 Claimant visited her personal physician at Kaiser. Her diagnoses included persistent asthma with an acute exacerbation and chronic sinusitis. The doctor noted that Claimant was "frustrated as has recurrent asthma exacerbations and chronic sinus congestions. Wonders if she needs admission for full testing or eval at National Jewish." On March 12, 2012 Claimant exchanged correspondence with Dr. Cvietusa at Kaiser and again requested the possibility of a referral to National Jewish Hospital for testing. She noted that her respiratory issues limited her activities and inquired about a leave of absence from work. . Claimant began teaching at Powell Middle School for the 2014-15 school year after living and teaching in Costa Rica for one year. She continued to suffer chronic sinusitis and asthma symptoms with periodic flare-ups. By January 12, 2017 Claimant reported to Dr. Cvietusa that she had experienced a bad quality of life for years because of poorly controlled asthma. Dr. Cvietusa noted a steady decline in both Claimant's FEV1 and FVC testing. The medical records and Claimant's reports reflect that she had been suffering recurrent asthma symptoms that produced a steady decline in her quality of life and activities for years before and during her work at Powell Middle School.

8. As found, environmental mold studies reflect a dearth of evidence suggesting that Claimant was exposed to mold spores while teaching at Powell Middle School. Initially, many of the air quality reports from Powell Middle School address locations other than Claimant's room 2689. Nevertheless, the air quality reports consistently demonstrate airborne mold as less-than or comparable-to the outdoor air. Claimant contends that the occupational disease of HP or the aggravation of her pre-existing respiratory condition began on January 30, 2017. The records reveal that the first environmental mold testing of Claimant's room 2698 occurred on August 15, 2017. The technician observed visible mold behind some cabinets in the southeast corner of classroom 2698. However, air quality testing demonstrated airborne mold as less-than or comparable-to the outdoor air. The area was remediated and a second air quality test

of room 2698 was conducted on August 24, 2017. The testing again demonstrated airborne mold as less-than or comparable-to the outdoor air.

9. As found, Claimant took a second leave of absence from her teaching duties at Powell Middle School from February 6, 2018 through May 29, 2018 because of escalating respiratory symptoms. During Claimant's leave of absence a March 15, 2018 air quality report revealed elevated mold levels in classrooms 2696 and 2698. Although inspectors did not observe any visible mold, the level of mold spores in room 2696 was "slightly elevated" and the level in room 2698 was "significantly higher" than outdoor ambient concentrations. A March 19, 2018 follow-up report specified that a single piece of wood under a cabinet or kick plate showed visible mold. Mold remediation in room 2698 was performed by cleaning and removing the piece of wood debris in the cabinet underneath a sink. A follow up air quality test on March 26, 2018 demonstrated airborne mold as less-than or comparable-to the outdoor air. Notably, the positive mold report did not occur until after Claimant began her second leave of absence and more than 13 months after she alleged the onset of her occupational disease. The remaining air quality testing at Powell Middle School through October 2018 demonstrated airborne mold as less-than or comparable-to the outdoor air. The preceding testing reveals that Claimant did not suffer environmental mold exposure in excess of outdoor levels while teaching at Powell Middle School. In the absence of documented mold exposure, it is speculative to suggest that Claimant's teaching duties caused HP or aggravated her pre-existing respiratory condition.

10. As found, Dr. Schwartz reviewed Claimant's medical history, conducted a physical examination and considered mold inspection reports from Powell Middle School. He noted that the environmental studies of Claimant's classroom only revealed the presence of mold four months after she became acutely ill in November 2017. Dr. Schwartz remarked that, "whether the excess mold was present prior to her becoming ill in November 2017, is a matter for speculation." He commented that Claimant's symptoms were typical of her multiple previous respiratory exacerbations. Moreover, although Claimant's symptoms should have improved while she was away from school if the presence of mold in her classroom caused her symptoms, medical records reflect Claimant suffered respiratory problems while away from school. Furthermore, relying on articles specifying the diagnostic criteria for HP, Dr. Schwartz concluded that Claimant did not have HP. He persuasively summarized that, because Claimant's respiratory symptoms preceded her work at Powell Middle School and she did not suffer an exposure based on the environmental testing, her work activities did not cause or aggravate her condition.

11. As found, in contrast, Drs. Rose and Portnoy concluded that Claimant's exposure to microbial contaminants in classroom 2698 while working at Powell Middle School caused her to develop HP. Dr. Rose considered the environmental sampling reports from Powell Middle School. Specifically, the March 19, 2018 report revealed penicillium aspergillus-like spore counts at over 200 times the outdoor level and three times higher than other areas of the school. Dr. Rose also noted that, because Claimant's symptoms worsened while at school and improved during periods of absences, mold

exposure at school was the source of Claimant's HP. However, Dr. Rose's opinion reflects that she relied significantly on Claimant's subjective characterization of mold exposure in her classroom. For example, Dr. Rose noted in her report that in 2014 Claimant began working at Powell Middle School in a below ground classroom area that "had recurrent problems with moisture intrusion, water damage, and visible microbial contamination behind the cabinets." Additionally, in her deposition Dr. Rose described Claimant as "occupying this water damage and mold contaminated indoor environment" for years. Furthermore, Dr. Portnoy acknowledged that he had not reviewed Claimant's Kaiser records or the environmental mold studies conducted at Powell Middle School. Despite the opinions and testimony of Drs. Rose and Portnoy, the medical records reflect that Claimant has suffered a long-history of worsening asthma and other respiratory conditions. Furthermore, the environmental testing records do not document an environmental mold exposure in excess of outdoor levels while teaching at Powell Middle School. In the absence of documented mold exposure, it is speculative to suggest that Claimant's work activities caused HP or aggravated her pre-existing respiratory condition.

12. As found, Dr. Hughes agreed with Dr. Schwartz that Claimant suffers from "substantial underlying pulmonary pathology and that the majority of her problems are non-occupational in nature." He commented that he expected Claimant to experience unpredictable flare-ups of her condition that would lead to complete disability independent of any occupational factors. Dr. Hughes ultimately withdrew his diagnosis of HP but concluded that Claimant's "sustained measurable exposures to mold" had aggravated her underlying condition. He noted that, simply because testing was not performed at the time Claimant became ill, "does not exonerate a potential workplace risk factor." However, attributing Claimant's symptoms to mold while working at Powell Middle School when the environmental testing records do not reveal elevated mold levels until Claimant was on her second leave of absence is speculative. The gradual worsening of Claimant's respiratory condition and the absence of exposure to mold reveal that Claimant's work activities did not cause, aggravate, intensify, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's Workers' Compensation claim is denied and dismissed.

ORDER

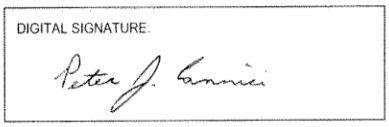
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's Workers' Compensation claim is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you

mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 18, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-061-884-001

ISSUES

I. Whether Claimant overcame the Division Independent Medical Examiner's opinion on permanent impairment by clear and convincing evidence?

II. Whether Claimant received an overpayment in permanent partial disability benefits?

STIPULATIONS

- The parties stipulated that Claimant was paid $18,073.65 in permanent partial disability (PPD) benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. This admitted claim occurred on May 22, 2017. Claimant suffered an injury to his low back when he twisted and bent in an awkward position to access paperwork. (*Respondent's Exhibit B, page 4.*)

2. Claimant has a history of low back complaints. Claimant's date of birth is January 27, 1956. When he was placed at MMI for this work related injury on November 16, 2017, Claimant was 61 years-old.

3. Claimant injured his low back in 1989 and underwent an L4 to S1 lumbar fusion in 1992. (*Respondent's Exhibit B, page 6*.) On September 14, 1993, Dr. Repert assessed an 11% whole person Table 53 impairment rating. (*Id.* at 8.) Flexion was invalid*. (Respondent's Exhibit E: Reichhardt Dep. #1 17:21-24*.) Claimant had hardware removed in 1994. *Id.*

4. Claimant injured his low back in 2007 and diagnostics showed increased changes at L2-3. (*Claimant's Exhibit 1, page 10.*) In 2007, Dr. Holthouser assessed a 12% Table 53 whole person impairment rating before apportionment, and 4% whole person impairment for range of motion. (*Respondent's Exhibit E: Reichhardt Dep. #1 10:4-12:14.*) Flexion was invalid after two sets of measurements, one with a computer assisted tracking system using two inclinometers. (*Respondent's Exhibit E: Deposition Exhibit B, page 51*.) After apportionment, claimant was assessed a 5% whole person impairment rating by Dr. Holthouser.

5. In 2016, Claimant injured his low back in a non-work related event and surgery was recommended. (*Hearing Tr. 39:7-15.*) Claimant refused surgery and is still

being treated with gabapentin and Lidoderm patches. (*Id. at 13-18.*) Claimant was also prescribed Vicodin for that injury. (*Id. at 40:7-10.*)

6. Dr. Reichhardt performed the Division independent medical examination (DIME) on May 2 and 3, 2018. *(Respondent's Exhibit E: Reichhardt Dep. #1 6: 10-12, January 4, 2019[1].)* Two days of evaluations were performed for repeat range of motion measurements. *Id.* Dr. Reichhardt is Board Certified in Physical Medicine and Rehabilitation, an instructor for the Division of Workers' Compensation, and teaches the Spinal Impairment Workshops through the Division. (*Id.* 4:18-5:6.)

7. Dr. Reichhardt took a medical history from claimant. (*Id.* 6:13-15.) Claimant did not report the 2007 injury to Dr. Reichhardt and Dr. Reichhardt was not aware of the 2007 injury when he performed his DIME and evaluated Claimant on May 2 and 3, 2018, and issued his report. (*Id.* 7:3-7.)

8. Dr. Reichhardt was made aware of claimant's 2007 back injury and impairment rating after his two evaluations of claimant. *Id.* Based on the new information, Dr. Reichhardt determined Claimant's whole person impairment rating after apportionment to be 3%. *Id.* (*Deposition Exhibit C.*) This was based upon a 2% physical impairment and a 1% mental impairment. *Id.*

9. As an instructor of the Spinal Impairment Workshop for the Level II Accreditation program, Dr. Reichhardt does not teach the attending physicians to complete the impairment analysis as Dr. Zuehlsdorff did in his independent medical examination of Claimant. (*Reichhardt Dep. #1 19:2-20*.) Dr. Reichhardt apportioned like from like (i.e. range of motion from range of motion and table 53 from table 53). (*Deposition Exhibit C*.)

10. Claimant indicated that he does not believe Dr. Reichhardt made a mistake, but felt Dr. Reichhardt was not thorough. (*Hearing Tr. 42:16-18*.) Claimant's independent medical examiner (IME), Dr. Zuehlsdorff, believes Dr. Reichhardt did a thorough job. (*Claimant's Exhibit 1, page 7; Hearing Tr. 42:12-15*.) Dr. Zuehlsdorff noted:

> The patient was asked directly why he has proceeded to a second Independent Medical Examination after the Division Independent Medical Examination with Dr. Reichhardt, when in fact, Dr. Reichhardt did recommend a rating obviously above and beyond what his primary, Dr. Tah had given him. The patient, at that time, pulled out two Final Admissions of Liability that he received from the insurance company. He first noted that he was to be given a certain amount of money, but the second one came out and assigned him nothing. He was very confused by this and felt he was potentially being ripped off by the insurance company. He claims that is the primary reason why he wanted to push his legal counsel to go forward with an Independent Medical

[1] Hereinafter, the citation of Dr. Reichhardt's first deposition on 1/04/19 will not include the date of the deposition or the exhibit letter. A second deposition conducted on 2/27/19 will be cited in full.

Examination after the Division Independent Medical Examination.

(*Claimant's Exhibit 1, page 9.*)

11. Dr. Zuehlsdorff acknowledged that Dr. Reichhardt's numbers were just different from his, and that he does not disagree with Dr. Reichhardt's measurements. (*Zuehlsdorff Dep. 20:20-22; 25:2-4.*) Dr. Zuehlsdorff stated, "I equate this to the fact that the range of motion numbers based on that patient that day, in a climate, in that setting can vary significantly." (*Id. at 11:10-22*.) Just because the previous three physicians who came up with invalid measurements does not mean they were incorrect. (*Id. at 17:5-20:18; Deposition Exhibits A and B.*) He states, "But the bottom line is, the only difference really between his and mine is the fact that I recognized lumbar flexion as valid in my range of motion numbers…" (*Id.* at *8:3-7*.)

12. Dr. Zuehlsdorff stated Dr. Reichhardt "did not put up any argument against that" [adopting Dr. Zuehlsdorff's range of motion measurements] and as a result, Dr. Zuehlsdorff interpreted this to mean Dr. Reichhardt adopted his findings. (Id. at 15:10-18.)

13. On February 27, 2019, a follow-up deposition with Dr. Reichhardt was conducted to address Dr. Zuehlsdorrf's assertions and assumption that Dr. Reichhardt adopted Dr. Zuehlsdorff's findings. Dr. Reichhardt indicated that he never intended to adopt Dr. Zuehlsdorrf's measurements. (*Reichhardt Dep. #2 6:6-21, February 27, 2019*.) Dr. Reichhardt stated that the Division evaluator has discretion to adopt the measurements of another physician, and felt he did not need to adopt Dr. Zuelsdorff's ratings or range of motion measurements. (*Id. at 6:22-7:9*.) "I feel comfortable with the range of motion measurements that I obtained and feel that the approach that I utilized was appropriate. And so I don't feel that there's a compelling reason to adopt somebody else's range of motion measurements." (*Id.* at 11:4-8.) Dr. Reichhardt also testified during his deposition that just because two physicians came up with different range of motion measurements does not mean either erred. (*Id. at 5:10-25*.) Therefore, the ALJ finds that Dr. Reichhardt did not adopt Dr. Zuehlsdorff's measurements and findings.

14. As found, Dr. Reichhardt determined Claimant's whole person impairment rating after apportionment to be 3%. *Id.* (*Deposition Exhibit C.*) This was based upon a 2% physical impairment and a 1% mental impairment. *Id.*

15. As testified to by Dr. Reichhardt, he is an instructor for the Division of Workers' Compensation, and teaches the Spinal Impairment Workshops through the Division. Moreover, the final impairment rating he assigned Claimant as documented in his deposition testimony and exhibits is consistent with the underlying medical record. Therefore, the ALJ finds Dr. Reichhardt's opinions as set forth in his report and subsequent deposition testimony and exhibits to be highly credible and highly persuasive.

16. The ALJ does not find Dr. Zuehlsdorff's opinions and testimony to be persuasive in establishing Dr. Reichhardt committed any errors in determining Claimant's impairment.

17. Based on the 2% whole person physical impairment rating of Dr. Reichhardt, PPD disability benefits owed (before overpayments) is $7,518.56.[2] PPD benefits owed for mental impairment (before overpayments) is $3,759.28.[3] This combines for total PPD benefits owed (before overpayments) of $11,277.84.[4]

18. Based on the stipulation of the parties at hearing, Claimant was paid $18,073.65 in PPD benefits. (*Hearing Tr. 4:25-5:2, January 11, 2019; see also Respondent's Exhibit A.*) Therefore, the overpayment to Claimant is $6,795.81.[5]

19. Respondent agreed to use the overpayment as a credit against future PPD benefits should that arise and not seek recovery of the overpayment via an order requesting Claimant to pay back the overpayment. (*Hearing Tr. 5:15-16.*)

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to

[2] Two percent physical impairment. (400 x 2% x 1.0 x $939.82 = $7,518.56.)
[3] One percent mental impairment. (400 x 1% x 1.0 x 939.82 = $3,759.28.)
[4] Total PPD award for physical and mental impairment. ($7,518.56 + $3,759.28 = $11,277.84.)
[5] Calculation of overpayment to Claimant. ($18,073.65 - $11,277.84 = $6,795.81.)

lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In cases of permanent medical impairment, the employee's award…shall be reduced when the employee suffered more than one permanent medical impairment to the same body part and has received an award under the Workers' Compensation Act. The permanent medical impairment rating applicable to the previous injury to the same body part, established by award or settlement, shall be deducted from the permanent medical impairment rating for the subsequent injury to the same body part. § 8-42-104(5), C.R.S.

5. The term "overpayment" means:

> Money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.
>
> § 8-40-201(15.5), C.R.S.

6. Respondents bear the burden of proof to establish Claimant received an overpayment of benefits." *Marquez v. Americold Logistics*, W.C. No. 4-896-504-04 (August 7, 2014).

7. The findings of a DIME physician are binding as to MMI and permanent impairment unless overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S. "Clear and convincing evidence is evidence demonstrating it is 'highly probable' the DIME physician's rating is incorrect. Therefore, to overcome the DIME physician's opinion, the evidence must establish that it is incorrect. Such evidence must be unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A DIME physician is required to rate a claimant's

impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003).

I. Whether Claimant overcame the Division Independent Medical Examiner's opinion on permanent impairment by clear and convincing evidence?

Dr. Reichhardt performed the division independent medical examination (DIME) on May 2 and 3, 2018. Two days of evaluations were performed for repeat range of motion measurements. Dr. Reichhardt is Board Certified in Physical Medicine and Rehabilitation, an instructor for the Division of Workers' Compensation, and teaches the Spinal Impairment Workshops through the Division.

Dr. Reichhardt took a medical history from Claimant. Claimant, however, did not report his 2007 injury to Dr. Reichhardt. After he performed the DIME, which included two evaluations, Dr. Reichhardt was made aware of Claimant's 2007 back injury and impairment during his deposition. Based on the new information, Dr. Reichhardt determined Claimant's whole person impairment rating after apportionment was 3%. This was based upon a 2% physical impairment rating and a 1% mental impairment rating.

As an instructor of the Spinal Impairment Workshop for the Level II Accreditation program, Dr. Reichhardt does not teach the attending physicians to complete the impairment analysis as Dr. Zuehlsdorff did in his independent medical examination of Claimant. Dr. Reichhardt apportioned like from like (i.e. range of motion from range of motion and table 53 from table 53).

Even Claimant's own IME, Dr. Zuelsdorff, felt Dr. Reichhardt did a thorough job. Three physicians determined claimant had invalid range of motion measurements. Only Dr. Zuelsdorff documented that he obtained valid range of motion measurements even though Claimant's pain was higher when undergoing the IME than when the DIME evaluation occurred.

Dr. Zuehlsdorff asserted that Dr. Reichhardt adopted his range of motion measurements based on silence. Dr. Zuehlsdorff ignored the fact that he calculated his final rating incorrectly because he did not do "like from like" when apportioning Claimant's prior injury and rating.

At a subsequent deposition with Dr. Reichhardt, he indicated that he did not adopt Dr. Zuelsdorff's numbers and that he has discretion to make this choice. Moreover, Dr. Zuelsdorff did not think Dr. Reichhardt erred in determining Claimant's impairment. Both physicians just had different measurements.

This claim is similar to *Almanza v. Majestic Industries*, W.C. No. 4-490-054 (November 13, 2003). In *Almanza*, the claimant underwent two range of motion (ROM) measurements prior to the DIME, both of which were invalid. The DIME physician's ROM measurements were also deemed invalid. The DIME physician performed more ROM measurements a few months later which were also deemed invalid. After the DIME, claimant retained an IME physician. The IME physician obtained a valid ROM measurement of claimant's lumbar spine. The ALJ found the

IME report was "simply not credible" because the IME physician obtained valid ROM measurements after four other measurements were reported as invalid. The Panel affirmed. See also *Fisher v. Cherry Hills Healthcare*, W.C. No. 4-646-00 & 4-646-001 (November 13, 2006) ["Dr. Lesnak clearly disagreed with the DIME rating but that disagreement did not demonstrate that it was highly probable or free from serious or substantial doubt that the DIME physician was wrong regarding the range of motion or the radiculopathy components of the rating."]

The ALJ finds and concludes Claimant has failed to overcome the impairment rating provided by Dr. Reichhardt, the DIME, by clear and convincing evidence.

II. Whether Claimant received an overpayment in permanent partial disability benefits?

The parties stipulated that claimant was paid $18,073.65 in PPD benefits. Dr. Reichhardt provided Claimant a 3% impairment rating. This was comprised of a 2% physical impairment rating and a 1% mental impairment rating. Claimant failed to overcome Dr. Reichhardt's impairment rating by clear and convincing evidence.

Claimant was paid $18,073.65 in PPD benefits. However, based on the impairment rating provided by Dr. Reichhardt, which Claimant failed to overcome, Claimant is only entitled to $11,277.84 in PPD benefits.

Therefore, the ALJ finds and concludes that Respondent has established by a preponderance of the evidence that Claimant has been overpaid $6,795.81.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to prove by clear and convincing evidence that the DIME physician's impairment rating, which is comprised of a 2% physical impairment and a 1% mental impairment, was incorrect.
2. Respondent proved that there is an overpayment of $6,795.81. Respondent may use the overpayment against any future PPD benefits.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 19, 2019

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

Whether the claimant has demonstrated by a preponderance of the evidence that cervical injections recommended by Dr. Kirk Clifford (and administered by Dr. Robert Frazho) constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the January 9, 2017 work injury.

Whether the claimant has demonstrated by a preponderance of the evidence that message therapy for the claimant's cervical spine, as recommended by Dr. Craig Stagg, constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the January 9, 2017 work injury.

FINDINGS OF FACT

1. The claimant is the owner/operator of the employer landscaping company. The claimant's job duties include all landscaping activities as well as billing and other management matters.

2. On January 9, 2017, the claimant slipped on ice and fell onto her right elbow and right hip.[1] The respondents have admitted liability for the January 9, 2017 injury.

3. The claimant testified that at the time of the injury she had neck symptoms that included pain, achiness, sharp needling, and stiffness. In addition, the claimant described pain that goes from her neck, down her trapezius, into her back and low back.

4. During this claim the claimant's authorized treating physician (ATP) has been Dr. Craig Stagg. The claimant first treated with Dr. Stagg on January 10, 2017. In paperwork completed by the claimant at that appointment, the claimant reported neck pain of 8 out of 10. Dr. Stagg also noted that the claimant had pain in her neck area. Dr. Stagg diagnosed an acute cervical strain and ordered x-rays of the claimant's cervical spine.

5. On January 10, 2017, x-rays of the claimant's cervical spine showed mild multilevel cervical degenerative disc disease and uncovertebral spurring that was causing foraminal narrowing bilaterally at the C5-6 level and on the right at the C3-4 and C4-5 levels.

[1] The claimant has received treatment for multiple body parts related to this claim including treatment for her right elbow, right shoulder, and sacroiliac joint. However, only recommended treatment of claimant's cervical spine is at issue in this order. Therefore, the ALJ does not address treatment of those other body parts at this time.

6. The claimant returned to Dr. Stagg on January 18, 2017 and on January 24, 2017. At both appointments the claimant reported improvement in her neck pain. The claimant testified that during this time the focus of her medical providers was her right shoulder. The medical records indicate that Dr. Stagg was primarily concerned about the claimant's right shoulder symptoms for a period of time.

7. On June 12, 2017, the claimant was seen by Dr. Stagg. At that time, the claimant reported tightness in her right trapezius with numbness into both hands. The claimant also reported that her symptoms were relieved by massage. Dr. Stagg referred the claimant for therapeutic massage and to Dr. Mitchell Copeland for consultation. In addition, Dr. Stagg ordered a magnetic resonance image (MRI) of the claimant's cervical spine.

8. On June 2, 2017, a cervical spine MRI showed multilevel degenerative disc disease with moderate to severe spinal canal narrowing at the C5-6 level (secondary to a posterior disc osteophyte complex) and mild to moderate spinal canal narrowing at the C4-5 level. In addition, the MRI showed a small disc bulge at the C7-T1 level, which with resulted in minimal effacement of the ventral thecal sac.

9. On June 30, 2017, the claimant reported to Dr. Stagg that she had pain in her cervical spine that was radiating into her right shoulder. Based upon the claimant's symptoms and the MRI results, Dr. Stagg referred the claimant to Dr. Kirk Clifford for consultation.

10. The claimant testified that it is her understanding that she has either a disc bulge or herniated disc at the C7-T1 level. The claimant also testified that she understands that she has arthritis in her neck that has now become symptomatic.

11. The claimant was seen by Dr. Copeland on July 11, 2017. At that time, the claimant reported continued posterior shoulder pain and neck pain. On that date, Dr. Copeland opined that the claimant's cervical spine was her main pain generator. He further opined that the claimant's fall on January 9, 2017 exacerbated a preexisting cervical condition. Dr. Copeland recommended formal physical therapy and noted the claimant would see Dr. Clifford for evaluation of her spine.

12. The claimant first treated with Dr. Clifford on July 12, 2017. Dr. Clifford noted that the claimant received treatment from Dr. Gebhard in 2005 related to degenerative changes at the C4-5 level and C5 radiculopathy. Dr. Clifford also noted that an MRI taken in 2005 showed a right sided disc herniation at the C4-5 level. Dr. Clifford also noted that the claimant had previously undergone electromyography and nerve conduction studies (EMG/NCS) with Dr. Mitchell Burnbaum and that Dr. Burnbaum had found indications of bilateral carpal tunnel syndrome.

13. Dr. Clifford diagnosed the claimant with multilevel cervical disc degeneration and a disc herniation with moderate stenosis. In addition, related to the claimant's right upper extremity pain, Dr. Clifford listed possible causes as "shoulder verses cervical versus carpal tunnel syndrome". Dr. Clifford recommended EMG/NCS

testing by Dr. Burnbaum. Dr. Clifford also noted that if the EMG/NCS testing showed a cervical root cause, he would recommend a cervical epidural steroid injection. Dr. Clifford did not recommend any surgical treatment for the claimant.

14. On July 19, 2017, the claimant was seen by Dr. Burnbaum who conducted EMG/NCS testing. In his report of that date, Dr. Burnbaum noted that he did not see "anything to suggest [the claimant] has a root compression" and opined that the claimant had "predominately myofascial pain".

15. On August 16, 2017, the claimant returned to Dr. Clifford. At that time, Dr. Clifford noted that Dr. Burnbaum found no evidence of obvious root compression. As a result, Dr. Clifford did not recommend surgery.

16. On August 18, 2017, Dr. Stagg noted that Dr. Burnbaum opined that the claimant had myofascial pain syndrome in her cervical spine, and Dr. Clifford agreed with that diagnosis.

17. On November 3, 2017, Dr. Stagg released the claimant to return to full duty. However, on December 8, 2017, Dr. Stagg placed the claimant on modified duty related to symptoms in her low back and right hip.

18. On January 16, 2018, the claimant returned to Dr. Stagg. At that time, the claimant reported that her neck symptoms were "basically the same still having some pain but overall improved."

19. On April 25, 2018, the claimant was seen by Dr. Stagg. The claimant reported that she was still having pain in her cervical spine and right shoulder.

20. At the request of the respondents, on July 25, 2018, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. In connection with the IME Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Lesnak noted that during his examination of the claimant, the claimant had full range of motion of her cervical spine and that cervical root tension maneuvers reproduced no symptoms. Also in his IME report, Dr. Lesnak opined that the claimant did not injure her lumbar spine, her right sacroiliac (SI) joint, or her cervical spine. Dr. Lesnak determined that the claimant had reached maximum medical improvement (MMI) no later than December 8, 2017.

21. On August 7, 2018, Dr. Stagg noted that the claimant's upper extremity symptomology was stable and she was at maximum medical improvement. Dr. Stagg also noted the claimant's cervical sprain was "stable".

22. On September 24, 2018, the claimant treated with Dr. Clifford. At that time, Dr. Clifford referred the claimant to Dr. Robert Frazho for a right sided C4-5, C5-6, and C6-7 facet injection

23. On October 30, 2018, a request for authorization for the additional right cervical facet injection at C4-5, C5-6, and C6-7 was submitted to the respondents.

24. On November 9, 2018, Dr. Stagg completed a WC 164 form in which he recommended six additional massage therapy visits.

25. On November 16, 2018, Dr. David Orgel completed a peer advisor report related to the request for ongoing massage therapy to treat the claimant. In his report, Dr. Orgel noted that the claimant had had 54 massage therapy treatments during this claim. Dr. Orgel also noted that the Colorado Medical Treatment Guidelines (the MTG) indicate a total of 16 treatments for massage therapy. Dr. Orgel noted that even if the claimant were allocated 16 treatments for her cervical spine and 16 treatments for her SI joint under the MTGs, that total of 32 appointments was already exceeded during this claim. Finally, Dr. Orgel noted that there was no indication that the claimant was receiving improvement in her pain or function from massage therapy. Dr. Orgel recommended denial of the request for additional massage therapy. Based upon Dr. Orgel's opinions, the respondents denied additional massage treatment.

26. On November 29, 2018, the claimant was seen by Dr. Frazho. At that time, the claimant reported acute pain in the right side of her neck. Dr. Frazho diagnosed cervical spondylosis and cervical stenosis and recommended the claimant undergo a right C4-5, C5-6, and C6-7 facet injection.

27. On December 5, 2018, Dr. Joseph Fillmore completed a peer advisor report related to the facet injection recommended by Dr. Frazho. Dr. Fillmore reiterated opinions expressed by Dr. Lesnak in the July 2018 IME report that the claimant did not injure her cervical spine at the time of the January 9, 2017 injury. Dr. Fillmore recommended denial of the injection. Based upon Dr. Fillmore's report, the respondents denied authorization for the recommended facet injection.

28. On December 13, 2018, Dr. Stagg saw the claimant and noted that Dr. Clifford's recommendation for cervical injections. At that time, Dr. Stagg opined that the claimant's cervical symptoms are related to the work injury and that the claimant initially injured her cervical spine.

29. Despite the respondents' denial, the claimant opted to proceed with the recommended facet injection. On January 16, 2019, Dr. Frazho administered a right C4-5, C5-6, and C6-7 facet injection.

30. On January 18, 2019, the claimant returned to Dr. Stagg and reported that the cervical injection gave her some relief.

31. On February 27, 2019, the claimant was seen by Dr. Clifford and reported three weeks of 90 percent pain relief from the facet injection. At that time, Dr. Clifford indicated that the claimant should return to Dr. Frazho for additional treatment. Dr. Clifford noted that the claimant could be a candidate for rhizolysis.

32. The claimant testified that following the January 16, 2019 injection, she felt "wonderful" from mid-January until early March. Beginning in early March, she began to have a return of the feeling of pins and needles that have now radiated into her arms.

33. On March 4, 2019, Dr. Frazho recommended the claimant undergo another right C4-5, C5-6, and C6-7 facet injection. A request for authorization for the additional right cervical facet injection at C4-5, C5-6, and C6-7 was submitted to the respondents on March 3, 2019.

34. The claimant testified that this injection was also denied by the respondents. The claimant also testified that she had the second injection on March 29, 2019. The claimant testified that since that additional injection she has felt "much better". The claimant testified that both of the cervical spine injections administered by Dr. Frazho were paid for by her private insurance.

35. The claimant testified that massage therapy provides her with temporary pain relief. The claimant also testified that she does not take pain medications, so massage therapy is helpful in managing her pain symptoms. In addition, the claimant testified that due to the relief she experienced following the cervical injections, she did not have pain in her neck that necessitated massage treatment.

36. Dr. Lesnak's testimony at hearing was consistent with his IME report. Dr. Lesnak testified that in his opinion that the claimant's January 9, 2017 fall did not cause an injury her cervical spine. With regard to the request for additional massage therapy to treat the claimant's cervical spine symptoms Dr. Lesnak testified that additional massage is not reasonable or necessary. In support of his opinion, Dr. Lesnak noted that the massage therapy the claimant has already received exceeds the MTGs. In addition, Dr. Lesnak testified that he has not seen any indication that the claimant has received functional benefit from massage. Dr. Lesnak testified that cervical injections should also be denied as not reasonable or necessary. Dr. Lesnak noted that the claimant had no neck symptoms at the time of the IME exam and it is his understanding that the claimant's neck symptoms arose after the IME.

37. The ALJ credits the claimant's testimony, the medical records, and the opinions of Drs. Stagg, Copeland, and Clifford over the contrary opinion of Dr. Lesnak and finds that it is more likely than not that the January 9, 2017 fall at work caused an aggravation or acceleration of the preexisting degenerative condition of the claimant's cervical spine, resulting in the need for medical treatment.

38. The ALJ credits the claimant's testimony, the medical records, and the opinions of Drs. Stagg and Clifford over the contrary opinion of Dr. Lesnak and finds that it is more likely than not that the cervical spine injections administered by Dr. Frazho are reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. The ALJ notes that the claimant has reported improvement in her cervical spine symptoms following the injections administered by Dr. Frazho.

39. The ALJ credits the medical records and the opinions of Drs. Lesnak and Orgel and finds that the claimant has failed to demonstrate that it is more likely than not that continued massage treatment is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. Although the claimant did suffer an aggravation of her preexisting cervical spine condition, as found above, the claimant has failed to demonstrate that massage therapy provides any functional improvement. Therefore, the ALJ finds that the claimant has failed to demonstrate that continued massage therapy is reasonable and necessary.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. The Colorado Workers' Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule

provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG "set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

5. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); ***aff'd Jones v. Industrial Claim Appeals Office*** No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

6. WCRP 17 Exhibit 8 Section 3(d)(iii) of the MTG provides, in pertinent part:

> Patients with pain 1) suspected to be facet in origin based on exam findings and 2) affecting activity; OR patients who have refused a rhizotomy and appear clinically to have facet pain; OR patients who have facet findings with a thoracic component. . . In these patients, facet injections may be occasionally useful in facilitating a functionally-directed rehabilitation program and to aid in identifying pain generators. Patients with recurrent pain should be evaluated with more definitive diagnostic injections, such as medial nerve branch injections, to determine the need for a rhizotomy. Because facet injections are not likely to produce long-term benefit by themselves and are not the most accurate diagnostic tool, they should not be performed at more than two levels, neither unilaterally nor bilaterally. Due to the lack of proof that these injections improve outcome, prior authorization is required. There is insufficient evidence to support the use of therapeutic cervical facet injections. . . All injections should be preceded by an MRI or a CT scan.

7. As found, the claimant has demonstrated by a preponderance of the evidence that the January 9, 2017 fall at work caused an aggravation or acceleration of the preexisting degenerative condition in the claimant's cervical spine, resulting in the need for medical treatment. As found, the claimant's testimony, the medical records, and the opinions of Drs. Stagg, Copeland, and Clifford are credible and persuasive, on this issue.

8. As found, the claimant has demonstrated by a preponderance of the evidence that the cervical spine injections administered by Dr. Frazho are reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. The ALJ has considered the MTG with regard to cervical facet injections and concludes that the opinions of Drs. Clifford and Stagg warrant a deviation from the MTG in this case, specifically with regard to cervical injections. As found, the ALJ places weight on the reports from the claimant that the injections have been effective in reducing her pain symptoms. As found, the claimant's testimony, the medical records, and the opinions of Drs. Stagg and Clifford are credible and persuasive, on this issue.

9. With respect to massage therapy for the cervical spine WCRP 17, Exhibit 8, Section 13(f) provides, in pertinent part:

> Massage is a generally well-accepted treatment consisting of manipulation of soft tissue with broad ranging relaxation and circulatory benefits. . . Indications include edema (peripheral or hard and non-pliable edema), muscle spasm, adhesions, the need to improve peripheral circulation and ROM, or to increase muscle relaxation and flexibility prior to exercise.

10. That same section of WCRP 17, Exhibit 8 provides that the time for massage treatment to be effective is "immediate"; the frequency of massage treatment is one to two times per week; with an "optimum duration" of six weeks and a "maximum duration of two months". If one assumes treatments occur twice a week for the maximum duration of two months (or eight weeks), the ALJ calculates this to be a total of 16 treatments, which was the total used by Drs. Lesnak and Orgel in referring the MTG.

11. As found, the claimant has failed to demonstrate by a preponderance of the evidence that further massage therapy is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. Clearly the claimant has received many massage therapy treatments during this claim well outside the frequency and duration contemplated by the MTG. The ALJ finds no persuasive evidence on the record that supports a finding that the claimant has experienced functional improvement as a result of the massage. As found, the medical records and the opinions of Drs. Lesnak and Orgel are credible and persuasive, on this issue.

[The remainder of this page intentionally left blank.]

ORDER

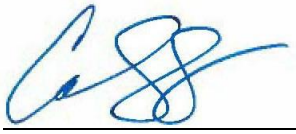
It is therefore ordered:

1. The respondents shall pay for the right C4-5, C5-6, and C6-7 facet injections administered by Dr. Frazho.

2. The claimant's request for massage therapy for her cervical spine is denied and dismissed.

3. All matters not determined here are reserved for future determination.

Dated this 22nd day of April 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

The issues to be determined by this decision involve Claimant's entitlement to maintenance medical benefits. The question answered is:

I. Whether Claimant established, by a preponderance of the evidence, that the request for a trial of spinal cord stimulation, is reasonable, necessary, and causally related to Claimant's October 26, 2016 industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant suffered an admitted injury to his left knee when it buckled and he fell while carrying a board on October 26, 2016. Claimant underwent an MRI of his left knee which revealed pathological changes consistent with acute tearing of the anterior cruciate ligament (ACL) as well as the medial and lateral menisci.

2. Claimant underwent left knee surgery with Dr. Derek Purcell on January 9, 2017. Dr. Purcell performed a left knee hamstring autograft ACL reconstruction.

3. Post surgically, Claimant complained of increasing pain in his lower left leg prompting Dr. Purcell to recommend an ultrasound to rule out deep vein thrombosis (DVT). Ultrasound confirmed the presence of a DVT in the left calf. Consequently, Claimant was started on a blood thinning agent (Xarelto).

4. On February 9, 2017, Dr. Purcell documented that Claimant "continues to have some nerve-like symptoms though it is unclear if it represents irritation from his nerve block or is secondary to his DVT". By March 9, 2017, Dr. Purcell documented that another ultrasound had been performed and that Claimant's DVT had resolved. Despite resolution of the DVT, Claimant experienced persistent hypersensitivity, color changes and swelling in his left lower extremity raising concern from Dr. Purcell for "left lower extremity RSD" (reflex sympathetic dystrophy) also referred to as complex regional pain syndrome (CRPS). Accordingly, Claimant was referred to Dr. Kenneth Finn for further evaluation.

5. Dr. Kenneth Finn evaluated Claimant on April 3, 2017. As part of his examination, Dr. Finn documented a history of pain and swelling in the left knee and distal to the foot, sensitivity to light touch in the anterior shin to the top of the foot with paresthesias in a peroneal and tibial distribution and weakness with increased pain with prolonged standing, walking, sitting, or driving. Physical exam confirmed swelling, joint

line tenderness, and decreased sensation in the distribution of both the superficial and deep peroneal and sural sensory distributions. The left leg was slightly discolored and cool to touch on examination. Dr. Finn diagnosed Claimant with complex regional pain syndrome (CRPS) I of the left lower limb and recommended an EMG, a post-op MRI of the knee, and possibly a sympathetic nerve block.

6. Claimant followed up with Dr. Mary Seagraves—the vascular surgeon who treated his DVT— on April 5, 2017, two days after Dr. Finn's examination. Dr. Seagraves documented that Claimant has "significant chronic edema with associated erythema and temperature change between his left and right lower extremities clinically". Dr. Seagraves specifically documented that Claimant's entire left lateral calf was numb to touch.

7. Claimant returned to Dr. Finn on April 24, 2017 with continued complaints of "burning pain, electrical sensations in the left lower leg in a diffuse pattern with discoloration and hyperhidrosis". Physical exam by Dr. Finn documented a reddish discoloration of the left leg below the knee with allydonia and hyperalgesia and mild hyperhidrosis compared to the right lower leg. Dr. Finn diagnosed Claimant with CRPS I and causalgia of the left lower limb. Dr. Finn recommended a sympathetic nerve block and increased dosages of Lyrica.

8. Claimant underwent a sympathetic nerve block performed by Dr. Finn on May 3, 2017. Claimant subsequently followed up with Dr. Finn's nurse practitioner (NP), Sonya Griffith, on May 11, 2017. He reported 80% improvement with the lumbar sympathetic block for about 18 hours after which his pain returned to its original level. Claimant reported "excessive" swelling in his left lower extremity on this date. NP Griffith's examination documented pitting edema of the left lower extremity, a slight color change between the left lower extremity and the right lower extremity, and a slightly cooler temperature of the left lower extremity. It was reported that Claimant's DVT had been ruled out as a cause of his ongoing lower extremity symptoms and a second lumbar sympathetic block was recommended.

9. A second lumbar sympathetic block was administered on May 24, 2017. The same day, prior to the block, Claimant presented to Memorial Health to follow up with Dr. Seagraves. Dr. Seagraves diagnosed Claimant with a history of DVT of lower extremity and RSD. It was noted that Claimant had already undergone a nerve block which resulted in temporary pain relief, which was "consistent with RSD" per Dr. Seagraves. Claimant's post-injection follow up on June 13, 2017 with NP Griffith fails to document his response to the May 24, 2017 injection. Nonetheless, Claimant testified that he had an even better response to the second injection than he did to the first, in terms of both pain reduction and functional improvement.

10. Respondents requested an independent medical examination (IME) with Dr. Joseph Fillmore. Dr. Fillmore would perform an IME and a record review regarding Claimant's medical condition; the IME occurring July 17, 2017 and the records review taking place December 6, 2018. During his July 17, 2017 IME, Claimant reported that he was experiencing red color changes and little red spots on his leg, hypersensitivity,

swelling, and "some hair loss" at one time. Dr. Fillmore ultimately concluded as follows: "[Claimant] does have pain out of proportion with objective findings which is often the case with CRPS. He appears to have an element of sympathetically mediated pain but at this point without further testing he cannot be diagnosed with CRPS."

11. On July 18, 2017, Claimant underwent a "Comprehensive Consultation" with Dr. David Reinhard on the referral of Dr. Frank Polanco, Claimant's ATP in this case. The purpose of the consultation was to evaluate for "possible CRPS". Dr. Reinhard did not have any medical records for review and the history he took came exclusively from Claimant. Dr. Reinhard asked Claimant about his previous lumbar blocks. According to Dr. Reinhard, Claimant reported that he had two lumbar sympathetic blocks, and that the first time "he did not get that much relief" and while the second block provided relief for a couple of days, Claimant felt it was "negative from a diagnostic standpoint".[1] It is unclear whether Dr. Reinhard was aware that Claimant received 80% relief of his symptoms after the first block. Dr. Reinhard performed an autonomic testing battery that came back with a clinical score of 3 points out of a possible 9, which "represents a low probability of complex regional pain syndrome". According to Dr. Reinhard, Claimant's clinical score of 3/9 results in a "negative test for CRPS". Nonetheless, Claimant's laboratory testing revealed a score of 3 leading Dr. Reinhard to opine that Claimant may have "possible dysautonomia". In the event of progressive symptoms, Dr. Reinhard indicated that Claimant could be re-evaluated with a follow-up autonomic battery and stress thermography.

12. Claimant subsequently followed up with NP Griffith on August 3, 2017 for ongoing CRPS type symptoms. A referral was made to Dr. Mark Meyer for evaluation of a trial of spinal cord stimulation. The requested evaluation would not occur until January 24, 2018 as Respondents initially denied the request for referral to Dr. Meyer.

13. While waiting for the evaluation with Dr. Meyer, Claimant continued to follow up with Dr. Polanco. Dr. Polanco placed Claimant at MMI on November 3, 2017, noting that there had been an extensive workup for "CRPS" which was unremarkable per the battery of testing. Dr. Polanco provided a 13% lower extremity rating for Claimant's ACL injury. He did not include CRPS in his diagnosis. He did not rate for CRPS. Dr. Polanco stated, "As I have evaluated Mr. L_____ he does not present with any clear symptoms or findings of CRPS . . . In my opinion he does not meet criterial for spinal cord stimulator as he is reporting "total" leg pain. [Spinal cord stimulation] (SCS) is more useful for a dermatomal pattern radicular pain". Dr. Polanco recommended maintenance treatment consisting of follow up with orthopedics as needed for 12 months, and modified duty restrictions.

14. Claimant requested a Division Independent Medical Examination (DIME). Dr. Stephen Grey was selected through the DIME procedure as the physician to

[1] WCRP 7, Ex. 7, p. 24 states "For diagnostic testing, use two blocks over a 3-14 day period. For a positive response, pain relief should be 50% or greater for the duration of the local anesthetic and pain relief should be associated with demonstrated functional improvement."

complete the DIME. Dr. Gray would complete the DIME on April 24, 2018. In the interim Claimant would continue treatment with NP Griffith.

15. Claimant was seen NP Griffith on January 2, 2018 at which time it was documented that he continued to have an intense, painful tingling sensation from his left knee down to his toes. NP Griffith stated "I will once again place [a] referral to Dr. Mark Meyer as I still strongly believe that eval for SCS trial is a highly appropriate next step."

16. As noted above, Claimant would be evaluated by Dr. Meyer on January 24, 2018. The report from this date of visit reflects that Claimant described limb pain (left leg) but no "arthraglias, back pain, joint stiffness, myalgias, limping, cane/walker or wheelchair use/bound". While Dr. Meyer diagnosed Claimant with RSD and chronic pain syndrome, the report is devoid of any examination findings or other objective information outside of Claimant's height, weight, body mass index (BMI), blood pressure or pulse to support this diagnosis. Rather, regarding exams, the report indicates simply "SEE ATTACHED DICTATION".[2] Dr. Meyer recommended proceeding with a trial of SCS for Claimant's left lower extremity pain. NP Griffith documented on January 30, 2018, that Dr. Mayer felt Claimant was an "excellent candidate" for a trial of SCS and they were awaiting the required psychiatric evaluation to move forward with the process.

17. Per ¶ 14, Claimant's requested DIME was completed by Dr. Gray on April 24, 2018. Dr. Gray noted that testing for CRPS was negative. He made a point to state, "It would appear that the nurse practitioner has persisted in the use of the diagnosis of complex regional pain syndrome despite the negative workup for CRPS." The ALJ finds this a reference to NP Griffith, from Dr. Finn's office. Dr. Gray diagnosed Claimant with a left knee ACL tear and medial meniscus tear. He noted that Claimant was status-post left knee hamstring autograft ACL reconstruction, and "status-post left lower extremity DVT with persistent post-thrombotic syndrome, with persistent pain (causalgia/claudication) and edema". Dr. Gray assigned a 33% scheduled impairment rating of Claimant's left lower extremity, 10% of which represented impairment of Claimant's peripheral vascular system, specifically intermittent claudication with persistent moderate edema. He did not include CRPS in his diagnosis. He did not provide a rating for CRPS. The DIME indicated maintenance medical treatment was warranted and included the suggestion that Claimant be afforded a trial of a spinal stimulator "*if he meets the criteria for this procedure*". (emphasis added). His opinion was that this could be done as maintenance care.

18. Respondents filed a Final Admission of Liability (FAL) consistent with the MMI and impairment opinions expressed by Dr. Gray. The FAL was filed June 13, 2018. Claimant filed an objection to the final admission on June 29, 2018, and an hearing application for disfigurement that same day. A disfigurement award was issued on August 22, 2018.

[2] Despite careful review of the records submitted, the ALJ is unable to locate a separate dictation reduced to writing describing the "exams" performed by Dr. Meyer or the results of those "exams".

19. On September 6, 2018 Dr. Kathy McCranie performed a physician advisor review regarding the request for a trial of SCS. Noting the absence of a diagnostic confirmation for CRPS and a lack of clear neuropathic radicular pain, Dr. McCranie opined that Claimant was not a candidate for a trial of SCS trial per the Medical Treatment Guidelines.

20. On October 18, 2018, Claimant filed the present application for hearing seeking a trial of SCS on a maintenance medical basis.

21. Claimant sought an opinion from Dr. Miguel Castrejon who completed an IME on December 14, 2018. Claimant reported to Dr. Castrejon that he continued to have constant pain described as pins and needles and throbbing pain of the left lower extremity distal to the knee extending along the anterolateral leg to include the area of the tibialis anterior and calf musculature down to the lateral ankle. He described showering as feeling as if the water was "peeling his skin off". He reported that he was bothered by direct touch or pressure on the left lower leg, noting that he could only tolerate silk sheets and soft pants due to pain. He also reported a "substantial" decrease in his pain from the lumbar sympathetic blocks. Exam documented moderate swelling of the left lower leg. On palpation, the left lower extremity felt cooler than the right, and according to Dr. Castrejon, had somewhat of a clammy feeling to it.

22. Dr. Castrejon diagnosed Claimant with sympathetically mediated pain with neuropathic radicular pain qualities of the left lower extremity secondary to development of deep calf vein thrombosis resulting in probable CRPS. Differential diagnosis included post thrombotic syndrome.[3] In support of his diagnosis, Dr. Castrejon reasoned that left lower extremity neuropathic symptoms were documented nine days post-surgery with the diagnosis of a DVT, which symptoms only continued to worsen with time, despite resolution of the DVT. Dr. Castrejon pointed out a number of references in the record wherein Claimant reported symptoms which were consistent with CRPS or otherwise clear neuropathic radicular pain. He placed great importance on Dr. Finn's April 3, 2017 examination wherein Dr. Finn documented decreased sensation in the distribution of both the superficial and deep peroneal and sural nerves. This particular finding is consistent with that of the vascular surgeon, Dr. Seagraves, who had previously opined Claimant was not suffering from post-thrombotic syndrome. Dr. Castrejon also pointed out that there were very limited descriptions of the nature of Claimant's distribution of symptoms by many of Claimant's medical examiners. For example, Dr. Gray documented pain in a "stocking like distribution," yet his physical exam findings indicated Claimant was most sensitive in certain areas of the leg that he did not describe in detail, leading Dr. Castrejon to the conclusion that his statement of a "stocking like distribution" was inconsistent with his own exam findings.

23. In his report, Dr. Castrejon explained that neuropathic radicular pain consists of painful symptoms arising in an area of altered sensation, and that the signs

[3] At hearing, Dr. Castrejon testified that his inclusion of "versus post thrombotic syndrome" was an error on his part, as he later discussed in his report why he opined Claimant did not have post thrombotic syndrome. (Tr. 48:15 – 49:1). *See also* Clmt. Ex. 15, p. 372.

and symptoms can vary between patients and even within individual patients over time. Dr. Castrejon's physical examination was similar to the April 3, 2017 examination by Dr. Finn that documented specific dermatomal distributions. Dr. Castrejon proposed that Claimant had "neuropathic pain that [could not] be superficially discounted as not complying with the spinal cord stimulator criteria" set for in the Medical Treatment Guidelines. Therefore, he opined that Claimant's situation warranted "further discussion regarding a spinal cord stimulator trial and even possible implantation". Additionally, Dr. Castrejon summarized the report from psychologist Joel Cohen, Ph.D, indicating there was no identified need for a psychological follow-up as the testing done did not reveal any emotional behavioral factors.

24. Dr. Fillmore performed a records review on December 6, 2018. Dr. Fillmore reviewed updated medical records, including testing results, since his July 17, 2017 IME of Claimant and indicated that while Claimant appears to meet the clinical criteria for CRPS, he did not meet the diagnostic criteria for the diagnosis. Dr. Fillmore opined that because Claimant had not met the requirements of a spinal cord stimulator per Rule 17 of the Medical Treatment Guidelines, he is not a candidate for a spinal cord stimulator.

25. Claimant testified at hearing. He reported little change in his pain and symptoms since being placed at MMI. He continues to have 7/10 pain, numbness, tingling, swelling and hypersensitivity. Claimant testified that he currently relies on medication, including Nucynta, Tramadol, and topiramate to help relieve his symptoms and if he misses a dose of his medications his pain will become "excruciating" and "unreal". Claimant explained that his deep pain in and through his leg and through his toes was "fantastic" after the first block and that allowed him to walk much better. Nonetheless, he testified this pain relief and functional improvement was very short lived. According to Claimant, the second block resulted in better pain reduction and increased function but again these benefits only lasted one day. There was no cross-examination of Claimant.

26. Dr. Castrejon testified by telephone at hearing on behalf of Claimant in his capacity as an expert in the field of physical medicine and rehabilitation. He explained at hearing that his final impression of Claimant having sympathetic-mediated pain with neuropathic radicular pain qualities is essentially a form of CRPS, as CRPS is a form of ongoing neuropathic pain. Dr. Castrejon elaborated that Claimant's ongoing neuropathic pain differs slightly from a CRPS Type I or Type II diagnosis, and it is important to look at the Medical Treatment Guidelines, specifically Workers' Compensation Rule of Procedure (WCRP), Rule 17, Exhibit 9 to help determine Claimant's appropriate treatment. According to Dr. Castrejon, Rule 17, Exhibit 9 indicates that SCS is appropriate in a subset of patients who have clear neuropathic, radicular pain in a distribution amenable to stimulation coverage. Dr. Castrejon testified that Claimant "definitely" had neuropathic pain, and the guidelines discuss peripheral nerve stimulation for said pain. Dr. Castrejon further testified that current Blue Cross/Blue Shield guidelines accept spinal cord stimulation as an accepted form of treatment for neuropathic pain.

27. Dr. Castrejon explained why Dr. McCranie's reliance on a negative EMG result when considering SCS treatment was misplaced. According to Dr. Castrejon, an EMG will not diagnose radiculopathy or a condition involving the sensory nerve pathways. Dr. Castrejon's physical examination, like Dr. Finn's, revealed pain and sensory findings in a distribution that involved specific dermatomal areas that would be amenable to a peripheral form of nerve stimulation. Consequently, he supports a trail of SCS.

28. During cross examination, Dr. Castrejon acknowledged that Claimant does not meet the diagnostic criteria for CRPS I or II. In his testimony, he stated that it was his opinion that Claimant qualified for a diagnosis of CRPS NOS (not otherwise specified), because he felt there was no other explanation for his symptoms and complaints. He acknowledged that the Medical Treatment Guidelines do not mention CRPS NOS as a diagnosis appropriate for SCS treatment. Dr. Castrejon could not point to any evidence-based medical studies that show that spinal cord stimulators are successful in the treatment of CRPS-NOS. Dr. Castrejon testified that a SCS trial should move forward because the Medical Treatment Guidelines were outdated and, in his opinion, should include CRPS NOS as a diagnosis warranting the use of SCS. However, he acknowledged that in his report he declared that a definitive diagnosis had not been established. As noted, he provided a differential diagnosis of CRPS versus post thrombotic syndrome. In his report, Dr. Castrejon noted: "In my professional opinion, if an inadequate description exists then how can one appropriately argue against recommended treatment for stimulator trial or, for that matter, *the presence or not* of "neuropathic radicular pain" (emphasis added). Conversely then, Dr. Castrejon ostensibly recognizes that if there is not adequate evidence to support the presence of a diagnosis then it would be inappropriate to argue for a specific course of treatment, including, in this case SCS. In making the statement, "how can one appropriately argue against recommended treatment for stimulator trial," Dr. Castrejon apparently rejects the CPDMTG and the CRPSMTG as a basis for appropriately arguing against recommended treatment for a stimulator trial.[4] As noted, Dr. Castrejon would amend his opinion by asserting that his inclusion of post thrombotic syndrome as a differential diagnosis was in error. Moreover, in his arguments against the use of the Guidelines, Dr. Castrejon declared that they were outdated and did not consider relevant and recent developments. Dr. Castrejon would later confess to being unaware of updates to the Guidelines in 2017 and admitted he was referring to the prior versions of the Guidelines in forming his opinion. Dr. Castrejon could not provide any reference to evidenced-based medical studies supporting his assertion that SCS could be effective for a diagnosis of CRPS NOS.

29. Dr. Joseph Fillmore presented expert testimony at hearing. Dr. Fillmore has extensive experience in pain management, including conducting SCS trials. His patients include those with known CRPS and RSD. He also has experience as a member of a panel updating Colorado Division of Workers' Compensation Guidelines.

[4] Dr. Castrejon also makes arguments against the determinations of the DIME, which are not relevant, given the procedural posture of this claim. Claimant does not challenge the DIME or the MMI determination and impairment rating reflected in that final admission filed consistent with the DIME.

As noted, Dr. Fillmore evaluated Claimant and provided a written report on July 17, 2017 with recommendations for treatment. As testing to confirm CRPS had not been completed at that time, he recommended that this be done. He noted that if these tests confirmed CRPS, a SCS could be considered. Conversely, "[i]f these tests [were] negative, he would not be a candidate for a stimulator."

30. As noted further, post MMI Dr. Fillmore completed a medical records review taking into consideration further diagnostic work-up since his IME. His report of December 6, 2018 was to specifically issues to address whether a SCS trial is reasonable, necessary, and related to the work injury. It is his expert conclusion that it is not. His written report and his testimony explained that diagnostic testing was negative and Claimant's situation does not meet the criteria of the Chronic Pain Disorder Medical Treatment Guidelines (CPDMTG) and the Complex Regional Pain Syndrome/Reflex Sympathetic Dystrophy Medical Treatment Guidelines (CRPSMTG) to justify a trial of SCS as reasonable and necessary.

31. According to the current version of the CPDMTG, patients with established CRPS I or II or a failed spinal surgery are candidates for spinal cord stimulators. CPDMTG, H.1.a, Neurostimulation. Moreover, this guideline provides: "Traditional or other SCS may be indicated in a subset of patients who have a clear neuropathic radicular pain (radiculitis) with or without previous surgery". The prior version of the CPDMTG effective 2012 contained the following similar language: "SCS may be indicated in a subset of patient who have a clear neuropathic radicular pain (radiculitis)". This version of the guidelines goes on to explain that patients, who are not candidates for surgical intervention on the spine and whom have "burning pain in a distribution amenable to stimulation coverage and have pain at night not relieved by position", may be candidates for SCS. See CPDMTG H.1.c.i.

32. The DOWC Medical Treatment Guidelines provide a vetted consensus regarding the diagnosis of CRPS and a method of determining when SCS is reasonable and necessary as a treatment modality. Rule 17, *Division of Workers' Compensation Medical Treatment Guidelines-Methodology and General Literature Search Strategy for Medical Treatment Guidelines*. Per Rule 17, Exhibit 7, the "[d]iagnosis of CRPS continues to be controversial. The clinical criterial used by the International Association for the Study of Pain is thought to be overly sensitive and unable to differentiate well between those patients with other pain complaints and those with actual CRPS…Clinical criteria alone are not dependable nor necessarily reliable and require objective testing". CRPSMTG, Diagnosis of CRPS, page 14. "All operative interventions must be based upon positive correlation of clinical findings, clinical course and diagnostic tests. A comprehensive assimilation of these facts must lead to a specific diagnosis with positive identification of pathologic conditions." CPDMTG, B. 9, General Guideline Principles, Surgical Interventions, pg. 3.

33. The risks associated with SCS are significant and include less commonly, "spinal cord compression, paraplegia, epidural hematoma, epidural hemorrhage, undesirable change in stimulation, seroma, CSK leakage, infection, erosion, and allergic

response". Other complications include, dural puncture, hardware malfunction or equipment migration, pain at the implantation site, loss of pain relief, chest wall stimulation, and other surgical risks". CPDMTG, H.1.b, pg. 179. Recent studies have shown the device complication rates to be 25% at 6 months, 32% at 12 months, and 45% at 24 months. CPDMTG, H.1.b, Neurostimulation. For a neuro-stimulation trial, a temporary lead in implanted at the level of pain and attached to an external source to validate effectiveness. CRPSMTG I, pg. 98. While the temporary leads can be removed, the ALJ understands from the evidence presented, that placing them is invasive and creates risks, including on rare occasion, those outlined above.

34. Claimant's expert Dr. Castrejon described his symptoms as allodynia, pain that occurs from things that normally don't elicit pain. Studies show that SCS may not influence allodynia (regardless of diagnosis). CPDMTG, *p. 179, citing to (Barolat et al., 1998; Barolat et al., 2001; Frey et al., 2009; Kemler, de Vet, Barendse, van den Wildenberg, & van Kleef, 2008; Richard B. North et al., 2005).*

35. Dr. Fillmore testified that it is not reasonable and necessary to place a spinal cord stimulator in Claimant, and by the same logic, not reasonable and necessary to proceed with a trial of SCS for this Claimant because does he meet the diagnostic criteria for CRPS I or II, as defined by the CRPSMTG. According to the CRPSMTG a patient should have confirmed diagnosis of CRPS to proceed to SCS trial and permanent SCS. As explained in his report and testified to by Dr. Fillmore, Claimant does not meet the criteria for this procedure for the following reasons:

- Claimant's electrodiagnositic evaluation was normal. *Ex. A, Bates 6; Ex. C.*
- Claimant's three phase bone scan was not diagnostic for CRPS. *Ex. A, Baste 3*
- Lumbar sympathetic blocks were diagnostically negative for CRPS. *Ex. A, Bates 2; Ex. E, Bates 56; Claimant testimony.*
- Infrared Stress thermography performed by Dr. Polanco was negative for CRPS. *Ex. A, Bates 8.*
- Autonomic testing battery was negative for evidence of CRPS. *Ex A. Bates 3-8; Ex E, Bates 56.*
- Diagnosis of CRPS under CRPSMTG requires at least one symptoms in three of four particular categories: Sensory, vasomotor, sudomotor, and motor/trophic. Claimant does not meet this criteria. *Ex. A, Bates 6-9.*
- Diagnosis of CRPS under CRPSMTG also requires at least one sign at the time of evaluation in two or more of these particular categories:

Sensory, vasomotor, sudomotor, and motor/trophic. Claimant does not meet this criteria. *Ex. A, Bates 6-9.*

36. Claimant, through Dr. Castrejon counters that while he does not meet the diagnostic criteria for CRPS I or II, he probably has sympathetically mediated radicular pain in a dermatomal pattern amenable to stimulation. Sympathetically Maintained Pain (SMP) is characterized by complaints of pain in the absence of clinically detectable vasomotor or sudomotor signs which decreases significantly with sympathetic blocks. As noted here, while Claimant's pain relief with blocks was relatively short lived it was substantial, approaching 80%.[5] Consequently, Claimant argues he falls into the subset of patients for whom a trail of SCS is warranted and in this case reasonable and necessary to cure and alleviate the ongoing effects of his industrial injury.[6]

37. Based upon the totality of the evidence presented, the ALJ credits the opinions of Dr. Castrejon, Dr. Finn and Dr. Seagraves to find that Claimant likely suffers from neuropathic pain in his left lower leg caused by his knee injury, subsequent surgery and post-surgical complications. The ALJ is persuaded that Claimant is an appropriate candidate for a trial of spinal cord stimulation and that the need for this trial is related to his admitted work related injury and is otherwise reasonable and necessary to cure and relieve him of his ongoing symptoms. While Dr. Fillmore's opinion that Claimant lacks the diagnostic criteria to support an impression of CRPS I or II in this case is persuasive, he did not adequately address the likelihood of Claimant having SMP, i.e. neuropathic radicular pain. In this regard, the ALJ finds the opinions of Dr. Castrejon concerning Claimant's SMP diagnosis and need for a trial of SCS credible and persuasive.

38. The ALJ further finds Claimant's condition satisfies the requirements of the Medical Treatment Guidelines ("MTG's") necessary to warrant a trial of neurostimulation. As noted at ¶ 31 above, "[t]raditional or other SCS may be indicated in a subset of patients who have a clear neuropathic radicular pain (radiculitis) with or without previous surgery". While the parties presented scant evidence regarding Claimant's psychological examination, Dr. Castrejon noted that Joel Cohen, Ph.D, found no need for a follow up psychological examination as previous testing done did not reveal any emotional behavioral factors to preclude the trail of SCS from proceeding. Based upon the evidence presented, the ALJ is persuaded that Claimant has undergone the necessary psychological evaluation to proceed with a trial of SCS.

39. Based upon the evidence presented, the ALJ finds that Claimant has proven, by a preponderance of the evidence, that a trial of SCS to help alleviate the ongoing effects of probable SMP caused by his industrial injury spinal cord stimulation is reasonable and necessary.

---

[5] The ALJ credits Claimant's testimony regarding the reduction in his pain complaints and functional improvement following his two sympathetic blocks.

[6] As noted in the CRPSMTG, patients who suffer from SMP may "use sympathetic blocks and active and passive therapy" from [the] guideline. CRPSMTG G.4.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant suffers from SMP, i.e. neuropathic radicular pain in a distribution that may be amenable to stimulator. Accordingly, the ALJ concludes that while Claimant probably does not

have CRPS I or II, he falls into a subset of patients from whom neurostimulation may be effective. Without undergoing a trial of the same, the ALJ concludes that it is impossible to know whether Claimant would benefit from such treatment. For these reasons, the ALJ concludes that a trial of SCS is warranted in this case. Dr. Fillmore's contrary opinions are unpersuasive.

II. Medical Benefits

D. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

E. The Medical Treatment Guidelines (Guidelines) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The purpose of the Guidelines is to comply with C.R.S. § 8-40-102(1), "and assure the quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation." Rule 17-1.

F. The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Guidelines adopted by the Division. In spite of this direction, it is acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011).

G. As provided for under § 8-43-201(3), the ALJ has "[considered] the medical treatment guidelines adopted under § 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease." In keeping with the MTGs and as found above, the ALJ concludes that Claimant's current condition is directly related to his industrial injury and satisfies the requirements set forth in the Medical Treatment Guidelines ("MTG's") necessary to warrant a trial of neurostimulation. See generally, Rule 17, Exhibits 7 and 9. Here, Claimant most probably has neuropathic pain (radiculitis) which effectively responded to sympathetic blocks, albeit for a short duration of time. While there are

risks associated with the implantation of the temporary leads necessary to conduct the trail, these leads can be removed and the ALJ concludes that these attendant risks do not outweigh the potential benefit that Claimant may enjoy should the trial prove effective. Moreover, while SCS may not influence allodynia regardless of Claimant's diagnosis, the ALJ is cognizant that the very purpose of a trail is to determine just that, specifically, whether Claimant's persistent pain will respond to SCS. Accordingly, the ALJ is unimpressed with the assertion that a trial of SCS is not warranted because Claimant may not respond. Finally, the ALJ is persuaded based upon the evidence presented that Claimant has undergone a psychological evaluation, which determined that no clinically significant psychological indicators existed that would preclude Claimant from undergoing a trial of neurostimulation. Consequently, Claimant has established by a preponderance of the evidence that he is entitled to a trial of SCS as a reasonable and necessary treatment modality to potentially cure and relieve him of the ongoing pain and dysfunction caused by his admitted work related injury.

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay for the spinal cord stimulator trial as requested by Dr. Meyer.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove he suffered a compensable work-related injury on or about September 2, 2018?

FINDINGS OF FACT

1. Claimant worked as a part-time "click list" clerk at Employer's grocery store in Monument. He typically worked five days per week, from 5:00 AM to 9:00 AM. Claimant's job was to fill online orders placed by customers. He walked through the store pushing a large wheeled cart with several divided containers or totes. He used a hand-held scanner to record items put into the cart as he filled the orders.

2. Claimant alleges an injury to his left arm and shoulder from pushing the cart. He identified the injury date as September 2, 2018 on his WC claim form. At hearing, he testified the pain started at work on August 31, but the symptoms intensified and "came together all at once" on September 2. On that date, he had stopped to retrieve some items and felt severe pain in his left arm to the shoulder after he let go of the cart. Claimant described the pain as "like a gunshot" and an "electrical shock." Claimant alleges his left hand swelled to "twice the size," and his left arm turned "red like Rudolph." Claimant became angry and threw his scanner to the ground. He resumed working for a brief time, but then left the store, went to his car, and sent a text message to his immediate supervisor, Ms. Shelia F[Redacted]. Claimant then went back inside and continued working.

3. At approximately 7:15 AM, the store manager, Ms. Michelle N[Redacted], encountered Claimant in the chip aisle. She wished Claimant good morning and asked how he was doing. Claimant was having no apparent difficulty working, and Ms. N[Redacted] noticed no physical abnormalities or pain behaviors. Claimant was hesitant to mention the injury because he wanted to report it to Ms. F[Redacted] instead. But he ultimately decided to tell Ms. N[Redacted], "because she was standing right there." He reported pain in his left hand and arm. Ms. N[Redacted] asked Claimant to come upstairs to her office to process his claim.

4. Claimant worked for approximately another hour before going to Ms. N[Redacted]'s office. Claimant and Ms. N[Redacted] completed handwritten incident reports and called in a report to a triage nurse at Sedgwick. Claimant gave the nurse the following statements regarding his injury:

> APPEARANCE of INJURY: There is swelling on my left hand and entire left arm. My left hand is twice the size of my right hand. The swelling on my left arm isn't massively but you can tell when you compare it to my right arm. There is a knot on the palm part of my left hand near the thumb (base of

thumb). The knot is horizontal. The length is 2 inches. My entire left arm and left hand is red.

SEVERITY: I can't grip or pick things up because of the pain in my left arm. I feel that a nerve is pinched. I don't have any strength. I can move my left arm but it's painful. I can bend and straighten my left arm completely. It hurts if I lift my arm over my shoulder.

5. Ms. N[Redacted] stated on the accident report she questioned the claim. When asked about that at hearing, she said it was because Claimant told her he was in pain for a couple of days, but she worked with him the day before and he said nothing about any pain or injury.

6. Ms. N[Redacted] gave Claimant a designated provider list, from which he chose the DaVita Urgent Care clinic.

7. Claimant saw Dr. Christopher McNulty at DaVita later that morning. He told Dr. McNulty, "on 08/31/18 he was pushing carts when he noticed severe pain that radiated from left shoulder down to wrist. Patient states he started favoring his left wrist by not using [it]. Patent states he has been trying to treat with IBU which has not helped. Patient states today he was pushing carts again when he felt severe pain radiating from left shoulder down to wrist back up to shoulder. Patient states he is unable to pick anything up at work or hold items."

8. Dr. McNulty examined Claimant's neck and noted "acute tissue changes bilaterally . . . worse on the left on the right." There was no tenderness "at all" beneath the scapula. Shoulder range of motion was nearly full with pain in the biceps tendon and AC joint at the extremes of abduction. Dr. McNulty noted "some generalized edema in these areas." Left wrist range of motion was reduced in all planes, with "a degree of generalized edema." Claimant had no significant loss of fine motor coordination in his left hand. X-rays of the neck, left shoulder, and left wrist were normal. Dr. McNulty diagnosed "chronic cervical strain with cervical radiculitis, acromioclavicular bursitis, bicipital tendinitis, [and] carpal tunnel syndrome." He prescribed a muscle relaxer, referred Claimant to therapy, and released him to work with no use of his left arm.

9. Claimant went back to the store and gave the restrictions to Ms. N[Redacted]. He also spoke with Randy J[Redacted], the assistant store manager, about modified work. Claimant wanted to fill his prescription at a different pharmacy and had not eaten lunch, so Ms. N[Redacted] allowed him to leave and come back the next day.

10. The parties presented conflicting evidence about when Claimant next went to work. Claimant testified he called off September 3 because he was in too much pain. He said he drove to Denver and purchased marijuana to make edibles for pain relief. Employer's witnesses testified Claimant came to work on September 3.

11. Whether it was September 3 or 4, Claimant returned to work and was assigned light duty "conditioning" shelves. This task entails pulling merchandise to the front edge of shelves to make sure it looks presentable and is within reach of customers.

While Claimant was working in the condiment section, a bottle of ketchup fell from the shelf. He was standing very close to the shelf and "instinctively" caught the falling bottle with his left hand. He testified this caused such excruciating pain in his left arm that he "peed my pants." Claimant became upset and left the store without telling anyone what happened. Later that day, Mr. J[Redacted] called Claimant to see where he was, and Claimant relayed the incident.

12. Claimant was seen at DaVita on September 5, 2018. He described the ketchup bottle incident, which he said happened "several days ago." Claimant stated Employer had sent him back for "reevaluation" because of the second incident. Dr. McNulty noted, "the patient says that the exacerbation of pain in the above areas has since quieted and he now has pain that he was here with originally when we opened his claim." The examination findings were similar to those at the initial visit on September 2, except there is no mention of any upper extremity swelling. Dr. McNulty opined Claimant had "exacerbated" his prior injury but "this seems to [have] quieted back down to baseline at this point." No treatment was recommended specifically for to the ketchup bottle incident. Dr. McNulty ordered an EMG "to confirm carpal tunnel syndrome of left wrist."

13. Claimant returned to work on September 5, 2018 as a greeter. He worked light duty until September 14, 2018 when he was terminated because his post-accident urine drug screen was positive for marijuana.

14. Claimant's last visit with Dr. McNulty was on September 15, 2018. He was improving but still had pain in the left wrist, forearm, and biceps, and "quite impressive tenderness" to palpation of the left acromioclavicular joint. He had "some chronic tissue changes" in the cervical musculature, but nothing "acute." Dr. McNulty opined, "I suspect that the patient is slowly improving secondary to a number of factors. He is no longer performing the duties that caused his current symptoms, he is getting an adequate amount of rest to the affected areas, and he is doing physical therapy." Dr. McNulty referred Claimant for an occupational medicine "evaluation."

15. Claimant saw Dr. Wallace Larson, an orthopedist, for an IME at Respondent's request on December 20, 2018. Dr. Larson noted Claimant gave "a very confusing history and flight of ideas." The physical examination showed "no objectively abnormal physical findings." Dr. Larson opined, "there is no objective and certainly no convincing subjective evidence the patient sustained a specific injury." He further opined, "[Claimant's] symptoms are not consistent with any known physical disorder."

16. Dr. Larson testified at hearing consistent with his report. He reiterated Claimant had "no objective abnormality on examination" and his subjective complaints matched no plausible diagnosis. Dr. Larson could discern no work-related medical condition that required treatment. He opined the evaluations and treatment received through DaVita were not reasonably necessary in relation to any work-related condition.

17. The testimony of Employer's witnesses was credible and persuasive. Dr. Larson's expert opinions are credible and persuasive.

18. Claimant failed to prove by a preponderance of the evidence he suffered any work-related injury that proximately caused a need for medical treatment or disability.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016). Moreover, the fact that a claimant receives some medical treatment after an accident does not automatically establish a compensable injury if the evidence ultimately shows the treatment was not reasonably necessary or proximately caused by the accident. *McTaggart-Kerns v. Dell, Inc*., W.C. No. 4-915-218-02 (May 29, 2014).

As found, Claimant failed to prove he suffered a compensable work-related injury. The fact that Claimant experienced pain while, or shortly after, performing job tasks does not automatically mean he suffered a work-related injury. An incident that merely elicits pain symptoms with no causal connection to the industrial activities does not compel a finding that a claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Simply because a claimant's symptoms arise after performing job functions does not necessarily create a causal relationship based on temporal proximity. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008). As noted in *Scully*, "correlation is not causation," and a merely coincidental correlation between the claimant's work and his symptoms does not mean there is a causal connection.

Claimant's dramatic descriptions of his symptoms and limitations are not consistent with the credible observations of his supervisors or supported by the medical records. Although he probably had some pain and swelling in his left arm, there is no

persuasive evidence those symptoms were proximately caused by his work on or around September 2, 2018. The onset of severe pain on September 2 was not associated with any exertion but occurred when he simply let go of the cart. Dr. McNulty diagnosed a litany of conditions, none of which the ALJ finds plausibly associated with Claimant's described work activities. Dr. Larson's opinions are persuasive. Dr. McNulty's opinions are not persuasive because provided no analysis and appears to have assumed Claimant's symptoms were work-related simply because they started at work. It was probably a coincidence Claimant's symptoms started at work becuase there is no demonstrated causal relationship to his employment duties. Although the incident with the ketchup bottle may have briefly exacerbated Claimant's pain, it did not proximately cause any need for medical treatment. When he saw Dr. McNulty on September 5, the exacerbation had resolved without treatment and he had returned to "baseline." After reviewing all the evidence, the ALJ concludes Claimant failed to carry his burden to prove a compensable injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 23, 2019

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant's ongoing prescriptions for Adderall, Aricept, and Geodon, as well as related medical appointments authorized treating physician (ATP) Steven Dworetsky, M.D., are reasonable, necessary and related to her February 10, 2009 work injury.

FINDINGS OF FACT

1. Claimant is a 65-year-old former project controls engineer.

2. Claimant has a longstanding prior history of treatment for post-traumatic stress disorder (PTSD) and depression. Since at least 2003, Claimant has taken anti-depressant medication, including Wellbutrin, and attended regular counseling sessions with psychotherapist Julie Rudiger, LCSW.

3. On February 10, 2009, Claimant sustained an admitted industrial injury when she tripped and fell forward, striking her head onto a glass door. Claimant then fell backwards and hit her head on the cement. Claimant reported she briefly lost consciousness during the incident.

4. Claimant was seen at Swedish Medical Center the same day. The medical record documents that Claimant had head and right shoulder injuries after tripping and falling, with loss of consciousness. It was noted Claimant had a headache with moderate swelling and small ecchymosis of the forehead, but no altered mental status. A CT scan of head revealed no acute changes. Claimant was released with instructions to follow up with a workers' compensation provider.

5. Claimant subsequently began complaining of cognitive issues and memory loss. In March 2009, Eric Hammerberg, M.D. assessed Claimant with post-concussion syndrome and situational adjustment reaction with anxiety and depression. Claimant also treated with Rafer Leach, M.D., who diagnosed Claimant with a mild traumatic brain injury. Claimant underwent a neurologic consultation with J. Bradley Gibson, M.D., who gave an impression of a Grade III concussion with loss of consciousness. Claimant also treated with Steven Dworetsky, M.D. a psychiatrist, who determined Claimant suffered a traumatic brain injury. Claimant underwent cognitive therapy and was prescribed, *inter alia*, Aricept, Adderall and Geodon.

6. On March 1, 2010, Gregory A. Thwaites, Ph.D. performed a neuropsychological evaluation at the request of Respondents. Dr. Thwaites determined Claimant sustained a mild concussion as a result of the February 10, 2009 work accident. He opined it was possible Claimant had subtle ongoing cognitive difficulties from the concussion, but that it was very difficult to assess the cause of the self-reported cognitive difficulties in light

of Claimant's sleep apnea, medication effects and pre-existing psychiatric concerns. Dr. Thwaites noted Claimant showed signs of symptoms magnification and response bias.

7. On March 26, 2010, Stephen Moe, M.D. performed a psychiatric IME at the request of Respondents. Based on Claimant's reports to him and the medical report from the date of injury, Dr. Moe concluded Claimant suffered a mild concussion on February 10, 2009, but noted other data called the diagnosis into question. He opined that, whether or not Claimant actually suffered a concussion as a result of the work injury, her current symptoms were due to other factors. Dr. Moe explained that Claimant's presentation was inconsistent with the prompt recovery expected with a mild concussion, and determined that Claimant's persistent physical and cognitive symptoms were due to somatoform disorder and cogniform disorder.

8. On August 24, 2010, Robert Watson, M.D. performed an IME at the request of Respondents. He opined Claimant sustained a closed head injury and deferred to Drs. Moe and Thwaites regarding neuropsychiatric issues. He noted concerns regarding the severity of Claimant's self-reported cognitive problems but, nonetheless, opined that Claimant appeared to have a mild neurological deficit from the work injury. Dr. Watson concluded Claimant had reached maximum medical improvement (MMI) and assigned a 19% whole person impairment rating, consisting in part, of a 5% whole person impairment rating for concussions under Section 4.1a of the AMA Guides.

9. Dr. Leach placed Claimant at MMI as of October 6, 2010.

10. Claimant subsequently underwent a Division-sponsored IME (DIME) with Ronald Swarsen, M.D. on February 22, 2011. Dr. Swarsen determined Claimant's work injury resulted in a closed head injury, without loss of consciousness, but with probable mild concussion, right shoulder impact injury, and sprain of the cervical spine. He opined that Claimant's psychological issues were pre-existing and not work-related. [1]

11. Respondents filed an amended Final Admission of Liability on July 22, 2011, admitting to Dr. Swarsen's 25% whole person impairment rating. Per the FAL, Respondents admitted liability for reasonably necessary *Grover*-type medical benefits per the recommendations of Dr. Swarsen. Dr. Swarsen recommended:

> Claimant has been on maintenance psychotropic drugs for quite some time before the work-related accident. Any psychotropic medications she was on before should be managed by her PCP and not under the work-related claim. Any medications prescribed for PTSD/panic disorder or sleep disorder which were pre-existing conditions would not be related to her work-related injury. This would include Wellbutrin, Zoloft, Temazepam and Valium (diazepam). Medications related to the closed head injury and brain issues should be continued indefinitely, including Adderall, Geodon, and Airicept. She should be tapered to the lowest effect doses of these

[1] Dr. Swarsen's DIME Report was not submitted at hearing by either party. Findings of Facts #10-13 of this Order adopts and incorporates the findings of fact set forth in ALJ Harr's February 7, 2012 Order, which was admitted into the record as Exhibit 3.

> medications. Follow-up visits with prescribing physicians for medication refills and adjustments are appropriate 2-3 times a year with appropriate laboratory monitoring as well.

12. A March 30, 2011 medical record of Dr. Gibson noted Claimant continued to have residuals of post-concussion syndrome manifested by cognitive dysfunction, posttraumatic visual disturbance and posttraumatic vertigo and disequilibrium.

13. On January 10, 2012, Claimant went to hearing before ALJ Michael E. Harr on the issue of whether ongoing treatment with Drs. Dworetsky and Gibson, and whether the medications prescribed by Drs. Dworetsky and Gibson, were reasonable and necessary maintenance treatment. ALJ Harr issued an order dated February 7, 2012. ALJ credited the opinions of Drs. Thwaites, Moe and Swarsen. He found Claimant failed to prove it was more probable than not "that the medications and treatment beyond those recommended by Dr. Swarsen are reasonably necessary to maintain her condition at MMI." ALJ Harr noted Respondents had admitted liability for ongoing treatment recommended by Dr. Swarsen, thus admitting liability for the Adderall, Geodon, and Aricept medications and for two to three follow-up visits per year with Dr. Dworetsky and Dr. Gibson to monitor claimant's medications. ALJ Harr ordered Insurer to pay for the Adderall, Geodon and Aricept medications prescribed by Dr. Dworetsky and Dr. Gibson and for three follow-up visits per year with Dr. Dworetsky and/or Dr. Gibson as reasonably necessary to monitor Claimant's medications. He specifically denied and dismissed Claimant's request for an award of medical benefits to cover medication and treatment for pre-existing depression, anxiety, PTSD, and psychological issues, including Wellbutrin, Zoloft, Temazepam and Valium.

14. Respondents continued to pay for Claimant's Adderall, Aricept and Geodon medications, as well as follow-up visits with Drs. Dworetsky and Gibson, pursuant to ALJ Harr's Order. Claimant continued to treat with Dr. Dworetsky after Dr. Gibson passed away.

15. On November 25, 2015, Allison M. Fall, M.D. performed an IME at the request of Respondents. Dr. Fall reviewed Claimant's medical records and interviewed and physically examined Claimant. Dr. Fall diagnosed Claimant with a work-related head contusion and mild concussion and preexisting PTSD/depression. She concluded that the cognitive deficits reported by Claimant were inconsistent with the injury Claimant sustained on February 10, 2009 and agreed with Dr. Moe's assessment. Dr. Fall opined that the medications being prescribed to Claimant for a traumatic brain injury are not medically reasonable and necessary as related to the work injury. She noted Claimant's cognitive symptoms likely have a functional basis, and further opined there was no medical indication for any further maintenance treatment as related to the work injury.

16. Dr. Fall performed a review of additional medical records and issued a supplemental report on August 16, 2018. It remained her opinion that medication for cognitive issues from a traumatic brain injury is not medically indicated in Claimant's case, and the medications prescribed by Dr. Dworetsky are not related to the work injury.

17. On February 20, 2019, Dr. Fall testified by pre-hearing deposition as an expert in physical medicine and rehabilitation. Dr. Fall testified consistent with her IME reports and continued to opine that the Adderall, Aricept and Geodon medications prescribed by Dr. Dworetsky are not reasonable, necessary or related to Claimant's February 10, 2009 work injury. Dr. Fall testified that Claimant suffered a mild concussion as a result of the work injury, which should have resolved without treatment in a short period of time. Dr. Fall opined Claimant does not have cognitive deficits as a result of a brain injury, but instead suffers from underlying unrelated psychiatric issues, as determined by Dr. Moe.

18. Dr. Dworetsky issued a letter dated February 28, 2019. Dr. Dworetsky noted Claimant was being treated with Aricept, Adderall and Geodon for a traumatic brain injury she sustained during the February 10, 2009 work incident. He explained that the Aricept was to help Claimant with memory and overall awareness, the Adderall was to help with cognition, attention and energy, and the Geodon was meant to decrease agitation and depression. Dr. Dworetsky noted Claimant's psychiatric status and cognitive status had not improved over the years and that Claimant "continues to require these medications to function at a minimal level."

19. Claimant testified at hearing she suffers from issues with cognition, memory, and speech as a result of the work injury. She testified that the issues began approximately two weeks after the work incident. Claimant testified she currently takes at least 12 different medications, including Valium, Hydrocodone, and Venlafaxine for depression. Claimant continues to see Julie Rudiger for depression and life coping skills. Claimant lives by herself, has a computer and an iPhone, and handles her banking with her son's assistance. Claimant testified she drives herself around, but requires the use of a GPS. Claimant testified she did not take Adderall, Aricept or Geodon prior to the work injury, and cannot currently function without the medications.

20. The ALJ credits the opinion of Dr. Dworetsky and the testimony of Claimant. The ALJ finds Claimant suffered a brain injury and cognitive issues as a result of her February 10, 2009 work injury. Claimant continues to treat with Dr. Dworetsky and take Adderall, Aricept and Geodon to alleviate the effects of the February 10, 2009 work injury. Claimant's ongoing treatment with Dr. Dworetsky and the prescriptions for Adderall, Aricept and Geodon are reasonable and necessary, as such treatment helps Claimant maintain a basic level of functioning.

21. The preponderant evidence establishes Claimant's ongoing prescriptions for Adderall, Aricept, and Geodon, as well as related medical appointments with Dr. Dworetsky, are causally related to the February 10, 2009 work injury and reasonably necessary to maintain Claimant at MMI.

22. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Maintenance Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the

effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether the claimant proved that specific treatment is reasonable and necessary to maintain his or her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Respondents argue Claimant did not suffer a traumatic brain injury as a result of the February 10, 2009 work injury; thus, ongoing treatment for cognitive issues, including the prescriptions of Adderall Aricept and Geodon, and the continued treatment with Dr. Dworetsky, are not reasonable, necessary or related. The ALJ disagrees.

Despite differing opinions on the severity of Claimant's head injury, all of Claimant's treating physicians and Respondents' independent medical examiners (RIMEs) found Claimant sustained, at the least, a mild concussion as a result of the February 10, 2009 work injury. This diagnosis is supported by Claimant's reports regarding the mechanism of injury and the medical records on the date of injury noting a head injury, loss of consciousness, and forehead swelling and ecchymosis. Although Claimant has a longstanding pre-existing history of psychological treatment for depression and PTSD, the record does not contain any evidence indicating Claimant suffered from cognitive issues prior to the work injury. While Claimant took numerous medications prior to the work injury, Claimant did not begin taking Adderall, Aricept or Geodon until after the work injury due to the effects of the work injury.

Drs. Thwaites, Moe, Watson and Fall, all RIMEs, acknowledged Claimant sustained a mild concussion, but opine that Claimant's persistent and significant symptoms are due to unrelated psychological issues and are inconsistent with the expected course of recovery for a mild concussion. Claimant's treating physicians, Drs. Dworetsky and Gibson, opine Claimant suffered cognitive dysfunction as a result of the concussion she sustained on February 10, 2009. DIME physician Dr. Swarsen specifically found Claimant's psychological issues were not work-related, and concluded any psychotropic drugs Claimant was on before the work injury, and any medications for Claimant's PTSD/panic disorder and sleep disorder were not work-related. However, he also specifically concluded that medications related to Claimant's closed head injury and "brain issues" should be provided as maintenance treatment. Implied in this opinion is the conclusion that Claimant's "brain issues" are the result of the February 10, 2009 work injury. Similarly, although ALJ Harr credited the opinions Drs. Moe and Thwaites, he further credited the opinion of Dr. Swarsen, concluding that Adderall, Geodon and

Aricept medications and follow-up appointments with Dr. Dworetsky (and Dr. Gibson) were reasonable and necessary to maintain Claimant's condition.

In his recent letter dated February 2019, Dr. Dworetsky credibly and persuasively explained the intended purpose of each medication, that each medication is being used to treat the effects of Claimant's work injury, and that each medication is needed in order for Claimant to maintain minimal function. Claimant credibly testified the medications help maintain her function. Thus, despite evidence in the record to the contrary regarding the severity and cause of Claimant's cognitive issues, the totality of the credible and persuasive preponderant evidence establishes that the ongoing prescriptions for Adderall, Aricept and Geodon, as well as continued follow-up visits with Dr. Dworetsky are causally related to the February 10, 2009 work injury, and are reasonable and necessary to maintain Claimant's condition at MMI.

ORDER

It is therefore ordered that:

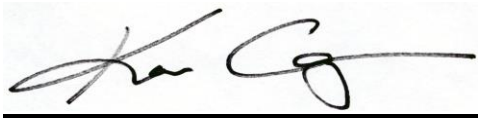
1. Respondents shall continue to pay for the Adderall, Aricept and Geodon medications prescribed by Dr. Dworetsky.

2. Respondents shall continue to pay for up to three follow-up visits per year with Dr. Dworetsky as are reasonably necessary to monitor Claimant's medications.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 24, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that he suffered an occupational disease in the form of a full-thickness tear of the right shoulder rotator cuff that began on August 25, 2017 during the course and scope of his employment with Employer.

FINDINGS OF FACT

1. On May 14, 2008 Claimant began working for Employer as a Door Builder. Employer's facility includes an assembly department in which individuals build standard doors and a custom department in which employees construct customized doors.

2. Claimant explained that he works approximately 40 hours during a five-day workweek but occasionally works overtime on Saturdays. He noted that he primarily builds about 10-20 custom doors per day. However, when he works in the assembly department he constructs approximately 80-100 doors each day. Claimant detailed that building a custom door includes swinging an approximately three-pound mallet 15-20 times per door to strike dowels and connect door parts. He also uses numerous clamps to hold door pieces in place and operates power tools to build jigs that hold pieces and guide tools. Furthermore, Claimant carries door frames and retrieves items from storage shelves.

3. Claimant commented that he began experiencing right shoulder pain during the summer of 2017. On August 25, 2017 Claimant reported his symptoms and Employer completed a First Report of Injury. The Report specified that Claimant suffered soreness and stiffness in his right shoulder. Claimant attributed his symptoms to using a mallet to construct doors at work.

4. On March 19, 2018 Claimant visited Marc-Andre R. Chimonas, M.D. for an examination. Dr. Chimonas reported that Claimant builds large, heavy wooden doors for Employer. Claimant began noticing pain in his right shoulder in about July 2017 and the pain progressively worsened while swinging a mallet overhead to construct doors. Although Claimant attempted to ignore his symptoms for several months, he visited his primary care provider at Kaiser in February 2018. He underwent a right shoulder MRI that revealed a full-thickness tear of the supraspinatus and subscapularis tendons. Dr. Chimonas noted that Claimant's co-pays were very high and "feels this is work-related so he formally filed a Workers' Compensation claim." In reviewing Claimant's job duties Dr. Chimonas commented that Claimant swings an approximately 3.5-pound mallet to secure two pieces of wood to every door. Claimant remarked that he assembles up to 100 doors each day and spends about three hours per day swinging a mallet.

5. After conducting a physical examination Dr. Chimonas performed a causation analysis pursuant to the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). He explained that the *Guidelines* specify chronic overuse syndrome of the shoulder if any of the following criteria are satisfied: (1) overhead work for at least 30 minutes each day for five years; (2) shoulder movement of 15-36 repetitions without a two second pause for 80% of a work cycle; (3) shoulder force with more than 10% maximum exertion without a two second pause for 80% of a work cycle; and (4) heavy lifting of over 20kg 10 times per day. Dr. Chimonas concluded that Claimant's right shoulder condition was caused by his work activities for Employer. He reasoned that, because Claimant has worked for Employer for 10 years swinging a mallet to construct 100 doors each day, he has engaged in overhead work for at least 30 minutes per day. Notably, Dr. Chimonas added that Claimant "may" also meet the preceding criteria 2-4 in performing his job duties. Accordingly, Dr. Chimonas concluded that Claimant suffered a cumulative trauma condition of the right shoulder. He assigned work restrictions of no lifting in excess of two pounds with two arms and "all lifting with right arm should be performed with elbow at side."

6. On March 26, 2018 Claimant returned to Dr. Chimonas for an examination. Claimant reported that he was concerned about bruising that had recently developed on his right upper arm. After conducting a physical examination Dr. Chimonas diagnosed Claimant with an unspecified injury of the muscles and tendons of the right shoulder rotator cuff. Dr. Chimonas reiterated that Claimant's symptoms were related to his work activities for Employer. He explained that Claimant required "urgent but not emergent surgery" because of a full-thickness rotator cuff tear with atrophy and retraction.

7. On March 26, 2018 Dawn Leskinen completed a Job Demands Analysis and Risk Factor Analysis for the position of Custom Door Builder at Employer's facility. She issued a report on April 12, 2018. The Job Demands Analysis specified that Claimant spent 50-60% of his day assembling doors by building frames, using hand tools and machines, swinging a mallet to hammer wooden dowels and tightening/loosening clamps. He spent about 5-10% of his workday reviewing and analyzing work orders, drawings, blueprints and schedules. Claimant also spent about 5-10% of his day gathering materials, preparing work, unclamping doors from the previous night, setting up equipment and laying out parts. Finally, Claimant spent about 10-20% of his day engaging in intermittent tasks including preparing glass, moving doors, sweeping and cleaning. Notably, each wooden doors that Claimant assembled weighed 53 pounds and the mallet he used to strike dowels weighed 2.62 pounds.

8. Ms. Leskinen conducted time studies of Claimant's overhead work activities and shoulder movements. She specifically determined that Claimant spent two minutes and forty seconds of cumulative time during his work shift engaged in overhead activities. Relying on the *Guidelines*, Ms. Leskinen did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's job duties. She specifically determined that no risk factors were present regarding Claimant's shoulder condition. Finally, Ms. Leskinen explained that Claimant performed a "consistent rotation of job duties throughout the work shift."

9. Employer subsequently reviewed Ms. Leskinen's Job Demands Analysis and determined that there were several inaccuracies requiring modification. Employer thus suggested several changes regarding Claimant's job activities. Notably, Employer maintained that Claimant worked on 8-15 doors each day and very rarely built fewer than 10 doors. Claimant also only used a stepstool to assemble doors approximately once per month. His used the mallet more frequently than identified or approximately 1-2 minutes per door on a daily basis. Most importantly, Employer noted that "we feel he performs overhead work (using the mallet or positioning door parts) at least 10 min[utes] total per day."

10. Claimant testified that, even with Employer's suggested modifications to the Job Demands Analysis, the report still contained inaccuracies. He noted that, when he worked in the assembly department, he constructed 60-100 doors each day. Moreover, he swung the mallet about 15-20 times to assemble each door. Claimant summarized that he engaged in overhead work in excess of 30 minutes each day.

11. Team Lead for the Custom Department Kevin Geminden testified that Claimant engaged in numerous tasks including retrieving parts, clamping and hammering that required overhead or forceful shoulder work. He summarized that Claimant engaged in overhead work for about 30 minutes each workday.

12. Team Lead for the Assembly Department Jeremy Burdick testified that the Assembly Department produces 80 doors each day. Hammering with a mallet requires overhead movement and employees perform overhead activities for about one-third of each workday.

13. On May 14, 2018 William Ciccone, II, M.D. conducted a records review of Claimant's claim. He commented that Claimant's March 10, 2017 MRI revealed a large, full-thickness right rotator cuff tear with muscle atrophy and biceps tearing. Physicians subsequently recommended a reverse arthropathy to repair Claimant's right shoulder. Dr. Ciccone concluded that Claimant's work activities did not cause his right shoulder rotator cuff tear. He disagreed with Dr. Chimonas' determination because the Job Demands Analysis did not meet the criteria for an overuse injury under the *Guidelines*. Dr. Ciccone explained that chronic rotator cuff pathology naturally becomes larger and worsens over time. Chronic rotator cuff tears are associated with muscle atrophy and "progress to the point where they affect the biomechanical balance of the shoulder." The individual then suffers loss of motion and pain, not because of a trauma, but because of the natural progression that occurs with shoulder pathology. Accordingly, Dr. Chimonas concluded that Claimant did not suffer an injury to his right shoulder while performing his work activities for Employer.

14. On June 22, 2018 Jose Carlos Cebrian, M.D. conducted a records review of Claimant's claim. After reviewing Claimant's medical records and considering the Job Demands Analysis, Dr. Cebrian performed a causation analysis pursuant to the *Guidelines*. He remarked that Claimant attributed his right shoulder symptoms to his work activities for Employer. Dr. Cebrian explained that, in order to perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first

step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to explain any scientific evidence that supports a causal relationship between the diagnosis and exposure or injury. Dr. Cebrian summarized that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines* to cause a right shoulder rotator cuff tear.

15. Dr. Cebrian initially noted that Claimant had been diagnosed with a right shoulder rotator cuff tear and atrophy. In delineating Claimant's job duties, Dr. Cebrian explained that Claimant makes between 8-15 doors per day. He uses a 2.62-pound hammer to strike wooden dowels when assembling custom doors. Claimant hammered at waist level from 128-240 times each shift. He specifically used the mallet at an overhead level to secure the top wood to the dowels below. Claimant used the mallet eight times per door for one second each time. Based on constructing 8-15 doors per day, Claimant hammered overhead from 64-120 times per shift. Notably, Claimant spent a total of about 10 minutes each shift performing overhead work. Furthermore, Claimant consistently rotated job duties throughout each day. He placed glass in doors, carried materials and put them on rolling racks, moved glass, applied moulding and operated a table saw.

16. Dr. Cebrian next considered the scientific evidence that supports a cause and effect relationship between Claimant's diagnosis and work activities. He initially explained that degeneration is not a "wear and tear process" but occurs at the cellular level. Degeneration is the inability to replace normal tissue as a result of the aging process. Healthy tissue is eventually replaced by less healthy tissue that begins to fray and tear. Dr. Cebrian explained that there is no question that an individual with shoulder degeneration will experience symptoms when repetitively elevating or internally rotating the arm while performing overhear materials handling. He reasoned that, although Claimant may have experienced symptoms while performing work activities, Claimant's symptoms were not caused by his job duties but instead reflected the underlying disease process in his right shoulder.

17. Dr. Cebrian remarked that the manifestation of symptoms while at work does not establish a causal relationship with job duties. He explained:

> There is no question that someone with shoulder degeneration will experience symptoms while repetitively elevating the arm, internally rotating the arm, or doing materials handling overhead. This is the reasonable medical expectation for the underlying condition. That [Claimant] may have had symptoms when doing certain activities at work is an indication of the underlying disease process and not of a causal relationship between the disease and the work exposure. The fact that symptoms are experienced at work does not require the medical inference that work is causal but rather the reasonable and symptomatic manifestation of the underlying condition.

18. Dr. Cebrian also applied the *Guidelines* in evaluating Claimant's right shoulder rotator cuff tear. The *Guidelines* specifically include factors for the development

of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. After reviewing the Job Demands Analysis and revisions, Dr. Cebrian concluded that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. He detailed that Claimant's overhead work and pauses in excess of two seconds were well below the threshold levels enumerated in the *Guidelines*. Dr. Cebrian summarized that Claimant's right shoulder degenerative findings are the result of the normal aging process.

19. On February 20, 2019 the parties conducted the post-hearing evidentiary deposition of Dr. Cebrian. Relying on W.C.R.P. Rule 17, Exhibit 4 of the *Guidelines*, Dr. Cebrian maintained that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold for the development of shoulder pathology. Considering the Job Demands Analysis and revisions, Dr. Cebrian explained that Claimant built between 8-15 custom doors per day. Only a portion of time hammering dowels into the frame and affixing styles onto the door involved work above shoulder level. Dr. Cebrian remarked that, "even if you were generous" and Claimant took 2-3 seconds per hammer strike of each dowel multiplied by the number of doors he assembled each day, overhead work still fell well below the 30-minute threshold enumerated in the *Guidelines*. In fact, as detailed in the Job Demands Analysis, Claimant's total overhead work time was closer to 10-minutes or less per day.

20. On February 25, 2019 the parties conducted the post-hearing evidentiary deposition of Dr. Chimonas. He maintained that Claimant's job duties for Employer caused his right shoulder rotator cuff tear. Relying on W.C.R.P. Rule 17, Exhibit 4, Dr. Chimonas specifically explained that Claimant lifted at least 10 custom doors each day weighing in excess of 50 pounds. The amount of lifting satisfied the criteria enumerated in the *Guidelines* for establishing a cumulative trauma injury. Moreover, Claimant's 10 years of overhead lifting while working for Employer contributed to his right shoulder cumulative trauma condition. However, Dr. Chimonas acknowledged that the criteria for repetitive, overhead lifting listed in the *Guidelines* was probably not satisfied based on the Job Demands Analysis and revisions.

21. On March 6, 2019 the parties conducted the post-hearing evidentiary deposition of Dr. Ciccone. Relying on the Job Demands Analysis, Dr. Ciccone maintained that Claimant's work activities for Employer did not cause his right rotator cuff tear. He explained that Claimant's right rotator cuff tear was caused by intrinsic rotator cuff disease unrelated to work. Claimant did not satisfy the criteria listed in W.C.R.P. Rule 17, Exhibit 4 for the development of a work-related shoulder cumulative trauma condition.

22. Claimant has failed to demonstrate that it is more probably true than not that he suffered an occupational disease in the form of a full-thickness tear of the right rotator cuff that began on August 25, 2017 during the course and scope of his employment with Employer. Although Claimant attributed his right shoulder symptoms to his work

activities, a review of his job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder.

23. Relying on the *Guidelines* in conducting a Job Demands Analysis, Ms. Leskinen did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. After conducting time studies of Claimant's work activities, Ms. Leskinen specifically determined that Claimant spent 50-60% of his day assembling doors by building frames, using hand tools and machines, swinging a mallet to hammer wooden dowels and tightening/loosening clamps. He spent about 5-10% of his workday reviewing and analyzing work orders, drawings, blueprints and schedules. Claimant also spent about 5-10% of his day gathering materials, preparing work, unclamping doors from the previous night, setting up equipment and laying out parts. Finally, Claimant spent about 10-20% of his day engaging in intermittent tasks including preparing glass, moving doors, sweeping and cleaning. Claimant thus engaged in a variety of tasks throughout his workday.

24. After reviewing the Job Demands Analysis and revisions, Dr. Cebrian persuasively concluded that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. He detailed that Claimant's overhead work and pauses in excess of two seconds were well below the threshold levels enumerated in the *Guidelines*. Specifically, based on constructing 8-15 doors per day, Claimant hammered overhead from 64-120 times per shift. Notably, Claimant spent a total of about 10 minutes each shift performing overhead work. Furthermore, Claimant consistently rotated job duties throughout each day. He placed glass in doors, carried materials and put them on rolling racks, moved glass, applied moulding and used a table saw. Dr. Cebrian thus summarized that Claimant's right shoulder degenerative findings are the result of the normal aging process. He reasoned that, although Claimant may have experienced symptoms while performing work activities, his right rotator cuff tear was not caused by his job duties. Instead, Claimant's right shoulder reflected the underlying degenerative process. Moreover, Dr. Ciccone disagreed with Dr. Chimonas' determination because the Job Demands Analysis did not meet the criteria for an overuse injury under the *Guidelines*. He persuasively concluded that Claimant's work activities did not cause his right shoulder rotator cuff tear, but his condition was attributable to intrinsic rotator cuff disease. Dr. Ciccone explained that chronic rotator cuff pathology naturally becomes larger and worsens over time.

25. In contrast, Dr. Chimonas concluded that Claimant's right shoulder condition was caused by his work activities for Employer. He reasoned that, because Claimant has worked for Employer for 10 years swinging a mallet to construct 100 doors each day, he has engaged in overhead work for at least 30 minutes per day. Dr. Chimonas alternatively explained that lifting at least 10 custom doors each day weighing in excess of 50 pounds satisfied the criteria enumerated in the *Guidelines* for establishing a shoulder cumulative trauma injury. However, Dr. Chimonas acknowledged that the criteria for repetitive, overhead lifting enumerated in the *Guidelines* was probably not satisfied based on the Job Demands Analysis and revisions. Furthermore, the *Guidelines* only specify that jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Accordingly, based on the Job Demands Analysis,

a review of the medical records and the persuasive opinions of Drs. Cebrian and Ciccone, Claimant did not engage in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate his right shoulder condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. Rule 17, Exhibit 5 provides an algorithm for evaluating Cumulative Trauma Conditions (CTC) pursuant to the *Guidelines*. In addressing applicability, the *Guidelines* note that "CTC's of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures." W.C.R.P. Rule 17, Exhibit 5, p. 6. In determining a diagnosis when performing a cumulative trauma analysis the *Guidelines* delineate specific musculoskeletal conditions and peripheral nerve disorders. Nevertheless, the Guidelines provide that "[l]ess common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment." W.C.R.P. Rule 17, Exhibit 5, p. 21.

7. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing two pounds or more. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. If neither Primary nor Secondary Risk Factors are present, the *Guidelines* provide that "the case is probably not job related." W.C.R.P. Rule 17, Exhibit 5, p. 24.

8. The *Guidelines* also specifically delineate factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per

minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when addressing the likelihood of cumulative trauma contributing to shoulder pathology. W.C.R.P. Rule 17, Exhibit 4, p. 16.

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered an occupational disease in the form of a full-thickness tear of the right rotator cuff that began on August 25, 2017 during the course and scope of his employment with Employer. Although Claimant attributed his right shoulder symptoms to his work activities, a review of his job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder.

10. As found, relying on the *Guidelines* in conducting a Job Demands Analysis, Ms. Leskinen did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. After conducting time studies of Claimant's work activities, Ms. Leskinen specifically determined that Claimant spent 50-60% of his day assembling doors by building frames, using hand tools and machines, swinging a mallet to hammer wooden dowels and tightening/loosening clamps. He spent about 5-10% of his workday reviewing and analyzing work orders, drawings, blueprints and schedules. Claimant also spent about 5-10% of his day gathering materials, preparing work, unclamping doors from the previous night, setting up equipment and laying out parts. Finally, Claimant spent about 10-20% of his day engaging in intermittent tasks including preparing glass, moving doors, sweeping and cleaning. Claimant thus engaged in a variety of tasks throughout his workday.

11. As found, after reviewing the Job Demands Analysis and revisions, Dr. Cebrian persuasively concluded that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. He detailed that Claimant's overhead work and pauses in excess of two seconds were well below the threshold levels enumerated in the *Guidelines*. Specifically, based on constructing 8-15 doors per day, Claimant hammered overhead from 64-120 times per shift. Notably, Claimant spent a total of about 10 minutes each shift performing overhead work. Furthermore, Claimant consistently rotated job duties throughout each day. He placed glass in doors, carried materials and put them on rolling racks, moved glass, applied moulding and used a table saw. Dr. Cebrian thus summarized that Claimant's right shoulder degenerative findings are the result of the normal aging process. He reasoned that, although Claimant may have experienced symptoms while performing work activities, his right rotator cuff tear was not caused by his job duties. Instead, Claimant's right shoulder reflected the underlying degenerative process. Moreover, Dr. Ciccone disagreed with Dr. Chimonas' determination because the Job Demands Analysis did not meet the criteria for an overuse injury under the *Guidelines*. He persuasively concluded that Claimant's work activities did not cause his right shoulder rotator cuff tear, but his condition was attributable to intrinsic rotator cuff disease. Dr. Ciccone explained that chronic rotator cuff pathology naturally becomes larger and worsens over time.

12. As found, in contrast, Dr. Chimonas concluded that Claimant's right shoulder condition was caused by his work activities for Employer. He reasoned that, because Claimant has worked for Employer for 10 years swinging a mallet to construct 100 doors each day, he has engaged in overhead work for at least 30 minutes per day. Dr. Chimonas alternatively explained that lifting at least 10 custom doors each day weighing in excess of 50 pounds satisfied the criteria enumerated in the *Guidelines* for establishing a shoulder cumulative trauma injury. However, Dr. Chimonas acknowledged that the criteria for repetitive, overhead lifting enumerated in the *Guidelines* was probably not satisfied based on the Job Demands Analysis and revisions. Furthermore, the *Guidelines* only specify that jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Accordingly, based on the Job Demands Analysis, a review of the medical records and the persuasive opinions of Drs. Cebrian and Ciccone, Claimant did not engage in forceful and repetitive activity for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate his right shoulder condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Claimant prove by a preponderance of the evidence he is entitled to medical benefits after MMI?

- Disfigurement.

FINDINGS OF FACT

1. Claimant is a firefighter who has worked for Employer for 16 years.

2. On January 15, 2018, Claimant suffered an admitted injury to his right knee while responding to a call. He was attempting to climb down from the fire engine backward and his right knee hyperextended and "popped," causing him to fall to the ground. Claimant immediately felt severe pain in his right knee and could not bear weight on his right leg.

3. Employer referred Claimant to its occupational medicine clinic, which has served as the primary ATP during the claim.

4. An MRI of the right knee on January 17, 2018 showed a complex tear of the posterior horn and body of the lateral meniscus, a bone bruise on the tibial plateau beneath the meniscal tear, and moderate joint effusion. The MRI also showed an intact ACL graft from a prior surgery.

5. Claimant tore his right ACL in 1988 playing lacrosse in high school. He underwent a successful ACL reconstruction with Dr. Oderia Mitchell. He rehabbed the knee for approximately one year and experienced a full recovery. After joining the fire department, Claimant had no problems with his right knee until the industrial injury on January 15, 2018.

6. Claimant had arthroscopic surgery with Dr. Derek Purcell on February 5, 2018. The initial plan was to perform a partial lateral meniscectomy, but Dr. Purcell also repaired a medial meniscus tear he discovered during surgery that the radiologist had missed. The articular cartilage in both compartments was in "good condition overall," as was the patellar articular cartilage. There was grade 2B cartilage change in the central aspect of the trochlea but no loose cartilage flaps.

7. Claimant recovered relatively quickly after surgery and was put at MMI on April 24, 2018. He saw Dr. Jay Neubauer for an impairment evaluation who signed a 9% scheduled lower extremity rating. Dr. Neubauer noted Claimant was using OTC pain relievers as needed, but did not recommend any ongoing treatment.

8. On April 26, 2018, Dr. Purcell authored a report addressing the potential for further treatment. Dr. Purcell stated,

> [Claimant] underwent a right knee arthroscopic partial medial and lateral meniscectomy on 02/05/2018 of this year. Partial medial and lateral meniscectomy increases his risk of developing tibiofemoral osteoarthritis, ultimately requiring the need for total knee arthroplasty. Arthroplasty may be required as early as over the next 15 years. He may continued conservative measures to treat the development of osteoarthritis over time.

9. Claimant saw Dr. John Tyler for a Division IME on September 25, 2018. Claimant set his greatest ongoing issue was occasional "popping and aching" in the knee. He had returned to full duty and was performing his job without difficulty. Claimant was taking over-the-counter anti-inflammatories periodically to manage the residual aching, particularly with weather changes. Dr. Tyler assigned a 21% lower extremity rating. Regarding future treatment, Dr. Tyler opined,

> As previously mentioned by Dr. Purcell in his report, this patient having the amount of loss he had to his lateral meniscus in the right knee puts him at a higher risk for requiring a total knee arthroplasty in the future. I am not a specialist in orthopedic surgery and, thus, cannot give any type of timetable in which a total knee arthroplasty would be required in his case and would prefer such judgment to Dr. Purcell. I do not see that further interventional care at this time from a conservative or surgical standpoint is required.

10. On October 31, 2018, Respondent filed a Final Admission of Liability admitting for Dr. Tyler's 21% scheduled rating. The FAL denied liability for medical treatment after MMI.

11. Claimant followed up with Dr. Purcell on November 29, 2018. He reported an episode of severe pain approximately one month before. His physical examination on the day of the appointment was relatively unremarkable. Dr. Purcell stated,

> We again discussed treatment for arthritis-related conditions of the knee. We reviewed the use of ice, avoidance of heat, trial of glucosamine and chondroitin, management of a healthy body weight, physical therapy and rehabilitation, bracing, Tylenol, anti-inflammatories, corticosteroids, and viscosupplementation. He understands that at some point in his lifetime he may also require total knee arthroplasty, but this should not be for many years to come.

12. Dr. William Ciccone II performed a record review at Respondent's request on February 15, 2019. Dr. Ciccone opined it was "unclear" whether the meniscus tears were work-related. He opined the medial meniscus tear was preexisting and asymptomatic, and the lateral tear could have been preexisting too. He disagreed with Dr. Purcell that Claimant will need treatment for developing arthritis and possible knee replacements of the next 15 years. He stated that meniscectomy increases the risk for

arthritis, but "does not mean it invariably leads to symptomatic arthritis." He noted early degenerative changes in Claimant's knee, which would not be related to the 2018 injury. He concluded, "While I believe that the claimant underwent appropriate care for his knee, I do not believe that the potential development of arthritis in the future can be wholly related to work."

13. Dr. Ciccone issued an addendum report dated February 26, 2019. Whereas he previously opined Claimant had "appropriate care," he now thought it "unclear" why Claimant had surgery before undergoing 6 weeks of rehabilitation. He indicated meniscus tears are usually caused by a twisting injury, not hyperextension. Dr. Ciccone opined, "Lacking an obvious mechanism for a meniscus tear, the lateral meniscus tear may have been pre-existing and asymptomatic alike the medial meniscus tear." He concluded,

> [C]laimant's continued symptoms are related to the pre-existing degenerative change. I do not believe that a fall backwards would cause any aggravation or acceleration of the degenerative change in the knee. I do not believe that the claimant should receive maintenance care, as the degenerative changes are not work related.

14. Claimant testified regarding the ongoing issues with his knee. He has some degree of knee pain "every single day," ranging from near-constant "dull pain" to episodes of "sharp" pain and "locking up." He perceives the pain is slowly worsening with time. He regularly takes OTC glucosamine and chondroitin supplements as recommended by Dr. Purcell, which he pays for himself. He performs low impact exercises to maintain strength and mobility in his legs and avoids high impact activities.

15. Claimant was a credible witness.

16. Claimant proved by a preponderance of the evidence he requires future medical treatment to relieve the effects of his injury.

17. Claimant has three (3) ½-inch diameter arthroscopic surgery scars around the right knee. The ALJ finds Claimant should be awarded $600 for disfigurement.

CONCLUSIONS OF LAW

A. General award of medical benefits after MMI.

The respondents are liable for medical treatment after MMI reasonably necessary to relieve the effects of the injury or prevent deterioration of the claimant's condition. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). There is no requirement that a particular course of treatment be articulated or that the claimant actually be receiving treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999). Rather, proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the employer's right to dispute the compensability or

reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003).

As found, Claimant proved a probable need for future treatment to relieve the effects of his injury. The ALJ is not persuaded by Dr. Ciccone's causation opinions, and concludes the February 2018 knee surgery was directly related to the work accident. Claimant probably at least tore his lateral meniscus in the accident. But even if Dr. Ciccone were correct that both tears were pre-existing, they were entirely asymptomatic and non-disabling before January 15, 2018, despite 16 years of strenuous work as a firefighter. If the accident did not cause one or more meniscal tears, it substantially aggravated a latent pre-existing condition. Either theory establishes the requisite causal nexus. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

Nor is the ALJ persuaded that Claimant's current symptoms "are related to the preexisting degenerative change" as opined by Dr. Ciccone. The minimal pre-existing degenerative changes in Claimant's his knee were asymptomatic before the January 15 accident, and there is no persuasive evidence Claimant would have required any current treatment for his knee, much less surgery, absent the industrial injury.

The ALJ agrees with Respondent that the possibility Claimant may require a total knee replacement 15+ years in the future is too speculative and indefinite to support an award of *Grover* benefits. But the ALJ also agrees with Claimant that the continued use of over-the-counter anti-inflammatories for pain control, and supplements recommended by Dr. Purcell, provides a legally sufficient basis for a general award of medical benefits after MMI. The ICAO has repeatedly held that OTC medications are a permissible form of *Grover* benefits. *E.g.*, *Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-875 (November 20, 2001) ("the fact [a] medication is available without a prescription does not vitiate its compensability or nullify the award of *Grover*-style medical benefits."); *Mann v. Ridge Erection Company*, W.C. No. 4-225-122 (April 4, 1996) (no distinction between "over the counter" medications and prescribed medications for purposes of *Grover* benefits); *Ashton-Moore v. Nextel Communications, Inc*., W.C. No. 4-431-951 (September 12, 2002) (recommendation to use OTC anti-inflammatories "as necessary for pain" can support *Grover* award).

Claimant has been continually symptomatic since the accident, despite a relatively good outcome from surgery. Given the length of time since MMI, he will probably remain symptomatic for the foreseeable future. Therefore, it is reasonable for Claimant to retain access to anti-inflammatory medications for pain relief and other maintenance modalities as recommended by Dr. Purcell or other authorized providers.

B. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has three (3) ½ inch diameter arthroscopic surgery scars around the right knee. The ALJ concludes that Claimant should be awarded $600 for this disfigurement.

ORDER

It is therefore ordered that:

1. Respondent shall pay for reasonably necessary medical treatment after MMI from authorized providers to relieve the effects of Claimant's injury or prevent deterioration of his condition.

2. Respondent shall pay Claimant $600 for disfigurement. Respondent may take credit for any previous disfigurement benefits paid in connection with this claim.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. What is the DIME physician's medical opinion regarding Claimant's Whole Person Impairment Rating and Maximum Medical Improvement?

II. Has Claimant overcome such DIME opinion by clear and convincing evidence?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained a mild concussion and nose abrasion when he ran into a door at his home on October 1, 2016. (Ex. I). He sought treatment with his primary care physician, Linda Silveira, who ordered x-rays to verify that his nose was not broken. Claimant missed work on Monday and Tuesday that same week due to this injury. He also had a follow-up visit with Dr. Silveira that week. (Ex. J).

2. At the initial hearing in this matter, Claimant testified that, on Thursday, October 6, 2016, he decided to dispose of three hard drives from a computer. (*see* Ex. 1-Findings of Fact, Conclusions of Law, and Order from ALJ Lamphere, dated 9/25/2017). Claimant explained that the hard drives stored data on a medium encased in a metal container roughly 3¼ inches in size. He threw the drives from a position approximately 12 feet above the ground on which the dumpster rested, and from the other side of a railing which separated his position from the opening below where the dumpster was located.

3. Several weeks later, on November 3, 2016, Claimant sought treatment with Dr. James Yohanan. Claimant detailed his October 1, 2016 concussion and nose abrasion. (Ex. K). He presented for evaluation for a "forehead, head, and neck injury," making no mention of any intervening cause (e.g., this alleged work injury). Claimant described: "accidently walked into the side of a door striking the bridge of his nose." *Id.* This injury resulted in a healed abrasion to the nose and a mild concussion. He complained at this time of bilateral ear pain and ringing in the ears. Dr. Yohanan concluded that he saw "no primary otologic disorder, nor would [he] expect one with this mechanism of injury." There was no mention whatsoever of the October 6, 2016 noise incident at work. (Ex. K).

4. At his January 4, 2017 visit with Dr. Shireen Rudderow and his January 25, 2017 visit with Dr. Barton Knox there was no mention of a neck injury. (Ex. L). Additionally, the physical examination by Dr. Knox revealed no neck pathology nor was any range of motion loss documented. (Ex. M).

5. Dr. Yohanan's February 16, 2017 report does mention the October 1, 2016 incident. (Ex. N). Dr. Yohanan opined that Claimant did not have hearing loss; rather, he had the "perception of hearing loss." (Ex. N). He opined that the 10/1/16 dumpster incident only "temporally and theoretically played a role in [Claimant's] symptoms." Even with the additional detail provided by Claimant, Dr. Yohanan still related all of Claimant's neck symptoms to his October 1, 2016 injury at home. *Id.*

6. Claimant acknowledged that he did not report the alleged incident to the Employer until after he saw Dr. Yohanan in November of 2016. (Ex. 1). Claimant eventually completed a Worker's Compensation Claimant's Report on January 16, 2017. Concerning his injuries, he stated: "Tinnitus and hearing loss in my right ear." (Ex. W). At no point even then did Claimant reference a neck injury-only the hearing loss. *Id.*

7. ALJ Lamphere issued Findings of Fact, Conclusion of Law, and Order dated September 25, 2017 (Ex. 1) finding the claim to be compensable, but denying the hearing loss claim. Instead, he found that Claimant sustained a compensable injury to his neck and ears, in the form of tinnitus. "While Claimant's exposure to a loud gunshot like sound probably did not cause a primary injury to the neck, the ALJ is persuaded that his ear pain and tinnitus indirectly caused the need for neck treatment." *Id.*

8. Claimant eventually began treating with Dr. Annu Ramaswamy. He was placed at MMI on June 26, 2018, and provided with a 4% whole person impairment rating for the cervical spine. (Ex. T). Dr. Ramaswamy stated: "In regards to range of motion, range of motion has been extremely limited and does not physiologically match the physical exam findings. Range of motion today is even lower than the last visit." *Id.* He then documented the dramatic drop in range of motion between the two visits, concluding that the severely restricted range of motion at that visit did not correlate with Claimant's physical examination that day.

9. Claimant requested a DIME, and Dr. Allison Fall was selected. At that examination, occurring 9/20/2018, Claimant presented the prior Order of ALJ Lamphere to the DIME physician. While not specifically referencing this Order in her DIME report, Dr. Fall notes in her opening paragraph: " The medical records provided were reviewed. He [Claimant] also brought in *additional documents* <u>which were reviewed</u>" (Ex. A, p. 1) (emphasis added). Claimant provided this Order without leave of an ALJ, permission of the Division of Workers Compensation, or by agreement of the parties. It was only later, at the *Samms* conference with the DIME physician on 1/11/2019, that Respondents confirmed that this had occurred at all.

10. Dr. Fall issued a report providing a 14% whole person impairment rating for the cervical spine, but did not include any analysis on why this was related to the noise incident of 10/6/16. (Ex. A).

11. Respondents moved for leave to schedule a *Samms* conference with the DIME physician. On 11/28/2018, ALJ Lamphere signed the Order authorizing this

conference, and specifically authorized Dr. Fall to issue a supplemental letter *"**clarifying** her DIME report".* (Ex. U, p. 81)(emphasis added).

12. Respondents then prepared a letter for Dr. Fall's review, with seven questions to be answered. Her answers were supplied on 2/14/19. (Ex. C, p. 21).

> 1. Did Mr. James Jones present you with a copy of the Findings of Fact, Conclusions of Law, and Order from the above-captioned workers compensation case when he presented for the DIME with you on September 20, 2018?
> A: Yes
>
> 2. Did your review of that Order influence your opinions in this matter concerning the extent of Claimant's injuries and medical causation in this case?
> A: Yes
> 3. Without the influence of that Order upon your independent medical judgment, would you have reached a different conclusion concerning the extent of Claimant's injuries and medical causation in this case?
> A: Yes
>
> 4. Based on your independent medical judgment, would Claimant's cervical injury be related to the noise incident at issue in this case?
> A: No
>
> 5. Based on your independent medical judgment, what would Mr. Jones permanent impairment rating be in this case? Please explain.
> A: It would be No impairment caused by the incident in this case.
>
> 6. Based on your independent medical judgment, what would Mr. Jones' date of maximum medical improvement be? Please explain.
> A: 2/16/17 as per the report of Dr. Yohanan, neck pain to the injury prior to work event, and <u>no</u> hearing loss (emphasis supplied).
>
> 7. Based on your independent medical judgment, would Mr. Jones require any medical maintenance care? Please explain.
> A: No. I would not have found causation for a cervical injury.

13. On 1/21/2019, Dr. John Burris' performed record review IME and addendum reports at Respondents' request. (Ex. B; D). Dr. Burris noted numerous inconsistencies in the medical records.

14. During a related medical evaluation (unrelated to Workers Compensation) on November 3, 2016 with Dr. Yohanan, Claimant attributed his symptoms of pain behind his ears to an event at home on October 1, 2016, when he walked into a door. Claimant did not mention a workplace event.

15. In his statements to his employer on November 29, 2017 and January 16, 2017, Claimant only claimed tinnitus and hearing loss with no mention of a neck injury or even neck pain.

16. The MRI of the cervical spine on May 25, 2018 revealed degenerative changes consistent with Claimant's previous cervical fusion, with no acute abnormalities associated with the October 6, 2016 noise incident. Ex. B. Dr. Burris' addendum indicated that Dr. Fall's revised opinion was now consistent with the medical records, and his own review of the case. (Ex. D).

17. At hearing, Claimant did not present any evidence challenging Dr. Fall's revised opinion.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

a. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of Respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

b. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

c. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v.*

ICAO, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

The DIME Physician's Medical Opinion / Whole Person Impairment

d. Where a DIME physician issues conflicting opinions concerning a Claimant's medical impairment, the ALJ must determine the DIME physician's true opinion as a matter of fact. *Rainwater v. John Sutphin*, W.C. No. 4-815-042-04 (Sept. 9, 2014). Once the ALJ determines the DIME physician's true opinion, the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence. *Id*.

e. The DIME's determinations regarding MMI and whole person impairment are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. ICAO*, 961 P.2d 590 (Colo. App. 1998). "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI and impairment findings are incorrect. *Qual-Med*, 961 P.2d at 592. A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. ICAO*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence that the DIME is incorrect. *E.g., Gutierrez v. Startek USA, Inc.*, W.C. No. 4-842-550-01 (ICAO March 18, 2016); *Javalera v. Monte Vista Head Start, Inc.*, W.C. No. 4-532-166 (ICAO July 19, 2004); *see also Gonzales v. Browning-Ferris Industries of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000).

f. The DIME's determination regarding the cause of the claimant's impairment is an "inherent" part of the diagnostic assessment, which comprises the DIME process of determining MMI and rating permanent impairment. *Egan v. ICAO*, 971 P.2d 664 (Colo. App. 1988); *see Yeutter v. ICAO*, 2019 COA 53, ¶ 23. Therefore, the DIME's determination that a particular impairment is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Id; See also Leprino Foods Co. v. ICAO*, 134 P.3d 475, 482 (Colo. App. 2005)

The Court of Appeals explained that:

> [A] DIME physician's opinions concerning MMI and permanent medical impairment are given presumptive effect. Both determinations inherently require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. Therefore, a DIME physician's

> determinations concerning causation are binding unless overcome by clear and convincing evidence.

Cordova v. ICAO, 55 P.3d 186 (Colo. App. 2002).

g. *In Braun v. Vista Mesa*, W.C. No. 4-637-254 (Apr. 15, 2010), the ICAO held that an ALJ's previous order which found that the claimant had sustained a compensable injury in the form of thoracic outlet syndrome did not serve as *issue preclusion* when a DIME doctor later determined the claimant did not have thoracic outlet syndrome and did not require further treatment for that condition. In a hearing challenging the DIME opinion, a second ALJ upheld the DIME's findings. The claimant appealed, arguing that the ALJ's order be set aside based upon issue preclusion due to the first ALJ's order. The Panel noted the evidentiary standards involved in the two ALJ decisions were distinct such that *issue preclusion* did not apply.

h. *In Ortega v. JBS USA, LLC*, W.C. No. 4-804-825 (Jun. 27, 2013)**,** the first ALJ held that certain body parts were not related to the compensable injury. A subsequent DIME concluded that those parts were related. Although the Panel initially held that the first order was not final, it went on to address whether issue preclusion might limit the review conducted by a DIME. The Panel rejected this position and distinguished *Lockhart* and *Younger* (now conclusively rejected by the ICAO in *Holcombe v. Fedex Corp.*, W.C. No. 4-824-259 (Mar. 24, 2017); *see also*, *Sharpton v. Prospect Airport Services*, W.C. No. 4-941-721-03 (Nov. 29, 2016); *Jackson v. Select Comfort Corp*., W.C. No. 4-914-418-03 (Nov. 16, 2016); *Madrid v. Trinet Group, Inc.*, W.C. No. 4-851-315-03 (Apr. 1, 2014)).

i. In this case, the ALJ finds that at the DIME exam, Claimant tendered Judge Lamphere's Order to Dr. Fall with the intent that it influence her *medical* opinion on causation. In fact, Claimant continues to persist in his position that ALJ Lamphere's Order has a preclusive effect on the DIME proceedings. While the ALJ herein stops short of finding that Claimant, *pro se*, acted in willful bad faith in so doing, it is inescapable that Claimant nonetheless did so, and in violation of Workers Compensation Rule of Procedure 11-4 (B)(2)/(7) then in effect. A *pro se* claimant is presumed to know applicable statutes and is required to act accordingly. *Kyrkopp v. Indus. Claim Appeals Office*, 30 P.3d 821 (Colo. App. 2001); *see Manka v. Martin*, 200 Colo. 260, 614 P.2d 875 (1980); see *also Muragara v. Xerox Business Services*, W.C. 4-946-815-02 (ICAO January 27, 2015).

j. Further, this ALJ finds that Claimant's actions actually had the effect he desired, to wit: Dr. Fall deferred to ALJ Lamphere's Order on the issue of causation, instead of using her independent medical judgment. In effect, she treated it as a matter of *issue preclusion,* thus somehow binding her. This was, through no fault of Dr. Fall, an erroneous *legal* conclusion she made, which then resulted in a *medical* conclusion-but subject to revision and clarification through appropriate legal process.

k. Dr. Fall then issued a letter on February 14, 2019 through the DIME Unit. That letter was issued in compliance with ALJ Lamphere's November 28, 2018 Order allowing

such a response following the *Samms* conference. That letter unequivocally revised **[clarified]** Dr. Fall's prior impairment rating, based on her own independent medical judgment. She concluded that to a reasonable degree of medical probability the noise incident did not cause a cervical injury. This ALJ finds, by clear and convincing evidence, that this represents the true medical opinion of the DIME physician, Dr. Fall, uninfluenced by the Order she was improvidently tendered at the DIME exam.

l. Nothing in the case law or statute precluded Dr. Fall from providing this revised opinion. She was not bound by the prior Order's determination on the *extent* of the compensable injury when providing a 0% permanent impairment rating. Outside of ALJ Lamphere's Order, Claimant has presented no evidence to the contrary. Accordingly, this ALJ finds that Claimant reached MMI as of February 16, 2017 with no permanent impairment.

ORDER

It is therefore Ordered that:

1. The DIME opinion is that Claimant reached MMI on 2/16/2017, and that Claimant has a 0% Whole Person Impairment.

2. Claimant has failed to overcome this DIME opinion.

3. Claimant's claim for Permanent Partial impairment benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 26, 2019 */s/ William G. Edie*

William G. Edie
Administrative Law Judge

Colorado Springs, Colorado 80906

ISSUES

Whether the claimant has demonstrated by a preponderance of the evidence that the C5-C6 and C6-C7 anterior cervical fusion with decompression of the spinal cord and of the neuroforamen, as recommended by Dr. Douglas Orndorff, is reasonable medical treatment necessary to cure and relieve the claimant from the effects to of the admitted January 16, 2015 work injury.

FINDINGS OF FACT

The parties have stipulated to the claimant's testimony as stated in paragraphs 1 through 16, which the ALJ hereby adopts as findings of fact:

1. The claimant has been receiving temporary total disability (TTD) benefits since January 18, 2015.

2. As the claimant previously testified on February 14, 2018 (at a workers' compensation hearing in Durango, Colorado), he slipped and fell on ice while at work on January 16, 2015. At that time, the claimant sustained several different injuries at that time and experienced several complications as a result of the injuries or the medical care for the injuries.

3. The claimant underwent the following surgeries for injuries to his right hip:

   a. On September 17, 2015, a right hip arthroscopic labral debridement/partial labrectomy by Dr. Lawton;

   b. On July 5, 2016, a right total hip arthroplasty by Dr. Lawton;

   c. On December 25, 2016, a closed reduction of the right dislocated total hip arthroplasty by Dr. Lawton;

   d. On January 23, 2017, revision of the right total hip arthroplasty, with an acetabular liner, and femoral head to a constrained liner, by Dr. Mallette.

4. On December 20, 2016, Dr. Orndorff performed an emergency cervical surgery for the diagnosis of cervical myelopathy. That surgery consisted of cervical decompression at the C3 to C5 levels, posterior segmental instrumentation using NuVasive viewpoint lateral mass screw; C3-C4 laminectomy; posterolateral cervical arthrodesis at the C3-C4 and C4-C5 levels.

5. In 2016, the claimant developed urinary retention problems. He was treated by Dr. Carpio at Mercy Medical Center. The claimant was diagnosed as

suffering from neurogenic bladder and urinary retention. The claimant has to self-catheterize in order to empty his bladder. The claimant has had to do this since June 2017.

6. The claimant wants to have whatever medical care he can get which might help him be able to urinate on his own and not have to self-catheterize in order to empty his bladder.

7. The claimant's current authorized urological doctor is Dr. Sejal Quayle, of Durango. Dr. Quayle has recommended a specific operation for the claimant called "transurethral vaporization of the prostate". The purpose of this procedure is to remove (by vaporization) a portion of the prostate that is impinging on the claimant's ureter. This removal might allow the claimant to urinate by using his abdominal muscles. The claimant wants to have the surgery recommended by Dr. Quayle.

8. The respondents obtained the opinion of urologist Dr. Heppe and he agreed with Dr. Quayle that the procedure she recommended was reasonable and necessary. The respondents have now authorized the procedure to be performed by Dr. Quayle. The claimant and Dr. Quayle will soon schedule this surgery.

9. After the cervical surgery on December 20, 2016 by Dr. Orndorff, the claimant felt improvement in the symptoms of numbness in both arms from his elbows to his hands, weakness in his right leg, right sided hip pain, better balance, although he still has some loss of coordination in his hands, and perhaps urinary and bowel problems.

10. Beginning before July 17, 2018, the claimant experienced symptoms of numbness and searing type pain in his hands and hand dysfunction. He also has a cold feeling in his hands and feet and problems with his balance.

11. The claimant saw Dr. Orndorff on July 17, 2018. The claimant had a magnetic resonance image (MRI) on September 11, 2018. On September 18, 2018, the claimant met with Dr. Orndorff and understood from Dr. Orndorff that Dr. Orndorff recommended another cervical surgery, specifically a C5-C6 and C6-C7 anterior cervical fusion with decompression of the spinal cord as well as the neuroforamen.

12. Dr. Orndorff requested authorization from the respondents and authorization was denied. The claimant has not yet had the surgery recommended by Dr. Orndorff.

13. The claimant wants to have the surgery that Dr. Orndorff recommends because the claimant trusts Dr. Orndorff's recommendations for surgery

14. At the respondents' request, the claimant traveled to Denver on January 9, 2019 to meet with Dr. Reiss for a medical evaluation. The meeting lasted about 30 minutes. Dr. Reiss told the claimant that he did need a second cervical surgery to help control or lessen the new symptoms. The claimant first saw Dr. Reiss's report from that visit on February 14, 2019. The claimant understands that Dr. Reiss thinks the best

surgery for the claimant to undergo is an anterior cervical discectomy, partial corpectomy and fusion of C3-C4 to decompress the anterior portion of the cord.

15. The claimant does not want to follow Dr. Reiss's recommendations for his neck surgery. The claimant wants to follow Dr. Orndorff's recommendations.

16. The claimant wants to have the cervical surgery as soon as possible because his symptoms are not improving and are getting worse.

Based upon the depositions and exhibits entered into evidence, the ALJ makes the following findings of fact:

17. On September 27, 2018, Dr. Orndorff requested authorization from the respondents for a C5-C6 and C6-C7 anterior cervical fusion with decompression of the spinal cord and the neuroforamen.

18. On October 5, 2018 Dr. Carlos Cebrian issued a report in which he opined that the respondents should not authorize the surgery recommended by Dr. Orndorff. In support of his opinion, Dr. Cebrian noted that the claimant "does not have a progressive neurological deficit and as a result there is no urgency" for another fusion surgery. Dr. Cebrian also noted that it is unknown whether the claimant's symptoms would improve with an extension of the fusion. Dr. Cebrian further opined that it is unclear if the claimant's symptoms correlate to the C5-C6 and C6-C7 levels. Ultimately, Dr. Cebrian recommended that the claimant undergo an independent medical examination (IME) with a spine surgeon to obtain that surgeon's opinion regarding appropriate treatment of the claimant. Based upon Dr. Cebrian's report, the respondents denied authorization for the recommended cervical surgery and made arrangements for an IME with Dr. Brian Reiss.

19. Dr. Orndorff testified by deposition regarding the recommended surgery. Dr. Orndorff testified that it a two level fusion that would address the claimant's symptoms of radiculopathy. Dr. Orndorff also testified that the claimant has developed adjacent segment disease at the C5-C6 and C6-C7 levels as a result of the fusion performed in December 2016. Dr. Orndorff explained that adjacent segment disease is the cause of the claimant's radicular symptoms. With regard to the surgery proposed by Dr. Reiss, Dr. Orndorff testified that the claimant has already had decompression and fusion at the C3-C4 level, so additional surgery at that level does not make sense to Dr. Orndorff. Dr. Orndorff testified that the claimant has a bone spur anteriorly at the C3-C4 level. However, it is Dr. Orndorff's opinion that the 2016 surgery addressed that bone spur by allowing the spinal cord to move away from the spur. Dr. Orndorff also testified that it is his opinion that the C3-C4 bone spur is not causing the claimant's current symptoms.

20. On January 9, 2019, the claimant attended an IME with Dr. Reiss. In connection with the IME, Dr. Reiss reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. Dr. Reiss opined that the claimant does not have "true radiculopathy". Dr. Reiss further opined that the only

area of significant central stenosis is at the C3-C4 level, which Dr. Reiss opines is the probable source of the claimant's myelopathy. Dr. Reiss does not believe the surgery recommended by Dr. Orndorff at the C5-C6 and C6-C7 levels is appropriate. Instead, Dr. Reiss recommended that the claimant undergo an anterior cervical discectomy, partial corpectomy with fusion at the C3-C4 level.

21. Dr. Reiss's testimony by deposition was consistent with his written report. Dr. Reiss testified that if he had performed the 2016 surgery he would have utilized an anterior procedure at the C3-C4 level, and not the posterior procedure at C3-C5 Dr. Orndorff performed. Dr. Reiss further testified that the claimant's imaging showed a large spur at C3-C4, pushing posteriorly onto the claimant's spinal cord. Dr. Reiss opines that this bone spur is the primary cause of the claimant's myelopathy. Dr. Reiss further opined that the bone spur was not addressed by the 2016 surgery. Dr. Reiss reiterated his opinion that the claimant's symptoms are the result of worsening myelopathy and not by radiculopathy from C5-6 and C6-7. In his testimony, Dr. Reiss again recommended an anterior cervical discectomy, partial corpectomy with fusion at the C3-C4 level.

22. The ALJ notes that the parties agree that the claimant needs to undergo cervical spine surgery. However, as indicated by their experts, the parties disagree as to the appropriate surgery to address the claimant's symptoms. The ALJ credits the claimant's testimony, the medical records, and the opinions of the claimant's treating surgeon, Dr. Orndorff, over the contrary opinions of Dr. Reiss. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that the C5-C6 and C6-C7 anterior cervical fusion, as recommended by Dr. Orndorff, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and

actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

23. As found, the claimant has demonstrated, by a preponderance of the evidence, that the C5-C6 and C6-C7 anterior cervical fusion recommended by Dr. Orndorff is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the claimant's testimony, the medical records, and the opinions of Dr. Orndorff are credible and persuasive.

ORDER

It is therefore ordered the respondents shall pay for the recommended C5-C6 and C6-C7 anterior cervical fusion with decompression of the spinal cord and of the neuroforamen, pursuant to the Colorado Medical Fee Schedule.

Dated this 29th day of April, 2019.

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-054-448-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 9, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 4/9/19, Courtroom 1, beginning at 8:30 AM, and ending at 12:18 PM).

Respondent's Exhibits A through SS were admitted into evidence, without objection. Claimant's Exhibits 1 through 9 were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Respondent filed its opening brief, electronically, on April 16, 2019. Claimant filed her answer brief, electronically, on April 23, 2019.

ISSUES

The issues to be determined by this decision concern the request of the Respondent to overcome the Division Independent Medical Examiner's (DIME"s) , Jack Rook, M.D., opinion concerning the degree of permanent medical impairment, which was 11% whole person and Respondent's claimed overpayment of temporary total disability (TTD) benefits from February 27, 2018 [the date the Claimant was released to full duty by her authorized treating physician (ATP)] through March 13, 2018 [the date of

maximum medical improvement (MMI)., in the aggregate amount of $1,722.20, which Respondent requests as a credit against the permanent partial disability (PPD) award.

The Respondent bears the burden of proof by clear and convincing evidence on the issue of overcoming the DIME opinion. Respondent's burden on the issue of "overpayment" is by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a 35-year old Registered Nurse (RN) for the Employer. She sustained admitted injuries to the low back on July 20, 2017, when she tripped over a scale and landed on her back and buttocks. She sustained admitted injuries to her low back, the degree of which are now in controversy. Respondent admitted the claim and began paying the Claimant TTD benefits.

2. Respondent filed a Final Admission of Liability (FAL) on March 23, 2018, admitting for reasonably necessary post-MMI maintenance medical benefits; an average weekly wage (AWW) of $1,290.65; TTD benefits of $861.10 per week from August 1, 2017 through March 12, 2018; an MMI date of March 13, 2018; and, PPD benefits, based upon the 5% whole person rating of the ATP, Robert I. Kawasaki, M.D., in the aggregate amount of $26, 177.60.

3. The MMI date of March 13, 2018, adopted by DIME Dr. Rook and previously assigned by ATP Dr. Kawasaki, is not in controversy and the ALJ finds that the Claimant reached MMI on the admitted date of March 13, 2018 Respondent's Exhibits A, NN and OO).

4. In her answer brief, Claimant endorsed the Statement of Facts, 1 through 30, contained in the Respondent's opening brief. In essence, the ALJ adopts the Statement as Findings, with accretions and re-numbering.

5. Claimant disagrees that DIME Dr. Rook erred in assessing a 6% whole person rating, attributable to the Claimant's loss of ROM.

6. Claimant argues, in essence, that the variability in ROM numbers (between 0%, 2%, and 6%), in and of itself is enough to leave the presumptive effect of the DIME opinion intact. A mere difference of opinion between a DIME and an ATP is not enough to overcome the presumptive effect of a DIME opinion, however, the correct analysis herein is whether Dr. Rook's 6% rating for loss of ROM is clearly wrong in and of itself. Because Dr. Rook's 5% specific disorders rating has not been overcome, as

outlined in detail herein below, the ALJ will not further analyze Claimant's argument relative thereto.

7. Claimant makes an argument that because thw Independent Medical Examiner (IME), F. Mark Paz, M.D., engaged by the Respondent, did not rate any impairment, his opinion that DIME Dr. Rook's 6% rating attributable to loss of ROM should have no weight. Such an assertion is actually not accurate. Dr. Paz rated the Claimant's overall impairment at zero, and zero is a rating.

8. In an effort to argue for an alternative loss of ROM rating, Caroline Gellrick, M.D. found error in Dr. Rook's impairment rating as follows:

> Regarding Dr. Rook's impairment rating, this examiner found discrepancy with a valid straight leg raise. His tightest straight leg raise again was on the right at 95 degrees but the sum of the sacral range of motion of 98 with is 106 degrees. Taking 95 from 106 equals 11. This should be 10 or below for valid sacral range of motion. **This is the only error this examiner found in Dr. Rooks report; therefore, the impairment would differ by 4 degrees** and in theory the ROM should be repeated again of the lumbar spine three sets of measurements. If it is invalid again with the sacral range of motion, the patient has to be seen on a different day and two sets of three range of motion lumbar spine are completed unless there is a valid sacral range of motion +/- 10 of the tightest straight leg raise. **Otherwise, this examiner totally agrees with Dr. Rook's DIME opinions for causation and assignment of impairment using the Third edition revised AMA Guides and maintenance treatment**. (Exhibit 5, pp. 12-13). (Emphasis added).

Claimant concedes that no repeat ROM was accomplished by anyone. Therefore, the ALJ , according to Claimant, is faced with the question of which ROM score should be accepted: 0, 2 or 6%. In clearer focus, the issue is whether DIME Dr. Rook's ROM measurement was valid in the first place. Because no repeat ROM measurements were done by DIME Dr. Rook, this alone invalidates the portion of his opinion regarding loss of ROM, thus, making it clearly erroneous.and free from serious and substantial doubt. that the 6% attributable to loss of ROM has been overcome.

9. Claimant takes the initial position that Dr. Rook's 6% ROM score is the best indicator of her average range of motion deficit because it best approximates the condition of her back at the end of her shifts while working for the Employer, as she testified. This begs the question if Dr. Rook's ROM measurement is not valid, and the ALJ does not find this argument to be persuasive.

10. In her answer brief, theClaimant concedes that she recognizes, according to Dr. Gellrick, that Dr. Rook made an error in calculating her ROM score. Claimant further argues that given that Claimant's IME Dr. Gellrick was able to find a range of motion deficit notwithstanding the fact that Claimant had an SI injection just four days

before her examination and because Dr. Paz himself found a range of motion deficit (ie., lumbar flexion) upon examination, Claimant urges the ALJ to find, in the alternative, that Dr. Gellrick's two percent ROM score is the best indicator of her range of motion deficit given the facts of this case. Part of the issue at hand is whether DIME Dr. Rook made a clear error in rating loss of ROM. The ALJ finds that he did make a clear error and the portion of his overall rating for loss of ROM is invalid and has been overcome by clear and convincing. The next question concerns whether Dr. Gellrick's 2% rating, attributable to loss of ROM should be substituted for DIME Dr. Rook's 6% loss of ROM rating. Certainly, Claimant is not implying that Dr. Gellrick's 2% loss of ROM rating should be given presumptive effect in lieu of Dr. Rook's invalid loss of ROM invalid rating. In fact, for this argument to prevail, the "preponderance" standard of proof would be operative. Is it more likely than not that the Claimant should have a 2% loss of ROM rating. In light of the totality of the evidence, articulated herein below, the ALJ finds that it is more likely than not that the Claimant had a zero percent loss of ROM rating.

11. Respondent claims an overpayment of temporary total disability (TTD) benefits from February 27, 2018 [the date the Claimant was released to full duty by her authorized treating physician (ATP)] through March 13, 2018 [the date of maximum medical improvement (MMI)., in the aggregate amount of $1,722.20. Respondent specifically requests a credit against the permanent partial disability (PPD) award. Unfortunately, the FAL provided the final payment on the PPD award as February 26, 2019. Consequently, a credit against the PPD award is not possible. The credit is the only relief requested by Respondent. Because it is not possible, the credit should be denied.

FINDINGS CONCERNING EVIDENTIARY FACTS

12. On July 28, 2017, Richard North, M.D. evaluated the Claimant, and found that her "range of motion ["ROM"] of the back is full. Patient is able to touch her toes with ease" (Respondent's Exhibit B).

13. On August 24, 2017, the Claimant saw chiropractor Dr. Mark Testa, D.C., who also found normal ROM (Respondent's Exhibit D).

ATP Robert Kawasaki, M.D.

14. On October 18, 2017, the Claimant presented for the first time to physiatrist Dr. Kawasaki (who became the Claimant's ATP) to whom she complained of increased pain when in a stationary position, including sitting for a long period of time. Dr. Kawasaki noted that the Claimant was "able to bend forward and place her palms on the ground. She is able to extend past 30º and lateral bend to around 30º in both directions." Dr. Kawasaki also noted a normal gait and that the Claimant was able to toe-and-heel walk without difficulty (Respondent's Exhibit E). On November 13, 2017, the Claimant returned to Dr. Kawasaki, who again noted that she was able to bend forward and place her fingers on her toes, and still had normal gait (Respondent's Exhibit E). [

15. On November 21, 2017, the Claimant underwent an unremarkable lumbar MRI (magnetic resonance imaging) that did not demonstrate any impingement or compression underlying the Claimant's complaints of radicular symptoms (Respondent's Exhibits G and H).

16. On November 28, 2017, the Claimant told Dr. Kawasaki that she had been taking the bus and felt that "this has increased her pain in the back" (Respondent's Exhibit H).

17. On December 22, 2017, the Claimant underwent bilateral SI joint injections. The report noted an initial negative diagnostic response (Respondent's Exhibit I). At her next follow-up with Dr. Kawasaki, on January 3, 2018, the Claimant reported improvement of 50% to 75%. She also complained, however, of new and increased pain that made it difficult to walk. Dr. Kawasaki again noted that the Claimant demonstrated normal ROM (Respondent's Exhibit J).

Overpayment

18. ATP Dr. Kawasaki released the Claimant to return to her regular employment on February 27, 2018 and the Claimant reached MMI on March 13, 2018, thus, the ALJ finds that there was an overpayment of $1,722.20 in TTD benefits. Respondent is entitled to a credit against aggregate PPD benefits in this amount. The Claimant, in her answer brief, concedes the overpayment.

Joan Mankowsi, M.D.

19. On January 4, 2018, the Claimant reported to Dr. Mankowski that Claimant had worsened since her injection (Respondent's Exhibit K).

20. About this time, the Claimant complained that she felt her leg would "giveway" and that her right leg "gave out," causing her to fall forward to the ground. Dr. Mankowski found no lower extremity weakness or objective findings on examination, and the doctor did not provide a physiologic explanation to these subjective complaints (Respondent's Exhibt L). On January 24, 2018, the Claimant reported to Dr. Kawasaki that she was having some numbness/tingling down her right leg that made it difficult to walk, and that she was performing housework and her right leg went numb on her for four hours that past Friday. Dr. Kawasaki did not address the objective findings as they related to the subjective reports, but he recommended an EMG. The Claimant continued to present with full ROM (Respondent's Exhibit M). The EMG was substantially normal (Respondent's Exhibit P)**.** The MRI yielded no explanation. The EMG or examination did not explain the Claimant's several complaints that her leg was giving out or for the extended numbness.

ATP Dr. Kawasaki's PPD Rating

21. On February 27, 2018, Claimant reported to Dr. Kawasaki that she was 90% better and only had 1/10 pain in her back and some aching numbness and tingling

sensation in her right leg and into her thigh area. Dr. Kawasaki released the Claimant to full-time, full duty work (Respondent's Exhibit P).

22. On March 13, 2018, Dr. Kawasaki placed the Claimant at MMI. He performed formal ROM measurements and noted that the Claimant "displayed excellent range of motion (ROM) in all directions." He assigned a 0% ROM impairment. He assigned a 5% rating for specific disorders after diagnosing low back pain and sacroiliac inflammation (Respondent's Exhibit R). The next day, on March 14, 2018, Dr. Mankowski concurred with Dr. Kawasaki that the Claimant was at MMI, after the Claimant reported that she was working out at a gym four days per week, lifting up to 300 pounds on the leg press and performing 35- to 65-pound upper extremity curls and lateral pulldowns, and also spent 30 to 40 minutes on the recumbent bicycle. *Id.* In rating the Claimant's permanent impairment rating, ATP Dr. Kawasaki followed the Division of Workers Compensation (DOWC) Medical Treatment Guidelines (MTG).

23. On Mach 21, 2018, Respondent filed a FAL, based on Dr. Kawasaki's PPD rating (Finding No. 2 herein above) The Claimant objected and requested a DIME. Although Claimant lives in Denver, she listed Colorado Springs as her preferred location of choice (Respondent's exhibit PP). Respondent had the opportunity to strike Dr. Rook in the DIME selection process but did not do so.

After MMI

24. The Claimant returned to Dr. Kawasaki on July 18, 2018, at which time she reported that she had woken up that morning with excruciating pain in the left lower abdominal quadrant into the pelvis and buttock (Respondent's Exhibit S). At hearing, the Claimant testified that she was unable to perform testing on that date due to these issues.

25. The Claimant presented the same day to the Employer and reported pain extending into her pelvic floor, which complaints included back pain. Thereupon, the Claimant was hospitalized for six days due to an ovarian torsion, before discharge on July 24, 2018, during which time she experienced some complications (Respondent's Exhibit U). Subsequent CT scans over the following days confirmed a hernia that had been an ongoing issue since 2015 (unrelated to the workers' compensation claim), and the Claimant subsequently treated for torsion and hernia issues over the following weeks and months (Respondent's Exhibits W to KK). The ALJ finds that the ovarian torsion or an aggravation thereof is not causally related to the admitted injury herein.

26. On August 6, 2018, the Claimant returned to the Employer for her torsion issues, at which time she remained on work restrictions for that condition, unrelated to the herein work injury (Respondent's Exhibit W). The Claimant underwent additional pelvic PT (physical therapy) on August 16, 2018 (Respondent's Exhibit X). On September 4, 2018, the Claimant was seen again at the Employer (a hospital), at which time she was still on some restrictions ("try to limit heavy lifting"). She noted lower abdominal pain and was still on medications. Claimant was confused as to what constituted abdominal pain versus low back pain (Respondent's Exhibit Y).

27. On September 5, 2018 – five days before her DIME, the Claimant noted increased tension in the right piriformis and significant scar tissue in the lower abdomen that affected SI mobility (Respondent's Exhibit Z). The medical records in evidence establish that the Claimant remained symptomatic for her torsion issues, with complaints that were interfering low back ROM.

DIME of Jack Rook, M.D.

28. On September 10, 2018, the Claimant underwent a DIME with Dr. Rook--in Colorado Springs. His eight-page medical review does not include any reference to the recent ovarian torsion issues, or suggest that he was aware that Claimant was actively suffering functional limitations, was on work restrictions and undergoing treatment for this non work-related condition; or, that Dr. Rook understood that the Claimant was undergoing pelvic floor therapy outside of the workers' compensation context.. Dr. Rook found that the Claimant was at MMI on March 13, 2018, and he provided a 5% Table 53 [American Medical Association Guides to the Evaluation of Permanent Impairment, 3rd Ed., Rev. (hereinafter AMA Guides) rating and assigned an additional 6% lumbar ROM rating. Dr. Rook did not perform repeat loss of ROM testing as required. Thus, hos loss of ROM rating is clearly erroneous.

Non Work-Related Umbilical Hernia Affecting ROM

29. In addition to obtaining ongoing treatment for her abdominal issues, the Claimant also sought surgery for her umbilical hernia that had been present since 2015 but had increased in size "over the past few months," and for which the pelvic physical therapist had told her was contributing to her chronic pain. The attending physician noted that the hernia was easily reducible on examination but, given Claimant's BMI (body mass index), the Claimant would not be an elective surgical candidate. That report noted morbid obesity of a BMI between 45 and 49.9 (Respondent's Exhibit BB) and the Claimant later advised that she had gained 15 pounds between her late July ovarian surgery and an October evaluation (Respondent's Exhibit EE). The ALJ finds that a work-related aggravation of the umbilical hernia has **not** been proven.

30. On December 14, 2018, the Claimant returned to Dr. Kawasaki to undergo repeat right-sided SI injection (Respondent's Exhibit II). Claimant declined left-sided injection, because she did not need it.

Claimant's independent Medical Examination (IME) with Caroline Gellrick, M.D.

31. On December 18, 2018, the Claimant underwent an IME with Dr. Gellrick, Contrary to her status pursuant to Dr. Paz in June and before her torsion onset in July, the Claimant stated she was no longer able to perform weightlifting or martial arts, and she complained of problems with house and yard work. The Claimant stated that she had to stop martial arts due to her surgery. Dr. Gellrick noted that the Claimant had a slight limp

at the time **(**Respondent's Exhibit JJ). Pursuant to Dr. Rook's worksheets and the opinions of Drs. Gellrick, the ALJ finds Dr. Rook's loss of ROM rating invalid.

32. Dr. Gellrick specifically noted that Dr. Rook's findings were discrepant for valid straight leg raise, and that his ROM measurements were invalid. She found "only" a 2% ROM rating, based on mildly abnormal flexion, *Id*, at a time Claimant's torsion issues seemed to be tapering.

33. Dr. Gellrick also remarked that Claimant had to drive from Denver to Colorado Springs for the DIME, and Claimant acknowledged that she was: "stiff and sore. According to Dr. Gellrick, "the patient relates this today to this examiner. She was quite stiff when she got down to Dr. Rook's office for the Division IME. Therefore, under those conditions, the range of motion of the lumbar spine would reflect more stiffness with lumbar flexion/extension, which is evident on his measurements. When the patient does examinations locally in the Denver metropolitan region, such as with Dr. Paz, she has more fluid range of motion." *Id.*

Respondent's IME, F. Mark Paz, M.D.

34. On June 22, 2018, the Claimant underwent an evaluation with Dr. Paz. She repeatedly advised Dr. Paz that the SI injections in December 2017 increased her pain. She stated that she was by then participating in martial arts two to three times per week and was walking substantially at work. She agreed that she was capable of performing all physical activities and duties required of her work (Respondent's Exhibit V).

35. Dr. Paz took formal ROM measurements and found no ROM loss for the injury. *Id.* He also performed a Patrick's/FABERS (SI joint) test that was negative (did not support SI dysfunction) and he noted normal examination findings. According to Dr. Paz, extension and bending to about 30º would constitute normal or above-normal ROM.

36. According to Dr. Paz, the EMG or examination of Dr. Mankowski did not explain the Claimant's several complaints that her leg was giving out or for the extended numbness, which Dr. Paz testified were not physiologic.

37. According to Dr. Paz, Dr. Rook's measurements were invalid (Respondent's Exhibits AA and JJ).

38. Dr. Paz found to a reasonable medical probability that Claimant sustained contusions, but did not find a medically probable diagnosis. Specific to SI joint dysfunction, Dr. Paz emphasized that Claimant's low back symptoms were diffuse, that provocative testing on physical examination did not support the diagnosis and the prior medical records documented symptoms migrating from the left to the right over the course of care with inexplicable increases in symptomatology. The diagnostic imaging did not identify inflammatory changes or pathology of the SI joints. Additionally, SI injections completed by Dr. Kawasaki were neither diagnostic nor therapeutic. There was no

pathology in the lumbar spine or SI joints that correlated with clinical findings, and anatomical findings may not be considered pathological unless there is a clear physiologic relationship. According to Dr. Paz, Claimant had merely non-specific complaints of low back pain that did not support a specific diagnosis or Table 53 rating. Thus, Claimant had no ratable impairment. *Id.*

Findings Analyzing the Evidence

39. The DIME's finding of a 6% ROM rating is significantly contrary to the weight of persuasive medical evidence. The medical records establish that the Claimant demonstrated normal ROM from immediately after the initial injury through MMI and as late as June 2018, by which time the Claimant was re-engaged in a rigorous martial arts and gym program. The DIME physician found significant ROM loss that was an anomaly against a backdrop of the weight of persuasive medical evidence. The ALJ finds that the ROM loss was attributable to other facts that were not properly considered by the DIME physician, and for which Dr. Rook may not even have been aware: (1) he used invalid measurements; (2) the Claimant (by her own admission) was experiencing unusual and temporary stiffness due to the long drive to attend her DIME that was not indicative of permanency; and, (3) her results were impacted by significant, acute non-industrial medical conditions with an onset during the time between MMI and the DIME. The ALJ infers and finds that all of these factors had a significant impact on the quality of the measurements and skewed the ROM results. These non-industrial conditions were not accounted for by Dr. Rook. Any one of these issues alone could explain the error of Dr. Rook's ROM findings.

40. The ALJ finds that there is a high probability that the DIME's Range of Motion (ROM) rating is clearly wrong. The ALJ finds numerous faults in the DIME physician's findings, as they pertain to the 6% rating for ROM loss, any of which, by itself, is a misapplication of proper ROM measurements.

41. Section 3.3e of the *AMA Guides* ("Impairments Due to Range of Motion Abnormalities") requires a comparison of hip flexion and straight leg raise (SLR) on the tightest side provides a "validation measure." Pursuant to paragraph 4 on page 97, "[i]f a SLR exceeds total sacral (hip) motion (flexion + extension) by more than 10 degrees, the test is invalid …" As noted by Claimant's own IME physician, Dr. Gellrick, and by Respondent's IME, Dr. Paz, Dr. Rook's testing fails this test on its face. As found, Dr. Rook's measurements are invalid. Dr. Rook clearly misapplied ROM protocols and this amounts to an "unmistakable" error. The ALJ infers and finds that Dr. Rook did not realize this clear error, and there is no persuasive evidence to suggest that he offered to perform repeat testing or that the Claimant has requested it in the months since the DIME.

42. The ALJ infers and finds that the portion of the impairment rating attributable to loss of ROM was improperly assigned and invalid, even without the issues noted below that demonstrate any that ROM issues at the time of examination were temporary or not work-related. DIME Dr, Rook's findings of ROM loss are contrary

to the weight of credible medical evidence, compared to the consistent findings of normal ROM prior to the DIME.

43. Permanent disability is determined when a claimant has reached MMI. At the time of MMI, ATP Dr. Kawasaki performed formal dual inclinometer ROM measurements demonstrating no deficit in lumbar flexion, extension, right lateral flexion or left lateral flexion. He found no lumbar ROM loss, and assigned a 0%, for each of these categories, and a 0% rating for ROM loss as a whole. Dr. Kawasaki's ROM findings are highly consistent with all references to ROM made throughout the pendency of this case, including the initial examinations the Claimant underwent in the first few days and weeks following her injury, when Drs. North, Kawasaki and Testa all found full ROM, as well as the findings noted by these doctors in the weeks leading up to MMI. Indeed, there are several notations, both early and late, that the Claimant was able to touch the floor with her palms and demonstrated other abilities consistent with extremely good (in fact, above normal) flexibility and motion, and Claimant was also regularly engaging in her rigorous martial arts and gym program by the time of MMI, too.

44. Claimant's ROM was full, immediately or no later than eight days after the initial injury, and she was observed as unrestricted by multiple physicians over the next several weeks and months and was confirmed to be unrestricted through formal testing in both March 2018 and June 2018, while she was also performing impressive physical activities requiring a high degree of flexibility. No physician prior to September 2018 contradicted these findings.

45. Insofar as the intent of measuring ROM is to determine permanent impairment, any finding of ROM restriction made after this time would be contradictory to Claimant's presentation before, at and just after MMI. This, alone, gives rise to an inference that any loss of ROM findings documented in September 2018 are not credible and do not represent "permanent" impairment at the time of MMI." The ALJ finds that it is improbable that loss of ROM attributable to an injury would have an onset months after the initial injury despite consistent notations demonstrating no restrictions in motion beforehand. The more likely explanation is that such findings are the result of improper ROM testing methods and/or due to a cause other than the admitted injury herein.

46. There is no credible information that Dr. Rook sought to obtain clarification or otherwise reconcile his results of 6% ROM loss with the explicit or implicit findings reported in all the other medical records. In a case with such discrepant findings, according to Dr. Paz, such action would have been necessary. Even if there was no clear explanation for the inconsistency, the DIME's finding of loss of ROM is contradicted by the medical records as a whole, thus, along with the totality of the evidence, establishing an unmistakable error.

47. The ALJ infers and finds that any loss of ROM is attributable to what happened after the June 2018 IME, and before the September 2018 DIME. The DIME Examiner did not consider this proposition. The Claimant was unusually stiff for her DIME

examination, and the ALJ infers and finds that any findings of limitations of ROM were a temporary result of her travels from Denver to Colorado Springs to attend the DIM*E.*

48. Although the Claimant resided in Denver at all times since her injury, treated exclusively in Denver, worked in Denver, and has no known ties to Colorado Springs, she requested that the DIME take place in Colorado Springs. She testified that she drove two hours to the evaluation, in rush hour traffic, to attend the 9:00 AM DIME on a Monday workday morning. The Claimant acknowledged that she is prone to experience stiffness and unusual pain due to being in vehicles for extended periods of time (the record includes several references to stiffness from sitting/traveling). The ALJ infers and finds that the Claimant's stiffness was a temporary event that would manifest in an inaccurate and time-limited restriction of ROM.

49. The Claimant explicitly acknowledged that she was unusually stiff from the drive on the morning of her DIME examination. The Claimant's IME, Dr. Gellrick, attributed the DIME ROM findings to stiffness from travel, and Dr. Gellrick remarked that the Claimant's ROM "of the lumbar spine would reflect more stiffness with lumbar flexion/extension, which is evident on [Dr. Rook's] measurements." Dr. Paz agreed with the Claimant's own expert that the ROM discrepancy was attributable to temporary, non-industrials issues, that no person (expert or lay) has disputed. There is no credible information that Dr. Rook considered the temporary stiffness issues that negatively impacted the ROM outcome. Dr. Rook directed the Claimant to stretch in advance of the evaluation (Claimant did not testify that Dr. Rook had her do so or that he recognized the fact that ROM measurements could be affected by a long drive from another city made during workday, rush hour traffic. This is problematic insofar as Claimant's demonstrated ROM at the DIME was inconsistent with the multiple formal measurements and informal observations of ROM prior to Dr. Rook's DIME evaluation. The ALJ infers and finds that the Claimant's ROM measurements taken on September 10 were not indicative of actual permanent impairment, and that Dr. Rook did not properly account for it. The AJ finds that this establishes that is highly probable, unmistakable and free from serious and substantial doubt that Dr. Rook's ROM findings are unreliable.

Non-Work Related Condition

50. The Claimant sustained a non work-related major medical condition between Her MMI evaluation and the DIME, *i.e.*, an acute ovarian torsion that caused an ROM Restriction, which DIME Dr. Rook did not know about or consider.

51. In addition to a temporary onset of stiffness because of the long rush hour drive from Denver to Colorado Springs, there is another factor that explains the Claimant's diminished ROM found by the DIME physician but which was not present when Dr. Kawasaki took formal measurements at the MMI date of March 13, 2018 and/or when Dr. Paz took similar measurements on June 22, 2018 (or when any of the other physicians noted Claimant's ability to touch her toes/floor, engage in martial arts and other physical activities and observed full ROM on almost every occasion from the date of injury through MMI):

52. The Claimant's onset of a non work-related major medical issue was on July 18, 2018. On that date, she experienced an acute ovarian torsion for which she presented to the hospital and underwent emergent or semi-emergent surgery. The medical records reflect that the Claimant had some complications during her hospitalization that lasted six days. The records also establish that the Claimant required substantial work restrictions and medications thereafter; also, she underwent therapy (pelvic floor therapy). The records confirm that this situation caused back pain, and the Claimant was also confused to some degree as to whether her pain related to her back injury compared to what was related to the torsion issue. Leading up to the week of the Dr. Rook's DIME, the Claimant continued to undergo active treatment and remained under work restrictions – even as she presented to Dr. Rook. She admitted that scar tissue and other issues were restricting her mobility with low back movement. The Claimant has also acknowledged that she ceased performing her martial arts and apparently scaled down her physical activities, substantially, after July 18 2018, due to the surgery, which reduction in activities continued through the DIME (and for many weeks and months thereafter). Even after the DIME, the Claimant continued to treat and undergo pelvic floor therapy, medications and other evaluation and treatment for the effects of the torsion, which effects lasted into 2019. This treatment was not causally related to the industrial injury herein. According to Dr. Paz, the torsion injury could generally cause diffuse pain that may be misinterpreted as SI joint or lower back pain. It caused decreased low back ROM. The Claimant acknowledged this fact in her medical records leading to the DIME.

53. Dr. Rook did not consider the impact of the torsion surgery and subsequent functional and pain issues. In fact, he misunderstood that the Claimant's ongoing pelvic floor therapy was due to her workplace injury, when it was actually provided by treatment providers outside of the scope of the workers' compensation case, for an unrelated condition (pelvic floor therapy is not a treatment modality that would be provided for SI dysfunction, or back issues generally, according to Dr. Paz. In light of the normal ROM results found as late as June 22, 2018, and the abnormal findings noted by Dr. Rook on September 10, 2018, the July 18, 2018 torsion event and surgery explains the discrepancy. The Claimant was abled at the time of the DIME due to torsion condition. This is a highly probable cause of any diminished ROM noted by the DIME, not present at any time in the 14 months before it. Because Dr. Rook failed to consider the impact of the non-industrial condition – an acute illness, in the wording of the *AMA Guides,* that could have explained the contradiction, Dr. Rook's ROM findings are an unreliable and are unmistakably wrong.

54. The Claimant had no loss of ROM prior to the July 18, 2018 torsion event, but she did afterwards, up to the point that Dr. Gellrick saw her in December 2018 (by which time the effect had mostly subsided; Dr. Gellrick found that Claimant's 6% ROM loss was 2% by the time she evaluated her, which would also be consistent with the acuteness of the torsion issues around the time of the DIME). This, by itself, in addition to the invalidity and errors Dr. Rook made in performing the ROM measurements, the inconsistencies and stiffness condition noted herein above, supports a finding that Dr.

Rook was clearly and convincingly wrong in assigning ROM impairment related to the July 2017 injury.

55. The Claimant had other ongoing medical conditions that were present between Her MMI Date and the DIME. In addition, the medical records reflect that there were other confounding medical issues present on September 10, 2018 that were not present at the time of MMI (or earlier). The Claimant had an umbilical hernia that significantly pre-dated the present injury (since 2015) but was worsening, growing and becoming "more painful" during the relevant period, leading the Claimant to seek treatment and request surgery in the same month that the DIME occurred. There is no persuasive evidence that the admitted industrial injury aggravated the umbilical hernia.The Claimant stated that the condition had been progressing "for months" by October 2018, and was present at the time of the DIME. The ALJ infers and finds that this condition would cause loss of ROM. Dr. Rook did not consider this factor. Surgery could not be performed at the time of the DIME because of Claimant's weight issues. At hearing, the Claimant admitted to weighing over 300 lbs.

56. The Claimant's body habitus and weight (300 lbs. at times) constitute one more explanation why Claimant's ROM was diminished at the time of the September 10, 2018 DIME, when it was normal in all the evaluations between July 28, 2017 and June 22, 2018. According to Dr.Paz , obesity could generally impact ROM, but here, the Claimant noted a weight gain of 15 lbs between her torsion surgery on July 18, 2018 and October 2018, which could impact ROM measurements – but rather the unusual rapid gain of weight due to non-work-related issues is an important factor impacting ROM in this short time frame around the occurrence of the DIME.

57. The Claimant's 15-lbs weight gain since the torsion surgery is indicative of lack of activity (which Claimant herself has acknowledged) after July 2018. The torsion and hernia issues resulted in a disability not present at MMI and unrelated to the injury herein, and the Claimant's presentation to Dr. Rook was compromised by the time of the DIME due to non-work related issues.

58. It is highly probable that Claimant's hernia and/or weight gain over these weeks leading up to the DIME are a better explanation for ROM diminishment found by the DIME physician than that the workplace injury suddenly caused ROM loss for the first time, 14 months post-injury. The unusual, rapid weight gain and increasing hernia issues are two significant changes that occurred between the time Drs. Kawasaki and Paz saw the Claimant and Dr. Rook performed the DIME, in addition to the lingering effects of the torsion injury, surgery and active treatment therefor.

Specific Disorders/Table 53 Rating

59. ATP Dr. Kawasaki rated the Claimant's permanent medical impairment for specific disorders at 5% whole person for low back pain and sacroiliac inflammation. His rating for ROM was zero. He declared the Claimant to be at MMI on March 13, 2018 and

recommended reasonably necessary post-MMI medical maintenance care. Based on Dr. Kawasaki's rating, the Respondent filed a FAL, dated March 23, 2018.

60. Dr. Gellrick performed an IME at Claimant's behest on December 18, 2018. She diagnosed "lumbosacral contusion with LS strain and with buttock coccygeal contusion. She agreed with Dr. Kawasaki's MMI date. She rated the Claimant's specific disorders at 5% whole person—the same as Dr. Kawasaki, however, she also rated the Claimant's loss of ROM AT 2% whole person for her total impairment rating of 7% whole person. With respect to ROM, Dr. Gellrick states (see worksheet." There is no persuasive underlying rationale for her 2% loss of ROM on her worksheet, which only states "2% for loss of range of motion (Respondent's Exhibit JJ).

61. ATP Dr. Kawasaki, Claimant's IME Dr. Gellrick, and DIME Dr. Rook, are in agreement that the Claimant's specific impairment rating is 5% whole person. Respondent's IME, Dr. Paz, is of the opinion that the specific impairment rating should be zero for an overall whole person impairment of zero. To use Respondent counsel's characterization of DIME Dr. Rook's opinions as a whole, Dr. Paz is an "outlier" when it comes to a specific disorders impairment rating. Even if Dr. Paz makes a case for zero impairment for specific disorders [utilizing his interpretation of the AMA Guides, but moreso his interpretation of the Division of Workers' Compensation (DOWC) Medical Treatment **Guidelines** (MTG) and Rating **Tips,** this cannot supplant the independent clinical judgments of three Level 11 fully accredited physicians (by DOWC). The MTG are merely guidelines—not rules. The "Tips," although better than a tip on which horse will win the next race, are "tips" on how to utilize the guidelines and cannot compel a licensed physician to surrender his/her independent clinical judgment to a slavish adherence to tips and guidelines], Dr. Paz's arguments do not rise to the level of making it highly probable, un-mistakable and free from serious and substantial doubt that all three physicians, including the ATP and the DIME physicians were clearly in error when they rated the Claimant's specific disorders at 5% whole person.

62. The ALJ infers that according to Dr. Paz, there should have been an overall admission of zero permanent medical impairment. Respondent has not sought to withdraw its previously filed FAL because the ALJ infers and finds no grounds for prospective withdrawal of a FAL exist and there is no allegation of **fraud.** § 8-43-203, C.R.S. provides where respondents have admitted liability on a claim, payments pursuant to the admission must continue until an order is entered following a hearing. Where either party contests the admission, it is binding only until the controverted issue is determined after hearing. *HLJ Mgmt. Group, Inc. v. Kim*, *supra*. This provision permits respondents to obtain relief from **improvident or erroneous** admissions. *Vargo v. Indus. Comm'n*, *supra*. Because the FAL was based on the opinion of ATP Dr. Kawasaki, it can hardly be said that it was **improvidently** filed. The Respondent, based on Dr. Paz's opinion, would effectively cause a withdrawal of the FAL based on their IME's opinion, contrary to the statutory scheme for determining "whole person" permanent medical impairment. Dr. Paz's zero PPD opinion certainly creates a contest but, as found, his opinion of zero permanent impairment attributable to specific disorders must be weighed against the DIME opinion, corroborated by the ATP's

opinion. In this case, Dr. Paz's opinion concerning zero impairment attributable to specific disorders fails and is contrary to the weight of the medical evidence and lacks credibility.

Ultimate Findings

63. The DIME opinion of Dr. Rook, with respect to his 5% whole person rating for specific disorders is credible and supported by the opinions of ATP Dr. Kawasaki and Claimant's IME Dr. Gellrick. Although Respondent's IME Dr. Paz is credible with respect to his opinion regarding loss of ROM, he steps down from the "impairment train" at the station marked "Specific Disorders." He is the outlier in this regard and his "zero" specific disorders rating is not credible,

64. Between conflicting opinions concerning the loss of ROM rating, the ALJ makes a rational choice, based on substantial evidence, to reject the opinions of Dr. Rook (6% whole person attributable to loss of ROM, and Dr. Gellrick (2% attributable to loss of ROM); and, to accept the opinions of ATP Dr. Kawasaki (zero attributable to loss of ROM) and Dr. Paz (zero), who persuasively articulated why a rating for loss of ROM was not appropriate.

65. Respondent cannot withdraw an FAL, which was based on an ATP's opinion, as **improvidently** filed, because its own hired IME (Dr. Paz) has a different opinion. A controversy is created—nothing more—to be resolved by an ALJ weighing the evidence.

66. Respondent has failed to prove that it is highly likely, unmistakable, and free from serious and substantial doubt that DIME Dr. Rook was clearly in error by rating the Claimant's specific disorders at 5% whole person, thus, Claimant has failed to overcome DIME Dr. Rook's opinion of 5% whole person, attributable to specific disorders, by clear and convincing evidence.

67. On the other hand, Respondent has proven that it is highly likely, unmistakable, and free from serious and substantial doubt that DIME Dr. Rook's rating of 6% for loss of ROM is clearly erroneous as articulated in greater detail herein above. Therefore, DIME Dr. Rook's overall rating of 11% whole person is erroneous. The correct whole person rating is 5%.

.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations,

determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the DIME opinion of Dr. Rook, with respect to his 5% whole person rating for specific disorders was credible and supported by the opinions of ATP Dr. Kawasaki and Claimant's IME Dr. Gellrick. Although Respondent's IME Dr. Paz was credible with respect to his opinion regarding no loss of ROM, he stepped down from the "impairment train" at the station marked "Specific Disorders." He is the outlier in this regard and his "zero" specific disorders rating is contrary to the weight of the medical evidence and lacking in credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and

plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions concerning the loss of ROM rating, the ALJ made a rational choice, based on substantial evidence, to reject the opinions of Dr. Rook (6% whole person attributable to loss of ROM, and Dr. Gellrick (2% attributable to loss of ROM) and to accept the opinions of ATP Dr. Kawasaki (zero attributable to loss of ROM) and Dr. Paz (zero loss of ROM), who persuasively articulated why a rating for loss of ROM was not appropriate.

Medical Treatment Guidelines

c. The Division of Workers' Compensation Medical Treatment Guidelines (MTG) were developed by the Director of the Division of Workers' Compensation (DOWC) pursuant to legislative direction in § 8-42-101(3.5) (a), C.R.S. In *Hall v. Indus. Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003), the court noted that the **Guidelines** are to be used by health care practitioners when furnishing medical aid. The "Rule, "however, specifies in Workers' Compensation Rules of Procedure (WCRP), Rule 17-5 (c), 7 CCR 1101-3, that "the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate." In those cases the "Rule" refers the provider to the preauthorization procedures in Rule 16-9. This section, and the following Rule 16-10, state that disputes over pre-authorization requests are to eventually be referred for adjudication procedures through the Office of Administrative Courts (OAC). That would be a hearing before an ALJ. An ALJ, therefore, has discretion to approve medical treatment even if it deviates from the **Guidelines.** The Industrial Claim Appeals Office has previously noted the lack of authority mandating that an ALJ award or deny medical benefits based on the **Guidelines.** *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 [Indus. Claim Appeals Office (ICAO), April 27, 2009]; *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (ICAO, July 23, 2008) [declining to require application of medical treatment guidelines for carpal tunnel syndrome in determining issue of PTD]; *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (ICAO, May 5, 2006), ***aff'd*** *Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (NSOP) [it is appropriate for the ALJ to consider the **Guidelines** on questions such as diagnosis, **but the guidelines are not definitive**); *Madrid v. Trinet Group*, W.C. No. 4-851-315 (ICAO, April 1, 2014). As found, Dr Paz relied on his **own interpretation** of the MTG in disagreeing with the ATP, the DIME and Claimant's IME Dr. Gellrick (all of whom are fully Level 11 accredited physicians by the DOWC) on the 5% specific disorders rating. His disagreement in this regard is a mere difference of opinion and does not rise to the level of clear and convincing evidence with respect to the 5% specific disorders rating.

d. On the other hand, Dr. Paz's articulation concerning why the MTG would not permit a rating of loss of ROM in the present case is persuasive because it is corroborated by ATP Dr. Kawasaki, and renders it highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Rook was clearly wrong in rating loss of ROM. Indeed, as found herein above, there were several non-work related factors that DIME Dr. Rook did **not** consider. The totality of the evidence supports an overcoming of DIME Dr. Rook's 6% loss of ROM portion of his total medical impairment rating by clear and convincing evidence, thus, the 5% specific disorders rating is all that stands.

Overcoming the DIME of Dr. Rook

e. The *AMA Guides,* 3rd Ed., Rev., require the rating physician to conduct a clinical and historical evaluation of a claimant's health status and compare the results to the rating criteria contained in the *AMA Guides*. *Wackenhut Corp. v. Indust. Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Pursuant to §3.3a of the *AMA Guides,"*[i]mpairment evaluation should be performed when the individual's condition has become static and well stabilized … [t]his precludes performing measurements when acute illness is present." A DIME physician's opinion on impairment is given presumptive weight, and is binding unless overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Leprino Foods Co. v. Industrial Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005). Clear and convincing evidence is evidence that is stronger than a mere preponderance; rather, it is evidence that is highly probable and "free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). All physical impairment ratings must be based on the *AMA Guides*, 8-42-101(3.7), CRS; *Kolar v. Industrial Claim Appeals Office*, 122 P.3d 1075 (Colo. App. 2005); 8-42-107(8)(c), CRS. A finding that the DIME did not comply with the directions of the *AMA Guides* supports a conclusion that such determinations have been overcome by clear and convincing evidence. *Silva v. Corporate Services Group Holdings, Inc*., W.C. No. 4-944-337-03 [Indus. Claim Appeals Office (ICAO), February 23, 2016]. As found, the part of DIME Dr. Rook's impairment rating attributable to loss of ROM has been overcome by clear and convincing evidence. As further found, Dr. Rook's specific disorders rating of 5% whole person, corroborated by ATP Dr. Kawasaki and Claimant's IME Dr. Gellrick, has **not** been overcome by clear and convincing evidence.

Overpayment

f. Although the Claimant concedes an overpayment of $1,722.20, Respondent asks for a credit against the PPD award. The last payment of the PPD award was as of February 21, 2019. Consequently, a credit against the PPD award is an impossibility.

ORDER

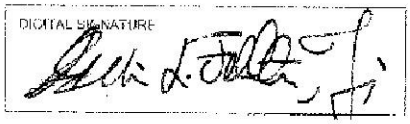
IT IS, THEREFORE, ORDERED THAT:

A. The Division Independent Medical Exam opinion of Jack Rook, M.D. having been overcome as to loss of range of motion of 6%, Dr. Rook's opinion relative thereto is hereby set aside.

B. Dr. Rook's opinion concerning specific disorders of 5% whole person not having been overcome, the Final Admission of Liability for 5% whole person and maintenance medical benefits is hereby re-affirmed and adopted.

C. Because it is impossible to exact a credit for an overpayment from the permanent disability award that has already been paid out, the claim for overpayment is hereby denied and dismissed.

DATED this 29th day of April 2019.



_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-026-853-003

ISSUES

- Whether Respondents overcome by clear and convincing evidence Greg Reichhardt's M.D. Division Independent Medical Examination report dated June 25, 2018 as to the correct date of Maximum Medical Improvement.

- Whether Respondents overcome by clear and convincing evidence Greg Reichhardt's M.D. Division Independent Medical Examination report dated June 25, 2018 as to the correct permanent medical impairment rating.

- Whether Claimant proved by a preponderance of the evidence entitlement to *Grover* medical benefits.

FINDINGS OF FACT

1. Claimant sustained a compensable industrial injury on September 24, 2016, when she fell from a motorized cart and landed on her right side.

2. Claimant initially sought treatment at the Platte Valley Medical Center emergency department. There, the emergency triage nurse noted:

- Claimant had lost consciousness for a brief duration.
- Claimant denied cervical tenderness.
- Claimant respiration was regular, non-labored and symmetric.

3. At the emergency department, Claimant complained of headache, right hip, shoulder, and chest pain. Claimant initially denied neck pain. On physical examination, Clamant presented no focal neurological deficits, no difficulty breathing, and no cervical spine pain.

4. The emergency department followed trauma protocols and performed brain and cervical spine CTs, and a right hip x-ray.

- Reading radiologist Dr. Lyders compared Claimant's brain CT to a brain CT performed on August 1, 2015, taken when Claimant presented with a severe headache. The scan revealed no hemorrhage or acute intracranial abnormality.
- The cervical spine CT showed no acute fracture or malalignment.
- The hip x-ray showed only a congenital finding.

Claimant's diagnoses included fall with loss of consciousness, facial contusion, scalp contusion, and right hip contusion.

5. Claimant's medical providers took her off work on September 24, 2016.

6. Claimant returned to the emergency department the next day reporting that the pain medication caused nausea. She was experiencing a headache with 10/10 pain. She indicated that she had no issues with her eyes or neck. Notes from the visit do not document neck pain, neurological deficits, or abnormalities in her eye examination. Claimant also underwent chest x-rays which Dr. Roth read as revealing no fractures.

7. On September 26, 2016, Claimant reported to Advanced Urgent Care, her initial workers' compensation provider. Claimant continued to report headache without dizziness and no vision change. Claimant's recent and remote memory were normal. Claimant continued to complain of right hip pain, and right eye pain. She also complained of neck pain. Although she complained of pain with cervical motion, she had full cervical range of motion. The nurse practitioner diagnosed contusion of eye, right shoulder pain, right hip pain, and head contusion with negative CT scan.

8. Over the next month, Claimant continued to report severe pain and an increasing number of symptoms. Claimant generally reported pain at 8/10, with headache pain of 9-10/10. Claimant began reporting right arm pain, dizziness, aggravation with any lifting or movement. Claimant's cervical range of motion continued to be full.

9. Claimant returned to work with restrictions in late October. She worked one day and then became unable to work more than three hours on the second day. Claimant reported nausea and muscle aches. She continued to have full range of cervical motion.

10. Claimant's provider, Dr. Parsons, recommended physical therapy. He increased Claimant's restrictions and returned her to modified duty.

11. On November 21, 2016, Claimant began to complain of blurred vision. Dr. Parsons noted Claimant exhibited multiple pain behaviors and reviewed with her the negative findings on the brain and cervical spine CT scans and x-rays. The doctor noted Claimant had full cervical range of motion.

12. On December 8, 2016, Claimant reported increased right eye, rib, and arm pain rated at 8/10. Claimant reported concern that her right forehead was "sinking in." For the first time, Claimant exhibited limited cervical range of motion. Dr. Parsons also documented that Claimant exhibited multiple pain behaviors.

13. Dr. Parsons referred Claimant to Dr. Anderson-Oeser, a pain management specialist. At that time, Claimant's active diagnoses were concussion with no loss of consciousness, contusion of chest, and neck sprain. Claimant reported the following symptoms

- Daily severe headaches

- Blurred vision in her right eye, which she later claimed became bilateral
- Cognitive issues with word recall problems and irritability
- Right-sided wrist pain with decreased range of motion
- Lateral right hip and groin pain, with sharp, stabbing pain in the anterior groin when rising from a seated position and with walking
- Claimant reported pain ranging from 8-10/10

14. Dr. Anderson-Oeser prescribed narcotic pain relievers, a Lido Pro patch and cream, and referred Claimant for a right hip injection and an opthalmygist. Claimant successfully underwent the injection which relieved her hip and groin pain.

15. Claimant returned to Dr. Parsons on January 23, 2017. Claimant reported worsening pain and a pain level of 10/10. Dr. Parsons again documented Claimant displayed multiple pain behaviors and referred her to Dr. Esparza for complaints of depression.

16. At an appointment three days later, her provider recommended a cervical spine MRI and a referral and to a psychiatrist.

17. Claimant underwent a cervical MRI on January 27, 2017. Radiologist Dr. O'Malley reviewed the films and noted the study was normal. Dr. D'Angelo, who performed a Respondents' sponsored independent medical evaluation, reported that Claimant's cervical MRI showed the same results she sees with pediatric patients. Claimant reported increased depression and anxiety. She reported only occasional radicular and paresthesia in her upper right extremity and decreased pain at 5-10/10.

18. On February 14, 2017, Dr. Esparza evaluated Claimant and reported that Claimant complained of restricted full-time work because of her excessive pain. Claimant continued to complain of headaches, back pain, and blurry vision. In addition, she had *new* complaints of needle-type pain in her eyes, lumbar back pain, and radiating symptoms into her buttocks.

19. Ophthalmologist Thomas Politzer evaluated Claimant in March 2017. Claimant had a change in refraction, but Dr. Polister did not causally relate the change to Claimant's work incident.

20. On April 4, 2017, psychiatrist Dr. Gutterman evaluated Claimant. Claimant offered no complaints of pain. The doctor noted her recent and remote memory were intact; her concentration appeared adequate; and she demonstrated no word finding difficulty.

21. Claimant continued to complain of headaches, right –sided cervical pain, right shoulder pain, and intermittent low back pain in mid-May 2017. She no longer complained of right upper extremity radicular symptoms, right-sided wrist pain, lateral pain

or right groin pain. Dr. Anderson-Oeser referred Claimant for osteopathic manipulation and prescribed massage therapy. Dr. Anderson-Oeser told Claimant that she did not expect Claimant to improve significantly unless Claimant became more involved in her home exercise program. Dr. Anderson-Oeser measured Claimant to have full cervical range of motion.

22. On May 23, 2017, Claimant reported more difficulty with her memory as time went on. Dr. Gutterman explained that would not be due to a head injury because those symptoms resolve, rather than increase, over time.

23. Throughout July, Claimant complained of headaches, cervical pain, right shoulder girdle and upper extremity pain, intermittent low back pain, depression, anxiety, memory problems, blurred vision, muscle spasm, decreased range of motion, and insomnia.

24. Dr. Anderson-Oeser re-examined Claimant on July 13, 2017. Claimant's chief presenting complaints were headaches, right shoulder girdle pain, right upper extremity pain, intermittent low back pain, depression and anxiety.

25. Dr. Anderson-Oeser re-examined Claimant on September 25, 2017. Claimant's chief presenting complaints were ongoing right shoulder girdle pain, headaches, depression and anxiety.

26. Dr. Anderson-Oeser explained a patient can have palpable spasm and tenderness but would have no permanent medical impairment if myofascial pain caused those symptoms.

27. On October 25, 2017, Dr. Anderson-Oeser found some increased tone of the trapezius and levator scapula muscles with tenderness over the right AC joint, subacromial space and right scapula with mild clicking and popping in the right shoulder. Claimant's cervical extension was minimally restricted, and she had minimal restrictions at the end range of forward flexion and extension, which, according to Dr. Anderson-Oeser, is common in people unless they are very limber. Other than following up with Dr. Gutterman regarding medication and continuing the cognitive behavioral therapies with Dr. Boyd, Dr. Anderson-Oeser prescribed no additional treatment.

28. Claimant underwent an FCE on December 8, 2017.

29. On January 10, 2018, Dr. Anderson-Oeser noted Claimant was doing well and had no pain at the time. Claimant reported occasional pain that would go to about a 2/10 but typically was a zero. Dr. Anderson-Oeser noted Claimant had finished her treatments with Dr. Boyd and Dr. Gutterman. As of January 10, 2018, Dr. Anderson-Oeser determined no treatment was reasonably needed to cure and relieve Claimant from, or related to, the effects of the industrial injury. Dr. Anderson-Oeser noted, "in fact, she weaned herself off all of the medications; the Tramadol, the Baclofen, the Duloxetine, the topical pain, she wasn't taking anything." Dr. Anderson-Oeser placed Claimant at MMI on January 10, 2018.

30. Dr. Anderson-Oeser has been Level II Accredited since 1988. She persuasively testified that if Claimant had a ratable medical impairment when she reached MMI, she would have given Claimant an impairment rating. However, based upon her Level II training, the AMA Guides and the Impairment Rating Tips Sheets, Claimant had no ratable impairment at MMI.

31. Claimant required no healthcare treatment that was reasonably needed to cure and relieve from, related to, the effects of the industrial injury after January 10, 2018. By that date, she had also weaned herself off all medications.

32. On June 25, 2018, Claimant underwent a DIME examination performed by Dr. Reichhardt. Dr. Reichhardt placed Claimant at MMI as of the date of his DIME, June 25, 2018, rather than on January 10, 2018. He did not explain why he chose June 25, 2018 as the date of MMI.

33. Dr. Anderson-Oeser reviewed a copy of Dr. Reichhardt's DIME report and testified that Dr. Reichhardt erred in placing Claimant at MMI as of the date of his DIME. Both Dr. Anderson-Oeser and Dr. D'Angelo opined that Claimant availed herself of no treatment between January 10 and June 25, 2018 to support and justify the later MMI date.

34. Dr. Reichhardt gave no medical justification pursuant to the AMA Guides to the Evaluation of Permanent Medical Impairment Third Edition Revised or the impairment rating Tips Sheets, or Level II Training that justifies a June 25, 2018 date of maximum medical improvement.

35. Dr. Anderson-Oeser reviewed Dr. Reichhardt's physical examination and opined that nothing in Dr. Reichhardt's physical examination establishes that his findings were direct and proximate results of the industrial injury. If what Dr. Reichhardt found was as a direct and proximate result of the industrial injury, Dr. Anderson-Oeser testified that she would have expected to find it at the time she put Claimant at MMI. Dr. Anderson-Oeser explained at the time she put her at MMI Claimant was not having any impingement, was having no pain, and was doing whatever she needed to do.

36. The ALJ finds that Dr. Reichhardt's assignment of June 25, 2018, as the date Claimant reached MMI finds no support in the medical record and is contradicted by the more persuasive opinions of Drs. Anderson-Oeser and D'Angelo. The ALJ finds that Respondents have met their burden of proof and established by clear and convincing evidence that Dr. Reichhardt erred in his MMI date.

37. In addition, Dr. Anderson-Oeser explained that without a Table 53 diagnosis, a doctor cannot rate range of motion limitations ascribed to an industrial injury.

38. The ALJ finds it highly probable and free from serious or substantial doubt that Dr. Reichhardt erred in providing the permanent medical impairment ratings and ascribing them to the industrial injury. Dr. Anderson-Oeser's testimony, supported by the medical evidence as well as Dr. D'Angelo's testimony, establishes Respondents met their

burden of proof. It is highly probable and free from serious or substantial doubt that Dr. Reichhardt erred in providing Claimant with a permanent medical impairment rating.

39. The ALJ finds Claimant sustained no permanent medical impairment as a direct and proximate of the industrial injury.

40. The ALJ finds that Claimant's subjective reports to her providers were often inaccurate. For example,

- Claimant reported to several providers that she has fractured ribs. However, Claimant underwent chest x-rays on September 26 and again on October 7, 2016. Dr. Roth, the reading radiologist of the September 26, 2016 x-ray, noted the absence of fracture. Dr. Parsons read the October 7, 2016 x-ray as normal.

- Claimant reported delayed and worsening cognitive and visual problems. These symptoms do not follow the natural history of acute blunt trauma or traumatic brain injury.

- Claimant's pain and numbness varied and migrated over time, inconsistent with the natural progression of her injury.

- Claimant's severe, unremitting pain complaints could not be substantiated by objective physical or radiologic findings.

- Claimant did not disclose to her treating physicians her longstanding history of severe headaches and anxiety.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

A DIME physician's opinions concerning MMI and impairment of the whole person are binding unless overcome by clear and convincing evidence. §8-42-107(8)(b)(III),

C.R.S. 2015; *Meza v. Indus.* Claim *Appeals Office,* 303 P.3d 158, 161 (Colo. App. 2013). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998).

The party seeking to overcome the DIME physician's impairment rating has the burden of proof. *Lambert & Sons, Inc. v. Indus. Claim Appeals* Office, 984 P.2d 656 (Colo. App. 1998). A party meets the burden of overcoming the DIME conclusion on MMI and permanent medical impairment only if the party demonstrates that the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). The party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions, including whether the DIME appropriately utilized the *AMA Guides* in his opinions. C.R.S. § 8-43-301(8) (2015); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000). A DIME physician must apply the *AMA Guides* when determining the Claimant's medical impairment rating. C.R.S. §8-42-101(3.7); C.R.S. §8-42-107(8)(c). The question of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000). Deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2003).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Maximum Medical Improvement

The ALJ concludes it is highly probable and free from serious or substantial doubt that Dr. Reichhardt erred in opining that MMI was June 25, 2018. Dr. Anderson-Oeser's MMI date was supported by objective medical evidence, including the September 24, 2016 cervical spine CT scan with no acute abnormality and the normal January 27, 2017 cervical spine MRI, both noted by Dr. D'Angelo and acknowledged by Dr. Reichhardt. Dr. Reichhardt's MMI opinion was not supported by objective medical evidence, as confirmed by Dr. D'Angelo's hearing testimony and an evaluation of the evidence. Dr. Anderson-Oeser's MMI opinion is supported by Dr. D'Angelo's hearing testimony and the objective medical evidence.

Dr. Reichhardt did not discuss Dr. Anderson-Oeser's MMI date opinion, providing no evidence that he was aware of, or analyzed, this relevant evidence. Dr. Anderson-Oeser's January 10, 2018 report establishes Claimant reported no pain on that date, Claimant believed she was capable of returning to full duty work without restrictions, and she denied depression. Dr. Anderson-Oeser's report noted Dr. Anderson-Oeser found cervical range of motion and bilateral shoulder range of motion was within normal limits. Failing to acknowledge this undermines Dr. Reichhardt's MMI date as this evidence clearly supported Dr. Anderson-Oeser's MMI date. Additionally, at the December 8, 2017 FCE, Claimant reported pre-FCE and post-FCE pain levels at zero out of ten. This FCE evidence, as confirmed by Dr. D'Angelo's hearing testimony, was consistent with Claimant's report of no pain to Dr. Anderson-Oeser at MMI.

The ALJ concludes Respondents have proven it is highly probable and free from serious or substantial doubt that Dr. Reichhardt erred when he found Claimant reached MMI on June 25, 2018. Accordingly, the ALJ concludes Dr. Reichhardt's DIME opinion regarding the date of MMI has been overcome by clear and convincing evidence.

Permanent Impairment Ratings

The ALJ concludes that Dr. Reichhardt's 9% permanent impairment rating for the cervical spine is erroneous, lacks credibility, and finds no support in the persuasive medical evidence. The ALJ finds the opinions of Dr. Anderson-Oeser and Dr. D'Angelo to be credible and persuasive. Dr. Reichhardt's cervical impressions consisted of a cervical strain, possible discogenic pain and possible periscapular myofascial pain. As Dr. D'Angelo testified, by definition a "strain" means a temporary -- not permanent -- issue. By its very nature, a cervical strain is not permanent and does not qualify as a specific disorder necessary to find an AMA Guides Table 53 permanent impairment. Mere possibilities of discogenic pain and periscapular myofascial pain do not qualify as specific disorders of the spine necessary to find a Table 53 permanent impairment. Dr. Anderson-Oeser also analyzed Dr. Reichhardt's report and testified there was no AMA Guides Table 53 specific disorder and Claimant was not entitled to permanent impairment for the cervical spine based on Dr. Reichhardt's report, let alone the temporal medical evidence at the time of MMI.

The ALJ concludes that Dr. Reichhardt's opinion regarding a 1% mental impairment rating is erroneous. Dr. Reichhardt did not establish the causation of the alleged depression to the admitted industrial injury or address Claimant's report of no

depression at her January 10, 2018 appointment with Dr. Anderson-Oeser. Dr. Reichhardt did not address a key issue that if the depression had resolved by January 10, 2018 and Claimant weened herself off her medications, how could Claimant's alleged depression six months later be causally related to the industrial injury. Claimant required no healthcare treatment to cure and relieve from, or related to, the effects of the industrial injury after January 10, 2018. In his report, Dr. Reichhardt simply noted Claimant reported some depression. No persuasive evidence supports that Claimant's depression at the time of the DIME was causally related to the industrial injury or why, after denying depression on January 10, 2018, she again reported depression at the DIME.

Furthermore, Dr. Gutterman's July 25, 2017 mental health impairment rating does not support Dr. Reichhardt's rating. Dr. Gutterman provided an impairment rating because Claimant was on psychotropics at that time, while Claimant had weaned herself off the psychotropics by January 10, 2018, and was not taking psychotropics on June 25, 2018 when she saw Dr. Reichhardt.

The ALJ concludes Dr. Reichhardt's opinion regarding an 11% upper extremity impairment is erroneous. Dr. Reichhardt did not relate the causation of the alleged range of motion deficit to the admitted industrial injury. Nor did Dr. Reichhardt address Claimant's full shoulder range of motion on January 10, 2018. Dr. Reichhardt did not relate Claimant's reported increase in shoulder pain since January 10, 2018, and decrease in shoulder range of motion since January 10, 2018, to the admitted injury. Claimant did not require medical treatment for the shoulder after January 10, 2018 and Claimant reported to Dr. Reichhardt, as noted in his report, she was not aware of any treatment that she might need. Dr. Reichhardts' opinion is also inconsistent with Dr. D'Angelo's hearing testimony.

Respondents have proven it highly probable and free from serious or substantial doubt that Dr. Reichhardt erred when he assigned Claimant the 9% cervical spine rating, the 1% mental health rating and the 11% upper extremity impairment rating. Accordingly, the ALJ concludes all of Dr. Reichhardt's impairment ratings have been overcome by clear and convincing evidence.

Once the DIME physician's opinion is overcome on any component of the Claimant's impairment, the question of the Claimant's correct medical impairment rating becomes a question of fact for the ALJ. *Serena v. SSC Pueblo Belmont Op Co. LLC*, W.C. No. 4-922-344-01 (ICAO Dec. 1, 2015); *Paredes v. ABM Industries*, W.C. No. 4-862-312 (ICAO Nov. 13, 2014).

The ALJ concludes Claimant's correct impairment rating for this industrial injury is zero. This is consistent with the medical evidence at and near the correct date of MMI, the FCE, Dr. Anderson-Oeser's report and the testimonial opinions of Dr. Anderson-Oeser and Dr. D'Angelo, whose opinions are credible and persuasive.

Grover Medical Benefits

The need for medical treatment may extend beyond the point of maximum medical improvement where the Claimant requires periodic maintenance care to prevent further deterioration of his condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). The Claimant must prove entitlement to Grover medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must show medical record evidence demonstrating the "reasonable necessity for future medical treatment." *Milco Constr. v. Cowan,* 860 P.2d 539, 542 (Colo. App. 1992). Such treatment becomes reasonably necessary where the evidence establishes that, but for a particular course of medical treatment, the claimant's condition can reasonably be expected to deteriorate, so that he will suffer a greater disability. *Milco Constr. v. Cowan, supra;* see also *Hanna v, Print Expediters Inc.,* 77 P.3d 863, 865 (Colo. App. 2003).

If, in an FAL, the respondents deny liability for medical benefits after MMI it is incumbent on the claimant to request a hearing and present substantial evidence that ongoing medical benefit are or will be reasonably necessary to relieve the effects of the injury or to prevent future deterioration. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003), citing *Grover v. Industrial Commission*, 759 P.2d 705, 711-712 (Colo. 1988). Respondents filed a Final Admission of Liability denying post-MMI maintenance medical care.

Claimant failed to prove entitlement to post-MMI maintenance medical care by a preponderance of the evidence. Claimant provided no medical testimony or evidence, and no lay testimony of a need for post-MMI maintenance medical treatment that was reasonably necessary and related to the admitted industrial injury. At the DIME appointment with Dr. Riechhardt, Claimant reported, “[s]he was not aware of any treatment that she feels that she needs.” After Dr. Anderson-Oeser placed Claimant at MMI on January 10, 2018, Claimant did not obtain medical treatment reasonably necessary and related to the admitted industrial injury. Dr. Anderson-Oeser opined no maintenance medical care was required.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to set aside the DIME opinion of Dr. Reichhardt regarding maximum medical improvement is GRANTED. The correct date of MMI is January 10, 2018.

2. Respondents have overcome Dr. Reichardt's DIME opinion that Claimant has a 9% whole person cervical spine rating.

3. Respondents have overcome Dr. Reichardt's DIME opinion that Claimant has a 1% mental health permanent impairment rating.

4. Respondents have overcome Dr. Reichardt's DIME opinion that Claimant has an 11% upper extremity permanent impairment rating.

5. The appropriate permanent impairment rating for Claimant's admitted industrial injury is zero, as assigned by Dr. Anderson-Oeser.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

ORDER ON REMAND GRANTING RESPONDENT'S MOTION FOR SUMMARY JUDGMENT

On October 23, 2018 ALJ Cannici issued an Order granting Respondent's Motion for Summary Judgment in this matter. The Order dismissed issues pertaining to Claimant's Petition to Reopen and request for Temporary Total Disability (TTD) benefits.

Claimant appealed Judge Cannici's Order to the Industrial Claim Appeals Office (ICAP). Claimant asserted that genuine issues of material fact exist about whether she sought to reopen her claim within the statutorily mandated six years from her date of injury.

On March 18, 2019 the ICAP remanded the matter to perfect the record on appeal by including the prehearing order of PALJ Barbo issued on May 6, 2016 and the prehearing order of PALJ Broniak issued on July 10, 2018. The ICAP noted that the pre-hearing orders of PALJ's Barbo and Broniak may constitute essential information regarding "whether there are genuine issues of material fact that remain in dispute." The Office of Administrative Courts (OAC) has included the preceding pre-hearing orders in the file and thus perfected the record.

The ICAP also requested a determination of whether Claimant filed a timely Petition to Reopen her claim. The ICAP explained that the central issue is whether the language on many of Claimant's applications for hearing that "MMI was rescinded by ATP Sander Orent, M.D. on 8/5/15," in conjunction with extrinsic evidence, constituted a Petition to Reopen for jurisdictional purposes. Accordingly, the ICAP set aside ALJ Cannici's October 23, 2018 Order and remanded the matter for a new order.

ISSUE

Whether there are genuine issues of material fact about whether Claimant sought to reopen her claim within the statutorily mandated six years from her date of injury.

FINDINGS OF FACT

1. On March 11, 2011 Claimant suffered a work-related injury. On February 9, 2012 Respondent filed a Final Admission of Liability (FAL) that acknowledged medical maintenance benefits after Maximum Medical Improvement (MMI). Claimant did not challenge the FAL and the claim closed by operation of law.

2. On May 4, 2016 Claimant filed an Application for Hearing, listing, among other issues, Temporary Total Disability (TTD) benefits and "MMI was rescinded by ATP Sander Orent, M.D., on 8/5/15." Claimant did not endorse "Petition to Reopen claim" or file a Petition to Reopen. The matter did not proceed to hearing.

3. On May 6, 2016 PALJ Barbo conducted a prehearing conference with the parties in this matter. PALJ Barbo noted that Respondent's had requested a pre-hearing conference on the following two issues: (1) a motion to vacate the June 23, 2016 hearing for failure to comply with OACRP 8(I) and; (2) a motion to strike Claimant's Application for Hearing for failure to file a Petition to Reopen or comply with WCRP 7-3(A). PALJ Barbo granted Respondent's request to vacate the June 23, 2016 hearing because Claimant filed a hearing confirmation form in the absence of a mutually agreeable date for the hearing. ALJ Barbo denied Respondent's request to strike the Application for Hearing because the relevant statute "does not mandate that a Petition to Reopen be filed in order to confer jurisdiction on an ALJ to determine whether the matter should be reopened."

4. On February 2, 2017 Claimant filed an Application for Hearing, listing, among other issues, TTD and "MMI was rescinded by ATP Sander Orent, M.D., on 8/5/15." Claimant neither endorsed "Petition to Reopen claim" nor filed a Petition to Reopen. The matter did not proceed to hearing.

5. On August 4, 2017 Claimant again filed an Application for Hearing, listing, among other issues, TTD and "MMI was rescinded by ATP Sander Orent, M.D., on 8/5/15." Claimant again failed to endorse "Petition to Reopen Claim" and did not file a Petition to Reopen. The matter did not proceed to hearing.

6. On October 10, 2017 Claimant filed a fifth Application for Hearing, listing, among other issues, TTD and "MMI was rescinded by ATP Sander Orent, M.D., on 8/5/15." Claimant did not endorse "Petition to Reopen Claim" or file a Petition to Reopen. The matter did not proceed to hearing.

7. On December 6, 2017 Claimant filed another Application for Hearing, listing, among other issues, TTD and "MMI was rescinded by ATP Sander Orent, M.D., on

8/5/15." Claimant again did not endorse "Petition to Reopen Claim" or file a Petition to Reopen. The matter did not proceed to hearing.

8. On March 30, 2018 Claimant again filed an Application for Hearing, listing TTD and "MMI was rescinded by ATP Sander Orent, M.D., on 8/5/15." Claimant neither endorsed "Petition to Reopen Claim" nor filed a Petition to Reopen.

9. On July 10, 2018 PALJ Broniak conducted a pre-hearing conference with the parties in this matter. PALJ Broniak noted that the pre-hearing conference involved the following two issues: (1) Respondent's motion for clarification as to defenses available at the merits hearing and; (2) Claimant's motion to compel supplemental discovery responses. PALJ Broniak granted Claimant's motion to compel supplemental discovery responses. In addressing Respondent's request for clarification of available affirmative defenses, ALJ Broniak noted that Respondent's failed to endorse the statute of limitations defense "with respect to Claimant's petition to reopen." Respondent's were thus precluded from raising the defense at hearing.

10. On July 17, 2018 the parties appeared for the hearing on the March 30, 2018 Application but the matter did not proceed. At the outset of the hearing ALJ Michelle E. Jones sought to clarify the issues presented. In a written order dated July 18, 2018 ALJ Jones concluded that "Petition to Reopen" was not an issue adequately endorsed for hearing. She explained that "[a]lthough it might possibly be inferred from the March 30, 2018 Application for Hearing that Claimant might be pursuing a petition to reopen, it is not listed as an issue for hearing." She reasoned that the Application for Hearing was not "sufficiently clear to provide Respondent with adequate notice that Claimant was pursuing a petition to reopen her claim based on a worsened condition." She summarized that Respondent should not be required to infer "from the pleadings that Claimant intended to reopen her claim." ALJ Jones thus determined that "the issue of petition to reopen was not sufficiently endorsed to allow Respondent notice and opportunity to be heard on the issue of petition to reopen based on worsening." She permitted Claimant to withdraw and refile a new Application for Hearing.

11. On August 1, 2018 Claimant filed an Application for Hearing, endorsing issues similar to those in previous applications. However, Claimant added the following issues: "Petition to Reopen Claim" and "Claimant's condition has worsened and she wants her claim reopened." The hearing was set to commence on October 26, 2018.

12. On September 21, 2018 Respondent's filed a Motion for Summary Judgment. Respondent's asserted that the issues of reopening and TTD benefits were barred by sections 8-43-203(2)(b)(2)(A) and 8-43-303 C.R.S. Claimant responded that there was a disputed issue of material fact about whether she sought to reopen her claim within six years from the March 11, 2011 date of injury because she filed numerous Applications for Hearing and had written discussions with Respondent about her request for TTD benefits based on a worsened condition. On October 23, 2018 ALJ Cannici issued an Order granting Respondent's Motion for Summary Judgment in this matter. The Order dismissed issues pertaining to Claimant's Petition to Reopen and request for TTD benefits. Claimant appealed ALJ Cannici's Order to ICAP.

CONCLUSIONS OF LAW

1. Pursuant to O.A.C.R.P. Rule 17, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." The rule allows a party to support its motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories and admissions on file. C.R.C.P. 56; *See also Nova v. Industrial Claims Appeals Office,* 754 P.2d 800 (Colo. App. 1988) (noting that C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act).

2. Summary judgment is appropriate when the pleadings show there is no genuine issue as to any material fact and the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churcey v. Adolph Coors Co*., 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegations of the pleadings and save time and expense connected with trial, when, based on undisputed facts, one party could not prevail as a matter of law. *See Drake v. Tyner,* 914 P.2d 519 (Colo. Ct. App. 1996).

3. Once the moving party shows specific facts probative to a right to judgment, it becomes necessary for the non-moving party to set forth facts showing there is a genuine issue for hearing. See *Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). An adverse party may not rest upon the mere allegations or denials in his pleadings, but his genuine response by affidavits or other means must set forth specific facts showing that there is a genuine issue. C.R.C.P. 56(e). Genuine issues of material fact cannot be manufactured and arguments alone will not preclude summary judgment because contentions must be supported. *See Bauer v. Southwest Denver Mental Health Center*, Inc., 701 P.2d 114 (Colo. App. 1985). Accordingly, an affirmative showing of specific facts probative of a right to judgment uncontradicted by submitted counter-affidavits leaves a trial court with no alternative but to conclude that no genuine issue of material fact exists. *Terrell v. Walter E. Heller & Co.,* 165 Colo. 463, 439 P.2d 989 (1968).

4. Section 8-43-203(2)(b)(II)(A), C.R.S. provides in part:

> *[a]n admission of liability for final payment of compensation must include a statement that this is the final admission by the Workers' Compensation insurance carrier in the case, that the claimant may contest this admission if the claimant feels entitled to more compensation to whom the claimant should provide written objection and notice to the claimant that the case will be automatically closed as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing included in the selection of an independent medical examiner pursuant to section 8-42-107.2, if an independent medical examination has not already been conducted.*

5. Section 8-43-303(1) C.R.S. specifies that: "[a]t any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition…."

6. Section 8-43-303(2)(a), C.R.S. provides: "[a]t any time within two years after the date the last temporary or permanent disability benefits or dependent benefits excluding medical benefits become due or payable, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition…."

7. The undisputed facts establish the Claimant did not contest the FAL within thirty days after the date of the final admission. Accordingly, the issue of TTD benefits is closed pursuant to §8-43-203(2)(b)(II)(A).

8. The undisputed facts establish that Claimant did not seek to reopen her claim within six years from the date of injury. Claimant has not filed a Petition to Reopen. Further, while Claimant filed multiple Applications for Hearing, she did not endorse reopening until August 1, 2018. The undisputed facts establish that Claimant did not seek to reopen her claim within two years from the date the last indemnity benefit became due or payable. The last indemnity benefit was due and payable on December 12, 2012. Claimant neither filed a Petition to Reopen nor an Application for Hearing endorsing reopening, between December 12, 2012 and December 12, 2014. As explained by ALJ Jones in her order dated July 19, 2018 "Claimant's case is closed and has been since 2015. Claimant has not yet applied for hearing endorsing Petition to Reopen her closed case based on worsening."

9. Section 8-43-303, C.R.S. does not require the filing of a formal petition to reopen in order to confer jurisdiction on an ALJ to determine whether a claim should be reopened. *In Re Casias*, W.C. No. 4-740-818-02 (ICAP, Mar. 25, 2013). However, the issue presented is not whether Claimant filed a Petition to Reopen her claim, but rather whether Respondent had notice that Claimant sought to reopen her claim based on a worsening of condition. Section 8-43-303, C.R.S. specifically requires notice to all parties prior to reopening based on a change in condition.

10. Claimant's argument is premised upon the notion that, because the facts are subject to conflicting interpretations, genuine issues of material fact exist. However, as ALJ Jones noted, Respondent should not be required to infer "from the pleadings that Claimant intended to reopen her claim." Specifically, Claimant's repeated use of the phrase "MMI was rescinded by ATP Sander Orent, M.D. on 8/5/15" on numerous applications for hearing, in conjunction with extrinsic evidence in the form of e-mails, did not provide Respondent with adequate notice that she sought to reopen her claim based on a worsening of condition. Speculating that Respondent had notice of Claimant's intent to reopen her claim based on a worsening of condition after numerous applications for hearing that did not mention reopening, is not a disputed fact that will preclude summary judgment Whether Claimant's Applications for Hearing provided Respondent adequate notice of endorsed issues did not constitute a disputed material fact but was instead an

argument about the application of the law to undisputed facts. Accordingly, having reviewed the record, including the pre-hearing orders of PALJs Barbo and Broniak, it is undisputed that Claimant did not timely seek to reopen her claim. Claimant is thus statutorily barred from reopening her claim and seeking additional indemnity benefits.

ORDER

Respondent's Motion for Summary Judgement is granted. The issues of reopening and TTD are denied and dismissed..

DONE this 29th day of April, 2019.

ISSUES

I. Whether Claimant has proven by clear and convincing evidence that the determination of the Division Independent Medical Examination (DIME) physician regarding maximum medical improvement (MMI) is incorrect.

II. Whether Claimant has proven by a preponderance of the evidence that additional maintenance care is reasonable, necessary, and causally related to her admitted industrial injury.

III. Whether Claimant established the right to temporary total disability (TTD) from August 20, 2017 through September of 2018.

IV. Whether Claimant established the right to reimbursement for medical bills.

V. Whether Claimant established the right to compensation for her husband's time off from work.

VI. Whether Claimant has established the right to reimbursement for funds deducted by the Frickey Law Firm from her payout of permanent partial disability (PPD).

FINDINGS OF FACT

1. Claimant is a 31-year-old woman who works for Employer as a cook.

2. Claimant sustained an admitted industrial injury on April 6, 2016 when a metal fry basket fell off of a shelf and struck her on the right side of the forehead. Claimant was taken to the emergency department at Littleton Adventist Hospital where she reported a frontal headache and small lump to the right eyebrow, but no blurred vision, dizziness, neck pain or back pain. On physical examination, Claimant's head was normocephalic and atraumatic, with no swelling or bruising noted. Claimant was oriented to person, place and time. CT scans of the head and cervical spine were normal. Claimant was diagnosed with a closed head injury and prescribed Percocet and Zofran.

3. Claimant subsequently began treating with authorized providers Deana Halat, FNP-BC and Christian Updike, DO at HealthONE Occupational Medicine Center. Claimant was first seen on April 11, 2016 with complaints of 6/10 pain, headaches and light sensitivity. Claimant was taking over the counter Tylenol for pain. It was noted on exam there was no swelling, ecchymosis or redness about the right eye or eyebrow. Claimant's neck range of motion was full and without tenderness. Claimant was assessed with postconcussion syndrome and released to part-time work.

4. On April 18, 2016, Claimant complained to Dr. Updike of headaches, nausea, and dizziness, but denied vision changes, numbness, tingling, neck pain, and shoulder pain. Dr. Updike noted Claimant reported that she did have right-sided neck pain initially but that the neck pain had "pretty much resolved." Dr. Updike further noted a normal examination other than slight pain with cervical spine range of motion. He referred Claimant for a short course of physical therapy.

5. By May 13, 2016, Claimant was continuing to report persistent headaches. Dr. Updike remarked that Claimant's reports persistent headache were not consistent with her clinical exam during which she was smiling, talkative, jovial, and made good eye contact. He questioned the presence of symptom magnification. Dr. Updike released Claimant to return to full-time work on May 16, 2016.

6. On June 3, 2016, Dr. Updike opined that Claimant's persistent subjective symptoms were "likely an issue more of low pain tolerance," given the modest mechanism of injury, ability to work full duty, and negative CT results. He, however, ordered a brain MRI to rule out any occult pathology. Dr. Updike anticipated Claimant would reach MMI in three weeks and would likely continue to have subjective complaints. Claimant underwent a brain MRI on June 15, 2016, which was normal with no acute findings.

7. Claimant continued to treat with Dr. Updike and continued to report right-sided head and neck pain, as well as right shoulder pain. On August 16, 2016, Dr. Updike referred Claimant for massage therapy and a pain management consultation with Yusuke Wakeshima, MD. Dr. Updike continued Claimant on full duty work.

8. Claimant first presented to Dr. Wakeshima on September 9, 2016. He opined that that the clinical history, examination and mechanism of injury were most consistent with myofascial pain.

9. Dr. Updike placed Claimant on modified duty on September 12, 2016. He noted concerns for delayed recovery.

10. Claimant continued to treat with Dr. Wakeshima, reporting right ankle and posterolateral leg pain which she attributed to the work injury. Claimant also continued to report right-sided neck, shoulder and back pain. Dr. Wakeshima opined that the work incident likely caused an increased strain pattern about the right cervical paraspinal musculature upper trapezius or levator scapula.

11. Claimant underwent an extensive course of conservative treatment, consisting of medications, Lidoderm patches and cream, physical therapy, massage therapy, a TENS unit, and trigger point injections.

12. On December 1, 2016, Dr. Updike placed Claimant at MMI with no permanent impairment. His final assessment was: postconcussive syndrome, cervicalgia and right shoulder pain, and delayed recovery. He released Claimant to full duty and referred her for six additional massage therapy sessions as maintenance treatment, along with follow-up with Dr. Wakeshima for any additional needs.

13. Claimant requested a DIME, which was performed by Timothy O. Hall, M.D. on June 26, 2017. Dr. Hall interviewed and physically examined Claimant and performed a medical records review. Claimant complained of daily right-sided temporal and frontal headaches, nausea, light sensitivity, dizziness, memory issues, and neck stiffness and pain. Dr. Hal's impression was as follows: (1) blunt trauma to head with mild postconcussive symptomatology, (2) tension headache involving muscles of mastication, possible postconcussion headache, and (3) soft tissue/whiplash type injury of the cervical thoracic area. He opined Claimant was at MMI, noting there was not "a great deal more" that could be done for Claimant. Dr. Hall assigned a 10% whole person impairment with no permanent restrictions or need for maintenance care.

14. Respondents filed a Final Admission of Liability (FAL) on August 3, 2017 consistent with Dr. Hall's DIME report, admitting to a 10% whole person impairment and no maintenance care.

15. Claimant continued to treat with Dr. Wakeshima. As of December 13, 2017, Dr. Wakeshima noted Claimant remained at MMI and her symptoms were most consistent with myofascial pain. Claimant last saw Dr. Wakeshima on April 11, 2018. She continued to report 7/10 pain, persistent headaches, dizziness, nausea and shoulder pain.

16. On February 15, 2019, John Raschbacher, MD performed independent medical examination (IME) at the request of Respondents. Claimant complained of headaches, blurry vision, anxiety and depression. Dr. Raschbacher interviewed and physically examined Claimant and performed a medical records review. He agreed Claimant was at MMI with no need for restrictions or maintenance treatment.

17. Dr. Raschbacher testified by deposition as an expert in occupational medicine. He explained that MMI is the point in time where further application of medical resources is not likely to improve a person's function. Dr. Raschbacher explained that, if a claimant's function deteriorates due to their injury, they may no longer be at MMI. However, he testified there is no indication Claimant's function has deteriorated. He testified that her return to work indicated she had actually improved. Dr. Raschbacher testified there is no medical reason why Claimant's condition would deteriorate. There is no latency period for her type of injury. The anticipated recovery for Claimant's injury under the Colorado Medical Treatment Guidelines is two to three months, and not the three years Claimant is alleging. He explained that there is no medical reason Claimant should have ongoing neurological or neck symptomology. He testified that her symptoms are vastly out of proportion to the reported mechanism of injury. Dr. Raschbacher concluded that Dr. Hall's conclusions regarding MMI and maintenance treatment were not in error, opining that maintenance care is not likely to change Claimant's subjective symptoms or reports.

18. Claimant testified at hearing that she still needs medical attention due to persistent pain in her head, shoulder and hands. Claimant testified that her current pain is 6-7/10, and that she currently takes three to four pain pills a day, which are ineffective in addressing her symptoms. Claimant testified that her current symptoms are the same

symptoms she's been experiencing since the 2016 work injury. Claimant testified that her last treatment for these symptoms was in April of 2018, and her symptoms have remained the same. Claimant testified that the treatment she has received made her worse. She wishes to undergo acupuncture treatment, which she believes will help with her symptoms. Claimant testified she is currently working at a different location of Employer. She stated her goal is to return to the condition she was in before the work injury occurred. She further testified she wants reimbursement of the costs her attorney deducted since it came out of her pocket.

19. Claimant's husband testified at hearing that Claimant complains everyday of her head and shoulder hurting. He further testified that he missed time from work because he had to transport Claimant to various medical appointments.

20. Claimant's Exhibit 1 is a ledger from Frickey Law Firm documenting costs associated with her claim, including the cost of the DIME and a professional interpreter.

21. The ALJ finds the opinions of Drs. Updike, Hall, Raschbacher and Wakeshima, as supported by the medical records, more credible and persuasive than the testimony of Claimant and her husband.

22. Claimant failed to prove Dr. Hall's DIME opinion on MMI is highly probably incorrect.

23. Claimant failed to prove by a preponderance of the evidence maintenance care is reasonable, necessary and causally related to her work injury.

24. As Claimant reached MMI on December 1, 2016, Claimant is not entitled to TTD benefits from August 20, 2017 through September 2018.

25. Claimant did not provide evidence of unpaid medical bills. Claimant failed to prove she is entitled to reimbursement of medical bills.

26. Claimant is not entitled to compensation for her husband's time off from work.

27. Claimant is not entitled to reimbursement of funds deducted by the Frickey Law Firm from her PPD payout.

28. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of

proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*,

176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

As found, Claimant failed to prove by clear and convincing evidence that Dr. Hall's DIME determination concerning MMI is incorrect. Claimant's authorized treating providers, Drs. Updike and Wakeshima, the DIME physician Dr. Hall, and Respondents' IME, Dr. Raschbacher, have all credibly opined Claimant is at MMI. Dr. Hall credibly explained that MMI is the point in time where further application of medical resources is not likely to improve a person's function. A determination of MMI does not mean a claimant's symptoms have completely resolved, which is effectively what Claimant is seeking as indicated by her testimony that she wishes to return to her pre-injury condition. Claimant underwent an extensive course of conservative treatment with no significant improvement. There is no credible and persuasive evidence Claimant's condition has deteriorated, as Claimant continues to experience the same symptoms since sustaining the injury and since she last underwent treatment. There is no credible and persuasive evidence that there is any additional treatment that is reasonably expected to improve Claimant's condition. The totality of the credible and persuasive evidence supports Dr. Hall's determination that Claimant is at MMI.

Maintenance Medical Treatment

The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably

necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

As found, Claimant failed to prove entitlement to maintenance medical treatment. No credible and persuasive evidence was introduced indicating future medical treatment is or will be reasonably necessary to relieve Claimant from the effects of her work injury or to prevent deterioration of her condition. Claimant contends she continues to suffer from the same symptoms since the date of injury, and has remained the same since she last received maintenance treatment over one year ago. This indicates Claimant's condition is stable and requires no further care to remain stable. Furthermore, as previously discussed, Claimant is seeking treatment to improve her condition, which is not the purpose of maintenance treatment. Drs. Hall and Raschbacher credibly opined that no maintenance care is indicated for Claimant's work injury. Accordingly, Claimant failed to meet her burden to prove she entitled to maintenance care.

TTD and Request for Compensation for Husband's Lost Time from Work

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Sections 8-42-105(3)(a) and (b), C.R.S. provide that TTD benefits shall continue until an employee reaches MMI or returns to regular or modified employment.

Dr. Hall's determination that Claimant reached MMI on December 1, 2016 has not been overcome by clear convincing evidence. Claimant is seeking TTD benefits from August 20, 2017 through an unspecified date in September 2018, which is after Claimant reached MMI. Accordingly, Claimant is not entitled to TTD for such time period.

Claimant has not provided any authority, nor is the ALJ aware of any, that would provide compensation for her husband's missed time from work. Additionally there is insufficient credible and persuasive evidence that her husband did, in fact, miss work due to Claimant's work injury.

Reimbursement of Medical Bills and Attorney Fees

Claimant provided no evidence of unpaid medical bills. There is insufficient evidence of any unpaid medical bills for which Respondents are liable. Regarding reimbursement of attorney fees, Claimant has not provided any authority, nor is the ALJ aware of any, that allows Claimant to seek reimbursement for attorney fees in this circumstance. Claimant chose to retain Frickey Law Firm as her representation and is now requesting Respondents assume financial responsibility for legal fees that appear properly paid for legal services rendered. Absent specific authority, Claimant is not entitled to reimbursement of such costs.

ORDER

It is therefore ordered that:

1. Claimant failed to prove by clear and convincing evidence that Dr. Hall's DIME opinion regarding MMI is incorrect. Claimant reached MMI as of December 1, 2016.

2. Claimant's request for maintenance treatment is denied and dismissed.

3. Claimant's request for TTD benefits from August 20, 2017 through September 2018 is denied and dismissed.

4. Claimant's request for reimbursement of medical bills and costs contractually paid to her attorney is denied and dismissed.

5. Claimant's request for compensation to her husband for missed time from work is denied and dismissed.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 30, 2019

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove she suffered a compensable injury to her left arm on July 1, 2018?

- If compensable, is a triceps tendon repair and ulnar transposition surgery recommended by Dr. Kobayashi reasonably necessary?

- What is Claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. Claimant works as a housekeeper at Employer's nursing home. She has worked at the facility for approximately seven years. Her job duties are primarily cleaning residents' rooms and the kitchen, transporting food, busing tables, and washing dishes. According to Claimant's supervisor, the job requires the ability to lift "at least 50 pounds." Claimant alleges she injured her left elbow on July 1, 2018 while mopping, when she pulled her left arm back and hit her elbow against a fire extinguisher mounted on the wall.

2. Claimant had a previous work-related injury to the same elbow in June 2016 while working for Employer. She struck her elbow on the inside of a dryer while removing clothes. She was diagnosed with traumatic olecranon bursitis and triceps tendinitis. Claimant ultimately had surgery with Dr. Michael Morley on December 1, 2016 to remove the bursa sac in the left elbow.

3. Claimant had an IME with Dr. Dwight Caughfield on February 21, 2017. She was still symptomatic, with 7/10 pain in the left elbow and forearm. She said the area turned purple approximately once or twice a month. She had some forearm numbness in a posterior antebrachial cutaneous distribution, and a positive Tinel's over the bursectomy area. Dr. Caughfield diagnosed right posterior antebrachial cutaneous neuropathy, either from the initial injury or from the surgery. He recommended a trial of amitriptyline, with consideration of medications such as Neurontin, Lyrica, or Topamax if the amitriptyline was not helpful. He also recommended physical therapy for desensitization and scar mobilization. If she did not improve with therapy, he recommended up to three nerve blocks. Dr. Caughfield did not recommend any work restrictions other than being careful to protect the elbow from further trauma.

4. Claimant settled her claim in April 2017. She received no further treatment or evaluations relating to her elbow until after the July 1, 2018 accident that is the subject of this claim.

5. Claimant testified her elbow symptoms improved after she saw Dr. Caughfield and she felt no need for further treatment. She testified her arm was "normal"

again, with no significant problems in the months leading up to July 1, 2018. She worked full time with no limitations until July 2018.

6. On July 1, 2018, Claimant was mopping floors in the kitchen. She pulled her arm back and struck her left elbow on a fire extinguisher. She felt a sharp pain through her arm to her pinky and ring fingers, which caused her to drop the mop. The pain also radiated up the back of the arm to the mid-triceps. The pain was so bad she felt like she might "throw up." She noticed immediate swelling around the elbow. A co-worker witnessed the event and asked Claimant if she was okay. Her supervisor, Kathleen B[Redacted], was not at work that day, so she completed her shift and went home without reporting the accident.

7. Claimant came to work the next day and completed her regular duties. She relied more on her right arm to compensate for the pain in the left arm.

8. Claimant reported the incident to Ms. B[Redacted] on July 3, 2018. She had waited until July 3 only because Ms. B[Redacted] was not at work on July 1 in July 2. Ms. B[Redacted] testified Claimant did not appear in obvious pain when she reported the injury. Ms. B[Redacted] instructed Claimant to complete an incident report, but Claimant could not find the form and instead wrote a note on a blank piece of paper and slid it under Ms. B[Redacted]'s door after she had left for the day.

9. On July 5 or 6, Claimant spoke with someone in the HR department who suggested she see Dr. Archuletta. But Dr. Archuletta was taking new patients, so she made an appointment with Doug Miller, FNP, at Rocky Ford Family Health Center.

10. On July 9, 2018, while awaiting her first appointment with Mr. Miller, Claimant went to the Arkansas Valley Regional Medical Center emergency room because she was in too much pain to wait any longer. She was evaluated by Dr. James Brady who documented, "8 days ago she [hit] her left elbow while mopping at work. She continues to have some pain and swelling, she was trying to wait for her workplace to send her someplace, however they have not so she came to the emergency department for evaluation." Examination of her left arm showed tenderness around the olecranon and triceps, swelling, and limited elbow range of motion. The report states Claimant was not having any numbness or tingling distally, although Claimant disagreed with that notation at hearing. X-rays of the left elbow were interpreted as "normal" with "no acute fracture." Dr. Brady diagnosed a left elbow contusion and imposed work restrictions of no lifting over 5 pounds and "limited use" of the left arm.

11. Claimant's initial appointment with Mr. Miller took place on July 23, 2018. She stated she "hit my elbow on a fire extinguisher while mopping the kitchen floor." She described "sharp throbbing pain with some swelling." She also reported numbness, tingling, and weakness, which supports her testimony she reported similar symptoms at the ER. Examination of the left elbow showed pain and swelling around the olecranon. Mr. Miller diagnosed a left elbow contusion and ordered repeat x-rays and an MRI.

12. The x-rays were completed on July 24, 2018 and showed moderate soft tissue swelling overlying the olecranon but "no evidence of acute fracture."

13. Claimant returned to Mr. Miller on August 6, 2018 and reported her symptoms "were about the same" as at the initial visit. The physical examination findings were similar too. The MRI had been denied "because insurance stated that the injury was not work-related." Claimant was planning to call the insurance carrier "to find out what they will pay for and what needs to be done."

14. Claimant had a follow-up appointment on August 20, 2018, with similar symptoms and examination findings. She was still waiting for the MRI to be approved.

15. Claimant eventually had the MRI on October 4, 2018. It showed a nondisplaced fracture of the olecranon, ulnar neuritis, and a tear of approximately 75% of the triceps tendon.

16. After reviewing the MRI report, Mr. Miller referred Claimant to Dr. Ky Kobayashi, an upper extremity surgeon.

17. Claimant saw Dr. Kobayashi on October 25, 2018. His examination findings included tenderness over the left olecranon, a positive Tinel's at the ulnar nerve, decreased sensation in the ulnar aspect of the hand, and significant weakness with resisted triceps testing. X-rays taking in Dr. Kobayashi's office showed the olecranon fracture had healed. He diagnosed a high-grade partial triceps tendon rupture and left ulnar neuropathy/cubital tunnel syndrome. Dr. Kobayashi recommended a left triceps tendon repair and a left ulnar nerve transposition. While waiting for surgery, he gave Claimant an elbow brace that limited movement from 30° to 100°. She understood she was to wear the brace "at all times, except for at bedtime."

18. Respondents denied the surgery and scheduled an IME with Dr. Frederick Scherr.

19. Claimant saw Dr. Scherr on February 11, 2019. Claimant told Dr. Scherr her left elbow was "fine" before the injury and denied falling outside of work or having any other recent trauma involving the left elbow. Dr. Scherr noted atrophy of the left triceps and some mild skin mottling around the triceps and posterior elbow. He appreciated no sweating, cold sensation, or abnormal hair growth. Claimant was exquisitely tender to palpation from the mid-triceps down to the mid-forearm. He noted atrophy around the left elbow, left forearm, and left shoulder girdle musculature. She had diminished sensation of the left ring and pinky fingers and a positive Tinel's over the elbow. Her shoulder range of motion was significantly limited. Dr. Scherr diagnosed a left elbow contusion (resolved), healed left elbow olecranon fracture, a 75% distal triceps tear, and possible adhesive capsulitis of the left shoulder due to prolonged immobilization.

20. Dr. Scherr opined none of these diagnoses were caused by the incident at work, except for the resolved elbow contusion. He believed it was "highly unlikely" Claimant suffered a triceps tendon tear because of the incident. He opined a 75% distal triceps tendon tear would generally require some type of rotation injury, moderate to

severe elbow hyperextension with rotation, or a severe elbow flexion injury. He opined distal triceps tendon tears are uncommon and generally caused by falling on an outstretched hand. He opined the fracture and tendon tear would be so painful and limiting that Claimant would not have waited eight days before seeking treatment. He recommended she stop using the brace and start progressive PT to restore mobility in the shoulder and elbow. He concluded, "While the surgery may be reasonable and necessary it is not with a degree of medical probability related to the alleged July 1, 2018 industrial injury."

21. Claimant saw Dr. Castrejon for an IME at her counsel's request the same day as her IME with Dr. Scherr. Dr. Castrejon's physical exam findings were similar to those noted by Dr. Scherr. Dr. Castrejon opined the olecranon fracture, ulnar neuritis, and triceps tendon tear were caused by the July 1, 2018 accident. He opined Claimant's current situation is "entirely different" from the injury in 2016. He noted the pathology shown on MRI is consistent with the described mechanism of injury. Dr. Castrejon felt it "paramount" that Claimant be allowed to proceed with the treatment recommended by Dr. Kobayashi.

22. Dr. Castrejon and Dr. Scherr testified at hearing to expand on the opinions expressed in their IME reports. Dr. Castrejon referenced medical literature showing that patients who have been previously treated for left upper extremity bursitis and/or who have undergone bursectomy have a higher risk for triceps tendon ruptures. This is typically due to violation of the tissue, including removal of the bursa sac, which can cause weakening of the triceps tendon as it inserts into the olecranon. Claimant, in fact, suffered a rupture of the distal triceps tendon at the olecranon insertion. Dr. Castrejon opined the impact with the fire extinguisher was sufficient to cause the fracture and triceps tendon tear. Dr. Castrejon opined Claimant's behavior after the accident and presenting condition at subsequent medical appointments was consistent with her injuries. He was aware of the two negative x-rays but pointed to literature showing elbow fractures are missed by x-rays 6% of the time.

23. Dr. Scherr maintained his opinion Claimant's elbow condition is not related to the July 1, 2018 incident. He agreed with Dr. Castrejon that individuals who have had a bursectomy or previous triceps tendinitis are more likely to sustain triceps tendon ruptures, but opined it was only a "small increase." He acknowledged that x-rays occasionally miss elbow fractures, but thought it highly unlikely the fracture was missed by the serial x-rays in July 2018. He reiterated that the impact with the fire extinguisher did not generate enough force to cause a fracture or triceps tear.

24. Dr. Castrejon's opinions are credible and more persuasive than the contrary opinions offered by Dr. Scherr.

25. Claimant proved by a preponderance of the evidence she suffered a compensable injury to her left arm on July 1, 2018. The injuries include the triceps tendon tear, ulnar neuropathy, and possible adhesive capsulitis of the left shoulder due to prolonged immobilization.

26. Claimant proved the surgery recommended by Dr. Kobayashi is reasonably necessary to cure and relieve the effects of the compensable injuries.

27. Claimant earned $5,979.99 in the 13 weeks immediately preceding her accident, for a weekly average of $460. At the time of the injury, Claimant was earning $11 per hour. She received a raise to $12 per hour effective September 1, 2018, which represents a 9.1% increase.

28. Claimant's AWW is $501.86.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). Each case is decided on its merits, and the facts in a workers' compensation case are not interpreted liberally for either claimant or respondents. Section 8-43-201.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not automatically establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

As found, Claimant proved she suffered compensable injuries on July 1, 2018, including the triceps tendon tear and ulnar neuropathy. The accident caused immediate severe pain around her elbow and symptoms in her left hand consistent with ulnar neuropathy. The symptoms continue unabated to date. Although Claimant had injured her elbow in 2016, the persuasive evidence shows she has a new injury and not merely a continuation of her prior problem. The ALJ acknowledges the significant symptomatology documented in Dr. Caughfield's February 2017 report but also notes that evaluation was less than three months after the surgery. There is no record of any treatment to the elbow between February 21, 2017 and July 1, 2018. Had Claimant remained significantly symptomatic during those 16 months, the ALJ expects she would have sought some treatment. At the least, the ALJ would expect a co-worker or supervisor

to have observed Claimant having difficulty with her elbow while performing her physically demanding job. There is no persuasive evidence she was limited in any way by her left elbow immediately before July 1, 2018. Although the ALJ doubts Claimant's elbow was entirely symptom-free during that time, there is no persuasive evidence she desired or required any medical treatment for it.

Dr. Castrejon is persuasive that the 2016 injury and surgery left Claimant's triceps tendon more susceptible to rupture from a trauma that might not otherwise have been injurious. The ALJ also credits Dr. Castrejon's opinion a fracture can occur from seemingly innocuous impacts, particularly in women over 50. The most confounding evidence is the two negative x-rays, which gave the ALJ pause in evaluating this case. But as Dr. Castrejon explained, x-rays miss approximately 6% of elbow fractures, which seems particularly pertinent with a non-displaced fracture such as involved here. The fracture was likely too subtle to be seen on x-ray but was picked up by the more sensitive MRI. Claimant had a known traumatic event at work that caused her to become and remain symptomatic, and there is no persuasive evidence of any other injurious event or cause around that time. While Respondents are not required to prove something outside of work caused the condition, the lack of any persuasive alternate theory of causation is a legitimate factor to consider. Ultimately, the weight of the persuasive evidence convinces the ALJ that Claimant probably tore her tendon and injured her ulnar nerve at work on July 1, 2018.

Claimant's injuries expanded to include the left shoulder because of prolonged immobilization related to the elbow injury. Although Dr. Kobayashi likely did not intend Claimant to remain splinted for such a prolonged period, she understood his instructions as wear the splint at all times unless she was sleeping. Claimant could not go back to Dr. Kobayashi because her claim has been denied and dutifully continued to his last instructions and wear the brace. Even Dr. Scherr agrees Claimant now has significant issues with her shoulder due to the immobilization.

B. The surgery is reasonably necessary

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). The occurrence of a compensable injury does not compel the ALJ to conclude that all requested treatment is reasonably necessary or causally related. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove reasonable necessity and causation by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant proved the surgery recommended by Dr. Kobayashi is reasonably necessary to cure and relieve the effects of her compensable injuries. The ALJ credits Dr. Kobayashi and Dr. Castrejon in finding the surgery offers the best chance of relieving Claimant's severe symptoms and restoring her function. Dr. Castreon is persuasive that Claimant needs to move forward with treatment quickly to prevent further

deterioration of her condition. Even Dr. Scherr conceded the surgery "may be" reasonable, and his primary disagreement related to causation. Having resolved the issue of causation and Claimant's favor, the ALJ sees no persuasive reason to deny her the surgery.

C. Claimant's AWW is $501.86

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The ALJ's discretionary authority includes the authority to include post-injury pay raises in the AWW. *Id*.; *Martinez v. City of Grand Junction*, W.C. No. 4-528-390 (September 30, 2003).

As found, Claimant's AWW is $501.86. The ALJ agrees with Claimant the post-injury raise should be included but believes the most appropriate method of calculating AWW is a hybrid of the parties' approaches. The best approximation of Claimant's actual wage loss is obtained by averaging the 13 weeks before the injury and increasing the result by the percentage of her September 2018 raise. This minimizes any potential skew based on a small sample size and avoids any distortion of her hours that may have been occasioned by the work injury. The raise from $11 to $12 per hour equates to a raise of 9.1%. Applying this percentage to Claimant's pre-injury hourly rate results in an AWW of $501.86 ($5,979.99 ÷ 13 = $460 x 1.091 = $501.86).

ORDER

It is therefore ordered that:

1. Claimant's claim for injuries on July 1, 2018 is compensable.

2. Insurer shall pay for all treatment from authorized providers reasonably necessary to cure and relieve the effects of Claimant's compensable injuries, including, but not limited to, the tendon repair and ulnar nerve transposition recommended by Dr. Kobayashi.

3. Claimant's average weekly wage is $501.86.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 30, 2019

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether claimant has shown by a preponderance of the evidence that he is permanently and totally disabled as a result of the May 19, 2017 work injury.

FINDINGS OF FACT

1. The claimant's date of birth is May 3, 1958 and at the time of the hearing he was 60 years old. The claimant resides in Grand Junction, Colorado. While employed with the employer, the claimant worked as a heavy line mechanic.

2. On May 19, 2017, the claimant was performing repairs on a vehicle that was up on a lift. The claimant was using a ladder to reach the area of the vehicle he was working on. While on the ladder, the claimant slipped and fell approximately six feet to the floor, landing on his buttocks.

3. On the date of the injury, the claimant received medical treatment at St. Mary's Hospital emergency department. This treatment included x-rays and a computerized tomography (CT) scan of the claimant's lumbar spine showed a compression fracture of the claimant's L1 vertebrae.

4. Following the initial treatment at the emergency room, the claimant treated with St. Mary's Occupational Health as his authorized treating provider (ATP). On May 22, 2017, the claimant was first seen at St. Mary's Occupational Health by James Harkreader, NP. Thereafter, the claimant was also seen at St. Mary's Occupational Health by Dr. Craig Stagg. The claimant's medical treatment during this claim has included acupuncture, injections, chiropractic treatment, physical therapy, pool therapy, a TENS unit, pain medications, and compound cream.

5. On July 17, 2017, the claimant was seen for a surgical consultation by Scott William Berry, PA for Dr. Basheal Agrawal. Based upon his examination of the claimant and the imaging, Mr. Berry opined that the claimant would not need surgery.

6. On September 19, 2017 a lumbar spine x-ray showed that the L1 had not changed since the imaging performed in May 2017. The x-ray also showed a 40 percent loss of height, anteriorly. Thereafter on October 6, 2017, a magnetic resonance image (MRI) of the claimant's lumbar spine showed that the fracture at L1 was unchanged, with greater than 50 percent height loss, anteriorly.

7. Thereafter, the claimant was seen by Dr. Agrawal on January 11, 2018. Dr. Agrawal opined that surgery would not benefit the claimant and recommended continued conservative pain management.

8. On, January 24, 2018, the claimant was seen by Dr. Kirk Clifford for a surgical consultation. Dr. Clifford opined that surgical intervention would not benefit the claimant. Instead, Dr. Clifford recommended that the claimant continue nonoperative treatment such as core strengthening exercises, a regular exercise program, anti-inflammatory treatment, and regular icing.

9. On February 6, 2018, the claimant attended a functional capacity evaluation (FCE) with Stacy Wood, PT with Grand Junction Therapies. Based upon the testing she conducted during the FCE, Ms. Wood noted in her report that the claimant qualified for a physical demand classification (PDC) of light duty. Although she assessed this PDC for the claimant, Ms. Wood further opined that the claimant was "disabled". Ms. Wood's testimony at hearing was consistent with her written FCE report.

10. On March 29, 2018, Dr. Stagg placed the claimant at maximum medical improvement (MMI) and assessed a permanent impairment rating of 17% whole person. Dr. Stagg determined that the claimant's permanent restrictions would be no lifting, pushing, or pulling over 20 pounds.

11. On July 18, 2018, the claimant attended an independent medical examination (IME) with Dr. Kathy McCranie. In connection with the IME, Dr. McCranie reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In her IME report, Dr. McCranie opined that the claimant is able to return to work in the light work category. Dr. McCranie noted that the claimant was able to lift up to 15 pounds and could progress up to 20 pounds. In addition, Dr. McCranie recommended that the claimant should limit kneeling, crawling, and stair climbing. The claimant's walking and standing should be limited to "an occasional basis", with no restrictions on sitting. Dr. McCranie's testimony by deposition was consistent with her written report.

12. Dr. McCranie testified that in her opinion the claimant is able to work within the sedentary and light work categories. Dr. McCranie also testified that she had concerns regarding the claimant's effort at the two FCEs.

13. The claimant has attended two vocational evaluations related to this claim. Based upon the claimant's testimony and the testimony of the two vocational experts in this matter, the ALJ makes the following findings of fact related to the claimant's educational and employment background.

14. The claimant was born in Mexico and attended school there until he immigrated to the United States in 1978. The claimant obtained a high school diploma in 1975. Prior to leaving Mexico the claimant worked in a shoe factory.

15. After moving to the United States, the claimant worked a number of jobs before training to become a mechanic. This prior employment included working as an orchard laborer, a landscaper, a mechanic's helper, a hotel housekeeper, a sandwich maker, and an auto detailer.

16. After he moved to the United States, the claimant enrolled in English as a second language (ESL) classes and learned English. From 1979 to 1982, the claimant completed a self-paced correspondence course with the California Aircraft Institute. Thereafter, the claimant attended a two-year, full-time program at Delta Montrose Technical Center training to become a mechanic.

17. From 1998 until the May 19, 2017 work injury the claimant has worked as an automobile mechanic, with focus on heavy line mechanics. In addition, during periods when the claimant was not working for others, he was self-employed as an auto mechanic from 1996 to 1998; from 2001 to 2003; and from 2008-2014. Over the course of his career as a mechanic, the claimant has received additional training and has obtained certifications through courses taught and tested in English.

18. On July 30, 2018, Robert Van Iderstine, Vocational Rehabilitation Specialist submitted his vocational evaluation report. Mr. Van Iderstine opined that the claimant would be unable to return to employment in his prior field. In addition, Mr. Van Iderstine opined that the claimant would be unable to return to any employment. In reaching these conclusions, Mr. Van Iderstine considered that the claimant would need to find entry level employment in the sedentary to light duty categories that would allow for position changes (sitting to standing), and not require lifting over 10 to 20 pounds. Based upon his review of the job market in Mesa County, Colorado, Mr. Van Iderstine was unable to locate any positions that would meet all of these requirements.

19. Mr. Van Iderstine's testimony at hearing was consistent with his written report. In addition, Mr. Van Iderstine provided extensive testimony regarding why he believes that positions identified by Ms. Harris (as described below) would not be appropriate employment for the claimant. Of particular concern for Mr. Van Iderstine was the claimant's self-report that he can only sit or stand for 20 minutes at a time. When he included this limitation in the claimant's vocational profile, Mr. Van Iderstine found that no positions in Mesa County would allow the claimant to change positions this frequently.

20. On September 5, 2018, the claimant attended a second FCE. This evaluation was with Lance Moore, PT with Peak Form Physical Therapy. Mr. Moore also assessed the claimant as being in the light demand category.

21. On November 13, 2018, Kristine Harris, MS, CRS, submitted her vocational assessment report regarding the claimant. In her report, Ms. Harris opined that the claimant is able to return to employment in the PDC of light duty. Ms. Harris noted a number of possible jobs available in Mesa County that fell within the light duty category. These positions included automotive customer service; service advisor; parking service specialist; delivery driver, floor staff/box office; line server; restaurant team member; server/kitchen/concierge; and vehicle rental driver. Ms. Harris's testimony by deposition was consistent with her written report.

22. Ms. Harris testified that she looked at the restrictions determined by both Dr. Stagg and Dr. McCranie. Ms. Harris also considered the findings of the FCEs. Based upon those various sources of information and her interview with the claimant, Ms. Harris determined that a number of positions were available in Mesa County that would comply with the claimant's limitations.

23. The claimant's daughter testified at hearing regarding the claimant's activities before and after his work injury. The claimant's daughter testified that the claimant previously enjoyed camping and riding ATVs with his family. She also testified that since his work injury the claimant has not engaged in those activities. The claimant's daughter also testified that she has assisted the claimant in completing job applications and other paperwork due to his limitations with reading and writing English.

24. The claimant's son also testified at hearing regarding the claimant's pre-injury and post-injury activity. Specifically, the claimant's son described the claimant enjoying working on cars, camping, and four wheeling before the injury. However, the claimant no longer does those activities because of his pain. The claimant's son testified that he has worked with the claimant and assisted him with his self-employment endeavors. The claimant's son described assisting the claimant with completing paperwork because of the claimant's limitations with reading English.

25. The claimant testified that his current symptoms include pain in his back that feels like the bones in his spine are rubbing together. The claimant also testified that walking causes his pain to increase. The claimant testified that he uses his pain medications, lidocaine patches, compound cream, and TENS unit to reduce his pain. The claimant also testified that he lies down on a flat surface to try to alleviate his pain symptoms. The claimant testified that he has to lie down five times each day.

26. Ms. B_____, owner of the employer, testified that she and the claimant communicated in English. Ms. B_____ also testified that the claimant as able to effectively perform his job duties as a heavy line mechanic while communicating in English, including completing paperwork.

27. The ALJ credits the opinions of Dr. McCranie and Ms. Harris over the contrary opinion of Mr. Van Iderstine and finds that the claimant is able to work in sedentary to light duty type work. The ALJ places weight on Dr. McCranie's assessment of the claimant's work restrictions are that the claimant can lift up to 15 pounds, (with progression 20 pounds); with limited kneeling, crawling, and stair climbing; and occasional walking and standing. With those restrictions in mind, the ALJ places weight on the opinion of Ms. Harris that jobs are available in the claimant's commutable labor market that would comply with these restrictions.

28. Therefore, the ALJ finds that the claimant is able to earn wages in his commutable labor market that fall within his work restrictions. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that he is permanently and totally disabled and unable to earn any wages. Despite the educational and language limitations raised by the claimant, the ALJ finds that the claimant has acquired sufficient skills throughout his employment history in order to earn wages.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. In order to prove permanent total disability, claimant must show by a preponderance of the evidence that he is incapable of earning any wages in the same or other employment. Section 8-40-201(16.5)(a), C.R.S. (2016). A claimant therefore cannot receive PTD benefits if he is capable of earning wages in any amount. *Weld*

County School Dist. RE-12 v. Bymer, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. *Lobb v. ICAO,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). In weighing whether claimant is able to earn any wages, the ALJ may consider various human factors, including claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. R.E. 12 v. Bymer*, 955 P.2d at 550, 556, 557 (Colo. 1998). The critical test is whether employment exists that is reasonably available to claimant under his particular circumstances.

5. The claimant is not required to establish that an industrial injury is the sole cause of his inability to earn wages. Rather the claimant must demonstrate that the industrial injury is a "significant causative factor" in his permanent total disability. *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). Under this standard, it is not sufficient that an industrial injury create some disability which ultimately contributes to permanent total disability. Rather, *Seifried* requires the claimant to prove a direct causal relationship between the precipitating event and the disability for which the claimant seeks benefits. *Lindner Chevrolet v. Industrial Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995), *rev'd on other grounds, Askew v. Industrial Claim* Appeals Office, 927 P.2d 1333 (Colo. 1996).

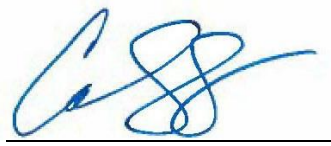
6. The respondents are not required to prove the existence of a job offer to refute a claim for permanent total disability benefits. *Black v. City of La Junta Housing Authority*, W.C. No. 4-210-925 (ICAO, December 1998) (claimant is not permanently totally disabled even though respondents' vocational expert was unable to identify a single job opening available to claimant); Beavers *v. Liberty Mutual Fire Ins. Co.,* (Colo. App. No. 96 CA0275, September 5, 1996) (not selected for publication); *Gomez v. Mei Regis*, W.C. No. 4-199-007 (September 21, 1998). Rather, the claimant fails to prove permanent total disability if the evidence establishes that it is more probable than not that the claimant is capable of earning wages. *Duran v. MG Concrete Inc.,* W.C. No. 4-222-069 (September 17, 1998).

7. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he is incapable of earning wages in the same or other employment in his commutable labor market. As found, with his prior work experience and the work restrictions determined by Drs. Stagg and McCranie, the claimant is able to work in sedentary to light duty type work. As found, the testimony of Ms. Harris is likewise persuasive that sedentary to light duty employment opportunities are available in Mesa County, the claimant's commutable labor market. In reaching this conclusion, the ALJ has considered "human factors" including that Spanish is the claimant's first language, and he learned English through ESL classes. The ALJ also considered the claimant's age, physical condition, work restrictions, educational background, employment history, and other human factors.

ORDER

It is therefore ordered that the claimant's request for permanent total disability (PTD) benefits is denied and dismissed.

Dated this 1st day of May, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

STIPULATION

At the commencement of the hearing the parties stipulated to an Average Weekly Wage (AWW) of $888.23. The parties' stipulation is approved.

ISSUES

I. Whether or not the pre-July 1, 2018 version of C.R.S. § 8-41-301 applies to Claimant's reported stress claim.

II. Whether Claimant demonstrated by a preponderance of the evidence that he suffered a compensable injury.

III. If Claimant's injuries are compensable, whether he demonstrated, by a preponderance of the evidence, that he is entitled to reasonable and necessary medical treatment benefits.

IV. Whether Claimant demonstrated by a preponderance of the evidence that he is entitled to Temporary Total Disability Benefits from August 12, 2018, and ongoing.

V. Whether Claimant demonstrated by a preponderance of the evidence that the right of selection of the treating physician passed to him due to Respondent's alleged failure to timely provide him with a list of designated physicians.

VI. Whether Claimant failed to timely report his claim to his employer as required by C.R.S. § 8-43-102.

Because the ALJ concludes that Claimant failed to establish that he suffered a compensable claim of mental impairment, this order does not address issues III-VI as outlined above..

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant began his employment with Respondent in 2006. He was hired as a sheriff's Patrol Deputy, later promoted to Patrol Sergeant, and ultimately demoted again to Patrol Deputy.

2. Claimant's essential duties and responsibilities as a Patrol Deputy and Patrol Sergeant included, in part: enforcement of state statutes by performing warrant, felony and misdemeanor arrests; responding to calls for assistance; providing aid and

assistance to victims by responding to injury accidents; assisting emergency personnel in treating and transporting victims of crime, traffic and other accidents; protecting crime scenes by establishing security perimeters/boundaries; locating, identifying and preserving evidence, briefing supervisors/investigators on their arrival to accident/crime scenes; interviewing victims and witnesses; detaining suspects; performing special assignments, such as searching for dangerous criminals, assisting with search and rescue operations and carrying a side arm and being prepared to use it with deadly force in defense of life.

3. Based upon the evidence presented, the ALJ finds that Claimant's work environment subjected him to significant risk of physical assault or injury by criminal elements and to psychologically traumatic events. Claimant's job description as a Patrol Sergeant was similar to that of a Patrol Deputy but included supervisory duties. Claimant admitted that as part of the position, Patrol Deputies and Sergeants were reasonably expected to respond to emergency situations including, but not limited to motor vehicle accidents, assaults, suicides, domestic violence calls etc.

4. During the course of his employment Claimant was exposed to numerous scenes involving catastrophic injury and violent death. He is seeking entitlement to workers' compensation benefits for mental impairment associated with post-traumatic stress disorder (PTSD) as a consequence of these exposures.

5. During his testimony, Claimant outlined several incidents that he asserts triggered the development of PTSD. According to Claimant, the initial incident occurred in 2008 when he responded to a semi-truck truck accident in his patrol area. Upon arrival, Claimant discovered that a tanker truck carrying gas had over-turned and caught fire. Claimant could hear screams coming from inside the truck's cab but due to extensive fire could not assist the driver to escape the wreckage. The driver burned to death and Claimant later found his severely burned corpse in the aftermath of the fire. In 2010, Claimant responded to a motorcycle accident and found the badly mangled body of the motorcyclist. In 2011, Claimant responded to a car accident where a female passenger was ejected through the windshield and struck a large boulder causing her broken body to contort in a very unnatural position. In 2012, Claimant responded to a child abuse call where he discovered a three-month old child laying on a bed. The child appeared cyanotic and had been burned on the cheek by a cigarette. In 2013, Claimant responded to a call and found a man who hung himself. According to Claimant the deceased man's face was so swollen that his eyes were "popping" out and his tongue was protruding from his mouth. In 2014, Claimant responded to a call for a welfare check and found a man who had committed suicide with a shotgun blast to the neck. That same year, Claimant responded to a suicide call involving a 17-year-old boy, who shot himself in the head. In 2015, Claimant was called to a mobile home on a welfare check because a foul odor was emanating from the trailer. Upon entry, Claimant discovered the bloated body of a dead man covered in maggots. In 2014 or 2015, Claimant responded to a motor vehicle accident where a vehicle left the roadway and plunged into a river. When the vehicle was pulled from the water, the first responders found the bodies of a drown couple holding hands. Other stressful incidents included

persons who died while Claimant was performing CPR on them and the transport a dead body wrapped in a blanket in the back of a truck.

6. Claimant admitted that the traumatic events to which he associates his PTSD were part of his job and job description. He admitted that responding to such incidents was not outside of a law enforcement officers, including a deputy sheriff's, usual experience. He also admitted that other first responders from the Sheriff's department and other agencies were normally present at these types of scenes.

7. Claimant testified that in addition to the above described calls, he responded to stressful calls and situations that did not involve death. In 2017, Claimant responded to a domestic violence call and upon responding to the scene he was fired upon by the suspect who was armed with a rifle. Claimant testified that he feared for his life; nonetheless, he did not reference this situation as the source of his PTSD.

8. Claimant first noticed a change in his psychological condition in 2016-2017. Claimant testified about anger issues at home and at work. He lost interest in previously enjoyed activities. He isolated himself. He reported trouble sleeping and that he screamed at night. He claimed that on one occasion, he did not sleep for 9 days straight. Claimant testified that radio dispatch, other deputies, and report writing irritated him at work, and he could not always control his anger. He testified he reported problems with anxiety and stress, and PTSD to Sergeant Johnston in 2017, and to Sergeant Owens in 2018.

9. Claimant began treating at Pueblo Community Health Center in February 2017. He met there with Cynthia Jimenez, a licensed clinical social worker (LCSW), on February 24, 2017. Claimant started psychotherapy treatment with Ms. Jimenez in March 2017. On March 7, 2017 Ms. Jimenez reported, "…Pt. has multiple exposures to various life-threatening and highly emotionally charged events via his career . . . Pt. reports increasing anxiety over the last several years, with significant increase in sx, including sleeplessness and intrusive thoughts over the last year." Ms. Jimenez diagnosed PTSD as early as May 2, 2017.

10. On August 22, 2017, Sheriff James L. B_____ disciplined Claimant and demoted him from the rank of Sergeant to the rank of Patrol Deputy for job performance issues, including his failure to supervise. Sheriff B_____ disciplined Claimant based on information gathered from Sheriff's Office staff, deputies, and others, who reported that Claimant would not listen/respond to his radio, could not be found at times, and was using unprofessional language over the radio. Poor report writing and approval were also cited as support for his demotion. As part of the demotion, Sheriff B_____ noted, "[b]ecause of these actions there has been a tremendous loss of confidence in your ability to effectively supervise deputies." Sheriff B_____ placed Claimant on "paid administrative leave" and three months of probation. As part of his demotion, Claimant's hourly salary was reduced from $23.37 to $18.29 effective August 14, 2017.

11. By December 2017, Claimant was receiving weekly PTSD treatment with Ms. Jimenez. On February 19, 2018, he reported continued nightmares, poor sleep, and intrusive thoughts about past incidents. Claimant saw Dr. Matthew Goodwin, a psychiatrist at Pueblo Community Health Center on April 19, 2018. Dr. Goodwin assessed Claimant with PTSD and reported, "…The patient is a law enforcement officer with a history of exposure to numerous potentially traumatic events throughout his career in law enforcement. He demonstrates numerous symptoms of PTSD including intrusive thoughts, recollections, and nightmares, increased psychomotor activity and anger along with depression episodes, isolation and emotional numbing . . . he is encouraged to continue follow-up in his individual therapy as this is perhaps the best intervention for his current symptoms. We also discussed realistic plans for his future given that he is in a very toxic and dangerous environment and this likely will continue to exacerbate his PTSD symptoms…"

12. On May 30, 2018, Dr. Goodwin reported, ". . . [Claimant] continues to be afraid that he will be fired if he was to tell people at work about his difficulties. At the same time, he felt that he needed to speak to his lieutenant about seeing a "Comp Doctor" for his problems. He is reluctant to request light duty as he feels that he would be letting the officers around him down. He feels very protective of them…"

13. On June 13, 2018, Dr. Goodwin reported, ". . . [Claimant] is expressing significant stress at his job at the Sheriff's office related to a former partner who is under internal investigation for illegal activities. He was recently notified by an internal affairs investigator that he would need to be interviewed regarding this person. He said that apparently his having a supportive conversation with him recently may have been misinterpreted . . . On the positive note he did approach his lieutenant and requested to receive help for his psychological problems as well as to be taken off of his current front line duties and placed in an alternate position. He says he has been scheduled to the "psych doctor" through the Sheriff's Department.

14. Employer required Claimant to attend a "fitness for duty evaluation" with psychologist Chad Waxman, Psy.D., on July 20, 2018. Dr. Waxman would issue a report dated August 20, 2018. In the interim, Claimant would be evaluated, on a onetime basis, for PTSD by Physician Assistant (PA) Steven Quackenbush on August 14, 2018.

15. Claimant filed an "Employee's Written Notice of Injury to Employer" on August 15, 2018. Claimant testified Employer never provided him with a list of Employer's designated medical providers. Employer's human resources director, Tammy C_____, testified that because a box was checked on Employer's form entitled "Worker's Compensation Checklist for all Claims" (page 216 of Claimant's hearing exhibits), she assumed such a list was provided to Claimant. She did not give him the list nor does she know who may have. Ms. C_____ testified that she does not have a copy of any such list. Ms. C_____ was in fact out of the office the week Claimant filed his written report of injury.

16. During his August 14, 2018 appointment with PA Quackenbush, Claimant admitted he had "non-reported escalation of symptoms since his initial employment with the Fremont County Sheriff's office over the past 12 years. As part of his evaluation, PA Quackenbush noted that "[m]any of [Claimant's] multiple and detailed descriptions of horrific accidents and injuries often resulting in death could be assumed to be a normal part of the job description and requirements of a County patrol officer." Nonetheless, PA Quackenbush indicated that Claimant had "perhaps witnessed more than his normally expected share of horrific injuries and death than would normally be assumed for a small rural community and County where the patient is employed." PA Quackenbush diagnosed PTSD and concluded Claimant "…obviously needs immediate and ongoing mental health and psychiatric care."

17. Claimant continued receiving treatment at Pueblo Community Health Center. On August 20, 2018, Ms. Jimenez noted, ". . . Pt. reports increased S/I (suicidal ideation) over the past couple of weeks and admits he asked his wife to hide his gun at one point. He denies he would act on his thoughts but says he is 'just so tired of not sleeping and of battling the intrusive thoughts…'" Respondents denied Claimant's claim the following day.

18. As noted above, Dr. Waxman issued a report dated August 20, 2018 following his fitness for duty evaluation. He reported, ". . . The Deputy is being referred by the department as a result of an 'outburst' where he 'screamed' at a superior deputy during an IA (internal affairs) investigation (of another deputy), where Deputy M_____ was a potential witness. It took time for him to calm down, and Deputy M_____ indicated that the nature of the investigation was 'triggering his PTSD' at the time." Dr. Waxman provided additional background information regarding the referral, by way of report given to him by a Lieutenant Johnston, as follows:

> On Monday 06/11/18, I [Johnston] was approached by Deputy Felix M_____, who asked if he could speak with me in private. Felix advised he was having some issues outside of work with inability to sleep and some anger issues. Felix advised he wakes up often with a dream about an incident he was involved with several years ago. The incident was a fatality accident involving a tractor trailer rig (fuel tanker), where the driver was trapped and burned to death. Felix describes that he heard the party scream for help.
>
> Felix told me he was currently seeing a counselor, and had started him on medication to help him sleep. I asked Felix if he felt counseling was helping, he said he felt a little, but not as must or as fast as he wanted it to. I asked Felix if he had any feelings of hurting himself or anyone else, Felix said he definitely did not have any of those feelings. Felix asked if the office had any resources for counseling, I told Felix I would check on it.
>
> I spoke to Felix's sergeant, Greg Owen, I asked Greg if he had any concerns with Felix's actions at work. Greg advised he did not. Greg did

advise that Felix had a similar conversation over his issues a few days previous with him also. I advised Greg to get with me if he says any concerns with Felix. At this time, I brought the issues to undersheriff Richard and Sheriff B_____. I also began to look into counseling options for Felix.

On the afternoon of 06/20/18, I was approached by Undersheriff Richards where she told me of an interview which Felix had been involved in. The interview was between Lt. Br_____ and Deputy M_____. Lt. Br_____ was asking what Felix had observed in a recent incident at the office. Lt. Br_____ advised Felix had begun screaming at him, asking him why he was doubting his integrity after working for the Fremont County Sheriff's Office for 12 years. It took Lt. Br_____ a little bit of time before he was able to calm Felix down. Lt. Br_____ felt this outburst was totally out of character for Felix. Undersheriff Richards told me, Lt. Br_____ told her Felix had said at one point in the interview that the interaction of the interview had triggered his PTSD at the time.

On the morning of 06/21/18, I spoke with Undersheriff Richards about Felix's actions from the day before, which concerned both of us as this is out of character for Felix. Undersheriff Richards and I agreed it would be best to seek a mental health professional to evaluate Felix's situation, to determine if a fitness for duty evaluation was warranted."

18. Dr. Waxman reported that the information above, from Lieutenant Johnston, ". . . [had] raised concerns about the [Claimant's] emotional stability and his ability to safely and effectively perform his duties as a law enforcement deputy. As a result, the [Claimant] is currently being evaluated to determine his psychological fitness to perform the full duties of a . . . Patrol Deputy."

19. Dr. Waxman reported that when asked about the reason for the referral to him, Claimant noted: "I have been having nightmares about certain deaths, I cry and get up and the past year my anger is worse and that it is affecting (his) family. Deputy M_____ stated that he has nightmares every night. He became tearful when discussing his family. Deputy M_____ stated that he has 'screamed' at his wife at times, causing her to leave him for periods of time. He denied his anger has ever led to physical aggression. With respect to his reported current symptoms, he indicated occasional trouble with breathing, blurred vision, anxiety (related to his thoughts of past traumatic events), irritability, dizziness, nightmares (reported as vivid dreams), and headaches. Deputy M_____ described his anxiety as 'water that keeps pouring out.' Deputy M_____ also stated he sometimes 'smells death' and needs to put a Vicks Vapor Rub under his nose to cope with the smell. He explained it is the 'ugliest smell you can smell.'"

20. Dr. Waxman noted that Claimant denied that his demotion resulted from disciplinary issues. Rather, Claimant related the outburst at work, prompting his referral to Dr. Waxman, to an email he received from internal affairs about being a witness in an investigation into another deputy's conduct. He stated that it made him angry and that he had trouble controlling it. Deputy M_____ then became irritable during the interview and explained the situation was 'bullshit' and that the deputy being investigated 'had nothing to do with it.' Deputy M_____ took the situation personally after he was 'questioned about dates in the past.' Deputy M_____ did not appear to look at this situation objectively or rationally (appreciating the typical process of an IA investigation). He clarified that he is a calm person in general and usually he would have just 'walked away…'"

21. Dr. Waxman added:

> When asked about his history of symptomatology, [Claimant] stated approximately two years ago, he started having anxiety and nightmares, as well as difficulty breathing. His symptoms appeared to have gotten worse over time. Deputy M_____ sated that one year ago he responded to a scene where a man was on fire and screaming for his life. He discussed witnessing the 'skin falling and melting off.' After this incident he was distressed and made the decision to seek therapy. Deputy M_____ stated that this incident 'blew everything up.' He started to remember previous traumatic incidents. The first incident he remembered was a deputy involved shooting, which occurred shortly before the incident with the burn victim. Deputy M_____ explained he was 'shot at for four hours,' and the suspected (sic) was subsequently apprehended. Since that time, he feels 'jumpy' when he hears gun fire."

22. Dr. Waxman reviewed other instances of trauma relayed by Claimant, including gruesome suicides and motor vehicle accidents, noting that Claimant reported that he could describe more traumatizing incidents, perhaps a 100 or more.

23. Dr. Waxman determined that Claimant was unfit for duty, noting: ". . . Deputy M_____'s self-report and collateral information is corroborated though [through] the testing he took. His PAI and MMPI-2-RF testing indicated he is experiencing anxiety that is causing him distress and ruminates on his physical impairments to a degree that is more than what is to be expected for his physical conditions. Additionally, he appears to be experiencing problems in his relationships, general irritability, and sensory/perceptual issues as a result. Overall, the available information suggests he is experiencing PTSD which is impacting major areas of his life including relationships, his health (i.e. motivation to take care of himself physically, drinking alcohol to cope with his thoughts, and experiencing insomnia), and his work as a Patrol Deputy (i.e. irritability with others as evident with the IA Investigation and difficulty coping with loud noises . . . Based on the background information, current test findings, observations, as well as the interview data, it is my conclusion, to a reasonable

degree of psychological certainty, that Deputy M_____ is ***unfit*** for duty at this time…" (Emphasis in original).

24. Dr. Waxman concluded, "…Collective evidence suggests that Deputy M_____ is suffering from Posttraumatic Stress Disorder (PTSD) as a result of complex trauma. He experienced over 100 critical incidents that have involved loss of life or traumatic in nature, as well as a situation where he feared for his life (i.e. four hour deputy involved shooting). As a result of his diagnosis of PTSD, it is recommended he engage in trauma specific treatment with a trained trauma focused therapist. Sessions for a person with complex trauma could take 26 or more sessions given his history of multiple traumas. While it is not unusual for there to be adjunctive treatment with psychotropic medication to assist with symptoms, there is no medication to treat the condition of PTSD itself…"

25. On August 30, 2018, Dr. Goodwin wrote to Employer noting, ". . . Mr. M_____'s symptoms are directly related to past and current stressful and traumatic experiences that he has had on the job as a Sheriff's Deputy for Fremont County. He has been strongly encouraged by this writer to request lighter duties that would take him off of street duties and allow him to possibly achieve some recovery from his symptoms. He has also been encouraged to seek evaluation for possible disability due to the severity of his symptoms."

26. On October 4, 2018, Claimant prepared a Worker's Claim for Compensation for PTSD/mental stress claim on exposure over the years to horrible things he was exposed to at work.

27. On October 22, 2018 Ms. Jimenez reported, "…[Claimant] was receptive to review and practice of coping skills. He accepted an article about PTSD and a treatment facility that specializes in treating first responders…" Claimant testified and the ALJ finds that the article Ms. Jimenez referred to is probably the item marked as Claimant's Exhibit 9, called "Damaged Goods." The article concerns first responders suffering from PTSD, and discusses treatment options at a facility called Transformations Treatment Center located in Delray Beach, Florida. At his own expense, Claimant traveled to Florida and participated in the PTSD treatment program offered at Transformations Treatment Center from November 26, 2018 to December 13, 2018. He testified the treatment was beneficial. While the ALJ finds that Ms. Jimenez probably provided Claimant with the brochure for Transformations Treatment Center (Transformations) on October 22, 2018, the record evidence does not support a finding that she actually referred Claimant to this facility for treatment. Rather, the evidence presented persuades the ALJ that after reading the materials supplied by Ms. Jimenez, Claimant elected to seek treatment at Transformations on a self-referred basis.

28. Dr. Robert Kleinman performed a Psychiatric Independent Medical Examination (PIME) of Claimant at the request of Respondents on November 13, 2018. He prepared and issued an initial report dated November 17, 2018. He subsequently reviewed additional medical records and prepared addendum reports dated, November

21, 2018, December 11, 2018, January 18, 2019 and January 23, 2019. He also testified at hearing. During the PIME, Claimant told Dr. Kleinman that he associated his PTSD to events occurring between 2008 and 2017. Claimant mentioned the tractor-trailer rig that caught fire in 2008 killing the driver. He also recounted other deaths that included babies, suicides, drownings, motorcycle accidents, etc. As noted, Dr. Kleinman subsequently issued four "addendum" reports after reviewing additional medical and employment records. Based upon the evidence presented, the ALJ finds that while Dr. Kleinman agrees that Claimant suffers from PTSD resulting from exposure to "critical incidents" at work, he concludes that these incidents "were not psychologically traumatic events that would generally be considered outside Claimant's area of "usual experience" and that "similar events would not evoke symptoms of distress in a worker in similar circumstances." As evidenced in his addendums, Dr. Kleinman opines that other complicating stressors, including Claimant's 2015 heart attack, 2016 and 2017 coronary stent placement surgery, his hypertension; and the aforementioned job demotion in 2017, that included a reduction in pay were perpetuating his PTSD in 2018.

29. The ALJ notes Claimant previously experienced some cardiac issues in June, 2016 that required placement of stents. Claimant took about one month off work for the procedure. Cardiologist Adam Strunk, M.D., reported on October 10, 2016, ". . . Mr. M_____ is doing much better. His energy has improved now that he is on BiPAP. He does have some difficulty with the mask but is getting used to it and does feel much better now that he is utilizing positive pressure ventilation. He has been able to chase people working as a policeman without dyspnea or chest discomfort and notes that his breathing is much better." Claimant denied that his cardiac condition was playing a role in perpetuating his PTSD, testifying that this medical condition was not stressful. Review of the record evidence reveals that on December 11, 2017, Claimant treated for chest pain following stent placement on December 5, 2017. Claimant "was released to go back to work but did not believe that he could do so." On December 27, 2017, psychotherapy notes referenced Claimant was depressed and anxious and that he recently had a cardiac event that resulted in a stint. Based upon the medical record and the potentially life threatening nature of Claimant's cardiac condition, the ALJ finds his assertion that this condition was "not stressful" or playing a role in his ongoing mental health symptoms, including his PTSD dubious.

30. Claimant also asserted that his work demotion was not stressful suggesting that it was not playing a role in his mental health symptoms/PTSD. The medical records reflect that on April 19, 2018, Dr. Goodwin noted that Claimant mentioned that his demotion made him feel incredibly angry and distrustful of people around him and on December 16, 2018, Therapist Matthew Taylor noted that Claimant reported feeling triggered by "nightmares" and "financial stress." Based upon the evidence presented, the ALJ finds that the medical records contradict Claimant's assertion that his demotion and subsequent reduction in pay were not playing a role in perpetuating his PTSD symptoms in 2018.

31. As noted at paragraph 14 above, Tammy C_____ testified that she did not provide Claimant a list of the Employer's designated medical providers. Rather, Ms. C_____ testified that she assumed such a list was provided to Claimant because the box was checked on the Employer's form entitled "Worker's Compensation Checklist for all Claims". As Human Resources Director for Fremont County, Ms. C_____ updates job descriptions and processes workers' compensation claims for the County. She testified that the events that led to Claimant's PTSD fell within the job descriptions for Patrol Sergeants and Patrol Deputies. She confirmed that multiple officers respond to the type of incidents described by Claimant. She indicated that approximately 24 Patrol Deputies and Sergeants work for the sheriff's department and, other than Claimant, none have reported a stress claim.

32. The opinions expressed by Dr. Kleinman are credible and more persuasive than the contrary testimony of Claimant or the opinions expressed by Dr. Goodwin.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. To receive compensation or medical benefits, a claimant must prove that he/she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *see also, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

B. "Mental-mental" injuries are injuries in which mental impairment follows a solely emotional stimulus. *Oberle v. Indus. Claim Appeals Office,* 919 P.2d 918, 920 (Colo. App. 1996). "An injury that is 'the product of purely an emotional stimulus that results in mental impairment' requires a 'heightened standard of proof' to 'help prevent frivolous or improper claims.'" *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205–06 (Colo. App. 2012) (internal citations omitted). This is true because "[c]ases in which a claimed disability is based on emotional or psychological cause and in which physical injury is absent are less subject to direct proof and more susceptible to being frivolous in nature." *Dushane v. Beneficial Colorado, Inc.,* W.C. No. 4-218-217 (ICAO

July 17, 1996). In this case, there is little doubt that Claimant suffers from injuries that are "mental-mental" in nature. Rather, the question presented here is when did Claimant's PTSD become manifest, i.e. disabling so as to determine the date of injury and law in effect at the time.

Date of Injury

C. Concerning occupational disease claims, the date of injury is the date of the onset of disability, and the law in effect on that date governs the rights and liabilities of the parties. *Ortiz v. Charles J. Murphy & Co.,* 964 P.2d 595 (Colo.App. 1988). The onset of disability rule is designed to assist ALJs in resolving the difficult question of when the claimant actually sustains an occupational disease where resolution of that question affects the level of benefits. It is well settled that the onset of disability occurs when an occupational disease impairs a claimant's ability effectively and properly to perform his or her regular employment or which renders a claimant incapable of returning to work except in a restricted capacity. *Charles J. Murphy & Co*., 964 P.2d 595 (Colo.App. 1988); *Ricks v. Industrial Claim Appeals Office,* 809 P.2d 1118 (Colo.App. 1991.) In this case, the evidence presented persuades the ALJ that the disabling effects of Claimant's PTSD became evident prior to July 1, 2018.

D. Indeed, the evidence presented supports a conclusion that Claimant confirmed that the initial and primary incident which gave rise to his PTSD occurred in 2008 when he responded to a burning semi-truck. Claimant referenced other stressful incidents that occurred in 2010, 2011, 2013, 2014, and 2015, which unbeknownst to Claimant at the time, probably exacerbated his PTSD and the psychological sequela caused thereby. Claimant recognized that these incidents had a profound effect on him and he noticed a change in his psychological status by 2016-2017. He testified he had anger issues at home and at work. He lost interest in previously enjoyed activities. He was drinking excessively, was isolating himself and had trouble sleeping. He would scream at night. Consequently, he smartly sought psychological care with Ms. Jimenez in March 2017. Ms. Jimenez diagnosed PTSD as early as May 2, 2017 and by August 2017, the debilitating effects of Claimant's PTSD was causing persistent irritation with his co-workers and anger with having to listen to his radio and dispatch. He could not be located by radio and would lose control over his emotions, using unprofessional language over the radio and in the workplace. He was also having difficulty with the cognitive demands necessary for good report writing, all signs the ALJ concludes, from the evidence presented, are consistent with the disabling effects of PTSD.

E. By August 22, 2017, the debilitating effects of Claimant's PTSD, as outlined above, had resulted in performance issues Sheriff B_____ felt warranted discipline. As noted, Sheriff B_____ demoted Claimant from the rank of Sergeant to the rank of Patrol Deputy. Sheriff B_____ placed Claimant on three months' probation and reduced Claimant's hourly salary. The demotion lessened Claimant's work duties from that of a Patrol Sergeant to that of a Patrol Deputy. Also, Sheriff B_____ placed Claimant on "paid administrative leave," which rendered him incapable of returning to work while on leave. While Claimant was able to return to work, he did so in the reduced capacity of a Patrol Deputy and for lesser pay. By

December 2017, Claimant was involved in weekly PTSD treatment sessions. Around May 2018, Claimant felt he needed to speak to his lieutenant about seeing a "Comp Doctor" for his persistent mental health symptoms. In June 2018, Claimant had an emotional outburst at work after which he confided in another deputy that he could not sleep and was having problems controlling his anger. He reported he was taking medication and was involved in counseling. On June 13, 2018, Claimant reported to Dr. Goodwin that he did approach his lieutenant requesting help for psychological problems. He asked to be taken off of his front line duties and placed in an alternate position. These events would lead to a subsequent referral to Dr. Waxman for a fitness for duty evaluation. While the evaluation took place in August 2018, the sequela prompting the referral and the referral itself were ongoing and occurred before July 1, 2018. The materials presented to Dr. Waxman, including the information gleaned from Lieutenant Johnston in combination with the May and June records from Dr. Goodwin persuade the ALJ that Claimant was probably unfit for duty as early as June 11, 2018, when he confided to Deputy Johnson that he was having problems with symptoms consistent with the disabling effects of PTSD and certainly by June 13, when it was documented in Dr. Goodwin's notes that he requested to be removed from his front line position. Based on the evidence presented as a whole, the ALJ concludes that Claimant's occupationally induced PTSD was impairing his ability to effectively and properly to perform his regular employment duties as various times prior to July 1, 2018. Claimant's contrary assertion that he "had no injury" and was not disabled until Dr. Waxman found him "unfit for duty" on August 20, 2018, is unpersuasive. Accordingly, the ALJ concludes that Claimant's onset of disability predates July 1, 2018.

Compensability

F. As noted above, a claimant must prove, by a preponderance of the evidence, that his/her injury arose out of the course and scope of his employment with employer. Section 8-41-301(1)(b), C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arise out of" requirement is narrower and requires a claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id*.

G. A stress claim, or mental impairment claim, is compensable only if it satisfies very specific statutory requirements. Section 8-41-301(2)(a), C.R.S., addresses the heightened burden of proof as referenced in paragraph B above in order to prove the compensable nature of a claim for mental impairment. Prior to July 1, 2018, "old law" provided that:

> A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For

> purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer. The mental impairment that is the basis of the claim shall have arisen primarily from the claimant's then occupation and place of employment in order to be compensable.

H. Effective July 1, 2018, the mental impairment law changed ("new law"). The "new law" removed the term licensed "physician" and replaced it with licensed "psychiatrist". The "new law" also expanded the definition of "psychologically traumatic event" in PTSD claims to include cases where (A) The worker is the subject of an attempt by another person to cause the worker serious bodily injury or death through the use of deadly force, and the worker reasonably believes the worker is the subject of the attempt; (B) The worker visually witnesses a death, or the immediate aftermath of the death, of one or more people as the result of a violent event; or (C) The worker repeatedly visually witnesses the serious bodily injury, or the immediate aftermath of the serious bodily injury, of one or more people as the result of the intentional act of another person or an accident.

I. As concluded above, the ALJ determines that the disabling effects of Claimant's occupationally induced PTSD had become evident prior to July 1, 2018. Consequently, the ALJ determines that the analysis regarding the compensable nature of Claimant's mental impairment in this case falls under the requirements necessary to be proven under the law existing prior to July 1, 2018. Here, the ALJ is persuaded that Claimant failed to meet his burden to prove the compensable nature of his mental impairment claim under the version of the statute existing prior to July 1, 2018 for the following reasons:

> i. <u>There was no psychologically traumatic events outside of the Claimant's usual work experience</u>: "Old law" required that the accidental injury consist of a psychologically traumatic event generally outside of a worker's usual experience. The requirement of a "psychologically traumatic event" outside the worker's usual experience refers to the claimant's personal experience. See *Davidson v. City of Loveland Police Department*, W.C. No. 4-292-298 (October 28, 2001). Here, Claimant did not meet his burden to prove that the psychologically traumatic event(s) he claims are responsible for his PTSD were generally outside of a Patrol Deputy's and/or Deputy Sergeant's usual experiences. Indeed, Claimant conceded that his job as a Patrol Deputy and/or Deputy Sergeant contemplated the need to respond to such incidents and specifically

included that Claimant had a duty and responsibility to respond to calls for assistance; provide aid and assistance to victims by responding to injury accidents; assist emergency personnel in treating and transporting victims of traffic and other accidents; secure and protect crime scenes; assist and interview victims and witnesses; carry a side arm and be prepared to use it with deadly force. Claimant admitted that the traumatic events to which he associates his PTSD were part of his job, and part of his job description. Claimant admitted that responding to such incidents was not outside of a police officer's or sheriff deputy's usual experience. He admitted that other first responders from the Sheriff's department and from other agencies were normally present at the scene. PA Quackenbush and Dr. Robert Kleinman agreed that the accidents and injuries Claimant described as the basis for his PTSD were assumed to be a normal part of the job description and requirements of a County patrol officer.

ii. Claimant presented insufficient evidence that the events he asserts led to his PTSD would evoke symptoms in workers in similar circumstances: Under "old law", Claimant was required to prove that the psychologically traumatic event(s) would evoke significant symptoms of distress in a worker in similar circumstances. Courts have held that the question of whether the traumatic event would evoke symptoms of distress in a worker in "similar circumstances" is a question of fact to be judged by an objective standard for a worker with experience, training, and duties similar to the claimant. See *Davidson v. City of Loveland Police Department,* W.C. No. 4-292-298 (Oct. 28, 2001). In this case, Claimant did not meet his burden to prove that the psychologically traumatic event(s) would evoke significant symptoms of distress in a worker in similar circumstances. Indeed, County Human Resources Director, Tammy C_____, testified credibly that there were approximately 24 other patrol deputies and Sergeants who were responding to the types of calls that Claimant asserts led to his PTSD during the same time frame Claimant reported being exposed. As the workers' compensation administrator for the County, Ms. C_____ testified that she had not received any other reported stress claims associated with incidents similar to those described by Claimant. PA Quackenbush, also noted that Claimant's descriptions of horrific accidents and injuries often resulting in death could be assumed to be a normal part of the job description and requirements of a County patrol officer. Finally, Dr. Kleinman testified that the majority of first responders do not develop PTSD concluding that that the traumatic events reported by Claimant would not evoke significant symptoms of distress in a similar worker in similar circumstances As noted above, the evidence presented persuades the ALJ that Claimant's reaction to the traumatic events he was exposed to is probably an idiosyncratic response to events that Respondents established were unlikely to evoke significant symptoms of distress in a similarly situated worker called upon to respond to such calls. See generally, *Brown v.*

Family Inn of Colorado Springs, W.C. No. 4-271-351 (November 12, 1996).

iii. Disciplinary action and other work stressors may not support a compensable claim: Under "old law" a claim for mental impairment is not work related if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer. While Claimant denied the disciplinary action, i.e. his demotion in 2017 impacted his condition, the evidence suggests otherwise. Claimant testified that radio dispatch, other deputies, and report writing irritated him at work and he could not always control his feelings/emotions. On August 22, 2017, Sheriff B_____ disciplined Claimant and demoted him from the rank of Sergeant to the rank of Patrol Deputy because of repeated issues where Claimant did not listen to his radio, dispatchers could not locate him, his use of unprofessional language over the radio, and Claimant's poor report writing and report approval. Sheriff B_____ placed Claimant on three months' probation and reduced Claimant's hourly salary. On April 19, 2018, Dr. Goodwin noted that Claimant mentioned that the demotion made him feel incredibly angry and distrustful of people around him. Consequently, the suggestion espoused by Claimant that there was no persuasive evidence that the demotion caused or contributed to Claimant's PTSD is unconvincing. Here, the ALJ credits the opinion of Dr. Kleinman that Claimant's demotion was as least partially involved in his psychological presentation and the perpetuation of his PTSD symptoms.

J. Because Claimant failed to establish he was subjected to psychologically traumatic events generally outside his employment that would evoke significant distress in a worker in similar circumstances and/or that his demotion issued August 22, 2017, was taken in bad faith, his claim for mental impairment must be denied and dismissed. In reaching this conclusion, the ALJ is cognizant of the fact that cases applying the onset of disability rule typically involve a choice of laws question, as where a claimant's benefits would differ depending on the date of the injury. Eg. *SCI Manufacturing v. Industrial Claim Appeals Office*, 879 P.2d 470 (Colo. App. 1994) (applies onset of disability rule in determining whether claim governed by SB-218); *Henderson v. RSI, Inc*., 824 P.2d 91 (applies onset of disability rule to determine the claimant's average weekly wage). While an analysis of the evidence presented in this case under the "new law" surrounding mental impairment effective July 1, 2018 may have resulted in a different conclusion, the plausible inferences drawn from the record persuade the ALJ that Claimant was disabled from the ongoing effects of his PTSD no later than June 13, 2018, the date Dr. Goodwin documented that Claimant requested a different work assignment due to his PTSD. Here, the ALJ resolves the conflicts in the evidence in favor of Respondents to conclude that Claimant's ability to effectively and properly to perform his regular employment was impaired prior to July 1, 2018. Accordingly, the ALJ concludes that the version of C.R.S. § 8-41-301(2)(a) in effect prior to July 1, 2018 governs the rights and liabilities of the parties under this claim. When

analyzing the evidence under this “old” version of the statute, Claimant failed to meet his burden to prove that he suffered a compensable claim for mental impairment. Consequently, his remaining claims need not be addressed further.

ORDER

It is therefore ordered that:

1. Claimant has failed to meet the statutory requirements set forth in §8-42-301(2), C.R.S. to establish a claim of mental impairment. Therefore, his claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 1, 2019

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Has Claimant overcome, by a preponderance of the evidence, the DIME opinion of Dr. Tyler on the issue of Permanent Partial Disability?

II. Has Claimant shown, by a preponderance of the evidence, that he is entitled to Temporary Partial Disability payments?

III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to compensation for Disfigurement?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. This is an admitted claim. On Thursday, November 12, 2015, Claimant suffered an injury when a wood panel fell from a wall and struck him in the mouth. (Ex. A, p. 1; Ex. B. p. 2).

2. A First Report of injury was completed and filed that same day. (Ex. A). Respondent's timely submitted a General Admission of Liability on 11/30/15. (Ex. B).

3. On the date of injury, Claimant went to the emergency room, where he received limited treatment and was referred to Rebecca Facy, DDS, MD. (Ex. F, K). The Emergency Room report indicates Claimant suffered a 6 mm laceration to his lower lip, an upper lip laceration of 1.5 cm *which did not penetrate through the lip*, and damage to upper teeth including a fracture. (emphasis added). *Id.*

4. Dr. Facy repaired the lacerations to Claimant's mouth and extracted his #9 incisor. At that time, it was hoped to salvage the remaining 3 teeth which had been damaged. (Ex. K). Dr. Facy released Claimant to "light duty for six weeks . . . to avoid any job that has the potential of patient getting hit in the face." *Id.* at 87.

5. Claimant promptly returned to work, as reflected in his testimony and wage records. (Ex. M). Such records indicate he was paid for the remainder of the shift he was working (Thursday, Nov 12), as well as the next day (Friday, Nov. 13). Claimant missed two 8-hour days and three additional hours as an apparent result of his injury. (He left early after working 3 hours on Monday, Nov. 16; a snow day occurred on Nov. 17, he missed work on Nov 18, 19). Claimant returned to work, full time, on Friday, Nov. 20. (Ex. M, p. 120).

6. Dr. Facy provided follow up treatment through December 2, 2015. He was then seen by his designated ATP, Dr. Frank Polanco, along with Scott Draper, DDS, for remaining dental and oral issues. (Ex. E, H).

7. Claimant first saw Dr. Polanco on December 8, 2015, at which time Dr. Polanco released Claimant to return to full duty, with no restrictions. (Ex. E, p. 16).

8. Claimant continued to treat with Dr. Draper and Dr. Polanco, until separating from his job in February of 2016. He then moved to Eugene, Oregon, where he treated with Timothy Welch MD, DDS, and Larry Over, DDS. (Ex. I & Ex. L). Ultimately, Claimant had his top four front teeth extracted and replaced with permanent porcelain implants. *Id.*

9. Dr. Larry Over released Claimant at MMI (effective 1/17/2018) with 0% impairment, but recommended maintenance treatment of replacement implants when needed. (Ex. L, pp. 103-104). Respondents filed a Final Admission of Liability in accordance with the report of Dr. Over, and admitted for maintenance care as recommended.

10. Claimant, pro se, objected to the Final Admission, filed an Application for Hearing and also sought a Division Sponsored IME. After a prehearing conference, all issues endorsed by for hearing were held in abeyance pending completion of the DIME process.

11. Claimant attended a DIME appointment in Colorado Springs with Dr. John Tyler on October 22, 2018. Upon review of all medical records and a physical examination of the Claimant, Dr. Tyler issued his report which states:

> Examination essentially shows 4 perfectly aligned upper teeth including both incisors. There is no scarring to the external oral region of his face. There is no paralysis or weakness in the musculature of the oral cavity that I can note. There is, by the patient's report, no sensory deprivation externally around his mouth. (Ex. D, p. 11).

12. After spending over 30 minutes counseling the Claimant on his inability to provide any type of impairment, Dr. Tyler closed his report, concluding that Claimant did not have any permanent, ratable impairment, and also agreed with the MMI date noted by Dr. Over. (Ex. D, p. 11.)

13. Respondents filed a Final Admission in accordance with the DIME report, again admitting for recommended maintenance care. Medical expenses to date were admitted for $22,771.56. (Ex. C).

14. Claimant objected to the Final Admission. His Application for Hearing, dated 12/1/2018, endorsed issues of Compensability, Medical Benefits, Disfigurement, Scheduled Impairment, Temporary Partial Benefits from date of injury through MMI, and discussed a penalty claim alleging that ‘Respondents Failed to report

the injury within 10 days'. He also alleged that he was entitled to lost wages, due to missing 3 days of work due to injury.

15. At the outset of the hearing, this ALJ requested a clarification of issues endorsed by the parties. After a short discussion between the parties, it was determined that compensability was not at issue, since Respondents have filed multiple admissions. Claimant also withdrew his medical benefit claim, since the recommended care he was seeking (replacement prosthetics) was already admitted on the Final Admissions, and reiterated by Counsel for Respondents.

16. Claimant then proceeded on his claims seeking permanent partial disability/overcoming the DIME of Dr. Tyler, disfigurement, and temporary partial disability benefits for the period 11/16/15 to 2/9/2016.

17. At hearing, Claimant testified on his own behalf. He indicated that he was seeking temporary benefits for lost wages. He did not present any records of lost wages, and testified only that he was 'uncomfortable' working with panels for Employer and thus lost out on some wages. Lost wages were never quantified by Claimant.

18. Upon cross-examination Claimant stated that the only 'lost wages' had already been requested by Claimant, and been paid by Employer, upon his resignation in February of 2016. In fact, upon resigning his position with Employer, Claimant requested, and was paid for the 19 hours (Two 8-hour days plus 3 hours) of time that he missed from his work in November, 2015 due to the injury. (Ex. M, p. 120).

19. During the period that Claimant alleges he missed out on work hours due to his fear of working with panels, he had already been released by Dr. Polanco to return to full duty.

20. Claimant further testified that he believes he is entitled to permanent impairment in accordance with the Worker Compensation Statutes for loss of his teeth.

21. Claimant is seeking disfigurement, asserting that he incurred scarring on his upper lip, and that his gum line on his upper front teeth is higher than it was before the injury/implants.

22. The ALJ has viewed Claimant's mouth, and makes these observations: There is no visible scarring anywhere on Claimant's face. In the course of ordinary conversation, and even when Claimant is smiling, there is no defect in Claimant's teeth apparent to the viewer. Once Claimant used his fingers to pull fully upwards on his upper lip, the ALJ could then view, at a slightly upward angle, that Claimant's gum line is slightly raised, due to the implant protocol.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case are not interpreted liberally in favor of either party. Section 8-43-201, C.R.S. (2016).

B. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. Pursuant to Section 8-43-215, C.R.S., the decision of the ALJ contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has discretion to make credibility determinations, draw plausible inferences from the record, and resolve conflicts in the evidence. *Davison v. Indus. Claim Apps. Office*, 84 P.3d 1023, 1025 (Colo. 2004). This decision does not address every item contained in the record, and incredible or implausible testimony or unpersuasive inferences that have not been specifically addressed have been implicitly rejected. *Magnetic Eng'ng, Inc. v. Indus. Claim Apps. Office*, 5 P.3d 385, 389 (Colo. App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. Colorado Jury Instructions, Civil, 3:16 (2018). The ALJ, as fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968); see also *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

D. The ALJ finds Claimant to be sincere in his testimony. There is no doubt he suffered pain from this injury, and considerable anxiety and inconvenience for some time afterwards. He was no doubt frightened by the experience, and was reluctant to work for some period of time following the injury. Nonetheless, the ALJ must apply the law as written. Further, Claimant did not present any expert testimony. The only expert opinions in evidence are found in the medical records submitted by Respondents. These records are consistent in finding that Claimant did not suffer any ratable permanent impairment as a result of the workplace injury.

Overcoming The DIME Physician's Opinions/Permanent Disability

E. While a DIME physician's findings of causation, MMI and whole person impairment are binding on the parties unless overcome by "clear and convincing evidence," the increased burden of proof required by the DIME procedures is not applicable to scheduled injuries Section 8-42-107(8)(b)(III) C.R.S. *Maestas v. Am. Furniture Warehouse*, W.C. No. 4-662-369 (ICAP June 5, 2007); *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004).

F. In this matter, Claimant seeks to overcome the DIME physician's opinion that he was not entitled to any impairment-on or off the schedule. As Claimant is seeking impairment 'on the schedule' for a loss of teeth, a mere preponderance of the evidence is required to overcome the DIME opinion. Despite this lowered burden, Claimant has failed to present sufficient evidence to overcome the DIME Physician's 0% rating.

G. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

H. In this matter, the DIME physician has properly applied the AMA Guides and, after thoroughly noting his explanation in his report, was "unable to come up with any type of impairment for [Claimant's] injuries or current symptomatology." Claimant has presented no evidence in the form of medical testimony to overcome the DIME physician's explanation and rating.

I. Permanent partial disability under the schedule found in §8-42-107(2) is available to a Claimant who suffers a workplace injury which results in functional impairment or disablement. *Warthen v. Indus. Claim Apps. Office*, 100 P.3d 581, 583 (Colo. App. 2004). Though addressing an earlier iteration of the Act, the Colorado Supreme Court found that impairment ratings measure "complete or partial loss of use." *World of Sleep, Inc. v. Davis*, 536 P.2d 34, 35 (Colo. 1975). Simply stated, without functional impairment or disablement, a Claimant is not entitled to an impairment rating under the schedule.

J. Though loss of a tooth is included on the schedule of impairments under §8-42-107(2)(ff), Claimant has not lost *functional* use of his teeth due to the permanent dental implants. While impairment measurements for nearly all other parts of the human body are measureable in terms of loss of range of motion or diminished functionality with respect to sensory organs, teeth occupy a unique niche. With teeth and modern dentistry as shown in Claimant's medical records, their functionality can be permanently repaired with dental implants, subject only to periodic replacement should one fail. Respondents have already admitted for any replacements which might be needed in the future.

K. As such, dental implants are not comparable to other prosthetic devices which might only *partially* replace functionality. It is the unique nature of a tooth, and the technology of permanent dental implants, which supports the DIME physician's 0% impairment rating. Additionally, due to the permanent nature of the dental implants, Claimant's case is not similar to cases involving removable dentures.

L. Claimant has presented no evidence to overcome the DIME physician's opinion on impairment or MMI. Claimant has not lost functionality of his teeth due to permanent replacement by means of implants. The ALJ finds, by a preponderance of the evidence, that Claimant has not overcome the DIME's determination.

Temporary Partial Disability

M. Temporary disability benefits are payable if the industrial injury causes a disability and as a result of the disability the claimant suffers a temporary wage loss. Section 8-42-103(1), C.R.S. 2019*; PDM Molding, Inc. v. Stanberg*, 898 P.2d 542, 545 (Colo. 1995). The claimant bears the initial burden to prove the entitlement to temporary disability benefits. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). In this case, Claimant seeks an award of Temporary Partial Disability Benefits from the date of his injury through MMI.

N. At hearing, Claimant testified that he was not earning as much money due to loss of hours after his injury because he was unwilling to work with panels for fear of future injury. While a letter from Claimant's initial treating dentist placed him on light duty for six weeks, he testified at hearing that the only time he missed due to injury was reflected in wage records, which show two missed 8-hour shifts and the remaining three hours of his shift on November 16, 2015.

O. Further, upon beginning treatment with his ATP, Dr. Polanco, as of December 8, 2015, Claimant was released to full duty. Any inability to work with panels after that date was the result of Claimant's own stated hesitance (however sincerely felt), rather than work restrictions placed on him by an ATP.

P. Claimant has not presented any evidence of wage loss as a result of the injuries. In fact, the wage records in evidence indicate that upon Claimant's resignation from Employer in February of 2016, he requested and was remunerated with full wages for the 19 hours that he missed as a result of his work. Claimant has failed to meet his burden to prove entitlement to temporary disability benefits.

Disfigurement

Q. "If an employee is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view, in addition to all other compensation benefits provided . . . the director [or ALJ] may allow compensation . . . to the employee who suffers such disfigurement." §8-42-108(1), C.R.S. (2019). The ALJ is afforded great discretion when determining the amount of compensation to be awarded for

disfigurement. *Garcia v. Colo. Dep't of Corr.*, W>C. No 4-827-794-01 (ICAP Jan 27, 2012) citing Section 8-42-108, C.R.S.

R. As noted in Dr. Tyler's DIME report, and as observed by the ALJ at hearing, no outward scarring was visible on Claimant's mouth, lips or face.

S. Further, Claimant's receded gum line due to the dental implants does not warrant an award of disfigurement. To demonstrate to the ALJ that his gum line has receded, Claimant forcibly pulled back his upper lip with his hands. As such, the receded gum line is not *normally exposed to public view.* Despite the distress Claimant may experience from this change in his appearance which might manifest itself while, for example, brushing his teeth, he has not proven a claim for disfigurement under Colorado Workers Compensation law.

ORDER

It is therefore Ordered that:

1. Claimant has failed to overcome the DIME opinion. His Impairment Rating remains at 0%. His request for Permanent Partial Disability payments is denied and dismissed.

2. Claimant's claim for Temporary Partial Disability payments is denied and dismissed.

3. Claimant's claim for Disfigurement benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 1, 2019

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-084-677-002

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable injury on May 9, 2018.

II. Whether Claimant established by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment.

III. Whether Dr. Lauren Bull is an authorized treating physician.

IV. Whether Respondents are liable for the medical treatment provided by Denver Health.

STIPULATIONS

1. Claimant's average weekly wage is $494.00.
2. The issue of temporary disability benefits is reserved.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on November 10, 1960 and was 58 years old on the date of hearing.
2. Claimant attended 12 years of school.
3. At the time of her injury, Claimant worked performing housekeeping duties for Respondent- Employer. She was normally a floor technician, but on the night of her injury she had been assigned housekeeping duties.
4. Claimant was hired at Respondent-Employer in October 2017.
5. Claimant worked full time the second shift, 3:00 p.m. to 11:30 p.m.
6. Claimant's responsibilities as a floor technician included cleaning and polishing floors. Her responsibilities as a housekeeper included lifting, sweeping, cleaning restrooms, and other cleaning tasks in the Gary Pavilion at Children's Hospital.
7. Claimant was injured on May 9, 2018 in the course and scope of her employment. On that date, she lifted several bags of laundry, which she did not realize contained wet towels. She rapidly lifted the heavy bags from the floor to a

basket, which was about three to four feet off the floor. While lifting the heavy bags of wet towels, she injured her right upper extremity - shoulder.

8. Claimant verbally reported her injury to Erin Drayton, one of her supervisors, on the night of her injury. Subsequently she verbally reported her injury to another supervisor, Doug Banker, as well as to Victoria Zenteno, training manager, and James Burke, resident regional manager, employed by Respondent-Employer at Children's Hospital.

9. In contradiction to Claimant's testimony, Victoria Zenteno and James Burke testified that they never received notice of a work-related shoulder injury until after Claimant filed her claim for compensation on August 8, 2018. (*Exhibit 5*).

10. Claimant worked the rest of her shift on May 9, 2018. While leaving work that day, Erin, a supervisor, asked Claimant what was wrong with her shoulder. Claimant told Erin that it was hurting really badly. (*Hearing Tr., p. 21).* She reported to work the next day and verbally advised another supervisor, Doug Banker, of her injury. Mr. Banker instructed her to go to physical therapy at Children's Hospital (*Hearing Tr., p. 23*).

11. Claimant reported to the physical therapy department at Children's Hospital on May 10, 2018. However, a Hospital representative informed her that she could not use the Hospital's services because she worked for a contractor for the Hospital, and not the Hospital itself. Thereafter, Claimant went to Human Resources, spoke with Victoria Zenteno, and advised Ms. Zenteno that Children's Hospital would not treat her for her work injury because she worked for a contract company. At that time, Ms. Zenteno neither directed Claimant to a specific medical provider nor provided her a list of 4 medical providers. Claimant then told Ms. Zenteno that she was going to Denver Health to get medical treatment. At no time did Ms. Zenteno tell Claimant she should not treat at Denver Health for her work injury. (*Hearing Tr., p. 24-25*).

12. Because Claimant could not receive medical services at Children's Hospital, Claimant went to her personal medical provider, Denver Health, on May 11, 2018.

13. By report dated May 11, 2018, Jenna Cohen, PA at the Emergency Department of Denver Health Medical Center, noted:

> [Patient] works as a tech at children's hospital, has been doing a lot of lifting, housekeeping at work. 3 days ago, started having right shoulder pain and decrease rom [range of motion]. Has continued pain, although it has improved, but still decreased abduction.

PA Cohen diagnosed "Acute pain of right shoulder" and prescribed Voltaren and Flexeril. (*Exhibit I, Bate pp. 162-166*).

14. PA Cohen returned Claimant to work on May 15, 2018 with a restriction of "no heavy lifting over 10 pounds for 2 weeks." (*Exhibit 16*). Thereafter, Claimant worked for several weeks at full duty.

15. Claimant did not seek additional medical care for several weeks because she lost her health insurance. Claimant subsequently qualified for Medicaid, and then returned to Denver Health, and was evaluated by Dr. Lauren Bull.

16. By report dated June 20, 2018, Lauren Bull, M.D., at Denver Health, examined Claimant, prescribed occupational therapy, and returned her to work on June 21, 2018. At that visit, Dr. Bull noted Claimant's right shoulder had limited range of motion and mild decrease in strength. The possible diagnosis at that time included rotator cuff tendinitis, versus small tear, versus osteoarthritis. (*Exhibit I, Bates pp. 172-175; Exhibit 16, Note of June 20, 2018*).

17. Claimant initially did not report her injury in writing, but she later applied for leave under the Family and Medical Leave Act (FMLA). Subsequently she submitted a "Medical Certification Form for Family Medical Leave Act" to Respondent-Employer. Dr. Bull completed a section of the form on June 22, 2018. Dr. Bull noted on the Form that Claimant's medical "condition [was] due to a work related injury or illness." (*Exhibit D, Bate page 81*). Both Ms. Zenteno and Mr. Burke testified that the form was received by Employer's Human Resources department and that neither of them noticed that Dr. Bull had opined that Claimant's condition was work related. Ms. Zenteno further testified that Katherine Ernst, a human representative who has left the employment of Respondent-Employer, handled the leave of absence request. (*Hearing Tr. p. 77*).

18. Respondent-Employer approved a medical leave absence from June 28 to September 15, 2018. (*Exhibit 16, Bate p. 119*).

19. Because Respondent-Employer could not accommodate Claimant's restrictions, on or about June 4, 2018, Claimant went to work for another cleaning contractor, Carluttle DC/ARS, which provided cleaning services to the Veteran's Administration Hospital. (*Hearing Tr., p. 30*). At this new job she worked full time, earning $16.85 per hour. Her wages were in excess of her earnings for Respondent-Employer. While she started as a housekeeper, she progressed to floor technician, and then to supervisor.

20. Claimant has never returned to Respondent-Employer, although on several occasions she has requested reinstatement.

21. Claimant has not suffered a shoulder injury before or after May 9, 2018.

22. At the hearing, Claimant testified credibly that she continues to suffer from pain and restricted range of motion of her right shoulder and that she wants to receive treatment for her shoulder injury.

23. On August 10, 2018, Claimant participated in an initial occupational therapy evaluation performed at Denver Health by Joshua Knight, OT. He noted that the patient complained of "right shoulder pain, secondary to lifting when attempting to move a bag full of wet towels." (*See Exhibit 7, Report of Dr. Lesnak dated December 21, 2018, p. 4*).

24. Claimant underwent additional physical therapy through Denver Health on August 13, 20, 27 of 2018, as well as September 20, 2018.

25. In his IME report and in his deposition, Dr. Lesnak diagnosed subjective complaints of intermittent right anterior/lateral upper arm pain with residual stiffness of her right upper arm and shoulder girdle region. He stated: "If indeed the patient did lift multiple heavy bags of linen and twist to the right and place them on a nearby cart, it is possible that she may have sustained a mild strain of her right proximal biceps and/or right lateral deltoid muscle/tendons. (*See Exhibit 7, p. 6*).

26. In his deposition, Dr. Lesnak opined that:

> Well, based on her reported mechanism of the incident, and then my review of the records after my evaluation of her, I felt that she may have possibly had a soft tissue injury of her proximal biceps tendon or possibly her deltoid muscle surrounding her shoulder, and that at the time of my evaluation, she possibly may have some residual right proximal biceps tendinitis or possibly a residual mild lateral deltoid·myofascial syndrome. (*Lesnak Tr., pp. 8-9*).

27. Dr. Lesnak opined Claimant has likely not reached maximum medical improvement as it pertains her upper extremity - shoulder condition. He recommended additional medical treatment including 3-4 more weeks of outpatient occupational therapy, which should be performed by a physical therapist. (*See Exhibit 7, p. 6; Lesnak Tr., p. 10*).

28. Despite Respondents' having notice of Claimant's work injury, Respondents have not offered Claimant a choice of four medical providers to assess and/or treat her work related injury.

29. In her report dated June 20, 2018, Dr. Bull indicated that the "onset date" for Claimant's right upper extremity pain was April 15, 2018, (*Exhibit I, Bates p. 171*), but Claimant denied telling Dr. Bull that her pain began on that date. (*Hearing Tr., Bates p. 44*). Consistent with Claimant's testimony is the information Dr. Bull put on the FMLA Form. The FMLA form completed by Dr. Bull on June 22, 2018, indicates the date the condition commenced was "approx. 4/15/18." (*Exhibit D, Bates p. 81*).

30. By her own admission, Claimant is not good at remembering dates. (*Hearing Tr., p. 44*). The ALJ finds that Claimant's inability to remember certain dates with exact precision does not diminish Claimant's credibility when taken in context with the record as a whole.

31. Respondents argue that the claim should be denied because of:

    a. Perceived discrepancy in reported date of injury;

    b. Contradictory testimony about when Claimant reported her injury to Respondent-Employer;

    c. Mr. Burke's testimony that Claimant herself asserted that she did not have a work-related injury;

d. Dr. Lesnak's opinion that Claimant did not suffer a right shoulder injury but rather a bicep or deltoid strain; and

e. Dr. Lesnak's opinion that Claimant had "extremely self-limiting behavior and pain behaviors." (See Hearing Tr., pp. 13-14).

32. Claimant injured her right upper extremity-shoulder- on May 9, 2018.

33. Claimant verbally reported her injury to Employer on May 10, 2018.

34. Employer referred Claimant to the physical therapy department at Children's Hospital for treatment. Children's Hospital, however, refused to treat Claimant since she was not an Employee of the hospital, but an employer of a contractor.

35. Neither Employer nor Insurer provided Claimant a list of four medical providers from which Claimant could choose to treat her injury.

36. Since Employer and Insurer failed to provide Claimant a list of medical providers to treat her work injury, Claimant went to Denver Health for medical treatment.

37. The medical treatment provided by Denver Health on May 11, 2018, June 20, 2018, and August 10, 2018, was reasonable and necessary to evaluate and treat Claimant's work injury.

38. The physical therapy provided by Denver Health on August 13, 20, and 27 of 2018, and September 20, 2018, was reasonable and necessary to treat Claimant's work injury.

39. Claimant selected Dr. Bull, at Denver Health, to be her authorized treating physician for her work injury. Therefore, Dr. Bull is an authorized treating physician.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of Claimant nor in favor of the rights of Respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable injury on May 9, 2018.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ finds and concludes Claimant has proven by a preponderance of evidence that she suffered a compensable injury to her right upper extremity and/or shoulder on May 9, 2018 for the following reasons:

Claimant credibly testified that she suffered an injury to her right shoulder when she lifted bags of wet towels at work. In addition, medical records from Denver Health corroborate Claimant's history of injury and her requests for medical attention. Moreover, Claimant's complaints to her medical providers, in injury reports, and in disability forms, are generally consistent as to mechanism of injury and the body part affected.

Additionally, in the Medical Certification Form for Family Medical Leave Act Form, dated June 22, 2018, Dr. Bull indicated that Claimant's right shoulder injury was work- related. Thereafter, Claimant submitted this report to Respondent-Employer as part of her FMLA application.

Even Respondents' independent medical examiner, Dr. Lesnak, testified that if Claimant's testimony about the mechanism of injury is credible, she probably suffered an injury to right arm or deltoid muscle.

Claimant testified credibly and without contradictory evidence that she did not have a problem with her right shoulder prior to her lifting bags of wet towels at work. Claimant also testified credibly and without contradictory evidence that she did not have an injury to her right shoulder after the May 9, 2018, industrial accident.

There is a minor discrepancy between the date of injury as reported by Claimant, May 9, 2018, and PA Cohen's statement that the shoulder injury occurred three days before the emergency room visit on May 11, 2019, which would make the date of injury May 8, 2018. Claimant testified that she was injured on May 9, 2018, and then reported the accident the next day to Doug Banker, who sent her to the physical therapy department at Children's Hospital. She testified that she went to Children's Hospital, which turned her away, on that same day. On the next day, May 11, 2018, she went to Denver Health. She testified that her visit to Denver Health was two days after the injury, not three. No credible and persuasive evidence was presented that Claimant was not working on May 8 or 9, 2018. This ALJ resolves this apparent conflict in the evidence finding that the date of injury is May 9, 2018.

For the same reasons, the ALJ is not persuaded that the injury date was April 15, 2018, as noted by Dr. Bull in a portion of the medical record. By her own admission, Claimant is not good at remembering dates. By the time she saw Dr. Bull on June 20, 2018, several weeks had elapsed between May 9 and that initial visit. Moreover, Dr. Bull put in the Family Medical Leave Act Form that the April 15, 2018, date was an approximation. Therefore, this ALJ reasonably infers that either Claimant or Dr. Bull erred in reporting of the date of injury and such error does not negatively impact Claimant's credibility.

This ALJ recognizes that there is contradictory evidence regarding whether Claimant verbally reported her injury to Respondent-Employer before her written report on August 8, 2018. Claimant testified that she verbally reported her work-related injury to Erin Drayton, one of her supervisors, on the night of her injury. Subsequently she testified that she verbally reported her injury to Doug Banker, Victoria Zenteno, and James Burke. Ms. Zenteno and Mr. Burke deny that Claimant ever gave them verbal notice of the injury. Because Ms. Drayton and Mr. Banker did not testify, Claimant's testimony regarding verbal report of injury to those two individuals stands unrebutted. As for Ms. Zenteno and Mr. Burke's testimony, this ALJ finds that neither witness worked in Human Resources, nor neither indicated that they conducted any research about the alleged incident. On balance, given the preponderance of other available information, this ALJ resolves the contradiction in the evidence by finding that the alleged failure to report the injury verbally to the two testifying witnesses does not call into question Claimant's overall credibility. Therefore, whether Claimant successfully reported her injury verbally to some employer representatives is not relevant to the ultimate finding whether Claimant suffered a compensable injury to her right upper extremity and/or shoulder.

The ALJ finds and concludes that the variances contained in the medical records regarding the date of injury are of the type that can occur when a patient is trying to convey to various medical providers what happened and the various medical providers are trying to document what was explained to them. The ALJ also finds and concludes that there are variances in the testimony of Claimant and the Employer witnesses regarding when and how Claimant reported her injury to Employer. However, the ALJ ultimately finds and concludes Claimant is credible and that she verbally reported her injury to her Employer on May 10, 2018.

As noted by the Colorado Supreme Court:

> It must be borne in mind that inconsistencies are not uncommon to the adversary process which, of necessity, must rely upon the sometimes contradictory and often incomplete testimony of human observers in attempting to reconstruct the historical facts underlying an event.

See People v. Brassfield, 652 P.2d 588, (Colo. 1982).

Moreover, Dr. Lesnak's testimony that Claimant did not injure her right shoulder joint, but rather her right arm or deltoid muscle, is not persuasive evidence that Claimant did not suffer any injury to her right upper extremity and/or shoulder while working for Employer. Furthermore, his testimony that he noted extreme guarding behaviors does not prove the absence of any injury. On the contrary, such evidence illustrates the importance of further evaluation and assessment of Claimant's condition to determine the extent of her compensable work injury.

The ALJ finds and concludes that Claimant has established by a preponderance of the evidence - as summarized above – that she suffered a compensable injury to her right upper extremity and/or shoulder on May 9, 2018.

II. Whether Claimant established by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment.

Based upon Claimant's pain complaints, and the medical reports from Denver Health, Claimant has established the need for medical treatment for her right upper extremity and/or shoulder. In addition, Dr. Lesnak's testimony that Claimant is not at MMI and needs three to four weeks of additional therapy, further supports this ALJ's finding and conclusion that Claimant is in need of additional medical treatment to cure and relieve her from the effects of her industrial injury.

Therefore, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment for her right upper extremity and/or shoulder.

III. Whether Dr. Lauren Bull is an authorized treating physician.

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the insurer will compensate the provider for the services rendered. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995).

Section 8-43-404(5)(a)(I)(A), applicable to this injury and claim for benefits, provides that:

> "In all cases of injury, the employer or insurer shall provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical provider, where available, in the first instance, from which list an injured employee may select the physician who attends said injured employee."

The statute further provides that if "the services of a physician are not tendered at the time of injury, the employee shall have the right to select a physician or chiropractor."

This statute affords the employer the right to designate at least four physicians and/or corporate providers that are deemed authorized to provide medical treatment. Consistent with the version of § 8-43-404(5)(a) that was amended in 1997, the current version provides that the employer's right to designate the authorized providers may be lost and the right of selection passed to the claimant if medical services are not tendered "at the time of injury." *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987).

The Director (Director) of the Division of Workers' Compensation (DOWC) has adopted regulations governing the application of these statutory provisions. Recognizing that the statute does not define precisely when and how the mandated "list" of providers must to be given to the injured worker, the Director has adopted WCRP 8-2(A)(1). This rule states that:

> A copy of the written designated provider list must be given to the injured worker in a verifiable manner within seven (7) business days following the date the employer has notice of the injury.

Consistent with the statute, WCRP 8-2(E) provides that that:

> If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing.

Claimant reported her injury to Employer on May 10, 2018. Upon receiving notice of Claimant's injury, Employer referred Claimant to only one medical provider, Children's Hospital physical therapy department. Moreover, Claimant went to Children's

Hospital and they refused to treat Claimant since she did not work for the hospital, but a contractor providing services for the hospital.

There is a lack of credible and persuasive evidence that Respondents provided Claimant a list of four medical providers who were willing to treat Claimant. Therefore, Claimant went to Denver Health and was treated by Dr. Lauren Bull. Since Respondents failed to provide Claimant with a choice of four medical providers pursuant to Section 8-43-404(5)(a)(I)(A), C.R.S. and Rule 8-2, they have waived their right to designate a treating physician in the first instance. As such, Claimant is free to choose her own physician, and Claimant has chosen Dr. Lauren Bull at Denver Health.

Therefore, the ALJ finds and concludes that Denver Health and Dr. Bull are authorized to treat Claimant.

IV. Whether Respondents are liable for the medical treatment provided by Denver Health.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found above, Denver Health and Dr. Bull are authorized to treat Claimant for her work related injury. The ALJ finds and concludes that the treatment provided by Denver Health on May 11, 2018, June 20, 2018, and August 10, 2018, is reasonable and necessary to treat Claimant's work injury. The ALJ also finds and concludes that the physical therapy provided by Denver Health on August 13, 20, and 27 of 2018, and September 20, 2018, was reasonable and necessary to treat Claimant's work injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury to her right upper extremity and/or shoulder on May 9, 2018.
2. Dr. Bull, at Denver Health, is authorized to treat Claimant for her work injury, subject to the fees set forth by the Colorado Workers' Compensation Medical Fee Schedule.
3. Respondents shall pay for the medical treatment provided by Denver Health on May 11, 2018, June 20, 2018, and August 10, 2018, pursuant to the Colorado Workers' Compensation Medical Fee Schedule.

4. Respondents shall also pay for the physical therapy provided by Denver Health on August 13, 20, and 27 of 2018, and September 20, 2018, pursuant to the Colorado Workers' Compensation Medical Fee Schedule.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 2, 2019.

Denver, CO 80203

ISSUES

I. Whether Respondent proved by a preponderance of the evidence that Claimant's claim for compensation is barred by the two-year statute of limitations set forth in § 8-43-103(2), C.R.S.

II. If Claimant's claim is barred by the two-year statute of limitations, whether Claimant proved by a preponderance of the evidence that there existed a reasonable excuse for the delay and that Respondent was not prejudiced thereby.

III. If Claimant's claim is not barred by the statute of limitations, whether Claimant proved by a preponderance of the evidence a prima facie compensable claim under § 8-41-209, C.R.S.

IV. If Claimant has proved a prima facie compensable claim under § 8-41-209, C.R.S., whether Respondent has proved by a preponderance of the evidence that Claimant's cancer did not arise out of Claimant's employment as a firefighter.

V. If the claim is compensable, whether Claimant has proved by a preponderance of the evidence that Respondent is responsible for the costs of Claimant's January 15, 2016 surgery and subsequent treatment.

STIPULATIONS

The parties stipulate Claimant has completed five or more years of employment as a firefighter, has cancer of the genitourinary system, and Claimant's employment physical from the late 1990s and physicals thereafter revealed no substantial evidence of cancer or related impairment that preexisted his employment as a firefighter.

FINDINGS OF FACT

1. Claimant is a 46-year-old man who has worked as a firefighter since the late 1990s, engaging in fire suppression and overhaul duties.

2. On December 9, 2015, at age 43, Claimant underwent a lumbar MRI for low back pain, which incidentally revealed a left kidney mass. Claimant sought treatment with a urologist who confirmed a diagnosis of renal clear cell carcinoma.

3. Claimant notified Employer of his diagnosis on December 18, 2015. The Report of Injury notes Claimant was diagnosed with kidney cancer and had been informed by his physician that "it could be due to the chemicals/toxins he has been exposed to at

work." It was further noted that it was "[e]xplained [to Claimant] that this starts a paperwork process and will leave his options of care open."

4. On December 30, 2015, Respondent filed an Employer's First Report of Injury form with the Division. Respondent filed a Notice of Contest on January 13, 2016.

5. On January 15, 2016, Claimant underwent treatment a successful nephrectomy to treat the renal cell carcinoma. He did not undergo any chemotherapy or radiation therapy. As of date of hearing, remains in remission.

6. Claimant did not work from January 15, 2016 through March 14, 2016 while recovering from the nephrectomy. Respondent paid Claimant line of duty wages during this time period, which were his full wages. Claimant did not perform any services for Respondent during this time period.

7. Claimant returned to regular full-duty work on March 15, 2016.

8. On March 16, 2016, Claimant's counsel sent Respondent the following documents: (1) an Entry of Appearance; (2) Objection to Admissions; (3) Notice of Objection to Verbal Communications with Claimant, Treating Physicians or Healthcare Providers; (4) Claimant's Combined Ongoing Production Request and Interrogatories; (5) Notice Pursuant to §8-41-203(4), C.R.S.; and (6) Release for Authorizations.

9. The Objection to Admissions and the Notice of Objections to Verbal Communications stated Claimant objected to any admissions of liability that had been filed, and to any verbal communications between any representative of Respondents and Claimant, respectively. The Combined Ongoing Production Request and Interrogatories requested information from Respondent.

10. The Notice Pursuant to § 8-41-203(4), C.R.S. notified Respondents Claimant may pursue any liable third parties arising out of "an injury and/or occupational disease occurring on 12/18/15."

11. The documents also contained a cover letter requesting that the claim file be provided and that all checks and past due temporary disability benefits, permanent disability benefits, and disfigurement be sent through counsel's office. The record contains no evidence of further written communications between Claimant and Respondent until Claimant's April 20, 2018 Application for Hearing. Claimant contends that his notification of his condition to Employer, along with the March 16, 2016 documents served as an informal substitute for a claim, providing constructive notice to Respondent of a compensable claim.

12. On April 26, 2017, Annyce Mayer, M.D. performed an Independent Medical Examination (IME) at the request of Claimant. Dr. Mayer interviewed and physically examined Claimant and reviewed his medical records. Dr. Mayer explained that smoke and soot produced by fires contains numerous carcinogens and, although it was impossible to estimate the intensity, duration or frequency of Claimant's exposures, it was likely Claimant was exposed to most, if not all, of these carcinogens over the

course of his 19 years as a firefighter. Dr. Mayer noted multiple risk factors for kidney cancer including, *inter alia*, hypertension, obesity, heavy smoking, and chronic renal failure. She noted Claimant was a non-smoker with no history of hypertension, chronic kidney failure, and nothing suggestive of hereditary kidney cancer syndrome. She acknowledged Claimant was obese, based on a body mass index (BMI) of 34.3 kg/m2; but noted obesity is a very common condition in the United States. Dr. Mayer noted that, between 2009 and 2013, the incidence of kidney cancer in white non-Hispanic males in Colorado aged 21-44 ranged from 2.3 to 4.7 per 100,000 while 20,000 to 25,000 per 100,000 were obese, meaning the overwhelming majority of those obese individuals did not get cancer. She concluded,

> In summary, [Claimant] sustained a number of typical firefighter exposures that increase the risk of kidney cancer over the course of his 19 years of work as a firefighter before his diagnosis, namely PAHs with some evidence of cadmium, asbestos, pesticides and solvents as well. As detailed above, for much of his career he had inadequate respiratory and skin protection, and was repeatedly exposed to carcinogens, including PAHs, which are present at virtually every fire scene. PAHs are well absorbed through the skin, making his inadequately cleaned bunker gear and hood highly relevant. Four large recent studies found significantly increased risk of kidney cancer in firefighters, in additional to the New Zealand Registry case control study. In my medical opinion to a reasonable degree of a medical probability, [Claimant's] kidney cancers meet the medical requirement of Colorado Firefighter Cancer Presumption statute 8-41-209, C.R.S., and there is no preponderance of the medical evidence that his kidney cancer did not occur on the job.

13. On November 1, 2017, Sander Orent, M.D. also performed an IME at the request of Claimant. Dr. Orent also interviewed and physically examined Claimant and reviewed medical records. Dr. Orent noted Claimant had kidney cancer at a young age with no known risk factors other than his extensive exposure to carcinogens throughout his career as a firefighter. He concluded,

> It is quite clear that the overhaul activities while working for [Employer] created a substantial exposure that has repeatedly exposed him to carcinogens such as polycyclic aromatic hydrocarbons and a variety of other agents including fluorinated compounds, phosphine gases, asbestos dust, and other potential agents. It should be clear from a causality perspective, the carcinogen exposure is the only and primary and identifiable risk factor for this man's hypernephroma. This is not a case to me that leaves any question regarding causality for the reasons I have detailed above.

14. Claimant filed an Application for Hearing on April 20, 2018 endorsing the issues of compensability, medical benefits, authorized provider, reasonably necessary benefits and average weekly wage.

15. On May 15, 2018, Claimant's counsel filed a Worker's Claim for Compensation with the Division.

16. On January 21, 2019, Robert W. Watson, MD, MPH performed an IME at the request of Respondent. Dr. Watson reviewed medical records and interviewed and physically examined Claimant. Dr. Watson also discussed medical literature concerning risk factors for development of renal clear cell carcinoma. Dr. Watson opined that many of the medical studies addressing firefighting as a risk factor for causation were undermined by poor methodology, confounding variables, and inconsistencies. He further opined that medical studies on obesity as a risk factor for renal cell carcinoma were, on the other hand, unequivocal. Specifically, Dr. Watson noted that medical research supported the finding that those who were obese were approximately twice as likely to develop renal cell carcinoma, and that a dose-response relationship between obesity and renal cell carcinoma was evident from the studies. Dr. Watson concluded it was unlikely Claimant's cancer was associated with his work as a firefighter and opined Claimant's obesity was associated with the development of Claimant's cancer.

17. Dr. Watson testified at hearing as an expert in occupational medicine and epidemiology. Dr. Watson testified consistent with his IME report, finding fault with the conclusions contained in the various studies relied upon by Drs. Mayer and Orent. Dr. Watson acknowledged Claimant is in a high-risk profession for exposure to carcinogens, and that there are multiple risk factors for the development of cancer. He testified that he does not know if Claimant's obesity is the sole cause of his cancer, but opined that his obesity has the strongest association.

18. Dr. Mayer testified at hearing as an expert in occupational medicine. Dr. Mayer disagreed with Dr. Watson that Claimant's obesity was the more probable cause of his cancer, explaining that obesity was a relative,but not an absolute, risk for the development of kidney cancer. She continued to opine Claimant's obesity was not a greater risk than all of the carcinogenic exposure Claimant sustained throughout his career as a firefighter.

19. Dr. Orent testified at hearing as an expert in occupational medicine. Dr. Orent also testified consistent with his IME report. He explained that obesity constituted evidence of correlation but not causation. Dr. Orent continued to opine Claimant's cancer was caused by years of carcinogenic exposure in his work as a firefighter.

20. The ALJ finds the opinions of Drs. Mayer and Orent more credible and persuasive than the opinion of Dr. Watson.

21. The ALJ finds that Claimant's claim is not barred by the statute of limitations set forth in § 8-43-103(2), C.R.S.

22. The ALJ finds Claimant met the threshold requirements for a compensable occupational disease under § 8-41-209, C.R.S., and Respondent failed to prove by a preponderance of medical evidence Claimant's cancer did not arise out of his employment as a firefighter.

23. Claimant has proved by a preponderance of the evidence that Respondent is responsible for reasonable and necessary medical treatment related to his renal cell carcinoma, including the costs of his January 15, 2016 surgery.

24. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Statute of Limitations

Section 8-43-103(2), C.R.S. provides that the right to workers' compensation benefits is barred unless a notice claiming compensation is filed with Division within two years after the injury. However, §8-43-103(2), C.R.S. also provides, in relevant part, that the limitation does not apply to:

> [a]ny claimant to whom compensation has been paid or if it is established to the satisfaction of the director within three years after the injury or death that a reasonable excuse exists for the failure to file such notice claiming compensation and if the employer's rights have not been prejudiced thereby, and the furnishing of medical, surgical, or hospital treatment by the employer shall not be considered payment of compensation of benefits within the meaning of this section…

The statute of limitations begins to run when the claimant, as a reasonable person, should have recognized the nature, seriousness, and probable compensable character of the industrial injury. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967); *Intermountain Rubber Industries v. Valdez*, 688 P.2d 1133 (Colo. App. 1984).

Claimant recognized the nature, seriousness, and probable compensable character of the occupational disease when diagnosed in December 2015. However, upon undergoing surgery to treat his cancer, Respondent paid Claimant his full wages while he did not work during his recovery. These payments constituted compensation, as Claimant missed work due to undergoing treatment for an occupational disease, Respondent was aware of this, and continued to pay him his full, line of duty wages during such time period. *See Stauss v. Industrial Commission*, 355 P.2d 1076 (1960), citing Pacific Employers Insurance Co., et. Al. v. Industrial Commission et al., 127 Colo. 400, 257 P.2d. 404, 409 (holding that, in order for payment of wages during an absence from work to be compensation under the Act, it must be established by competent evidence or reasonable inferences that the employer was making the payments conscious of the fact he was making the same as compensation, and the employee must receive the payments with the knowledge or reasonable assumption the payments were being made as compensation for his injuries). Respondent concedes that the payment of full wages during Claimant's absence from work due to the nephrectomy was compensation. Payment of this compensation had the effect of tolling the statute of limitations for the period during which compensation was paid. Thus, the statute of limitations began to run in Claimant's case on March 15, 2016, when he returned to performing full duty work at full wages.

Claimant did not file an Application for Hearing or formal claim for benefits within the two-year statute of limitations. Claimant argues, in part, that the March 16, 2016 pleadings constitute an informal substitute of a claim. A timely filed notice of claim need not take any particular form. *Saxton v. King Soopers, Inc.*, W.C. No. 4-200-777 (March 11, 1997), citing Colorado Auto Body, Inc. v. Newton, 160 Colo. 113, 414 P.2d 480 (1966); Intermountain Rubber Industries, Inc. v. Valdez, 688 P.2d 1133 (Colo.App. 1984). However, an informal substitute for a claim must, at a minimum, identify the

claimant, indicate that a compensable injury has occurred, and convey the idea that the claimant expects compensation for the injury. *Martin v. Industrial Commission*, 608 P.2d 366 (Colo.App. 1980). The Panel has held that an employer's First Report of Injury and Notice of Contest are not substitutes for filing a workers' claim for compensation. *Packard v. City and County of Denver*, W.C. 4-925-466 (ICAO 12-4-18), *McGlothlen v. Karman, Inc.*, W.C. 4-937-396-01 (April 2, 2018).

The ALJ is not persuaded the March 16, 2016 documents are sufficient to constitute an informal substitute for a claim. While the documents identify the claimant and refer to an occupational disease of December 15, 2016, they do not clearly convey the idea Claimant expected compensation for the injury. Nonetheless, the ALJ is persuaded a reasonable excuse for Claimant's failure to timely file a claim exists based on the totality of the credible and persuasive evidence. Claimant believed there was actual notice of a claim based on his notification to Employer of the alleged work injury and subsequent written communication by his attorney on March 16, 2016. As of December 18, 2015, Respondent was aware of Claimant's diagnosis and his contention that his condition was work-related. Although a Notice of Contest was filed, Respondent then proceeded to pay Claimant his full line of duty wages during a two-month absence while recovering from surgery related to what had already been reported as an alleged work injury. Shortly after Claimant returned to full duty, several pleadings were filed, indicating Claimant may pursue a claim. Additionally, Respondent was sent Dr. Mayer's April 2017 IME report in which she opined Claimant's condition was due to his work exposure. Based on this sequence of events, the ALJ is persuaded it was reasonable for Claimant to not file a claim within the required two-year period. The ALJ is further persuaded Respondent was not prejudiced by Claimant's failure to timely file a claim, as Respondent was immediately made aware of Claimant condition and his contention the condition was work-related, Respondent paid Claimant compensation while he missed work due to what Respondent knew was an alleged work injury, and received documents indicating the potential pursuit of a claim. Claimant filed both an Application for Hearing and formal claim with the Division within three years of March 15, 2016. Accordingly, his claim is not barred by the statute of limitations.

Compensability

Section 8-41-209, C.R.S. provides:

> (1) Death, disability, or impairment of health of a firefighter of any physical subdivision who has completed five or more years of employment as a firefighter, caused by cancer of the brain, skin, digestive system, hematological system, or genitourinary system and resulting from his or her employment as a firefighter, shall be considered an occupational disease.
>
> (2) Any condition or impairment of health described in subsection (1) of this section:

(a) Shall be presumed to result from a firefighter's employment if, at the time of becoming a firefighter or thereafter, the firefighter underwent a physical examination that failed to reveal the substantial evidence of such condition or impairment of health that preexisted his or her employment as a firefighter.

(b) Shall not be deemed to result from the firefighter's employment if the firefighter's employer or insurer shows by a preponderance of the medical evidence that such condition or impairment did not occur on the job.

In *City of Littleton v. Industrial Claim Appeals Office*, 370 P.3d 157 (Colo. 2016), the Colorado Supreme Court held that the presumption section in 8-41-209(2)(a) relieves a firefighter of the burden to prove that his or her cancer resulted from his or her employment as a firefighter for purposes of establishing a compensable occupational disease under the Act. The Court reasoned, however, that the presumption is not irrebuttable and, if met, shifts the burden of persuasion to the employer to show by a preponderance of medical evidence that the firefighter's condition "did not occur on the job." *Id*. at 165. The Court further held that an employer can meet this burden by establishing, by a preponderance of medical evidence, either: (1) a firefighter's known or typical occupational exposures are not capable of causing the type of cancer at issue; or (2) the firefighter's employment did not cause the firefighter's particular cancer, i.e. the firefighter was not exposed to the substance or substances that are known to cause the firefighter's condition or impairment, or where the medical evidence renders it more probable that the cause of the claimant's condition or impairment was not job-related. *Id.* at 172.

As found, Claimant satisfied the threshold requirements of Section 8-41-209, C.R.S. Respondent failed to show, by a preponderance of medical evidence, Claimant's condition did not occur on the job. The opinions of Drs. Mayer and Orent were more credible and persuasive than the opinion of Dr. Watson. Drs. Mayer and Orent credibly and persuasively explained that firefighting can lead to substantial carcinogenic exposure, which can lead to an increased risk of kidney cancer. It is not disputed Claimant was exposed to carcinogens over the course of his approximately 20-year career as a firefighter. Respondent argues Claimant's obesity put him at a significantly increased risk for developing renal cell carcinoma, and is the more likely cause of his condition. The ALJ is not required to rank risk factors in the course of determining whether an employer has rebutted the statutory presumption under §8-41-209, C.R.S. *City of Boulder v. ICAO,* P.3d 2011 COA 93 (June 28, 2018). Each of the expert witnesses acknowledged that cancer is multifactorial, and there is no way to precisely determine the specific cause of Claimant's cancer. Although Claimant was considered obese, he was subject to over 19 years of work exposure to carcinogens that have been shown capable of causing Claimant's cancer. Based on the totality of the credible and

persuasive evidence, Respondents have failed to prove it is more likely than not Claimant's employment did not cause his renal cell carcinoma.

ORDER

It is therefore ordered that:

1. Claimant's claim is not barred by the statute of limitations provided in § 8-43-103(2), C.R.S.

2. Claimant has established by a preponderance of the evidence that his renal cell carcinoma is compensable under § 8-41-209, C.R.S.

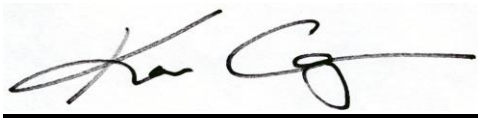
3. Respondent failed to establish by a preponderance of the evidence that Claimant's renal cell carcinoma did not occur on the job.

4. Respondent is liable for reasonable and necessary medical treatment related to Claimant's renal cell carcinoma, including his January 15, 2016 surgery.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 2, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable left shoulder injuries during the course and scope of his employment with Employer on August 4, 2018.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his August 4, 2018 industrial injuries.

STIPULATION

The parties agreed that Claimant's request for penalties against Employer for reporting violations under §§ 8-43-103 and 8-43-101(1), C.R.S. have been withdrawn with prejudice.

FINDINGS OF FACT

1. Claimant began working for Employer as a Flooring Installer in 2012. In mid-to-late July 2018 Installation Supervisor Greg Nicholson approached Claimant about performing work on a project in Steamboat Springs, Colorado. Mr. Nicholson specifically asked Claimant to perform moisture testing on concrete subflooring in a hospital MRI room to determine whether flooring could be applied over concrete. Employer informed Claimant that he could bring his friend Marcie and they could stay overnight. However, because Marcie did not want to take the trip, Claimant declined the project.

2. Approximately one week later Employer again approached Claimant about the Steamboat Springs project. After Employer permitted Claimant to drive his motorcycle to the site, Claimant agreed to perform the work. Claimant noted that his friend Dan Kler would be accompanying him on his own motorcycle. He remarked that he did not like to operate his motorcycle alone in the mountains.

3. Claimant explained that on Friday, August 3, 2018 he clocked in at Employer's shop in Aurora, Colorado and picked up some tools. He and Mr. Kler then drove west on I-70 and north towards Steamboat Springs.

4. Claimant detailed that he would clock in and out of jobs using his cell phone. He remarked that, when he had worked on mountain jobs in the past with Eric Peterson, they usually met and clocked in at Morrison, Colorado. Alternatively, if they met at Employer's shop, he would clock in there. Claimant explained that he never discussed his travel route to Steamboat Springs with Mr. Nicholson. However, he commented that he was not required to take a specified route because he was driving his motorcycle. He remarked that he would be compensated for his commute from

Morrison to Steamboat Springs as well as his return trip. Claimant would receive his regular hourly wage for commuting time and submit a travel reimbursement log for his mileage.

5. On Saturday, August 4, 2018 Claimant completed the moisture testing at the hospital in Steamboat Springs sometime in the latter part of the morning. Because he noticed storm clouds to the south and sought to avoid interstate driving, Claimant and Mr. Kler decided to travel north from Steamboat Springs towards Laramie, Wyoming. After getting to Laramie and heading east, Claimant planned to travel south on I-25 to his home in Dacono, Colorado. Claimant noted that he planned to clock out from work after traveling for three hours on the return trip.

6. At some location between Walden, Colorado and Laramie Claimant struck tar on the road and lost control of his motorcycle. He went off the road and crashed into an Aspen tree. Claimant noted that he clocked out from work shortly after the accident. His motorcycle was damaged and he injured his left shoulder area during the collision. Claimant contacted friends to transport him and the motorcycle back to Dacono.

7. Claimant visited the Indian Peaks Emergency & Urgent Care Center in Frederick, Colorado on the night of August 4, 2018. He explained that he hit a patch of black tar while coming around a corner on his motorcycle in Wyoming and went off the road. He struck his left shoulder and backside area on a tree.

8. On August 6, 2018 Claimant reported his accident and injuries to Mr. Nicholson. Claimant explained that he would be unable to work for the day. He did not specify that his injuries were related to his job duties for Employer.

9. Claimant testified that he did not call Mr. Nicholson to advise that he would be traveling home on a different route. He confirmed that it was his intention to ride north through Laramie, travel east, then head south through Fort Collins, Colorado and end at his home in Dacono. Claimant acknowledged that the route was longer in travel time and mileage than if he had returned through the Morrison exit. He specifically agreed that the return route involved an additional 45-50 miles of driving.

10. Claimant submitted a mileage reimbursement form regarding his trip to Steamboat Springs. He noted that his trip from the Morrison exit to Steamboat Springs was 178 miles. Although Claimant traveled a different route home, he requested identical reimbursement for 178 miles on the return trip because he did not want to bill Employer for the additional mileage to his home.

11. Claimant did not file a Workers' Claim for Compensation until October 29, 2018. He noted that he was involved in a motorcycle accident on August 4, 2018 on CO 127/WY 230 between Walden, Colorado and Laramie, Wyoming. On November 13, 2018 Respondents challenged the claim by filing a Notice of Contest. Respondents asserted that Claimant's injuries were not work-related.

12. On September 10, 2018 Claimant underwent left shoulder surgery through his personal health care provider George W. Chaus, M.D. Claimant continues to

receive medical treatment through Authorized Treating Physician (ATP) Roberta P. Anderson-Oeser, M.D. He suffers persistent left shoulder pain and weakness. Claimant has not reached Maximum Medical Improvement (MMI).

13. Mr. Nicholson testified at the hearing in this matter. He explained Employer's policy for clocking in and out for travel time and mileage. He noted that employee phones are equipped with an "app" and there is a geofence around the work area. For a mountain project, employees log in and out at designated locations. On August 3, 2018 Claimant clocked in at Employer's shop in Aurora and then drove to Steamboat Springs. Claimant worked on the project and clocked out for the evening. He then clocked back in on August 4, 2018 when he completed work on the project by reading tests and recording information. Employer then expected Claimant to leave Steamboat Springs to return home and clock out at the Morrison exit on I-70. Mr. Nicholson remarked that Claimant did not contact him about returning home through an alternate route from Steamboat Springs on August 4, 2018. He emphasized that Claimant was well aware that he was expected to clock out at the Morrison exit because he had followed the procedure about 1-2 months earlier when he completed a job in Steamboat Springs.

14. Employer's Executive Vice President and co-owner Eric Peterson testified at the hearing in this matter. He explained that Employer has created a geofencing system that is used for travel to job sites located outside of the Denver metropolitan area. The western boundary is located at I-70 and Morrison Road. Mr. Peterson remarked that Employer's travel policy provides that employees can clock in at the shop located in Aurora or at one of the outer boundaries. He explained that Employer created the geofencing system because it was having trouble with employees falsifying their time cards. With the ExakTime system on employees' phones, Employer can identify the location from which an employee is clocking in or out. Notably, Employer's Handbook specifies that employees are to clock in and out at the "Morrison exit."

15. President of Employer Corey Werner testified at the hearing in this matter. He explained that, when an employee is on the clock, his location is tracked through an ExacTime "app" on his phone. He noted that on August 4, 2018 the tracker revealed that Claimant left Steamboat Springs and went north to Walden towards Laramie. Claimant was in Wyoming at the time of his accident.

16. Claimant has demonstrated that it is more probably true than not that he suffered compensable injuries during the course and scope of his employment with Employer on August 4, 2018. Initially, after completing moisture testing for Employer at a facility in Steamboat Springs, Claimant noticed storm clouds to the south and sought to avoid interstate driving. Claimant thus decided to travel north towards Laramie. After reaching Laramie and heading east, Claimant planned to head south on I-25 to his home in Dacono, Colorado. However, Claimant hit a patch of black tar while coming around a corner on his motorcycle in Wyoming and went off the road. He suffered left shoulder injuries when he struck a tree.

17. Respondents assert that Claimant engaged in a substantial deviation from employment by failing to return home from Steamboat Springs on I-70 and clocking out at the Morrison exit. Claimant had taken the correct route to the Steamboat Springs project on August 3, 2018, but improperly failed to return through the same route. Respondents maintain that Employer's policy requires employees to return from mountain projects on I-70 and travel through Morrison. However, the totality of the circumstances reflect that the length and duration of Claimant's planned trip from Steamboat Springs into Wyoming and eventually to his home in Dacono did not attenuate the causal connection with his job duties to the extent that it exceeded the reasonable range of consequences contemplated by the employment contract.

18. The record reflects that Claimant was in travel status during his trip to and from Steamboat Springs. Travel was contemplated by Claimant's employment contract and constituted a substantial part of his service to Employer. Claimant's job duties for the Steamboat Springs project required him to travel to the site. The job specifically required Claimant to perform moisture testing on concrete subflooring in a hospital MRI room to determine whether flooring could be applied over concrete. The trip involved a round trip commute and Claimant was reimbursed for his total mileage. Claimant engaged in travel with the express consent of Employer and Employer received a special benefit from the travel. When Claimant accepted the job to travel beyond a fixed location to perform testing in Steamboat Springs the risks of travel became the risks of the employment.

19. Although Claimant was in travel status, the critical inquiry is whether he engaged in a substantial deviation that severed the causal connection with his employment. Employer's witnesses testified that there is a geofence around the Denver Metropolitan area that permits employees to clock in and out at designated locations. If an employee is traveling to the mountains for a project, he is expected to clock in and out at the I-70 and Morrison Road exit. However, the record reflects that the designated time tracking locations are designed to insure proper timekeeping and not to prescribe specific driving routes when employees perform jobs outside of the Denver Metropolitan area. Notably, Employer created the geofencing system because it was having trouble with employees falsifying their time cards. Although employees typically traveled on I-70 for mountain projects, the customary route did not establish a specific course.

20. Claimant's alternative route from Steamboat Springs to his home in Dacono constituted a reasonable, minor and insignificant deviation from the trip on I-70 through Morrison. Claimant credibly explained that, when leaving Steamboat Springs, he noticed storm clouds to the south and sought to avoid interstate driving. Claimant and Mr. Kler thus decided to travel north towards Laramie. After getting to Laramie and heading east, Claimant planned to drive south on I-25 to his home in Dacono. Although the route was somewhat farther than the trip east on I-70 to Morrison, Claimant noted that he planned to clock out from work after traveling for three hours. He also requested identical mileage reimbursement for his trips to and from Steamboat Springs. Claimant thus mitigated Employer's concerns about mileage and timekeeping. His route did not constitute such a deviation from the circumstances and conditions of his employment that he stepped aside from his job and was performing an activity for his sole benefit.

21. Claimant has demonstrated a nexus between his injuries and his employment duties for Employer. His route from Steamboat Springs and accident giving rise to his left shoulder injuries did not constitute a substantial deviation from his employment duties. Claimant had completed the Steamboat Springs project as requested and simply took a reasonable, alternate route while traveling home. He did not abdicate his job duties. Accordingly, Claimant's August 4, 2018 left shoulder area injuries occurred during the course and scope of his employment with Employer.

22. Claimant has demonstrated that it is more probably true than not that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries. As a result of his motor vehicle accident on August 4, 2018 Claimant suffered injuries to his left shoulder area and underwent surgery. Claimant continues to receive medical treatment through ATP Dr. Anderson-Oeser. He suffers persistent left shoulder pain and weakness. Claimant has not reached MMI. Accordingly, Claimant is entitled to reasonable and necessary medical treatment for his August 4, 2018 industrial injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "time" limits of employment include a reasonable interval before and after working hours while the employee is on the employer's property. *In Re Eslinger v. Kit Carson Hospital,* W.C. No. 4-638-306 (ICAP, Jan. 10, 2006). The "place" limits of employment include parking lots controlled or operated by the employer that are considered part of employer's premises. *Id.*

5. Generally, injuries sustained by employees while they are traveling to or from work are not compensable because such travel is not considered the performance of services arising out of and in the course of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). However, injuries incurred while traveling are compensable if "special circumstances" exist that demonstrate a nexus between the injuries and the employment. *Id.* at 864. In ascertaining whether "special circumstances" exist the following factors should be considered:

- Whether travel occurred during working hours;
- Whether travel occurred on or off the employer's premises;
- Whether travel was contemplated by the employment contract; and
- Whether obligations or conditions of employment created a "zone of special danger" out of which the injury arose.

Id. In considering whether travel is contemplated by the employment contract the critical inquiry is whether travel is a substantial part of service to the employer. *See id.* at 865.

6. "Special circumstances" may be found where the employment contract contemplates the employee's travel or the employer delineates the employee's travel for special treatment as an inducement. *See Staff Administrators Inc. v. Reynolds,* 977 P.2d 866, 868 (Colo. 1999). "Special circumstances" may also exist when the employee engages in travel with the express or implied consent of the employer and the employer receives a special benefit from the travel in addition to the employee's mere arrival at work. *See National Health Laboratories v. Industrial Claim Appeals Office,* 844 P.2d 1259, 1260 (Colo. App. 1992). The essence of the travel status exception is that when the employer requires the claimant to travel beyond a fixed location to perform his job duties the risks of the travel become the risks of the employment. *Breidenbach v. Black Diamond, Inc.,* W.C. No. 4-761-479 (ICAP, Dec. 30, 2009).

7. In considering whether travel was contemplated by the employment contract, case law reflects that the exception applies when a claimant is required by an employer to come to work in an automobile that is then used to perform job duties. The vehicle confers a benefit to the employer beyond the employee's mere arrival at work.

See Whale Communications v. Osborn, 759 P.2d 848 (Colo. App. 1988). As explained in 1 A. Larson, *Workmen's Compensation Law*, §17.50 (1985), "[t]he rationale for this exception is that the travel becomes a part of the job since it is a service to the employer to convey to the premises a major piece of equipment devoted to the employer's purposes. Such a requirement causes the job duties to extend beyond the workplace and makes the vehicle a mandatory part of the work environment."

8. There is no requirement under the Act that a claimant must be on the clock or performing an act "preparatory to employment" in order to satisfy the "course of employment" requirement. In re Broyles, W.C. No. 4-510-146 (ICAP, July 16, 2002). As noted in Ventura v. Albertson's, Inc., 856 P.2d 35, 38 (Colo. App. 1992):

> The employee, however, need not be engaged in the actual performance of work at the time of injury in order for the "course of employment" requirement to be satisfied. Injuries sustained by an employee while taking a break, or while leaving the premises, collecting pay, or in retrieving work clothes, tools, or other materials within a reasonable time after termination of a work shift are within the course of employment, since these are normal incidents of the employment relation.

9. The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). Nevertheless, the employee's activity need not constitute a strict duty of employment or confer a specific benefit on the employer if it is incidental to the conditions under which the employee typically performs the job. *In Re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). It is sufficient "if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment." *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). Incidental activities include those that are "devoid of any duty component, and are unrelated to any specific benefit to the employer." *In Re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008). Whether a particular activity has some connection with the employee's job-related functions as to be "incidental" to the employment is dependent on whether the activity is a common, customary and accepted part of the employment as opposed to an isolated incident. *See Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

10. When the employer asserts a personal deviation from employment "the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship." *Roache v. Industrial Commission,* 729 P.2d 991 (Colo. App. 1986); *In Re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010). If an employee substantially deviates from the mandatory or incidental duties of employment so that he is acting for his sole benefit at the time of injury, his claim is not compensable. *Kater v. Industrial Commission,* 729 P.2d 746 (Colo. App. 1986). The issue is thus whether the "claimant's conduct constitutes such a

deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing an activity for his sole benefit." *In Re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010); *see Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). It is thus not essential that the activities of an employee emanate from an obligatory job function or result in a specific benefit to the employer for a claim to be compensable. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). Ministerial actions for an employee's personal comfort do not constitute a substantial deviation from employment unless the personal need being met or the means chosen by the employee to satisfy his personal comfort is unreasonable. *In Re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008); *see Larson's Workers' Compensation Law,* §21.00. However, if an employee substantially deviates from the mandatory or incidental duties of employment so that he is acting for her sole benefit at the time of injury, his claim is not compensable. *Kater v. Industrial Commission,* 729 P.2d 746 (Colo. App. 1986). The question of whether a deviation is significant enough to remove the claimant from the course and scope of employment is a factual determination for the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

11. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on August 4, 2018. Initially, after completing moisture testing for Employer at a facility in Steamboat Springs, Claimant noticed storm clouds to the south and sought to avoid interstate driving. Claimant thus decided to travel north towards Laramie. After reaching Laramie and heading east, Claimant planned to head south on I-25 to his home in Dacono, Colorado. However, Claimant hit a patch of black tar while coming around a corner on his motorcycle in Wyoming and went off the road. He suffered left shoulder injuries when he struck a tree.

12. As found, Respondents assert that Claimant engaged in a substantial deviation from employment by failing to return home from Steamboat Springs on I-70 and clocking out at the Morrison exit. Claimant had taken the correct route to the Steamboat Springs project on August 3, 2018, but improperly failed to return through the same route. Respondents maintain that Employer's policy requires employees to return from mountain projects on I-70 and travel through Morrison. However, the totality of the circumstances reflect that the length and duration of Claimant's planned trip from Steamboat Springs into Wyoming and eventually to his home in Dacono did not attenuate the causal connection with his job duties to the extent that it exceeded the reasonable range of consequences contemplated by the employment contract.

13. As found, the record reflects that Claimant was in travel status during his trip to and from Steamboat Springs. Travel was contemplated by Claimant's employment contract and constituted a substantial part of his service to Employer. Claimant's job duties for the Steamboat Springs project required him to travel to the site. The job specifically required Claimant to perform moisture testing on concrete subflooring in a hospital MRI room to determine whether flooring could be applied over concrete. The trip involved a round trip commute and Claimant was reimbursed for his total mileage. Claimant engaged in travel with the express consent of Employer and

Employer received a special benefit from the travel. When Claimant accepted the job to travel beyond a fixed location to perform testing in Steamboat Springs the risks of travel became the risks of the employment.

14. As found, although Claimant was in travel status, the critical inquiry is whether he engaged in a substantial deviation that severed the causal connection with his employment. Employer's witnesses testified that there is a geofence around the Denver Metropolitan area that permits employees to clock in and out at designated locations. If an employee is traveling to the mountains for a project, he is expected to clock in and out at the I-70 and Morrison Road exit. However, the record reflects that the designated time tracking locations are designed to insure proper timekeeping and not to prescribe specific driving routes when employees perform jobs outside of the Denver Metropolitan area. Notably, Employer created the geofencing system because it was having trouble with employees falsifying their time cards. Although employees typically traveled on I-70 for mountain projects, the customary route did not establish a specific course.

15. As found, Claimant's alternative route from Steamboat Springs to his home in Dacono constituted a reasonable, minor and insignificant deviation from the trip on I-70 through Morrison. Claimant credibly explained that, when leaving Steamboat Springs, he noticed storm clouds to the south and sought to avoid interstate driving. Claimant and Mr. Kler thus decided to travel north towards Laramie. After getting to Laramie and heading east, Claimant planned to drive south on I-25 to his home in Dacono. Although the route was somewhat farther than the trip east on I-70 to Morrison, Claimant noted that he planned to clock out from work after traveling for three hours. He also requested identical mileage reimbursement for his trips to and from Steamboat Springs. Claimant thus mitigated Employer's concerns about mileage and timekeeping. His route did not constitute such a deviation from the circumstances and conditions of his employment that he stepped aside from his job and was performing an activity for his sole benefit.

16. As found, Claimant has demonstrated a nexus between his injuries and his employment duties for Employer. His route from Steamboat Springs and accident giving rise to his left shoulder injuries did not constitute a substantial deviation from his employment duties. Claimant had completed the Steamboat Springs project as requested and simply took a reasonable, alternate route while traveling home. He did not abdicate his job duties. Accordingly, Claimant's August 4, 2018 left shoulder area injuries occurred during the course and scope of his employment with Employer. *See In Re Satterfield*, W.C. No. 5-069-072-001 (ICAP, Feb. 4, 2018) (where the claimant traveled from home office to dry cleaners and Office Depot Store to pick up binders for business presentation there was a sufficiently insubstantial deviation so that the trip remained part of the employment relationship); see also *In Re Rieks,* W.C. No. 4-921-644 (ICAP, Aug. 12, 2014) (where employer required the claimant to come to work in an automobile to attend appointments and meet with customers, transport of car was contemplated by the employment contract and the claimant's motor vehicle accident on the way to work occurred in the course of and arose out of his employment); *Norman v.*

Law Offices of Frank Moya, W.C. No. 4-919-557 ICAP, Apr. 23, 2014) (where attorney was required to use car to travel from work to courthouse and was injured in motor vehicle accident while she was driving to her first court appearance of the day, injuries were compensable because travel was contemplated by employment contract and conferred benefit to employer beyond mere arrival at work); *Lopez v. Labor Ready,* W.C. 4-538-791 (ICAP, Sept. 26, 2003) (where the claimant's job required her to spend large parts of her day in her personal vehicle and she was injured in a motor vehicle accident while driving home for lunch, claim was compensable because it conferred a benefit to the employer beyond the claimant's mere arrival at work). *Compare In Re Hall,* W.C. No. 4-689-120 (ICAP, Nov. 7, 2007).(where the claimant had a motor vehicle accident while driving to transport inmates to work in exchange for payment from the inmates and the employer was not involved in the agreement, the claimant's activities were not contemplated by the employment contract).

Medical Benefits

17. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In Re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

18. Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The employer's obligation continues until the claimant reaches MMI. MMI is defined as the point in time when the claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S.

19. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries. As a result of his motor vehicle accident on August 4, 2018 Claimant suffered injuries to his left shoulder area and underwent surgery. Claimant continues to receive medical treatment through ATP Dr. Anderson-Oeser. He suffers persistent left shoulder pain and weakness. Claimant has not reached MMI. Accordingly, Claimant is entitled to reasonable and necessary medical treatment for his August 4, 2018 industrial injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable Workers' Compensation injuries to his left shoulder area on August 4, 2018 during the course and scope of his employment with Employer.

2. Claimant shall receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Claimant meet her burden of proof to show the proposed surgery for her left knee is reasonable and necessary and related to the industrial injury?

FINDINGS OF FACT

1. Claimant has been employed as a salesperson for Employer since 2013.

2. Claimant's medical history was significant in that she previously injured her left knee at work on August 29, 2012.

3. On September 19, 2012, Claimant underwent an MRI of her left knee. The MRI revealed tricompartmental degenerative changes, with small tears of the medial and lateral meniscus.[1]

4. On October 15, 2012, Dr. Motz performed a medical meniscetomy and debridement on Claimant's left knee. Claimant testified she underwent one, possibly two arthroscopic procedures during this time.[2] A post-surgery MRI done on April 15, 2013 showed degenerative changes, with tears in the medial meniscus noted above.

5. On October 3, 2013, Claimant was evaluated by John Burris, M.D. At the time, she reported 5/10 pain in the knee, as well as locking, catching and the knee giving out. On examination, Dr. Burris noted the surgical scars were well-healed, with no unusual swelling, or tenderness. There was no ligamentous laxity to varus or valgus stress. Dr. Burris' diagnosis was: left knee meniscal tear. Although additional treatment was recommended, Claimant declined further treatment and Dr. Burris assigned a 13% lower extremity rating. The impairment rating included an 8% impairment for range of motion ("ROM") loss and 5% impairment assigned for the meniscal tears. Dr. Burris issued permanent work restrictions, which specified limiting kneeling and squatting to less than 33% of the time. There was no evidence this work restriction was ever lifted.

6. On April 14, 2014, Claimant was examined by Wayne Gersoff, M.D. at Advanced Orthopedic for continued pain and discomfort in the left knee. Dr. Gersoff stated Claimant never felt better after the October 2012 surgery. Dr. Gersoff noted a small joint effusion, along with medial and lateral joint line tenderness. Dr. Gersoff's assessment was: left knee pain, secondary to possible recurrent meniscal pathology and he recommended an MRI.

[1] The MRI report was not admitted into evidence, but was referenced in the report prepared by Dr. Burris.

[2] In an evaluation of the left hip done by orthopedic surgeon, Brian Larkin, M.D. on May 3, 2013, Claimant was noted to have undergone three left knee arthroscopies.

7. Claimant underwent an MRI on April 14, 2014, which was read by Andrew Sonin, M.D. The indication for the MRI was chronic left knee pain for a year, including locking and clicking. Dr. Sonin's impression was: interval medial meniscal resection since September 19, 2012, with no recurrent tear and almost no residual tissue remaining; interval resection of the free edge of the lateral meniscus since 2012, with no recurrent tear; degenerative change in the patellofemoral interval without much interval change since 2012; distal patellar tendinopathy without tear; small joint effusion, no loose body. The ALJ found this MRI showed pathology referable to the April 1, 2017 injury.

8. There was no evidence in the record Claimant required treatment from mid-April 2014 until April 1, 2017. Claimant testified she was not examined by any doctor during this period of time and was able to work and had no limitations.

9. On April 1, 2017, Claimant sustained an admitted industrial injury while working for Employer. She was driving a customer's car to be washed and thought she had put it in park. Claimant testified she tried to get back in but the vehicle rolled back and ran over her left leg.

10. Claimant was transported by ambulance to Swedish Hospital. The ambulance report noted left knee showed multiple small abrasions that looked like tire marks, redness, but no bleeding and a hematoma was beginning to form. X-rays were taken of Claimant's left knee at Swedish. In the emergency room, Claimant was evaluated by Suzanne Smith Chilton, M.D., who noted tenderness on the lateral aspect of the left knee, with multiple superficial abrasions to the lateral aspect of the left knee and thigh. Dr. Chilton found there was nothing to suggest fracture, dislocation, NV compromise or compartment syndrome. The x-ray results were reported as negative.

11. On April 7, 2017, Claimant was evaluated by Mary Zickefoose, M.D. at HeathOne Carenow Urgent Care. At that time, she was complaining of constant left leg pain since the injury, which occurred six days prior and said her knee felt unstable. Dr. Zickefoose noted Claimant's left knee was swollen, her right middle finger and fourth finger were also swollen. Dr. Zickefoose's diagnoses included: crushing injury of left knee, initial encounter; crushing injury of left lower leg, initial encounter; pain in right hip. An MRI was ordered because of instability in the left knee.

12. The MRI was performed on April 19, 2017. Charles Wennogle, M.D. reviewed the films and identified the following: nondisplaced fracture of the lateral tibia at the proximal tibiofibular articulation, with associated marrow edema; essentially absent medial meniscus, likely surgical; full-thickness articular defect of the superior aspect of the patella, including the patellar apex, lateral and medial facet; thickening of the patellar tendon likely represents prior injury; edema in the retroquadriceps fat pad likely indicates mild impingement; mild thinning of the articular cartilage overlying the medical femoral condyle, with osteophyte formation, consistent with osteoarthritis;

complex tear anterior horn lateral meniscus with small tear at the inner free edge margin of the body of the lateral meniscus, as described.

13. Claimant returned to Dr. Zickefoose on April 21, 2017, after the MRI. She was diagnosed with a nondisplaced fracture of the lateral condyle of the left tibia and torn lateral meniscus. Dr. Zickefoose prescribed Cyclobenzaprine and referred Claimant to Dr. Gersoff.

14. On April 26, 2017, Claimant was evaluated by James Ferrari, M.D. at Advanced Orthopedic, at which time Claimant described her symptoms as moderate-severe. X-rays were ordered. Dr. Gersoff evaluated Claimant on May 1, 2017 and noted decreased strength in the left knee, as well as decreased passive ROM. Ecchymosis and effusion were present in the left knee. Dr. Gersoff's assessment was: unilateral primary osteoarthritis and he recommended another course of viscosupplementation. In his review of the MRI, Dr. Gersoff noted Claimant had degenerative joint disease, which had been ongoing. He believed that the present accident probably exacerbated her pre-existing condition of osteoarthritis. The Synvisc injection was administered on May 8, 2017.

15. Claimant was evaluated by Dr. Zickefoose on May 8, 2017 and reported her knee symptoms were not getting better. Claimant also reported increased right hip and lower back pain since lying down for the MRIs. Dr. Zickefoose found left knee swelling and prescribed Naproxen and a Medrol pack. Claimant received no work restrictions. When she returned to Dr. Zickefoose on May 23, 2017, Claimant reported her knee gave out the week before and she was still experiencing knee pain. Dr. Zickefoose's diagnoses remained the same and she prescribed Ambien for Claimant. Dr. Zickefoose concluded Claimant could continue to work without restrictions.

16. The focus of Dr. Zickefoose's evaluation on June 7, 2017 was primarily the low back and left hip, with a referral for an evaluation of the left hip given on July 14, 2017. Claimant reported no long-lasting relief of pain in the left knee, which was said to be stable and improved by Dr. Zickefoose.

17. Claimant returned to Dr. Gersoff on July 21, 2017, after having a Synvisc injection. At this time, Claimant described her knee symptoms as chronic, non-traumatic, but continuous and worsening. Dr. Gersoff stated the Visco supplementation was not helpful. Dr. Gersoff opined that the degenerative joint disease in Claimant's knee joint was made worse by the accident and this accelerated the need for her to consider joint arthroplasty surgery. Dr. Gersoff referred Claimant to his colleague for an evaluation for a knee replacement.

18. Claimant returned to Dr. Zickefoose on August 10, 2017. At that examination, Claimant's left knee was found to be swollen laterally extending down into the calf. On September 13, 2017, Dr. Zickefoose indicated she was going to follow-up with Dr. Gersoff to see whether a request for partial or total knee replacement was made. At both appointments, Claimant's lumbar spine and hip were also addressed. Dr. Zickefoose had maintained Claimant on full duty status, but found she was unable to

work from September 13 through September 22, 2017. In the months of October through December 2017, the focus of Dr. Zickefoose's evaluations was not on Claimant's knee, but rather the low back and hip. Dr. Zickefoose noted Claimant continued to experience a left knee pain during this time and reported it during those evaluations.

19. Claimant was evaluated for a second opinion by R. P. Swann, M.D. at Advanced Orthopedic on January 11, 2018. She was complaining of pain, stiffness and instability on the left side. Dr. Swann noted decreased ROM on flexion and extension. Dr. Swann's impression was: Claimant had global pain, but only mild medial DJD. He showed her the data that she would not do well with a TKA. He said he would talk to Dr. Gersoff about scoping the lateral compartment and if Claimant had medial-sided symptoms, after that a UKA could be performed.

20. A Rule 16 medical causation review, dated January 22, 2018, prepared by Douglas Scott, M.D. was admitted into evidence. Dr. Scott opined Insurer should deny authorization for the requested left knee surgery because it was not reasonable, necessary, related to or indicated to treat the effects of the April 1, 2017 injury. Dr. Scott's opinion was based on the fact that Claimant did not injure her left knee medial meniscus and there was evidence of a prior medial meniscus excision in 2012. Dr. Scott noted that the left knee injury included abrasions, bruising and a bony contusion, without injury to her medial joint compartment. The MRI confirmed that the medial meniscus was completely absent and Claimant had ongoing degenerative joint disease in the left knee. Dr. Scott also noted Dr. Gersoff indicated Claimant never felt better after her surgery and continued to have pain/discomfort. Dr. Scott concluded that there was no evidence of acute structural injury to the medial joint of the left knee from diagnostic testing.

21. A request for authorization of left knee MM surgery was sent by Dr. Gersoff's office on February 15, 2018. The ALJ inferred the reference to MM was to medial meniscectomy and that this was an error, as it was the lateral meniscus which was the focus of the proposed surgery.

22. A denial of the request for a left knee medial meniscectomy was sent by Insurer on or about February 23, 2018.

23. Claimant returned to Dr. Gersoff on April 6, 2018 and she described her left knee pain as constant, with moderate symptoms. At that time, Dr. Gersoff administered a cortisone injection.

24. On June 7, 2018, Dr. Zickefoose evaluated Claimant and noted an increase in pain, as well as swelling in the left leg. Claimant was noted to be missing more time from work. The diagnoses were: complex tear of lateral meniscus, left knee-worsening; low back pain-worsening; pain in right hip-worsening.

25. Claimant returned to Dr. Zickefoose on July 23, 2018, complaining about continued knee pain. The diagnoses were the same as the June 7, 2018 appointment.

Dr. Zickefoose made a call to Dr. Gersoff's office to see if a formal request was made for the knee surgery. Claimant's work restrictions were continued.

26. Claimant was evaluated by Dr. Gersoff on September 7, 2018. Her left knee symptoms were said to occur constantly. Dr. Gersoff's impression was that the majority of Claimant's pain and discomfort, as well as functional disability was over the lateral aspect of her knee joints. Dr. Gersoff opined that the complex tearing of the anterior horn and anterior body of the lateral meniscus was directly related to her accident and this was directly related to her pain, discomfort and disability she experienced. The ALJ credited the opinion that the accident caused the tearing in the anterior horn and anterior body of the lateral meniscus Dr. Gersoff said Claimant's prior medial meniscectomy in the past was not a significant source of pain and discomfort.

27. Dr. Zickefoose performed a re-check of Claimant's left knee on October 17, 2018, at which time it was noted Claimant was having trouble getting up and down from a chair because of increased pain in the knee. Dr. Zickefoose's diagnoses were: complex tear of lateral meniscus, left knee-stable/improved; low back pain-stable/improved; pain in right hip-stable/improved. Claimant's prescriptions were re-filled and she was advised to work as tolerated.

28. Dr. Gersoff's office forwarded an authorization request to Respondents, dated October 18, 2018, with accompanying records seeking authorization for surgery a partial lateral menisectomy on Claimant's lateral meniscus.

29. A letter, dated October 29, 2018 was sent on behalf of Respondents pursuant to W.C.R.P. 16 that declined authorization for the surgery, pending an IME.[3]

30. Dr. Gersoff evaluated Claimant on November 5, 2018 and the symptoms of pain and swelling were described as occurring constantly. Dr. Gersoff's assessment was: derangement of unsp. lateral meniscus due to old tear/inj., left knee.

31. On November 7, 2018, Claimant was evaluated by Dr. Zickefoose, who noted symptoms of continued knee pain. Claimant reported her left knee was drained of 35 cc. of fluid on Monday by Dr. Gersoff. They were awaiting the decision on surgery for the left knee and an IME was being scheduled, which Dr. Zickefoose thought was too long for Claimant to wait. Dr. Zickefoose stated the condition of Claimant's left knee was worsening and ordered a repeat MRI.

32. On November 13, 2018, Claimant underwent an MRI of the left knee and the films were read by Dr. Sonin. Dr. Sonin was the radiologist who read the films for the MRI taken in 2014. Dr. Sonin's impression was: previous medical meniscectomy, with increasing chondromalacia in the medial compartment, but no loose body; joint effusion and small leaking Baker's cyst; small nondisplaced anterior horn tear of the lateral meniscus that may be new in the interval. The ALJ found the anterior horn tear was not present in the 2017 MRI.

[3] Exhibit H.

33. On January 4, 2019, an independent medical examination was performed by John Schwappach, M.D. on behalf of Respondents. Dr. Schwappach said the MRI demonstrated a complex tear in the anterior horn and lateral body of the lateral meniscus, a nondisplaced fracture of the lateral tibia and osteoarthritis. Claimant was treated by Dr. Gersoff. Claimant was diagnosed with left knee osteoarthritis by Dr. Ferrari and Swann. In his review of the treatment records, Dr. Schwappach noted Claimant had not tried physical therapy ("PT") and typically did not take any pain medication for her left knee. Her pain was on the lateral portion of the left knee and the left knee joint with flexion.

34. On examination, Claimant's left knee was stable, Dr. Schwappach found no tenderness to palpation and 100° of active ROM on flexion. There was full ROM on extension. Patellofemoral joint crepitus was positive on the left, not on the right. Dr. Schwappach concluded Claimant's complaints were consistent with a degenerative process in her left knee. He noted the requested transarthroscopic partial lateral meniscectomy of the left knee did not to follow the DOWC MTG guidelines. Where there was moderate to advanced osteoarthritis arthritis, there was no benefit to perform arthroscopic surgery for degenerative tears. Further, where Claimant had not tried PT and various injections provided no relief, surgery was not indicated. The concern about performing surgery where osteoarthritis was present was persuasive to the ALJ.

35. On January 9, 2019, Claimant returned to Dr. Zickefoose, at which time she was reporting pain 8/10. Claimant had an antalgic gait, favoring the left lower extremity. Dr. Zickefoose's diagnoses included: complex tear of the lateral meniscus, current injury, left knee; low back pain. Dr. Zickefoose opined the back surgery was being delayed unnecessarily, as no IME was ever ordered for her back. Her left knee IME had nothing to with her back. The plan was to try to manage Claimant's pain. In the M-164, MMI was said to be unknown.

36. Claimant testified her knee is very painful and swells constantly. She wanted to have the surgery.

37. Dr. Schwappach testified as an expert in orthopedic surgery at hearing. He is Level II accredited, pursuant to the W.C.R.P. He opined the recommended surgery was not appropriate, reasonable or necessary to provide relief for left knee pain under both Claimant's clinical presentation and the DOWC Medical Treatment Guidelines. Dr. Schwappach stated Claimant had not received PT to address the underlying condition in her left knee, which was recommended. He also did not believe Claimant would benefit from the surgery. The C-LJ credited Dr. Schwappach's opinion that surgery was not indicated where Claimant had not completed a course of PT.

38. Dr. Schwappach noted that the natural progression of Claimant's osteoarthritis was likely the result of the documented varus alignment in her knee along with the several prior surgeries she underwent, as opposed to the incident of April 1, 2017. Dr. Schwappach testified that some of Claimant's treatment, including the

Synvisc injections and draining of her knee, was for the osteoarthritis condition, not the April 1, 2017 injury. This was because meniscal tears typically do not cause edema.

39. On cross-examination, Dr. Schwappach agreed that the MRI done in April 2017 after the injury showed evidence edema and small tear of the lateral meniscus. These were not present in the 2014 MRI. Dr. Schwappach also testified there was no treatment for the left knee from April 14, 2014 to April1, 2017.

40. Dr. Schwappach issued a supplemental report on March 8, 2019, after reviewing the November 13, 2018 MRI report, which was not available at the time of his evaluation or testimony. Dr. Schwappach stated this study confirmed a nondisplaced anterior horn tear of the lateral meniscus, which appeared to be new when compared to the April 19, 2017 study. A leaking Baker's cyst and evidence of the prior medial meniscectomy were also identified, along with increased chondral loss indicating advanced osteoarthritis.

41. Dr. Schwappach noted Claimant had underlying advanced osteoarthritis, as diagnosed by Drs. Gersoff, Ferrari and Swann, which was confirmed by the November 13, 2018 MRI scan. He reiterated his opinion that isolated, nondisplaced anterior horn meniscal tears of the lateral meniscus rarely benefit from surgical treatment and the Claimant did not have complaints on the anterior lateral aspect of her left knee. Further, Claimant had not completed physical therapy of the left knee and Dr. Schwappach opined the proposed transarthroscopic partial lateral meniscectomy is not indicated under the DOWC MTG. The ALJ credited this opinion, as the fact that Claimant had not received PT and other conservative modalities of treatment.

42. Dr. Gersoff issued a supplemental report in connection with an evaluation that occurred on March 11, 2019. He noted Claimant was diagnosed as having a lateral meniscus tear and he recommended arthroscopic surgery. Dr. Gersoff stated the treatment plan was based on multiple visitations with her in which the location of her symptoms and pain were discussed. He reviewed the radiographic studies, as well as the MRIs, in addition to his evaluations of Claimant. The ALJ noted Dr. Gersoff had the benefit of evaluating Claimant on multiple occasions, including after the surgery in 2014 and his opinion on causation was persuasive.

43. Dr. Gersoff said that while Claimant had previous work done on the meniscus and was developing arthritis in compartment of her knee joints, it was also very apparent that she had damage to the lateral meniscus as a result of her work-related injury. He said Claimant consistently complained of mostly anterior lateral knee joint pain, which was consistent with the MRI findings. Dr. Gersoff opined that the arthroscopy and partial meniscectomy would help improve the symptoms of her lateral knee joint. This would not change the condition of her medial joint where there was some early osteoarthritic changes. The ALJ noted that Dr. Gersoff focused on the location of Claimant's symptoms and that the procedure would provide symptom relief. He did not provide an opinion on the DOWC MTG, the possible contraindications of the procedure, including acceleration of osteoarthritis.

44. Claimant proved that the condition of her left knee was aggravated by the April 1, 2017 admitted industrial injury.

45. Claimant failed to prove the proposed surgery was reasonable and necessary at this time.

46. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the credibility of Claimant, as well as the opinions of the medical experts was dispositive.

Medical Benefits

The instant case pits two expert opinions which are at contretemps-those of Dr. Gersoff and Dr. Schwappach. Claimant argued the left knee surgery recommended by Dr. Gersoff is reasonable, necessary, and related to Claimant's April 1, 2017 industrial injury. Claimant pointed to the fact she was able to work full time in the sales position, without any evidence in the medical records that the developing osteoarthritis in her left knee limited her activities. Claimant correctly pointed out there was no evidence Claimant required treatment for her left knee from April 2014 until the industrial injury. Claimant argued Respondents were responsible for providing medical benefits to Claimant because the April 1, 2017 caused the documented meniscal tear on the lateral side and this condition required surgery.

Respondents averred Claimant failed to prove a causal nexus between her workplace injury and the claimed need for a left lateral meniscectomy. In addition, Respondents contended the requested surgery was not recommended under the DOWC Medical Treatment Guidelines, relying upon the testimony and reports of Dr. Schwappach. Respondents also argued that Dr. Gersoff did not address whether this procedure was appropriate under the DOWC MTG.

As a starting point, Claimant suffered a previous injury to her left knee for which she underwent at least two surgical procedures. (Findings of Fact 2-3). This injury resulted in a permanent medical impairment and permanent work restrictions. (Finding of Fact 5). It was undisputed Claimant has developed osteoarthritis in her left knee. (Findings of Fact 3-4, 12, 15, 17, 33-34). This was borne out the medical evidence, including the MRIs, which were done in 2017 and 2018. However, this condition did not prevent Claimant from working, as she testified. (Finding of Fact 8). Also, there was no evidence in the records Claimant required treatment for three years. *Id.*

Based upon the totality of the evidence, the ALJ found Claimant did not meet her burden of proof as to the proposed surgery. The ALJ credited the opinions offered by Dr. Schwappach, who opined that the proposed arthroscopic surgery was not reasonable and necessary. As found, Claimant had not received PT and participated in active exercise and the like. (Findings of Fact 33-34). Dr. Schwappach testified the surgery was not reasonable and necessary where Claimant had not completed physical therapy. (Finding of Fact 37). Dr. Schwappach also questioned whether arthroscopy would provide a benefit in this case, which was persuasive to the ALJ. It was on this basis that the Court determined Claimant failed to meet her burden of proof.

When coming to this conclusion, the ALJ closely reviewed Dr. Gersoff's opinion. As found, Dr. Gersoff treated Claimant both prior to and for this injury. (Finding of Fact 42). Dr. Gersoff had the benefit as an ATP of reviewing the radiographs and MRI scans on the left knee. (Finding of Fact 42). More particularly, Dr. Gersoff offered his opinion that Claimant's symptoms were coming from the lateral side, which she had consistently reported that while he treated her. The ALJ credited Dr. Gersoff's opinion on causation, name that the April 1, 2017 injury aggravated the underlying osteoarthritis. (Finding of Fact 44). As determined in Finding of Fact 26, 42-43, the ALJ was not persuaded by Dr. Gersoff's surgery recommendation. In his most recent report, Dr. Gersoff opined the proposed procedure would relieve Claimant's symptoms, but did not address the lack of PT. The ALJ determined that Dr. Gersoff also did not specifically address whether the procedure would provide a benefit where this level of osteoarthritis was present, a concern raised by Dr. Schwappach. (Finding of Fact 43).

A review of the DOWC MTG applicable to this issue also supports the conclusion that the proposed surgery is not reasonable and necessary. The DOWC MTG general principles section provides guidance when surgical intervention should be considered for a knee injury. These sections suggest that Claimant should first receive conservative treatment, including PT and active exercise before surgery is considered:

B. GENERAL GUIDELINES PRINCIPLES

….

5. ACTIVE INTERVENTIONS: Emphasizing patient responsibility, such as therapeutic exercise and/or functional treatment, is generally emphasized over passive modalities, especially as treatment progresses. Generally, passive interventions facilitate progress in an active rehabilitation program with concomitant attainment of objective functional gains.

6. ACTIVE THERAPEUTIC EXERCISE PROGRAM: Goals should incorporate patient strength, endurance, flexibility, coordination, and education. This includes functional application in vocational or community settings.

…

9. SURGICAL INTERVENTIONS: Surgical interventions should be contemplated within the context of expected functional outcome and not purely for the purpose of pain relief. The concept of "cure" with respect to surgical treatment by itself is generally a misnomer. All operative interventions must be based upon positive correlation of clinical findings, clinical course, and diagnostic tests. A comprehensive assimilation of these factors must lead to a specific diagnosis with positive identification of pathologic condition(s)."[4]

More particularly, the DOWC MTG addresses treatment protocols for meniscal injuries:

f. Meniscus Injury:

….

v. Non-operative Treatment: Lower Extremity Injury Exhibit Page Number 91

A) Initial Treatment: ice, bracing, and protected weight-bearing.

B) Patient education should include instruction in self-management techniques, ergonomics, body mechanics, home exercise, joint protection, and weight management.

C) Medications such as analgesics and anti-inflammatories may be helpful. Refer to medication discussions in Section F.7, Medications and Medical Management.

D) Benefits may be achieved through therapeutic rehabilitation and rehabilitation interventions. They should include range-of-motion (ROM), active therapies, and a home exercise program. Active therapies include proprioception training, restoring normal joint mechanics, and clearing dysfunctions from distal and proximal structures. Passive as well as active therapies may be used to control

[4] Rule 17, Exhibit 6, p. 2-3.

pain and swelling. Therapy should progress to strengthening and an independent home exercise program targeted to further improve ROM, strength, and normal joint mechanics influenced by structures distal and proximal to the knee. Refer to Section F. Therapeutic Procedures, Non-operative.[5]

E) Return to work with appropriate restrictions should be considered early in the course of treatment

…

G) Surgical Indications/Considerations:

1) Locked or blocked knee precluding active therapy;

2) Isolated acute meniscus tear with appropriate physical exam findings;

3) Isolated degenerative meniscal tear is not an indication without locking or other major functional symptoms.

Multiple studies note increased osteoarthritis in knees with menisectomy, with a greater incidence in patients who have had a total menisectomy, allograft, lateral menisectomy, or degenerative tear.

There is some evidence that, in patients with degenerative tears of the medial meniscus, a conservative treatment plan may yield substantial functional and symptomatic benefits similar to arthroscopic meniscectomy when measured 2 years after the beginning of treatment. The conservative treatment plan must include both supervised physical therapy and a home exercise program.

…

There is good evidence that, in the initial management of knee OA with a torn meniscus, it is reasonable to start with nonoperative physical therapy. There is also good evidence that about 30% of patients may not respond to PT alone. The appropriate treatment changes for the patients who do not do well with PT are not evident from the study, since little is known about what accounts for their lack of benefit from the PT program."[6]

The DOWC MTG specifically reference the need for conservative treatment, such as PT and active exercise, which Claimant has not had. The DOWC MTG also suggest conservative treatment may increase function and help alleviate symptoms. In summary, the ALJ was not persuaded the surgery proposed for Claimant's left knee

[5] The ALJ notes that Section 2. KNEE a. Aggravated Osteoarthritis (OA), which covers treatment aggravated osteoarthritis in the knee also suggests the use of non-operative treatments, including therapeutic rehabilitation and rehabilitation interventions, manipulation/manual therapy and acupuncture. [DOWC MTG Rule 17, Exhibit 6, p. 67].

[6] Rule 17, Exhibit 6, p. 92.

was reasonable and necessary. The ALJ has denied this request for surgery based upon the evidence before the Court at this time. The ALJ makes no determination whether Claimant may require this procedure or another surgical procedure on her left knee in the future.

ORDER

It is therefore ordered:

1. Claimant failed to meet her burden to show the proposed surgery is reasonable and necessary. The request for left knee lateral arthroscopy is denied and dismissed without prejudice.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that the L3-L4 and L4-L5 laminectomy with facet and femoral decompression surgery recommended by Dr. Douglas Orndorff is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 5, 2017 work injury.

FINDINGS OF FACT

1. The claimant suffered an admitted work injury on September 5, 2017. The claimant testified that on the date of his injury he was working as a laborer laying asphalt. The claimant's specific job task was to move the poured asphalt with a large rake. While raking the asphalt, the claimant felt a pop in his back followed by immediate pain.

2. The claimant reported the incident to his supervisor and he was sent by the employer for medical treatment at Southwest Walk-In Care. On September 5, 2017, the claimant was first seen at Southwest Walk-In Care and treated with Dr. Leslie Stanwix. Thereafter, Dr. Stanwix became the claimant's authorized treating physician (ATP) for this claim.

3. In the medical report dated September 5, 2017, Dr. Stanwix diagnosed lumbar radiculopathy and recommended x-rays, rest, and medication. In addition, Dr. Stanwix determined that the claimant was unable to work from September 9, 2017 through September 12, 2017. Dr. Stanwix also referred the claimant for physical therapy treatment with Southwest Memorial Hospital Physical Therapy.

4. While treating at Southwest Walk-In Care on September 5, 2017, x-rays of the claimant's lumbar spine showed no acute post traumatic sequelae and very mild degenerative changes of the lumbar spine.

5. On September 8, 2017, the claimant had his first physical therapy session at Southwest Memorial Hospital Physical Therapy.

6. On September 12, 2017, the claimant returned to Dr. Stanwix and reported that he was "getting better with [physical therapy] and hot baths." On that date, Dr. Stanwix released the claimant to return to work with work restrictions. Those work restrictions included no lifting, carrying, pushing, or pulling over 40 pounds.

7. On September 12, 2017, the claimant returned to physical therapy and reported that he was "having significantly less back pain". The claimant also reported that he was returning to work on September 13, 2017. The claimant did not pursue additional physical therapy treatment after September 12, 2017.

8. The claimant testified that despite his statements to his medical providers his symptoms had not improved and he continued to have back pain in September 2017. The claimant testified that he told Dr. Stanwix and the physical therapist that he had improved because he needed to get back to work. The claimant also testified that he stopped physical therapy treatment in September 2017 after two treatments because the physical therapy caused an increase in his low back pain. The ALJ has considered this testimony and does not find it credible or persuasive.

9. The claimant returned to work for the employer on September 13, 2017. The claimant testified that after he had worked approximately half of the day on September 13, 2017, he was informed that his employment was ending. The claimant also testified that he was told that the employer no longer needed him.

10. Approximately one week after his employment with the employer ended, the claimant found work operating a back hoe for his friend three to four days per week. The claimant testified that he performed that back hoe related work for one month.

11. The claimant testified that he continued to have pain and sought treatment with Dr. Stanwix. The claimant returned to Dr. Stanwix on November 1, 2017. On that date, the claimant reported that his pain had returned and that he was having low back pain that caused lightning-type sensations and pain that radiated into his legs and caused numbness. On that date, Dr. Stanwix referred the claimant to Dr. David Silva for consultation.

12. The claimant was first by Dr. Silva on December 13, 2017. At that time, the claimant described the September 5, 2017 raking incident. In addition, the claimant reported that he had low back and left thigh pain. Dr. Silva diagnosed central mechanical low back pain with L3 radicular features and recommended a magnetic resonance image (MRI) of the claimant's lumbar spine.

13. The recommended lumbar spine MRI was performed on December 15, 2017. The MRI showed multilevel degenerative changes in the claimant's lumbar spine with the greatest at the L3-L4 level, with moderate spinal canal narrowing in the setting of congenitally short pedicles. It was also noted that there was mild neural foraminal narrowing on the right at L3-L4 level and on the left at the L4-L5 level. In addition, the MRI showed an annular disc fissure at the L4-L5 level.

14. On January 17, 2018, the claimant returned to Dr. Silva. Based upon the MRI results, Dr. Silva recommended transforaminal epidural steroid injections (TFESIs) at the L3-L4 and L4-L5 levels. The recommended TFESIs were administered by Dr. Silva on January 22, 2018.

15. On February 27, 2018, the claimant returned to Dr. Silva and reported that the injections "took away all of his pain" for four to five days. After that period of pain relief, the claimant's pain returned, but not to level he was experiencing prior to the injections. On that same date, the claimant reported to Dr. Silva that he had pain in his left hip, buttock, and down his left leg. Dr. Silva recommended repeat TFESIs at the

same levels. The recommended repeat injections were performed by Dr. Silva on March 7, 2018.

16. On March 7, 2018, the respondents filed a General Admission of Liability (GAL) admitting for the claimant's September 5, 2017 work injury.

17. On March 21, 2018, Dr. Silva completed a WC-164 form outlining work restrictions for the claimant. Specifically, Dr. Silva noted that the claimant could return to full time work with work restrictions that included no lifting over 25 pounds, and no repetitive lifting or carrying of over 20 pounds.[1]

18. On April 2, 2018, the claimant returned to Dr. Silva and reported that the March 7, 2018 injections did not provide any relief of his symptoms. Dr. Silva recommended an electromyogram nerve conduction study (EMG/NCS) and referred the claimant for a surgical consultation.

19. On April 11, 2018, the claimant was seen by Dr. Amir Abtahi for the surgical consultation recommended by Dr. Silva. On that date, the claimant reported low back pain that was radiating into his left lower extremity. He also reported that physical therapy and injections had not provided relief of his symptoms. Dr. Abtahi noted the MRI finding of epidural lipomatosis at the L3-L4 level and the broad based disc bulge at the L4-L5 level. Dr. Abtahi opined that the claimant would not benefit from surgery, but opted to wait to see the results of the EMG before proceeding.

20. On April 19, 2018, an EMG/NCS was performed and showed no evidence of lumbar radiculopathy. The test results were deemed normal.

21. Also on April 19, 2018, the claimant was seen by Dr. Abtahi who reviewed the results of the EMG/NCS. The claimant continued to complain of axial back pain with radiating pain and/or numbness into the left thigh. Dr. Abtahi recommended that the claimant continue conservative treatment including additional epidural injections, physical therapy, and weight loss.

22. Dr. Abtahi testified by deposition in this matter and reiterated his opinion that surgical intervention would not benefit the claimant. In support of this opinion, Dr. Abtahi noted that the claimant's symptoms of radiculopathy are caused by the epidural lipomatosis at the L3-L4 level. Dr. Abtahi also reiterated his opinion that the claimant should continue conservative treatment.

23. On April 23, 2018 and April 24, 2018, Dr. Silva submitted authorization requests to the respondents for additional TFESIs. The respondents denied authorization of the additional injections.

[1] Based upon the medical records it appears that the claimant was not seen by Dr. Silva on March 21, 2018 and that the WC-164 form was completed at the request of one of the parties.

24. On May 15, 2018, the claimant returned to Dr. Stanwix and requested an additional surgical referral. On that date, Dr. Stanwix referred the claimant to Dr. Douglas Orndorff for surgical consultation.

25. On June 5, 2018, the claimant was seen by Dr. Orndorff and reported long standing low back pain with left leg radiculopathy. Dr. Orndorff did not make any specific treatment recommendations on that date because imaging was not available.

26. On June 8, 2018, the claimant returned to Dr. Orndorff. At that time, Dr. Orndorff recommended that the claimant undergo an L3-L4 and L4-L5 laminectomy with facet and femoral decompression. In making this recommendation, Dr. Orndorff noted that the claimant had exhausted more than six months of "all forms of conservative options". A request for authorization of the surgery recommended by Dr. Orndorff was submitted to the respondents.[2]

27. Dr. Orndorff testified by deposition in this matter. Dr. Orndorff testified that it was his understanding that the claimant was not responsive to conservative treatment. In addition, Dr. Orndorff testified that the claimant's radiculopathy was in an L4-L5 distribution, which correlates with stenosis at the L3-L4 and L4-L5 levels. Dr. Orndorff testified that the claimant did have preexisting epidural lipomatosis.

28. In an undated report, Dr. Michael Janssen, Physician Advisor for the respondents, reviewed the request for surgery and opined that the recommended surgery may be reasonable given the claimant's preexisting degenerative disease. However, Dr. Janssen also opined that the claimant's need for surgery is not related to the September 5, 2017 work injury. In addition, Dr. Janssen specifically opined that the claimant's injury on September 5, 2017 did not exacerbate or aggravate the claimant's preexisting condition.

29. At the direction of the respondents, on October 15, 2018, the claimant attended an independent medical examination (IME) with Dr. Mark Paz. In connection with the IME, Dr. Paz reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Paz opined that the claimant may have developed myofascial low back pain at the time of the September 5, 2017 work injury. However, it is Dr. Paz's opinion that the claimant's pain generator is the lipomatosis at the L3-L4 level. Dr. Paz also opined that the claimant's lipomatosis was not caused by the September 5, 2017 work injury. In his report, Dr. Paz explained that lipomatosis is secondary to congenital factors and obesity. Dr. Paz opined that the raking activity that the claimant was performing at the time of his injury on September 5, 2017 did not aggravate or accelerate the lipomatosis. In addition, Dr. Paz noted that lipomatosis is not treated with injections or surgery. Specifically, with regard to the surgery recommended by Dr. Orndorff, Dr. Paz opined that the surgery is inconsistent with a diagnosis of L3-L4 level lipomatosis.

[2] At his post-hearing deposition taken on March 19, 2019, Dr. Orndorff testified that he performed the recommended surgery on January 10, 2019.

30. Based upon the opinions of Drs. Janssen and Paz, the respondents denied authorization for the recommended lumbar surgery.

31. Dr. Paz's testimony by deposition was consistent with his written report. Dr. Paz testified that it is his opinion that the most likely cause of the claimant's low back symptoms is the L3-L4 lipomatosis. Dr. Paz explained that lipomatosis is a collection of fat cells encased in a thin tissue. When lipomatosis develops in an enclosed space, such as the spinal canal, it can reduce the size of the canal and compress the contents of the canal. Dr. Paz further testified that lipomatosis occurs because of underlying genetic causes and obesity. Dr. Paz noted in his testimony that the claimant's lipomatosis was not caused by the work event of September 5, 2017. Nor did that September 5, 2017 event aggravate or accelerate the lipomatosis. Therefore, Dr. Paz opined that the recommended surgery is not related to the claimant's work injury.

32. The claimant testified that his current symptoms include low back pain and numbness in his left leg. The claimant also testified that prior to September 5, 2017 he did not have low back issues. However, at the IME, the claimant reported to Dr. Paz that he had prior back pain 10 to 15 years prior.

33. Medical records entered into evidence indicate that on October 23, 2013 the claimant reported to his personal care provider, Dr. Hope Barkhurst, pain in his back after heavy shoveling. The claimant also reported to Dr. Barkhurst that he had previously experienced pain in this same location in his back.

34. The ALJ does not find it credible that the claimant stopped physical therapy because it was increasing his symptoms. The ALJ credits the reports the claimant made to his medical providers at the time that he stopped physical therapy and finds as true that the physical therapy did improve the claimant's symptoms, allowing him to return to work.

35. The ALJ credits the medical records and opinions of Drs. Abtahi, Janssen, and Paz over the contrary opinion of Dr. Orndorff and finds that the claimant has failed to demonstrate that it is more likely than not that the L3-L4 and L4-L5 laminectomy with facet and femoral decompression surgery is reasonable, necessary, and related to the September 5, 2017 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation

case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

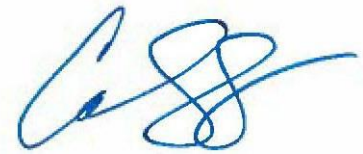
4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the L3-L4 and L4-L5 laminectomy with facet and femoral decompression surgery recommended by Dr. Orndorff is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 5, 2017 work injury. As found, the medical records and opinions of Drs. Abtahi, Janssen, and Paz are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for the L3-L4 and L4-L5 laminectomy with facet and femoral decompression surgery is denied and dismissed.

Dated this 3rd day of May, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-047-135-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 18, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 4/18/19, Courtroom 1, beginning at 1:30 PM, and ending at 4:30 PM).

Claimant's Exhibits 1 through 13 were admitted into evidence, without objection. Respondents' Exhibits A through R were admitted into evidence, without objection.

The evidentiary deposition of William Ciccone II, M.D., taken on March 27, 2019, was lodged at the commencement of the hearing (hereinafter referred to "Ciccone Depo,, followed by page and line numbers) and shall serve in lieu of Dr. Ciccone's live testimony.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on April 29, 2019. On April 29, 2019, Respondents filed objections thereto, specifically, that paragraph (h) under the Conclusion of Law "fails to resolve conflict in the evidence. The initial report of Dr. Ciccone concluded that the Claimant did not sustain a left shoulder injury in the work incident in question." The objection is well taken and the conflict is resolved against Dr. Ciccone's initial left shoulder opinion as specified in more detail herein below. After a consideration of the proposed decision and the objection thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern medical benefits, specifically, whether Thomas Seib , M.D., and Douglas Nowak, M.D., are authorized providers; whether the left hip arthroscopy performed by Dr. Nowak on March 14, 2019 was reasonably necessary to cure and relieve the Claimant from the effects of the Claimant's admitted work injury of May 15, 2017; whether the left shoulder MRI (magnetic resonance imaging) with contrast requested by Jason Hsu, M.D., is reasonably necessary to lead to a treatment recommendation with the objective of curing and relieving the Claimant from the effects of his admitted injury; and, whether the Claimant is entitled to temporary total disability (TTD) benefits for the periods of August 12, 2018 through September 6, 2018, and from October 23, 2018 and continuing until terminable by law.

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. This is an admitted claim with a date of injury of May 15, 2017. Respondents filed a General Admission of Liability (GAL), dated February 15, 2018, admitting for medical benefits, an average weekly wage (AWW) of $1, 318.19, and temporary total disability (TTD) benefits of $878.79 from May 17, 2017 through February 23, 2018 (Claimant's Exhibit 2, Bates No. 0003).

2. The Claimant is presently employed as a Captain for Frontier Airlines. On May 15, 2017, he was scheduled to fly a red-eye flight from Las Vegas to Pittsburg. At that time, he was a first officer.

Findings/The Injury

3. The Claimant was walking between flights on travertine tile, pulling approximately 70 pounds of luggage with his left hand. He stepped on spilled food with his right foot. His right foot shot out and his leg stayed back, putting him in nearly a full splits. His left arm rapidly swung to the front, still holding his luggage. He fell, landing on his right hand. His hips were twisted when he fell.

4. The Claimant immediately felt pain in his neck, left shoulder, and left hip.

5. The Claimant was able to take off and fly most of his flight as planned. His left shoulder swelled up during the flight and he felt unsafe operating the landing controls with his left upper extremity. He and the Captain agreed that the Captain would land the plane.

6. The Claimant landed in Pittsburg in the early morning of May 16, 2017. He telephoned his assistant chief pilot Aaron Rex to report his injury. Rex arranged for the Claimant to seek medical care at Concentra in Pittsburg.

7. The Claimant sought treatment at the Pittsburg Concentra on May 16, 2017, where he discussed his complaints of neck pain, shoulder pain and a knot running down his shoulder, pain in his left ribs, and left hip. The Concentra record states, "The patient presents today with Patient slipped and fell on the concourge (sic) floor injuring left side of neck, mid back, right hip and right wrist as well as left shoulder" (Claimant's Exhibit 5, Bates No. 000031)

8. The Claimant was taken off work by his Employer due to his injuries. Respondents have paid TTD benefits from May 17, 2017 to February 23, 2018 (Claimant's Exhibit 2, Bates No. 000003).

Physician' Assistant Gillam and Physical Therapy

9. The Claimant returned to his home in Seattle, Washington. Respondents furnished care with Physician's Assistant (PA) John Gillam at ZoomCare in Seattle beginning on May 18, 2017. On the initial visit, PA Gillam noted that Claimant's mechanism of injury was slipping on lettuce. "Pt fell at airport 3 days ago. Hurt left shoulder, neck and mid back and left hip" (Claimant's Exhibit 12, Bates No. 000239).

10. According to the Claimant, ZoomCare provided treatment for his neck, left shoulder, and left hip. PA Gillam requested an x-ray of the Claimant's left shoulder, neck, and left hip. The Claimant underwent those x-rays on May 22, 2017 (Claimant's Exhibit 9, Bates No. 000150-000151).

11. PA Gillam continued to note Claimant's left hip pain in his visits of May 22, May 30, June 15, June 29 and July 17, 2017 (Claimant's Exhibit 12, Bates No.000245-000265).

12. PA Gillam referred the Claimant for physical therapy (PT) at MoveMend. MoveMend treated the Claimant's left shoulder, left hip, neck, and left ribs. On the Claimant's initial visit of May 23, 2017, the physical therapist noted that Claimant's worst pain was his left shoulder, his neck was second worst, and his left hip was third worst (Claimant's Exhibit 8, Bates No. 000097).

13. The MoveMend physical therapists continued to note left hip pain and their treatment of the left hip continued on May 25, May 30, June 6, June 8, June 12, June 13, June 15, June 20, June 22, June 27, June 29, July 5, July 11, July 13, August 8,

August 10, August 14, August 15, August 20, August 23, August 29, September 6, September 20, and October 4, 2017 (Claimant's Exhibit 8, Bates Nos. 000101-000149).

14. Respondents provided a nurse case manager, (NCM) Donna Tanner, who began to attend the Claimant's medical appointments with him.

15. According to the Claimant, PA Gillam concluded that his clinic was not qualified to treat Claimant's injuries and ongoing pain. In his record of August 4, 2017, PA Gillam instructed Claimant as follows: "Please follow up with Physical Medicine and Rehab. We will not be able to see you anymore for this condition since it is a chronic pain issue and we are unable provide care for chronic pain at this clinic" (Claimant's Exhibit 12, Bates No.000269). On his Activity Prescription Form, PA Gillam noted, "Chronic pain issue can no longer be managed at ZoomCare. Referred to PM&R for definitive care & further management" (Claimant's Exhibit 12, Bates No.000270).

Medical/Chain of Authorized Referrals

16. PA Gillam referred the Claimant to Jason Hsu, M.D., an orthopedic physician specializing in the shoulder at the University of Washington. Dr. Hsu began treating the Claimant in July 2017, and only treated his left shoulder.

17. Dr. Hsu suggested continued conservative therapy at his visits from July through September 2017 (Claimant's Exhibit 11, Bates No. 000202-000223).

18. According to the Claimant, PA Gillam and NCM Donna Tanner discussed that Claimant needed a pain and rehabilitation specialist to address all of his symptoms, including his left hip. NCM Tanner gave the Claimant two options. , Paul Nutter, M.D., and Thomas Seib, M.D. The Claimant chose Dr. Seib, so he could get in sooner to see him.

19. The first provider designated by the Employer was ZoomCare, wherein PA Gillam treated the Claimant. The referrals to MoveMend, Dr. Hsu and Dr. Seib were within the authorized chain of referrals during the natural progression of medical care causally related to the admitted injuries of May 15, 2017.

20. NCM Tanner sent an email to claims adjuster Melissa Teregan on October 10, 2017, stating "I had previously talked to [Claimant] about changing providers to a physical medicine and rehab physician to guide treatment rather than just choosing specialists. He was able to get an appointment with Dr. Thomas Seib a physical medicine and rehab physician. Many of my co-workers have had him for their claimant's provider and highly recommend him" (Claimant's Exhibit 13, Bates No. 000277).

21. In a follow-up email on October 11, 2017, to Adjuster Teregan, NCM Tanner clarified her previous email: "I guess I didn't explain myself well enough. I did give him the option of Dr. Paul Nutter and his group in Puyallp or Dr. Seib and his group who practice in Everette and Edmonds. He was able to get into Dr. Seib the quickest.

He was seen initially at a ZoomCare clinic and they didn't want to see him anymore" (Claimant's Exhibit 12, Bates No.000278).

Thomas Seib, M.D.

22. The Claimant began treating with Dr. Seib in October 2017. NCM Tanner attended those appointments. Claimant testified that Respondents furnished these appointments.

23. On November 11, 2017, Dr. Seib noted that the Claimant "has pain in the left scapular region and left hip" (Claimant's Exhibit 10, Bates No. 000162).

24. The Claimant continued to note his left shoulder pain on his pain diagrams for Dr. Seib's visits from November 2017 through August 2018 (Claimant's Exhibit 10, Bates Nos. 000160, 000165, 000170, 000174, 000175, 000175, and 00018).

25. Dr. Seib prescribed a specific series of physical therapy, including work hardening, at Cascade and Concept Physical Therapies. Dr. Seib wrote the prescription for SI/Lumbar/ Hip (Claimant's Exhibit 4, Bates No. 00030). According to the Claimant, both facilities treated his left hip and his left shoulder.

26. On November 6 and November 14, 2017, the Claimant's providers at Cascade Rehabilitation Associates discussed his hip pain and/or special tests on the left hip (Claimant's Exhibit 4, Bates No. 000021, 000023, 000024,000027).

27. The Claimant noted issues with his left hip on his pain diagrams for Concept Physical therapy on: November 3, November 28, December 6, 2017, January 9, January 11, February 5, February 15, February 20, February 22, March 5, and October 17, 2018 (Claimant's Exhibit 6, Bates Nos. 000035, 000036, 000037, 000038, 000039, 000062, 000063, 000072, and 000075).

28. The Claimant's providers at Concept Physical Therapy discussed his complaints of left hip pain and their treatment of his left hip on: January 29, January 31, February 5, February 6, February 7, February 13, February 14 and February 20, 2018 (Claimant's Exhibit 6, Bates Nos. 000040, 000056, 000058, 000064, 000066, 000068, 000070, and 000073).

29. Dr. Seib released the Claimant to return to work at the end of February 2018. According to the Claimant, he returned to full duty flying and was promoted to Captain. His left shoulder and left hip continued to bother him and affect his sleep.

30. Dr. Seib saw the Claimant on April 4, 2018 and noted that Claimant had had a very severe flare in his symptoms recently and had had a complete relapse. The Claimant was still working full time but had taken occasional days off due to increased symptoms (Claimant's Exhibit 10, Bates No. 000180).

After the Relapse

31. According to the Claimant, on August 12, 2018, he called in sick to work due to his injuries. He walked to the parking garage to leave for the airport. His left shoulder was so painful that he did not think he could lift his luggage into the trunk. He did not attempt to lift his luggage, returned to his apartment, and called his Employer.

32. The Claimant reported his worsening of symptoms from the May 15, 2017 injury to his Employer. The Claimant was clear with his Employer that he did not sustain a new injury in August 2018. The Employer asked the Claimant to return to ZoomCare. Thereupon, the Respondents provided the Claimant with a new workers' compensation benefits card, with his original date of injury of May 15, 2017.

33. The Claimant returned to ZoomCare on August 23, 2018 with complaints of left shoulder and hip pain. FNP (Nurse Practitioner) Ranada Soltani noted, "Last appt for this claim, he was referred to PM&R. Pt reports he was instructed to return to work with follow up care to continue progressing to get better" (Claimant's Exhibit 12, Bates No.000271). FNP Soltani note: "Left shoulder is higher than right shoulder when sitting upright; left outer hip pain that radiates to low back when pressed. Pt stands during most of the visit" (Claimant's Exhibit 12, Bates No.000273).

34. According to the Claimant, ZoomCare took him off work and referred him back to Dr. Seib. FNP Soltani noted, "Work note provided to allow 1 week off work- pt has appt scheduled 1 week with provider who was initially managing this case. Advised pt to have his specialist determine work restrictions and when to return to full active duty" (Claimant's Exhibit 12, Bates No.000274).

35. Dr. Seib continued the Claimant's restriction from work through September 6, 2018 (Claimant's Exhibit 10, Bates No. 000187).

36. On August 30, 2018, Dr. Seib noted that Claimant "reports pain across the lumbosacral junction with pain along the lateral aspect of the left hip, radiating towards the groin." He requested an MRI (magnetic Resonance imaging) and arthrogram of the left hip to evaluate for labral tear on August 30, 2018 (Claimant's Exhibit 10, Bates No. 000184-000185).

37. Dr. Seib referred the Claimant back to Dr. Hsu for the left shoulder, to discuss surgical options (Claimant's Exhibit 10, Bates No. 0000187).

38. Dr. Seib again submitted a request for a left hip MRI on September 6, 2018 (Claimant's Exhibit 10, Bates No. 000188).

39. The Claimant received the MRI of the left hip on October 16, 2018. The findings were "detached tear of the left anterior-superior acetabular labrum, without adjacent cartilage abnormality" (Claimant's Exhibit 9, Bates No. 000155).

Claimant Off Work Again

40. The Claimant received the report with the findings on October 23, 2018. Upon reading that he had a complete detached labral tear, he telephoned Dr. Seib to ensure he understood the findings. He then called the Employer's Manager on Duty Line. He spoke to Elyse Swedberg. They discussed that if a plane lost an engine and the Claimant had to make a V-cut, his left lower extremity may not be strong enough and the plane could go off the runway. The plane could be damaged, and passengers could be injured or killed. Swedberg and the Claimant concurred that Claimant was not safe to fly. The Claimant was removed from the schedule, and his leave was coded as "OJI, " or on-the-job injury.

41. The Respondents did not reinstate TTD benefits on October 24, 2018. The Claimant has not returned to work since October 23, 2018 and has had no income in the interim.

42. Based upon the results of the MRI, Dr. Seib removed the Claimant from work on October 23, 2018, stating: "Pt has torn labrum L hip. Unable to work. Surgical eval needed" (Claimant's Exhibit 10, Bates No. 000189).

43. Dr. Seib referred the Claimant to orthopedic surgeon Douglas Nowak, M.D., on October 25, 2018, noting "MRI attached. Please review. We are requesting authorization for referral to Dr. Nowak for surgical consult" (Claimant's Exhibit 10, Bates No. 000190).

44. Dr. Seib continued to restrict the Claimant from work on November 11, 2018, stating "Vocational issues are discussed. At this point I do not believe patient is safe to pilot an airplane. He is capable of light duty work if other work is available. Patient is given an APF indicating this" (Claimant's Exhibit 10, Bates No. 000193).

45. Dr. Seib continued to restrict the Claimant from work on February 13, 2019, stating "Patient is capable of working modified duty, but not able to return to job of injury due to ongoing shoulder injury, as well as hip injury" (Claimant's Exhibit 10, Bates No. 000201).

Douglas Nowak, M.D.

46. Dr. Nowak first saw the Claimant on October 31, 2018. Dr. Nowak noted that Claimant had "left hip pain for about a year and a half from a work injury. He injured this in a slip & fall while working on 5/15/17…The hip hurts anterolateral deep about the hip and also about the sacroiliac joint. Pain is worst with sitting and bending. He rates the pain as 8 out of 10 and is constant. Pain quality is sharp, dull, stabbing, throbbing and aching. It frequently interferes with his sleep." Dr. Nowak recommended first trying an intra-articular hip corticosteroid injection (Claimant's Exhibit 7, Bates No. 000077-000079).

47. Dr. Nowak saw the Claimant again on February 11, 2019, after the **Claimant had had the corticosteroid injection. Dr. Nowak was of the following opinion: "I feel surgery is indicated at this time given his prior conservative treatment, duration & severity of symptoms and diagnosis**" (Claimant's Exhibit 7, Bates No. 000082).

48. Dr. Nowak was of the opinion that the need for the surgery was related to the Claimant's work injury., stating "I feel this condition is related to the work injury on a more likely than not basis and treatment for this should fall under a workers' comp claim" (Claimant's Exhibit 7, Bates No. 000082).

49. Dr. Nowak and the Claimant discussed the surgery again on March 6, 2018. Dr. Nowak stated: "I feel [Claimant] is a good candidate for hip arthroscopy. He has failed conservative treatment as noted above in HPI. Symptoms are moderate to severe and are consistent with femoroacetabular impingement. Further, he does not have any contra-indications for FAI surgery" (Claimant's Exhibit 7, Bates No. 000086).

50. Respondents denied authorization for the surgery (Claimant's Exhibit 1, Bates No. 000001-000002).

The Hip Surgery

51. The Claimant underwent the requested surgery with his own money on March 14, 2019.

52. Dr. Nowak performed a left hip arthroscopy with femoroplasty, acetabuloplasty, labral repair, synovectomy, chondroplasty, and intraoperative fluoroscopy with interpretation (Claimant's Exhibit 7, Bates No. 000088- 000092).

53. According to the Claimant, the surgery considerably alleviated his left hip pain and increased his function. He is one week ahead of his physical therapy schedule.

54. Dr. Nowak saw the Claimant for post-surgery follow up on March 25, 2019. He noted that the Claimant was doing well. His pain was well controlled, and he was no longer requiring pain medication (Claimant's Exhibit 7, Bates No. 000094-000095).

Return to Dr. Hsu

55. The Claimant returned to Dr. Hsu on Dr. Seib's referral on October 16, 2018. Dr. Hsu stated, : [Claimant] returns for evaluation concerning left shoulder pain that has been persistent since his injury over a year ago. Given persistence of symptoms and inconclusive findings on his previous non-contrast MRI from last year**, I'd suggest we get an arthrogram MRI to assess for true labral pathology"** (emphasis supplied) (Claimant's Exhibit 11, Bates No. 000225).

56. Dr. Hsu requested authorization for the left shoulder MRI with contrast on October 16, 2018 (Claimant's Exhibit 11, Bates No. 000230). His request noted the diagnostic studies were medically necessary (Claimant's Exhibit 11, Bates No. 000233).

57. Respondents' claim manager Patty Atherton denied the MRI (Claimant's Exhibit 11, Bates No. 000234).

58. The Claimant continues to have pain and functional limitations in his left shoulder. It rolls forward and is unstable. It continues to affect his sleep.

Respondents' Independent Medical Examiner (IME), William Ciccone, M.D.

59. Respondents retained Dr. Ciccone to conduct an IME. Dr. Ciccone submitted two reports and testified by evidentiary deposition.

60. Dr. Ciccone's original report was submitted to the parties by ExamWorks on February 25, 2019 (Claimant's Exhibit 3; Respondents' Exhibit A).

61. Dr. Ciccone provided a seven-page summary of Claimant's medical treatment from May 15, 2017 to October 16, 2018, describing each medical record (Claimant's Exhibit 3, Bates No. 000009-000015).

62. Dr. Ciccone concluded,: "I believe that the claimant suffered an injury to the left hip labrum as a result of the work incident. The claimant explained to me that he was walking through the airport pulling his bags behind him with his left arm. His right foot slipped forward causing him to twist and fall to the right. His left foot remained planted on the ground and he pulled his bag forward quickly with his left arm. His left foot remained planted on the ground causing his hip to twist as his right hand hit the ground" (Claimant's Exhibit 3, Bates No. 000016).

63. Dr. Ciccone discussed the Claimant's complaints of left hip pain throughout the medical records. He stated that he believes the note regarding right hip pain in the May 16, 2017 Concentra record was a typographical error. "Throughout the claimant's care he has intermittent complaints of left hip pain that sometimes radiates into the back side of the hip at the SI joint" (Claimant's Exhibit 3, Bates No. 000016).

64. Dr. Ciccone stated,: "While there was definitely a lot of attention paid to the left shoulder initially, the claimant did have intermittent recorded complaints of left hip pain" (Claimant's Exhibit 3, Bates No. 00017).

65. Dr. Ciccone concluded that "the clamant suffered an acute labral tear in the left hip due to the twisting injury on 5/15/17…In this instance the MRI of the left hip

from 10/16/18 did not reveal any degenerative changes in the hip, leading to the conclusion that this an acute tear" (Claimant's Exhibit 3, Bates No. 000017).

66. Dr. Ciccone discussed the Claimant's mechanism of injury: "I believe that a twist with the claimant's full weight on the left hip would be an appropriate mechanism to cause a labral tear. Further, his examination findings are consistent with a symptomatic labral tear" (Claimant's Exhibit 3, Bates No. 000017).

67. Dr. Ciccone stated the opinion that the requested left hip surgery was reasonable and causally related to the work injury, as Claimant had failed conservative management and had relief of the diagnostic injection. (Claimant's Exhibit 3, Bates No. 000017).

68. Dr. Ciccone, in his first report, stated: "I do not believe the claimant suffered a work related injury to ther left Shoulder" (Claimant's Exhibit 3, Bates No. 000016). In arriving at this conclusion, Dr. Ciccone assumed that there was no impact to the Claimant's left shoulder. This assumption is contrary to the Claimant's testimony about the admitted injuries and it is contrary to the weight of the aggregate medical evidence. Although the ALJ finds Dr. Ciccone's first opinion concerning the Claimant's left hip credible (his changed opinion is **not** credible), the ALJ finds his first opinion regarding the left shoulder lacking in credibility.

Dr. Ciccone's Second Report

69. Dr. Ciccone sent Respondents' counsel a new report on February 26, 2019 (Respondents' Exhibit A, Bates No. 00001-00015). Dr. Ciccone's record review and summary of twenty-eight of Claimant's medical records is identical to that of his first report (Respondents' Exhibit A, Bates No. 0005-001). He testified that he did not review any additional medical records or diagnostic scans **prior to changing his opinions** (emphasis supplied). (Ciccone Depo. Tr. p.40:lns 9-22).

70. In his new report, Dr. Ciccone changed his conclusion regarding Claimant's work-related diagnosis of his hip. He stated, "I do not believe that the claimant suffered a minor sprain/ strain to the left hip as a result of the work incident on 5/15/17" (Respondents' Exhibit A, Bates No. 0011). Later in the report, he stated, "I believe that the claimant suffered a minor sprain/ strain to the let hip resulting in trochanteric bursitis" (Respondents' Exhibit A, Bates No. 00012).

71. Dr. Ciccone changed his opinion regarding Claimant's complaints of hip pain following the date of injury. Whereas he previously deemed the Concentra note regarding the right hip to be a typographical error, he stated in his new report that Dr. Applegate found no hip pain in his "thorough" and "complete" exam (Respondents' Exhibit A, Bates No. 00011).

72. Dr. Ciccone testified, "[Claimant] didn't have hip pain on the initial evaluations. (Ciccone Depo. Tr. p.13: lns 2-4).

73. Dr. Ciccone stated: “In this instance, the claimant had no left hip pain until almost a week after the injury” (Respondents’ Exhibit A, Bates No. 00012). In his deposition, Dr. Ciccone acknowledged that PA Gillam repeatedly noted left hip pain on May 18, 2017, two full days after the date of injury (Ciccone Depo. Tr. p.47:lns. 8-13).

74. Dr. Ciccone stated that Claimant’s hip pain continued to resolve until 7/17/17. “In medical records there is no other mention of hip pain until 1/10/18” (Respondents’ Exhibit A, Bates No. 00012).

75. Dr. Ciccone changed his opinion regarding the nature of Claimant’s hip labral tear:I do not believe that the MRI findings on 10/16/18 reveal an acute injury but rather a degenerative tear” (Respondents’ Exhibit A, Bates No. 00012).

76. Dr. Ciccone stated he did not review any new scans or radiology reports to change his conclusion regarding the nature of the tear (Ciccone Depo. Tr. p. 41:lns. 4-7). “We know from some of the science when you look at individuals who have asymptomatic or painless hips and you MRI them, up to 60 percent of them have labral tears already (Ciccone Depo. Tr. p.25, lns. 5-8).

77. Dr. Ciccone stated he was aware of the statistics regarding the prevalence of labral tears when he issued his first report (Ciccone Depo. Tr. p.64: lns. 2-13).

78. Dr. Ciccone changed his opinion regarding the reasonable necessity of surgery: “It would be unlikely that the claimant would benefit from this surgery and likely would get worse” (Respondents’ Exhibit A, Bates No. 00012). In his deposition, Dr. Ciccone stated that Claimant had a positive response to the hip injection: “So in that situation, the option for hip arthroscopy exists” (Ciccone Depo. Tr. p.27:lns. 5-6).

79. Dr. Ciccone changed his opinion regarding Claimant’s credibility. “The claimant’s history as related to me is suspect” (Respondents’ Exhibit A, Bates No. 00012).

80. Dr. Ciccone testified that Claimant did not tell him he fell down onto the ground. He did not dispute that the first sentence Claimant stated to him was “It was a slip and fall at the Las Vegas airport.” He did not dispute that Claimant told him he was twisted when he hit (Ciccone Depo. Tr. p.55:ln.19; p. 56 ln. 7).

81. Dr. Ciccone changed his :“I do not believe that the mechanism of injury that is stated in the claimant’s early evaluations following the injury would cause a hip labral tear” (Respondents’ Exhibit A, Bates No. 00013).

82. Dr. Ciccone testified that his first report was a draft that was unfortunately released, and he should not have emailed it (Ciccone Depo. Tr. p.14: lns.14; p. 15:ln. 1). He stated the first report was “an **argument** (emphasis supplied) superficially to see if could be actually defended, and I just couldn’t critically defend it” (Ciccone Depo. Tr.

p.23:lns. 20-22). The ALJ finds this explanation totally lacking in credibility. It, therefore, undermines the entire credibility of dr. Ciccone's second report and changed opinion.

83. Dr. Ciccone stated that Respondents' counsel contacted him after he sent out the first report, but he could not recall their conversation (Ciccone Depo. Tr. p.61: lns. 7-15).

84. Dr. Ciccone testified that he did not review images of Claimant's hip or shoulder (Ciccone Depo. Tr. p.17:ln. 15). He did not accept the images Claimant brought to the IME. He did not request the images from Respondents (Ciccone Depo. Tr. p.52: lns. 1-15).

Ultimate Findings

85. The evidence relied upon by the Respondents' concerning their theory that the Claimant had no permanent effects from the admitted injuries of May 15, 2017 is Respondents' IME Dr. Ciccone's two opinions that the Claimant did not sustain a work related injury to the left shoulder, which the ALJ has found to be lacking in crediblity; and, Dr. Ciccone's second opinion that there were no permanent effects to the left hip, which opinion is a 100% "about face" which, as found, is based on an unsatisfactory and incredible explanation for the "about face," *i.e.,* the first report was a draft and not intended to go out. At first, Dr. Ciccone was of the opinion that left hip surgery was "reasonable and necessary." In his changed opinion, it was no longer necessary. The ALJ infers and finds, "You must be kidding me, Dr. Ciccone!" Dr. Ciccone's changed opinions are contrary to the totality of the medical evidence in the case. At first Dr. Ciccone considered the Claimant to be credible. In his changed opinion, Dr. Ciccione waffled on the issue of Claimant's credibility. The ALJ reasons that there is no room for a mercurial approach to causal relatedness and the need for surgery when the Claimant's future as a pilot is at stake. As found, the previous treating and evaluating physicians did not "have a dog in the fight." The opinions of Dr.Hsu, Dr. Seib and Dr. Nowak are persuasively articulated in an objective fashion, supported by the underlying medical record, consistent throughout, and highly credible. The Claimant's history has been consistent throughout. He presented as an articulate, careful, straight-forward and credible individual. His testimony is corroborated by the credible medical evidence developed by his treating physicians.

86. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Zoon PA Gillam, Dr. Hsu, Dr. Seib, Dr. Nowak, plus the testimony of the Claimant, and to reject the opinions of Respondents' IME Dr. Ciccone almost entirety, with the exception of Dr. Ciccone's first opinion concerning the left hip, which is corroborated by the weight bf medical evidence. His second opinion concerning the left hip is rejected, thus, the ALJ has resolved the conflicts in the evidence.

87. All of the Claimant's medical providers for the left shoulder and left hip injuries of May 15, 2017, began with an Employer referral to ZoomCare, and referrals

emanating from Zoomcare were made in an unbroken chain of referrals through Dr. Hsu, Dr. Seib and Dr. Nowak (who performed the surgery at issue). Consequently the chain of referrals remains in an unbroken chain in the natural progression of treatment for the Claimant's admitted, compensable conditions.

88. All of the Claimant's medical care and treatment for the left shoulder and left hip injuries of May 15, 2017 is causally related thereto and reasonably necessary to cure and relieve the effects thereof.

89. There is no issue concerning the Claimant's admitted average weekly wage (AWW) of $1,318.19 and resultant TTD rate of $878.79 per week, or $125.54 per day, which the ALJ hereby finds as fact.

90. As found herein above, the totality of the evidence supports the fact that the Claimant was placed off work with restrictions, effective October 23, 2018; has not been released to full duty; has not been offered sustainable modified duty; has not reached maximum medical improvement (MMI); and, has been sustaining a 100% temporary wage loss since October 23, 2018. Therefore, the Claimant has been temporarily and totally disabled since October 23, 2018 and continuing. The period from October 23, 2018 through the hearing date, April 18, 2019, both dates inclusive, is a total of 178 days..

91. The Claimant has sustained his burden of proof, by a preponderance of the evidence on all issues.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254

(1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the evidence relied upon by the Respondents' concerning their theory that the Claimant had no permanent effects from the admitted injuries of May 15, 2017 is Respondents' IME Dr. Ciccone's later opinions that the Claimant did not sustain a work related injury to the left shoulder (first and second opinions), which the ALJ found to be lacking in crediblity; and, Dr. Ciccone's second opinion that there were no permanent effects to the left hip, which opinion is a 100% "about face" which, as found, is based on an unsatisfactory and incredible explanation for the "about face," *i.e.,* the first report was a draft and not intended to go out. At first, Dr. Ciccone was of the opinion that left hip surgery was "reasonable and necessary." In his changed opinion, it was no longer necessary The ALJ infers and finds, "You must be kidding me, Dr. Ciccone!" Dr. Ciccone's changed opinions are contrary to the totality of the medical evidence in the case. At first Dr. Ciccone considered the Claimant to be credible. In his changed opinion, Dr. Ciccone waffled on the issue of Claimant's credibility. The ALJ reasons that there is no room for a mercurial approach to causal relatedness and the need for surgery when the Claimant's future as a pilot is at stake. As found, the previous treating and evaluating physicians did not "have a dog in the fight." The opinions of Dr.Hsu, Dr. Seib and Dr. Nowak are persuasively articulated in an objective fashion, supported by the underlying medical record, consistent throughout, and highly credible. The Claimant's history has been consistent throughout. He presented as an articulate, careful, straight-forward and credible individual. His testimony is corroborated by the credible medical evidence developed by his treating physicians.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial**

evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ZoomCare PA Gillam, Dr. Hsu, Dr. Seib, Dr. Nowak, plus the testimony of the Claimant, and to reject the opinions of Respondents' IME Dr. Ciccone almost entirety, with the exception of Dr. Ciccone's first opinion concerning the left hip, which is corroborated by the weight bf medical evidence. His second opinion concerning the left hip is rejected, thus, the ALJ has resolved the conflicts in the evidence.

Chain of Authorized Referrals

c. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, all of the Claimant's medical providers for the left shoulder and left hip injuries of May 15, 2017, began with an Employer referral to ZoomCare, and referrals emanating from Zoomcare were made in an unbroken chain of referrals through Dr. Hsu, Dr. Seib and Dr. Nowak (who performed the surgery at issue). Consequently the chain of referrals remains in an unbroken chain in the natural progression of treatment for the Claimant's admitted, compensable conditions.

Medical

d. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to his aditted left hip and left shoulder injuries of May 15, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary.

Average Weekly Wage (AWW)

e. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As further found, Claimant has had a 100% temporary wage loss

since October 23, 2018. the Claimant's admitted average weekly wage (AWW) of $1,318.19 yielded a TTD rate of $878.79 per week, or $125.54 per day.

Temporary Total Disability Benefits

f. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*, however, the treating physicians and the Employer have kept the Claimant off work because of safety issues concerning the Claimant's work-related condition

g. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, modified employment is not made available, and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found herein above, the totality of the evidence supports the fact that the Claimant was placed off work with restrictions, effective October 23, 2018; has not been released to full duty; has not been offered sustainable modified duty; has not reached maximum medical improvement (MMI); and, has been sustaining a 100% temporary wage loss since October 23, 2018. Therefore, the Claimant has been temporarily and totally disabled since October 23, 2018 and continuing. The period from October 23, 2018 through the hearing date, April 18, 2019, both dates inclusive, is a total of 178 days.

h. Past due TTD benefits at the rate of $878.79 per week, or $125.54 per day, are due from October 23, 2018 through April 18, 2019, both dates inclusive, a total of 178 days, in the aggregate amount of $22,346.12. TTD benefits from April 19, 2019 and continuing until terminable by law are warranted.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24

P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012).. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on all issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all the costs of all authorized, reasonably necessary and causally related medical care and treatment for the Claimant's left shoulder and left hip injuries of May 15, 2017, including the surgery performed by David Nowak, M.D., subject to the Division of Workers Compensation Medical Fee Schedule.

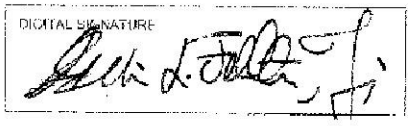
B. Respondents shall pay the Claimant temporary total disability benefits of $878.79 per week, or $125.54 per day, from October 23, 2018 through April 18, 2019, both dates inclusive, a total of 178 days, in the aggregate amount of $22,346.12, which is payable retroactively and forthwith.

C. From April 18, 2019 until temporary benefits are terminable by law, Respondents shall continue to pay the Claimant $878.79 per week in temporary total disability benefits.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this 3rd day of May 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-843-821-003

Issue

Whether Claimant's current medications prescribed by Dr. Kuklo, are reasonable, necessary, and related to Claimant's workers compensation injury.

Findings of Fact

1. In 2010, Claimant sustained an admitted work injury. She underwent treatment and ultimately her authorized treating physician (ATP) placed her at maximum medical improvement (MMI) in March 2012, and provided a fifteen percent whole person impairment rating for her cervical spine. Claimant's ATP recommended continuing Claimant's prescription medications for six to twelve months. Respondents filed a final admission of liability shortly thereafter.

2. Dr. Timothy Kuklo assumed Claimant's care post MMI and continues to provide maintenance medical treatment. Dr. Kuklo's care has consisted primarily of continuing to prescribe Claimant narcotic pain relievers and the benzodiazepine Valium.

3. Respondents challenge whether Claimant's medications remain reasonably necessary and related to her work injury.

4. Dr. Allison Fall testified on Respondents' behalf as an expert in physical medicine and rehabilitation. She evaluated Claimant on February 1, 2017. Claimant currently takes 5 mg of Oxycodone, and 2-5 mg of Valium per day. She occasionally takes a low dose of Dilaudid for breakthrough pain. Dr. Fall opined that the risks associated with Claimant continuing on these medications exceed their benefits. Dr. Fall identified the risks as falls, over-sedation, liver damage, overdose, and decreased respiration. She doubted that Claimant received benefit from the medications because the Oxycodone had a short duration, and the Valium was effective only for short-term treatment. Dr. Fall opined that Claimant should take an anti-inflammatory rather than Oxycodone.

5. Dr. Fall opined that Claimant's underlying work injury remained at MMI and that Dr. Kukla's treatment now related to Claimant's degenerative changes and central tremor rather than the radiculopathy and chronic pain from the work injury.

6. Dr. Fall opined that Claimant's medications have no effect on her ability to function.

7. Dr. Fall opined that Claimant could stop taking all of her medications without side effects.

8. Dr. Kuklo testified on Claimant's behalf as an expert in orthopedic spine surgery, a field in which he is board certified and has in excess of twenty years of experience. Dr. Kuklo has treated Claimant for approximately eight years.

9. Dr. Kuklo opined that Claimant's treatment is reasonable, necessary, and related to her work injury.

10. Dr. Kuklo did not share Dr. Fall's concerns about the risk of an overdose because her dose -- one-sixth what it was originally was -- "is incredibly small." He also testified that he knows no one who experiences traditional side effects at Claimant's dosage.

11. Dr. Kuklo acknowledged that generally, anti-inflammatories are preferable to opioids, however, he had trialed Claimant on Tramadol and Gabapentin without success and Claimant experienced an adverse reaction to Celebrex. Further, although a pharmacy review performed by Optum Pharm had recommended that Claimant taper off of the opioid and instead use an over-the –counter acetaminophen, Claimant was not able to tolerate acetaminophen.

12. Overall, Dr. Kuklo testified that based on Claimant's function, her medications are a "good working formula," with very low risk.

13. Claimant testified that she has ongoing pain and numbness travelling down from her neck through her arm into her hand, greater on her left, dominant side. Her ongoing pain causes sleep difficulties that Valium eases. She has limited range of motion in her cervical spine and complies with her ten-pound lifting restrictions. Claimant takes 2.5 mg of Oxycodone when she wakes to help reduce her pain and increase her function. Claimant credibly testified that she does not believe she could remain functional in her job and her activities of daily living without continuing with her medications.

Conclusions of Law

Where the respondents file a final admission admitting for post-MMI medical treatment pursuant to *Grover v. Industrial Comm'n*, 759 P.2d 705 (Colo. 1988), respondents retain the right to contest liability for a particular treatment. When respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury. *Id*. at 712; *Snyder v. Industrial Claim Appeals Offc*., 942 P.2d 1337 (Colo. App. 1997). However, where the respondents attempt to modify an issue they had admitted, the respondents bear the burden of proof for such modification. Section 8-43-201(1), C.R.S. (2018). This includes the termination of previously admitted maintenance medical benefits. *Arguello v. State of Colorado*, W.C. No. 4-762-736-04 (May 3, 2016); *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012).

Accordingly, Respondents bore the burden of proof with respect to the reasonable necessity and relatedness of Claimant's continued medications. Respondents bore the burden of proving by a preponderance that medications Dr. Kuklo currently prescribes are no longer reasonably necessary and causally related to the 2010 work injury.

The *Guidelines* provide, in relevant part, that "medications should be clearly linked to improvement of function, not just pain control." WCRP 17, Exhibit 9 (H)(6). Furthermore, the *Guidelines*, specify that, "examples of routine functions include the ability to perform work tasks, drive safely, pay bills or perform math operations, remain alert and upright for 10 hours per day, or participate in normal family and social activities." WCRP 17, Exhibit 9(H)(6).

As found Dr. Kuklo has been Claimant's ATP since she reached MMI in 2012. He persuasively explained that Claimant suffers from chronic pain because of her 2010 industrial injury. She requires Oxycodone, Valium and occasional Dilaudid to reduce her pain and maintain her ability to function in her job and activities of daily living. Without the medications, Claimant would likely become non-functional. Dr. Kuklo noted that Claimant takes a low dose of her medications and faces none of the usual risks of long-term opioid use. Furthermore, Claimant noted that her pain medications reduce her symptoms. Although the medications do not eliminate her pain, they reduce her pain enough to allow improved sleep and function.

Claimant's persuasive testimony also supports the conclusion that she is able to function in her job and activities of daily living while on her medications.

As found, Respondents have not established by a preponderance of the evidence that Claimant's maintenance treatment is no longer reasonably needed, or that the maintenance treatment is no longer related to Claimant's work injury. The record is replete with evidence that Claimant continues to suffer chronic pain with some numbness, sleep disturbances, limited range of motion, and lifting restrictions because of her 2010 work injury.

ORDER

Based on the foregoing Findings of Fact and Conclusions of Law, the ALJ hereby Orders:

1. The opioids and the benzodiazepines prescribed by Dr. Kuklo are reasonable, necessary, and related to Claimant's work injury.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 3, 2019

Kimberly B. Turnbow
Administrative Law Judge

ISSUES

1. Whether Claimant has overcome Division Independent Medical Examination (DIME) physician Dr. Thurston's opinion on maximum medical improvement (MMI) by clear and convincing evidence. If so, Claimant requests an order requiring Respondents to provide additional reasonable, necessary, and causally related medical treatment.

2. Whether Claimant has overcome DIME physician Dr. Thurston's opinion on Claimant's permanent partial disability (PPD) rating as a result of her work injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits prior to being placed at MMI.

FINDINGS OF FACT

1. Claimant is a 55-year-old woman who is employed by Employer as a service specialist team lead. Claimant has been employed by employer for approximately 17 years.

2. As part of her duties, Claimant assisted call center representatives with any issues they had while on the phones or while doing additional work. Claimant attempted to resolve issues and her area of specialty involved life insurance questions. Claimant regularly worked from 7 a.m. until all issues were resolved for the day, ending her work days anywhere between 5 p.m. and 9 p.m.

3. In April of 2014, Claimant was sent by Employer to Texas to assist newly hired call center representatives who had been in training for six weeks or less and who were just starting to actively answer phone calls from Employer life insurance agents.

4. On April 9, 2014, Claimant was at work at the call center and needed to use the restroom. As she walked into the restroom, the floor turned from cement to tile with a slight raised threshold estimated to be approximately 1 inch. Claimant's foot hit the raised threshold and tile and she tripped.

5. Claimant testified that she hit her left leg and that she landed with her knee kind of bent, on her feet, but with her hands on the ground of the bathroom floor.

6. Claimant testified that she had low back pain and a sharp shooting pain immediately in her back and buttocks to the left and 2-3 inches below her pants and that it felt like stabbing with a knife.

7. On April 14, 2014, Sarah Holder, D.O. at Carenow in Texas evaluated Claimant. Claimant reported that she tripped in the bathroom at work and had pain in her back at a 7/10. X-rays were taken and showed no fracture in the lumbosacral or pelvis area. It was recommended that Claimant rest, use heat, and stretch as needed. Claimant was allowed to return to work without restrictions. Claimant was diagnosed with strain/sprain of the back lumbosacral and sacroiliac. *See* Exhibit 1.

8. On April 18, 2014, Claimant completed her work assignment in Texas and returned to Colorado.

9. On April 24, 2014, John Charbonneau, M.D. evaluated Claimant. Claimant reported that she was walking into the women's restroom when she tripped on the raised threshold between the cement in the room and the tile inside the restroom. Claimant reported that she fell forward onto outstretched upper extremities and had instant left low back pain, primarily in the area of the left SI joint. Claimant reported that it happened very quickly. Claimant said she had pain primarily in the upper one-half of the left SI joint and that at times, the pain radiated around the lateral aspect of her pelvis to the anterolateral aspect of the pelvis. Claimant reported that at times she had some pain into the left buttock but not below that point. Claimant reported that she was quite fatigued by the end of the day due to the combination of pain and abnormal walking. Claimant reported a significant history of previous spinal injury and surgery including what Dr. Charbonneau thought sounded like an L4-5 laminectomy and discectomy in 2009 for removal of a free fragment. Claimant reported that she made a full recovery. Claimant also reported what Dr. Charbonneau believed was probably a C5-6 anterior cervical discectomy and fusion. Dr. Charbonneau found Claimant to walk with significant discomfort and to sort of roll her pelvis, which he opined was characteristic of someone who had an SI joint injury. Dr. Charbonneau noted an appearance of a little bit of scoliosis but opined it may be compensatory for Claimant's pelvic tilt from the left SI joint pain. Claimant had mild to moderate tenderness in the upper one-half of the left SI joint. Claimant had pain in range of motion. Dr. Charbonneau diagnosed lumbosacral sprain and he recommended frequent position changes as needed. *See* Exhibits 2, C.

10. On May 8, 2014, Dr. Charbonneau evaluated Claimant. Dr. Charbonneau noted that he believed Claimant had a lumbosacral sprain and left SI joint dysfunction superimposed on a previous L4-5 laminectomy and discectomy procedure. Claimant reported that her pain was different and seemed to be extending to the right with more stiffness and a sense of popping in the lower back. Claimant also reported that her buttocks were now getting numb. Dr. Charbonneau noted that Claimant appeared considerably less uncomfortable than when he last saw her and that her transitions from sitting to standing and back again were much more fluid. Dr. Charbonneau found her paraspinal muscle tenderness to be largely gone but found the tenderness in the upper one-half of the left SI joint to remain. Dr. Charbonneau told Claimant that he felt she was moving better but she reported she was having just as much pain. Dr. Charbonneau recommended physical therapy twice per week for three weeks. *See* Exhibits 2, C.

11. On May 22, 2014, Dr. Charbonneau evaluated Claimant. Claimant reported that her pain was killing her and that she had a lot of tightness and pain in the left lower back area primarily over the upper reaches of the left SI joint. Claimant reported the pain was awakening her at night multiple times. Claimant reported sharp pains in the left lower back in the superior portion of the left SI joint and over the left L5-S1 facet joint and also reported more diffuse general low back pain. Claimant reported some popping in her lower back and a little bit of throbbing in the lateral aspect of her left foot. Claimant reported that she had purchased a TENS unit on eBay but that it did nothing for her low back pain. Claimant was observed walking with an abnormal gait with a decreased swing through her left lower extremity. Claimant also was very cautious in changing form sitting to standing to lying and back again. Claimant was reproducibly tender in the superior one-third of her left SI joint. Claimant had positive results on the left for reproduction of left SI joint pain with the Patrick test and the FABER test. Dr. Charbonneau opined that the primarily pain generator was the left SI joint and that Claimant may have some L5-S1 facet joint dysfunction. Dr. Charbonneau noted his concern with the potential for delayed recovery or medication dependence. Dr. Charbonneau referred Claimant to Dr. Nieves for consideration of injection therapy. *See* Exhibits 2, C.

12. On May 29, 2014, Dr. Charbonneau evaluated Claimant. He noted that Claimant was leaving for a business trip in a few days and would be gone for two weeks. Claimant reported that she had not even gotten her Nucynta medication until the day prior and that she was about the same. Claimant reported that her pain was better localized to the superior portion of the left SI joint with no true radicular symptoms. Claimant reported that if she sat for too long, her legs would go numb circumferentially from the distal thigh out to the tips of her toes but that it reversed promptly when she stands up and moves around. Claimant reported that she was working full time at her regular work. On exam, Claimant was tender only in the superior one-third of the left SI joint with no other tenderness. Dr. Charbonneau diagnosed lumbosacral sprain and left SI joint dysfunction superimposed on a previous L4 laminectomy and discectomy. Dr. Charbonneau recommended continued medications, using heat/ice, and noted Claimant would see Dr. Nieves after her business trip. *See* Exhibits 2, C.

13. On July 9, 2014, Ricardo Nieves, M.D. evaluated Claimant. Claimant reported tripping at work on April 9 where she did not quite fall but twisted her lower back and had left sided low back pain. Claimant reported a history of back surgery in 2007 and 2008 and reported a history of cervical spine surgery. On exam, Dr. Nieves found tenderness in the left side lower lumbar spine and left sacroiliac joint. He opined that the clinical findings suggested left sided lower lumbar facet joint dysfunction and possible left sacroiliac joint dysfunction. He recommended scheduling left sided L5-S1 facet joint injections as diagnostic and therapeutic and opined that if they provided significant but temporary help, Claimant would require confirmatory facet joint medial branch blocks and possible radiofrequency ablation. He opined that if the facet joint injection provided no help, then he might need to look into SI joint injections or an MRI. *See* Exhibit 5.

14. On July 16, 2014, Claimant underwent left L5-S1 facet joint steroid injections. At a later visit, Claimant reported that the injections did not help and that she

continued to have pain in the left sided lower back and an MRI was recommended. *See* Exhibits 5, I, K.

15. On July 24, 2014, Carenow in Texas again evaluated Claimant. Carenow continued to diagnose strain/sprain of the back lumbosacral and sacroiliac. Carenow gave Claimant work restrictions of no kneeling, squatting, bending, stooping, pushing, pulling, and climbing ladders. Carenow recommended that Claimant quit smoking and follow-up with workers compensation in Colorado. *See* Exhibit 1.

16. On August 20, 2014, Dr. Charbonneau evaluated Claimant. Claimant reported worsening low back pain to the left of the spine, that her right knee was getting sore, and that she was getting depressed. Claimant reported that she had been treated for depression a long time ago, and Dr. Charbonneau noted that it was 2 years prior. Dr. Charbonneau noted in the diagnosis section of his report that Claimant seemed to be slowly worsening despite a relatively benign clinical examination and intervention by a pain medicine/spine care specialist, therapy, and medications. Dr. Charbonneau noted Claimant had a preference for narcotic pain medication that he opined was not appropriate care for Claimant. *See* Exhibit C.

17. On August 26, 2014, Claimant underwent an MRI of her lumbar spine. The MRI was compared to a prior MRI that was performed on May 6, 2009 prior to her work injury. Radiologist Bruce Berkowitz, M.D. opined that Claimant had no change in the lumbar spine other than interval improvement in the appearance of the postsurgical changes at the level of L3-4. He noted that a right far lateral disc protrusion was unchanged at L3-4, a diffuse disc bulge asymmetric to the right at L4-5 was unchanged, and a minimal broad based central disc protrusion at L5-S1 was unchanged. *See* Exhibit 6.

18. On September 3, 2014, Dr. Charbonneau evaluated Claimant. He reviewed Claimant's MRI with her and opined that it showed multi-level degenerative disk disease and degenerative facet joint disease. Dr. Charbonneau opined that the MRI showed no major focal disc herniations and that when compared to Claimant's May 2009 MRI, this new MRI showed improved appearance at Claimant's prior operative level and showed a stable appearance at all other levels. Claimant's pain again was noted to be limited to the upper half of her left SI joint. Dr. Charbonneau diagnosed left SI joint strain and inflammation. Dr. Charbonneau recommended Claimant return to Dr. Nieves for left SI joint injections. *See* Exhibits 2, C.

19. On October 8, 2014, Dr. Nieves injected Claimant's left SI joint with steroid injections and lidocaine. In a follow up visit, Claimant reported that she had complete pain relief for a short time following the left SI joint injection. Dr. Nieves recommended referral to another pain specialist for SI joint denervation. *See* Exhibits 5, I, K.

20. On October 13, 2014, Dr. Charbonneau evaluated Claimant. Claimant reported that she was not regularly taking the recommended medications. Claimant reported that a left SI joint injection had given her complete resolution of all her left low

back pain for about 4-5 hours but that it came back by the end of the day. Dr. Charbonneau noted that Claimant definitely had a positive result during the anesthetic phase. Dr. Charbonneau noted that Claimant's entire presentation had changed with the exception of Claimant's antalgic left lower extremity gait. He noted that Claimant was smiling, talkative, and her mood and affect was much improved. Again, on exam, the only area of tenderness was in the upper one-half of the left SI joint. *See* Exhibits 2, C.

21. Dr. Charbonneau evaluated Claimant on November 10, 2014 and December 18, 2014. He noted that a biopsychosocial evaluation reported from Dr. Bruns noted that Claimant had major depression and a pain disorder and had recommended biofeedback in individual psychotherapy sessions. He also noted that Claimant reported a few days of lower pain after her left SI joint injection and that they could consider it a positive response. Dr. Charbonneau noted that Dr. Nieves was no longer performing left SI joint denervation procedures but that Claimant could see Dr. Columbus for consideration of a left SI denervation. *See* Exhibits 2, C.

22. On January 16, 2015, David Columbus, D.O. evaluated Claimant. Claimant reported pain in the lumbar spine and sacro-iliac. Dr. Columbus noted that Claimant had been injected twice by Dr. Nieves, in the left facets and the SI joint and that he had referred Claimant for evaluation for radiofrequency ablation of facets and SI joint. On exam, Dr. Columbus found tenderness over the left lower segments and the left SI joints. *See* Exhibit 7.

23. On February 2, 2015, Dr. Columbus diagnosed lumbar spondylosis and lumbar region post laminectomy syndrome. Dr. Columbus listed the procedure performed that day as destruction of left L3-4, left L4-5, and left L5-S1 using standard radiofrequency thermocoagulation of the left L4, L5, and S1 medial branch nerves. *See* Exhibits 7, I.

24. On February 12, 2015, Dr. Charbonneau evaluated Claimant. He noted that Claimant had undergone left facet rhizotomies at the L3-4, L4-5, and L5-S1 on February 2. Claimant reported that the procedure had helped and that she overall had a lower level of pain. Dr. Charbonneau opined that on physical examination it was clear that Claimant was feeling better and that she was moving more comfortably after making transitions from sitting to standing. He also noted that after she loosened up, she was walking with an essentially normal gait. Claimant reported pain at a 2-3/10. Dr. Charbonneau recommended observing Claimant's response to the facet rhizotomy for one more month and he explained to Claimant the impairment rating process and maintenance care and noted that if Claimant was doing well in one month, he would get her set up for a permanent partial impairment rating and definition of maintenance care. *See* Exhibits 2, C.

25. On March 12, 2015, Dr. Charbonneau evaluated Claimant. Claimant reported she was about the same as her last visit. Dr. Charbonneau noted that meant Claimant was substantially improved with low back and left SI joint pain as she had steadily improved after her radiofrequency ablation. Claimant reported numbness in the left upper extremity, but Dr. Charbonneau opined that had nothing to do with the work

injury. Dr. Charbonneau noted Claimant was clearly feeling better, could sit and stand comfortably, had full range of motion in her lumbar spine, and had limited tenderness in the superior portion of the left SI joint. Claimant reported pain at a 3-5/10. Dr. Charbonneau opined that Claimant's depression was stable and probably back to pre-injury level but wanted an opinion and final visit with Dr. Bruns to make sure there was no injury related psychological impairment. Dr. Charbonneau opined that it was time for a permanent partial impairment rating and requested that Dr. Reichhardt perform the rating. Dr. Charbonneau opined that Claimant would be at maximum medical improvement the date of her rating with Dr. Reichhardt and requested that Dr. Reichhardt also define maintenance care, including the potential for additional nerve ablation procedures and maintenance medications. Dr. Charbonneau opined that after Claimant saw Dr. Bruns and Dr. Reichhardt, he would see her for a wrap up session to make sure Claimant had a plan for maintenance care. *See* Exhibits 2, C.

26. On April 8, 2015, Dr. Bruns evaluated Claimant. Dr. Bruns noted that as Claimant had reached MMI medically, he was evaluating her work related mental health impairment. Claimant reported sleep disorder ongoing and difficulty with irritability and forming interpersonal relationships. Claimant reported that due to the strain of dealing with her physical problems, she could become excessively irritated with people around her both at home and at work. Dr. Bruns provided an impression that this was at least in part a preexisting personality trait. Dr. Bruns opined that Claimant was at MMI psychologically and did not need maintenance care. *See* Exhibit D.

27. On April 20, 2015, Dr. Charbonneau evaluated Claimant. He noted that the visit was supposed to be a maintenance visit following MMI and impairment rating visit with Dr. Reichhardt but that Claimant failed to show up for her appointment with Dr. Reichhardt. Claimant reported that she felt like crap and had pain in her left upper SI joint. Dr. Charbonneau noted that Claimant was walking with an antalgic gait, had limited lumbar range of motion with reported tightness and pain in her upper left SI joint, and had point tenderness in the superior one-half of the left SI joint. Dr. Charbonneau noted that Claimant had been doing very well for 3-4 months after a left lower lumbar facet joint rhizotomy but now was complaining of recurrent symptoms. Dr. Charbonneau recommended Claimant see Dr. Columbus again to determine if any additional procedures are needed for the recurrent left SI joint pain. He noted that if Dr. Columbus did not recommend anything, he would get Claimant set up with Dr. Reichhardt again for MMI and an impairment rating. *See* Exhibits 2, C.

28. On May 13, 2015, Dr. Columbus evaluated Claimant. Claimant reported pain in the left side at the superior SI joint area following the radiofrequency in February. Dr. Columbus planned to inject Claimant's SI joint. On June 1, 2015, Dr. Columbus performed a therapeutic left SI joint injection of anesthetic and steroid and performed a left superior cluneal nerve injection. *See* Exhibits 7, I.

29. On June 11, 2015, Dr. Charbonneau evaluated Claimant. Claimant reported that a June 1, 2015 left SI joint injection had significantly helped and that she was feeling a lot better with a substantial reduction in her symptoms. Dr. Charbonneau

noted that it was clear Claimant was feeling better and moving better at the appointment. Dr. Charbonneau again referred Claimant to Dr. Reichhardt for an impairment rating and definition of maintenance care. *See* Exhibits 2, C.

30. On July 6, 2015, A.C. Lotman, M.D. issued a medical record review addendum. Dr. Lotman opined that Claimant had a very complicated history with a prior cervical spine surgery and prior lumbosacral spine surgery. Dr. Lotman opined that Claimant's diagnosis remains lumbar spondylosis, failed lumbar spine surgery, and chronic left SI joint dysfunction. Dr. Lotman opined that injections were necessary and related to Claimant's work injury and that it was probable she would need further injections in the future. *See* Exhibit 4.

31. On July 13, 2015, Gregory Reichhardt, M.D. evaluated Claimant. Dr. Reichhardt noted that Claimant was there for an evaluation of permanent impairment. Claimant reported that she was injured when walking into a bathroom and tripping over the edge of the tile, which was higher than the carpeting and had no transition strip. Claimant reported that she caught herself and did not impact the ground. Claimant reported that she had the immediate onset of pain in the low back and SI area. Claimant reported that she had done physical therapy and had SI injections and that the injections provided some temporary relief. Claimant reported she also underwent a left L3 to S1 radiofrequency rhizotomy and had a month of relief. Claimant also reported she underwent right SI injections and right cluneal nerve injections in June of 2015 and did not have significant relief. Claimant also reported symptoms of depression. Claimant reported continued aching in the low back and left gluteal area with some numbness extending down the posterior aspect of the thigh. Claimant reported that she had a previous back injury and had surgery and had no significant ongoing problems or functional limitations at the time of this work injury. Dr. Reichhardt opined that Claimant was at MMI with an MMI date of July 13, 2015. He opined that it would be appropriate for Claimant to have six follow up visits with a physician, four follow up visits with a physical therapist, and coverage of medications. Dr. Reichhardt opined that there were no specific injections recommended as Claimant did not have a particularly good response to the rhizotomy with only one month of relief and had no significant relief with her most recent SI injections. He opined Claimant could work full duty. Dr. Reichhardt performed an impairment rating and opined she had a 13% rating for lumbar impairment with no apportionment, as Claimant's low back condition was not independently disabling at the time of injury. Dr. Reichhardt also reviewed psychiatric impairment, which he noted was 2% whole person. Dr. Reichhardt opined that Claimant, overall, had a 15% whole person impairment as a result of the work injury. *See* Exhibit J.

32. On July 30, 2015, Dr. Charbonneau evaluated Claimant. Dr. Charbonneau noted that this was his final case closure visit. Claimant reported that she still had some left upper SI joint pain. Dr. Charbonneau opined that Claimant was at MMI and he agreed with the impairment rating and maintenance care recommendations given by Dr. Reichhardt. He opined that Claimant had reached MMI on July 13, 2015 with a 15% whole person impairment and attributed the permanent partial impairment to the work injury in question. *See* Exhibits 2, C.

33. Dr. Charbonneau evaluated Claimant at maintenance visits on November 19, 2015 and January 29, 2016. Claimant reported chronic pain in her left lower back, that the pain was interfering with her daily activities and frequently awakened her. Dr. Charbonneau found tenderness to the left of the spine at the lumbosacral junction but no tenderness in the left SI joint. By January of 2016, Claimant reported that her left lower back pain was smoldering and continued to hurt when she sat or twisted. Claimant reported an exacerbation at the end of the year and that she had pain every day. On exam, Claimant reported diffuse superficial tenderness over the lumbosacral junction. Claimant reported that she was going through the Division Independent Medical Examination process. Dr. Charbonneau opined that Claimant's July 13, 2015 MMI date remained unchanged and recommended another maintenance visit in six months. *See* Exhibits 2, C.

34. On June 22, 2016, Claimant underwent a Division Independent Medical Examination (DIME) performed by Lloyd Thurston, D.O. Dr. Thurston reviewed significant medical records including numerous records predating Claimant's work injury. Dr. Thurston reviewed the imaging and diagnostic studies and performed a physical examination. Dr. Thurston found Claimant's description of her symptoms, activity, work, and life changes due to the injury to be dramatic. Claimant walked with a markedly antalgic gait involving a shortened stance phase of the right leg which Dr. Thurston opined was the opposite of what he anticipated with left leg/hip pain. Dr. Thurston opined that pain behaviors demonstrated included facial grimacing, occasional moaning, and extensive verbal and written description of symptoms and how the injury affected Claimant's life. *See* Exhibits 11, A.

35. Dr. Thurston opined that Claimant's medical records prior to the April 9, 2014 work injury show anxiety, pain disorder, severe stress reaction, and depression that existed for years before the April 9, 2014 work injury. Dr. Thurston opined that the mechanism of injury in this case was minor and that Claimant's subjective complaints were out of proportion to the injury. Dr. Thurston pointed out that the imaging studies did not identify a physical injury and that the lack of response to appropriate conservative care was consistent with somatic symptom disorder. Dr. Thurston opined that no pain generator was identified and that Claimant's response was most consistent with somatic symptom disorder where she has a mental illness characterized by physical complaints. Dr. Thurston opined that there was no Table 53 diagnosis and therefore no range of motion impairment. Dr. Thurston opined that Claimant had a 0% permanent partial disability impairment as a result of the work injury. He agreed that Claimant reached MMI on July 13, 2015. Dr. Thurston opined that Claimant had no permanent partial disability rating for psychiatric impairment as she had documented anxiety, stress reaction, pain disorder, and depression before the injury. Dr. Thurston recommended no further medical care but recommended further psychological and psychiatric treatment outside the workers' compensation system. *See* Exhibits 11, A.

36. On July 28, 2016, Dr. Charbonneau evaluated Claimant. Dr. Charbonneau noted that Claimant had undergone a DIME that concluded she was at MMI with a 0%

permanent impairment. Claimant reported she was not feeling good at all and had started having mental problems and difficulty with her performance at work and her memory in February. Claimant felt her mental problems were due to her work injury. Claimant reported that she had been off work for about 4-5 months and had been back for about 4 weeks or so. Claimant reported pain at a 6-7/10. Dr. Charbonneau opined that Claimant continued to be stable, but with chronic pain. Dr. Charbonneau noted Claimant's reports of worsening mental health issues and memory problems leading to performance issues at work and he opined it was not clear that those were related to the work injury. *See* Exhibit 2.

37. On August 4, 2016, Claimant sought treatment outside the workers' compensation system. Chris Kottenstette, PA evaluated Claimant. Claimant reported persistent low back and left leg pain after a work injury in April 2014. Claimant reported that the workers' compensation system had not adequately managed her pain and that she couldn't stand it anymore. Claimant reported that she had done physical therapy and multiple injections as well as having her nerves burnt in the lower back. Claimant reported about three months of relief from the nerve burning. *See* Exhibit 10.

38. Claimant continued to treat outside the workers compensation system and eventually underwent lower back surgery- a posterior lumbar interbody fusion at L4-5 with spondyloreduction on September 27, 2016. Claimant continued to follow up with providers outside the workers' compensation system. *See* Exhibit G.

39. On November 12, 2018, Claimant underwent an Independent Medical Evaluation performed by Kathleen D'Angelo, M.D. Dr. D'Angelo took a history from Claimant and reviewed medical records. Dr. D'Angelo noted multiple presentations to medical providers between March of 2009 and February of 2013 for low back pain with pain radiation and numbness. Dr. D'Angelo also noted that in January of 2014 Claimant had chest pain with malaise aggravated by her inspiration and anxiety and that moderate depression was revealed in examination. In January of 2014, a severe stress reaction was noted. Dr. D'Angelo also noted that on March 28 of 2014, Claimant was evaluated by Dr. Haskins and reported persistent fluctuating back pain in the lower back and left flank with radiation to the left calf, left foot, and left thigh aggravated by daily activities including sitting, twisting, and walking. Medication and exercises were encouraged as well as consideration of physical therapy. Dr. D'Angelo noted that twelve days after Claimant was encouraged to take medication, do exercises, and consider physical therapy for her low back pain, she had the work injury in question. Dr. D'Angelo noted that at an April 24, 2014 evaluation after the work injury with Dr. Charbonneau, Claimant reported lumbar spine surgery in 2009 followed by 6-8 weeks of symptoms and then a full recovery without residual symptoms. *See* Exhibit B.

40. After reviewing voluminous medical records from both prior to and after the April 9, 2014 work injury, Dr. D'Angelo reached a conclusion. She opined that Dr. Charbonneau, Dr. Thurston, and Dr. Reichhardt were correct in placing Claimant at MMI on July 13, 2015. Dr. D'Angelo opined that Claimant's underlying and pre-existing spinal degenerative disease, which required copious medical care prior to and following

Claimant's minor work incident, was not causally related to the Claimant's work event. Dr. D'Angelo opined that Claimant's need for treatment for identical complaints continued unabated after Claimant caught her foot on flooring at work. Dr. D'Angelo opined that the mechanism of injury was minor. Dr. D'Angelo opined that the complaints before the date of injury were identical to the complaints after the date of injury and that the last appointment for lumbar pain was less than two weeks before the work incident. Dr. D'Angelo opined that regardless of whether Claimant stumbled in her worksite bathroom, Claimant would have the same issues and complaints as she currently presents with. Dr. D'Angelo opined that the length of time of Claimant's complaints prior to the injury, the identical nature of the complaints, the lack of neurological objective findings on exam, and Claimant's pre-existing psychiatric disease all contribute to her determination that Claimant's current symptoms were not related causally related to the April 2015 work injury. Dr. D'Angelo opined that Claimant's lumbar complaints, need for surgery, and ongoing care through her primary care provider and psychiatrist for mood disorder as well as her complaints of left leg and foot numbness were due to Claimant's personal and pre-existing medical and psychiatric issues. Dr. D'Angelo opined that Claimant does not require maintenance care, permanent work restrictions, and opined that Claimant does not have a permanent impairment due to the April 9, 2016 work event. *See* Exhibit B.

41. Dr. D'Angelo opined that Claimant did not have a Table 53 diagnosis stemming from a work related injury. Dr. D'Angelo opined that Claimant did not sustain a work related injury to her spine. *See* Exhibit B.

42. Dr. D'Angelo testified by deposition consistent with her Independent Medical Evaluation report. She opined that Claimant's symptoms and presentation before April of 2014 was essentially the same as after the report of injury. Dr. D'Angelo also testified that Claimant had pre-existing psychiatric conditions as well. Dr. D'Angelo testified that Claimant was not forthcoming in presenting her preexisting lumbar spine history and her preexisting psychiatric history to the workers' compensation providers post injury. Dr. D'Angelo noted that at Claimant's April 24, 2014 visit with Dr. Charbonneau Claimant reported that she had lumbar spine surgery in 2009 and made a full recovery without residual symptoms, which was clearly not consistent with Claimant's medical history. Dr. D'Angelo opined that Claimant's symptoms were very subjective and not consistent with objective findings. Dr. D'Angelo testified that Dr. Thurston, the DIME physician, did not err in any way. She agreed that Claimant had a 0% impairment. Dr. D'Angelo testified that the surgery Claimant underwent in September of 2016 was not causally related to her work injury.

43. Claimant testified at hearing. Overall, Claimant's testimony as well as her reports to medical providers is not found consistent with the weight of the credible medical evidence. As pointed out by Dr. Thurston and Dr. D'Angelo, while claimant reported to her treating providers that she had fully recovered from a prior back surgery with no residual symptoms, claimant's medical records prior to the date of injury indicate not only ongoing complaints for low back pain, but complaints dating back to 2011 that are significantly similar, if not the same, to symptoms reported as a result of the work injury.

44. Claimant's treating providers, including Dr. Reichhardt and Dr. Charbonneau do not mention the significant pre-existing history and they rely on Claimant's inaccurate subjective reports.

45. Claimant's pre-existing treatment for low back pain includes the following:

- 03/13/2009 – Lumbar Spine MRI: disc bulge at L4-5, extruded disc fragment at L3-4 with moderate to severe right sided neuroforaminal narrowing with impingement on exiting right L3 nerve root. (Ex. N, p. 545, 549).

- 03/17/2009 – Front Range Center for Brain & Spine Surgery: neurosurgical evaluation with MRI evidence of a herniated disc and recommendation for laminectomy. (Ex. M, p. 519-20).

- 05/29/2009 – Ct Lumbar Spine: impression included moderate to severe right foraminal stenosis with mass effect on the right L3 nerve root. (Ex. N, p. 546-47).

- 05/29/2009 – Lumbosacral Myelography: mild disc bulges at L3-4 and L4-5. (Ex. N, p. 548).

- 10/19/2011 – Family Physicians: ***recurrence* of low back pain/left hip pain with radiation to the left foot**; symptoms include limping, numbness, tingling, weakness; prior history of herniated disc with surgical removal; PT considered. (Ex. H, p. 478).

- 10/25/2011 – Family Physicians: reports of **worsening low back pain with radiating pain down left leg and medial thigh**; assessment is chronic thoracic or **lumbosacral neuritis or radiculitis** with history of laminectomy, physical therapy does not work in general and ESI has not worked in the past; repeat lumbar spine MRI ordered. (Ex. H, p. 474).

- 11/01/2011 – Lumbar Spine MRI: ordered due to lumbar pain, impression included disc protrusion at L4-L5 with moderate right neural foraminal encroachment, and L5-S1 broad-based disc bulge. (Ex. N, p. 539).

- 11/03/2011 – Family Physicians: claimant presented with **low back pain with pain radiating to the left thigh and left buttock**. Lumbar MRI scan looked normal without evidence of herniation. Medication and physical therapy were recommended. (Ex. H, p. 471-72).

- 12/20/2011 – Orthopaedic & Spine Center: evaluation for **3 months of left hip pain**, labral tear identified on MRI and felt not to be responsible for her SI/low back pain, assurance provided. (Ex. L, p. 517).

- 04/05/2012 – Family Physicians: report of low back/hip pain without injury; assessment was **low back pain related to lumbar degenerative joint disease or**

sacroiliitis. Physical therapy and Prednisone recommended with consideration for injections. (Ex. H, p. 468).

- 09/12/2012 – Family Physicians: claimant reported **worsening low back pain with pain radiating to the left calf without a new injury**. Percocet and Prednisone for sciatic pain and consideration for PT. (Ex. H, p. 465).

- 02/11/2013 – Family Physicians: **reports of low back pain/sciatica, pain radiating to the left calf, left foot, and left thigh**. Treatment included Vicodin. (Ex. H, p. 460).

- 02/18/2013 – Family Physicians: reports **continued pain and numbness down left leg to bottom of foot**; consider repeat MRI or ESI. (Ex. H, p. 457).

- 03/28/2014 – Family Physicians: claimant reports **3 months of fluctuating, but persistent low back pain which radiates to the left calf, left foot, and left thigh**. No specific injury. Symptoms include aching, dull, sharp, and shooting pain and **aggravated by daily activities, sitting, twisting, and walking**. Impression is **left low back pain, left SI joint pain, and left sciatica pain**. Vicodin prescribed and PT considered. (Ex. H, p 442-43).

46. In addition to her pre-existing history of significant low back problems, Claimant also had a history of depression, anxiety, memory issues, and sleep problems dating back to 2009. The medical records include the following:

- 03/16/2009 – Front Range Center for Brain & Spine Surgery: client questionnaire with endorsed symptoms including: back pain, **memory lapses or loss**, pain in the leg, **depression**, **sleep disturbances**, weight change, night sweats, and nausea; also noted that claimant was on medication for depression. (Ex. M, p. 522, 524).

- 12/06/2013 – Family Physicians: complaints of **worsening insomnia**. The assessment included anxiety and insomnia. Ambien, Fluoxetine and Xanax were prescribed. Claimant was noted to be "**moderately depressed**." (Ex. H, p. 454-56).

- 01/02/2014 – Family Physicians: claimant seen for insomnia and an acute and severe stress reaction due to separation and impending divorce. Psychiatric review of symptoms was positive for anxiety, depression, and insomnia. Claimant was observed to be uncomfortable, anxious and crying. Dr. Haskins noted claimant was "moderately depressed." (Ex. H, p. 450).

- 01/13/2014 to 06/30/2016 – Dr. Jane Derk: Marriage counseling and therapy with notations regarding depression and bipolar disorder. (Ex. F, p. 340-58).

- 03/03/2014 – Family Physicians: claimant evaluated for **chronic anxiety and insomnia**. It was noted that she was in counseling, along with marital counseling. Zolpidem to help with her sleep disorder was refilled. (Ex. H, p. 446).

- 03/28/2014 – Family Physicians: chronic problems included anxiety and ADD. Past medical history was **positive for memory loss**. Active medications included Fluoxetine and Clonazepam. (Ex. H, p. 442-43).

- 05/16/2016: Depression and Bipolar Clinic – A past psychiatric history documents a pre-existing history of bipolar disorder, ADHD, ADD, anxiety or panic disorder, PTSD, depression, and physical/sexual abuse. (Ex. E, p. 262).

47. Claimant also testified at hearing regarding non-work related factors contributing to her depression and anxiety, including a history of domestic violence, prior abuse, attempted murder involving her uncle, involvement with the FBI, marital issues, a fiancé who committed suicide, and raising three children alone. Claimant further admitted that she had been on and off anxiety medication since approximately 2009.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Overcoming the DIME opinion on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's

finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Claimant has failed to establish by clear and convincing evidence that DIME physician Dr. Thurston's determination of MMI was incorrect. Dr. Thurston's MMI opinion and finding MMI existed on July 13, 2015 is consistent with the opinions of Dr. D'Angelo and Dr. Charbonneau. By July 13, 2015, Claimant had undergone significant treatment including imaging for a very minor mechanism of injury. Despite attempts, providers were not able to identify a pain generator. Claimant has failed to show that Dr. Thurston erred by determining MMI. Rather, by July 13, 2015 there were no additional diagnostic procedures needed nor was there additional medical treatment needed to improve Claimant's injury related medical condition. By this point, Claimant was in the same condition she was prior to the work injury. Claimant had low back symptoms similar to those she had prior to the injury. Claimant had psychiatric issues similar to those she had prior to the injury. Claimant has failed to meet her burden and the determination of MMI is consistent with the weight of the medical records and the credible medical opinions.

Overcoming the DIME opinion on Permanent Impairment

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between

physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Claimant has failed to establish by clear and convincing evidence that DIME physician Dr. Thurston's determination of 0% permanent impairment was incorrect. Dr. Thurston's opinion is clear, detailed, and consistent with the credible report and testimony of Dr. D'Angelo. Although Dr. Reichhardt rated Claimant with a 15% whole person impairment, Dr. Reichhardt did not have the available pre-existing records and relied on Claimant's subjective reports that she was doing well prior to her work related injury. The subjective reports were not accurate. Dr. Thurston and Dr. D'Angelo had the benefit of a full record review and both were able to review extensive pre-existing records relating to both the lower back and psychological issues. Further, the ALJ finds credible and persuasive that no Table 53 impairment existed to allow rating as there was no Table 53 diagnosis. Dr. Thurston and Dr. D'Angelo's opinions are more persuasive and credible than the opinion of Dr. Reichhardt, given the limitations that Dr. Reichhardt had without all available pre-existing records.

Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has failed to establish by a preponderance of the evidence that any medical treatment subsequent to her MMI date of July 13, 2015 including fusion surgery and ongoing psychiatric care, is reasonable, necessary, or causally related to her April 9, 2014 work injury. As found above, DIME physician Dr. Thurston credibly opined that no further treatment was warranted. Dr. D'Angelo agreed and explained in her detailed report and in her testimony why further treatment was not warranted under the claim. Claimant has not established that the medical treatment she eventually underwent including a fusion surgery and the psychiatric treatment she is still undergoing is reasonable and necessary to treat her April 9, 2014 injury. Rather, the credible and persuasive evidence is that the treatment, and any future treatment, is to address Claimant's pre-existing problems that pre-dated her work injury and were not accelerated or exacerbated by her minor slip at work.

Temporary Total Disability Benefits

If an injury or occupational disease causes disability lasting more than three regular working days and the injured employee leaves work as a result of the injury, an award of temporary disability benefits is payable. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542, 546 (Colo. 1995). "Disability" involves medical incapacity evidenced by loss of restriction of bodily function and loss of wage-earning capacity as demonstrated by claimant's inability to resume her prior work. See *Montoya v. ICAO* 2018 COA 19 (Colo.

App. 2018). Claimant bears the burden of proving an entitlement to TTD benefits. § 8-43-201(1), C.R.S.

TTD continues until the first occurrence of any one of the following: (a) the employee reaches MMI; (b) the employee returns to regular or modified employment; (c) the attending physician gives the employee a written release to return to regular employment; or (d) the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. § 8-42-105(3), C.R.S.

Claimant has failed to establish by a preponderance of the evidence an entitlement to TTD benefits. Although Claimant testified that she used vacation days when she attended physical therapy and other doctor appointments, Claimant failed to point out how many days/hours of work she missed due to her injury. Claimant failed to identify specific dates/hours of missed work totaling more than three regular working days. Claimant also failed to establish medical incapacity or loss of wage-earning capacity due to any inability to resume her prior work. Rather, the records establish that Claimant was never placed on work restrictions prior to her placement at MMI and they establish that Claimant worked her regular pre-injury job the entire time. Claimant also failed to establish that she lost any wages or had loss of wage earning capacity due to medical incapacity. Claimant has thus failed to meet her burden.

ORDER

It is therefore ordered that:

1. Claimant has failed to overcome DIME physician Dr. Thurston's opinion on maximum medical improvement (MMI) by clear and convincing evidence. Claimant reached MMI on July 13, 2015.

2. Claimant thus is not entitled to an order requiring Respondents to provide additional reasonable, necessary, and causally related medical treatment. No further treatment is necessary or related to her April 9, 2014 work injury.

3. Claimant has failed to overcome DIME physician Dr. Thurston's opinion on Claimant's permanent partial disability (PPD) rating as a result of her work injury. Claimant has no permanent impairment resulting from her April 9, 2014 work injury.

4. Claimant has failed to establish, by a preponderance of the evidence, an entitlement to TTD benefits prior to being placed at MMI.

5. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 3, 2019

Denver, CO 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his admitted June 27, 2005 lower back injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. On June 27, 2005 Claimant suffered an admitted industrial injury to his lower back while working for Employer. Claimant received conservative medical treatment through Authorized Treating Physician (ATP) Robert Kawasaki, M.D.

2. In February 2006 Gary Ghiselli, M.D. performed microdiscectomy surgery at the L5-S1 level of Claimant's lumbar spine. However, Claimant continued to report lower back and left lower extremity symptoms. A lumbar MRI revealed recurrent disc herniation at the L5-S1 level that displaced the left S1 nerve root. Dr. Ghiselli informed Claimant that a repeat microdiscectomy would likely relieve his left lower extremity symptoms. However, because of concerns about Claimant's lower back pain, Dr. Ghiselli referred Claimant back to Dr. Kawasaki for diagnostic/therapeutic epidural steroid injections (ESIs).

3. Dr. Kawasaki administered ESIs and medial branch blocks. He also prescribed physical therapy. On November 14, 2006 Dr. Kawasaki determined that Claimant had reached Maximum Medical Improvement (MMI) and assigned a 16% whole person impairment rating.

4. In a November 28, 2006 visit with Dr. Kawasaki Claimant reported occasional decreased sensation in his genital area and erectile dysfunction (ED). Although Claimant had been experiencing the ED symptoms for several months, he was reluctant to report them to Dr. Kawasaki. Dr. Kawasaki noted that the ED symptoms failed to represent an acute change in Claimant's condition. He subsequently referred Claimant for a repeat lumbar spine MRI.

5. On January 11, 2007 Dr. Ghiselli reviewed the repeat MRI findings with Claimant. The MRI continued to reflect the recurrent disc herniation that existed on the initial MRI. Dr. Ghiselli commented that Claimant's radicular symptoms were not significant. He explained that "[d]ue to the confounding ED, it would be unreasonable to decompress the L5-S1 level. I do not think that this is the reason for his [ED] and it may be contributing to his lower back and left lower extremity complaints." Dr. Ghiselli recommended a second surgery but Claimant was reluctant to proceed. He thus referred Claimant back to Dr. Kawasaki to discuss additional treatment options.

6. Dr. Kawasaki referred Claimant to urologist Seth Glick, M.D. Dr. Glick recommended a trial of Viagra for Claimant's ED. He did not believe there were any problems with Claimant's lower urogenital tract and noted that the ED could be related to psychological issues or back pain.

7. On March 15, 2007 Claimant returned to Dr. Ghiselli for an examination. Dr. Ghiselli again recommended surgery to decompress the L5-S1 level. He reasoned that surgery would likely improve Claimant's left lower extremity complaints but would not likely correct his back pain or ED symptoms.

8. On April 24, 2007 Claimant underwent a Division Independent Medical Examination (DIME) with Greg Reichhardt, M.D. Claimant reported decreased sensation throughout the entire left side of his body including his face, arm, trunk and leg. Dr. Reichhardt noted diffuse weakness throughout the entire left upper and lower extremity. He diagnosed Claimant with lower back pain, left hemi-body sensory loss unlikely related to his industrial injury, sexual dysfunction and gross numbness of uncertain etiology. Dr. Reichhardt detailed that "Claimant's presentation raises several concerns. His sexual dysfunction is not well explained based on the lumbar MRI. In addition, he has neurologic symptoms and findings which are unexplained based on his back injury. This likely represents a neurologic condition unrelated to his work-related injury or manifestation of a non-physiologic presentation." He recommended a psychological evaluation, further urologic testing and electrodiagnostic testing. Dr. Reichhardt agreed with Dr. Kawasaki that Claimant had reached MMI on November 14, 2006. He assigned a 10% impairment for a specific disorder of the lumbar spine and a 17% rating for range of motion deficits for a total 25% whole person impairment. Dr. Reichhardt did not assign impairment ratings for sexual dysfunctions or depression because the conditions were not related to his June 27, 2005 industrial injury.

9. On October 29, 2007 Claimant visited clinical psychologist Rebecca Hawkins, PhD. for an examination. Claimant reported that he had not experienced ED problems prior to his February 2006 back surgery. Dr. Hawkins noted that, after the discectomy in February 2006, Claimant no longer had typical morning erections and did not respond to sexual stimulation. Claimant's ED did not improve with Viagra.

10. On October 31, 2007 Administrative Law Judge Michael E. Harr issued Findings of Fact, Conclusions of Law and an Order in the present matter. ALJ Harr concluded that Claimant had demonstrated his condition worsened as of September 25, 2007 and he was no longer at MMI. He thus determined that Dr. Kawasaki's recommendations for further urological testing and a psychological evaluation were reasonably necessary to cure and relieve the effects of Claimant's June 27, 2005 industrial injury. Nevertheless, ALJ Harr reasoned that Claimant's "ongoing prescription for Viagra or similar medication" was not reasonable and necessary.

11. On November 6, 2007 Claimant returned to Dr. Hawkins for an evaluation. Claimant reported multiple issues including ED, psychological concerns and postsurgical problems. Dr. Hawkins diagnosed major depressive disorder, probable male erectile disorder and a pain disorder. She determined that psychological factors

were likely contributing to his experience of pain and suffering. Dr. Hawkins also noted that Claimant's ED might be multifactorial. She recommended up to 10 psychotherapy sessions and treatment with Wellbutrin. Dr. Hawkins summarized that Claimant's depressive symptoms appeared to be "reactive to his injury, chronic pain, and limitations in his ability to function occupationally and sexually."

12. On May 5, 2008 Claimant's treating urologist Fred Grossman. M.D. addressed the cause of his ED and hypogonadism after Insurer's adjuster denied treatment for the conditions. Dr. Grossman explained that Claimant had hypogonadism or reduced testosterone as a result of "sustained action oral opioids" that subsequently caused his ED. He included "a copy of a recent article from the Journal of Pain that documented the occurrence of hypogonadism in men consuming sustained action oral opioids."

13. On May 15, 2008 urologist Richard R. Augspurger, M.D. provided his opinion on the cause of Claimant's ED after reviewing Dr. Grossman's report. He noted that he could not demonstrate that a neurological condition was causing Claimant's ED. However, he remarked that low testosterone levels may be attributed to narcotic use. Dr. Augspurger reasoned that, if Claimant's ED was related to narcotic use, the ED would be "indirectly related" to his industrial lower back injury.

14. After additional conservative medical treatment, diagnostic testing and psychological counseling Claimant returned to Dr. Kawasaki on August 25, 2009. Claimant reported that he continued to suffer leg pain and back stiffness. Dr. Kawasaki noted that he had multiple discussions with Claimant about decreasing opioid medications to restore endocrine function and "potentially" restore sexual function. He diagnosed Claimant with the following: (1) L5-S1 discectomy with postlaminectomy syndrome; (2) chronic left S1 radiculopathy; (3) chronic opioid dependence; (4) hypogonadism with hypotestosteronism secondary to opioid use that resulted in sexual dysfunction; and (5) adjustment disorder with depressed mood. Dr. Kawasaki determined that Claimant had reached MMI. However, Claimant would require significant medical maintenance treatment including a gym membership for 12 months and 10 psychological visits with Dr. Hawkins over the following 12 months. Dr. Kawasaki explained that Claimant would continue the following medications for an indefinite period: (1) Ambien CR; (2) Wellbutrin XL; (3) Ibuprofen and (4) Zoloft. He also remarked that Claimant would require follow-up care with Dr. Grossman. Dr. Grossman was prescribing Cialis, Androgel and penile injections. Finally, Dr. Kawasaki commented that Claimant was not interested in any additional surgical interventions.

15. On January 25, 2011 Claimant returned to Dr. Kawasaki for maintenance treatment. Dr. Kawasaki remarked that Claimant had been taken off multiple medications because of an elevation in liver function results after being treated for tuberculosis. Claimant reported that subsequent additional liver function testing revealed that his blood levels were returning to normal. He commented that he would be returning to Mali at the end of the week but would return in mid-March.

16. During 2015 and 2016 Claimant visited an emergency room for right-sided neck, back and hip pain. Claimant did not seek additional urological treatment during the period.

17. After additional maintenance visits with Dr. Kawasaki in 2017, Claimant returned to Dr. Hawkins for psychological treatment on January 16, 2018. Claimant reported that he had returned to the area because he had an independent medical examination scheduled with Brian D. Lambden, M.D. for the following day. He reported significant anxiety and depression as well as nocturnal panic attacks.

18. On January 17, 2018 Claimant visited Dr. Lambden for an independent medical examination. Dr. Lambden performed a physical examination and thoroughly reviewed Claimant's medical records. Claimant reported continued lower back symptoms that included low-level radiating pain down his left leg. Dr. Lambden concluded that Claimant's ED was not likely caused by opioid use, borderline low testosterone levels or surgery because his symptoms preceded his opioid use and surgery. He noted that medical literature suggested a likely psychological cause for Claimant's ED symptoms. Dr. Lambden thus determined that he was "not sure anything else" needed to be done for Claimant's ED. In addressing Claimant's chronic pain, Dr. Lambden reasoned that no further treatment was necessary because Claimant was not interested in surgical intervention and it was questionable whether surgery would provide a benefit 10 years after Claimant's industrial injury. Claimant had thus reached MMI. Regarding opioid dependence, Dr. Lambden agreed that Claimant should be switched from Opana to Percocet but attempt opioid tapering to reduce dependence. He also questioned whether Claimant required Lyrica and recommended reduction in Ibuprofen use. Finally, Dr. Lambden noted that Claimant's depression would resolve over time with case closure. He also stated that Claimant's use of anti-depressants was not unreasonable, but suggested the discontinuation of Sertraline because Claimant was not exhibiting depressive symptoms and the medication has a negative effect on ED.

19. In a March 22, 2018 report Dr. Lambden reviewed additional medical records from Dr. Kawasaki and Dr. Hawkins. He also considered a January 30, 2018 urine toxicology report that reflected Claimant's testosterone level was 291 with a normal range of 250-827.

20. On April 3, 2018 Claimant visited urologist John W. Tillett, M.D. for an examination. He evaluated Claimant's ED and hypogonadism. Claimant recounted that he had suffered an industrial lower back injury on June 27, 2005, subsequently underwent surgery and continued to experience back pain. Dr. Tillett noted that Claimant has received narcotic pain medications since 2005 and had visited Dr. Grossman since 2007 for ED and hypogonadism until Dr. Grossman's retirement. Claimant denied any ED prior to surgery and has managed his ED well with Cialis 10mg since 2008. He remarked that he currently lives in Mali but spends significant time in Denver to visit his ex-wife and children. Dr. Tillett noted that Claimant was taking the following medications: (1) Oxycodone HCL capsule; (2) Ibuprofen 800 mg oral capsule; (3) Lyrica 75 mg oral capsule; (4) Temazepam 7.5 mg oral capsule; (5) Bupropion HCL

tablet; (6) Cialis 10 mg oral tablet; and (7) Sertraline HCL 100 mg oral tablet. After conducting a physical examination, Dr. Tillett diagnosed Claimant with ED and hypogonadism or low testosterone.

21. On April 5, 2018 Dr. Tillett conducted a medical records review of Claimant's case. He recounted that Claimant had suffered an industrial lower back injury on June 27, 2005, subsequently underwent surgery and continued to experience back pain. In an addendum report dated April 24, 2018 Dr. Tillett noted that Dr. Lambden determined Claimant's ED was unrelated to chronic opioid use, low testosterone or surgery because the condition preceded surgery and opioid use. In contrast, Dr. Tillett explained that there was no evidence in the medical records that Claimant's ED existed prior to his surgery or opioid use. He also disagreed that low testosterone was unrelated to ED.

22. Claimant and Dr. Kawasaki testified at the hearing in this matter that Claimant currently takes the following medications:

a. 100 milligrams of Sertraline (an anti-anxiety medication for panic disorders);
b. Bupropion (an anti-depressant medication for major depressive disorders);
c. Ibuprofen (an anti-inflammatory medication for pain);
d. Lyrica, 75 milligrams (a neuropathic pain medication);
e. Oxycodone, 10 milligrams every six hours (a narcotic medication for pain),
f. Cialis 10 milligrams (for ED);
g. Temazepam (for sleep).

23. Respondents clarified at hearing that they were challenging the medications prescribed by Drs. Kawasaki and Tillett. Respondents specifically contested prescriptions for Cialis, Oxycodone, Lyrica and Bupropion. They did not seek a denial of all medical maintenance treatment.

24. Claimant testified at the hearing in this matter that he began suffering from constant back pain, depression and ED shortly after his June 27, 2005 industrial injury. He emphasized that he had not experienced ED prior to his lower back injury. Claimant noted that his pain medications reduce his symptoms. Although the medications do not completely eliminate his pain, they allow improved sleep and function. Claimant remarked that his psychotropic medications help him deal with anxiety and depression. Nevertheless, he continues to suffer panic attacks that are typically worse at night.

25. Dr. Kawasaki testified at the hearing in this matter. He stated that he has been Claimant's ATP since August 2005. Dr. Kawasaki explained that Claimant suffers from chronic pain as a result of his June 27, 2005 industrial injury. He requires opioid pain medications to improve his function. Without the medications Claimant would likely become non-functional and have difficulty getting out of bed. Dr. Kawasaki noted that Claimant takes a reasonable amount of opioid medications and there are no plans for weaning. Claimant specifically takes about 60 milligrams of morphine equivalent. The amount does not place Claimant in the "danger zone." In contrast, when individuals

take 90-120 milligrams of morphine equivalent, they tend to develop opioid-related problems. Dr. Kawasaki summarized that opioid medications assist Claimant in performing activities of daily living. He noted that Claimant has never presented with any addictive or aberrant behavior since he began treatment in August 2005.

26. Dr. Kawasaki explained that chronic pain can increase depression, anxiety and other psychosocial issues. He summarized that Claimant requires anti-depressant medications because of his industrial injury. Dr. Kawasaki specifically prescribed Bupropion 300 mg. Temazepam 75 mg and Sertraline 100 mg on January 15, 2018 for Claimant's symptoms of anxiety and depression. Furthermore, because Claimant has exhibited both objective and subjective pain symptoms consistent with the injured nerve in his lower back, Dr. Kawasaki prescribed Lyrica 75 mg on January 15, 2018.

27. Dr. Kawasaki explained that Claimant's extended opioid use for pain is partially responsible for his ED. He remarked that log-term use of opioid medications generally affects the endocrine system. Specifically, the use of opioids impairs the gonadal system that produces testosterone. Dr. Kawasaki commented that, although Claimant's ED was secondary to chronic opioid use, psychologic issues also contributed to his sexual dysfunction. He explained that Claimant felt powerless, had a shift in identity, lost his job, suffered pain, felt fear and experienced performance anxiety. Dr. Kawasaki commented that the preceding factors contribute to Claimant's sexual dysfunction. He detailed that Claimant underwent unsuccessful ED treatment modalities with penile injections, testosterone, clomid and Viagra. However, Claimant had success treating his ED when he began taking Cialis. Dr. Kawasaki thus continues to prescribe Cialis.

28. Dr. Tillett testified at the hearing in this matter. He explained that ED is a distressing medical condition in which a man is unable to achieve or sustain an erection. Hypogonadism refers to suboptimal production of sperm or testosterone. Dr. Tillett diagnosed Claimant with both ED and hypogonadism. He maintained that Claimant's chronic opioid use constituted a significant causative factor in his ED and hypogonadism conditions. Dr. Tillett remarked that the longer an individual is taking opioid medications, the greater the effect on erectile and testicular function. Moreover, Claimant's anxiety and depression may be contributing to his ED. Dr. Tillett determined that reducing Claimant's opioid medication now would likely not have much impact on his ED and testosterone function. The chronicity of opioid therapy has damaged Claimant's ability to recover erectile function and testosterone secretion.

29. Dr. Tillett recommended additional diagnostic testing for Claimant's hypogonadism condition. He explained that hypogonadism therapy can produce benefits such as increased sexual desire, libido, energy and lean muscle mass while also improving a general sense of well-being. The therapy can also cause improvements in emotional/psychologic parameters, lipid profiles/cholesterol levels and ED. Thus, beginning testosterone treatment could help decrease Claimant's depression while increasing his energy and level of functioning. Dr. Tillett explained that testosterone levels and erectile function are intertwined. He commented that the American Urology Association (AUA) guidelines on the management of ED recommend

that every man presenting with ED have a serum testosterone work-up. Dr. Tillett agreed with Dr. Kawasaki that Claimant should continue to use Cialis 10 mg. for treatment of his ED.

30. Dr. Lambden testified at the hearing in this matter. He maintained that Claimant should be gradually tapered from opioid medications. He specifically recommended ceasing Sertraline, Temazepam, Oxycodone, Bupropion, Lyrica and Ibuprofen. Dr. Lambden remarked that his preference for chronic pain management is to decrease opioids whenever possible. He also commented that opioids and Lyrica negatively impact ED. He explained that ED is a multifactorial problem not associated with Claimant's testosterone levels. Therefore, Claimant's use of opioids for his June 27, 2005 industrial injury did not cause his ED and Cialis should be discontinued. Furthermore, Dr. Lambden noted that Claimant was not having sufficient depressive symptoms to warrant continuing Sertraline in light of its negative effect on ED. He summarized that, once the case has been closed and Claimant has adjusted to living in Mali, his depression symptoms should resolve without medication.

31. Claimant has established that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance treatment designed to relieve the effects of his admitted June 27, 2005 lower back injury or prevent further deterioration of his condition. Initially, Claimant suffered an industrial lower back injury on June 27, 2005, subsequently underwent surgery and continued to experience back pain. The record is replete with evidence that Claimant continues to suffer chronic pain, sleep disturbances, psychological problems and urological issues as a result of his June 27, 2005 injury.

32. Dr. Kawasaki has been Claimant's ATP since August 2005. He persuasively explained that Claimant suffers from chronic pain as a result of his June 22, 2005 industrial injury. He requires opioid pain medications to improve his function. Without the medications Claimant would likely become non-functional and have difficulty getting out of bed or completing activities of daily living. Dr. Kawasaki noted that Claimant takes a reasonable amount of opioid medications and there are no plans for weaning. Furthermore, Claimant noted that his pain medications reduce his symptoms. Although the medications do not completely eliminate his pain, they allow improved sleep and function.

33. Claimant remarked that his psychotropic medications help him deal with anxiety and depression. Nevertheless, he continues to suffer panic attacks that are typically worse at night. Dr. Kawasaki explained that chronic pain can increase depression, anxiety and other psychosocial issues. He summarized that Claimant requires anti-depressant medications because of his industrial injury. Dr. Kawasaki specifically prescribed Bupropion 300 mg. Temazepam 75 mg and Sertraline 100 mg on January 15, 2018 for Claimant's symptoms of anxiety and depression. Furthermore, because Claimant has exhibited both objective and subjective pain symptoms consistent with the injured nerve in his lower back, Dr. Kawasaki also prescribed Lyrica. Finally, Dr. Hawkins summarized that Claimant's depressive symptoms appeared to be

"reactive to his injury, chronic pain, and limitations in his ability to function occupationally and sexually."

34. Dr. Kawasaki further explained that Claimant's extended opioid use for pain is partially responsible for his ED. He remarked that long-term use of opioid medications generally affects the endocrine system. Specifically, the use of opioids impairs the gonadal system that produces testosterone. Dr. Kawasaki commented that, although Claimant's ED is secondary to chronic opioid use, psychologic issues also contribute to his sexual dysfunction. Similarly, Dr. Tillett diagnosed Claimant with both ED and hypogonadism. He maintained that Claimant's chronic opioid use constituted a significant causative factor in his ED and hypogonadism conditions. Dr. Tillett remarked that the longer an individual is taking opioid medications, the greater the effect on erectile and testicular function. He determined that reducing Claimant's opioid medication now would not likely have much impact on his ED and testosterone function. Furthermore, Dr. Grossman explained that Claimant had hypogonadism or reduced testosterone as a result of "sustained action oral opioids" that subsequently caused his ED. Moreover, Dr. Augspurger remarked that low testosterone levels may be attributed to narcotic use. He reasoned that, if Claimant's ED was related to narcotic use, the ED would be "indirectly related" to his industrial lower back injury.

35. Dr. Tillett also recommended additional diagnostic testing for Claimant's hypogonadism condition. He explained that hypogonadism therapy can produce benefits such as increased sexual desire, libido, energy and lean muscle mass while also providing a general sense of well-being. The therapy can also cause improvements in emotional/psychologic parameters, lipid profiles/cholesterol levels and ED. Thus, beginning testosterone treatment could help decrease Claimant's depression while increasing his energy and level of functioning.

36. In contrast, Dr. Lambden maintained that Claimant should be gradually tapered from opioid medications. Dr. Lambden concluded that Claimant's ED is a multifactorial problem not likely caused by opioid use, borderline low testosterone levels or surgery because his symptoms preceded his opioid use and surgery. He reasoned that Claimant's use of opioids as a result of his June 27, 2005 industrial injury did not cause his ED and Cialis should be discontinued. Furthermore, Dr. Lambden noted that Claimant was not having sufficient depressive symptoms to warrant continuing Sertraline in light of its negative effect on ED. He summarized that, once the case has been closed and Claimant has adjusted to living in Mali, his depression symptoms should resolve without medication. However, the persuasive evidence reveals that Claimant began suffering from constant back pain, depression and ED as a result of his June 22, 2005 industrial injury. The record and medical opinions of Drs. Kawasaki, Hawkins and Tillett reflect that Claimant's pain medications, psychotropic prescriptions and ED medications have not only reduced his pain but also maximized his level of function over an extended period of time consistent with the Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). Moreover, the testosterone therapy recommended by Dr. Tillett will likely decrease Claimant's depression while improving his level of functioning. Accordingly, Claimant shall receive reasonable, necessary and

related medical maintenance benefits designed to relieve the effects of his June 27, 2005 industrial injury or prevent further deterioration of his condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. The *Guidelines* provide, in relevant part, that "medications should be clearly linked to improvement of function, not just pain control." WCRP 17, Exhibit 9 (H)(6). Furthermore, the *Guidelines*, specify that, "examples of routine functions include

the ability to perform work tasks, drive safely, pay bills or perform math operations, remain alert and upright for 10 hours per day, or participate in normal family and social activities." WCRP 17, Exhibit 9(H)(6).

6. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance treatment designed to relieve the effects of his admitted June 27, 2005 lower back injury or prevent further deterioration of his condition. Initially, Claimant suffered an industrial lower back injury on June 27, 2005, subsequently underwent surgery and continued to experience back pain. The record is replete with evidence that Claimant continues to suffer chronic pain, sleep disturbances, psychological problems and urological issues as a result of his June 27, 2005 injury.

7. As found, Dr. Kawasaki has been Claimant's ATP since August 2005. He persuasively explained that Claimant suffers from chronic pain as a result of his June 22, 2005 industrial injury. He requires opioid pain medications to improve his function. Without the medications Claimant would likely become non-functional and have difficulty getting out of bed or completing activities of daily living. Dr. Kawasaki noted that Claimant takes a reasonable amount of opioid medications and there are no plans for weaning. Furthermore, Claimant noted that his pain medications reduce his symptoms. Although the medications do not completely eliminate his pain, they allow improved sleep and function.

8. As found, Claimant remarked that his psychotropic medications help him deal with anxiety and depression. Nevertheless, he continues to suffer panic attacks that are typically worse at night. Dr. Kawasaki explained that chronic pain can increase depression, anxiety and other psychosocial issues. He summarized that Claimant requires anti-depressant medications because of his industrial injury. Dr. Kawasaki specifically prescribed Bupropion 300 mg. Temazepam 75 mg and Sertraline 100 mg on January 15, 2018 for Claimant's symptoms of anxiety and depression. Furthermore, because Claimant has exhibited both objective and subjective pain symptoms consistent with the injured nerve in his lower back, Dr. Kawasaki also prescribed Lyrica. Finally, Dr. Hawkins summarized that Claimant's depressive symptoms appeared to be "reactive to his injury, chronic pain, and limitations in his ability to function occupationally and sexually."

9. As found, Dr. Kawasaki further explained that Claimant's extended opioid use for pain is partially responsible for his ED. He remarked that long-term use of opioid medications generally affects the endocrine system. Specifically, the use of opioids impairs the gonadal system that produces testosterone. Dr. Kawasaki commented that, although Claimant's ED is secondary to chronic opioid use, psychologic issues also contribute to his sexual dysfunction. Similarly, Dr. Tillett diagnosed Claimant with both ED and hypogonadism. He maintained that Claimant's chronic opioid use constituted a significant causative factor in his ED and hypogonadism conditions. Dr. Tillett remarked that the longer an individual is taking opioid medications, the greater the effect on erectile and testicular function. He determined that reducing Claimant's opioid medication now would not likely have much

impact on his ED and testosterone function. Furthermore, Dr. Grossman explained that Claimant had hypogonadism or reduced testosterone as a result of "sustained action oral opioids" that subsequently caused his ED. Moreover, Dr. Augspurger remarked that low testosterone levels may be attributed to narcotic use. He reasoned that, if Claimant's ED was related to narcotic use, the ED would be "indirectly related" to his industrial lower back injury.

10. As found, Dr. Tillett also recommended additional diagnostic testing for Claimant's hypogonadism condition. He explained that hypogonadism therapy can produce benefits such as increased sexual desire, libido, energy and lean muscle mass while also providing a general sense of well-being. The therapy can also cause improvements in emotional/psychologic parameters, lipid profiles/cholesterol levels and ED. Thus, beginning testosterone treatment could help decrease Claimant's depression while increasing his energy and level of functioning.

11. As found, in contrast, Dr. Lambden maintained that Claimant should be gradually tapered from opioid medications. Dr. Lambden concluded that Claimant's ED is a multifactorial problem not likely caused by opioid use, borderline low testosterone levels or surgery because his symptoms preceded his opioid use and surgery. He reasoned that Claimant's use of opioids as a result of his June 27, 2005 industrial injury did not cause his ED and Cialis should be discontinued. Furthermore, Dr. Lambden noted that Claimant was not having sufficient depressive symptoms to warrant continuing Sertraline in light of its negative effect on ED. He summarized that, once the case has been closed and Claimant has adjusted to living in Mali, his depression symptoms should resolve without medication. However, the persuasive evidence reveals that Claimant began suffering from constant back pain, depression and ED as a result of his June 22, 2005 industrial injury. The record and medical opinions of Drs. Kawasaki, Hawkins and Tillett reflect that Claimant's pain medications, psychotropic prescriptions and ED medications have not only reduced his pain but also maximized his level of function over an extended period of time consistent with the Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). Moreover, the testosterone therapy recommended by Dr. Tillett will likely decrease Claimant's depression while improving his level of functioning. Accordingly, Claimant shall receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his June 27, 2005 industrial injury or prevent further deterioration of his condition.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant shall receive specifically delineated reasonable, necessary and related medical maintenance benefits as prescribed by Drs. Kawasaki and Tillett. The medical maintenance medications that Claimant shall receive include: (1) 100 milligrams of Sertraline (an anti-anxiety medication for panic disorders); (2) Bupropion (an anti-depressant medication for major depressive disorders); (3) Ibuprofen (an anti-

inflammatory medication for pain); (4) Lyrica, 75 milligrams (a neuropathic pain medication; (5) Oxycodone, 10 milligrams every six hours (a narcotic medication for pain); (6) Cialis 10 milligrams (for ED); and (7) Temazepam (for sleep).. Claimant shall also receive the additional testosterone therapy recommended by Dr. Tillett. Respondents shall be financially responsible for the preceding medical maintenance benefits.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether respondent has demonstrated by a preponderance of the evidence that claimant's temporary partial disability benefits should be suspended based on an intervening event?

FINDINGS OF FACT

1. Claimant is employed with employer as an assistant grocery manager. Claimant sustained a compensable work injury on July 1, 2017 when she was pushing a bookshelf and felt a pop in her right knee. Claimant sustained a second injury that same day when a co-worker kicked out claimant's right knee causing her knee to buckle.

2. Claimant came under the care of Dr. McClellan for her work injury. Dr. McClellan treated claimant conservatively and provided claimant with work restrictions that included no lifting more than 10 pounds and no walking or standing greater than 2 hours per day as of July 5, 2017.

3. Claimant underwent a magnetic resonance image ("MRI") of the hip and was diagnosed with a labral tear. Claimant subsequently underwent an arthroscopy on October 25, 2017 and the primary finding was synovitis.

4. Claimant provided the work restrictions to employer and was originally taken off of work and provided with temporary total disability benefits beginning July 27, 2017. Employer subsequently provided claimant with modified work within her restrictions, and limited claimant to 30 hours of work per week. As a result of the modified duty, claimant was provided with temporary partial disability ("TPD") benefits in the amount of $166.00 per week ($232 every two weeks). Respondent transitioned claimant to TPD benefits effective January 15, 2018. The temporary disability benefits paid to claimant are reflected in a general admission of liability ("GAL") dated June 21, 2018 and entered into evidence at hearing.

5. Claimant's work restrictions would periodically change minimally during the time in which she was receiving TPD benefits. As of September 4, 2018, claimant was still limited to no lifting, carrying, pushing or pulling over 10 pounds with limitations on walking and sitting of no more than 3 hours.

6. During this period of time, claimant became pregnant. Claimant also developed the onset of low back pain. A repeat MRI was recommended but claimant testified she could not have the MRI accomplished until after the first trimester of her pregnancy. Claimant testified that once she was past the first trimester of pregnancy where the MRI could be performed safely, the MRI was denied.

7. Claimant applied for family leave from employer on November 8, 2018. The leave claimant elected was related to her pregnancy and offered by employer and not related to her work injury. Claimant testified at hearing that she left work on the advice of her mid wife who told claimant if she wanted to take leave, she could. Claimant testified that the due date for her baby was November 29, 2018.

8. After claimant took leave for her pregnancy, respondent filed a petition to suspend temporary disability benefits on December 6, 2018. Claimant objected to the petition to terminate and respondent sought a hearing on whether employer could terminate claimant's ongoing temporary partial disability benefits.

9. At hearing, respondent argued that the earnings for claimant would have been reduced to $0 once claimant elected to take leave for the birth of her child, regardless of the work injury. Respondent argued that the leave claimant sought represented an intervening event sufficient to terminate claimant's ongoing receipt of temporary disability benefits as the wage loss was related to the family leave, and not the work injury as of November 8, 2018 when claimant stopped working due to her pregnancy.

10. The ALJ agrees that the basis for the wage loss after November 8, 2018 is related to claimant's maternity leave, and not the work injury. In fact, claimant does not appear to dispute this fact. However, the Colorado Workers' Compensation Act does not provide that temporary disability benefits can be cut off under these circumstances. The Act specifically provides that benefits continue until either claimant is placed at maximum medical improvement ("MMI"), or is released to return to work by a treating physician in a modified duty position, a position is offered to the claimant in writing, and claimant does not return to work.

11. As argued by claimant, claimant's temporary disability benefits would have continued whether she was taking the leave for her pregnancy or not until a statutory cut off for the temporary disability benefits occurred. While there was an interruption in claimant's treatment for her work injury in order for claimant to give birth to her child, the extent to which the interruption delayed claimant reaching MMI is speculation.

12. Insofar as the Act does not allow for TPD benefits to be suspended under the circumstances in this case, respondent's request for an Order suspending receipt of TPD benefits while claimant is on leave is denied.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the

rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Section 8-42-106(2), C.R.S., provides in pertinent part:

> Temporary partial disability shall continue until the first occurrence of either of the following: (a) The employee reached maximum medical improvement; or (b)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

4. While the ALJ agrees that the claimant's total wage loss was related in this case to the election to undergo leave related to claimant's pregnancy and not related to the work injury, the ALJ finds that the Act does not allow for temporary disability benefits to be suspended in this case based on the election of the claimant to take family leave offered by employer.

5. Due to the fact that respondent has failed to establish a statutory basis for the suspension of TPD benefits, the request to suspend benefits is herby denied.

ORDER

It is therefore ordered:

1. Respondent's request for an Order suspending claimant's TPD benefits due to an intervening event is denied.

2. All matters not determined here are reserved for future determination.

Dated May 7, 2019

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge

ISSUES

- Whether claimant has established by a preponderance of the evidence that respondent is in violation of an Order and subject to penalties of up to $1,000 per day pursuant to Section 8-43-304(1), C.R.S.?

FINDINGS OF FACT

1. Claimant testified at hearing that he brought a workers compensation claimant against employer and attended a settlement conference on April 26, 2018. Claimant testified that at the settlement conference which was attended by a prehearing conference judge, the employer and claimant by telephone, he agreed to settle his claimant against employer.

2. Claimant testified that as a result of his injury he missed three months of work and had approximately $10,000 in medical bills that needed to be reimbursed.

3. Claimant entered into evidence at hearing copies of the settlement agreement in which employer agreed to pay claimant $15,000 to settle the workers' compensation claim. Pursuant to the settlement agreement, employer agreed to pay claimant $417.00 per month for 36 months. The settlement agreement was approved by the Director of the Division of Workers' Compensation on May 9, 2018. The Order was mailed to the parties.on that same day.

4. Claimant testified employer paid claimant pursuant to the settlement agreement for the first two months, with a payment of $420.00 on May 28, 2018 and a payment of $420.00 on July 2, 2018. Employer then made two partial payments of $300 on July 30, 2018 and $120.00 on August 10, 2018. Claimant testified he did not receive any further payments after August 10, 2018.

5. Claimant testified that total amount of the four payments made in this case amounted to $1,260.00.

6. Employer testified in this case and explained that he was unemployed and was unable to make payments, which resulted in him failing to abide by the Order approving the settlement agreement. Employer testified that he obtained a new job on October 31, 2018 and would continue to make payments if he could.

7. Employer testified he did not make any payments after October 31, 2018 because he did not know he could continue to make payments after the application for hearing was filed seeking penalties.

8. Employer testified as to volunteer coaching activities he performs on behalf of Jack Rabbit Baseball, but denied receiving any compensation for his coaching

activities. Employer testified he intends to comply with the settlement agreement and make payments to claimant pursuant to the settlement agreement.

9. The ALJ finds that claimant has established that employer was ordered by the settlement agreement to make payments of $420.00 per month and has failed to abide by the Order of the Director approving the settlement agreement. The ALJ therefore finds that claimant has established the employer is subject to penalties pursuant to Section 8-43-304(1), C.R.S.

10. The ALJ finds that penalties are appropriate in this case as there is a lack of communication from employer to claimant or his counsel of his hardship in complying with the terms of the settlement agreement. However, insofar as employer intends to comply with the settlement agreement, the ALJ finds that the penalties should not be so egregious as to make compliance with the original settlement agreement impossible.

11. Claimant argued at hearing that the penalties should begin as of August 11, 2018, as employer did not make any further payments after that date. However, employer's next payment was not due until September 1, 2018 as the two partial payments made on July 31 and August 10, 2018 complied with the required payment that was due for Auigust.

12. Therefore, the ALJ determines that employer is subject to penalties beginning September 1, 2018 and continuing until April 11, 2019, the date of hearing, in the amount of $6.73 per day for a period of 223 days.

13. The ALJ notes that the extent of the penalties awarded in this case could have been much more significant, but intends to provide employer with an opportunity to comply with the settlement agreement in this case.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider,

among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Section 8-43-304(1), C.R.S. provides that penalties of up to $1,000 per day may be ordered if a party "violates any provision of articles 40 to 47 of this title, or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel.

4. Pursuant to Section 8-43-304(1), a claimant must first prove by a preponderance of the evidence that the disputed conduct constituted a violation of statute, rule, or order before a court can assess penalties against a respondent. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995).

5. As found, claimant has demonstrated by a preponderance of the evidence that respondent has failed to obey an Order by failing to pay claimant the pursuant to the settlement agreement and is subject to penalties of up to $1,000 per day for violation of that Order.

6. Respondent is hereby ordered to pay to claimant $6.73 per day for 223 days for failure to comply with the Order approving the settlement agreement in this case.

ORDER

It is therefore ordered:

1. Employer shall pay claimant $6.73 per day for a period of 223 days.

Dated May 8, 2019

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

In lieu of payment of the above compensation and benefits to the claimant, the Respondent-Employer shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $1,500.79 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Gina Johannesman/Trustee; OR

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $1,500.79 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or
(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

IT IS FURTHER ORDERED: That the Respondent-Employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

IT IS FURTHER ORDERED: That the filing of any appeal, including a petition to review, shall not relieve the employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-065-765-001

ISSUES

I. Whether Respondent overcame the opinion of the DIME physician, Dr. Justin Green, by clear and convincing evidence regarding Claimant's impairment rating.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a member of the Denver Fire Department and has been a firefighter with the department for approximately fifteen years.
2. Claimant's date of birth is July 23, 1982.
3. While on a run on December 26, 2017, Claimant slipped on some ice and twisted his back. He felt his back getting tight and over the course of his work shift, he experienced increasing stiffness and pain in his low back. While at home after his shift, in the early morning hours, Claimant found himself unable to walk. His pain was incapacitating and he was unable to drive himself to the hospital. Therefore, Claimant was taken by ambulance to Parker Adventist Hospital. While getting ready to be discharged, he again experienced shooting left lower extremity pain and he was transferred to Sky Ridge Hospital.
4. Claimant was released from the hospital on January 9, 2018. Shortly thereafter, he underwent a lumber MRI, which demonstrated a herniated disc at L3-L4. A repeat MRI was performed on February 27, 2018. The MRI findings noted a persistent large left subarticula disc extrusion at L3-L4 with inferior migration of extruded disc material with increased inferior migration. Additional findings included persistent compression and displacement of the descending left L4 and the left L5 nerve roots. There was also persistent moderate and persistent L3-L4 spinal stenosis. In addition, the left subarticular disc extrusion at L4-L5 posteriorly was displacing the distending left L5 nerve root. There was also narrowing of the left lateral recess with moderate bilateral L4-L5 foraminal narrowing.
5. Claimant underwent an extensive regimen of physical therapy, massage therapy, and saw several specialists including Dr. Mankowski, Dr. Castro and Dr. Ghiselli. The physical therapy was ongoing for approximately twice a week from February 2018 until June 2018. Massage therapy occurred approximately once a week for the same time.
6. Claimant was provided work restrictions and ultimately returned to light duty work.

7. Dr. Ghiselli examined Claimant on April 19, 2018 and noted that there was full flexion and full extension. However, there is no indication Dr. Ghiselli formally measured Claimant's range of motion using dual inclinometers - as required by the AMA Guides - for measuring Claimant's lumber flexion and extension. Dr. Lesnak commented in his testimony that there is no indication Dr. Mankowski used dual inclinometers and performed a formal range of motion exam using the parameters set forth in the AMG Guides. (*Hearing Testimony P. 46.*)

8. On June 5, 2018, Claimant saw his primary authorized treating physician, Dr. Mankowski and/or clinician Vicki Haseman. At this appointment, Claimant was released to full duty and placed at maximum medical improvement. The report from this visit indicates Claimant reported "some back stiffness" and indicated that he had "increased low back stiffness after working his second shift." (*Ex. E, p. 77*.) Dr. Mankowski or Ms. Haseman performed a physical examination of Claimant. As part of the physical examination, the following was noted:

> AROM: (all painess) [sic]
> Flex fingers to toes
> Bilat bend 30 dgr
> Ext 30 dgr.

(*See Ex. E, p. 78*.)

According to this report, Claimant was noted to have full lumbar range of motion in all planes without pain. (*See Green Depo. 39:18-20*.) However, there is no indication Dr. Mankowski and/or Ms. Haseman formally measured Claimant's range of motion using inclinometers and that the range of motion measurements met the validity criteria of the AMA Guides. Moreover, there is no indication in the report that Dr. Mankowski or Ms. Haseman believed Claimant would have full range of when measured pursuant to the AMA Guides. This is supported by the fact that they sent Claimant to a physical therapist, Laura Curran, for formal range of motion measurements, which would meet the validity criteria of the AMA Guides, to assist in determining Claimant's impairment pursuant to the AMA Guides.

9. On July 17, 2018, Claimant underwent range-of-motion testing with physical therapist Laura Curran for purposes of determining his impairment rating pursuant to the AMA Guides. (*Ex. D, p. 71.*) Physical therapist Curran measured Claimant's lumbar range of motion as follows:

> 57° of lumbar forward flexion;
>
> 9° of lumbar extension;
>
> 22° of lumbar right lateral flexion; and
>
> 12° of lumbar left lateral flexion.

(E*x. D, p. 74*.)

10. Dr. Mankowski accepted physical therapist Curran's range-of-motion measurements for purposes of determining Claimant's impairment rating

pursuant to the AMA Guides. (*Ex. D, pp. 71-72*.) The impairment rating Dr. Mankowski ultimately assigned was 18% of the whole person. (*Ex. D, p. 71*.) This was based on 13% for range-of-motion deficits based on the measurements taken by the physical therapist, and 6% for a Table 53 diagnosis. (*Ex. D, p. 71*.)

11. On August 16, 2018, Claimant successfully completed a Fitness for Duty performance evaluation that was conducted by Employer. Lieutenant Lacy Burke testified and showed a film demonstrating the various physical tasks, which simulated various job duties, each firefighter had to be able to perform in order to be deemed "fit for duty." The film showed someone, other than Claimant, performing various simulated job duties that each firefighter must be able to perform within a certain time in order to successfully perform their job as a firefighter.

12. Lt. Burke was not present when Claimant successfully performed his Fitness for Duty evaluation. Therefore, she was unable to testify how Claimant performed each task and whether, in her lay opinion, he exhibited range of motion deficits that were inconsistent with what was documented by the Division Examiner, Dr. Green, or consistent with what was measured by Dr. Lesnak as set forth in his IME and worksheets.

13. Claimant testified that he found it very difficult to move for a week after performing the Fitness for Duty test. He also testified that he is very competitive and always gives his full effort when he undertakes tasks, whether it be those shown in the video, tasks at work, or performing movements at an examination. Claimant also testified that he tried to modify certain tasks to limit his lumber flexion and instead of bending over would try to squat to complete certain tasks in the performance examination.

14. The ALJ finds Claimant's testimony to be credible and persuasive.

15. On September 21, 2018, Dr. Lawrence Lesnak performed an IME for Employer. He noted in his report that there was active lumber flexion range of motion of 62 degrees and maximum lumber extension of 28 degrees. Dr. Lesnak testified that he did the measurements in accordance with the AMA Guides and completed the appropriate worksheets. The worksheet, which contains his range of motion measurements, is contained in Respondent's Hearing Exhibits. (*Exhibit C, P. 68*.)

16. On November 12, 2018, Claimant underwent a Division independent medical examination (DIME) with Dr. Justin Green. Claimant complained of left paralumber back tightness and persistent left anterolateral leg hypestesia. He also reported decrease in strength in his left quad. In addition, Claimant reported experiencing an occasional charley horse-like cramping sensation of his left anterior thigh and occasional right lower extremity sciatic when he is working hard. He had right lateral hip pain with long periods of standing and reported occasional posterior right legal parshesia. Dr. Green did an appropriate evaluation and performed the appropriate range of motion measurements as required by the AMA Guides. Dr. Green also validated the range of motion measurements pursuant to the AMA Guides. He concluded Claimant had a 14%

whole person impairment rating. The 14% rating was comprised of a 7% rating for specific disorders under Table 53 and 7% for decreased range of motion.

17. In his report, Dr. Green documented the objective tests, MRI findings and neurological deficits - as well as the prior range of motion measurements used by Dr. Mankowski in providing Claimant an impairment rating, which corroborated the existence of medical impairment based on specific disorders and range of motion deficits.

18. In addition, Dr. Green's rating was consistent with the rating provided by Dr. Mankowski in that it demonstrated medical impairment due, in part, to a decrease in lumbar range of motion.

19. Dr. Green testified that when he reviewed Dr. Lesnak's conclusions and opinions regarding Claimant's lumbar range of motion measurements, he gave them less weight because he did not feel that he could rely on them as being compliant with the AMA Guides because he was not provided Dr. Lesnak's worksheet that contained his range of motion measurements. (*Deposition Dr. Green P. 35:3 – 14*). It is not clear whether Dr. Green was directed to review Dr. Lesnak's worksheet with his range of motion measurements during the deposition. However, when the discrepancy between his range of motion measurements and Dr. Lesnak's was pointed out, as well as the higher range of motion deficits used by Dr. Mankowski, Dr. Green did not recommend any additional evaluations to resolve the disparity between his measurements, the physical therapists, Dr. Lesnak's, and the comments in some of the medical records that indicated Claimant had normal lumbar range of motion. (*Green Depo. 44:5*.)

20. Dr. Green testified that he thought the medical records that indicated Claimant had normal lumbar range of motion did not contain any information that the providers actually measured Claimant's lumbar range of motion in accordance with the AMA Guides. Therefore, he appropriately discounted such comments. He stated that was why he discounted Dr. Mankowski's June 5, 2018 observations (*Deposition Dr. Green P.37:2 – P. 38:12*). He also testified that Dr. Ghiselle's observation on April 19, 2018, of Claimant's range of motion, was also not consistent with the AMA Guides as it relates to measuring range of motion. (*Deposition Dr. Green P. 39:24 – P. 40:9*). Again, in Dr. Ghiselle's report, there was no showing of any measurements or validation of Claimant's lumbar range of motion. Therefore, Dr. Green reasonably assumed it was just a visual observation.

21. Dr. Green was shown the Fitness for Duty video and observed that someone with Claimant's limited range of motion in their lumbar spine may or may not be limited in their ability to perform the physical tasks demonstrated in the video. He stated it would depend on the person's morphology (ex. long arms, long torso), and the flexibility in their thoracic spine to help compensate. (*Deposition Dr. Green P. 10:5 – P. 11:11*).

22. Dr. Green testified in his deposition that individuals with lumber problems can compensate by performing tasks in different ways and that some people put up

with pain and can have greater flexion and extension than someone not willing to put up with the pain.

23. Dr. Green also testified that range of motion can vary. Dr. Lesnak's testimony was in accord. He testified there are a wide variety of reasons range of motion can vary. A patient may have pain on one day or slept wrong or stiffness (*Transcript P. 49: 9 – 14*). When asked whether the difference in Claimant's range of motion [as measured by Dr. Green and Dr. Lesnak] could be consistent with day-to-day variances, Dr. Lesnak stated, "It can be again for a variety of reasons. (*Transcript P. 51:10-18*).

24. A key point to which Dr. Green also testified is that functional capacity and range of motion are two fundamentally different things. (*Deposition P. 14:10-12.*) This key point is covered in detail in Chapter 1 of the AMA Guides, which sets forth what the AMA Guides measure. The AMA Guides, in Chapter 1, *Concepts of Impairment Evaluation*, provides that the AMA Guides measure "medical impairment" and that "medical impairment" is different from disability. In Chapter 1 of the AMA Guides, the point is driven home that "medical impairment" can exist without occupational "disability." In explaining this concept, the AMA Guides provides the following explanation:

> Various terms used in the *Guides*, such as "impairment," "disability," and "handicap," appear in laws, regulations, and policies of diverse origin without prior agreement on the ways in which they are to be used. It is no wonder there is uncertainty, if not controversy, about the meanings of these words. This book remedies that situation through careful definition and delineation of the domain in which each term is applied. Accordingly, even when the terminology of the *Guides* may differ from that of a particular law, regulation, or administrative system, analysis in accordance with the following discussion should indicate how the principles embodied in the *Guides* may be interpreted and applied within that law or system.
>
> The accurate and proper use of medical information to assess impairment depends on the recognition that, whereas impairment is a medical matter, disability arises out of the interaction between impairment and external demands, especially those of an individual's occupation. As used in the *Guides*, "impairment" means an alteration of an individual's health status that is assessed by medical means, "disability," which is assessed by nonmedical means, is an alteration of an individual's capacity to meet personal, social, or occupational demands for statutory or regulatory requirements. Stated another way, "impairment" is what is wrong with a body part or organ system and its functioning; "disability" is the gap between what the individual *can* do and what the individual *needs* or *wants* to do.

> ***An individual who is "impaired" is not necessarily "disabled."*** Impairment gives rise to disability only when the medical condition limits the individual's capacity to meet the demands of life's activities. For example, losing the distal phalanx of the little finger, right-hand, will impair the functioning of the digit and hand of both a concert pianist and a bank president, but the bank president is less likely to be disabled than the pianist. An individual who is able to meet a particular set of demands is not "disabled," even if a medical exam and shows impairment. (Emphasis added.)
>
> . . .
>
> It is difficult to overstate the importance of examining the context in which the terms "impairment," "disability," and "handicap" appear. In general, a physician's evaluation of the patient should be understood to be a medical evaluation of health status or, in terms of the *Guides*, an evaluation. ***The Physician does not determine industrial loss of use, economic loss, or any other type of loss giving rise to disability payments.*** [1] (Emphasis added.)

25. Dr. Green stood by the impairment rating he provided Claimant as set forth in his DIME report. Dr. Green did not think there was any reason to change the impairment rating he provided Claimant based on his review of the various medical records, which included Dr. Lesnak's, during his deposition. Dr. Green also did not think he should change the rating he provided Claimant after viewing the Fitness for Duty evaluation video, which showed someone other than Claimant performing various simulated work tasks. In the end, Dr. Green concluded that his findings were in substantial accordance with the information available to him and there was no need to undertake further clinical evaluation to resolve any disparities in the information that was available to him.

26. The ALJ finds Dr. Green's opinions and testimony to be credible and persuasive.

27. The ALJ finds Dr. Green properly applied the AMA Guides in evaluating Claimant and determining Claimant's impairment.

28. The ALJ does not find the Fitness for Duty video to be persuasive evidence that Dr. Green did not properly apply the AMA Guides in determining Claimant's impairment. Moreover, the ALJ does not find the rating provided by Dr. Green to be inconsistent with Claimant's ability to pass the Fitness for Duty test as demonstrated in the video.

29. The ALJ also does not find the range of motion measurements documented by Dr. Lesnak and physical therapist Curran, as well as the visual observations and notations of other providers that Claimant had normal range of motion, to be

[1] AMA Guides, pp. 1-2.

persuasive evidence that supports a finding Dr. Green erred in determining Claimant's impairment pursuant to the AMA Guides.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondent overcame the opinion of the DIME physician, Dr. Justin Green, by clear and convincing evidence regarding Claimant's impairment rating.

A DIME physician must apply the AMA Guides when determining Claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall

be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

In *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000), the court noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

Ultimately, the question of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

The "Fitness for Duty" Video (Exhibit I)

Respondent introduced a video of a firefighter performing various simulated work tasks. Respondent contends the 14% impairment rating Dr. Green provided Claimant, pursuant to the AMA Guides, must be wrong because someone with a 14% impairment of the lumbar spine could not perform the firefighter related tasks illustrated in the video.[2]

As specifically set forth in the AMA Guides, and previously stated in the foregoing findings of fact, the AMA Guides evaluates "medical impairment" and not "disability." Therefore, the degree of medical impairment under the AMA Guides does not always equate with occupational disability.

Respondent's witness, Lieutenant Lacy Burke from the fire department, who authenticated the video, stated that this was not a video of Claimant performing the work-related tasks. While Lieutenant Burke believed the video illustrated how the tasks

[2] The 14% rating provided by Dr. Green is comprised of a 7% rating for specific disorders under Table 53 and 7% for decreased range of motion.

should be performed, she was not present when Claimant performed the tasks and would not know how he performed the tasks.

Dr. Green was shown the video and observed that someone with degree of Claimant's lumbar range of motion, as he measured, may or may not be limited in their ability to perform certain physical tasks. He stated it would depend on each person's morphology, (ex. long arms, long torso), and the flexibility in their thoracic spine to help compensate. (*Deposition Dr. Green P. 10:5 – P. 11:11*).

Consistent with the AMA Guides, Dr. Green testified that functional capacity and range of motion are two fundamentally different things (*Deposition P. 14:10-12*).

There was no medical opinion offered that indicated how Claimant performed the tasks depicted in the video and whether he performed the tasks in the way depicted in the video. In addition, there was no credible or persuasive medical testimony that indicated the performance of the tasks depicted in the video could not be performed with someone with a 14% rating under the AMA Guides with the same Table 53 disorders and range of motion deficits as Claimant.

Therefore, the ALJ did not find the video to be persuasive in overcoming the impairment rating provided by Dr. Green.

Various Range of Motion Observations and Measurements

The June 5, 2018, report of Dr. Mankowski indicates either Dr. Mankowski and/or Ms. Haseman noted their general observations of Claimant's lumbar range of motion at that visit. However, there is no indication Dr. Mankowksi and/or Ms. Haseman formally measured Claimant's range of motion pursuant to the AMA Guides. Moreover, the fact that Claimant was sent out to a physical therapist for the sole purpose of measuring his lumbar range of motion for his impairment rating supports a finding that the mere observations noted in the record were not meant to be a definitive finding regarding Claimant's range of motion deficits for impairment rating purposes. Had the general observations been intended as such, there would have been no need to send Claimant to have formal range of motion measurements performed by a physical therapist and performed pursuant to the AMA Guides. Moreover, the fact that Dr. Mankowski used the range of motion measurements – which showed a deficit – provides additional evidence that despite the general observations contained in the medical records, Dr. Mankowski was of the opinion that Claimant did not have normal lumbar range of motion.

The same is true of Dr. Ghiselli's April 19, 2018 report. There was no indication Dr. Ghiselli formally measured Claimant's lumbar range of motion in conformity with the AMA Guides.

Dr. Green testified that he only considered or gave weight to any measurements that he could verify were done according to the AMA Guides. He testified that he just had to compare apples to apples. For this reason, Dr. Green discounted visual observations without documented repeat and validated measurements and opinions.

It is not clear whether Dr. Green reviewed Dr. Lesnak's range of motion worksheet that was submitted as an exhibit during his deposition. However, Dr. Green was asked to comment on Dr. Lesnak's IME report and the range of motion measurements documented in his IME. Moreover, at the time he performed his IME, it is not clear whether he really cared whether Dr. Lesnak's measurements were done in conformity with the AMA Guides in light of his assessment of the matter.

In his deposition, Dr. Green stood by the impairment rating he provided Claimant as set forth in his DIME report. Dr. Green did not think there was any reason to change the impairment rating he provided Claimant based on his review of the various medical records, which included Dr. Lesnak's, during his deposition. Dr. Green also did not think he should change the rating he provided Claimant after viewing the Fitness for Duty evaluation video, which showed someone other than Claimant performing various simulated work tasks. Furthermore, he did not think he should change the rating he provided Claimant based on the range of motion measurements taken by the physical therapist. In the end, Dr. Green concluded that his findings were in substantial accordance with the information available to him and there was no need to undertake further clinical evaluation to resolve any disparities in the information that was available to him.

Dr. Lesnak conceded in his testimony that he had no evidence that Dr. Green did not perform the measurements in accord with the AMA Guides. He also conceded that there was no evidence that Dr. Green did not validate the range of motion measurements pursuant to the AMA Guides. At best, Dr. Lesnak's opinion, which is based on different range of motion measurements, is merely a difference of opinion between examiners regarding range of motion measurements and the proper rating to assign Claimant pursuant to the AMA Guides.

Although a DIME physician can ignore valid range of motion measurements, when such measurements are inconsistent with the underlying information contained in the record and/or evaluation of the physician, Dr. Green chose not to disregard his own range of motion measurements that were valid. However, he reasonably chose to disregard the range of motion measurements documented by Dr. Lesnak and those used by Dr. Mankowski.

The ALJ finds Dr. Green's opinions and conclusions to be credible and persuasive for a number of reasons. First, the rating provided by Dr. Green is consistent with the DIME physician's clinical evaluation and observations. Second, Dr. Green documented the objective tests, (i.e., MRI findings and neurological deficits) as well as the other data that corroborated the existence of medical impairment as determined by the AMA Guides. Third, Dr. Green, in his deposition, credibly testified that he believed his rating was appropriate despite the various range of motion measurements contained in the record.

Therefore, the ALJ finds and concludes that Respondent has failed to overcome Dr. Green's opinion regarding Claimant's impairment by clear and convincing evidence.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent has failed to overcome Dr. Green's opinion regarding Claimant's impairment rating by clear and convincing evidence.
2. Respondent shall pay Claimant permanent partial disability benefits based upon the 14% whole person impairment rating as determined by the DIME physician, Dr. Green.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 9, 2019

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant overcame Dr. Orgel's DIME opinion on maximum medical improvement (MMI) by clear and convincing evidence.

II. If Claimant failed to overcome Dr. Orgel's DIME opinion on MMI, whether Claimant proved by clear and convincing evidence that Dr. Orgel erred in finding that Claimant has a 10% whole person impairment.

III. Whether Claimant has proved by a preponderance of the evidence that she is entitled to ongoing reasonably necessary and related medical treatment, including reimbursement for the April 5, 2018, surgical implant of a vagal nerve stimulator (VNS).

IV. Whether Claimant has proved by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits from September 19, 2017, through ongoing.

V. Whether Respondent has proved by a preponderance of the evidence that there is an overpayment for combined TTD and permanent partial disability (PPD) benefits paid in excess of the statutory cap.

STIPULATIONS

The parties agreed to the bifurcation of permanent total disability pending the determination of the above issues.

FINDINGS OF FACT

1. Claimant is a 53-year-old woman who worked for Employer as a recreational coordinator. Claimant sustained an admitted industrial injury on July 12, 2001 when she was thrown off a horse while leading a teen adventure program. Claimant's horse became startled and began running, then came to an abrupt stop, causing Claimant to flip over the front of the horse and land on the ground. Immediately following the injury, Claimant was transported to McKee Medical Center in a school bus. An EMT record from the same day notes Claimant fell off a runaway horse, hit her pubis on the horn of the saddle, and struck her lower back on a rock. It was further noted Claimant denied hitting her head, loss of consciousness, and cervical spine pain.

2. Claimant was seen at Denver Health on July 13, 2001. Cynthia Kuehn, M.D. noted the following regarding the mechanism of injury: "The patient reports that her horse got spooked by weather, and she was thrown off, landing on her lower back." No head injury was noted. Claimant complained of severe low back and tailbone pain as

well as some neck and shoulder stiffness. Dr. Kuehn initially diagnosed Claimant with a low back strain and contusion, coccydynia secondary to contusion, and cervical spine and trapezius muscle strain. Follow-up evaluations with Dr. Kuehn on July 16 and July 30, 2001 document low back and groin complaints, as well as some upper back discomfort. A lumbar MRI revealed degenerative disc disease at L5-S1 with a posterior disc bulge.

3. On July 31, 2001, Claimant presented to Barry Ogin, M.D. upon the referral of Dr. Kuehn. Claimant completed a patient questionnaire, reporting that she flipped over a horse onto her back. The pain diagram does not indicate any head or neck symptoms. Dr. Ogin documented the following regarding the mechanism of injury:

> She noted that the horse began to speed up and then ran into another horse coming to a complete stop. The patient believes that she flipped over the front of the horse and landed on the ground on her buttocks. She does not think she lost consciousness, but tells me that things happened so fast that she is unsure exactly whether she flipped or not or what she landed on. She had immediate pain in her low back and pelvic region.

Dr. Ogin recommended Claimant treat with medication, physical therapy and an electric stimulator. Claimant underwent the recommended conservative treatment and was eventually placed at MMI for her low back injury on September 24, 2001.

4. Claimant experienced her first seizure on July 23, 2002 and was seen at Denver Health with noted tonic-clonic seizure activity. She subsequently underwent a CT scan of the head and an awake EEG, both of which were normal. Claimant continued to experience seizures and was ultimately diagnosed with posttraumatic epilepsy by Richard L. Hughes, M.D., Chief of Neurology at Denver Health. In a letter dated October 22, 2002, Dr. Hughes opined that Claimant's posttraumatic epilepsy was the result of the July 12, 2001 work injury. He noted Claimant "was thrown over the top of a horse after it abruptly stopped. She was dazed, and it is unclear how long her period of change in conscienceness [*sic*] lasted (it wasn't really long)." Dr. Hughes concluded it was likely Claimant's seizures were the result of the July 2001 injury as Claimant "has no inborn tendency for epilepsy from her family, has had no infectious processes affecting her as child or young adult, and has not had anything resembling a seizure until this event in July 2001…" Claimant was placed on medication to control the seizures.

5. On October 24, 2003, Duane J. Glatz, M.D., a neurologist, performed an independent medical examination (IME) at the request of Respondent. Regarding the mechanism of injury, Dr. Glatz noted Claimant's horse began running and stopped abruptly, resulting in Claimant being thrown over the head of her horse and the back of another horse in a somersault fashion, landing on her back. He specifically noted there was not a direct head injury and no loss of consciousness. Dr. Glatz diagnosed Claimant with generalized tonic-clonic seizures and complex partial seizures. He opined Claimant's seizures were posttraumatic in nature and were caused by the fall from a horse on July 12, 2001. Dr. Glatz explained that, although posttraumatic epilepsy is

more likely to occur in individuals who have had a direct head injury with loss of consciousness, it was not essential for a diagnosis of post-traumatic epilepsy. He wrote,

> [Claimant] did not sustain a 'minor' fall from the horse. The history indicates that she was, in effect, ejected from the horse and thrown over another animal, landing forcefully on her back. There apparently was no direct blow to the head. However, the mechanism of injury itself probably was great enough to cause forceful movement of the brain over the base of the skull bones, which have many sharp protuberances and ridges. This, in effect, resulted in the development of enough scar tissue for the onset of post-traumatic epilepsy.

Dr. Glatz noted Claimant's development of epilepsy in July 2002 was within the expected time for post-traumatic seizures. He further noted that idiopathic epilepsy is unlikely to develop in an individual in his or her thirties, and there was no other known reasons for Claimant to have developed epilepsy.

6. On October 30, 2003, Lynn Parry, M.D., a neurologist, performed an IME at the request of Claimant. Claimant reported to Dr. Parry she was thrown over the head of the horse and over the back of another horse onto uneven ground. Dr. Parry noted, "She does recall hitting the ground and standing up but felt immediately profoundly dizzy and had to lie down again." Dr. Parry reviewed Claimant's medical records and noted an August 15, 2001 physical therapy record documented complaints of dizziness over the past two months. Dr. Parry opined Claimant sustained a traumatic brain injury as a result of the July 2001 work injury and diagnosed her with post-traumatic seizures. She wrote,

> Often these patients actually are not aware of specific loss of consciousness unless it has been prolonged. Often they simply have difficulty with accounting for specific periods of time which can represent either loss of consciousness, post-traumatic amnesia, or post-traumatic condition, all of which are indicators of a traumatic brain injury.

Dr. Parry noted Claimant fell within the time period for developing posttraumatic seizure disorder, as seizures can develop up to 24 months after a head injury. She also noted Claimant had no other known risk factors.

7. On November 19, 2003, Peter S. Quintero, M.D., a neurologist, performed an IME at the request of Respondent. Dr. Quintero noted Claimant was thrown forward off of a horse, struck a second horse, and landed on her back on a rock. He noted Claimant did not strike her head but was dazed by the impact. Claimant reported to Dr. Quintero that after the injury she experienced intermittent headaches. Dr. Quintero opined Claimant suffered from posttraumatic generalized tonic-clonic seizures and complex partial seizures as a result of the July 12, 2001 work accident. He noted that, while Claimant did not strike her head during the incident, "it was a rather violent blow to her back, and she was dazed by the incident" and subsequently developed headaches. He made note that Claimant had no family history of seizures, and no previous history

of seizures, syncope, head injury, central nervous system disease, central nervous system congenital malformation, or other abnormalities that would account for the seizure disorder. Like Dr. Glatz, Dr. Quintero noted it would be unusual for a patient to develop idiopathic seizures in his or her thirties.

8. Claimant returned to Dr. Ogin for reevaluation on December 23, 2003. Claimant reported she developed neck discomfort and headaches towards the end of 2001. Dr. Ogin noted that, when he first evaluated Claimant, she was not complaining of neck problems and her neck was not an issue throughout his treatment of Claimant. He opined it was unlikely all of Claimant's current neck problems were related to the July 2001 fall. He did, however, diagnose Claimant with a seizure disorder, noting Drs. Hughes, Glatz and Quintero had all opined Claimant's seizure disorder was related to the July 2001 work accident. Dr. Ogin referred Claimant to Kristen Bracht, M.D. for a neurologic consultation.

9. Claimant first saw Dr. Bracht on February 12, 2004. Dr. Bracht noted Claimant fell off of a horse while at work, got up and did not initially lose consciousness, but then laid back down and "may have passed out for a minute." She noted Claimant had experienced approximately seven seizures since July 2002, the majority usually occurring in her sleep, with incontinence and tongue biting, followed by confusion. Dr. Bracht opined Claimant suffered from posttraumatic epilepsy related to the July 12, 2001 injury.

10. Claimant underwent an awake EEG on August 29, 2004, the results of which were normal. Dr. Hughes noted Claimant had a right hand tremor which did not correlate with any epileptiform activity. Claimant underwent a brain MRI on January 10, 2006, which was also normal. Claimant continued to use medication to treat the seizures.

11. Claimant returned to Dr. Bracht on June 22, 2009 having last been evaluated in October of 2007. Dr. Bracht noted Claimant's seizures had increased to one seizure a month in the preceding fall season in the setting of significant family stressors, then did not occur for another five months. Dr. Bracht noted Claimant underwent a 48-hour ambulatory EEG on March 14-16, 2008 that was read as showing left temporal intermittent slowing with somewhat sharp features at times. The reading was felt most consistent with a tendency towards partial seizures emanating from the left temporal region. Dr. Bracht further noted Claimant's seizures were under varying control and tended to increase with stress.

12. On July 29, 2009, Claimant was placed at MMI by DIME physician Johnathan Woodcock, M.D., a neurologist, with a 10% whole person impairment rating for episodic neurologic disorders. He opined Claimant had chronic posttraumatic seizure disorder related to the July 12, 2001 fall from the horse and required chronic antiepileptic drug management.

13. Respondent filed a Final Admission of Liability (FAL) on May 14, 2010 admitting for a 10% whole-person rating and reasonable, necessary and related medical

maintenance benefits. Total TTD benefits admitted as of that date were $10,583.18. Total PPD admitted was $30,719.90 (noting PPD paid out from July 2009 to March 2011).

14. Claimant continued to treat for seizures with Dr. Bracht and her primary care physician, Dr. Grace Alfonsi, in 2010, 2011 and 2012. On January 28, 2013, Dr. Alfonsi noted Claimant's seizure disorder was worsening.

15. On February 10, 2013, Claimant presented to the emergency room at Denver Health after experiencing tongue numbness and bilateral handshaking. Michael Earnest, M.D. felt the particular episode was not an epileptic seizure but rather a psychogenic nonepileptic seizure, "based on the fact that the episode primarily involved bilateral hand shaking with complete retention awareness. In addition, the length of the episode of 20 to 30 minutes does not fit a difficult epileptic seizure…"

16. On February 25, 2013, Dr. Alfonsi completed a reasonable accommodation request for Claimant indicating that she may need time away from work due to her seizures, and that she was struggling with computer activities and writing reports. Claimant needed to avoid bright lights was having difficulty with short-term memory post seizure. She struggled to relearn her job and performing her essential duties.

17. On March 23, 2013, Claimant filed a Petition to Reopen her claim based on a worsening of condition of her seizure disorder.

18. On July 9, 2013, Claimant began treating for her seizure disorder with neurologist and epileptologist Edward H. Maa, M.D. at Denver Health.

19. On August 26, 2013, Claimant attended a neurological consultation with William Wagner, M.D. Regarding the mechanism of injury, Dr. Wagner noted Claimant was thrown from a horse, hit her head and lost consciousness. Claimant reported to Dr. Wagner that most of her seizures consisted of right-sided jerking at night, but also grand mal seizures and daytime seizures. Dr. Wagner diagnosed Claimant with posttraumatic refractory complex partial epilepsy with secondary generalization and recommended Claimant undergo in-patient EEG monitoring.

20. From September 30, 2013 through October 2, 2013, Dr. Maa performed epilepsy monitoring of Claimant consisting of continuous EEG and video monitoring. Six left temporal onset complex partial seizures were captured during the testing.

21. On November 5, 2013, Bennett J. Machanic, M.D., a neurologist, performed an IME at the request of Claimant. Dr. Machanic noted Claimant was thrown overhead and "apparently landed on her head and was unconscious for several minutes." Dr. Machanic concluded Claimant suffered from refractory posttraumatic epilepsy with some generalized convulsive episodes but also complex partial seizures. He opined Claimant's condition had worsened and strongly suggested Claimant's case be reopened for further evaluation.

22. A SAMMs conference was held with Dr. Wagner on February 28, 2014. In a letter dated April 28, 2014, Dr. Wagner confirmed it was his opinion that Claimant's current seizure disorder was related to her July 12, 2001 work injury. He further confirmed it was his opinion that further diagnostic testing and treatment was necessary to improve Claimant's seizure problems and bring them back under control. He also confirmed that he could see and treat Claimant as a general neurologist, but that Claimant also needed to see an epileptic specialist, such as Dr. Maa, and should continue to be seen by Dr. Maa or an epileptic neurological specialist.

23. The parties eventually stipulated that Claimant was no longer at MMI. Respondent voluntarily reopened Claimant's claim in an August 12, 2014 General Admission of Liability (GAL). The total combined TTD and PPD paid out prior to reopening was $40,371.24. The August 12, 2014 GAL admitted for retroactive TTD for periods during 2013 and 2014.

24. Claimant continued to experience refractory seizures throughout 2015 and 2016, requiring additional time off from work and additional accommodations.

25. On March 31, 2016, John J. Raschbacher, M.D. performed an IME at the request of Respondent. Regarding the mechanism of injury, Dr. Raschbacher noted, "She does not remember having a head injury at the time but also thinks that she had a head injury and migraine after the fall. On history, this issue does not appear to be very clear." Dr. Raschbacher noted Claimant had been diagnosed with pseudoseizures or psychogenic seizures, and questioned the actual frequency of Claimant's non-psychogenic seizures. He further questioned the diagnosis of posttraumatic seizures, stating,

> There was no head injury, brain injury, concussion, or similar problem at the time of her fall from a horse. It appears that the history that she offered to neurologists and others later changed. It is not clear to what extent these physicians, acting in good faith, were affected by the history that she had actually injured the head.

26. Dr. Raschbacher explained that no head injury is necessary to produce the onset of seizures in adulthood, and that epilepsy can occur idiopathically in the absence of any head injury. Dr. Raschbacher opined Claimant has some secondary gain issues, and recommended a psychiatric IME and forensic neurologic medical record review be performed.

27. On April 7, 2016, Eric Hammerberg, M.D., a neurologist, performed an IME at the request of Respondent. Dr. Hammerberg noted Claimant had been thrown from a horse and landed on her back. He diagnosed Claimant with posttraumatic complex partial seizures, with secondary generalization, and pseudoseizures. He opined Claimant probably has a left anterior temporal lobe focus and recommended a referral to Dr. Bracht for further evaluation before surgery was contemplated. Dr. Hammerberg explained that the focal injury of the anterior temporal lobe can occur following head trauma without clinical evidence of concussion or post concussive syndrome and he

therefore agreed with the other neurologists that Claimant's problems were the result of her July 2001 work-related injury. He further agreed with Dr. Raschbacher that a forensic psychiatric evaluation should be performed in addition to the other recommendations.

28. On April 26, 2016, Claimant was being evaluated for potential brain surgery. According to Scott Pearson, PA-C, Claimant's symptoms were coming from Claimant's left temporal lobe based upon an EEG and PET scan with hypometabolism in the right temporal lobe. PA-C Pearson indicated that Claimant was unable to complete WADA testing to assess memory and language localization because of a blockage in the ascending aorta. Claimant was to complete a neuropsychological evaluation as the next step to help with localization of neurological strengths and weaknesses. A functional MRI was being ordered to assist with language localization.

29. On July 12, 2016, Claimant was determined to be medically disqualified from her job based upon her medical condition of post-traumatic epilepsy.

30. On October 4, 2016, Claimant saw Brandon Schreiber, PA-C, under the supervision of Dr. Maa in the neurology department at Denver Health. Claimant presented with convulsions. PA-C Schreiber noted the convulsions appeared somewhat suppressible and distractible by the consulting neurology staff. He concluded that "[t]he features suggested against any pathologic or drug induced tremor and intact cognition in setting of full body shaking makes seizure unlikely. It is most likely functional."

31. On February 23, 2017, Stephen A. Moe, M.D. performed a psychiatric IME at the request of Respondent. Dr. Moe noted there were no reports in any of the medical records at the time of indicating acute signs or symptoms of a concussion. He also addressed Dr. Glatz's theory that Claimant could have suffered a brain injury without direct impact to the head. Dr. Moe noted that medical research on the topic has shown that the degree of whiplash necessary would need to be comparable to that experienced in a military aircraft crash and would be sufficient to cause cervical spine fractures in a human cadaver. With regard to Claimant's diagnosis for epilepsy, Dr. Moe noted he did not have sufficient medical records to confirm a diagnosis of epilepsy, though he did not rule out the possibility. However, Dr. Moe felt that regardless of whether Claimant suffered from epilepsy, she also suffered from psychogenic non-epileptic events or episodes (PNEE). He opined that Claimant's condition, whether due to epilepsy or PNEE, was not the result of the July 12, 2001 work injury.

32. On March 7, 2017, PA-C Schreiber, under the supervision of Dr. Maa, recommended Claimant undergo VNS surgery to treat Claimant's refractory seizures.

33. Dr. Hammerberg reviewed additional records and issued an addendum to his IME report on March 21, 2017. Dr. Hammerberg reiterated his opinion that Claimant had posttraumatic epilepsy as a result of the July 12, 2001, but also noted that some of Claimant's seizure activity may be psychogenic in nature. He noted that, on March 7, 2017, PA-C Schreiber recommended Claimant be referred for a VNS. He noted further that one possible explanation for the refractoriness of Claimant's seizures is that the

seizures are not truly epileptic, but psychogenic. Dr. Hammerberg stated that it is impossible to treat a claimant for seizure activity without defining which seizure phenomena are caused by electrical paroxysmal discharges in the brain and which are not. He recommended that Claimant undergo prolonged video and EEG recording for 7 to 10 days or longer in a hospital setting to determine the type of seizures Claimant was experiencing. Dr. Hammerberg agreed with Dr. Moe that PNEE would not have been caused by the July 12, 2001 work injury, but disagreed with Dr. Moe that the trauma on the date of injury would not have caused epileptic seizures. He explained that, although the medical records do not document a traumatic brain injury, it is quite possible that being thrown from a horse and landing on one's back could have caused a countercoup injury to the tip of the left anterior temporal lobe which developed into a seizure focus the following year.

34. In response to questions regarding the VNS, Dr. Hammerberg indicated that a VNS is an appropriate option when seizures are poorly controlled with medication like Claimant's, as long as the seizures are truly epileptic. He indicated that because he had not been provided with Dr. Maa's records for review and Dr. Maa may have addressed all of the ambiguities in the case, it was not possible to comment upon this without being provided with and reviewing his reports. Dr. Hammerberg indicated that the benefits of a VNS were that the epilepsy becomes easier to control with medication, and surgical complications of VNS surgery are rare and include pain at the site of the incision, infection and scarring, as well as difficult vocal cord paralysis which is usually temporary. In addition, other problems may include voice changes, hoarseness, throat pain, cough, headache, chest pain, difficulty breathing, difficulty swallowing, abdominal pain, insomnia and brachiocardia. Dr. Hammerberg also indicated that the success rate of the VNS in reducing and controlling the frequency of seizures by decreasing them between 20% and 50%. He indicated that the seizure intensity may also diminish, and patients may also note improved mood and improved quality of life.

35. Claimant was placed at MMI by Dr. Alissa Koval of Denver Health on September 19, 2017 with no additional impairment. Respondent filed a FAL on October 10, 2017 admitting for reasonably necessary and related maintenance medical care. And noting the existence of an overpayment. Claimant filed a timely objection to this admission and requested a DIME.

36. From October 29, 2017 through March 17, 2018, Claimant received $520.00 per week in unemployment insurance benefits through the Colorado Department of Labor.

37. On February 12, 2018, Dr. Machanic performed a second IME at the request of Claimant. Dr. Machanic was of the opinion that, as a result of the work injury, Claimant had a cerebral concussion, mild traumatic brain injury, and post-traumatic mixed epilepsy with both episodes of generalized convulsive activity and also left focal complex partial seizures. He noted that, although there were allegations of non-epileptic seizures, he was unable to sort out precisely what component of altered consciousness was due to non-epileptic events versus organic post-traumatic epilepsy. He stated, "[t]he evidence is clear and massive that the patient suffers from posttraumatic mixed epilepsy and any non-epileptic seizures activity would be trivial compared to what is

going on with brain pathology at his point…" Dr. Machanic opined Claimant was not at MMI for her epilepsy and needed additional treatment with Dr. Maa, medication management, and consideration of the implantation of a VNS. Dr. Machanic was of the opinion that Claimant would require medical treatment with a neurologist for the foreseeable future. He provided a provisional impairment rating of 25% for Claimant's episodic neurological disorders based upon moderate interference with the Claimants activities of daily living per Table 1 page 109 of the AMA Guides in addition to ratings of 12% whole person for Claimant's cervical spine, 17% of her lumbar spine and 9% of the right upper extremity, which combined for a 45% whole person impairment rating.

38. On March 27, 2018, Claimant's counsel sent Respondent's counsel an e-mail stating, "Dr. Maa has scheduled Claimant for VNG (*sic*) surgery on April 5, 2018. Please reinstate TTD benefits as of that date." Attached were instructions given to Claimant for the procedure, indicating Claimant was scheduled for a VNS Insertion with Dr. Ojemann on April 5, 2018. Prior authorization for the procedure was not requested.

39. In a letter dated April 3, 2018, Respondent's counsel noted that Respondent was not in receipt of any preauthorization request for the procedure being performed and, to the extent the March 27, 2018 e-mail constituted a preauthorization request, such request was denied.

40. Claimant underwent VNS implant surgery on April 5, 2018, performed by Dr. Ojemann. Dr. Maa referred Claimant to Dr. Ojemann to perform the procedure. Respondent does not dispute Dr. Ojemann's status as an authorized provider. [1]

41. David Orgel, M.D. performed the DIME on May 9, 2018. Dr. Orgel reviewed Claimant's medical records dating back to the July 12, 2001 injury, including the multiple IME reports conducted at the requests of Respondent and Claimant. Dr. Orgel concluded that, based on the records, Claimant's diagnosis appeared to be complex partial left temporal lobe seizure with pseudoseizures. He explained, "I based this on the nocturnal study which did show some focal abnormalities in the left temporal lobe associated with seizures in the October 2013 inpatient evaluation. However further workup suggested pseudoseizures as well." Dr. Orgel concluded that Claimant's temporal lobe epilepsy appeared to be primarily nocturnal. He referenced three journal articles regarding nocturnal seizures, and noted such epilepsy may present during adulthood, is generally not described as being posttraumatic, and its most common differential diagnosis is pseudoseizures. Dr. Orgel opined that Claimant's grand-mal-type seizures were actually psychogenic non-epileptic seizures, and did not represent a generalization of Claimant's partial complex epileptic seizures. He felt that Claimant's primary diagnosis was conversion disorder with psychogenic non-epileptic seizures and that this was the cause of Claimant's ongoing disability. He wrote,

[1] Respondent did not endorse authorized provider as an issue on the Response to Application for Hearing, in any CIS, or at hearing. At hearing, Respondent's counsel conceded Dr. Ojemann was within the chain of referral and is an authorized treating physician by virtue of Dr. Maa's referral. Additionally, Respondent made no argument in its position statement challenging the status of Dr. Ojemann as an authorized provider.

> I do believe that she has temporal lobe epilepsy. I do not believe that this has caused her grand mal seizures, that is, I do not feel that her temporal lobe epilepsy has generalized. This would be inconsistent with its occurrence at night, and her generalized seizures seem to be related to stress. Therefore I think her grand mal presentation is related to her pseudoseizures. Given this conclusion, her complaints of injury during seizure activity would not be work-related as pseudoseizures are not work-related. Based on the literature reviewed I'm not convinced that her temporal lobe seizures are work-related either, and much of her treatment has not been to her benefit in my opinion, given her proven diagnosis of pseudoseizures.

42. Dr. Orgel placed Claimant at MMI as of the date of his examination, noting Claimant's treatment had reached its logical conclusion with the recent placement of the VNS. Despite Dr. Orgel expressing doubt as to the work-relatedness of Claimant's temporal lobe seizures, he nonetheless stated he "accept[ed] this as being her only work-related condition," and assigned Claimant a 10% whole person impairment based on Table 1, page 109 of the AMA Guides under slight interference with daily living. He opined Claimant did not require any maintenance treatment.

43. Respondent filed an Amended FAL on June 11, 2018, noting the revised MMI date. Exhibit A.1. The FAL noted that total TTD admitted was $64,702.39, that total TPD admitted was $5,599.94, and that total PPD admitted was $30,719.90.

44. On November 5, 2018, Dr. Moe performed a follow-up psychiatric IME. Claimant reported a reduction in the frequency of her grand mal seizures since the implementation of the VNS. Dr. Moe reviewed the results of Claimant's video EEG from late September 2013 and early October 2013 and accepted the diagnosis of partial complex seizures. He noted, however, that the diagnosis did not change the fact that Claimant's early medical records were devoid of a July 12, 2001 head or brain injury that could tie the diagnosis to Claimant's July 12, 2001 accident. He continued to question whether Claimant's reported tonic-clonic seizures actually represented epileptic seizures instead of psychogenic non-epileptic events.

45. Dr. Maa testified by pre-hearing deposition as an expert in neurology with a subspecialty in epilepsy. In explaining the condition of epilepsy, Dr. Maa used the analogy of a fire breaking out in a brain. Dr. Maa explained that the same seizure can have different stages of severity if allowed to "spread," beginning with partial seizures/focal awareness seizures, then going to complex partial seizures/focal unaware seizures, and then generalized tonic-clonic seizures/grand mal seizures/bilateral convulsions. Dr. Maa explained that just because a patient is only having complex partial seizures without convulsions does not mean they are no longer having seizures.

46. Dr. Maa stated that Claimant's current diagnosis is posttraumatic epilepsy, confirmed by the continuous EEG and video monitoring results, which correlate with Claimant's clinical findings. Dr. Maa reviewed the conclusions of DIME physician Dr.

Orgel and opined that Dr. Orgel's determination that Claimant has complex partial left temporal lobe seizures with pseudoseizures is wrong, as no nonepileptic seizures were captured during the EEG video testing, which would have occurred if Claimant had, in fact, been suffering from nonepileptic seizures. Dr. Maa testified he had not seen any evidence that Claimant had pseudoseizures, but acknowledged he had not reviewed Dr. Moe's report. Dr. Maa described pseudoseizures as psychogenic, resulting from a conversion disorder in which internalized trauma manifests. He testified that 30 percent of individuals with epilepsy have nonepileptic seizures in addition to epileptic seizures. He further explained that stress can provoke both nonepileptic and epileptic seizures; thus, just because a seizure is triggered by stress does not mean the seizure is nonepileptic. Dr. Maa opined that Claimant does not have nonepileptic/pseudoseizures, as she has a confirmed diagnosis of focal epilepsy. He testified that Dr. Orgel's opinion that Claimant's primary diagnosis of a conversion disorder with pseudoseizures is wrong because her epileptic seizures were captured on video and by EEG.

47. Dr. Maa testified that the information cited by Dr. Orgel in his DIME report regarding nocturnal frontal lobe epilepsy is true if a patient actually has a diagnosis of nocturnal frontal lobe epilepsy. He explained, however, that Claimant does not have a diagnosis of nocturnal frontal lobe epilepsy, and that such diagnosis is completely different from Claimant's actual diagnosis, and has a completely different presentation on EEG. Dr. Maa testified that Dr. Orgel's statement that "Claimant has a left temporal lobe epilepsy but that is not what caused her grand mal seizures" indicates a lack of understanding of epilepsy and the generalization of epileptic seizures. Dr. Maa also indicated that Dr. Orgel is wrong in his conclusion that Claimant's current condition is not as a result the July 2001 work injury. He explained that, although Claimant's first seizure had delayed onset, it occurred within the average 18-month timeframe for the development of posttraumatic epilepsy.

48. Dr. Maa further testified that one-third of epileptic patients become refractory over time and worsen when the seizures are not well-controlled. He opined that Claimant is not at MMI, as she is currently having a seizure a week and is at high risk of injury or death. Dr. Maa stated that Claimant's continuing need for treatment is related to her post-traumatic epilepsy. He opined that brain surgery will be Claimant's best chance at controlling her seizures, as the VNS did not provide the amount of seizure control he had hoped for. Dr. Maa testified that a properly chosen surgical candidate who undergoes brain surgery has a 50-80 percent chance of seizure freedom.

49. Dr. Maa testified that his understanding of the mechanism of injury was that Claimant was thrown from a horse, struck her head, passed out, and woke up in the hospital. Dr. Maa initially testified that Claimant's injury could not have caused posttraumatic epilepsy if the mechanism of injury did not involve hitting her head. He later clarified that, absent striking her head, whiplash-type motion in which Claimant's head whipped over and bounced back could cause a rapid acceleration/deceleration injury and brain contusion.

50. Dr. Moe testified at hearing as an expert in forensic psychiatry. Dr. Moe testified that mild traumatic brain injuries typically involve a physical force exerted against the

brain. He explained a traumatic brain injury results from "an impulsive force delivered to the brain of sufficient magnitude to cause acute mental status changes and then potentially persistent neurological problems." Dr. Moe testified that, in order to diagnose a mild traumatic brain injury, there must be both a plausible mechanism of injury consistent with a brain injury as well as acute changes in neurological functioning that occur shortly after the injury. Dr. Moe explained that, absent a direct impact to the skull, brain injuries can occur in whiplash situations, but would require such force in a conscious adult that it would result in severe neck injuries.

51. Dr. Moe further testified that his review of Claimant's medical records during the weeks and months after the injury indicated no account of Claimant striking her head or suffering any neck injury, aside from some initial stiffness. Dr. Moe also testified that those records revealed no evidence of an acute change in neurological functioning, as would be consistent with a brain injury, despite evidence that medical providers were paying attention to Claimant's mental status. Dr. Moe acknowledged that the Colorado Medical Treatment Guidelines do not require a blow to the head or loss of consciousness in defining a traumatic brain injury. Dr. Moe opined that Claimant suffers from epileptic and non-epileptic psychogenic seizures, but continued to opine no traumatic brain injury resulted from the July 12, 2001 work injury.

52. Claimant testified at hearing that, although the VNS has helped with decreasing the frequency and severity of her seizures, her seizures have not resolved. Claimant continues to take antiepileptic medications including Lamictal, Keppra and Onfi. She testified that, as a result of the work injury, she is struggling physically and financially, her memory has been affected, she is unable to drive, and is very light sensitive. Claimant stated she requires sunglasses and is unable to function in environments with bright or fluorescent lighting. Claimant stated she continues with pain in her right arm, neck and upper back at this time, and has chronic low back problems since the accident. Claimant testified she is not currently able to work or perform the essential job duties of the position she held with Employer.

Ultimate Findings

53. Claimant's testimony is found credible and persuasive.

54. The ALJ finds the opinions of Drs. Maa, Machanic, Hammerberg, Wagner, Hughes, Glatz, Parry, Quintero, Ogin, Bracht and Woodcock more credible and persuasive than the opinions of Drs. Orgel, Moe, Raschbacher, Koval, and Earnest.

55. Claimant suffers from posttraumatic epilepsy as a result of the July 12, 2001 work injury.

56. Claimant proved it is highly probable Dr. Orgel's DIME finding on MMI is incorrect and that she is not at MMI for her work-related condition. Additional evaluation and treatment is reasonably expected to improve Claimant's work-related condition. Claimant is entitled to ongoing reasonably necessary medical treatment related to the July 12, 2001 work injury.

57. Claimant is entitled to reimbursement for the costs of the VNS surgery, which was performed by an authorized provider and was reasonably necessary and related to the July 12, 2001 work injury.

58. As Claimant is not at MMI, she is entitled to TTD benefits beginning September 17, 2017 and ongoing, subject to offsets for unemployment insurance benefits.

59. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are also binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

Claimant argues Dr. Orgel's opinion on MMI is in error because she requires additional curative treatment for her temporal lobe epileptic seizures, which were caused by the July 12, 2001 work injury. While Respondent maintains it does not challenge Dr. Orgel's causation opinion, finding of MMI, or impairment rating,

Respondent argues Claimant never suffered a head injury, thus making her epilepsy and ongoing need for epilepsy treatment non-work-related.

Although Dr. Orgel noted he doubted the work-relatedness of Claimant's temporal lobe seizures, he nonetheless stated he accepted the temporal lobe seizures as Claimant's only work-related condition and provided an impairment rating for such condition. The totality of the credible and persuasive evidence supports Dr. Orgel's ultimate causation opinion that Claimant's temporal lobe epilepsy resulted from the July 12, 2001 work fall. Drs. Hughes, Glatz, Parry, Quintero, Bracht, Woodcock, Wagner, Machanic, Hammerberg and Maa, who are all neurologists, opined Claimant suffered from posttraumatic seizure disorder as a result of the July 12, 2001 work injury. The ALJ acknowledges that the medical records indicate different physicians had different understandings regarding whether Claimant struck her head and/or lost consciousness during the work injury. Drs. Hughes, Wagner, Machanic and Maa (initially) believed Claimant struck her head and/or loss consciousness, while Drs. Parry, Bracht, and Hammerberg did not reference any hitting of the head or loss of consciousness, and Drs. Glatz and Quintero specifically noted neither occurred. The ALJ further acknowledges that medical evaluations in the days following the incident do not document any reported head injury or loss of consciousness.

Nonetheless, Drs. Glatz, Quintero, Hammerberg and Maa credibly opined that a direct head injury with loss of consciousness is not required for a diagnosis of posttraumatic epilepsy. Drs. Glatz, Quintero and Maa credibly explained that being thrown over the head of a horse after coming to an abrupt stop and landing forcefully on one's back was not a minor incident and could result in head trauma that causes seizures. The ALJ is persuaded the mechanism of injury was sufficient to cause Claimant's condition. Although Claimant did not develop seizures until approximately one year after the work injury, Drs. Glatz, Parry, and Maa also credibly explained Claimant was within the average timeframe to develop posttraumatic seizures. Additionally, multiple physicians noted Claimant was beyond the typical age for developing idiopathic seizures, and there were no other known reasons for her development of seizures.

While Dr. Orgel's ultimate causation opinion regarding temporal lobe seizures is correct, the totality of the credible and persuasive evidence establishes that it is highly probable his determination of MMI is incorrect. Dr. Orgel opined that Claimant's primary diagnosis is conversion disorder with pseudoseizures, concluding that the majority of Claimant's presentation and impairment is related to pseudoseizures. He opined that Claimant's temporal lobe epilepsy had not generalized and was not the cause of her grand mal seizures, stating it "would be inconsistent with its occurrence at night, and her generalized seizures seem to be related to stress." Dr. Maa, a neurologist and epileptologist, credibly explained that Dr. Orgel's conclusions demonstrate a fundamental misunderstanding of Claimant's diagnosis and the generalization of seizures. In support of his conclusions, Dr. Orgel cited medical literature regarding nocturnal frontal lobe epilepsy, which Dr. Maa credibly explained is an entirely different diagnosis than Claimant's. Dr. Maa credibly explained that stress can provoke both

nonepileptic and epileptic seizures, further undermining Dr. Orgel's inference that Claimant's continuing seizures are nonepileptic because they are provoked by stress.

Dr. Maa further credibly opined Dr. Orgel's opinion that Claimant's primary diagnosis of a conversion disorder with pseudoseizures is incorrect, as Claimant's epileptic seizures were captured with objective testing. Dr. Maa credibly testified that pseudoseizures present with completely different electrical activity, and no pseudoseizures were observed on his continuous EEG monitoring of Claimant. Dr. Maa credibly explained that individuals who do not specialize in the treatment of epilepsy may misdiagnose patients or misinterpret certain signs. Additionally, Dr. Machanic credibly opined that any non-epileptic seizure activity would be trivial in light of the substantial evidence that Claimant suffers from posttraumatic epilepsy. Here, the opinions of Drs. Maa and Machanic go beyond a mere difference of opinion. Dr. Orgel's reliance on medical literature regarding a completely different diagnosis than Claimant's diagnosis, along with other credible and persuasive evidence, supports a conclusion that his finding of MMI is highly probably incorrect.

Dr. Maa credibly opined Claimant's condition is refractory, and she is at high risk for injury or death due to posttraumatic epilepsy, which was caused by the July 12, 2001 work injury. Dr. Maa credibly opined additional treatment, including brain surgery, is necessary and reasonably expected to improve Claimant's work-related condition. As further treatment is reasonably expected to improve Claimant's work-related condition, she is not at MMI.

Reimbursement for VNS Surgery

Section 8-42-101(1)(a), C.R.S., provides that respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The claimant bears the burden of establishing her entitlement to medical treatment by a preponderance of the evidence. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office, supra*. Whether the claimant sustained her burden of proof is a factual question for resolution by the ALJ. *See City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

Respondent argues Claimant is not entitled to reimbursement for the VNS surgery because the surgery was not reasonably necessary to treat any work-related condition. Respondent further argues that, even if the ALJ finds that the VNS surgery was reasonably necessary and related to cure and relieve the effects of the July 12, 2001 work accident, Respondent is not liable for the surgery because the treatment was unauthorized, relying on the Panel's holding in *Gosselova v. Vail Resorts*, W.C. No. 4-975-232-02 (ICAO December 24, 2018).

In *Gosselova*, the claimant independently sought and underwent treatment with a physical therapist and orthopedic surgeon who were not authorized to treat the claimant. The ALJ concluded that, regardless of whether the medical treatment was

reasonable and necessary, the respondent was not required to pay for unauthorized treatment. The Panel affirmed the ALJ's order, stating they were aware of no legal authority that requires respondents to pay for unauthorized medical treatment. The Panel stated,

> We cannot ignore the uncontroverted record evidence that the respondent did not give permission for the claimant to be treated by therapist Doyle or Dr. Gottlob, the claimant did not attempt to obtain prior authorization, nor did respondent know of the treatment until after the treatment had been rendered. Treatment sought the claimant apart from that performed by the selected physicians and their referrals is not the liability of the respondent.

Gosselova, supra.

While the Panel in *Gosselova* referred to the claimant's lack of attempt to obtain prior authorization, the crux of the Panel's analysis focused on whether the providers were authorized to provide treatment. *Gosselova* is distinguishable from the facts of the present case in that Respondent here does not dispute that Dr. Ojemann status as an authorized provider. Rather, Respondent argues that the failure to request prior authorization for the VNS surgery renders Respondent free from any liability to reimburse Claimant for the cost of the procedure.

The purpose of prior authorization under WCRP 16 is to facilitate a determination of the reasonableness of treatment in advance of the treatment by directing the physician to submit a request for prior authorization. Thus, even though WCRP 16 purports to address "authorization" for treatment, the purpose of the rule is to establish the "reasonableness and necessity" of treatment provided by an authorized treating physician. *Arszman v. Target Corporation*, W.C. No. 4-798-406 (December 15, 2011); *Bray v. Hayden School Dist. RE-1*, W.C. No. 4-418-310 (Apr. 11, 2000); *Repp v. Prowers Medical Center*, W.C. No. 4-530-649 (September 12, 2005), aff'd, Case No. 05CA2085 (Colo. App. May 11, 2006) (not selected for official publication). The Panel has previously held that an authorized physician's failure to request prior authorization of a procedure does not preclude a claimant from proving that the disputed treatment is reasonably necessary and related and from obtaining an order requiring the respondents to pay for treatment. *Arszman, supra; Repp, supra; Bray, supra.*

Accordingly, the failure to request prior authorization in this case does not, by itself, absolve Respondent from any liability to pay for the procedure. As such, the ALJ next considers whether Claimant met her burden to prove that the VNS surgery was reasonably necessary and related to the July 12, 2001 work injury. As previously discussed, the ALJ finds and concludes Claimant suffered from posttraumatic epilepsy as a result of the July 12, 2001 work injury. Dr. Maa referred Claimant for VNS surgery to treat the effects of her posttraumatic epilepsy. Dr. Hammerberg credibly opined that VNS implantation is an appropriate option for patients suffering from epileptic seizures that are poorly controlled with medication, and can reduce seizure intensity and frequency. Although Dr. Maa testified the VNS implantation was not as effective as hoped, Claimant credibly testified the VNS has provided some assistance with

decreasing the frequency of her seizures. Despite the failure to request prior authorization of the VNS surgery, as the procedure was performed by an authorized provider, and was reasonably, necessary and causally-related to the July 12, 2001 work injury, Respondents are liable to reimburse Claimant for the cost of the procedure.

TTD Benefits

To prove entitlement to TTD benefits, the claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found, Claimant overcame Dr. Orgel's DIME opinion that she is at MMI. Claimant's posttraumatic epilepsy resulting from the July 12, 2001 work injury resulted in an inability to resume her prior work. Claimant was determined to be medically disqualified from her job based upon her medical condition of posttraumatic epilepsy. Accordingly, Claimant is entitled to TTD benefits beginning from September 19, 2017, and ongoing.

Overpayment

The Act defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." Section 8-40-201(15.5), C.R.S. (2018). Section 8-42-107.5, C.R.S., as in effect at the time of the work injury on July 12, 2001, provided that a claimant whose impairment rating is twenty-five percent or less may not receive greater than $60,000 of combined temporary and permanent partial disability benefits, and a claimant whose impairment rating is greater than twenty-five percent

may not receive greater than $120,000 of combined temporary and permanent partial disability benefits.

Respondents argue Claimant was overpaid $41,022.23 in combined temporary and permanent disability benefits based on the statutory cap of $60,000. Claimant argues that the determination of an overpayment cannot be determined or recouped until Claimant is at MMI, as the applicable cap is determined based upon the final physical impairment rating and a determination is made as to whether Claimant is permanently and totally disabled. The ALJ agrees that, based on the finding that Dr. Orgel's DIME opinion on MMI has been overcome, the issue of a potential overpayment cannot be considered at this time, as a final impairment rating will need to be determined once Claimant is again placed at MMI. The issue of overpayment is thus reserved for future determination.

Offsets

Section 8-42-103(1)(f), C.R.S. provides that compensation for temporary disability shall be reduced, but not below zero, by the amount of unemployment insurance benefits received. As found, Claimant received unemployment insurance benefits in the amount of $520.00 per week from October 29, 2017 through March 17, 2018, entitling Respondent to offset Claimant's unemployment benefits against her TTD benefits.

ORDER

It is therefore ordered that:

1. Claimant suffers from posttraumatic epilepsy as a result of the July 12, 2001 work injury. Claimant overcame Dr. Orgel's DIME opinion on MMI by clear and convincing evidence. Claimant is not at MMI and is entitled to ongoing treatment that is reasonably necessary and casually related to the July 12, 2001 work injury.

2. Respondent shall reimburse Claimant for the cost of the April 5, 2018 VNS surgery.

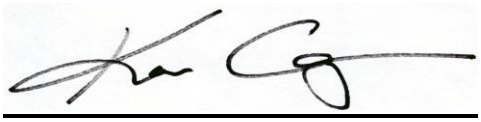
3. Respondents shall pay Claimant TTD benefits from September 17, 2017, and ongoing, subject to offsets for unemployment insurance benefits.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 9, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-044-615-003

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

No substantive changes have been made in the following corrected decision. It is issued to correct typographical errors.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 30, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 4/30/19, Courtroom 1, beginning at 1:30 PM, and ending at 4:45 PM). The official Spanish/English Interpreter was Jovana Gray.

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection. Respondents' Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the Respondents' case-in-chief, Claimant's counsel moved for a judgment in the nature of a directed verdict, which was granted as to Respondents' attempt to overcome the Division Independent Medical Examination (DIME) opinion of Miguel Castrejon, M.D., regarding impairment and denied as to Respondents' attempt to overcome the DIME regarding the Claimant not having reached maximum medical improvement (MMI). Having heard the arguments of both counsel, the ALJ referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on May 7, 2019. On May 10, 2019, Respondents indicated that they had no objection to the proposed decision. Having considered the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether Respondents

have overcome the DIME opinion of Dr. Castrejon that Claimant is not at MMI for her February 20, 2017 injury until she undergoes a repeat right shoulder MRI (magnetic resonance imaging) and surgical consultation. If Respondents overcome the DIME opinion with respect to MMI, whether the Claimant is entitled to the permanent impairment (PPD) rating assigned by the DIME for her head and neck conditions.

The Respondents' burden of proof is by "clear and convincing evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulated Facts and Findings Thereon

1. At the conclusion of the hearing, the parties stipulated, and the ALJ finds, that Claimant's psychological impairment rating is 2% of the whole person.

2. The parties further stipulated, and the ALJ finds, that Respondents paid Claimant PPD benefits consistent with the 2% psychological impairment rating.

Preliminary Findings

3. This admitted claim stems from an incident that occurred at work on February 20, 2017. On that date, a number of strainers fell hitting the Claimant on the head and neck. She injured her head and neck and was diagnosed with a closed head injury and acute cervical sprain (Claimant's Exhibit 5, bates 39).

4. Ultimately, the Respondents filed a Final Admission of Liability (FAL), admitting for an average weekly wage (AWW) of $461.31; temporary total disability (TTD) [TTD rate was $307.54 per week] and temporary partial disability benefits through January 24, 2018; 2% impairment rating for psychological impairment; and admitting liability for post-MMI medical maintenance benefits. The Claimant filed a timely objection and Notice and Proposal for Selection of a DIME. Miguel Castrejon, M.D. was selected as the DIME Examiner.

Concentra Medical Centers

5. Claimant's authorized treating provider (ATP) was Concentra Medical Center (Concentra). When the Claimant first presented to Concentra on February 20, 2017, she described feeling dizzy and having a headache (Claimant's Exhibit 5, bates 35). She returned to Concentra the following day and described headaches with neck pain. Glenn Petersen, PA-C (certified physician's assistant) assessed the Claimant's condition as a closed head injury and acute cervical sprain (Claimant's Exhibit 5, bates 39).

6. The Claimant was initially referred to physical therapy (PT) within Concentra for treatment of her neck (Claimant's Exhibit 5, bates 39, 46). PT continued, but due to ongoing complaints, the Claimant was referred to Frederic Zimmerman, D.O., a physiatrist within the Concentra system. In each of the visits with the Claimant, Dr. Zimmerman identified "increased muscle tone" as well as trigger points. He performed trigger point injections on two separate occasions and documented complete relief of the Claimant's symptoms. He felt this was a diagnostic response (Claimant's Exhibit 5, bates 54 and 61). In addition to the trigger point injections, Dr. Zimmerman also prescribed amitriptyline and referred the Claimant to WalterTorres, Ph.D. a licensed clinical psychologist, for a psychological consultation.

7. The Claimant was also referred to Mark Failinger, M.D., an orthopedic surgeon, who first evaluated the Claimant on May 25, 2017. Dr. Failinger was concerned that her right shoulder might be involved and referred the Claimant to an MRI of the right shoulder. That MRI found only tendinosis of the rotator cuff of the right shoulder. Dr. Failinger recommended a subacromial cortisone injection which he performed on June 8, 2017 (Claimant's Exhibit 5, bates 81). When the Claimant returned to Dr. Failinger on June 29, 2017, she reported no benefit from the injection. She wanted to discuss surgery on the shoulder and Dr. Failinger recommended another injection which he performed at that appointment. Again, Claimant reported no benefit from the injection and Dr. Failinger concluded that the Claimant was not a surgical candidate and that he had no other treatments to offer (Claimant's Exhibit 5, bates 88).

8. On July 13, 2017, the Claimant was seen by Albert Hattem, M.D., who recommended a cervical MRI which was done on August 4, 2017. That MRI was interpreted as normal with the exception of a syrinx which no physician has considered as part of the claim (Claimant's Exhibit 5, bates 99).

9. On the January 24, 2018, John Burris, M.D., placed the Claimant at MMI without physical impairment. He recommended ongoing care with Gary Gutterman, M.D., a psychiatrist, and Eric Hammerberg, M.D., for medications. (Respondents' Exhibit E, bates 15). On February 19, 2018, Dr. Gutterman provided a psychiatric impairment rating of 2% whole person (Claimant's Exhibit 9, bates 209), which Respondents admitted.

Eric Hammerberg, M.D.

10. Dr. Hammerberg is a neurologist to whom the Claimant was referred by Concentra. He first examined the Claimant on May 18, 2017. His impression after taking the Claimant's history and performing a physical examination was that the Claimant was suffering from posttraumatic headaches with vertigo and right hemisensory loss. He recommended and requested authorization for an MRI scan of the brain (Claimant's Exhibit 7, bates 184). At Claimant's next visit to Dr. Hammerberg, he reviewed the MRI of the brain which he interpreted as normal. Nonetheless, he concluded that the Claimant was suffering from posttraumatic headaches and

prescribed gabapentin (Claimant's Exhibit 7, bates 185). The Claimant continued to describe headaches at subsequent appointments and Dr. Hammerberg continued to prescribe gabapentin to treat her symptoms (Claimant's Exhibit 7, bates 186-187).

George Vladimir Schakaraschwilli, M.D.

11. At Respondents' request, Dr. Schakaraschwilli saw the Claimant for an independent medical examination (IME) on July 6, 2017. Dr. Schakaraschwilli noted complaints of ongoing headaches and found, on physical examination, that Claimant's cervical range of motion was limited and painful on the right side of the neck (Respondents' Exhibit F, bates 3 and 7). Dr. Schakaraschwilli also found some lost range of motion in the right shoulder but, based on his review of records from other medical providers, concluded that Claimant's shoulder range of motion (ROM) was most likely self-limited. He concluded that ongoing right shoulder treatment was not indicated (Respondents' Exhibit F, bates 7). He also concluded that given Claimant's ongoing complaints of neck pain that an MRI of the cervical spine should be obtained to rule out a disc herniation as the cause of the symptoms in Claimant's right upper quadrant (Respondents Exhibit F, bates 7). The ALJ finds Dr. Shakaraschwilli's assessment highly credible and persuasive as it pertains the the right shoulder (RUE).

12. Dr. Schakaraschwilli testified at hearing. He stated that the history the Claimant provided of her mechanism of injury, specifically strainers falling on her head and neck, was inconsistent with a right shoulder injury. He noted that all of the medical records available for review at the time of the IME indicated the same mechanism of injury. He agreed that the history the Claimant provided to Dr. Castrejon of raising her right arm above her head to fend off the falling strainers might be sufficient to injure a shoulder. Nevertheless, because the only physician to whom Claimant relayed that history was the DIME, after recounting the injury to several other physicians, Dr. Shakaraschwilli concluded that it was not likely that she used her right shoulder to deflect the falling strainers. The ALJ finds Dr. Schakaraschwilli's opinions as to the lack of evidence of a right shoulder injury credible and persuasive. Specifically, the ALJ finds that Dr. Schakaraschwilli established that it is highly probable, unmistakable and free from serious or substantial doubt that Dr. Castrejon was in error assigning a tentative rating for the RUE.

13. As to Claimant's cervical spine, Dr. Schakaraschwilli did not disagree with other physicians' conclusions that the February 20, 2017 incident caused a cervical strain. He agreed that the likely response to objects falling on one's head would be to turn the head to avoid such objects and that such a motion is not only sufficient to cause a cervical sprain but possibly a herniated disc in the cervical spine. He was of the opinion that to the extent Claimant suffered such a cervical sprain, it would have been mild and he would have expected it to resolve shortly after the incident. This ALJ finds that Dr. Schakaraschwilli's report and testimony primarily focused on this issue of MMI and ongoing treatment for the right shoulder. He did not persuasively argue that Claimant did not merit permanent impairment for her neck and headaches. His opinion that Claimant could not merit a neck rating without findings on the cervical MRI is not

supported by Table 53 of the *American Medical Association Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev. (hereinafter "AMA Guides").

14. The testimony of Dr. Shakaraschwilli with regard to Claimant's ongoing headaches focused on the normal MRI of the brain. Dr. Shakaraschwilli concluded that there was no injury to the brain that would explain the Claimant's ongoing headaches. Nonetheless, he conceded that other physical conditions such as tight muscles in the neck could cause cervicogenic headaches. As with his testimony regarding Claimant's neck, Dr. Schakaraschwilli's opinions do not address with specificity Dr. Castrejon's opinion regarding impairment for chronic headaches. Dr. Shakaraschwilli's attempt to minimize the head injury as just a contusion is not persuasive because it fails to address the reports of a neurologist, Dr. Hammerberg, who examined and treated Claimant for posttraumatic headaches for more than six months.

15. Although Dr. Shakaraschwilli presented as straight-forward, articulate and convincing in his assessments, hos opinions amount to a mere difference of opinion with DIME Dr. Castrejon, with the exception of Dr. Shakaraschwilli's opinion concerning the RUE (which makes it highly probable that DIME Dr Castrejon was in error in this regard), do not rise to the level of the other opinions that DIME Dr. Casterejon was in clear error.

John Burris, M.D.

16. Dr. Burris became involved in the herein claim as a "delayed recovery specialist" within the Concentra system. He first saw Claimant nearly eight months after her injury (Respondents' Exhibit E, bates 20). On physical examination, Dr. Burris noted essentially a normal physical examination. He did not document loss of range of motion, trigger points or spasms which had been regularly documented by other physicians. Dr. Burris attributed the Claimant's ongoing pain complaints to "secondary gain" (Respondents' Exhibit E, bates 22). He concluded that Claimant was likely at an endpoint for care pending reports from Dr. Gutterman and Dr. Hammerberg. Dr. Burris then saw Claimant twice more waiting for reports from Dr. Gutterman and Dr. Hammerberg and then he released Claimant at MMI without impairment. He recommended maintenance care in the form of ongoing visits with Dr. Gutterman and Dr. Hammerberg (Respondents' Exhibit E, bates 15).

17. Dr. Burris testified at hearing. His testimony consisted of little more than a regurgitation of the findings and conclusions outlined in his medical reports. Dr. Burris did not outline specific errors that he found in Dr. Castrejon's report other than Dr. Burris' conclusion that he found no objective explanation for Claimant's ongoing complaints. This ALJ finds that Dr. Burris' opinions amounted to a mere difference of opinion with DIME Dr. Castrejon and do not rise to the level of clear and convincing evidence.

Miguel Castrejon, M.D., DIME Examiner

18. Dr. Castrejon evaluated the Claimant as a DIME physician on June 25, 2018. Dr. Castrejon took note of the Claimant's description of her injury to Concentra on February 20, 2017. He then documents that he questioned Claimant further as to how the injury occurred and that she told him that when the strainers fell she lifted her right arm above her head and attempted to "swat" the containers away. Dr. Castrejon questioned the Claimant regarding details of specific appointments with medical providers for her claim. He noted that she did not recall much specific information regarding these appointments. Yet, when he asked the Claimant how she responded to the injection performed by Dr. Failinger, she told Dr. Castrejon that it provided long term relief even though, according to Dr. Failinger, she did not report any benefit from the injection. On physical examination, Dr. Castrejon identified objective findings such as hypertonicity and trigger points. He also documented, using a goniometer, lost range of motion in the right shoulder and neck. Claimant reported that her headaches, neck pain and depression had stabilized with use of medication and that her primary concern was her right shoulder. Dr. Castrejon, relying on Claimant's history that the subacromial injection had helped with pain, concluded that Claimant was not at MMI for her right shoulder and implicitly found that Claimant was at MMI for her other conditions. Dr. Castrejon recommended a repeat right shoulder MRI and a second opinion with an orthopedic surgeon. Dr. Castrejon provided a provisional impairment rating for Claimant's cervical spine, headaches, right shoulder, and depression. For the cervical spine he assigned a 10% rating, 4% based on Table 53, page 80 of the *AMA Guides to the Evaluation of Permanent Impairment*, 3rd Ed. revised (AMA Guides), and 6% for lost range of motion. He assigned a 5% whole person rating for Claimant's chronic posttraumatic headaches, a 6% scheduled rating for the right shoulder, and 2% for psychiatric impairment due to required use of psychotropic medication. The ALJ finds that in general Dr. Castrejon's opinions are credible, well-reasoned and supported by the medical records with the exception that his opinion regarding the Claimant's right shoulder. The ALJ finds that it is highly probable and free from any serious or substantial doubt that Dr. Castrejon's erred by relying on Claimant's history regarding the injection, given that the injection took place over a year before the DIME and that multiple providers documented no lasting benefit from the injection (Claimant's Exhibit 5, bates 88, 90, and 93).

19. The ALJ finds that Dr. Castrejon's opinions with regard to permanent impairment of the cervical spine and chronic headaches are credible and supported by medical records and the AMA Guides.

Ultimate Findings

20. At the conclusion of the Respondents' case-in-chief, their evidence could not get any better and they had failed to overcome DIME Dr. Castrejon's opinions by clear and convincing evidence, with the exception of his opinion concerning the recommended right shoulder MRI and surgical consultation, thus, delaying MMI, in which case the DIME opinion concerning the right shoulder had been overcome.

21. The opinions of all other physicians in evidence are not sufficiently

persuasive to extend beyond differences of opinion with DIME Dr. Castrejon and, therefore, do not make it highly probable, unmistakable and free from serious and substantial doubt that Dr. Castrejon's PPD ratings, with the exception of the right shoulder delay of MMI were in error. In the later regard. It is highly probable, unmistakable and free from serious and substantial doubt that Dr. Castrejon's opinion that the Claimant was **not** at MMI was clearly in error. This being the case, the ALJ finds that the Claimant reached MMI for all admitted injuries on February 19, 2018. Therefore, Dr. Castrejon's tentative ratings became actual ratings, as intended by the dictates of the AMA Guides.

22. For the reasons stated herein above, the ALJ finds that the Claimant reached MMI for all conditions related to her February 20, 2017 work injury on February 19, 2018 (physiological and psychological). The ALJ also finds that the Claimant has not established a permanent impairment rating for her right shoulder symptoms because the aggregate medical evidence does not support permanent impairment of the right shoulder.. The ALJ finds, however, that the Claimant has established (in addition to the admitted permanent psychological impairment), a permanent impairment rating for her spine (10% whole person) and headaches (5% whole person), plus 2% whole person, psychiatric, for a grand total of 17% whole person permanent medical impairment, according to the AMA Guides Combined values Chart of which the ALJ takes administrative notice.

23. Between conflicting medical opinions with regard to Claimant's MMI status, the ALJ makes a rational choice, based on substantial evidence, to accept the opinion of Dr. Schakaraschwilli that Claimant is at MMI and that the repeat MRI and surgical consultation for the RUE are not reasonably necessary or causally related to the February 20, 2017 work injury.

24. The Respondents have proven that it is highly likely, unmistakable, and free from serious and substantial doubt, that Claimant is at MMI for all conditions related to her February 20, 2017 work injury. Respondents have also proven by clear and convincing evidence that Claimant's ongoing right shoulder complaints do not merit a permanent impairment rating.

25. The ALJ finds, based on substantial evidence, that Claimant's permanent medical impairment rating should be 10% whole person for the cervical spine, 5% whole person for the chronic posttraumatic headaches, and 2% for psychiatric impairment for a total of 17% whole person, according to the "Combined Values Chart of the AMA Guides of which the ALJ hereby takes administrative notice. The ALJ makes a rational choice to accept the opinion of Dr. Castrejon and to reject the opinions of Dr. Shakaraschwilli and Dr. Burris with respect to Claimant's impairment ratings for the spine and chronic headaches because their opinions amount to a difference of opinion that does not rise to the level of clear and convincing evidence.. Dr. Castrejon's opinion is supported by medical records which consistently document ongoing pain complaints in the neck and head with objective findings and diagnostic responses to trigger point injections. Furthermore, his opinions have presumptive effect unless overcome by clear

and convincing evidence.

26. Based on § 8-42-107 (8) (e), C.R.S., the Claimant's age of 39 on the date of MMI, February 19, 2018 and her PPD of 17% whole person, the formula provides for an aggregate PPD award of $29, 696.06 [Age factor of 1.42 X 400 weeks X TTD rate of $307.54 per week X 17% whole person = $29, 696.06].

27. The FAL admitted for all causally related and reasonably necessary post-MMI medical maintenance benefits. In doing so, the respondents were contemplating post-MMI psyciatricc care to implement their 2% psychiatric impairment admission. In light of the herein decision, the ALJ finds the the award of post-MMI (*Grover*) medical maintenance benefits should be a general award covering the spine, headaches and causally related conditions subject of this decision.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Judgment in the Nature of a Directed Verdict

a. Colo. Rules of Civil Procedure, Rule 41(b) (1), provides that, after a plaintiff in a civil action *tried without a jury* has completed the presentation of his evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief. In determining whether to grant a motion to dismiss or in the nature of a directed verdict, the court is not required to view the evidence in the light most favorable to the plaintiff, as argued by a claimant. *Rowe v. Bowers*, 160 Colo. 379, 417 P.2d 503 (Colo. 1966)*; Blea v. Deluxe/Current, Inc.*, W.C. No. 3-940-062 [Indus. Claim Appeals Office (ICAO), June 18, 1997] (applying these principles to workers' compensation proceedings). Neither is the court required to "indulge in every reasonable inference that can be legitimately drawn from the evidence" in favor of the Claimant. Rather, the test is whether judgment for the respondents is justified on the claimant's evidence. *Amer. National Bank v. First National Bank*, 28 Colo. App. 486, 476 P.2d 304 (Colo. App. 1970); *Bruce v. Moffat County Youth Care Center*, W. C. No. 4-311-203 (ICAO, March 23, 1998). The question of whether the Claimant carried this burden was one of fact for resolution by the ALJ. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, at the conclusion of the Respondents' case-in-chief, their evidence could not have gotten any better and they had failed to overcome DIME Dr. Castrejon's opinions by clear and convincing evidence, with the exception of his opinion concerning the recommended right shoulder MRI and surgical consultation, this, delaying MMI, in which case the DIME opinion concerning the right shoulder had been overcome.

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of all other physicians in evidence were not sufficiently persuasive to extend beyond differences of opinion with DIME Dr. Castrejon and, therefore, did not make it highly probable, unmistakable and free from serious and substantial doubt that Dr. Castrejon's PPD ratings, with the exception of the right shoulder delay of MMI were in error. In the later regard , it is highly probable, unmistakable and free from serious and substantial doubt that Dr. Castrejon's opinion that the Claimant was **not** at MMI was clearly in error.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a

particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions with regard to Claimant's MMI status, the ALJ made a rational choice, based on substantial evidence, to accept the opinion of Dr. Schakaraschwilli that Claimant is at MMI and that the repeat MRI and surgical consultation are not reasonably necessary or related to the February 20, 2017 work injury. The ALJ made a rational choice to accept the opinion of Dr. Castrejon and to reject the opinions of Dr. Shakaraschwilli and Dr. Burris with respect to Claimant's impairment ratings for the neck and chronic headaches. Dr. Castrejon's opinion is better supported by medical records which consistently document ongoing pain complaints in the neck and head with objective findings and diagnostic responses to trigger point injections.

Overcoming the DIME

d. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office***,** 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of

the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, Respondents have proven that it is highly likely, unmistakable, and free from serious and substantial doubt, that Claimant reached MMI on February 19, 2018 for all conditions related to her February 20, 2017 work injury. Respondents have also proven by clear and convincing evidence that Claimant's ongoing right shoulder complaints do not merit a permanent impairment rating. As also found,, the Claimant's permanent medical impairment rating should be 10% whole person for the cervical spine, 5% whole person for the chronic posttraumatic headaches, and 2% for psychiatric impairment for a total of 17% whole person, according to the AMA Combined Values Chart.. The ALJ makes a rational choice to accept the opinion of Dr. Castrejon and to reject the opinions of Dr. Shakaraschwilli and Dr. Burris with respect to Claimant's impairment ratings for the neck/spine and chronic headaches. Dr. Castrejon's opinion is adequately supported by medical records which consistently document ongoing pain complaints in the neck and head with objective findings and diagnostic responses to trigger point injections. Furthermore, as found, DIME Dr. Castrejon's opinion in this regard has presumptive effect unless overcome by clear and convincing evidence.

Post-MMI Medical Maintenance Benefits

e. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). As found, the Claimant is entitled to post-MMI medical maintenance benefits for all causally reated and reasonably necessary consequences of the February 20, 2017 admitted injury, including treatment for the spine/neck and headaches.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Pursuant to the Final Admission of Liability, Respondents shall pay the costs of all causally related and reasonably necessary post maximum medical impairment medical maintenance benefits, including treatment for the spine and headaches, subject to the Division of Workers Compensation Medical Fee Schedule.

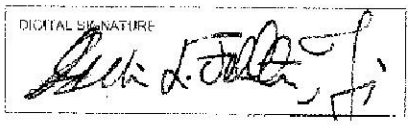
B. Respondents having overcome the opinion of Miguel Castrejon, M.D., in part, that Claimant was not at maximum medical improvement, the Claimant reached maximum medical improvement on February 19, 2018, at which time the Claimant was 39-years old (d.o.b. August 15, 1978).

C. Based on the Claimant's permanent partial disability of 17% whole person, Respondents shall pay the Claimant aggregate permanent partial disability benefits of $29, 696.06 06 [Age factor of 1.42 X 400 weeks X TTD rate of $307.54 per week X 17% whole person = $29, 696.06].

D. Respondents are entitled to a credit of $3,493.65, paid pursuant to the admission of 2% whole person psychiatric permanent disability and an overpayment credit of $878.69, for a total credit of $4,372. 34, thus Respondents shall pay the Claimant net permanent partial disability benefits of $25, 323.72, payable retroactively and forthwith.

E. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

DATED this 13th day of May 2019.



_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Did Claimant prove tha an L4-5 fusion surgery recommended by Dr. David Wong is reasonably necessary to cure and relieve the effects of his industrial injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a tractor-trailer truck driver for approximately six months. Before that, he worked in a relatively physically demanding position as a welder.

2. Claimant suffered serious injuries in a head-on motor vehicle accident on August 29, 2016. He was driving his tractor-trailer eastbound on Highway 160 near Fort Garland when a car traveling in the opposite direction crossed the centerline and struck him head-on. The driver of the car was killed. Claimant was jostled around in the cab badly, despite wearing his seatbelt. After the accident, Claimant tried to exit the cab. Unfortunately, he did not realize the stairs on the side of his truck had been torn off, and he fell backward to the ground, landing on his back and buttocks. He developed severe back pain immediately after falling.

3. Claimant has a long history of low back pain starting with a work-related injury in the mid-2000s. His symptoms were relieved with physical therapy and epidural steroid injections, and he was released with no restrictions or impairment. Claimant experienced episodic back pain after that primarily associated with strenuous activity.

4. Claimant also suffers from gout, and the symptoms appear to have overlapped the low back issues to some degree.

5. The record contains a handful of treatment notes relating to Claimant's low back before the August 2016 MVA. On July 7, 2014, Claimant saw his primary care provider, PA-C Brian Jackson, for pain in his back and feet. He was "currently taking no medications. Just having significant pain." Examination showed muscle spasm in the lumbar area and positive straight leg raise. His feet were tender with reddening and increased warmth, consistent with gout. Mr. Jackson prescribed allopurinol and colchicine for gout, but nothing specifically for the back pain.

6. Claimant returned to Mr. Jackson on December 1, 2014 for "back pain and exacerbation of gout." The physical exam was largely benign with only tenderness in the low back and foot. Mr. Jackson recommended Claimant continue taking the allopurinol and added an NSAID (piroxicam). He did not state whether the piroxicam was prescribed for the back pain or gout, although it would generally address symptoms of both conditions.

7. On April 27, 2015, Claimant saw Mr. Jackson again for "chronic back pain and gouty arthritis." Mr. Jackson prescribed a Medrol Dosepak "for [his] back and gout," and ordered a lumbar MRI to evaluate a possible herniated disk.

8. The MRI was done on May 19, 2015. It showed bilateral L4 pars defects with approximately 8mm anterolisthesis of L4 on L5; moderate to advanced L4-5 disc degeneration, minimal L4-5 degenerative endplate changes, and moderate bilateral foraminal stenosis at L4-5. There was a disc bulge at L4-5 but no herniation.

9. After reviewing the MRI, Mr. Jackson referred Claimant to "Dr. Wong" for an orthopedic evaluation.[1]

10. Claimant saw PA-C Boyd Larson at Parkview Neurosurgery on June 18, 2015. Claimant reported his low back pain had "worsened over the last year." The pain was primarily in his back, but radiated into his right buttock in the back of his right thigh, stopping at the knee. He also reported "infrequent and less severe" pain radiating into the left buttock and back of the left thigh. He rated his pain as 8/10. The only significant clinical finding was "mild" tenderness to palpation at the midline of his low back. The neurological examination was entirely normal, with normal sensation, strength, and deep tendon reflexes bilaterally, negative straight leg raise bilaterally, and a normal gait. Mr. Boyd ordered flexion-extension x-rays and an EMG. He gave Claimant a back brace and advised him to call or come back after the EMG was complete.

11. The flexion-extension x-rays showed bilateral chronic spondylolysis, anterolisthesis of L4 on L5 that increased from 11 mm to 13 mm with motion, and severe L4-5 disc space narrowing.

12. Claimant did not follow up with Mr. Boyd again. He saw Mr. Jackson on February 3, 2016, who noted "history of lumbar back disc problems. No problems right now." There are no further treatment records addressing Claimant's low back until after the August 2016 accident.

13. Claimant credibly testified that immediately before the August 29, 2016 accident he had no back pain, no numbness, tingling, or pain down his legs, and performed all the duties of his job without limitation or difficulty. He credibly testified his pain complaints and symptoms changed significantly after the accident. The ALJ finds Claimant's testimony in this regard consistent with and supported by the medical records.

14. After the MVA, Employer referred Claimant to the SLV Regional Medical Center Occupational Medicine Program (ROMP). He initially saw Dr. Susan Geiger but saw Dr. Kevin Rice at the third visit, who has been the primary ATP since.

15. On November 21, 2016, Dr. Rice ordered flexion-extension x-rays because of persistent low back pain. The x-rays showed retrolisthesis of L5 relative to L4, most

[1] The ALJ presumes the referral was to Dr. David Wong or Dr. Doug Wong, both of whom are spine surgeons.

likely due to bilateral pars defects. Claimant returned to Dr. Rice on November 22, 2016 to review the x-rays, which Dr. Rice noted were radiographically similar to the 2015 MRI.

16. Dr. Rice referred Claimant for an updated MRI, which was completed on November 25, 2016. The radiologist compared the images to the May 18, 2015 MRI, and noted no interval change. Dr. Rice recommended Claimant continue physical therapy.

17. On December 16, 2016 Claimant told Dr. Rice physical therapy was not helping his back pain. Dr. Rice recommended Claimant stop therapy and referred him to Dr. Bernard Guiot for a surgical evaluation.

18. Claimant saw Dr. Guiot on December 21, 2016. He told Dr. Guiot he had been having back pain "24/7" since the accident, with pain levels ranging from 4/10 to 8/10. Claimant also reported numbness from his low back down through the buttocks and hamstrings bilaterally and to his knee on the right side. Claimant explained therapy had not helped. Claimant also told Dr. Guiot about his pre-injury history of "intermittent" low back pain. He explained the symptoms "had typically been self-limiting. Indeed, the patient would have experienced back pain only after heavy activity. His symptoms would have lasted no more than 24 hours and were managed effectively with a hot bath and NSAIDs."

19. Dr. Guiot recommended an L4-5 fusion, but wanted new flexion-extension x-rays and a repeat CT scan to verify the extent of the pars defects before making the final decision.

20. Claimant underwent a CT scan on February 1, 2017. It revealed grade 1 anterolisthesis of L4 on L5 with bilateral L4 spondylolysis. The radiologist noted the findings were not significantly changed compared to the prior CT scan from August 29, 2016. The flexion-extension x-rays were completed on February 23, 2017, and showed grade 1 anterolisthesis of L4 on L5, and bilateral L4 spondylolysis.

21. Claimant returned to Dr. Guiot on March 16, 2017 to discuss the imaging studies. Dr. Guiot concluded Claimant's pain was emanating from the L4 pars defects resulting in grade 1-2 spondylolisthesis with high-grade spinal stenosis. He formally requested authorization for an L4-5 fusion.

22. Dr. Brian Mathwich reviewed the request on March 29, 2017 and opined,

> Obviously, the pars defect and spondylolisthesis are pre-existing conditions, and the patient also had pre-existing back pain; however, in the records, there is no specific correlation of the patient's baseline back pain prior to the work-related injury and after.
>
> [I recommend] that the authorized treating provider do a thorough evaluation of the old records to determine exactly what the patient's baseline back pain was prior to surgery, compare that to his current injury, and determine whether there has been a significant change. While the underlying structural changes are pre-existing and non-work-related, the

> patient may have suffered an exacerbation or permanent aggravation due to the accident. If that is the case, surgery would be warranted under the workers' compensation [system]. However, [if] the patient's current pain is at or near his baseline pain prior to the injury, then there would be no significant increase of his underlying pre-existing injury, and no further treatment will be warranted.

23. On March 30, 2017, Claimant returned to Dr. Rice who opined, "there has without question been a change in the severity, character, and frequency of [Claimant's] back pain since the accident." And on July 26, 2017, in response to correspondence from Respondents' counsel, he reiterated his opinion the need for surgery was due to the accident.

24. The surgical request was re-staffed with Dr. James Ogsbury, a spine surgeon. Dr. Ogsbury noted Claimant's symptoms persisted despite 65 visits of physical therapy and acupuncture. He thought the surgery was "obviously" and "clearly" necessary, but had questions about causation despite Dr. Rice's assessment. Dr. Ogsbury agreed with Dr. Mathwich it was important to determine Claimant's preinjury pain pattern to determine if the accident aggravated or accelerated his pre-existing condition. He thought an evaluation by spine surgeon was unnecessary and recommended an IME with a physiatrist.

25. Claimant saw Dr. Allison Fall for an IME at Respondents' request on December 13, 2017. Dr. Fall opined Claimant's reports of "intermittent" and "self-limiting" low back pain were "not consistent with the medical records indicating numerous follow-ups for the back pain including MRI and MRI follow-up and then referral to a surgeon." Dr. Fall opined Claimant's presentation at the examination was exaggerated and "self-limited." She saw no indication of any acute change in Claimant's spine after the MVA and opined he suffered at most a myofascial strain. She opined there was no objective evidence of any worsening of his lumbar spine condition and Claimant's subjective presentation was unreliable. Ultimately, Dr. Fall concluded the requested surgery was not causally related to the accident.

26. The parties attended a hearing before the undersigned ALJ on July 19, 2018 regarding Dr. Guiot's propoed surgery. Dr. Rice testified consistent with the opinions he previously expressed regarding causation. Dr. Rice reiterated that claimant's back problems and associated level of function worsened after the accident, leading him to conclude the accident substantially aggravated his pre-existing condition and caused the need for surgery. Dr. Fall testified consistent her IME report. She reiterated there was no objective evidence to indicate Claimant aggravated or accelerated his pre-existing condition. She opined Claimant sustained a mild myofascial injury but returned to baseline, and the requested surgery was not causally related to the August 2016 accident.

27. During the hearing, it was discovered Dr. Guiot had retired. Respondents moved to dismiss the application for hearing on the grounds the issue was moot. The ALJ deferred ruling on the motion and asked the parties to address the issue in their post-hearing position statements.

28. Before the briefs were filed, Dr. Rice referred Claimant to Dr. David Wong for a surgical evaluation. Dr. Wong ordered flexion and extension x-rays which showed unstable spondylolisthesis at L4-L5, shifting from 10mm to 17mm with motion. Dr. Wong recommended a decompression and intertransverse fusion and pedicle screw instrumentation at L4-5.

29. Insurer staffed Dr. Wong's request with Dr. Ogsbury on September 12, 2018. Relying on Dr. Fall's IME report. Dr. Ogsbury opined the surgery was not work-related.

30. On November 15, 2018, the ALJ convened a status conference to discuss the procedural posture of the case. The ALJ and the parties agreed it was most appropriate to use the evidence and testimony already presented at the July 19, 2018 hearing, but schedule a second hearing so the parties could supplement the record with any further evidence deemed necessary to resolve the issue of medical benefits, which now changed to involve the surgery recommended by Dr. Wong.

31. Dr. Michael Rauzzino performed a records review on behalf of Respondents on October 29, 2018. Dr. Rauzzino noted that Claimant's low back was symptomatic within a year of the work injury, and none of the radiographic imaging after the accident demonstrated an acute structural change to Claimant's lumbar spine. Rauzzino agreed with Dr. Fall that at most, Claimant strained his lumbar spine after the accident, but absent a new structural injury to his lumbar spine, his ongoing symptomatology did not relate to the accident. Dr. Rauzzino stated:

> As of June 2015, [Claimant] was reporting the same type of pain he is reporting now after the motor vehicle accident. It is the same type of pain in terms of quality, intensity, and location with no acute structural changes in the spine caused by the accident. The measurement of the spondylolisthesis that Dr. Wong feels has moved from grade 1 to grade 2 is really not significantly different in my opinion. [Claimant] had at least grade 1 spondylolisthesis in 2015 and while there may be some slight progression of this in 2018, this would be expected with the natural history of his underlying disease.

32. Dr. Wong testified via deposition on March 7, 2019. He opined Claimant substantially aggravated his pre-existing condition and the need for surgery is related to the admitted work injury. Dr. Wong reviewed pre-accident medical records that confirmed his impression Claimant's condition changed significantly after the accident. Dr. Wong noted the biggest changes were the extent of Claimant's radiculopathy and the amount of movement shown on the flexion and extension x-rays. Dr. Wong opined it was very unusual for this degree of instability to develop naturally, and the most medically probable cause is the work accident.

33. Dr. Rauzzino testified via deposition on March 11, 2019. Dr. Rauzzino reiterated his opinion that Claimant's need for surgery is not related to the accident. He based his conclusion on the following factors: (1) Claimant has a known multiyear history

of spondylolisthesis at L4-L5 that was symptomatic; (2) Claimant had numerous episodes where he had significant back pain before the accident; (3) Claimant had radicular pain into his legs bilaterally leading up to the accident very similar to the pain he is currently reporting to his medical providers.

34. Dr. Rauzzino testified it is common for spondylolisthesis to change or worsen. Dr. Rauzzino stated the choice to prescribe Claimant a back brace in June 2015 reinforces his opinion Claimant had symptomatic instability in his lumbar spine before the work accident. Dr. Rauzzino indicated Claimant's pain complaints after the accident were similar to those that he experienced and reported in June 2015. At the outset of the claim, Claimant reported primarily back pain that radiated into his upper thighs, it was not until almost two years later that his pain radiated down his leg. Dr. Rauzzino testified this is similar to what would be seen in the natural progression of Claimant's lumbar spine condition absent any aggravation or acceleration. Dr. Rauzzino testified that had the accident caused an aggravation or acceleration of Claimant's pre-existing condition he would have expected to see an immediate increase in his radiculopathy.

35. The ALJ finds the causation opinions of Dr. Rice and Dr. Wong credible and more persuasive than the contrary opinions offered by Dr. Fall, Dr. Rauzzino, and Dr. Ogsbury. The ALJ is particularly persuaded by the analysis and discussion in Dr. Wong's deposition testimony.

36. Claimant's testimony regarding his pre-accident physical condition and level of function is credible and consistent with the other persuasive evidence of record.

37. Claimant proved by a preponderance of the evidence the surgery recommended by Dr. Wong is reasonably necessary and causally related to the August 29, 2016 industrial accident.

CONCLUSIONS OF LAW

The respondents must provide medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, for either claimant or respondents. Section 8-43-201.

The existence of a pre-existing condition does not preclude a claim for medical benefits if the claimant proves an industrial injury aggravated, accelerated, or combined

with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved the surgery recommended by Dr. Wong is reasonably necessary to cure and relieve the effects of his industrial injury. The persuasive evidence shows Claimant's low back was substantially worse after the accident. Before the accident, he had episodic flares of back pain, whereas his symptoms have been constant since the MVA. His clinical presentation has changed significantly as well. In August 2015, he had primarily low back pain, with some referred pain to the thigh but not the foot. He had no loss of sensation, normal strength, and negative straight leg raise bilaterally. He had 2mm of movement at L4-5 on flexion-extension x-rays, which falls below the established surgical threshold. His symptoms at the time were not severe enough to pursue injections or surgery, and he opted to a back brace. He did physically demanding work without limitation, and in February 2016 specifically told his PCP he was having "no problems" with his back. He now has progressive neurological deficits including weakness and worsening sensory loss. He has 7mm of documented movement on flexion-extension x-rays, well beyond that needed to justify a fusion. His symptoms are much worse than before and prevent him from working or performing other avocational activities he did before previously. The ALJ is persuaded by Dr. Wong's analysis and conclusion that the substantial change in Claimant's condition and the current need for surgery is a natural and proximate result of the MVA rather than the natural progression of his pre-existing condition.

ORDER

It is therefore ordered that:

1. Insurer shall pay for the L4-5 fusion surgery recommended by Dr. Wong.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 13, 2019

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: , Claimant, VS. , Employer, Self Insured Respondent	▲ COURT USE ONLY ▲ **CASE NUMBER:** **WC 5-018-070-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on October 18, 2018, before Margot W. Jones, Administrative Law Judge. Claimant was present and was represented by_____, Esq. _____, Esq. represented Respondent. This matter was digitally recorded in Denver, Colorado in Courtroom 4 convening at 8:30 a.m. The parties' exhibits 1-3 and A-P were admitted into evidence.

In this order, K is referred to as "Claimant" and Respondent-Employer _____, self-insured, is referred to as "Respondent" or "Employer."

Also in this order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes, "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, "the Act" refers to the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

1. Whether Respondent proved by clear and convincing evidence that the determination of the Division independent medical examiner (DIME) is most probably incorrect.

2. Whether Claimant proved by a preponderance of the evidence that the medical treatment recommended by Dr. Khoi D. Pham is reasonably necessary and related medical treatment.

FINDINGS OF FACT

1. Claimant is a 36 year old female who worked for Employer from February 2015 until September 2016 in the Pharmacy Department. On December 10, 2015, Claimant suffered an admitted injury to her back, among other body parts. Claimant reported a work injury from catching her right foot on a mat and tripping. Claimant testified credibly, as follows:

> So the mats in the pharmacy were I – I had heard from the manager were pulled over from the meat department, so they had these rubber studs that stuck up. Occasionally, it would trip me so I would have to catch my footing. This time it really caught my foot. I turned the corner; it caught my foot; I couldn't go any further. I fell forward, I hit my right knee, I – my back jerked forward and flew it – my left hand flew into a medication shelf which then fell over into the next shelf and then fell over into the next shelf and almost broke the front pharmacy glass. Hundreds of medications went everywhere. I just remember the loud bang, medications went everywhere. Immediately, I was scared. Tr. 28:5-16.

2. Claimant was referred for authorized medical care. On December 29, 2015, Claimant's treating physician, Paul Ogden, MD, noted that Claimant had difficulty attending her medical appointments because of her family's schedule. By March 30, 2016, Dr. Ogden continued to report that Claimant has difficulty attending medical appointments because of childcare issues.

3. On April 19, 2016, Claimant treated with Dr. Robert Kawasaki, M.D. who assessed facet joint dysfunction combined with sacral iliac joint dysfunction. The doctor referred Claimant to Jason Gridley, DC, for active release techniques. Ultimately, Claimant did not receive chiropractic care because her case was closed for non-compliance.

4. On June 21, 2016, after reviewing Claimant's MRI films, Dr. Kawasaki diagnosed facet arthropathy at L2-3, L3-4 and L4-5 and sacroiliac joint dysfunction of both sides

related to her work injury. He also noted Claimant's challenges with scheduling and that Claimant's case was closed for noncompliance.

5. On June 22, 2016, Dr. Ogden reported Claimant's case was closed administratively due to non-compliance. On closure, he did not express his opinion on maximum medical improvement (MMI).

6. In the year 2000, Claimant was involved in a motor vehicle accident which resulted in temporary paralysis, Brown Sequard syndrome, and right-side weakness and hyperesthesia with "significant foot drop." Claimant testified that she has no recollection from the 2000 injury, but that the car she was in did somersaults into the desert. She testified to a cervical fusion and inpatient care for 3 months.

7. Medical records reflect that during the next decade and a half, Claimant sporadically sought medical attention for back pain. In August 2004, Claimant received chiropractic care rating her average back pain as 9/10, and her bilateral leg pain as 5/10.

8. In 2007 Claimant filed for disability based on severe back pain and a right foot drop condition. On a pain questionnaire, Claimant reported back pain when standing or sitting for long periods. Claimant reported awakening several times at night with neck and back pain. After filing for disability, on November 12, 2007, Claimant was evaluated by Dr. Claudia Elsner for back, right leg, right foot, and right-hand pain. Dr. Elsner diagnosed lower back pain arising from Claimant's right foot drop and unphysiologic gait. Dr. Elsner recommended physical therapy and a neurologic evaluation.

9. In 2014, Claimant presented to Kaiser Permanente with "significant back pain" rated 8/10. Claimant inquired at Kaiser Permanente about a surgery to repair her foot drop.

10. On June 6, 2015, Claimant's opioid prescription was refilled by Dr. Ada Gillis. The doctor recommended a lumbar MRI and acupuncture for the lumbar condition.

11. On June 9, 2015, a neurosurgery referral was made for Claimant at Kaiser, and she was diagnosed with low back pain with bilateral sciatica.

12. On August 5, 2015, Claimant saw neurosurgeon Dr. Christine Munson. Claimant reported constant pain from her injury in the 2000s. Dr. Munson diagnosed Claimant with Brown Sequard, radicular pain and back pain.

13. Dr. Robert Kawasaki, M.D. examined Claimant for her work-related injury on April 19, 2016. He noted a prior car accident for Claimant but also that she had "regained" all left-sided strength and function with only a degree of right-sided weakness remaining. He diagnosed her with low back pain and joint dysfunction as a result of this claim, which is consistent with Dr. Pham and Claimant's testimony.

14. After Claimant's December 10, 2015, Workers' Compensation case was administratively closed for non-compliance, on March 13, 2017, Claimant treated with Danilo Mazzella, M.D. at Kaiser. The doctor reported, as follows:

> Review of her chart and discussion with patient indicates that she has had new lower back pain and symptoms since work related injury in December, 2015. These symptoms are different from previously existing symptoms related to an mva with cervical spine trauma in 2000. (Exhibit 2, p.13)

15. Respondent filed a Final Admission of Liability on or about August 18, 2017, to which Claimant objected and requested a DIME.

16. The DIME was performed by Khoi D. Pham, M.D. on December 18, 2017. After reciting her medical history, Dr. Pham related Claimant had ongoing pain from the back into the buttock area and over her tailbone. Claimant stated to him that the pain was "stabbing and burning," was made worse with activity and that he felt she had been given inadequate treatment. He mentioned in his report that further valid treatments had already been scheduled by Claimant. Importantly, he delineated between a "pre-existing cord injury" for Claimant and this claim, in which different injuries occurred. Dr. Pham testified that he had Claimant's medical records prior to the work injury and was aware of the 2000 injury. He opined that despite the records of Claimant reports of back pain after the 2000 injury, Dr. Pham continued to believe that Claimant required medical treatment and is not at MMI. Dr. Pham opined that Claimant needed to return to Dr. Kawasaki.

17. Respondent applied for a hearing to challenge the results of the DIME. Dr. Cebrian's deposition was taken in preparation for the hearing. Dr. Cebrian diagnosed Claimant with a work related lumbar strain that resolved in 2016. Dr. Cebrian testified that Claimant's pain levels were consistently high at the time of his examination that she presented with ongoing complaints indicating the need for care. Dr. Cebrian opined that Claimant is at MMI for the work injury, did not have a permanent impairment nor does she require additional medical treatment. Dr. Cebrian points to what he characterizes as Dr. Pham's error in his failure to provide an impairment rating even though he opines Claimant is not at MMI.

18. Dr. Cebrian's opinion that Claimant is at MMI amounts to a difference of opinion, since Dr. Pham was fully apprised of Claimant's medical history and, even in the face of that history, Dr. Pham opined that Claimant required additional medical treatment to cure and relieve her of the effects of the work injury.

19. Dr. Pham appeared at the hearing, was present for Claimant's testimony and testified in support of his DIME report and Claimant's need for medical treatment overall. He reiterated that his opinions on the issues of MMI and medical treatment were unchanged.

20. Claimant credibly testified at hearing regarding the mechanism of injury. The ALJ finds that Claimant's work related injury involved a fall with great force. She also credibly testified that her ongoing pain, additional symptoms and need for additional treatment were as the result of this admitted claim and no other causative factor.

21. Respondent has failed to present clear and convincing evidence to support the contention that Dr. Pham's determination of MMI was most probably incorrect. Dr. Cebrian offered contrary evidence which was found to be less credible and persuasive than the opinions of Dr. Pham. Dr. Pham At best, Dr. Cebrian's opinions amount to a difference of opinion regarding the hearing issues.

22. Claimant has proven by a preponderance of the evidence that the care as recommended by Dr. Pham is necessary to cure or relieve the effects of her admitted work injury.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; City of Boulder v. Streeb, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Dime procedure

4. Respondent contends that it overcame the opinion of Dr. Pham with regard to MMI by clear and convincing evidence. By contrast, Claimant argues that Respondents have not met their burden of proof.

5. The determination of MMI and the assessment of permanent impairment both require the DIME physician to diagnose the claimant's condition or conditions, and determine their causal relationship to the industrial injury. *See Cordova v. Industrial Claim Appeals Office*, P.3d (Colo. App. No. 01CA0852, February 28, 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The burden of proof rests on the party challenging the DIME physician's determinations to overcome them by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office, supra; Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1998). Clear and convincing evidence is evidence demonstrating that it is "highly probable" that the DIME physician's rating is incorrect. *American Compensation Insurance Co. v. McBride,* 107 P.3d 973, 980 (Colo. App. 2004). Such evidence must be unmistakable and free from serious or substantial doubt. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1150 (Colo. App. 2002). The questions of whether the DIME physician has correctly applied the rating protocols, and ultimately whether the rating itself has been overcome by clear and convincing evidence, are questions of fact for the ALJ. *McLane Western Inc. v. Industrial Claim Appeals Office,* 996 P.2d 263 (Colo. App. 1999*); Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 2002 (Colo. App. 2000).

6. Further, even if the ALJ finds the DIME physician deviated from the rating protocols of the AMA Guides, the party challenging the rating must still demonstrate that the deviation casts substantial doubt on the overall validity of the rating. *Schrameck v. USA Waste Management*, W.C. No. 4-407-221 (ICAO May 18, 2001), *Rivale v. Beta Metals, Inc*., W.C. No. 4-2655-360 (April 16, 1998), *aff'd. Rivale v. Industrial Claim Appeals* Office, (Colo. App. No. 98CA0858, January 28, 1999) (not selected for publication). A mere difference of opinion between physicians fails to constitute error. *See, Gonzales v. Browning Ferris Indust. of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

7. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Qual-Med v. Industrial Claim Appeals Office*, *supra.*

8. In this case, Dr. Cebrian maintains that Claimant's current symptoms are not related to the work injury. However, Dr. Pham expresses the contrary conclusion. Dr. Pham and Cebrian have a difference of opinion on the question of Claimant's

condition and her MMI status. Dr. Cebrian's opinion does not amount to clear and convincing evidence that Dr. Pham's MMI determination is incorrect.

Medical benefits

9. Claimant contends she sustain her burden of proof to establish that she is entitled to reasonably necessary and related medical benefits. Claimant points in support of her claim to Dr. Pham's determination that she is still in need of medical treatment to cure and relieve her of the effects of the 2015 work injury.

10. If there is a compensable injury, the employer and its insurance carrier must provide all medical benefits, which are reasonably necessary to cure and relieve the work-related injury. Section 8-42-101 C.R.S.; *Owens v. Indus. Claim Appeals Office of State of Colo.,* 49 P.3d 1187, 1188 (Colo. Ct. App. 2002). The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-42-101, C.R.S.; See *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Where liability for a particular medical benefit is contested, the claimant must prove that it is reasonably necessary to treat and is causally related to the industrial injury. *Id*.; See *Grover v. Industrial Commission,* 759 P2d 705 (Colo. 1988). The record must distinctly reflect that the medical treatment was necessary and designed to cure or relieve the effects of the work injury. *Pub. Serv. Co. of Colorado v. Indus. Claim Appeals Office of State of Colo.,* 979 P.2d 584, 585 (Colo. Ct. App. 1999).

11. Dr. Pham credibly opined that Claimant's condition requires treatment to cure and relieve her of the effects of the work injury. Dr. Pham recommends that Claimant be permitted to return to Dr. Kawasaki for medical treatment. Dr. Cebrian's opinions to the contrary were considered and dismissed since those opinions were premised on Dr. Cebrian's MMI determination.

12. Since it is concluded that Claimant requires additional medical treatment, Respondent shall be liable for reasonably necessary and related medical treatment to cure and relieve Claimant of the effects of the 2015 work injury.

ORDER

1. Respondent failed to establish by clear and convincing evidence that the DIME opinion is incorrect.

2. Claimant established by a preponderance of the evidence that he is entitled to medical benefits to cure and relieve him of the effects of the work injury. Respondent is liable for the medical treatment recommended by Dr. Pham.

DATED: May 14, 2019

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at ttp://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-015-735-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 1, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/1/19, Courtroom 1, beginning at 8:30 AM, and ending at 9:30 AM).

Stipulated Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on May 8, 2019. Respondents were given 2 working days within which to file objections. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern average weekly wage (AWW) and permanent partial disability (PPD) benefits, specifically, whether Claimant's AWW and the temporary total disability (TTD) weekly rate at the time of maximum medical improvement (MMI) should be used as part of the formula provided in § 8-42-107 (8) (e) C.R.S. , to determine Claimant's PPD benefits? An additional issue is whether the Claimant is entitled to bodily disfigurement benefits?

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulation of Fact and Findings Thereon

1. The parties stipulated, and the ALJ finds, that Claimant's AWW on the date of injury was $806.63. The parties further stipulated, and the ALJ finds, that Claimant's AWW on the date of MMI was $1,167.88.

Preliminary Findings

2. The Claimant's date of birth is August 21, 1982, and she was was 35 years old on the date of MMI, June 7, 2018, thus, establishing an age factor of 1.5, as part of the formula provided in § 8-42-107 (8) (e), C.R.S.

3. This is an admitted claim with a date of injury of January 26, 2016. Respondents filed a Final Admission of Liability (FAL), dated July 31, 2018, admitting for PPD benefits of $452.10 per week, based on 4% whole person PPD and an admitted AWW OF $678.15, calculated at $10,850.40 (4% x 400 x $452.10 x 1.5). Claimant filed a timely objection to the FAL, filed an Application for Hearing on the issues of PPD and AWW, and the hearing referenced hereinabove occurred.

4. The Claimant at all relevant times was employed as a mechanic for Employer. She developed a kin disease on her feet due to a work-place exposure. Claimant was not placed on temporary or permanent restrictions following her date of injury.

5. According to the Claimant's testimony at hearing, her injury consists of severe rashes on both feet that itch and are painful. Her skin will peel off her feet. Her job duties require her to be on her feet 90% of the day. At the time of MMI, the Claimant's pay was dependent on her productivity. She had to sit down and remove her shoes daily to address her feet condition, including application of cream prescribed by her doctor, thus, significantly affecting her productivity and pay. According to the Claimant her current wages as of the time of the hearing are about the same as they were at the MMI date. The testimony of the Claimant is credible and persuasive.

Ultimate Findings

6. Based on the totality of the evidence, the ALJ finds that the fairest method to calculate Claimant's PPD benefits is to utilize her AWW at the time of MMI.

The parties stipulated, and the ALJ found an AWW of $1,167.88 at the time of MMI. In the exercise of discretion, the ALJ finds that the fairest method used to compute Claimant's PPD benefits, is by using the AWW and consequent weekly TTD rate as part of the formula for calculating whole person PPD. The corresponding TTD rate is 2/3 of $1,167.88, or $778.58. As a result, Claimant's PPD award should be $18,685.92 [4% x 400 x $778.58 x 1.5 (Age Factor)). Respondents previously admitted and paid $10,850.40 in PPD benefits pursuant to the FAL, dated July 31, 2018. Respondents are entitled to credit this amount against the PPD awarded by this Order.

7. The ALJ finds the Claimant's testimony concerning her work pay and limitations after the admitted injury straight-forward, credible and dispositive.

8. The ALJ observed reddish discolorations and evidence of skin falling off the bottoms of the Claimant's feet, plainly visible to public view.

9. The Claimant has sustained his burden of proof, by a preponderance of the evidence on all issues.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v.*

Cline, 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony concerning her work pay and limitations after the admitted injury straight-forward, credible, undisputed and dispositive. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Average Weekly Wage

b. . To determine an employee's AWW, the ALJ may choose from two different methods set forth in § 8–42–102. *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010). The first method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." *Id. (citing* § 8–42–102(2); The default provision lists six different formulas for conducting this calculation, such as multiplying the monthly wage or salary at the time of the accident by twelve and then dividing by fifty-two. *Id.* (citing § 8–42–102(2)(a)–(f)) The second method for calculating an employee's AWW, referred to as the "discretionary exception," applies when the default provision "will not fairly compute the [employee's AWW]." *Id.* (citing § 8–42–102(3). In such a circumstance, the ALJ has discretion to "compute the [AWW] of said employee in such other manner and by such other method as will, in the opinion of the director based upon the facts presented, fairly determine such employee's [AWW]." *Id.* The overall purpose of the statutory scheme is to calculate "a fair approximation of a claimant's wage loss and diminished earning capacity." *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). As such, § 8-42-102(3), C.R.S., grants the ALJ substantial discretion to calculate the AWW if any of the statutorily prescribed methods will not "fairly compute" the AWW. See *Pizza Hut v. Indus. Claims Appeal Office*, 18 P.3d 867 (Colo.App. 2001) (ALJ acted within the scope of his discretion in determining that the higher wage earned at the time of MMI more fairly compensates claimant for his future loss of earnings). As found, the Claimant's AWW of $1,167.88 (with a corresponding TTD rate of $778.59) at the time of MMI more fairly compensates the Claimant for her future loss of earnings arising out her work-related injury, as part of the formula.

Permanent Partial Disability

c. The admitted PPD of 4% whole person, the MMI date of June 7, 2018, the Claimant's date of birth of August 21, 1982, the fact that she was 35 years old on the date of MMI, which establishes a formula age factor of 1.5, is undisputed. Consequently, ursuant to § 8-42-107 (8) (d) and (e), C.R.S., medical impairment benefits are determined by multiplying the medical rating by the age factor, by 400 weeks and by TTD rate. As found, Claimant is entitled to medical impairment benefits

in the aggregate amount of $18,685.92 (4% x 400 x $778.58 x 1.5). Respondents previously admitted and paid $10,850.40 in medical impairment benefits pursuant to the FAL, dated July 31, 2018. Respondents are entitled to credit this amount against the medical impairment benefits awarded by this decision. After the credit, Respondents are liable for the net amount of $7, 835.52 due in PPD benefits.

Bodily Disfigurement

d. Section 8-42-108 (1), C.R.S., provides for a disfigurement award up to $4,000, plus an annual escalator based on the State Average Weekly Wage (AWW) if the injury is to an area in public view and is permanent. Bodily disfigurement is assessed according to appearance not loss of function. *Arkin v. Indus. Comm'n. of Colorado,* 145 Colo. 463, 358 P.2d 879 (1961). Compensation beyond $4,000, plus the AWW escalator, is only appropriate if the disfigurement affects the face, is comprised of extensive body scars or burns, or manifests itself as stumps due to loss or partial loss of limbs. § 8-42-108 (2). Because facial deformities "are presumed to impact on an individual's social and vocational functioning." the statutory maximum award is appropriate. *See Gonzales v. Advanced Component Systems*, 949 P.2d 569 (Colo. 1997). As found, in the present case, the Claimant's disfigurement affects the bottom of her feet, specifically, as reddish discolorations and evidence of skin falling off the bottoms of the Claimant's feet, plainly visible to public view, but is serious, unpleasant looking and plainly visible to public view. It is not among the listed schedule disfigurements in § 8-42-108 (2), with an $8,000 maximum award. It is within the purview of a maximum $4,000, plus the State AWW escalator, award. Therefore, an award of $2,000.00 is appropriate.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to an increased PPD award and a bodily disfigurement award.

ORDER

IT IS, THEREFORE, ORDERED THAT:

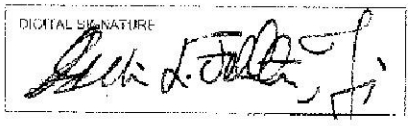
A. Respondents shall pay the Claimant medical impairment benefits for 4% whole person permanent medical impairment in the aggregate amount of $18,685.92 (4% x 400 x $778.58 x 1.5), from June 7, 2018, the date of maximum medical improvement.

B. Respondents previously admitted and paid $10,850.40 in medical impairment benefits pursuant to the Final Admission of Liability, dated July 31, 2018. Therefore, they are entitled to credit in this amount against the medical impairment benefits awarded by this decision. After the credit, Respondents shall pay the Claimant permanent partial disability benefits in the net amount of $7, 835.52, which is payable retroactively and forthwith.

C. For and account of the Claimant's bodily disfigurement, in addition to other benefits, Respondents shall pay the Claimant the amount of $2,000.00, payable in one lump sum.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent per annum (8%) on all amounts of indemnity benefits due and not paid when due.

DATED this 15th day of May 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-086-383-001

ISSUES

- Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury in the April 27, 2018 motor vehicle accident,
- Whether Claimant is entitled to additional medical benefits,
- Whether Claimant is entitled to temporary indemnity benefits,
- Whether Claimant was at fault for his separation from employment,
- Penalties for late reporting under C.R.S. § 8-43-102(1)(a), and
- Penalties for failure to wear a safety device under C.R.S. § 8-42-112(1)(a)&(b).

STIPULATIONS

1. The parties stipulated that Claimant's average weekly wage was $488.99.
2. The parties stipulated that, if this matter is found compensable, Denver Health, Center for Occupational Safety and Health, would continue as the authorized provider.
3. Claimant stipulated that he was not wearing a seatbelt at the time of the motor vehicle accident.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 40-year-old former seasonal employee of Respondent's Parks and Recreation Department. The Department employed Claimant at the Crestmore Park location performing general labor and parks maintenance for the summer 2018 season.

2. On April 27, 2018, Claimant was driving Respondent's Ford F350 work truck when another vehicle traveling at approximately 15 miles per hour rear-ended the truck. Claimant was in the course and scope of his employment at the time of his accident. As stipulated, Claimant was not wearing a seatbelt at the time of the accident. Respondent's vehicle sustained minor damage in the accident and the at-fault vehicle sustained moderate damage.

3. Claimant testified that the rear-ending vehicle drove under the work truck,

almost causing the truck to flip over, struck the front tires of the work truck pulling it down and preventing it from flipping over, and then drove out from underneath the truck. Claimant's description of the mechanism of accident defies the laws of physics. It is also inconsistent with the police report, medical reports, and photographs of the accident scene.

4. Claimant testified that during the accident, he struck his head on the roof of the truck and that his body struck the steering wheel. Claimant testified to a brief loss of consciousness and that he experienced shock like symptoms, internal swelling, and shortness of breath. Claimant testified that he did not speak with Brian N_____ at the scene of the accident or immediately thereafter.

5. Claimant did not report any injury to the responding police officers; neither did Claimant report any injury to his supervisor at the accident scene. Later, Claimant returned to Respondent's maintenance facility at Crestmore Park, and then went home for the remainder of the day.

6. Claimant's supervisor, Brian N_____, testified that Claimant called him to inform him of the accident. Mr. N_____ arrived shortly thereafter and inquired whether Claimant was injured. Claimant denied any injury. After the police investigation, Mr. N_____ drove the work truck and Claimant drove Mr. N_____'s truck back to the shop. When they met at the shop, Mr. N_____ again asked whether Claimant was injured, and Claimant again denied any injury. Mr. N_____ allowed Claimant to go home for the remainder of the day. In the days following the accident, Mr. N_____ continued to ask Claimant whether he needed medical treatment, and Claimant continued to deny any need for treatment.

7. Mr. N_____ testified credibly that Claimant performed medium to heavy manual labor at Crestmore Park. This included mowing, weeding, painting, cleaning and hauling trash. Mr. N_____ credibly testified that Claimant was able to complete all assigned job duties in the summer of 2018 without issue, without pain complaints, and without any sign of injury.

8. Claimant resigned from his seasonal position with Respondent on August 15, 2018 via a text message to Brian N_____. Twelve days later, Claimant texted Mr. N_____ that he sustained an on the job injury. Later, Claimant called Respondent's OUCH Line to report his injury.

9. Claimant testified he sustained injuries to his heart, spine, neck, stomach, kidneys, and liver. He also sustained a head injury with headaches and shock like symptoms. Claimant testified that shortly after the accident, he had diffuse muscle bruising and swelling. Claimant testified he experienced 10 out of 10 pain shortly after the accident and ongoing. Claimant's testimony regarding the scope of his injuries and the types of injuries sustained is inconsistent with the medical records and the mechanism of the accident. The ALJ finds it highly unlikely that Claimant experienced such extreme pain given that he continued to work full duty, and did not report any injury for over four months. The ALJ finds Claimant's testimony is not credible.

10. Claimant first sought medical treatment for the alleged April 27, 2018 accident on August 20, 2018, when he reported to the emergency room at Lutheran Medical Center. There, Claimant reported experiencing back pain, neck pain, headache, and intermittent tingling in his bilateral arms after the accident. However, Claimant denied having the symptoms when the medical provider examined him. Claimant provided no persuasive explanation for why he went to the emergency room if he was not then experiencing symptoms.

11. After Claimant reported the injury to Respondent, Respondent referred Claimant to authorized treating physician, Dr. Kuehn at Denver Health – COSH. Dr. Kuehn initially evaluated Claimant on August 22, 2018. Claimant reported he was in a rear end motor vehicle accident, that he was a restrained driver, and that he sustained multiple muscle strains and contusions in the accident. Claimant stated he felt something move in his back at the time of the accident, and that he felt numbness and pain over the next few days. Claimant reported intermittent paresthesias in the fourth and fifth digits of both hands and in the great toes bilaterally. He also reported headaches, seeing blue streaks, nausea, neck pain, mid back pain, low back pain and pain at the top of his head. Dr. Kuehn noted that she could not reproduce lumbar or cervical pain on physical examination. With respect to causation, Dr. Kuehn stated, "Of note, the patient has diffuse complaints of pain throughout his spine. However, I cannot reproduce that pain when I palpate the spine or the paraspinous musculature. At this point, the relationship of his diffuse pain to his remote motor vehicle accident is unclear. Given the delay in evaluation, assessing causality is going to be very difficult."

12. Claimant returned to Denver Health on September 12, 2018. He reported that his condition was worsening and that he was spending all of his time in bed. Again addressing causation, Dr. Kuehn noted that, "the etiology of this patient's symptoms is unclear at this time. His mechanism of injury over 4 months ago would not seem likely to generate this progressively severe and diffuse symptomology." Dr. Kuehn did recommend physical therapy three times a week to address Claimant's pain complaints.

13. On October 5, 2018 Claimant returned to COSH continuing to complain of diffuse pain. Dr. Kuehn added to her causation assessment following this evaluation stating:

> As I stated in my initial note, the causality of this patient's symptoms is difficult to determine. His injury was in April of this year. However he did not seek care for this reported injury until 8/20/18 at Lutheran Hospital and then subsequently with our clinic. The fact that he waited to come in for his reported injury makes assessing the temporal relationship between his pain and the injury very difficult. Additionally, the delay in seeking care for his reported injury makes assessment of biological plausibility very difficult. At this point, the patient's exam is not consistent with discogenic disease as there are not radicular symptoms. His complaints of paresthesias do not follow a dermatome. The patient's complaints of pain are consistent throughout his visits but the etiology of his pain remains obscure.

14. On October 19, 2018, Claimant returned to Dr. Kuehn. At this evaluation, he reported episodes of incontinence. Dr. Kuehn noted a report of incontinence and that protocol mandated an MRI be performed. MRIs of the thoracic spine and lumbar spine were completed on October 27, 2018. The lumbar spine MRI revealed no acute pathology. The thoracic spine MRI found a reduction in height at T8, which Dr. Kuehn opined was likely not related to the MVA. The radiology results did not indicate that Claimant sustained any injury to either his lumbar or thoracic spine in the April 27, 2018 accident.

15. Dr. Kuehn's final evaluation took place on October 29, 2018. He noted that Claimant reported spasms from the back of his head into his back and that Claimant was concerned about abdominal swelling. Dr. Kuehn noted that Claimant previously reported taking multiple muscle relaxants, was instructed to bring in his medications, and that Claimant had failed to bring his medications to the evaluation. She also noted Claimant was unable to provide a urinary sample or request.

16. Dr. Kuehn opined that no injury resulted from the accident. Dr. Kuehn's medical reports and causation analysis are based on the objective evidence and are credible. Dr. Kuehn accurately noted Claimant's delay in reporting symptoms, inconsistencies in Claimant's reported symptoms and the mechanism of injury, the lack of findings in radiology, and symptoms out of proportion to objective findings, in reaching her conclusions.

17. At Respondent's request, Dr. J. Tashof Bernton saw Claimant on February 19, 2019 for an independent medical examination. Dr. Bernton also performed a Battery for Mental Health II assessment. Dr. Bernton reviewed Claimant's medical records, performed an examination, and concluded that Claimant was not injured in the MVA.

18. Dr. Bernton testified live at hearing. Dr. Bernton testified that he was unable to diagnose any injury associated with the April 27, 2018 accident. Dr. Bernton noted it was unlikely Claimant was injured as he was able to engage in a job requiring heavy fliting for four months without reporting an injury, that there was no objective evidence of injury -only Claimant's subjective complaints, and that Claimant's symptoms were out of proportion to the objective findings. Dr. Bernton persuasively testified that any treatment Claimant obtained was based on his subjective symptom reporting and not due to any actual injury. Dr. Bernton explained that Dr. Kuehn's referrals and restrictions were reasonable based on Claimant's reported symptoms, but were not necessary because Claimant sustained no injury requiring treatment. The ALJ finds Dr. Bernton's testimony credible, persuasive and consistent with the opinions of the authorized treating physician and medical records.

19. Dr. Bernton testified persuasively regarding Claimant's mental health assessment. Claimant has possible somatoform symptoms or malingering, with extreme results in the Battery for Mental Health II evaluation. Claimant had somatic complaints in the 92nd percentile, pain complaints in the 99th percentile, and functional complaints in the 99th percentile. As stated in Dr. Bernton's report:

> This profile is uncommon with extremely high levels of somatic complaints, pain complaints and functional complaints coupled with low levels of self-disclosure, defensiveness, hostility and borderline and chronic maladjustment characteristics. The combination of these scales indicate that this is an individual who is extremely likely to have a strong somatoform contribution to pain complaints, and pain complaints should not be taken at face value.

20. The ALJ finds the opinions of Dr. Kuehn and Dr. Bernton persuasive with respect to causation. Both physicians considered the temporal relationship between the accident and Claimant's report of injury, as well as the lack of objective findings on examination, in determining that Claimant did not sustain an injury in the April 27, 2018 motor vehicle accident.

21. The ALJ further finds Claimant's testimony is not credible and does not support a finding that Claimant sustained any injury on April 27, 2018. Claimant testified to a highly improbable mechanism of injury inconsistent with natural laws, the police report, photographs, and witness statements. Claimant's testimony regarding his symptoms and pain complaints are internally inconsistent, inconsistent with the medical records, and are exaggerated beyond plausibility.

22. Based on the totality of the evidence, the ALJ finds Claimant did not establish by a preponderance of the evidence that he sustained any injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

For a claim to be compensable under the Act, a Claimant has the burden of proving that he suffered a disability that proximately caused by an injury arising out of and within the course and scope of employment. C.R.S., §8-41-301(1) (c). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Id*. at 846.

A compensable injury is an injury that "arises out of" and "in the course of" employment. *See* C.R.S. §8-41-301(1) (b). In deciding whether a Claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Credibility is a significant consideration when determining compensability. In assessing credibility, the ALJ should consider, among other things, the consistency or

inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness of the testimony; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

The ALJ must examine the totality of the circumstances to determine whether there is a sufficient nexus between the employment and the injury such that the accident may be said to have occurred in the scope of the Claimant's employment. *City and County of Denver School District No. 1 v. Industrial Commission*, 581 P.2d 1162 (1978). In establishing causation, a Claimant "must show that the industrial injury bears a 'direct causal relationship between the precipitating event and the resulting disability.'" *See Garcia v. CF&I Steel*, W.C. No. 4-454-548 (ICAO May 14, 2004).

The ALJ concludes that the following persuasive factors support a finding that Claimant did not suffer a compensable injury on April 27, 2018.

- Claimant's symptoms were entirely subjective with no objective findings of injury in the medical records.
- Claimant's symptoms were extreme and inconsistent with the findings on examination.
- Claimant exaggerated his physical symptoms, testifying to extreme pain and diffuse pain complaints in excessive of objective findings by physicians.
- Claimant was able to work an entire summer in a physically demanding position without accommodation or seeking medical care despite the alleged severe injuries.
- Claimant waited over four months to report any injury and only did so after resigning from his employment with Respondent.
- A preponderance of objective medical evidence supports this conclusion, with the authorized treating physician and Dr. Bernton both concluding Claimant did not sustain a compensable injury in the April 27, 2018 incident.

The ALJ further concludes that Claimant was not credible for the following reasons.

- Claimant testified to a mechanism of injury that was extremely improbable and exaggerated the magnitude of the auto accident.
- Claimant was a poor historian. His testimony was often inconsistent with his responses to interrogatories, his own statements at hearing, and prior statements.
- Claimant was not forthcoming with his medical providers and other doctors by failing to inform them accurately of the force of the accident and of his

not wearing a seatbelt.

- Claimant was not forthcoming on cross-examination. For example, when asked for details about additional medical treatment sought, Claimant responded that he was seen in multiple emergency rooms, but that he was never treated as he was turned away by the emergency rooms.

- Thus, the ALJ concludes that Claimant did not suffer a compensable injury on April 27, 2018. Having concluded that Claimant did not suffer a compensable injury, the ALJ need not address other issues endorsed for hearing.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Administrative Law Judge enters the following order:

1. Claimant failed to meet his burden of proving by a preponderance of the evidence that he sustained a compensable injury on April 27, 2018.

2. Claimant's claim is not compensable, and is denied and dismissed.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 16, 2019

/s/ Kimberly Turnbow
Kimberly B. Turnbow

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence she is entitled to ongoing medical treatment to her right hip for the compensable work injury suffered on February 8, 2017.

II. Whether Claimant has proven by a preponderance of the evidence the right hip surgery recommended by Dr. White is reasonable medical treatment necessary to cure and relieve the effects of the February 8, 2017 work injury.

III. Whether Claimant has demonstrated by a preponderance of the evidence she sustained a compensable injury to her left hip arising out of and within the course and scope of her employment on October 14, 2018.

IV. If Claimant has proven she sustained a left hip compensable injury on October 14, 2018, whether Claimant has proven by a preponderance of the evidence she is entitled to receive reasonable, necessary and causally related medical benefits.

FINDINGS OF FACT

1. Claimant is a 44-year-old woman with an April 23, 1975 date of birth. Claimant worked for Employer as a personal shopper, collecting items for customers' online orders.

2. On February 8, 2017, Claimant sustained an admitted industrial injury when she fell backwards off of a six-foot tall ladder and landed on the ground. Claimant presented to authorized provider Concentra reporting that she straddled the ladder as she fell and then landed on her buttocks. Claimant complained of vaginal bleeding and tailbone pain. She was referred to the emergency department at Sky Ridge Medical Center, where a pelvic CT scan revealed a non-displaced mildly comminuted distal sacral fracture at the S5 level. Claimant was diagnosed with a fractured sacrum and labial laceration.

3. Claimant returned to Concentra on February 9, February 11, February 12 and February 15, 2017 for recheck of her labial laceration and sacral fracture. She reported coccyx pain and vaginal bleeding. Claimant also sought treatment at Sky Ridge on February 11, 2017 for vaginal bleeding.

4. During a follow-up appointment at Concentra on February 17, 2017 Claimant reported having severely painful muscle spasms down both legs, pain in the left buttock, pain along the lateral aspect of her thighs, and intermittent numbness from her hips bilaterally down the anterior aspect of her thighs.

5. Claimant treated with Concentra on February 21, February 27, and February 28, 2017, reporting severe pain in the sacral area. Her ongoing diagnosis was a coccyx contusion, closed fracture of the sacrum, and laceration of the labia majora.

6. On March 7, 2017, Claimant presented to Michael Rauzzino, M.D. for a neurosurgical consultation. Claimant complained of primarily sacral pain without radiculopathy on the left side, along with some pain starting around the sacrum radiating around to the right upper part of her leg. She reported that her symptoms had worsened and changed over the previous week. Dr. Rauzzino ordered MRIs of Claimant's pelvis, sacrum and lumbar spine, noting Claimant had some pain in the right side of her pelvis.

7. Claimant underwent the MRIs on March 9, 2017. The lumbar and sacrum MRI revealed some chronic left facet joint arthritis at L4-5 with minimal spondylolisthesis. The pelvic MRI confirmed the findings of a fractured coccyx.

8. During a follow-up evaluation at Concentra on March 14, 2017, Claimant reported pain in her left buttock and right lateral hip. On March 19, 2017, Claimant presented to Sky Ridge Medical Center and reported increased sacral and abdominal pain after participating in physical therapy.

9. Claimant attended a follow-up appointment with Dr. Rauzzino on April 4, 2017, complaining of what she described as nerve pain starting in her hips and radiating down the lateral aspect of both legs, right greater than left, as well as continuing coccygeal pain. Dr. Rauzzino reviewed the March 9, 2017 MRIs and opined surgery was not indicated.

10. Claimant presented to delayed recovery specialist John Burris, M.D. on April 12, 2017. Dr. Burris noted Claimant's main issue had been persistent low back pain. He opined that the sacral fracture had likely healed and recommended Claimant treat with physical therapy, a TENS unit and pool therapy to focus on increasing function and mobility.

11. Claimant subsequently switched her care from Concentra to U.S. HealthWorks, presenting to Ryan Otten, M.D. on April 28, 2017. Claimant complained of sharp and burning right hip pain that radiated to the knee, as well as lower back pain. Dr. Otten's diagnosis was a closed fracture of the sacrum and coccyx. He placed Claimant on work restrictions and continued her physical therapy.

12. On May 1, 2017, Claimant reported to Dr. Otten worsening right hip nerve pain. On physical exam, Claimant reported tenderness in the right buttock, greater trochanter and thigh. She exhibited no muscle weakness of the hips. Dr. Otten diagnosed arthralgia of the right hip and closed fracture of the sacrum.

13. On May 9, 2017, Claimant presented to Lori Rossi, M.D. at U.S. HealthWorks after presenting to the emergency room on May 8, 2017 for increased right hip pain. Dr. Rossi diagnosed right hip pain and closed fracture of the sacrum and coccyx and ordered a continuation of light duty. Claimant continued to receive treatment from Dr. Rossi, who eventually referred Claimant for a right hip MRI.

14. A May 24, 2017 right hip MRI revealed a focal small nondisplaced partial anterior acetabular labral tear. On June 8, 2017, Dr. Rossi noted a right hip joint labral tear was discovered as another event in the injury of February 8, 2017. She kept Claimant on light duty restrictions and recommended additional physical therapy. On June 30, 2017 Claimant stated to Dr. Rossi that she felt no one had listened to her regarding her right hip pain for the first three months of her treatment.

15. On June 29, 2017, John T. Sacha, M.D. administered a sacrococcygeal joint injection and a right hip intraarticular joint injection. Dr. Sacha performed a ganglion impar block and a caudal epidural steroid injection on August 24, 2017, and a repeat right greater trochanteric bursa corticosteroid injection on September 19, 2017. The hip injections did not provide any significant sustained relief.

16. Upon the referral of Dr. Rossi, Claimant presented to Nathan D. Faulkner, M.D. on November 6, 2017. Claimant denied any antecedent hip pain or dysfunction. Dr. Faulkner reviewed the May 24, 2017 right hip MRI, noting mild effusion and a nondisplaced superior labral tear. He also reviewed radiographs taken on October 3, 2017, noting femoroacetabular impingement. Dr. Faulkner opined that Claimant's labral tear was more likely than not caused by the February 8, 2017 work injury. He recommended proceeding with a right hip arthroscopy, CAM debridement and labral repair.

17. On December 20, 2017, Alfred C. Lotman, M.D. performed an Independent Medical Examination (IME) at the request of Respondents. Dr. Lotman examined Claimant and reviewed medical records, including the May 24, 2017 right hip MRI. He opined that Claimant suffered from a small nondisplaced superior labral tear as a result

18. On February 22, 2018, Claimant underwent a right hip arthroscopy with CAM depression, subspine decompression and acetabular labral repair, performed by Dr. Faulkner. No complications were noted. Claimant reported improvement in her right hip pain during follow-up appointments with Dr. Faulkner on March 9 and April 16, 2018. On March 9, 2018, Claimant reported more pain on her left side which she attributed to overcompensation due to her right-sided symptoms.

19. Claimant returned to Dr. Rossi on May 7, 2018 with a chief complaint of increased pain in the right hip after performing a new exercise in physical therapy. On May 11, 2018, Dr. Faulkner also noted Claimant reported increased groin pain after doing some new physical therapy exercises the week prior. Dr. Faulkner noted it appeared Claimant had some tendinitis.

20. Claimant subsequently continued to report right hip pain. Dr. Faulkner noted that repeat radiographs of the pelvis taken on June 4, 2018 showed well maintained joint spaces with no interval change, excellent CAM decompression and normal alignment with no fractures. He ordered a repeat right hip MRI.

21. Claimant underwent the repeat right hip MRI with arthrogram on June 7, 2018, which was compared to Claimant's March 9, 2017 pelvic MRI. Radiologist Frank

Crnkovich, M.D. interpreted the results and noted expected postoperative change to Claimant's anterosuperior labrocapsular interface. His impression was, in relevant part: postoperative appearance of the right hip, no recurrent labral tear.

22. Dr. Faulkner reviewed the June 7, 2018 right hip MRI at a follow-up evaluation of Claimant on June 11, 2018. He noted the MRI showed no recurrent labral tear, with the labrum and capsular repair intact with no fractures and minimal effusion. Dr. Faulkner recommended Claimant restart physical therapy.

23. On June 25, 2018, Claimant reported to Dr. Faulkner experiencing intermittent sharp stabbing pain over her anterolateral hip that radiated down her thigh. Dr. Faulkner administered a right hip intraarticular injection. During a follow-up exam with Dr. Faulkner on July 30, 2018, Claimant reported experiencing 50% relief in her right hip pain after the injection. She complained, however, of developing increased left hip pain, worse than right.

24. On September 6, 2018, Dr. Rossi noted Claimant had been slowly progressing since undergoing the acetabular tear repair until roughly three weeks ago with aggravation of right hip pain. Physical exam revealed active range of right hip motion, functionally within normal limits. Dr. Rossi's assessment was: recent setback of tendinitis of right hip injury. She recommended Claimant continue physical therapy. On September 21, 2018, Dr. Faulkner referred Claimant to Dr. White for a second opinion on Claimant's continued right hip pain.
